3.3.4 The domain covers the model area of more than 2000 m from the Application Site's boundary. The domain dimension is about 17000m x 17000m and with an elevation of 1500m. More than 90 million grid cells are defined to simulate the air flow. Given the large domain adopted in this assessment and the physical limitation on the computational resources of the CFD model, the horizontal and vertical grid size employed in the CFD model in the vicinity of the Project Area were taken as a global minimum size of 2 m and were increased for the grid cells further away from the Project Area at a growth ratio of 1.2. The global maximum size of a cell is 32 m and smaller cell size up to 0.5 m was used. Besides, four layers of prism cells (each layer of 0.5 m thick) were employed above the terrain and podium of the Application Site. The blockage ratio is less than 3%. Topography will cover entire domain.

3.3.5 The windward boundary is defined as inflow with the wind profile defined. The leeward boundary is defined as outflow. The sky and lateral boundaries are defined as symmetric boundary condition. It is confirmed that all existing and committed developments in the surrounding area and barrier structure onsite and offsite are included in the CFD model.

3.3.6 The advection terms of the momentum and viscous terms are resolved with the second order numerical schemes. The scaled residuals are converged to an order of magnitude of at least 1×10^{-3}.

3.4 Test Point Location

3.4.1 Test points are proposed including 30 (P01 to P30) numbers of perimeter test points defined along the boundary of the Application Site and 556 numbers of overall test points within the Assessment Area.

3.4.2 Additionally, 23 numbers of special test points are defined within the Application Site.

3.4.3 All these test points are located at 2m above ground level / podium level. 34 focused groups are selected for analysis.

3.4.4 The test points generally represent important pedestrian areas such as sitting out area and pedestrian walkway as well as site boundary. **Figure 4a** shows the overall and perimeter test points selected for this quantitative AVA. **Figure 4b** shows the grouping of the special test points selected in the Application Site for this quantitative AVA.

4. QUANTITATIVE ASSESSMENT RESULT

4.1 Spatial Average Wind Velocity Ratio

4.1.1 The wind velocity ratio (VR) under a specific wind direction at a test point is calculated by dividing the simulated wind speed at the test point under this wind direction with the velocity at gradient height under the same wind direction. All test points were located at 2 m above ground level.

4.1.2 **Table 4.1** and **Table 4.2** showed the Application Site spatial average velocity ratio (SVR), local spatial average velocity ratio (LVR) and average wind velocity ratio along surrounding air sensitive uses area during annual condition and summer condition respectively for the Baseline Scenario, Proposed – Scenario 1 and Proposed – Scenario 2.

4.1.3 Proposed Scenario 1 is with residential development, reserved school site, relocated soy sauce factory site under Proposed R(E) Site (subject matter of this application) and Proposed Scenario 2 is, in addition, with residential development and GIC facilities at Proposed OU(CDWRA)1 Site (under separate submission).

4.1.4 **Appendix 4** shows VR contour plots at pedestrian level. **Appendix 5** shows detailed VR results for tested wind directions.

Table 4.1 Summary of Spatial Average Wind Velocity Ratios (VR) (Annual)

Focused Group	Spatial Average Wind Velocity Ratio (VR)	Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2
	SVR (P01-P30)	0.15	0.15	0.15
	LVR (P01-P30, T001-T563)	0.19	0.19	0.19
1	San Tam Road (T06 – T16, T100 – T108, T140 –T142, T220 – T225, T270, T272 – T274, T364 – T370, T496 – T500)	0.20	**0.21**	**0.21**
2	Castle Peak Road-Tam Mi (T17 – T35, T97 – T99, T144, T146, T275 – T278, T501 – T505)	0.22	0.22	**0.23**

Note: Bold characters highlighted in grey represent higher VR in comparison.

4.2 Site Air Ventilation Assessment

4.2.1 The SVR indicates how the lower portion of the buildings in the Application Site may affect the wind environment of its immediate vicinity.

4.2.2 According to **Table 4.1** and **Table 4.2**, the annual predicted SVRs for Baseline Scenario, Proposed Scenario 1 and the Proposed Scenario 2 are all 0.15 whereas the summer predicted SVRs are 0.17, 0.16, and 0.16 respectively. This shows that the Baseline Scenario has slightly better air ventilation performance under summer

condition whereas all scenarios have comparable air ventilation performance under annual condition.

4.3 Local Air Ventilation Assessment

4.3.1 The LVR indicates how the wind environment within the local area may be affected due to the differences between the Baseline Scenario and the Proposed Scenario 1 & the Proposed Scenario 2.

4.3.2 The predicted annual LVRs of the Baseline Scenario, Proposed Scenario 1 and Proposed Scenario 2 are all 0.19 whereas predicted summer LVRs are all 0.18. The above results show that both Proposed Scenarios have comparable ventilation performance of the local area under annual and summer wind condition when compared to Baseline Scenario.

4.4 Comparison of Weighted Average VR for Focused Areas

4.4.1 According to the **Table 4.1**, under annual situation, the Proposed Scenario 2 performs slightly better than the Baseline Scenario at spatial average VR for the focused group nos. 1, 2, 8, 14, 24, 26, 31, 32, and 33. The Proposed Scenario 2 performs slightly better than the Proposed Scenario 1 at spatial average VRs focused group nos. 2, 5, 8, 14, 16, 18, 24, and 33. Proposed Scenario 1 performs slightly better than Baseline Scenario at spatial average VR for the focused group nos. 1, 11, 12, 17, 26, 31, 32, and 33. For the focused groups nos. 5, 18, 23, and 30, Baseline Scenario would have slightly better spatial average VR when compared with that of the two Proposed Scenarios. For focused group nos. 3, 4, 6, 9, 10, 13, 15, 19, 20, 21, 25, 27, 28, and 29, the spatial average VRs are comparable among three scenarios.

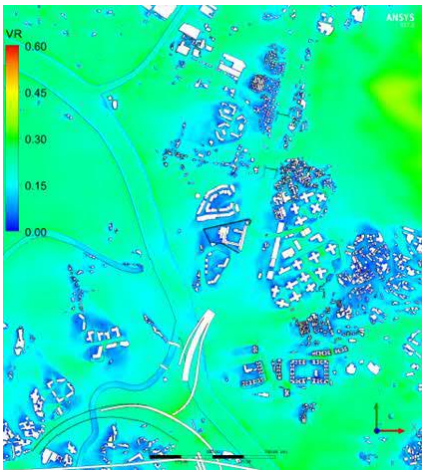
4.4.2 Under the summer situation (**Table 4.2**), the Proposed Scenario 2 performs slightly better than the Baseline Scenario at spatial average VR for the focused group nos. 4, 7, 11, 14, 15, 16, 23, 24, 26, 31, 32, and 34. The Proposed Scenario 2 performs slightly better than the Proposed Scenario 1 at spatial average VRs focused group nos. 5, 7, 9, 23, and 24. Proposed Scenario 1 performs slightly better than Baseline Scenario at spatial average VR for the focused group nos. 4, 6, 11, 14, 15, 16, 18, 21, 26, 30, 31, 32, and 34. For focused group nos. 12, the spatial average VRs of the Baseline Scenario are slightly better than the two Proposed Scenarios. For focused group nos. 2, 3, 8, 10, 13, 17, 20, 25, 27, 28, and 29, the spatial average VRs are comparable among three scenarios.

4.5 Discussion of Overall Performance under Annual and Summer Conditions

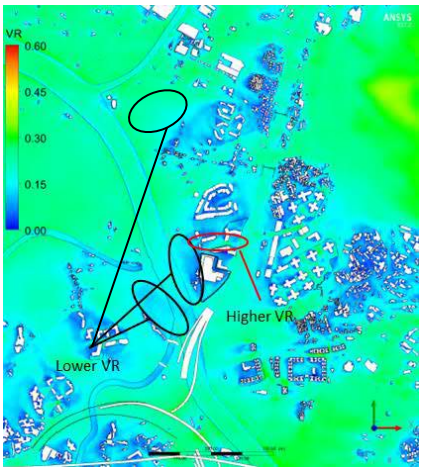
4.5.1 For annual condition, the VR contour plots (see **Appendix 4**) show that the Proposed Scenario 1 and the Proposed Scenario 2 would have lower VR (dark circle) at the western side of the Application Site including Pok Wai South Road, wetland area east of Pok Wai South Road, Kam Tin River, and the Yuen Long Bypass Floodway Engineered Wetland. A slightly worse air ventilation performance at that area under the Proposed Scenario 1 and Proposed Scenario 2 are observed when compared to the Baseline Scenario.

4.5.2 Under the Proposed Scenario 2, lower VRs are observed at the western side of the OU(CDWRA)1 Site, the southeastern side of Wing Kei Tsuen, and the wetland area east of Pok Wai South Road when compared to the Proposed Scenario 1 and Baseline Scenario. However, the VR of the building separation within OU(CDWRA)1 Site would be higher under Proposed Scenario 2 when compared with the Proposed Scenario 1. In addition, slightly higher VR (red circle) along San Tam Road and Castle Peak Road-Tam Mi is observed.

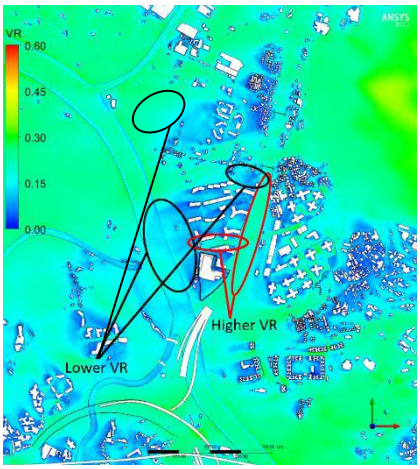
4.5.3 The Baseline Scenario has low building mass and wind can generally flow over the mass and reach pedestrian level gradually under all directions. The building disposition in the Application Site under both Proposed Scenarios would alter the northerly wind flow and slightly reduce the wind availability at the western side of the Application Site. On the other hand, the building disposition and orientation would divert and facilitate more southerly wind flow along road such as San Tam Road and Castle Peak Road-Tam Mi. The air ventilation impact to the western side of the Application Site would be further minimised by the proposed building separation under both Proposed Scenarios, especially under Proposed Scenario 2 when the separation within OU(CDWRA)1 site also allows prevailing easterly wind penetrating across the Application Site. It is observed that the wind availability within the Application Site is comparable for both Proposed Scenarios and the Baseline Scenario under annual wind condition. Therefore, it is anticipated that there would have no significant air ventilation impact at the immediate vicinity of the Application Site and its surroundings under annual wind conditions.



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

4.5.4 For summer condition, the difference nearby the Application Site is more observable among the three Scenarios. The VRs among the southern side of the Assessment Area are comparable between three Scenarios. The VR contour plots (**Appendix 4**) show that the Proposed Scenario 1 and the Proposed Scenario 2 would have slightly lower VRs at the northern side of the Application Site including the open spaces at the southern portion of Wing Kei Tsuen when compared with the Baseline Scenario.

4.5.5 Both Proposed Scenario 1 and Proposed Scenario 2 would have lower VR (dark circle) at the northern side of the Application Site. The high building blocks in the Application Site are aligned in E/W direction and it would block some portion of summer prevailing wind. Thus, lower VR is observed along the building separation between OU(CDWRA)1 Site & Application Site under both Proposed Scenarios when compared to Baseline Scenario. Moreover, it is observed that wake zone at the southern portion of Wing Kei Tsuen under the Proposed Scenario 2 is slightly larger than that of the Proposed Scenario 1, due to additional blockage by proposed development at OU(CDWRA)1 Site. However, the proposed building separation within the Application Site and building separation within OU(CDWRA)1 Site would facilitate E/W wind penetration to improve the overall ventilation performance at the surrounding area under Proposed Scenario 2. Therefore, the ventilation performance at the major pedestrian accessible area would be comparable between the Proposed Scenario 2 and Baseline Scenario under summer wind condition.

		Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2

4.6 Directional Analysis

NNE Wind

		Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2

4.6.1 From the spatial average VR results in **Appendix 5**, the Proposed Scenario 2 have slightly lower SVR and comparable LVR when compared to the Baseline Scenario. For the Proposed Scenario 1, it has slightly higher SVR and comparable LVR when compared to the Baseline Scenario and the Proposed Scenario 2.

4.6.2 Under the Baseline Scenario, NNE wind flow atop the low-rise buildings at the Application Site, the OU(CDWRA)1 Site and further reach the downward areas including Pok Wai South Road, Kam Tin River and Yuen Long Bypass Floodway Engineered Wetland. Thus, a slightly higher VR downwind of the Application Site is observed when compared to the two Proposed Scenarios.

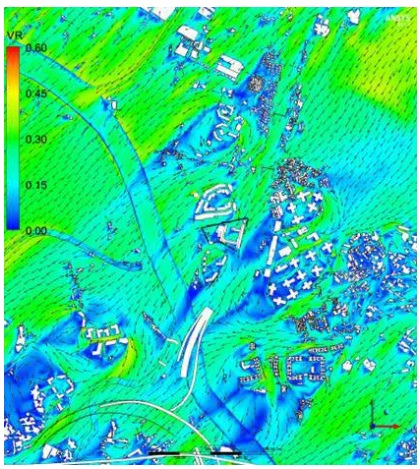
4.6.3 Regarding the Proposed Scenario 1, the building blocks under the Application Site aligned along the E/W direction would block NNE wind flow towards the relocated soy sauce factory, the reserved school site and south-western side of the Application Site which result in a lower VR when compared with the Baseline Scenario. It is observed that the building separation between Application Site & OU(CDWRA)1 Site can facilitate wind penetration as it has relatively higher VR among the area. Moreover, T6 and T1 in the Application Site provide setback from the wind corridor along San Tam Road. It

resulted in air ventilation improvement along that pedestrian road when compared to Baseline Scenario.

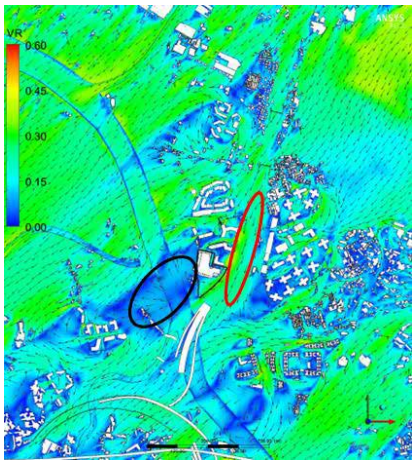
4.6.4 Under the Proposed Scenario 2, the proposed E/W oriented high-rise building blocks at the OU(CDWRA)1 Site would block the NNE wind flow to reach Application Site. Together, the proposed high-rise buildings at Application Site would further block the NNE wind flow towards the downward areas including Nam Sang Wai Road and Yuen Long Bypass Floodway Engineered Wetland. Therefore, a larger wake area is observed at the downward area when compared to the Baseline Scenario and the Proposed Scenario 1. Slightly worse ventilation performance at Application Site is observed when compared to the Baseline Scenario.

4.6.5 On the other hand, the proposed building blocks of the Application Site under the Proposed Scenario 1 and the Proposed Scenario 2 would divert wind penetration to along San Tam Road and Castle Peak Road-Tam Mi, which would result in higher VRs at that area when compared with the Baseline Scenario. In addition, the building separations at T11/T20 and T17/T18 of the OU(CDWRA)1 Site is found with slightly higher VR than Baseline Scenario.

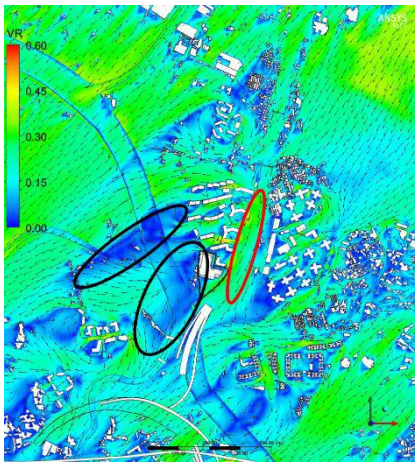
NE Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

4.6.6 From the spatial average VR result table in **Appendix 5**, it is observed that the Proposed Scenario 2 has relatively higher SVR and comparable LVR when compared to the Baseline Scenario. For the Proposed Scenario 1, the SVR and LVR are comparable when compared to the Proposed Scenario 2. For both Proposed Scenario, they would have slightly higher SVR and comparable LVR when compared with the Baseline Scenario.

4.6.7 Under NE prevailing wind, wind would pass through the low-rise buildings of the OU(CDWRA)1 Site, the Application Site and its surrounding areas under the Baseline Scenario. Thus, a slightly higher VR is observed at Application Site, the existing soy sauce factory, Pok Wai South Road and Kam Tin River when compared to the two Proposed Scenarios.

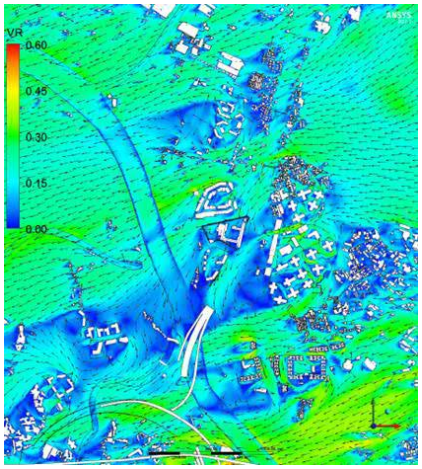
4.6.8 Under the two Proposed Scenarios, high-rise building blocks of the Application Site would block wind flow towards southwest. Thus, lower VRs (dark circle) are observed along Pok Wai South Road, Kam Tin River and Yuen Long Bypass Floodway Engineered Wetland when compared to the Baseline Scenario.

4.6.9 On the other hand, the proposed building blocks of the Application Site under the Proposed Scenarios would divert the wind penetration along San Tam Road and San

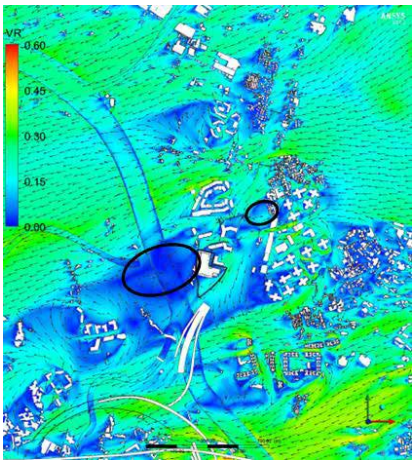
Tin Highway, which would result in higher VR at that area when compared with the Baseline Scenario. In addition, there is more wind flow along the building separation between the OU(CDWRA)1 Site & Application Site towards Kam Tin River when compared with the Baseline Scenario.

4.6.10 Under the Proposed Scenario 2, high-rise buildings proposed at the OU(CDWRA)1 Site and the Application Site would create a larger wake area at the western side of the OU(CDWRA)1 Site when compared with the Baseline Scenario and the Proposed Scenario 1. However, higher VRs can be found to the east of the Application Site. Moreover, the better ventilation performance along the pedestrian roads such as San Tam Road and Castle Peak Road-Tam Mi is found as the NE wind would penetrate through the proposed building separations within the OU(CDWRA)1 Site and within the Application Site and would facilitate air ventilation to the surrounding area. In general, the proposed mitigation measures under the Proposed Scenario 2 would provide better air ventilation along the pedestrian roads at the east of the Application Site when compared to Baseline Scenario and Proposed Scenario 1 despite wake area is observed in the west of the Application Site.

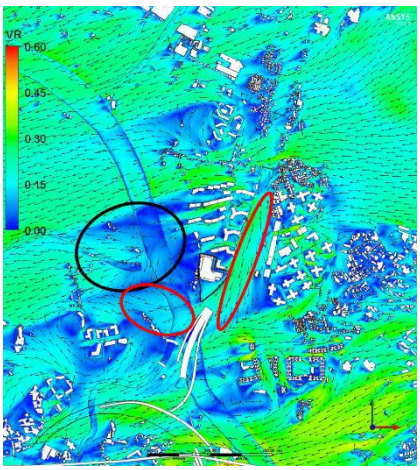
ENE Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

4.6.11 From the spatial average VR result table in **Appendix 5**, the Proposed Scenario 1 would have comparable SVR and LVR when compared with the Baseline Scenario under ENE wind, while the Proposed Scenario 2 would have slightly higher SVR and LVR when compared with the Baseline Scenario.

4.6.12 Under ENE prevailing wind, wind would pass through the building separations between the OU(CDWRA)1 Site & the existing soy sauce factory, and between the existing soy sauce factory & the southern part of the Application Site towards the surrounding areas under the Baseline Scenario. Thus, a slightly higher VR is observed at two building separations under the Baseline Scenario. It is also observed that a stagnant zone is located at the southwest of Sha Po Public Housing Site. Moreover, relatively low VR is observed at the southwestern part of the assessment area.

4.6.13 Under the two Proposed Scenarios, high-rise building blocks of the Application Site would block ENE wind flow towards southwest on the downwind side of the relocated soy sauce factory. Thus, a wake area (dark circle) is observed near Kam Tin River and Yuen Long Bypass Floodway Engineered Wetland. On the other hand, more portion of ENE wind is diverted to flow through the building separation between Application Site & OU(CDWRA)1 Site and the building separation within the Application Site in Proposed

Scenario 1. Moreover, it is observed that a section of San Tin Highway to the east of the Application Site is of lower VR as some portion of ENE wind downwash at the pedestrian level disturbs the flow after hitting the building blocks of the Application Site.

4.6.14 Under the Proposed Scenario 2, the proposed high-rise building blocks at the OU(CDWRA)1 Site would further block some portion of ENE reaching Kam Tin River and Yuen Long Bypass Floodway Engineered Wetland. Therefore, some more wake area to the west of OU(CDWRA)1 Site is observed when compared to the Baseline Scenario and the Proposed Scenario 1. On the other hand, high-rise building block at OU(CDWRA)1 Site would divert ENE wind flow through the building separation between the Application Site & OU(CDWRA)1 Site and further towards Pok Wai South Road. On the other hand, with the adjusted building blocks of OU(CDWRA)1 Site and Application Site in Proposed Scenario 2, it would divert more wind flow along San Tam Road and Castle Peak Road. It resulted in higher VR along these pedestrian roads when compared to the Baseline Scenario. Moreover, it is appeared that the VRs at the building separations within the OU(CDWRA)1 Site and within the Application Site are slightly higher to facilitate more ENE wind penetration towards its downwind area. It is expected there is no overall adverse air ventilation issue despite the wake area is observed on downwind side.

E Wind

		Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2

4.6.15 Under E wind condition, according to the predicted VRs shown in **Appendix 5**, the Proposed Scenario 1 has slightly higher SVR and comparable LVR when compared with the Baseline Scenario. For the Proposed Scenario 2, it would have slightly higher SVR and LVR when compared to the Proposed Scenario 1 and Baseline Scenario.

4.6.16 According to the contour plot of prevailing E wind, the VRs are high in three Scenarios along San Tin Highway and northern side of the OU(CDWRA)1 Site including Wing Kei Tsuen. Under the Baseline Scenario, the incoming E wind flow atop the low-rise of building blocks at Mo Fan Heung, the Application Site and the OU(CDWRA)1 Site towards Pok Wai South Road and its surroundings. It is observed that the building separation within the Application Site would facilitate E wind penetration towards the downwind area. It is observed that a wake zone is located at the west side of Sha Po Public Housing Site.

4.6.17 For the two Proposed Scenarios, the building disposition and building blocks with higher building height of the Application Site would block some portion of wind to the western

side of the Application Site despite that building separation is provided. A wake area (dark circle) is found near Kam Tin River, Pok Wai South Road and Yuen Long Bypass Floodway Engineered Wetland. The building blocks of the Application Site aligned along the E/W direction would facilitate some portion of E wind flow from the eastern side to the western side of the Application Site to mitigate the situation to some extent. Especially, there is more portion of E wind flow along the building separation between the Application Site & OU(CDWRA)1 Site. On the other hand, some portion of E wind would be diverted to flow along San Tam Road and Castle Peak Road-Tam Mi to provide ventilation to the southeastern side of the Application Site. Thus, the southern side of San Tam Road and Castle Peak Road-Tam Mi under Proposed Scenario 1 have better ventilation performance when compared to Baseline Scenario.

4.6.18 Under the Proposed Scenario 2, the proposed building blocks at the OU(CDWRA)1 Site would further block some portion of E wind from reaching Kam Tin River and Yuen Long Bypass Floodway Engineered Wetland. Therefore, a larger wake area is observed when compared to the Baseline Scenario and the Proposed Scenario 1. High-rise buildings are proposed at OU(CDWRA)1 Site would create a larger wake area at western side of OU(CDWRA)1 Site under the Proposed Scenario 2 when compared with the Proposed Scenario 1. The building separation within the Application Site under Proposed Scenario 2 is aligned with the direction of E wind. Therefore, the VR at the open space and building separation under Proposed Scenario 2 would be higher. Besides, the VR along San Tam Road and Castle Peak Road-Tam Mi is even better in Proposed Scenario 2 due to diversion of flow. Overall speaking, ventilation performance for Proposed Scenario 2 is comparable with Baseline Scenario and Proposed Scenario 1.

ESE Wind

		Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2

4.6.19 The Application Site is on downwind side of Sha Po Public Housing Site and is therefore subject to lower wind availability. From the spatial average VR result table in **Appendix 5**, it is observed that Proposed Scenario 2 would have slightly lower SVR and comparable LVR when compared to the Baseline Scenario. For the Proposed Scenario 1, slightly lower SVR and comparable LVR are observed when compared to the Proposed Scenario 2, while Proposed Scenario 1 would have slightly lower SVR and comparable LVR when compared to the Baseline Scenario.

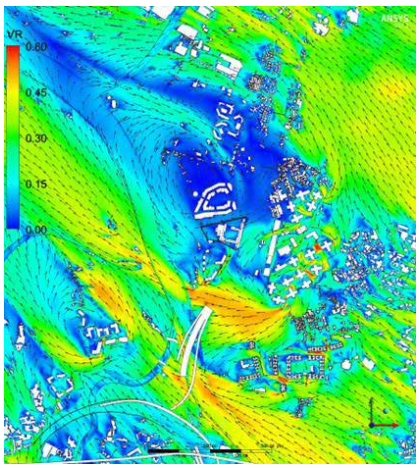
4.6.20 Under the Baseline Scenario, ESE wind would flow towards the Application Site through Mo Fan Heung and Sha Po Public Housing Site. The high rise building of Sha Po Public Housing Site and the proposed Au Tau Station are altering the prevailing ESE wind to

flow towards the Proposed Development. Some portion of ESE wind is diverted towards the northern side of OU(CDWRA)1 Site. Thus, a slightly higher VR is observed at the section of Castle Peak Road-Tam Mi (to the northeast of the Application Site) and the building separation between Application Site & OU(CDWRA)1 Site when compared to the two Proposed Scenarios. Wake area is generally found at the immediate vicinity of the Application Site under the Baseline Scenario as the incoming ESE wind would be diverted by high-rise building towers of the Sha Po Public Housing Site. The wind environment is relatively worse when compared with other prevailing wind condition.

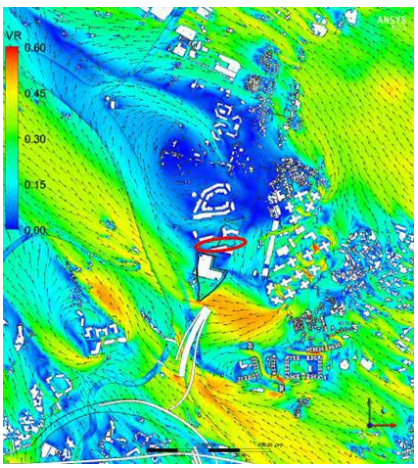
4.6.21 Under Proposed Scenario 1, it appears that the building separation would be able to facilitate some portion of ESE wind to penetrate across the Application Site. However, higher building height of the Application Site would block ESE wind flow to the western side of the Application Site. A wake area (dark circle) is found near Kam Tin River and the west side of the Application Site. In general, the overall wind environment and wind flow pattern are comparable between the Proposed Scenario 1 and Baseline Scenario.

4.6.22 For the Proposed Scenario 2, high-rise buildings are proposed at the OU(CDWRA)1 Site and would block some portion of ESE wind from reaching the downwards areas. A wake area is observed at the western side of the OU(CDWRA)1 Site. The building blocks of T3 and T12 of the OU(CDWRA)1 Site are aligned with E/W wind direction under the Proposed Scenario 2 which would facilitate some ESE wind to flow towards the western side and Kam Tin River. Furthermore, the building separation between the Application Site & OU(CDWRA)1 Site would further facilitate ESE wind flow. Thus, higher VRs along this building separation and west side of the Application Site is observed when compared with the Proposed Scenario 1. It is appeared that the wind availability along San Tam Road and Castle Peak Road-Tam Mi are relatively higher under Proposed Scenario 2 as the building at OU(CDWRA)1 Site would divert more portion of ESE wind towards the north of Castle Peak Road-Tam Mi and San Tam Road. Thus, the VR along the pedestrian road is relatively higher when compared with other two Scenarios. As a result, the wind availability for all three Scenarios is comparable under ESE wind condition, no adverse air ventilation issue is anticipated.

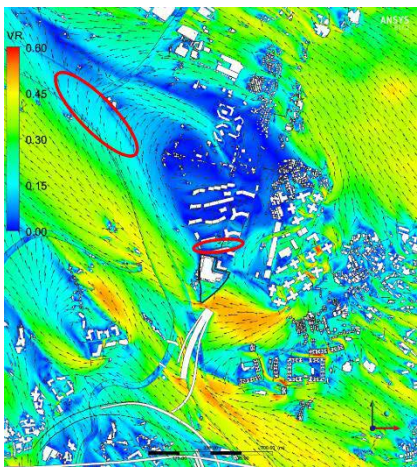
<u>SE Wind</u>



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

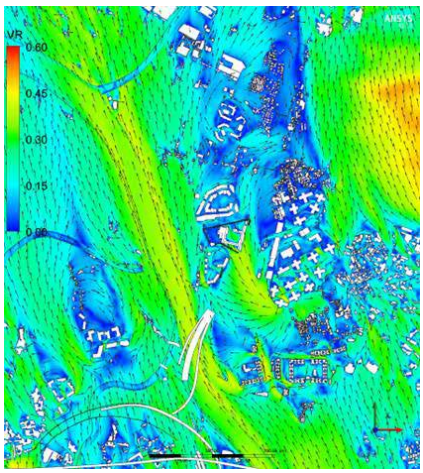
4.6.23 From the spatial average VR result table in **Appendix 5**, it is observed that two Proposed Scenarios have lower predicted SVR when compared to the Baseline Scenario, while the Baseline Scenario has slightly higher LVR and comparable LVR when compared to the Proposed Scenario 1 and 2 respectively.

4.6.24 Under the Baseline Scenario, wake areas (dark circle) are found at the downward side of the Application Site and the OU(CDWRA)1 Site, which would result in lower ventilation performance in Wing Kei Tsuen. On the other hand, wake area also appeared at the area next to Pok Wai South Road and Application Site. It is observed that the building blocks from Sha Po Public Housing Site mainly divert the SE wind towards west. Therefore, the ventilation performance along San Tam Road and Castle Peak Road-Tam Mi behind it are slightly impacted.

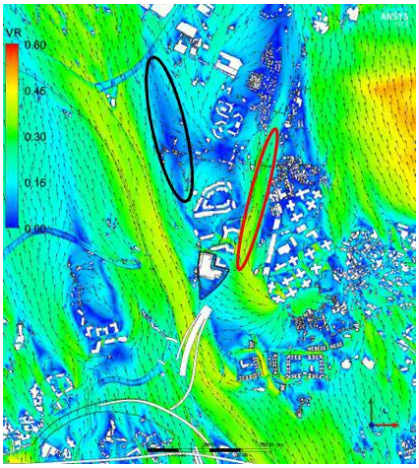
4.6.25 Under the Proposed Scenario 1, stagnant zone is still observed at the northern side of the Application Site due to the wind blockage by the building of Sha Po Public Housing Site and proposed building within the Proposed Development. However, the arrangement of the proposed building blocks would channel some portion of SE wind flow across the Application Site and OU(CDWRA)1 Site. In addition, the proposed building separation within the Application Site would facilitate some portion of SE wind and provide air ventilation at the immediate west of the Application Site and further west of the surrounding area.

4.6.26 Under the Proposed Scenario 2, the less compacted building arrangement allows more SE wind flow through the Application Site. The façade of the proposed development would also channel the incoming wind and thus enhancing wind availability within the Application Site. In addition, some portion of SE wind would flow through the building separation or atop the relocated soy sauce factory within the Application Site and then would reach Pok Wai South Road and Kam Tin River, and Tai Sang Wai South. As such, a slightly better ventilation performance is observed at the western side of the Application Site when compared with the Baseline Scenario.

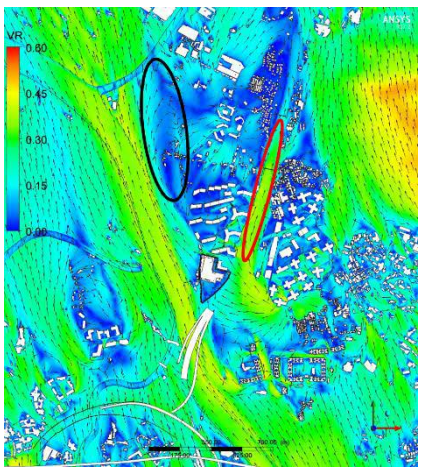
SSE Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

4.6.27 From the spatial average VR result table in **Appendix 5**, the Proposed Scenario 2 has comparable SVR and LVR when compared to the Baseline Scenario. For the Proposed Scenario 1, it would have slightly higher SVR and comparable LVR when compared to the Baseline Scenario and the Proposed Scenario 2.

4.6.28 The ventilation performance at the west side of the assessment area including Kam Tin River, Nam Sang Wai Road, and Pok Wai South Road is relatively higher than other prevailing wind direction for all three Scenarios. The overall ventilation performance under Baseline Scenario would be slightly better under prevailing SSE wind condition. Under the Baseline Scenario, similar as the SE wind direction, more SSE wind would flow atop the low-rise buildings of the Application Site and the OU(CDWRA)1 Site when

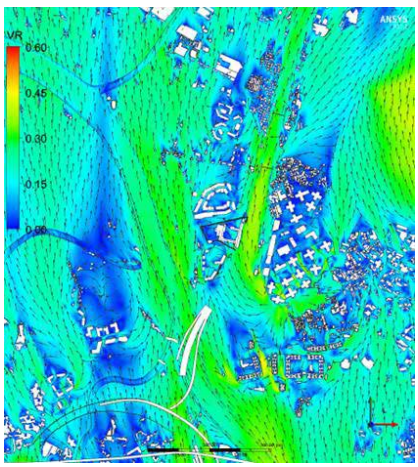
compared to the two Proposed Scenarios. It is observed that there is no significant wake area within the assessment area. However, the ventilation performance at Wing Kei Tsuen is relatively higher than both Proposed Scenarios.

4.6.29 Under the two Proposed Scenarios, a larger wake area (dark circle) is found at the northern side of the assessment area when compared with the Baseline Scenario. Higher building blocks and the building disposition would block SSE wind flow towards the north of the assessment area and its surrounding. However, high-rise building block under the Application Site would divert more SSE wind flow along San Tam Road, San Tin Highway and Castle Peak Road-Tam Mi, which would result in higher VRs at that area when compared with the Baseline Scenario. Besides, the building separation within the Application Site would increase wind permeability and facilitate wind flow towards the west. Thus, area next to Pok Wai South Road has slightly higher VR than Baseline Scenario.

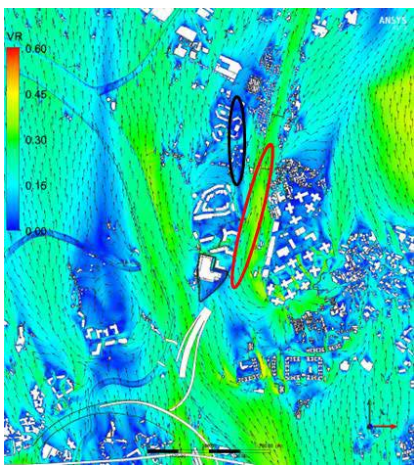
4.6.30 Regarding the Proposed Scenario 2, the building blocks under the Application Site and the OU(CDWRA)1 Site aligned along the E/W direction would facilitate channelled SSE wind to flow towards two sides including Pok Wai South Road and San Tin Highway when compared to the Baseline Scenario. The SSE wind would travel along Kam Tin River instead of flowing towards the north of the assessment area. Thusm relatively ower VR is observed at Wing Kei Tsuen and north of Pok Wai South Road. However, it is appeared that the low VR area is mainly occupied by ponds with low pedestrian access.

4.6.31 In addition, some portion of wind would flow atop the relocated soy sauce factory. On the other hand, more wind would flow through the building separations within Application Site and OU(CDWRA)1 Site to reach its surrounding areas. As such, a slightly better ventilation performance is observed at building separation between the Application Site & OU(CDWRA)1 Site. Moreover, the building disposition in both Proposed Scenarios would divert more wind flow along Castle Peak Road-Tam Mi and San Tam Road than Baseline Scenario. Therefore, the VR along the road is higher under both Proposed Scenarios.

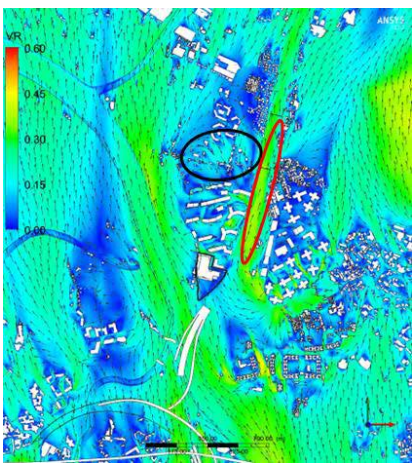
S Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

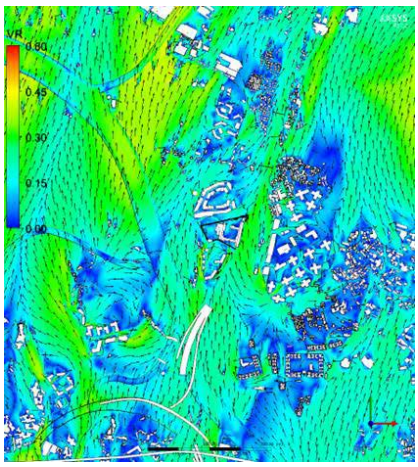
4.6.32 From the spatial average VR result table in **Appendix 5**, Proposed Scenario 2 has comparable SVR and LVR when compared to the Baseline Scenario. For the Proposed Scenario 1, slightly lower SVR and comparable LVR is found when compared to the Baseline Scenario.

4.6.33 Under the Baseline Scenario, S wind flow along Pok Wai South Road, Kam Tin River and San Tin Highway. A wake area is found at the southern side of Wing Kei Tsuen. The building in the Baseline Scenario would allow S wind to circulate through or pass over and continue to facilitate towards the northeastern side and along Castle Peak Road-Tam Mi, and San Tam Road. It is observed that the building blocks in the Baseline Scenario would not alter S wind flow when it is travelling along the major wind corridor such as Pok Wai South Road, Castle Peak Road-Tam Mi, and San Tam Road. The overall wind environment under S wind condition is relatively better among all three Scenarios.

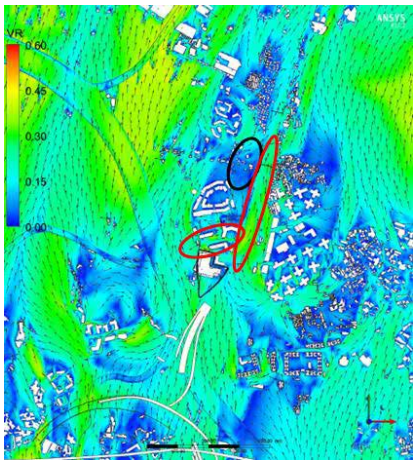
4.6.34 As compared with Baseline Scenario, the VRs along San Tam Road and Castle Peak Road-Tam Mi under two Proposed Scenarios are slightly higher. The building disposition of the building blocks in the Application Site would facilitate more portion of S wind to flow along the roads. On the other hand, higher building height of the building blocks in the Application Site under the two Proposed Scenarios would block some portion of S wind to flow towards the downwind areas including abandoned fishpond or low-rise scattered development at Wing Kei Tsuen. Thus, a slightly lower VR (dark circle) at the north of assessment area is observed in both Proposed Scenarios.

4.6.35 Under the Proposed Scenario 2, the high-rise building blocks of the Application Site and the OU(CDWRA)1 Site would block slightly more S wind from flowing towards the downward areas. Thus, a slightly larger area with lower VR (dark circle) is found under the Proposed Scenario 2 when compared with Proposed Scenario 1. However, the proposed within the Application Site would allow the S wind to circulate through. It is appeared that the VR is relatively higher within the development in Proposed Scenario 2. The ventilation performance of the immediate vicinity and the surrounding of the Application Site is comparable with the Baseline Scenario.

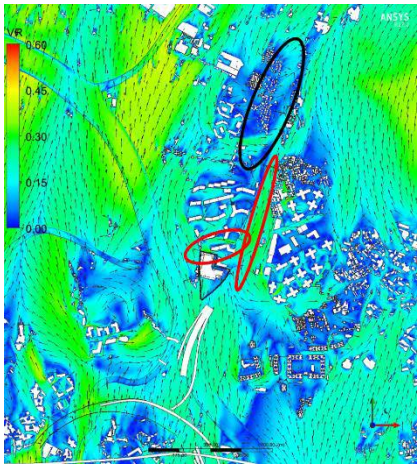
SSW Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

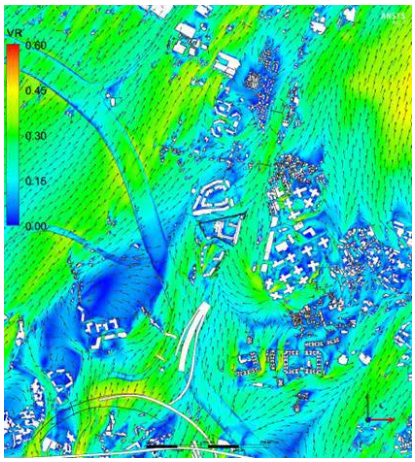
4.6.36 Under SSW wind condition, it is found that there is generally higher wind availability observed near Pok Wai South Road, San Tin Highway and Kam Tin River under three Scenarios. Taking into account the SSW wind results in **Appendix 5**, Proposed Scenario 2 has slightly lower SVR and LVR when compared to Baseline Scenario. For the Proposed Scenario 1, the SVR and LVR are comparable when compared to the Baseline Scenario, while the Proposed Scenario 1 would have slightly higher SVR and LVR when compared to the Proposed Scenario 2.

4.6.37 Under the Baseline Scenario, SSW wind would flow through the building separation within the Application Site & the existing soy sauce factory and then would reach its surroundings. Thus, better ventilation performance is observed especially along the downwind area of Castle Peak Road-Tam Mi. Since more portion of SSW wind would divert along the major wind corridor along San Tam Road and Castle Peak Road, less wind would flow towards the Sha Po Public Housing Site, resulting a wake zone induced at the northern side of the Sha Po Public Housing Site. In addition, the building separations between the Application Site & the existing soy sauce factory would enhance air ventilation at that area when compared to the two Proposed Scenarios. More portion of SSW wind would be facilitated to penetrate from west of the assessment area towards northeast of the Application Site.

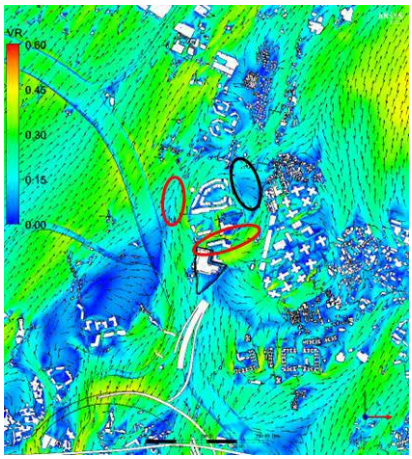
4.6.38 Under the two Proposed Scenarios, wake area (dark circle) is found at the northeastern side of the OU(CDWRA)1 Site when compared with the Baseline Scenario. Higher building blocks and the building disposition of the building blocks of the Application Site would block SSW wind. Thus, a large wake area is found. The higher building blocks of the OU(CDWRA)1 Site under the Proposed Scenario 2 would further block the SSW wind from flowing towards northeast. Therefore, the VRs at the northeast of the Application Site and Mo Fan Heung under the Proposed Scenario 2 are slightly lower when compared to the Proposed Scenario 1.

4.6.39 However, under the Proposed Scenario 2, SSW wind would flow through the building separations between the Application Site & the OU(CDWRA)1 Site and building separation between the T5 of Application Site & adjacent soy sauce factory building to provide wind ventilation to the surroundings. The ventilation performance along San Tam Road and Castle Peak Road-Tam Mi is appeared to be comparable under the Proposed Scenario 2 when compared to the Proposed Scenario 1.

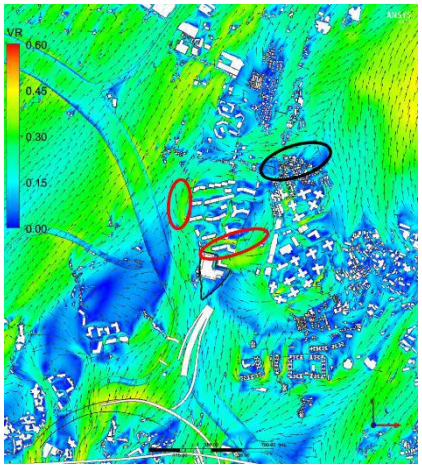
SW Wind



Baseline Scenario



Proposed Scenario 1



Proposed Scenario 2

4.6.40 Under SW wind condition, it is found that there is generally higher wind availability observed near Pok Wai South Road and Kam Tin River under three Scenarios. Taking into account the SSW wind results in **Appendix 5**, Baseline Scenario has slightly higher SVR and but slightly lower LVR when compared to the Proposed Scenario 1 and the Proposed Scenario 2. For Proposed Scenario 1, it has comparable SVR and slightly lower LVR is observed.

4.6.41 Under the Baseline Scenario, it is observed that the surrounding development in the southwest of the assessment area is blocking the SW wind to reach the Application

Site. Therefore, large wake area is appeared in the upwind side of the Application Site and OU(CDWRA)1 Site. The SW wind would flow atop the Application Site and the OU(CDWRA)1 Site and reach its surroundings. Better ventilation performance at that area is observed. In addition, more portion of SW wind would flow along the building separation between the Application Site & OU(CDWRA)1 Site when compared to the Proposed Scenario 1 and the Proposed Scenario 2.

4.6.42 Under the two Proposed Scenarios, wake area is found at the northeastern side of the OU(CDWRA)1 Site and Mo Fan Heung when compared with the Baseline Scenario as the higher building blocks and building disposition would alter the incoming SW wind flow. But, extent of impact is lower. Meanwhile, the higher building blocks of the Application Site under the Proposed Scenario 2 would further block the SW wind from flowing towards the downwind area. Therefore, lower VR is observed at Mo Fan Heung under the Proposed Scenario 2. However, the building separation within the Application Site under the Proposed Scenario 2 would effectively facilitate wind penetration. It is observed that the VR within the Application Site and OU(CDWRA)1 Site is relatively higher when compared to Baseline Scenario. In spite of some wake area induced at the northeastern side of the Application Site, the building separation within the Application Site would facilitate SSW wind penetration generally. In addition, under Proposed Scenario 2, it is appeared that the building separation between the residential blocks & proposed school site within the Application Site would facilitate wind penetration towards the major pedestrian roads including San Tam Road and Castle Peak Road-Tam Mi. In comparing with Baseline Scenario, the building orientation in the Application Site would divert the incoming SW wind towards the north, which would improve the ventilation performance along Pok Wai South Road under two Proposed Scenarios.

WSW Wind

		Baseline Scenario	Proposed Scenario 1	Proposed Scenario 2

4.6.43 From the spatial average VR result in **Appendix 5**, it is observed that Proposed Scenario 2 has slightly higher SVR and comparable LVR when compared with the Baseline Scenario. For the Proposed Scenario 1, it has slightly lower SVR and comparable LVR when compared to the Baseline Scenario and the Proposed Scenario 2.

4.6.44 Similar to the SW wind condition, it is observed that the surrounding development in the southwest of the assessment area is blocking the WSW wind to reach the Application Site and OU(CDWRA)1 Site. Moreover, the WSW wind flow atop the Application Site and the existing soy sauce factory and then would reach its

surroundings. In addition, there is more portion of WSW wind along the building separation between the OU(CDWRA)1 Site & the existing soy sauce factory, and reaching San Tin Highway when compared to the two Proposed Scenarios. Thus, slightly higher VR is observed at the northeastern part of Castle Peak Road – Tam Mi and San Tam Road.

4.6.45 Under the two Proposed Scenarios, wind availability is lower at the northeastern side of the Application Site when compared with the Baseline Scenario. The building separation between the Application Site & OU(CDWRA)1 Site under the Baseline Scenario facilitate more wind penetration along the E/W direction, which allow the WSW wind to later reach the northeastern side of the Application Site. While the building orientation of the development under both Proposed Scenarios can welcome WSW wind to penetrate through, local wake area is observed behind blocks. However, it is observed that the WSW wind would flow through the open space at the south of relocated soy sauce factory to facilitate wind flow along Castle Peak Road – Tam Mi and San Tam Road towards the north of the assessment area. In addition, it is shown that the building separation between the Application Site & OU(CDWRA)1 Site under two Proposed Scenarios would facilitate relatively more wind penetration in the E/W direction than that under Baseline Scenario. It is anticipated that there would be no significant air ventilation issue in the surrounding area under Proposed Scenarios when compared to Baseline Scenario as well.

5. CONCLUSION

5.1.1 The Baseline Scenario, Proposed Scenario 1 (without OU(CDWRA)1 Site) and Proposed Scenario 2 (with OU(CDWRA)1 Site) at the Application Site have been evaluated from an air ventilation standpoint. Scenario 1 is with residential development, reserved school site, relocated soy sauce factory site under Proposed R(E) Site (subject matter of this application). Scenario 2 is, in addition, with residential development and GIC facilities under Proposed OU(CDWRA)1 Site (under separate submission).

5.1.2 According to the Quantitative Assessment results, the annual predicted SVRs for Baseline Scenario, Proposed Scenario 1 and the Proposed Scenario 2 are all 0.15 whereas the summer predicted SVRs are 0.17, 0.16, and 0.16 respectively. This shows that the Baseline Scenario has comparable air ventilation performance at immediate vicinity under annual wind condition when compared to the Proposed Scenario 1 and the Proposed Scenario 2. Under summer wind condition, the Baseline Scenario has slightly better air ventilation performance at immediate vicinity when compared to the Proposed Scenario 1 and Proposed Scenario 2, mainly due to its less building footprint and low-rise nature.

5.1.3 The predicted annual LVRs of the Baseline Scenario, Proposed Scenario 1 and Proposed Scenario 2 are all 0.19 whereas predicted summer LVRs are all 0.18. The above results show that all three Scenarios have comparable ventilation performance of the local area under annual condition and under summer condition.

5.1.4 For annual condition, the VR contour plots (see **Appendix 4**) show that the Proposed Scenario 1 and the Proposed Scenario 2 would have slightly lower VR at the western and northeastern side of the Application Site when compared to Baseline Scenario, including Pok Wai South Road, Pok Wai Road, Kam Tin River, Nam Sang Wai Road, Tung Shing Lei, Yuen Long Bypass Floodway Engineered Wetland, and Wing Kei Tsuen.

5.1.5 Under the Proposed Scenario 1, higher VRs than the Baseline Scenario are observed at San Tam Road, Nam Sang Wai Road, Access Road near Fung Kat Heung, Sha Po Tsuen Road, Yau Pok Road, building separations between T9/T10, T2/T9, and along Eastern building setback.

5.1.6 Under the Proposed Scenario 2, lower VRs are observed at the western side of the OU(CDWRA)1 Site, Wing Kei Tsuen and the wetland when compared to the Baseline Scenario. However, the VR of the building separation within Application Site and building separation between the Application Site & OU(CDWRA)1 Site would be slightly higher under Proposed Scenario 2 when compared with the Baseline Scenario. The Proposed Scenario 2 would have slightly higher VR than Baseline Scenario at San Tam Road, Castle Peak Road-Tam Mi, Mo Fan Heung, Yuen Long Bypass Floodway Engineered Wetland, Anchors Academy and Crescent Green, Yau Pok Road, building separation between T9/T10, T2/T9, and along eastern building setback.

5.1.7 For summer condition, the Proposed Scenario 1 and the Proposed Scenario 2 would have slightly lower VR at the northern side of the Application Site including OU(CDWRA)1 Site and open spaces at southeast of Wing Kei Tsuen when compared with Baseline Scenario.

5.1.8 Under the Proposed Scenario 1, higher VRs than the Baseline Scenario are observed at Pok Wai South Road, Relocated Soy factory portion and School Site, Nam Sang Wai Road, Yuen long Bypass Floodway Engineered Wetland, Park Yoho Venezia, Park Yoho Sicilia, Elite Garden, Yau Pok Road, building separations between T11/T12, T9/T10, T2/T9, and along southern building setback.

5.1.9 Under the Proposed Scenario 2, a slightly lower VR is observed at the western side of the OU(CDWRA)1 Site and Wing Kei Tsuen when compared to the Baseline Scenario.

As observed, improvement is found among the area of the building separation between Application Site & OU(CDWRA)1 Site, and within the Application Site would be higher under Proposed Scenario 2 when compared with the Baseline Scenario. The Proposed Scenario 2 would have slightly higher VR than Baseline Scenario at Pok Wai South Road, OU(CDWRA)1 Site, Nam Sang Wai Road, Yuen Long Bypass Floodway Engineered Wetland, Park Yoho Venezia, Tung Shing Lei, Anchors Academy and Crescent Green, Yau Pok Road, building separation between T9/T10, T2/T9, and along southern building setback.

5.1.10 To conclude, the modelling results show that the Proposed Scenario 1 and Proposed Scenario 2 have generally comparable wind performance at the pedestrian level of the area around the Application Site when compared to the Baseline Scenario. Some portions of wind would flow through the building separation between the Application Site & the OU(CDWRA)1 Site, and the building separations within the Application Site. As such, the ventilation performance within the Application Site and along San Tin Highway would be enhanced under annual and summer wind condition. Overall speaking, there would not have any significant air ventilation impact at the immediate vicinity of the Application Site and its surroundings.

Proposed GIC facilities in YL-KTN OZP	Site Area
1. Standard Divisional Fire Station	About 4,000m^2
2. Standard Divisional Police Station	About 5,200m^2
3. Sports/Leisure Centre	About 7,700m^2
4. 30-classroom Primary School	About 6,200m^2

Standard Divisional Fire Station (Tin Shui Wai Fire Station)

Requirements under HKPSG - Ch.3 Community Facilities

(18) Fire Stations	Provision depends on graded response time determined by fire risk category system. Generally 1 standard divisional station is provided for 1 fire division. Provision of standard sub-divisional station and non-standard station depends on local needs.	Site allocation for (a) Standard divisional fire station - 2 960m² with a minimum frontage of 47m.	district
		(b) Standard sub-divisional fire station - 1 800m² with a minimum frontage of 37m. For (a) and (b), the frontage of the site will have to be widened if the run-in to the drill yard is not from the back.	local
		(c) Non-standard fire station no set standard for site requirement.	local
(18) Fire Stations (Cont'd)		(d) Joint divisional fire station and ambulance depot - 3 830m² with a minimum frontage of 80m and a drill yard of 1 635m² behind the divisional fire station building block.	district
		(e) Joint sub-divisional fire station and ambulance depot - 2 670m² with a minimum frontage of 70m and a drill yard of 1 225m² behind the sub-divisional fire station building block.	district

Site Area for Standard Divisional Fire Station in YL-KTN OZP	About 4,000m²
Tin Shui Wai Fire Station	
Site Area	About 3,200m²
Zoning	G/IC
BHR under OZP	No BHR
Existing BH *	20.9mPD

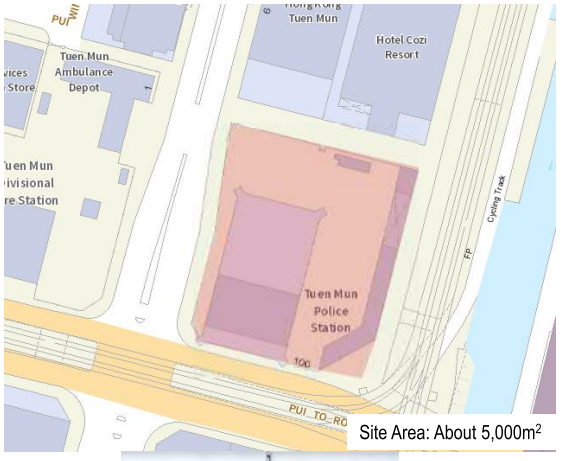
https://geodata.gov.hk/gs/view-dataset?uuid=92bc152a-28f0-4aa2-8a93-031eec932a48&sidx=0

Site Area: About 3,200m²

Standard Divisional Police Station (Tuen Mun Police Station)

Requirements under HKPSG - Ch.3 Community Facilities

(12) District Police Stations	1/200 000 – 500 000 persons. #	About 4 650m² (61m x 76m) fronting onto at least 2 main roads plus similar size married staff quarters.	regional
(13) Divisional Police Stations	1/100 000 – 200 000 persons. #	About 3 000m² (50m x 60m) fronting onto at least 2 main roads.	district
(14) Sub-Divisional Police Stations/Police Posts	No set standard.* To be determined in the light of local factors and other considerations.	Site allocation dependent on building design.	local
(15) Marine Police Stations	No set standard.* To be determined in the light of local factors and other considerations.	Site allocation dependent on building design.	regional



Site Area: About 5,000m²

Site Area for Standard Divisional Police Station in YL-KTN OZP	About 5,200m²
Tuen Mun Police Station	
Site Area	About 5,000m²
Zoning	G/IC
BHR under OZP	60mPD
Existing BH *	58.9mPD

https://geodata.gov.hk/gs/view-dataset?uuid=92bc152a-28f0-4aa2-8a93-031eec932a48&sidx=0

Sports/leisure Centre (Yuen Wo Road Sports Centre)

Requirements under HKPSG - Ch.4 Recreation, Open Space and Greening

Table 8 : Standards of Provision for Recreation Buildings

Built Facility	Provision Standard	Site Area#	Remarks
Sports Centre	1 per 50 000-65 000	0.6 ha (i.e. 100m x 60m)	With*: 8 x badminton, or 2 x basketball, or 2 x volleyball 2 x tennis plus 3 x Squash Courts 1 x Activity/Dance 1 x Fitness Training
Leisure Centre	1 per 50 000	0.6 ha (i.e. 100m x 60m)	May be provided as an alternative to Sports Centre*

Site Area: About 8,200m^2

Site Area for Sports/Leisure Centre in YL-KTN OZP	About 7,700m^2
Yuen Wo Road Sports Centre	
Site Area	About 8,200m^2
Zoning	G/IC
BHR under OZP	No BHR
Existing BH *	18.1mPD

https://geodata.gov.hk/gs/view-dataset?uuid=92bc152a-28f0-4aa2-8a93-031eec932a48&sidx=0

Primary Schools

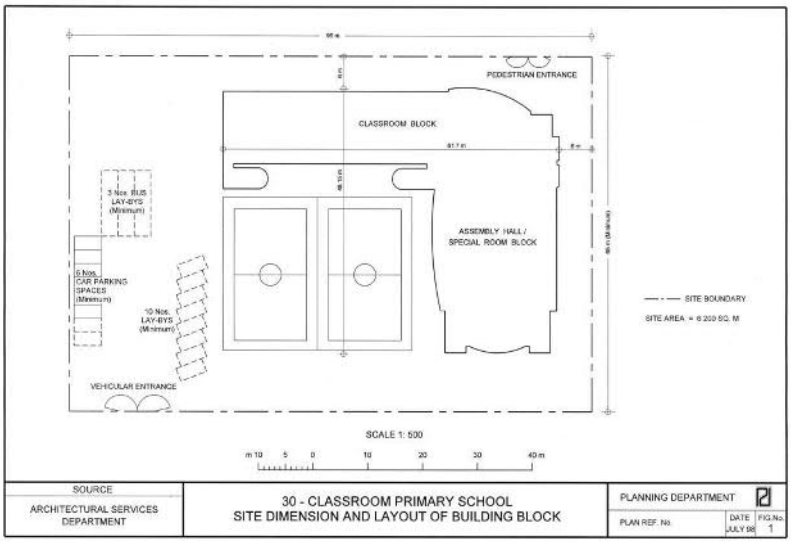
Primary School Designs

2.2.2 For planning purpose, and as a general reference to facilitate the identification and reservation of sites for primary schools, the Architectural Services Department has prepared three different indicative designs for the 30-classroom, 24-classroom and 18-classroom primary schools respectively. Figures 1, 2 and 3 show the general block layout plans for these school designs. According to these general block layout plans, the reference site areas required are as follows:

(a) 30-classroom primary school : 6 200m^2 with a minimum width of 65m (95m x 65m);

(b) 24-classroom primary school : 4 700m^2 with a minimum width of 55m (85m x 55m); and

(c) 18-classroom primary school : 3 950m^2 with a minimum width of 55m (72m x 55m)



LSPS application no. LSPS/002 endorsed by CE in C in November 2022

Gist of LSPS Application No. LSPS/002
(Revised Development Proposal by Applicant)
土地共享先導計劃申請編號 LSPS/002 摘要
（經申請人修訂的發展計劃）

Part One **第一部分**	**Application Site** **申請地點**
1. Applicant 申請人	Topwood Limited, Success King Limited and Richduty Development Limited (parent company: Sun Hung Kai Properties Limited) 合域有限公司、誠君有限公司及富任發展有限公司 （母公司：新鴻基地產發展有限公司）
2. Location/address (*Plan 1: Location Plan*) 位置/地址（*圖 1：位置圖*）	Ho Chau Road, Yuen Long, New Territories (near Tung Shing Lei) (Various lots in D.D. 115 and adjoining Government land) 新界元朗蠔洲路（近東成里）（丈量約份第 115 約多個地段及毗鄰政府土地）
3. Application Site Area (sq.m.) 申請地點面積（平方米）	About 約 57,055 (Including Government land of about 包括政府土地約 20,065sq.m. 平方米)
	Including 包括： - Total Development Site Areas[(1)] 45,441 發展用地總面積[(1)] - Land designated for Access Road and Other Use (Compensation Pond) 11,614 作通道及其他用途（彌償漁塘）的土地
4. Statutory Plan 法定圖則	Approved Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8 南生圍分區計劃大綱核准圖編號 S/YL-NSW/8
5. Zoning 土地用途地帶	"Residential (Group D)" 「住宅（丁類）」

1 Includes Private Development Portion and Public Housing/Starter Homes Portion.
包括私人發展部分及公營房屋／「首置」部分。

Part Two **第二部分**			**Development Proposal** **擬議發展計劃**	
Development Parameters[2] (*Plan 2: Master Layout Plan submitted by the applicant*) 發展參數[2]（*圖2：申請人提交的總綱發展藍圖*）			Private Housing Development Portion 私人房屋發展部分	Public Housing/ Starter Homes Portion 公營房屋／「首置」部分
1. Development Site Area (sq.m.) 發展用地面積（平方米）			About 約 23,340	About 約 22,101
2. Plot ratio 地積比率	住用 Domestic		2.15	4.23
	非住用 Non-domestic		0.09	0.04
3. Gross floor area (sq.m.) 總樓面面積（平方米）	住用 Domestic	Generated under LSPS 因土地共享先導計劃新增	About 約 40,029 [30%]	About 約 93,400 [70%]
		Private Housing Previously approved 先前已獲批准的私人房屋發展	10,150[3]	N/A 不適用
		Total 總數	About 約 50,179	About 約 93,400
	非住用 Non-domestic		About 約 2,245	About 約 800
4. No. of block 幢數	住用 Domestic		0	0
	非住用 Non-domestic		0	0
	綜合 Composite		3	6
5. Maximum Building height/ Maximum No. of storeys 建築物的最高高度／建築物的最高層數			- m米	- m米
			99.9 mPD 米 (主水平基準上)	99.3 mPD 米 (主水平基準上)
			24 Storey(s)層 *Excluding Basements* *不包括地庫*	26 Storey(s)層 *excluding Basements* *不包括地庫*
6. No. of Units 單位數目			1,261	1,868[4]
7. Anticipated Population 預計人口			3,153	5,231[4]
8. Open space 休憩用地（sq. m 平方米）			Not less than 不少於 3,153	Not less than不少於 5,231

2 The development parameters shown are for reference only and subject to detailed technical assessments by the applicant and the infrastructural capacity. They do not represent the eventual parameters to be developed and the details of public housing/Starter Homes to be determined by the Government.
上述所載的發展參數只供參考，並有待申請人提交的詳細技術評估和基礎設施容量再作確實。它們並不代表最終的發展參數及政府決定的公營房屋／「首置」細節。

3. The domestic GFA per previously approved planning application no. Y/YL-NSW/4.
先前已獲批的規劃申請（編號Y/YL-NSW/4）的住用總樓面面積。

4 No. of Units and Anticipated Population of Public Housing/Starter Homes Portion shown are based on the assumptions suggested in the "Land Sharing Pilot Scheme Topical Guideline 1" and are for reference only. The actual figures would be further determined subject to detailed technical assessments by the applicant.
公營房屋／「首置」部分的單位數目及預計人口是根據《土地共享先導計劃專題指引 1》建議的假設而得出，並只供參考。實際數字有待申請人在進行更詳細的技術評估後確實。

Development Area for the Proposed "OU(CDWRA)(1)" : 65,121m²
Development Residential Area (DRA): 44,933.5m²
Wetland Restoration Area (WRA): 20,187.5m²
Private Open Space for residents: Total not less than 5,592m²
(For estimated population of 5,592 people)

Legend

- Proposed "OU(CDWRA)(1)" Zoning Boundary
- Development Site Boundary
- Wetland Restoration Area
- Landscape Buffer
- Fence/Wall
- Railing/Glass balustrade on development platform
- Lawn
- Shrub
- Grass/Reed Planting
- Green Roof
- Bench
- Retained Tree (DRA: 127 nos. WRA: 15 nos.)
- New Tree Planting (DRA: 434nos. WRA: 48nos.)
- Elderly Fitness Court/ Fitness Station
- Children's Play Area
- Trellis
- Swimming Pool
- Water Feature
- Fish Pond
- Wood Deck
- +4.50 Proposed Level
- Pedestrian Entrance/Exit
- Vehicular Entrance/Exit
- Indicative Visitor/ Operator Entrance to the WRA

1. Entrance Plaza designed with water feature creates sense of arrival and character of development.
2. 6-30m Landscape buffer provides landscape and visual integration with surrounding wetland/fishpond character, soften the development edge and screens out human activities.
3. Outdoor swimming pool provides active recreational facilities for the residents to establish a social focus and landscape core in the centre of proposed development.
4. Landscape core designed with leisure lawn, children's play area, elderly fitness court and sitting-out area to provide passive recreational facilities.
5. Preserved tree clusters alongside of existing water channel to continue their contribution to the landscape context. These trees also provide screening to proposed development and soften the development edge.
6. Water Garden designed with water feature as a theme responds to adjacent fishpond/wetland and waterchannel character.
7. Ficus Garden with preserved trees provides strolling path and sitting-out area for residents to relax and enjoy the nature.
8. Courtyard Garden provides sitting-out area and other passive recreational facilities for residents.
9. Meadow Garden with lush and rustic plantings borrows adjacent fishpond/wetland character into the residential landscape.
10. Entrance Plaza with symmetry design and plantings creates sense of arrival to the clubhouse.
11. Leisure Lawn allows flexible green space for relaxing, picnic, morning exercises and family games.
12. Wetland Restoration Area reinstates and maintains 70% of waterbody and 30% of planting area/preserved trees, grass/reed planting and operational spaces on pond bunds.
13. Preserved trees on existing pond bund continue its contribution to the fishpond/wetland context.

Proposed Rezoning from "OU(CDWRA)" to "OU(CDWRA)1" for Comprehensive Residential Development with Wetland Restoration Area at Various Lots in DD104 and Adjoining Government Land, Wing Kei Tsuen, Nam Sang Wai, Yuen Long – S12A Amendment of Plan Application

EXECUTIVE SUMMARY

The Application Site currently falls within the "Industrial (Group D) ("I(D)") and "Open Storage" ("OS") zones in Yuen Long. The Applicant proposes to rezone from "I(D)" and "OS" zones to "Residential (Group E)" ("R(E)") zone in support of a comprehensive development, reserved school site and relocated soy sauce factory (name "R(E)" Site) in rezoning application (No. Y/YL-NSW/9).

A Quantitative Risk Assessment (QRA) has been prepared to assess risk posed by the high pressure town gas pipeline in the vicinity of the Application Site and include recommendations, if necessary, for mitigation measures, protection works and other measures and works to be carried out and implemented within the Application Site to ensure compliance with the risk guidelines as described in Section 4.4, Chapter 12 of the Hong Kong Planning Standards and Guidelines (HKPSG).

The assessment of the risks posed by the existing high pressure town gas pipeline (HPTGP) running along San Tam Road, in the vicinity of the Application Site during Operational Phase (2031), are in compliance with Hong Kong Risk Guidelines [1] for the planning submission.

Key study findings are summarized as below:

Individual Risk

The individual risk contours of 1E-08 and 1E-09 per year were identified for the existing HPTGP and within the proposed study zone. The predicted individual risk level is well below the individual risk criterion as 1E-05 per year from Hong Kong Risk Guidelines.

Societal Risk

The societal risk for Operational Phase (2031) of the Application Site is within "Acceptable" region based on Hong Kong Risk Guidelines.

Conclusion

It could be concluded that the individual risk and societal risk associated with the existing HPTGP are in compliance with Hong Kong Risk Guidelines [1]. As such, no further mitigation measures are required.

1. INTRODUCTION

1.1 Background

1.1.1 The Application Site currently falls within the "Industrial (Group D) ("I(D)") and "Open Storage" ("OS") zones in Yuen Long. The Applicant proposes to rezone from "I(D)" and "OS" zones to "Residential (Group E)" ("R(E)") zone in support of a comprehensive development, reserved school site and relocated soy sauce factory (name "R(E)" Site) in rezoning application (No. Y/YL-NSW/9).

1.1.2 There is another planning application (No. Y/YL-NSW/8) for rezoning the "Other Specified Uses (Comprehensive Development to Include Wetland Restoration Area)" zone ("OU(CDWRA)") to "OU(CDWRA)1" zone for comprehensive development to the north of the Application Site and is submitted under separate submission (name "OU(CDWRA)1 Site").

1.1.3 Both the proposed developments at the R(E) Site and OU(CDWRA)1 Site are tentatively completed at the same time so that both developments are considered together for planning of the infrastructure.

1.1.4 Ramboll Hong Kong Limited is commissioned by the Applicant to prepare the Quantitative Risk Assessment (QRA) based on the MLP. This QRA includes to assess risk posed by the high pressure gas pipeline and all gas installations in the vicinity of the lot and recommendations for mitigation measures, protection works and other measures and works to be carried out and implemented within the lot to ensure compliance with the risk guidelines as described in Section 4.4, Chapter 12 of the Hong Kong Planning Standards and Guidelines (HKPSG).

1.2 The Application Site and Its Environs

1.2.1 The Application Site of about 81,550 m^2 currently zoned as "I(D)" (currently occupied by a soy sauce factory) and "OS" (currently occupied for open storage yard) under the Approved Nam San Wai Outline Zoning Plan (No. S/YL-NSW/8).

1.2.2 The Application Site is bounded by Caste Peak Road – Tam Mi section, San Tin Highway and Tsing Long Highway to the east. To the immediate west is an existing meander zoned "Open Space" ("O"). OU(CDWRA)1 Site is to the immediate north.

1.2.3 The northern portion of the Application Site is currently occupied by a soy sauce factory whereas the southern portion is being used for open storage purpose with containers, trucks and some temporary structures such as shelter and container office. It is noted that the existing soy sauce factory onsite will be relocated to the southern side of the Application Site in future.

1.2.4 The surrounding area to the west is mainly ponds, river and meander. To the further north (north of OU(CDWRA)1 Site) situates some village type developments and open storage yard. The area to the east separated by heavy trafficked road includes Mo Fan Heung and Fung Kat Heung (with factory and open storage uses and some scattered village houses), Sha Po Sewage Pumping Station, Sha Po Tsuen and new residential development (Park Yoho).

1.2.5 **Figure 3-1** shows the Master Layout Plan (MLP), while **Figure 3-2** presents the location of the Application Site and its environment.

1.3 Proposed Scheme

1.3.1 The proposed development comprises 3 portions: (1) residential portion on northern side including 11 numbers (T1 to T12, T4 omitted) of residential towers (14 to 28 storeys) and associated facilities (e.g. clubhouse, carpark), a commercial podium and

a covered transport lay-by; (2) a reserved school site for primary school located at the middle and nearby road carriageway on east side to enable access; and (3) the soy sauce factory to be relocated from north to south side. There are altogether 3115 residential flats provided (with average 2.6 persons per flat).

1.3.2 Another proposed development at OU(CDWRA)1 Site will consist of residential and GIC uses.

1.3.3 Both the Proposed Developments at the Application Site (R(E) Site) and OU(CDWRA)1 Site are tentatively completed for occupation by 2031.

1.4 Scope of Work and Objectives

1.4.1 The objective of this QRA Study is to evaluate if the risks posed from the existing HPTGP running along Sam Tam Road, in the vicinity of the Application Site during Operational Phase (2031) are in compliance with Hong Kong Risk Guidelines in terms of individual risk and societal risk.

1.4.2 The scope of work for this QRA Study includes:

- 1.6 km high pressure town gas pipeline

1.4.3 The following scenario was assessed in this QRA Study:

- Operational Phase – to consider the existing HPTGP, the projected surrounding population within the proposed study zone and the additional population introduced from the Application Site in operational year 2031.

1.4.4 The detailed tasks included:

- To identify all potential hazardous scenarios associated with the existing HPTGP to the surrounding off-site population;
- To carry out a QRA Study expressing risks in terms of both individual risk and societal risk;
- To evaluate the risk level by comparing with Hong Kong Risk Guidelines [1] in terms of individual risk and societal risk, respectively; and
- To identify and assess practicable and cost effective risk mitigation measures, if required.

1.5 Report Structures

1.5.1 The remainder of this report is structured as follows:

- Section 1: summarises the proposed QRA methodology adopted for this QRA Study;
- Section 2: describes the Application Site and the existing HPTGP running along San Tam Road;
- Section 3: summarises the proposed population estimation approach, the off-site population within the proposed study zone for the HPTGP, and the meteorological data obtained from the proximity weather station;
- Section 4: identifies the set of hazardous scenarios related to the HPTGP operation;
- Section 5: presents the frequency assessment of hazardous scenarios;
- Section 7: presents the consequence assessment of hazardous outcomes;
- Section 8: describes the risk summation and risk measure of Hong Kong Risk Guidelines;
- Section 9: summarises the study findings for both individual risk and societal risk;
- Section 10: presents the conclusions; and
- Section 11: lists out the references cited in this QRA Study.

2. PROPOSED QUANTITATIVE RISK ASSESSMENT METHODOLOGY

The elements of this QRA Study are depicted in **Figure 2-1**, and each of the elements is depicted as follows:

2.1 Hazard Identification

This QRA Study concerns the fire and toxic hazards associated with the town gas being transported in the HPTGP. The associated failure may be partial or catastrophic as a result of corrosion, fatigue, etc. These failures are taken into account for the detailed analysis in this QRA Study.

2.2 Frequency Analysis

This task involves the frequency analysis for each of the identified hazardous scenarios. Frequency analysis includes quantification of the frequency of the initiating events (e.g. pipework failure), and conducting event tree analysis to model the development of an event to its final outcomes (flash fire, jet fire, fire ball, toxicity if not being ignited).

2.3 Consequence Analysis

Consequence analysis involves the modelling of the physical effects, and *SAFETI 6.7* [5], was adopted in this QRA Study. Consequence modelling results were used to establish levels of harm to critical equipment at varying distances from the identified hazards. Probit equations are used to relate levels of harm to exposure.

2.4 Risk Summation and Assessment

Risk summation was conducted using *SAFETI 6.7* which calculates the risk based on different failure outcomes, failure event location, and weather conditions prevailing proximity to the HPTGP. This step involves the integration of consequence and frequency data to give the risk results in terms of the required risk measures.

The products of the frequency and consequence for each outcome event above are summed and the total risks are expressed in individual risk and societal risk terms. Individual risk results were presented as iso-risk contours overlaid on the HPTGP plot plan. The acceptability of the risks for the off-site population was compared with Hong Kong Risk Guidelines [1].

2.5 Risk Mitigation

Practical and cost-effective risk mitigation measures based on this QRA Study are recommended, if required, to demonstrate the risks are ALARP.

3. APPLICATION SITE AND HPTGP DESCRIPTION

3.1 Application Site

The proposed development comprises 3 portions: (1) residential portion on northern side including 11 numbers (T1 to T12, T4 omitted) of residential towers (14 to 28 storeys) and associated facilities (e.g. clubhouse, carpark), a commercial podium and a covered transport lay-by; (2) a reserved school site for primary school located at the middle and nearby road carriageway on east side to enable access; and (3) the soy sauce factory to be relocated from north to south side. There are altogether 3115 residential flats provided (with average 2.6 persons per flat).

The Master Layout Plan (MLP) of the Application Site is depicted in **Figure 3-1**, while **Figure 3-2** presents the location of Application Site, proposed study zone and the existing HPTGP.

3.2 Existing High Pressure Town Gas Pipeline

With reference to IGEM/TD/2 [16], "The site-specific F-N curve should be compared to the IGEM/TD/1 F-N Criterion envelope. As the F-N criterion envelope relates to 1.6 km length of gas pipeline, the site-specific F-N curve is obtained by factoring risk values by a factor equal to 1.6 km divided by the site interaction distance."

Based on the information provided by the Hong Kong and China Gas Company Ltd (HKCG), the existing HPTGP in the vicinity of the Application Site is 600 mm in diameter, designed working pressure at 35 barg and running along San Tam Road, with pipeline length greater than 1.6 km.

A proposed highest risk 1.6 km pipeline segment with higher population density, with the location of interest (Application Site) located at about the start of the 1.6 km pipeline, running along San Tam Road with the following population groups selected for the Application Site and adjacent site with planning application (No. Y/YL-NSW/8) submitted at the same time, and adopted in this QRA Study for the detailed risk analysis. The risks were then compared with Hong Kong Risk Guidelines [1].

- Residential Buildings;
- Industrial Buildings;
- Schools; and
- Leisure Areas.

The selected segment of the existing HPTGP within the proposed study zone is depicted at the Population Map of **Appendix 3-1**, and **Table 3-1** shows the technical specifications of the existing HPTGP, which were provided by HKCG.

Table 3-1 Technical Specification for the existing HPTGP running along San Tam Road

Parameter	Specification
Pipe Diameter (Nominal)	600 mm (High Pressure)
Pipe Length	Around 2 km
Design Pressure	35 barg
Maximum Operating Pressure	35 barg
Hydraulic Test Pressure	900 psi
Air Test Pressure	100 psi
Pipe Material	Steel
Pipe Wall Thickness	12.7 mm
External Coating	400 Micron Fusion Bonded Epoxy Coating
Internal Coating	50 Micron of Two Pack Epoxy
Jointing Method	BS4515 & BGC/PS/P2
Year of Construction	1992-1995
Non-Destructive Test of Jointing	100% X-Ray
Backfilling Material	Surrounded by 150 mm Thick Zone, 2 Fresh Water Sand Plus Selection Soil
Cathodic Protection	Sacrificial Anode (Magnesium) at about 300 m Interval
Minimum Depth	1.1 m
Material Grading (Pipe/ Fitting)	API 5L X 42/ X 52
Welding Specification	BGC/PS/P2
Isolation Valves (Cameron Full Bore Ball Valve)	Upstream: BV24118 and BV 16117 at Fairview Interchange Downstream: BV24138 at Nam Sang Wai Road
Pipe Length between Isolation Valves	2.7 km

3.3 Physical Properties

3.3.1 Physical Properties of Town Gas

The HKCG pipeline network within the proposed study zone is designed to supply town gas produced at the Tai Po Gas Production Plant to consumers. The composition of town gas and other physical properties is given in **Table 3-2**.

Table 3-2 Gas Composition & Other Physical Property Data of Town Gas

Parameter	Details
Composition	
• Hydrogen	49.0% volume
• Methane	28.5% volume
• Carbon dioxide	19.5% volume
• Carbon monoxide	3.0% volume
Average molecular weight	15.1 kg $kmol^{-1}$
Density	0.5 (at atmospheric condition) (kg m^{-3})
Specific heat ratio	1.3
Gross Calorific Value	17.3 MJ m^{-3} (28.0 MJ kg^{-1})

3.4 Safety System Description

3.4.1 Pipeline Leak Detection/Shutdown System

The HKCG pipeline network and stations are monitored and controlled through the supervisory control and data acquisition (SCADA) system by the grid control centre, which is manned twenty four (24) hours a day by competent control engineers.

In case of abnormal pressure variation over the network, an alarm will be initiated and the grid control engineer will take immediate action for investigation and remedy. Emergency team is always on stand-by and they will arrive at the scene within thirty (30) minutes in case of emergency.

4. SURROUNDING POPULATION

4.1 Population Consideration

The population surrounding the existing HPTGP consists of residential buildings, leisure facilities, and public facilities such as public roads. The population considered in this QRA Study is summarised in **Appendix 3-1**.

The population data within the proposed study zone was estimated based on online available population data mentioned at Section 4.1.5 or population estimation assumption as presented at **Table 4-3**.

4.1.1 Proposed Study Zone

The proposed study zone for the existing HPTGP is defined as 200 m from the pipeline alignment based on 1% fatality thermal radiation distance. The approach to determine the proposed study zone is consistent with IGEM/TD/2[16].

4.1.2 Types of Population Considered

Three (3) types of population were considered in this QRA Study:

- Pedestrian population on footpaths and pavements next to hazardous facilities;
- Road traffic population; and
- Building population.

The population estimation methods for each type of population are outlined in the following section. For areas not supported by surveys or where information is not available from other pertinent sources of information, the assumptions were made based on consultant's best judgment.

4.1.3 Pedestrian Population

Pedestrian flow on the pavement was assessed by a site survey conducted in June 2022. The site survey was aimed to collect site specific information such as the width of pavement, surrounding conditions of the public traffic roads etc. The results from the survey were analysed and used to calculate population densities for all pavements within the proposed study zone. Based on the population data from the site survey, the population density can be calculated from the following equation.

No existing building population was identified for the proposed development sites, it was conservatively assumed 100% growth for the pedestrian within the proposed study zone for the operation phase of the proposed development.

$$\text{Pedestrian population (persons m}^{-2}) = P / t / v / W$$

where:

P is the number of pedestrians passing a given point (person);
t is the total time the survey is carried out (second);
W is the pavement width (m); and
v the average walking velocity of pedestrian (m s^{-1}).

4.1.4 Road Traffic Population

Road traffic population on the public roads was estimated from a combination of the following databases:

- Site survey in June 2022; and
- Annual Traffic Census 2020 (ATC 2020) [20] (latest available census data at the time of preparation of this report)

A population density approach was adopted for estimating the population within vehicles on the road. The traffic density information adopted in this QRA Study was estimated based on the data in ATC 2020 to determine the distribution of vehicle types. The road population density can be calculated:

$$\text{Population Density (persons/m}^2\text{)} = \text{AADT} * P_{avg} / 1{,}000 / 24 / V * L$$

where:

AADT is Annual Average Daily Traffic from 2020 Annual Traffic Census;
P_{avg} is the average number of persons per vehicle;
V is the vehicle speed in km hr^{-1}; and
L is the road length in meter, based on actual road length data.

The average number of persons per vehicle can be calculated:

$$P_{avg} = \sum_{i=1}^{N} (f_i \times P_i)$$

where:

f_i is the fraction of vehicle type i (based on 2020 ATC); and
P_i is the mean occupancy of vehicle type i (based on 2020 ATC).

Typically, vehicle speed of 50 km hr^{-1} for non-highway route sections and vehicle occupants were conservatively assumed as outdoor with regards to consequence models (i.e. flash fire/ toxic cloud, etc.). In addition, vehicle speed of 80 km hr^{-1} was used for Yuen Long Highway, and vehicle speed of 100 km hr^{-1} was used for San Tin Highway and Tsing Long Highway.

The traffic population at each public road within the proposed study zone was estimated using the average vehicle occupancy from Core Station 5025 "Yuen Long Highway (from Tin Shui Wai West Int to Lam Tei Int)". Average traffic growth was obtained based on the data provided from past 5 years Annual Traffic Census. As the highest traffic growth rate amongst the roads was estimated as 1.8%, a 2% annual traffic growth rate was conservatively proposed and adopted in this QRA Study for each road.

Table 4-1 Traffic Growth Rate from Annual Traffic Census

Roads	Year					Growth Rate (%)
	2016	2017	2018	2019	2020	
Yuen Long Highway	-6.2%	-0.7%	3.2%	4.0%	-15.3%	-3.0%
Tsing Long Highway	-0.9%	-0.3%	1.4%	-6.0%	-20.1%	-5.2%
San Tin Highway	7%	-2%	-5%	5.4%	-9.9%	-0.8%
Castle Peak Road – Tam Mi	4.2%	-1.6%	11.2%	-0.6%	-4.1%	1.8%

4.1.5 Land and Building Population

The land and building population within the proposed study zone was estimated based on the following sources and verified by a site survey conducted in June 2022:

- Planning Data from Town Planning Board [18];
- Centamap; and
- Geographic Information System (GIS) database.

For those population which cannot be achieved by the above approach is made reference to the *EIA Study for Operation of the Existing Tai Lam Explosive Magazine at Tai Shu Ha, Yuen*

Long for Liantang/ Heung Yuen Wai Boundary Control Point Project, Register No.: AEIAR-193/2015 [17] to estimate the population in buildings (both existing buildings and approved developments) within the proposed study zone.

Buildings within or extended partly into the proposed study zone were included in this QRA Study. Rather than considering density-based averages of population, the analysis was based on individual buildings. The task of assessing population building-by-building is substantial but is necessary to accurately model the F-N pairs with high N values.

Building Identification

The Lands Department (LD) of the HKSAR Government maintains a GIS database of buildings in Hong Kong. To identify buildings within the proposed study zone, a recent GIS map layer containing all buildings (LD) is obtained. Additionally, the GIS building height information for most of the buildings (but usually not podiums or other similar structures) are available from the same source.

Building Attributes, Usage and Population Identification

There is no publicly available data on the population of individual buildings in Hong Kong. Therefore, to provide a basis for estimating the number of people in a building, it is necessary to identify each building's attributes and usage.

The buildings and structures in the GIS database are classified as: regular building (BP), building under elevated structure (BUP), open-sided structure (OSP), proposed building (PBP), podium (PD), podium under elevated structure (PDU), ruin (RU) and temporary structure (TSP). Using the above information, the information from property developers' websites as well as aerial photographs, the actual or likely usage category of buildings identified is determined and each building is assigned to one of the following building usage categories:

- Residential Building;
- Industrial Building;
- Car Park;
- Fire Station;
- Commercial Building;
- Kindergarten;
- Station; and
- Leisure.

It is noted that unless their usage could be determined from other available sources, the GIS categories OSP, TSP and RU, were assumed to be unpopulated.

Following this, the same information sources are used to sub-categorize buildings by other attributes, such as the number of floors. Details on the building attributes and categories and associated assumptions are presented below.

Number of Floors

Building height data is available from the GIS database for most buildings and the number of floors was estimated from these data, assuming three (3) m height per floor. For most of the high-rise residential buildings (excluding the housing estates) the floor number information, considered more accurate, is also available from the property developer website. When neither of the above information will be available and where it will be possible, the number of floors will be estimated from 3-dimensional aerial photos. In the event of an absence of data from any of the above sources, such buildings are covered by site survey carried out.

Residential Buildings

Based on Population and Household Statistics Analysed by District Council District 2020, the average domestic household size for Yuen Long District is 2.8 which was adopted to estimate the residential population within the proposed study zone in this QRA Study.

According to latest Projections of Population Distribution 2021 – 2029 issued by Planning Department [23], the population of Tertiary Planning Unit (TPU) 525 is summarised in **Table 4-2**. According to the latest Project of Population Distribution 2021 – 2029 [23], the projected population up to year 2029 is available. For a conservative approach, growth factor of 1.200 was adopted in this QRA Study.

Table 4-2 Population Growth Factor for Residential of Tertiary Planning Unit 525

Year	2019[1]	2020[1]	2021[1]	2022[1]	2023[1]	2024[1]	2025[1]	2031[2]
TPU 547								
Population	1,400	1,500	1,500	1,500	1,500	1,500	1,600	1,680
Growth Factor	1.000	1.071	1.071	1.071	1.071	1.071	1.143	1.200

Note:

1. *Population number for year 2019 – 2025 is from Projections of Population Distribution 2021 – 2025.*
2. *Population number for year 2031 is projected from Projections of Population Distribution 2021 – 2025.*

For most of the high-rise residential buildings, the total number of units is available from the property developers' websites or Home Affairs Department of the HKSAR Government [14]. For all the remaining buildings, including the village houses and estate high-rises, the number of units per floor will be estimated from the floor area, assuming 1 unit per about 65 m^2 (700 square feet). Based on this assumption, small structures in village setting of area less than about 30 m^2 will be assumed to be unpopulated.

Other Buildings

While residential type buildings are well defined, less information is available for other types of buildings such as commercial, industrial, etc. The approach to estimate other building population generally follows that adopted in the EIA Study [17], and is based on typical Hong Kong building structure, usage, height, and typical capacity of public facilities. The details are presented in **Table 4-3**. In the application of typical values from **Table 4-3**, further refinements will be made based on building height and area and taking into account the maximum density of people in most non-residential building as one person per 9 m^2 (the Code of Practice for the Provision of Means of Escape in Case of Fire [21]).

Table 4-3 Building Population Assumptions

Category	**Building Height /Size[1]**	**Assumption**			**Total**
Carpark		It is assumed 0.2 people per parking space			
Primary School		If number of classes and number of staff are not provided, it is assumed there will be 30 students per class, 4 classes per form and a total of 30 staff employed			750
Industrial		Floors	Unit	People/Unit	
	H	25	8	8	1,600
	M	15	6	8	720
	L	8	6	6	288

Using the above approach, a database providing characterization of each building by their broad attributes including population was developed.

4.2 Time Period and Occupancy

Since population can vary during different time periods, the analysis considered three (3) time categories (weekday day, weekend day and night). These are summarized in **Table 4-4**.

Table 4-4 Population Time Periods

Time Period	**Description**
Weekday Day	7am to 7pm, Monday – Friday
Weekend Day	7am to 7pm, Saturday – Sunday
Night	7pm to 7am, Monday – Sunday

The occupancy of buildings during each time period was based on assumptions as listed in **Table 4-5**. For vehicle and pavement populations, distribution across various time periods was based on site surveys.

Table 4-5 Population Distribution

Type	Occupancy (%)		
	Weekday Day	**Weekend Day**	**Night**
Industrial Building (1)	100%	10%	10%
Leisure (1)	70%	100%	0%
Carpark (1)	70%	70%	10%
MTR/bus terminus (1)	70%	50%	10%
Residential Building (1)	50%	80%	100%
Commercial (1)	100%	100%	10%
Substation (1)	100%	10%	10%
Pedestrian (1)	100%	100%	10%
Construction Site	100%	50%	0%
Petrol Station (1)	50%	50%	1%
Hotel (1)	50%	80%	90%
School (1)	100%	10%	0%

Notes:

1. *This population distribution table is based on the approved Safety Case Study Report for Towngas Transmission Network 2012 in 2015 [22].*
2. *The population fraction to be considered outdoor is assumed as 5% for the private residential area, 1% for the commercial area and 100% for vehicle.*

4.3 Protection Factors

Protection factors were used to factor down the population so that only those exposed are considered in the risk summation for certain types of incidents such as fireball, flash fire, jet fire and toxic incidents.

For example, the dimensions of the vapour cloud can be defined in terms of distances to lower flammable limit (LFL) in the case of flash fires and distances to 1% fatality concentration for toxic effects. Protection factors can be determined by considering the dimensions of the gas plume/flame envelope as a function of height and distance from source with respect to the height of each building. The proportion of the building outside of the gas plume is the protection factor.

Further details are given in the following paragraphs.

4.3.1 Height Protection Factors

Since the affected areas for jet fire and flash fire are limited (i.e. do not cover the entire building for high rise structures), a height protection factor is considered to exclude the population residing on higher floors of a building (higher than 10 m or 3 storeys). It is because the consequence of hazardous scenarios is less than 10 m height based on the detailed consequence modelling using *SAFETI 6.7*.

In case of fireball events, a protection factor is also applied so that those exposed population and fireball rise effect are considered in the risk summation. The population of the building above the top of the fireball is protected.

4.3.2 Indoor Protection Factors

A protection factor was also considered for effects from radiation and toxic gas for population indoors.

Protection for indoor population against all the fire events (jet fire and flash fire) and toxic effects was considered by assuming that the indoor fatality rate is about 10% of the outdoor fatality rate.

For persons within the fireball radius/ criteria zone, it is assumed that 50% of person would be killed and 50% indoor protection factor [13] should be applied in this QRA Study.

4.3.3 Shielding Factors

A shielding factor is generally used to take credit for the shielding of buildings by other buildings from fireball effects [13].

By superimposing the hazard zone from fireball events on an area map, a shielding factor should be derived for the house or building in the immediate vicinity, as follows:

- The proportion of the building within the fireball diameter, for buildings wholly within the fireball shielding is afforded only to the people at the back of the building;
- For buildings wholly outside the fireball, the proportion of the building not in the direct line of sight of the existing HPTGP is considered protected. Outside the fireball diameter, only radiant heat effects are considered. Radiant heat from the flame surface travel in straight lines and therefore only affects that part of a building directly in front; and
- For buildings which are partly inside and partly outside the fireball diameter, that proportion of the building outside the fireball diameter is considered shielded by the rest of the building.

4.4 Ignition Factors

In order to calculate the risk from flammable materials, information is required on the ignition sources which are present in the area over which a flammable cloud may drift. The probability of a flammable cloud being ignited as it moves downwind over the sources can be calculated. The ignition source has three factors:

- Presence factor is the probability that an ignition source is active at a particular location;
- Ignition factor defines the "strength" of an ignition source. It is derived from the probability that a source will ignite a cloud if the cloud is present over the source for a particular length of time; and
- The location of each ignition source is specified. This allows the position of the source relative to the location of each release to be calculated. The results of the dispersion calculations for each flammable release are then used to determine the size and mass of the cloud when it reaches the source of ignition.

The ignition sources are site specific. The typical ignition sources are road vehicles and the population nearby.

Roads are line ignition sources in *SAFETI 6.7*. The presence factor for a line source is determined based on traffic densities, average speed along the road and the length of the road element. The location of the line source is drawn onto the site map in *SAFETI 6.7*. Probability of ignition for a vehicle is taken as 0.4 in 60 seconds based on TNO Purple Book [12].

SAFETI 6.7 will automatically allow for people acting as ignition sources. These are based on the population data. The presence of such sources (e.g. cooking, smoking, heating appliances, etc.) is derived directly from the population densities in the area of concern.

The details of probability of delayed ignition should be referred to *Assumption Number 1.2.5* in **Appendix 4-1**.

4.5 Meteorological Data

The proximity weather station to the existing HPTGP is Lau Fau Shan Weather Station. Therefore, wind speed, wind stability and direction data taken from Lau Fau Shan Weather Station between 2016 and 2020 were adopted for this QRA Study.

With reference to "*Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)*"[12] at least six (6) representative weather classes are recommended to be used in QRA Study, covering the stability conditions of stable, neutral and unstable, low and high wind speed. At least the following six (6) weather classes have to be covered in terms of Pasquill classes.

Stability class	**Wind speed (1)**
B	Medium
D	Low
D	Medium
D	High(2)
E	Medium
F	Low

Note:

(1): Low wind speed corresponding to 1 – 2 m/s
Medium wind speed corresponding to 3 – 5 m/s
High wind speed corresponding to 8 – 9 m/s

(2): WIND speed higher than 5 m/s is assumed to be wind speed category "High".

The details of meteorological data analysis can be referred to *Assumption 1.1.1* in **Appendix 4-1.**

The probability of each weather state for each direction during the day and night are rationalized for analysis based on the requirements presented in "*Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)* [12]. Based on the analysis on raw data, the summary of meteorological data is shown in **Table 4-6**, which was used for this QRA Study. The meteorological data adopted has been evaluated with the latest "Summary of Meteorological and Tidal Observations in Hong Kong: from Hong Kong Observatory and it was confirmed the meteorological data used is still valid. [24]

The wind speeds are quoted in units of meters per second, (m/s). The atmospheric stability classes refer to:

A – Turbulent
B – Very Unstable
C – Unstable
D – Neutral
E – Stable
F – Very Stable

Atmospheric stability suppresses or enhances the vertical element of turbulent motion. The vertical element of turbulent motion is a function of the vertical temperature profile in the atmosphere (i.e the greater the rate of decrease in temperature with height, the greater the level of turbulent motion). Category D is neutral and neither enhances nor suppresses turbulence.

Table 4-6 Meteorological Data from Lau Fau Shan Weather Station (Year 2016 - Year 2020)

		Probability												
		Day						Night						
	Wind Speed (m/s)	3.1	1.7	4.3	7.3	3.1	1.6	1.0	1.8	4.1	7.4	3.1	1.6

5. HAZARD IDENTIFICATION

5.1 Main Hazards from the HPTGP

The main hazard associated with the existing HPTGP is loss of containment leading to an accidental town gas leak. Town gas is flammable and explosive due to the presence of methane and hydrogen, and carbon monoxide respectively. Town gas is also toxic due to presence of carbon monoxide.

5.2 Flammable & Toxic Effects of Town Gas

5.2.1 Flammable Effects

Town gas contains mainly hydrogen, methane and carbon monoxide which are flammable. The respective LFL for hydrogen, methane and carbon monoxide are summarised below:

- LFL for hydrogen is 4% (volume);
- LFL for methane is 5.3% (volume); and
- LFL for carbon monoxide is 12.5% (volume).

The LFL for the town gas mixture is estimated to be 5.5% (volume).

5.2.2 Toxicity

Town gas also contains carbon monoxide which is toxic in nature. Carbon monoxide is a chemical asphyxiant, and it can combine with haemoglobin in the blood displacing oxygen.

The Immediately Dangerous to Life and Health (IDLH) value for carbon monoxide is 1,200 ppm [1].

5.3 Review of Pipeline Incidents

A review of major international failure/ accident databases was undertaken to identify past incidents involving transmission gas pipelines. The following databases have been reviewed:

- US Gas Pipeline Incident Database, 1984 to 2013 [3]; and
- European Gas Pipeline Incident Database, EGIG 1970 to 2016 [4].

The objective of such review is to identify the causes and consequences of the pipeline failures.

5.4 Causes of Loss of Containment

5.4.1 High Pressure Town Gas Pipeline

The principal causes for loss of containment of pipeline, based on an analysis of wide incident database (see Section 5.3), are:

- Corrosion – internal and external;
- Third party interference during road construction, due to work on other underground utilities, construction work on adjoining areas, etc.;
- Material defect;
- Construction defect;
- Improper operations;
- Defect caused by pressure cycling; and
- External – flooding, subsidence, etc.

The contribution of each of the above causes to the overall failure frequency taken from foreign database is discussed in detail. Appropriate factors were applied to reflect the actual operating condition of the HPTGP.

6. FREQUENCY ANALYSIS

Approach to frequency analysis was based on the application of world-wide historical data for similar systems modified suitably to reflect local factors. Although it may be preferable to use local data to estimate failure frequencies, such data are not sufficient enough to provide statistically significant results.

6.1 Failure Rate for the HPTGP

6.1.1 Failure Rate for HKCG HPTGP

There is no any historical record of failure for the HPTGP. Therefore, failure frequency of gas transmission pipeline was extracted from US and EGIG databases for analysis and projection. Based on the detailed analysis as explained at *Section 6.1.3,* the modified failure rates based on application of the US and EGIG data to the HKCG system are 2.30×10^{-5} and 8.81×10^{-6} per km-year, respectively. Both modified US and EGIG failure rates data are at the similar order of magnitude of 10^{-5} per km-year.

It is noted that HKCG operates and maintains its pipelines to very stringent standards. The failure rate of HKCG's gas pipeline is considered to be within the modified failure rates, i.e. between 2.30×10^{-5} and 8.81×10^{-6} per km-year and at a lower side. A pipeline failure rate of 10^{-5} per km-year was, therefore, proposed and adopted in this QRA Study. This proposed pipeline failure rate is also same as the proposed failure rate for underground high pressure town gas pipeline stipulated in "Guidance Note for High Pressure Town Gas Installations in Hong Kong" published from Electrical and Mechanical Services Department (EMSD)[25].

6.1.2 Analysis of Local Failure Database for HKCG HPTGP

HKCG commenced operations on high pressure transmission network at 35 barg operating pressure in 1986 and the total length of high pressure network currently in operation in Hong Kong is around 205 km. The total pipeline operating years is therefore estimated as $32 \times 205 = 6{,}560$ km-year, assuming the current length of the network for the past 32 years. In reality, the network would have gradually expanded over the years and therefore the total pipeline operating years may be only about 50% of the above figure. The data on km-year is therefore not statistically significant to estimate failure frequencies. In comparison, the US Gas Pipeline database is based on a total pipeline operating data of 14.0 million km-year.

6.1.3 Analysis of International Failure Database for Gas Pipeline

The approach proposed in this QRA Study is to consider international failure databases and derive an appropriate failure frequency for the HKCG HPTGP taking into account specific pipeline design and environment features. The main failure databases considered are the failure database for US natural gas pipelines and the failure database for European gas pipelines.

The relevant international databases reviewed in this QRA Study are:

- US Gas Transmission & Gathering Pipelines, 1984 to 2013 [3]; and
- The European Gas Pipeline Incident data Group (EGIG), 1970 to 2016 [4].

The operating km-year for US gas transmission pipeline between 1984 and 2013 is 14.0 million km-year while for European gas pipelines between 1970 and 2016, it is 4.41 million km-year. It can be seen that in comparison to HKCG's operating experience, these databases are based on a much larger operating experience world-wide and therefore are more representative in terms of inclusion of various possible failure modes.

An extensive review and analysis of these databases were conducted to derive failure rates appropriate to the HPTGP for this QRA Study. A brief description of the databases is included in the following paragraphs.

Analysis of US Gas Failure Data

The US Department of Transportation (DOT) Research and Special Administration maintains databases for pipelines incidents (reportable) in the United States and pipeline mileage data. Under the reporting requirements, events involving a gas release that causes death, injury or damage in excess of US$50,000 needs to be reported. Due to the nature of reporting, it is possible that minor incidents of leaks are underrepresented.

The US Gas Pipeline Incident Database has been filtered to consider only onshore transmission pipelines and only those failures involving the body of the pipeline. There have been 2,359 incidents involving loss of containment during the period from 1984 to 2013. The total pipeline km-year during this period is 1.4×10^7, and this gives a failure rate of 2,359 / $(1.4 \times 10^7) = 1.69 \times 10^{-4}$ per km-year.

A breakdown of the 2,359 pipeline incidents according to cause of failure is summarised at **Table 6-1**. Some of the pipeline failure causes are not applicable to the pipeline at this QRA Study while others may be more relevant. These are discussed in the following paragraphs.

Table 6-1 Summary of US Gas Onshore Transmission Pipeline Incidents by Cause 1984-2013

Cause of Failure	Description of Cause	No. of Incidents	%
1 EXTERNAL FORCE		**918**	**38.9%**
1.1 Weather		188	8.0%
1.1.1 Earth Movement	Subsidence, landslides, earthquake	109	4.6%
1.1.2 Temperature		11	0.5%
1.1.3 Heavy Rain/ Flood		34	1.4%
1.1.4 Lightning		19	0.8%
1.1.5 High Wind		11	0.5%
1.1.6 Cold Weather	Thermal stress, frozen components, frost heave	4	0.2%
1.2 Excavation Damage		613	26.0%
1.3 Other Forces Damage	Previous damaged pipe, vandalism, Damage by fire/explosion, vehicle not engaged in excavation, previous mechanical and intentional damage	117	5.0%
2 CORROSION		**453**	**19.2%**
2.1 External	Failure of coating/ CP	273	11.6%
2.2 Internal		180	7.6%
3 WELDS, MATERIALS & EQUIPMENT FAILURE	Environment-cracking related, body of pipe, pipe seam, butt & fillet weld, joint, fitting or component, malfunction of control/relief equipment, threaded connection or coupling failure, non-threaded connection failure	**529**	**22.4%**
4 INCORRECT OPERATIONS	Includes incorrect valve position	**47**	**2.0%**

Cause of Failure	Description of Cause	No. of Incidents	%
5 OTHER	Miscellaneous and unknowns	**412**	**17.5%**
TOTAL		**2,359**	**100%**

Discussion on Failure Causes Relevant to the HKCG HPTGP

Weather

Cold weather and high wind which contributes 0.2% to overall failures is not relevant for the HKCG HPTGP and therefore is excluded. Lightning is also considered not relevant since the transmission pipelines are buried while the above ground stations are installed with lightning protection facilities and thus a 100% reduction factor is assumed.
In addition, since the pipeline is buried, failure due to temperature issues is not applicable and a 100% reduction factor is assumed.

Subsidence/ Landslides

Buried pipelines are not affected by debris deposition due to landslides. However, if buried pipelines are within the initiation zone of a landslide, earth movement could cause rupture. Therefore, failures due to landslides are not expected. Landslides which contribute to 90% of failures are therefore excluded. However, incidents due to subsidence are considered.

Subsidence could occur due to excavations in the vicinity. Earth movement due to earthquakes could affect the pipeline (see paragraph below).

Earthquakes

Large earthquakes may cause varying degrees of damage to the pipeline. The magnitude of the earthquake (peak ground acceleration) required to catastrophically rupture the pipeline is estimated at 0.6 g/MMS-XI. This is equivalent to an average vulnerability of general building stock in Hong Kong (i.e. low rise buildings up to 10 storeys).

The pipeline failure frequency used in this QRA Study is derived based on US DOT database, which accounts for failures due to earthquakes. A 90% reduction is therefore assumed.

Flooding

The pipeline is buried with minimum 1.2 m (1.5 m for the laid section of 4.36 km) earth cover and no portion of the pipeline is exposed; and therefore a 100% reduction is assumed.

Third Party Damage

The potential for third party damage depends on the surrounding environment. Also, wall thickness, design factor, buried depth and impact protection such as concrete cover, all have a combined influence on whether third party activity could cause damage to the pipeline and if so, the nature of damage (a full bore rupture or hole leak).

The databases for transmission pipelines in the US and Europe mainly consist of those in rural areas and therefore have a design factor of 0.72, the requirement under ASME/ANSI B31.8 for gas pipelines [9], BS 8010 [10] and IGEM/TD/1 [11]. Also, the US gas pipeline database may include pipelines with earth cover less than 1.1 m (ANSI/ASME B31.8 requires only 0.6 m as minimum cover for Location Class 1 and 0.75 m for Location Classes 1, 2 and 3) and therefore, application of these failure rates to the HKCG HPTGP may be conservative.

The wall thickness of HKCG HPTGP is 12.7 mm while the design factor is 0.3. The gas pipeline is also normally buried at 1.1 m deep and is extra protected by the steel capping for those with shallow cover. The potential for damage due to third party is therefore significantly reduced. The only hazard is third party activity involving utilities, construction work.

Potential misjudgement by the contractor or carelessness could cause damage to the pipeline. Other reasons for a low probability of third party damage in Hong Kong include:

- Most of the high pressure gas main are laid under expressways/ carriageways where excavation is strictly controlled;
- It is a legal offence to damage a gas pipe without taking safety precautions while carrying out the works; and
- Self-initiated trench inspection work has greatly enhanced the co-ordination with construction work in the vicinity of gas main resulting in more than 86% reduction of third party since 1998.

It is worthwhile to note that about 30% of the incidents due to third party damage in the US [3] occurred despite prior notification to the pipeline operator. The pipeline operator therefore needs to follow up with site visits and inspection. Given the high standards of operation and maintenance of HKCG HPTGP, a 90% reduction of this failure cause is assumed.

External Corrosion

The US Gas Pipeline Incident Database includes pipelines which are not protected. The HKCG HPTGP is protected by protective epoxy coating and sacrificial anode cathodic protection system. Therefore, the failure rate corresponding to cathodically protected pipeline is adopted. A 50% reduction is therefore assumed.

Failure Rate vs Age of Pipeline

The US Gas Pipeline Incident Database includes pipelines of various ages. Increase in failures due to ageing is observed principally due to external corrosion and fatigue, but the failure database does not contain sufficient information to perform a statistical analysis. The age of pipelines that have failed is available but no data is provided on the age of all the pipelines that are in operation. The normal design life for a pipeline is considered as 40 years, however, it can be observed from the incident database that pipelines as old as 60 years are also in operation. Therefore, it is concluded that the age of pipeline has no relation to their failure rate and hence not considered in the failure rate data.

Internal Corrosion

The gas transported by the pipeline consists of mainly dry hydrogen and methane. There are no other components which could cause internal corrosion. Furthermore, the pipelines are generally protected by an internal coating which also enhances their protection from internal corrosion.

Internal corrosion which constitutes 7.6% of all failures in the database is therefore discounted for the HKCG HPTGP.

Welds & Materials

Welds and materials constitute a significant 22.4% of failures. There has been no incident involving HKCG gas pipelines due to poor welding or material defect. HKCG adopt 100% non-destructive testing (NDT) as per IGEM/TD/1 which is more stringent than ANSI B31.8 which requires only a minimum of 75% of the welds to be inspected by NDT for pipeline operating at 20% SMYS or more in class 4 location. Based on these factors, a 90% reduction is assumed for this category.

Other Forces Damage

Previous damaged pipe, vandalism, damage by fire/ explosion, vehicle not engaged in excavation, previous mechanical and intentional damage are not anticipated as these kinds of damage are likely specific to aboveground pipelines. Since aboveground pipelines of HKCG are found in only pressure regulating stations. All pressure regulating stations are surrounded

by boundary walls/ fences and usually unmanned. Based on this reason, a 90% reduction is assumed for this category.

Incorrect Operations

These failure cases mentioned include the malfunction of control or relief equipment, etc. This is not applicable to HKCG HPTGP because they are in general all welded and normally do not consist of any equipment such as relief, control, etc., therefore a 90% reduction factor is assumed for failures due to the HPTGP.

Conclusions

The discussion above on the applicability of various failure causes in the US Gas Onshore Transmission Pipeline Failure Database to the HKCG HPTGP and the modification factors to be considered in are summarised in **Table 6-2**. The modified failure rate is derived as 2.30×10^{-5} per km-year based on 322 incidents in 1.40×10^{7} pipeline km-year.

Table 6-2 Modification of US Gas Onshore Transmission Pipeline Failure Data

Cause of Failure	No. of Incidents	%	Reduction factor	No. of incidents considered
1 EXTERNAL FORCE	**918**	**38.9%**		**85**
1.1 Weather	188	8.0%		11
1.1.1 Earth Movement	109	4.6%	90%	11

Analysis of EGIG Data

The EGIG is an industry group of nine (9) companies comprising all of the major gas transmission system operators in Western Europe.

The EGIG database for the period 1970 to 2016 includes 1,366 incidents against the total exposure of 4.11×10^6 km-year [4]. This gives an overall frequency of 3.10×10^{-4} per km-year. The major causes of incidents are given in **Table 6-3**.

Table 6-3 EGIG Incidents Breakdown by Causes

Cause	Proportion (1970 to 2016)
External Interference	46.49%
Corrosion	16.79%
Construction Defects/ Material Failure	16.46%
Ground Movement	4.52%
Hot Tap	8.39%
Others	7.34%

External interference remains the main cause of incidents with gas leakage.

Incidents due to corrosion occur mainly in thin-walled pipelines (less than 10 mm). With regard to external corrosion, pitting is the major contributor. All the incidents with internal corrosion are caused by manufactured gas and not due to natural gas. Although town gas is also a manufactured gas, it has been found that it has no corrosive property and therefore, no internal corrosion has been indicated in the HPTGP.

Construction defects and material failures are more frequent in lines constructed before 1963. Significant improvements in construction methods since 1980's have contributed to substantial reduction in failures due to this cause.

The EGIG database provided a more detailed breakdown of the database depending on the diameter of the pipeline as well as the thickness of the pipeline. This is very useful in determining the failure rate that is most relevant to the pipeline at this QRA Study. As the diameter and wall thickness of the pipeline considered in this study are 750 mm and 12.7 mm, respectively, the accident involving pipelines in the category of 23 to 34 inches and 10 to 15 mm are considered. The revised failure frequencies breakdown in terms of failure causes are included in **Table 6-4**.

Similar to the US database, appropriate modification factors are applied to each of the failure cause categories in **Table 6-4** based on consideration of parameters relevant to the HKCG HPTGP.

Table 6-4 EGIG Incidents - Breakdown of Failure Frequency (1970 - 2016)

Cause	Frequency per year	Reduction Factor Applied	Resultant Frequency
External Interference for Diameter Class 575 mm to 850 mm (23" to 34")	3.00×10^{-5}	90%	3.00×10^{-6}
Corrosion for Wall Thickness 10 to 15 mm	1.25×10^{-6}	50%	6.25×10^{-7}
Construction Defects/ Material Failure for Pipes Constructed in 1984 to 2013	1.50×10^{-5}	90%	1.50×10^{-6}
Ground Movement	1.40×10^{-5}	90%(2)	1.40×10^{-6}
Hot Tap by Error (1)	2.60×10^{-5}	100%	0.00
Others	2.28×10^{-5}	90%	2.28×10^{-6}
Total	**1.09×10^{-4}**		**8.81×10^{-6}**

Notes:

(1) The practice of hot tapping is not adopted by HKCG and hence not considered relevant.

(2) Based on EGIG database, flood, landslide and lightning contributed to about 90% of ground movement; hence based on the discussion in this section, a reduction factor of 90% is applied.

Conclusions

The modified frequency derived from the EGIG database is 8.81 x 10^{-6} per km per year.

6.2 Pipeline Hole Size Distribution Adopted in this QRA Study

6.2.1 Hole Size Distribution for HKCG HPTGP

Based on the detailed review of international failure database for the HPTGP, the summary of hole size distribution is presented at **Table 6-5**. The detailed review and explanation for the hole size distribution adopted in this QRA Study are summarised at *Sections 6.2.2* and *6.2.3.*

Table 6-5 Hole Size Distribution for the HPTGP

Category	Hole Size	Proportion
Rupture	Full bore	1%
Puncture	100 mm	19%
Hole	50 mm	30%
Leak	25 mm	30%
	10 mm	20%
Total		**100%**

6.2.2 Review of International Failure Database for Gas Pipeline

It is difficult to estimate the hole sizes caused by pipeline damage from incident databases since there is no clear definition on how the incidents must be classified, whether as rupture, puncture or leak and how these have been reported.
The hole size distribution presented in US Gas Onshore Transmission Pipeline Failure Data (1984 – 2013) is as follows:

Line Rupture	28.0%
Leak	35.0%
Other	37.0%

The hole size distribution presented in EGIG data (1970 - 2013) for diameter class 575 mm to 850 mm (23" to 34") is as follows:

Line Rupture	15.7%
Hole	19.3%
Pinhole/ Crack	65.1%

The hole size distribution presented in UK Health and Safety Executive (UK HSE) [15] for pipework whose diameter is ranged from 500 mm to 1,000 mm is as follows:

Line Rupture	3.2%
Puncture (1/3 pipework diameter > 100 mm)	8.1%
Leak (25 mm)	32.3%
Pin (4 mm)	56.5%

The hole size distribution presented in UK HSE [15] for above ground transfer pipeline is as follows:

Line Rupture (> 100 mm)	2.4%
Large Hole (>75 ≤ 110 mm)	12.4%
Small Hole (>25 ≤ 75 mm)	25.1%
Pin (≤ 25 mm)	60.0%

However, UK HSE failure database has no particular failure database for underground (buried) pipeline.

6.2.3 Pipeline Hole Size Distribution Analysis

Pipeline Line Rupture Scenario Probability

The probability of line rupture scenario from the US is relatively high about 30% while that from EGIG database for diameter class 575 mm to 850 mm (23" to 34") is about 15%. However, based on HKCG historical failure database, the scenario of line rupture for the HPTGP has never occurred. Also, based on UK HSE [15] failure database, the probability of a line rupture scenario for pipework whose diameter is ranged from 500 mm to 1,000 mm and above ground transfer pipeline are 3.2% and 2.4%, respectively.

Due to design factor of 0.3 on the HPTGP, it is less likely to have leaks propagating to a line rupture scenario; therefore, it is recommended the probability of a line rupture scenario of 1% was adopted in this QRA Study.

Pipeline Puncture (100 mm) Scenario Probability

According to UK HSE [15], the probability of a puncture (100 mm) scenario is relatively low, about 10% for both pipework and above ground transfer pipeline. However, it is not possible to identify the probability of a puncture (100 mm) scenario from both US and EGIG database. Nevertheless, it is conservatively assumed the probability of a puncture (100 mm) scenario for the HPTGP as 19% adopted in this QRA Study.

Pipeline Hole (50 mm) Scenario Probability

The probability of a small hole (>25 - ≤ 75 mm) scenario is about 25% for above ground transfer pipeline from UK HSE failure database [15] and 65.1% from EGIG database, but the probability of hole size (50 mm) scenario is not available from US database and UK HSE failure database for pipework whose diameter is ranged from 500 mm to 1,000 mm. It is recommended the probability of a small hole size (50 mm) scenario as 30% adopted in this QRA Study.

Pipeline Leak (25 mm) Scenario Probability

Based on US database, and UK HSE failure database [15] for pipework whose diameter is ranged from 500 mm to 1,000 mm, the probability of a leak (25 mm) scenario is 35%, and 32.3%, respectively. Therefore, it is reasonable to assume the probability of a leak (25 mm) scenario as 30% adopted in this QRA Study.

Pipeline Small Leak (10 mm) Scenario Probability

The probability of a pin hole (≤25 mm) scenario is 60.0% based on UK HSE failure database for above ground transfer pipeline, and that of pin (3.2 mm) scenario is 56.5% from UK HSE failure database for pipework. Since both database show relatively high failure frequencies for a small leak scenario, it is more suitable to recommend the probability of a small leak scenario (10 mm) as 20% adopted in this QRA Study for the HPTGP.

6.3 Event Tree Analysis

An event tree analysis (ETA) was performed to model the development of each event from the initial release to the final outcome. The event tree takes into consideration whether there is an immediate ignition, a delayed ignition, or no ignition. Orientation of the release is also considered. A generic event tree for the underground HPTGP is depicted in **Figure 6-1**. The possible outcomes include jet fires, flash fires, fireballs, and toxic releases.

The various branches in the event trees are discussed in the following sections.

6.3.1 Orientation of Release

The consequences of a gas release are dependent on the release rate and the orientation of the release. Failures that occur on the top portion of the pipeline result in vertical jet releases (unobstructed) and are governed by momentum jet dispersion/ momentum jet fires. Failures that occur from the bottom portion of the pipeline lose momentum due to impingement/ obstruction with the surrounding earth (for buried sections of pipeline) and therefore are governed by buoyant plume rise followed by Gaussian dispersion. For releases from flanges and valves, the release may be horizontal or inclined in addition being vertical. The probability of orientation of releases considered in this QRA Study is listed in **Table 6-6**.

Table 6-6 Probability of Orientation of Release

Equipment/ Pipework	Vertical	Horizontal	Inclined (45°)
Pressurised Gas Pipeline (buried)	0.5	-	0.5

6.3.2 Ignition Probability

The potential for ignition depends not only on the presence of ignition sources but it is also a function of release rate and duration of release. Larger releases are more likely to be ignited

than smaller releases. Similarly, releases that continue for a longer duration have a higher probability of ignition than short duration releases.

Based on a number of sources, Cox et al. [2], an ignition probability was estimated based on spill size for gas and liquid releases as given in **Table 6-7**.

Table 6-7 Ignition Probability for Plant Releases

Leak Release Rate	**Probability of Ignition**	
	Gas	**Liquid**
Minor (<1 kg s^{-1})	0.01	0.01
Major (1 to 50 kg s^{-1})	0.07	0.03
Massive (>50 kg s^{-1})	0.30	0.08

6.4 Event Outcome Frequencies

Combining the failure rates with leak size distribution and probabilities for release orientation and ignition probability allows the frequency of each event outcome to be calculated.

7. CONSEQUENCE ANALYSIS

Consequence analysis was involved the following steps:

- Source term modelling; and
- Physical effects modelling.

The source term modelling comprises the application of appropriate discharge rate models to define the release rate, release duration and the quantity of release. The source term modelling output forms the inputs to physical effects modelling such as the dispersion and fire modelling.

7.1 Source Term

The gas dispersion modelling of *SAFETI 6.7* was adopted to estimate the release rates, which were used to determine the immediate ignition probability.

7.2 Physical Effects Modelling

The hazardous scenarios following a release may include:

- Fireball;
- Jet fire;
- Flash fire; and
- Unignited dispersion leading to toxic effects (only 35 barg operating pressure).

7.2.1 Fireball Effects

A release caused by a line rupture of the HPTGP may give rise to a fireball scenario upon an immediate ignition. Due to the transient nature of a release for high pressure condition, the mass of flammable gas entering the fireball for the HPTGP (35 barg) is difficult to estimate. A method proposed by D A Carter in [6] is to calculate at each time step the quantity of fuel that can be consumed in a fireball scenario with the same burning time as the time since the start of the release. The size of the fireball is determined by equating these two values.

Numerical modelling was carried out to estimate the release rate and the mass released for different duration. The mass/duration correlation in the fireball model used in HSE's MISHAP98 model [7], is given as,

$$M = Max\left[\left(29t/\ 4.5A\right)^3, \left(29t/\ 8.2A\right)^6\right]$$

where:

M is the flammable gas mass in tonnes;
t is the duration in seconds; and
A is a substance-specific factor.

Substance-specific factor is derived from the stoichiometric combustion equation and is equal to 30.4 for natural gas.

Based on the above, the fireball mass is estimated as about 15 tonnes with a duration of about 12 seconds for the HPTGP at high pressure condition of 35 barg.

The consequence analysis for fireball scenario was conducted by *SAFETI 6.7* [5] with Roberts (HSE) method as the calculation method, which adopts the following equation for estimation of fireball diameter.

$$R = A \times M^{1/3}$$

where:

R is the radius of fireball;
A is a substance-specific factor; and
M is the mass of the fireball.

Persons caught in the open within the fireball diameter are assumed to be 100% fatality. Due to the presence of multi-storey buildings, consideration of fireball rise is critical in estimating the potential for causing injury/fatality to persons at higher levels.

Lihou and Maund [8] suggest a simple relationship to calculate the height of rising methane fireballs:

$$H = 10t$$

where,

t is the duration of fireball, seconds; and
H is the final height, metres.

Based on consequence modelling by *SAFETI 6.7*, the final height of fireball scenario is about 147.5 m and therefore all the floors in a multi-storey building are most likely to be engulfed by the rising fireball.

However, since the release associated with the line rupture scenario was dominated by momentum effects, the initial height of the fireball is likely to be at some elevation from the ground level considerably mitigating the effects at /near ground level.

7.2.2 Jet Fire Effects

Jet fires result from ignited releases of pressurised flammable gas or superheated/ pressurised flammable liquid. The momentum of the release carries the materials forward in form of a long plume entraining air to give a flammable mixture. Combustion in a jet fire occurs in the form of a strong turbulent diffusion flame that is strongly influenced by the momentum of the release.

7.2.3 Flash Fire Effects

In the event that a release is not ignited immediately, the gas will disperse with the wind and may subsequently be ignited if it reaches an ignition source. Portions of the cloud within flammability limits will then burn in a flash fire. The dispersion distance to the LFL will be used as the hazard footprint. Dispersion modelling was performed using *SAFETI 6.7* for the representative weather conditions at a particular site surrounding.

7.2.4 Toxic Effects of Carbon Monoxide

In case the released gas is not ignited, the dispersing cloud may cause toxic effect to people due to the presence of carbon monoxide in town gas. The concentration corresponding to each fatality level can be derived from Probit equation assuming an exposure time of thirty (30) minutes, which is summarised in Assumption Number 1.3.5 in **Appendix 4-1.**

8. RISK SUMMATION & EVALUATION

The hazardous scenarios, the associated frequencies, meteorological data, population data, and suitable modelling parameters identified were input into *SAFETI 6.7*. All risk summation was modelled using *SAFETI 6.7*. The inputs to the software comprise of:

- Release cases file detailing all identified hazardous scenarios, and their associated frequencies and probabilities;
- Release location of hazardous scenarios either at given points or along given routes;
- Weather probabilities file that details the local meteorological data according to a matrix of weather class (speed/stability combinations) and wind directions;
- Population data with the number of people and polygonal shape as well as indoor faction; and
- Ignition sources with ignition probabilities in a given time period.

The detailed *SAFETI 6.7* input file is presented in **Appendix 8-1**.

8.1 Risk Measures

The two (2) types of risk measures considered in this QRA Study are societal risk and individual risk.

8.1.1 Societal Risk

Societal risk is defined as the risk to a group of people due to all hazardous scenarios arising from a hazardous installation or activity. The simplest measure of societal risk is the rate of death or potential loss of life (PLL), which is the predicted equivalent fatality per year. The PLL is calculated as follows:

$$PLL = f_1N_1 + f_2N_2 + f_3N_3 + \ldots\ldots + f_nN_n$$

where:
f_n is the frequency; and
N_n the number of fatalities associated with the nth hazardous scenarios.

Societal risk can also be expressed in the form of an F-N curve, which represents the cumulative frequency (F) of all hazardous scenarios leading to N or more fatalities. This representation of societal risk highlights the potential for accidents involving large numbers of fatalities.

8.1.2 Individual Risk

Individual risk may be defined as the frequency of fatality per individual per year due to the realisation of specified hazardous scenarios. Individual risk may be derived for a hypothetical individual present at a location 100% of time or a named individual considering the probability of his presence etc.

8.2 Risk Evaluation

The risks derived for the existing HPTGP during Operational Phase (2031) of the Application Site were evaluated by comparing against the risk criteria in Hong Kong Risk Guidelines [1].

8.2.1 Hong Kong Risk Guidelines

The individual risk criteria specify that the risk of fatality to an off-site individual should not exceed 10^{-5} per year. The individual risk is normally calculated in Hong Kong taking into account occupation or presence factors, protection factors etc. It is generally accepted that the same individual risk criteria should also apply for transport operations.
The societal risk guidelines in Hong Kong are shown in **Figure 8-1**. There are three regions indicated on the figure:

- Unacceptable region;
- ALARP region where risk is tolerable providing it has been reduced to a level ALARP; and
- Acceptable region where risk is broadly acceptable.

From an analysis of the above risk results, the dominant contributors to risk were identified and measures to mitigate them may be specified. Such measures may either seek to reduce the likelihood of hazardous scenarios occurring or to reduce the impact of the hazardous scenarios should they occur, to ALARP.

9. RESULTS AND DISCUSSION

9.1 Individual Risk

The individual risk contours of 1E-08 and 1E-09 per year for the existing HPTGP are depicted in **Figure 9-1**.

The individual risk contour of 1E-09 is well confined within the proposed study zone of the HPTGP, all credible hazardous scenarios with frequency higher than 1E-09 per year were considered in this QRA Study. The predicted individual risk level is well below the individual risk criterion as 1E-05 per year from Hong Kong Risk Guidelines.

9.2 Societal Risk

Potential Loss of Life

The societal risk for Operational Phase (2031) of the Application Site were expressed in terms of PLL, which is 1.98E-06 per year for the existing HPTGP within the proposed study zone.

The detailed breakdown of PLL for Operational Phase (2031) are presented in **Table 9-1,** in which the major risk contributors are from fireball scenario at night time, weekday and weekend day.

Table 9-1 Breakdown of Potential Loss of Life – Operational Phase 2031

Ranking	Scenario	Description	PLL
1	HPUGP_UG_Rup_FB_WN	Weekday Night - Fireball of catastrophic rupture of high pressure town gas pipeline	8.28E-07
2	HPUGP_UG_Rup_FB_WDD	Weekday Day - Fireball of catastrophic rupture of high pressure town gas pipeline	7.67E-07
3	HPUGP_UG_Rup_FB_WED	Weekend Day - Fireball of catastrophic rupture of high pressure town gas pipeline	3.71E-07
4	HPUGP_UG_Rup_100mm_V_WDD	Weekday Day - Flammable effect of 100 m leak from high pressure town gas pipeline	3.27E-09
5	HPUGP_UG_Rup_NFB_WDD	Weekday Day - Flammable effect of catastrophic rupture from high pressure town gas pipeline (Inclined release)	2.06E-09
Other			8.05E-09
Total			**1.98E-06***

Note*: Potential loss of life value identified from risk summary report is slightly different from the PLL value identified from F-N curves.

F-N Result

The F-N results for the existing HPTGP in comparison with Hong Kong Risk Guidelines [1] is presented in **Figure 9-2.** The societal risk for Operational Phase (2031) of the Proposed Development is within "Acceptable" region based on Hong Kong Risk Guidelines [1].

10. CONCLUSION

A QRA study was conducted to assess if the risks posed by the existing HPTGP for the Operational Phase (2031) of the Application Site are in compliance with Hong Kong Risk Guidelines [1].

Individual Risk

The individual risk contours of 1E-08 and 1E-09 per year were identified for the existing HPTGP and within the proposed study zone. The predicted individual risk level is well below the individual risk criterion as 1E-05 per year from Hong Kong Risk Guidelines.

Societal Risk

The societal risk for Operational Phase (2031) of the Application Site is within "Acceptable" region based on Hong Kong Risk Guidelines.

Conclusion

It could be concluded that the societal risk and individual risk associated with the existing HPTGP are in compliance with Hong Kong Risk Guidelines [1]. As such, no further mitigation measures are required.

Appendix 4-1

Assumptions for this QRA Study

1.1 SURROUNDING DATA ANALYSIS

1.1.1 Meteorological Data

Assumption Number: 1.1.1

As per Appendix 4.B of "*Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)*" [3], at least six representative weather classes are recommended to be adopted in this QRA Study, covering the stability conditions of stable, neutral and unstable, low and high wind speed. At least the following six (6) weather classes have to be covered in terms of Pasquill classes.

Stability Class	Wind Speed (1)
B	Medium
D	Low
D	Medium
D	High
E	Medium
F	Low

(1): Low wind speed corresponding to 1 – 2 m s^{-1}
Medium wind speed corresponding to 3 – 5 m s^{-1}
High wind speed corresponding to 8 – 9 m s^{-1}

Several rules will be applied to classify the observations in the six weather classes:

1. Observations in the Pasquill stability classes A, A/B, B and B/C are grouped to class B while the wind speed of the weather class is equal to the average wind speed of the observations.

2. Observations in the Pasquill stability classes C, C/D, D are grouped to class D while the wind speed of the weather class is equal to the average wind speed of the observations. Wind speeds below 2.5 m s^{-1}, between 2.5 m s^{-1} and 6 m s^{-1} and above 6 m s^{-1} are classified as the wind speed categories low, medium and high respectively.

3. Observations in the Pasquill stability classes E and F are allocated on the basis of the wind speed. Wind speeds below 2.5 m s^{-1} and above 2.5 m s^{-1} are classified as weather classes F and E respectively. The wind speed in each weather class is equal to the average wind speed of the observations in the weather class.

Assumption Number: 1.1.1

The allocation of six (6) representative weather classes is shown in following figure.

Wind Speed	A	B	B/C	C	C/D	D	E	F
< 2.5 m s^{-1}	B medium			D low			F low	
2.5 – 6 m s^{-1}				D medium			E medium	
>6 m s^{-1}				D high				

Data available can be separated for night-time and daytime, in which case, the period of the day attributed to daytime should have the daytime and night-time statistics added correctly.

The mean temperature of 23.3°C and relative humidity of 78% recorded at the Hong Kong Observatory between years 1981–2010 were used in the modelling.

1.1.2 Surface Roughness

Assumption Number: 1.1.2

The roughness parameter reflects the average roughness over which cloud is dispersing. For consequence modelling conducted using *DNV Phast Risk*, a value of 50 cm should be selected representing a conditions of parkland, bushes, and numerous obstacles.

1.2 FREQUENCY ANALYSIS

1.2.1 Failure Frequency Database

Assumption Number: 1.2.1

Regarding the HPTPG, the failure frequency is assumed as 10^{-5} per km-year adopted in this QRA Study.

1.2.2 Release Hole Size Considered in this QRA Study

Assumption Number: 1.2.2

The following representative leak sizes of the HPTGP should be proposed to consider in this QRA Study:

- Partial failure resulting in a 10 mm hole representing a minor leak;
- Partial failure resulting in a 25 mm hole representing a small leak;
- Partial failure resulting in a 50 mm hole representing a significant leak;
- Partial failure resulting in a 100 mm hole representing a large leak; and
- Full bore rupture release to represent an instantaneous rupture.

The hole size distribution considered for the HPTGP is as follows:

Category	Hole Size (mm)	Proportion
Line Rupture	Full bore	1%
Puncture	100 mm	19%
Hole	50 mm	30%
Leak	25 mm	30%
	10 mm	20%

1.2.3 Release Orientation Probability

Assumption Number: 1.2.3

The consequences of a release from the pipeline depend on the orientation of release. Failures that occur on the top portion of the pipeline result in vertical jet release (unobstructed) and are governed by momentum jet dispersion/ momentum jet fires.

Failures that occur from the bottom portion of the pipeline lose momentum due to impingement/ obstruction with the surrounding earth (for buried sections of pipeline) and therefore are governed by buoyant plume rise followed by Gaussian dispersion, which is considered as inclined orientation release.

The probability of orientation of release from hole up to 100 mm size considered in this QRA Study is listed in following table.

Orientation of release may not be relevant for full bore failures, which are more likely to result in an upward release following the displacement of each cover. Therefore, full bore failures are considered completely unobstructed.

Equipment/ Pipeline	Vertical	Horizontal	Inclined (45°)
Pressurised Gas Pipeline (buried)	0.5	-	0.5

1.2.4 Ignition Probability

Assumption Number: 1.2.4

The potential for ignition depends not only on the presence of ignition sources but it is also function of release rate and duration of release. Larger releases are more likely to be ignited than smaller release. Similarly, release that continue for a longer duration have a higher probability of ignition than short duration releases.

Based on Cox, Lees, Ang et al [1], the ignition probability is estimated based on spill size for gas and liquid release as given in following table. The immediate ignition is estimated based on release rate from Cox et al. [1].

Leak Size	**Probability of Ignition**	
	Gas	**Liquid**
Minor (< 1 kg s^{-1})	0.01	0.01
Major (1 to 50 kg s^{-1})	0.07	0.03
Massive (> 50 kg s^{-1})	0.30	0.08

1.2.5 Probability of delayed ignition

Assumption Number: 1.2.5

As per Appendix 4.A of "Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)" [3], the probability of ignition a time interval of one minute for a number of sources is listed as following table:

Source	Probability of Ignition in one minute
1. Point Source	
motor vehicle	0.4
flare	1.0
outdoor furnace	0.9
indoor furnace	0.45
outdoor boiler	0.45
indoor boiler	0.23
ship	0.5
ship transporting flammable materials	0.3
fishing vessel	0.2
pleasure craft	0.1
diesel train	0.4
electric train	0.8
2. Line Source	
transmission line	0.2 per 100 m
road	Note 1
railway	Note 1
3. Area Source	
chemical plant	0.9 per site
oil refinery	0.9 per site
heavy industry	0.7 per site
light industrial warehousing	as for population
4. Population Source	
residential	0.01 per person
employment force	0.01 per person

Note 1:
The ignition probability for a road or railway near the establishment or transport route under consideration is determined by the average traffic density. The average traffic density, d, is calculated as:
$d = NE/v$
where:
N: number of vehicles per hour (hr^{-1})
E: length of a road or railway selection (km)
v: average velocity of vehicle (km hr^{-1})

1.3 CONSEQUENCE ANALYSIS

1.3.1 Source Term Modelling

Assumption Number: 1.3.1

Most leak sources are at ground level or near ground level. However, taking into account that most release consists of light ends which are buoyant, 1.0 m is considered an accurate representative height for modelling purposes in this QRA Study.

The averaging time considered for dispersion modelling is 18.75 seconds.

1.3.2 Fireball Effect

Assumption Number: 1.3.2

With regard to fireball, a 100% fatality is assumed for any person outdoors within the fireball radius.

Fatality rates due to exposure to thermal radiation from fireball to persons without protective clothing should be determined by "Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)" [3] Probit function, as follows:

$$Pr = -36.38 + 2.56 \times \ln(Q^{4/3} \times t)$$

where

Pr	Probit corresponding to the probability of death (-)
Q	heat radiation (W m^{-2})
t	exposure time (s)

The exposure time, t, is limited to maximum of twenty (20) seconds.

1.3.3 Jet Fire Effect

Assumption Number: 1.3.3

Fatality rates due to exposure to thermal radiation from jet fire to persons without protective clothing should be determined by "Guidelines For Quantitative Risk Assessment, CPR 18E (Purple Book)" [3] Probit function, as follows:

$$Pr = -36.38 + 2.56 \times \ln(Q^{4/3} \times t)$$

where

Pr	Probit corresponding to the probability of death (-)
Q	heat radiation (W m^{-2})
t	exposure time (s)

The exposure time, t, is limited to maximum of twenty (20) seconds.

1.3.4 Flash Fire Effect

Assumption Number: 1.3.4

With regard to flash fires, a 100% fatality is assumed for any person outdoors within the flash fire envelope. The extent of the flash fire is considered to be the distance to 100% of LFL.

1.3.5 Toxicity Effect (Carbon Monoxide)

Assumption Number: 1.3.5

In case the released gas is not ignited, the dispersing cloud may cause toxic effect to people due to the presence of carbon monoxide. Fatality rates due to toxic exposure is determined by the Probit function, as follows:

$$Y = a + b \times \ln(C^n \times t)$$

Where:

Y is the Probit corresponding to the probability of death;

a, *b*, *n* are the constants describing the toxicity of a substance;

C is the concentration of the toxic material in mg m^{-3} or ppm, and

t is the exposure time in minutes.

For this QRA Study, *a* is taken as -7.4, *b* is taken as 1 and *n* is taken as 1 for concentration in mg m^{-3} based on Purple Book.

The exposure time was taken as thirty (30) minutes for off-site public if it is assumed that no breathing apparatus for off-site public.

1.3.6 Protection Factor

Assumption Number: 1.3.6

Protection factors are used to factor down the population so that only those exposed to hazardous scenarios are considered in the risk summation for certain types of incidents such as fireball, jet fire, flash fire and toxic incidents.

Three types of protections are considered in this QRA Study:

1. Height Protection Factors

Since the affected areas for jet fire and flash fire are limited (i.e. do not cover the entire building for high rise structures), a height protection factor is considered to exclude the population residing on higher floors of a building (higher than 10 m or 3 storeys). It is because the consequence of hazardous scenarios is less than 10 m height based on *PHAST Risk* modelling.

In case of fireball scenario, no such protection factor is applied as the diameter of the fireball and the rise of fireball likely engulfs the whole building height if the buildings along the route are mainly low to medium rise.

2. Indoor Protection Factors

A protection factor is considered for effects from thermal radiation and toxic gas for indoor population. Protection for indoor population against all fire scenarios including jet fire, flash fire and fireball) and toxic effects is considered by assuming that the indoor fatality rate is about 10% of the outdoor fatality rate.

For persons within the fireball radius, it is assumed 50% of the outdoor fatality rate.

3. Shielding Protection Factors

A shielding factor is generally used to take credit for the shielding of buildings by other buildings from fire effects.

By superimposing the hazard zone from fireball scenario on an area map, a shielding factor is derived for the houses or buildings in the immediate vicinity, as follows:

- An indoor protection factor of 50% is applied to the closet buildings, i.e. which stand facing directly the pipeline route; and
- A shielding factor of 50% is applied only to these buildings located behind the closet buildings along the pipeline route.

Appendix 6-1

Full List of Failure Scenarios

APPENDIX 6-1 FULL LIST OF FAILURE SCENARIOS

The full list of the failure scenarios, the corresponding frequencies and consequence distances for underground high pressure town gas pipeline are presented in **Table 1**

Table 1 Failure Scenarios of Underground High Pressure Towngas Pipeline (600 mm)

Scenario Tag	Event	Frequency per km	Consequence Distance (d) (m)
01_UG_10mm_V	JF	1.00E-08	3.60

09_UG_Rup_FB	FB	3.00E-08	187.00
10_UG_Rup_nFB	FF	2.80E-08	124.00
10_UG_Rup_nFB	TX	4.20E-08	24.50

Note:
Consequence distance based on LFL for flash fire and 1% fatality for other events (jet fire, toxic and fireball)
UG is underground
_V is vertical release
_I is inclined release
JF is jet fire
FF is flash fire
TX is toxic release
FB is fireball

	Departmental Comments	Responses to Comments
1.	**Comments of the District Lands Officer/Yuen Long, Lands Department**	
1.1	The application site ("the Site") involves 2 private lots nos. 1910 RP and 1743 S.C RP and adjoining Government land in D.D. 107.	Noted.
1.2	As quoted by the applicant, the Site has an area of about 81,550 m^2 (including about 15,714 m^2 Government land), which should be subject to further verification and survey. In case of any discrepancy in site area found, the proposed development parameters will have to be revised accordingly.	Noted.
1.3	As per the A Book and land search records, Lot 1910 RP in D.D. 107 is held under Yuen Long New Grant No. 781 for the purpose of the manufacture of soy, sauce, preserved fruits or vegetables or Chinese sweetmeats, while Lot 1743 S.C RP in D.D. 107 is an old schedule agricultural lot held under Block Government Lease and subject to a Short Term Waiver No. 2788 for the purpose of ancillary use to container storage yard.	Noted. The proposed Explanatory Statement has been slightly updated with reference to Yuen Long New Grant No. 781. Please refer to **Appendix A** for reference.
1.4	It is noted that the applicant, being the owner of Lot 1743 S.C RP in D.D. 107, has reached preliminary consensus with the owner of Lot 1910 RP in D.D. 107 on the planning scheme which involves relocation of the existing soy sauce factory. The ownership details will be checked upon receipt of formal land application.	Noted.
1.5	Should the Town Planning Board decide to approve the application, the registered owners have to apply for land exchange/lease modification to implement the planning scheme. However, there is no guarantee at this stage that the land exchange/lease modification application (including the granting of additional Government land) would be approved. Such application will be dealt with by this department acting in the capacity of the landlord at our discretion, and if it is approved under such discretion, the approval would be subject to such terms and conditions including amongst others, the payment of premium and administrative fee as may be imposed by this department.	Noted.

	Departmental Comments	Responses to Comments
1.6	The southern side of the Site is subject to Shek Kong Airfield Height Restriction of 139 to 149 mPD.	Noted. The proposed maximum building height of the Proposed Development would be not more than 115mPD. It would not exceed the Shek Kong Airfield Height Restriction of 139 to 149mPD.
1.7	As per para. 4.4 of the Planning Statement, 4 separate accesses will be provided at Castle Peak Road – Tam Mi for the respective uses namely (i) Proposed Residential Portion; (ii) Covered Transport Lay-by; (iii) Reserved School Site; and (iv) Relocated Soy Sauce Factory Portion. It is noted that some of the proposed vehicular access would encroach onto slope features nos. 6NE-AF98(1) and 6NE-A/F105 maintained by HyD.	Noted.
1.8	The proposed tree felling/transplanting /tree compensatory as stated in para. 4.3 and Appendix B of the Planning Statement should be subject to separate application to be submitted for formal approval upon implementation of the development proposal.	Noted.

	Departmental Comments	Responses to Comments
2.	**Comments of Director of Leisure and Cultural Services**	
2.1	The application site encroaches some amenity areas where the shrubs and trees are currently maintained by LCSD (i.e. green area in the location map below). Please ask the applicant to consider excluding the subject amenity areas from the application site. 	The subject amenity area is currently a piece of "Unallocated, Unleased Government Land" ("UUGL") situated within the same "I(D)" zone of the existing soy sauce factory under the OZP. For the sake of consistency and comprehensiveness, the subject amenity area is included in the Application Site boundary for rezoning into "R(E)" zone in one go. Based on the site photos, the subject amenity area has a few existing trees, mostly with tree crowns leaning towards the Proposed Development. It is noted that the trees in the amenity area would be unavoidably affected by the proposed covered transport lay-by, ingress/egress of the Proposed Development and associated road widening works at Castle Peak Road – Tam Mi. Upon completion of the proposed development, the portion within the Development Site of the future development is proposed to be managed and maintained by the land owner, whereas the portion falling on the public road will be handed over to respective Government department for management and maintenance.  

	Departmental Comments	Responses to Comments
3.	**Comments of Chief Architect/Central Management Division 2 of Architectural Services Department**	
3.1	It is noted that the proposed development mainly consists of 11 nos. of towers with building height ranging from about 58mPD to 115mPD. Since the adjacent areas are mainly "Open Space" and "Open Storage" permitted in OZP, the proposed development is undesirable from visual impact point of view and may not be compatible to adjacent developments, subject to PlanD's view.	Noted. The Proposed Development is considered to be compatible with the planning context in view of the following: <u>In line with Changing Planning and Development Context</u> 1. The Northern Metropolis will become a future economic engine and important employment hub. With the focal economic and innovation development taking place in the San Tin Technopole, the region will be developed into an urban core with high-density developments. 2. According to the Northern Link (NOL) Project Profile published in June 2021, the planned Au Tau Station will be implemented about 600m away to the southeast of the Application Site, which gives rise to the opportunity of releasing the development potential of the valuable land resources at locations close to the station. 3. As identified under the Government's "Study on Existing Profile and Operations of Brownfield Sites in the New Territories" released in November 2019, there is a public housing development site situated right to the opposite of the Application Site across San Tam Road and San Tin Highway. According to preliminary design, the maximum plot ratio would be up to 6.5. 4. A recent planning application (Application No. A/YL-NSW/274) with maximum PR not more than 2.29 for the development of a residential and community hub has been approved by the Board on 26 February 2021, to the southwest of the Application Site.

	Departmental Comments	Responses to Comments
	(Con't)	Thus, the subject application would be not only unleash the development potential brought by the policy directives and the planned NOL, but would also be compatible with the changing development context in the vicinity. <u>Design Interventions in the Proposed Scheme</u> 1. To minimise any potential impact on the existing low-rise developments nearby, a stepped building height profile within the Application Site has been proposed. The taller buildings with 29 storeys (not more than 115 mPD) from the Castle Peak Road will descend towards the west with building height of 14 storeys (not more than 58mPD) to respect the water bodies in the west. 2. Building are generally separated into 2 E-W running clusters with provision of building separations to facilitate visual and wind penetration. Sufficient building separations in compliance with the requirement of PNAP APP-152 are provided to facilitate visual and wind penetration. 3. A Visual Impact Assessment (VIA) has been prepared in support of the subject planning (**Appendix B** refers). With the visual interests brought by stepped building height and building separations, the VIA has concluded that the Proposed Development is acceptable in visual terms.
3.2	The building length of all the residential towers appear to exceed 60m which may have adverse impact on the air ventilation and visual permeability. The applicant is advised to comply with the building separation requirement of the design guidelines promulgated in PNAP APP-152.	Noted. It is confirmed that relevant building separation requirements as promulgated in PNAP APP-152 would be complied with under the proposed development.

	Departmental Comments	Responses to Comments
4.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department**	
4.1	***Landscape Aspect***	
4.1.1	Table 4 under para. A.5.7 – The applicant is advised to include Chinese species name in the proposed planting palette.	Noted. In addition to the scientific names of proposed plants, Chinese species names are now included. Please refer to **Table 4 under Para. A.5.7 in revised Landscape Design Proposal in Appendix C** for consideration.
4.1.2	Sufficient self-explanatory information, eg. more spot levels, entrance, EVA, etc. and descriptions of the proposed works should be shown on all landscape drawings.	More information and descriptions are added on the landscape drawings. Please refer to the revised Indicative Landscape Master Plan in **Appendix C** for consideration.
4.1.3	Figure S1-SEC-02(Rev.0) (Section B-B) – The section cutting through the podium area of building blocks T6 and T5 is not tally with the plan.	Noted. Section B-B is revised to tally with the plan. Please refer to the revised Indicative Landscape Section B-B Plan in **Appendix C** for consideration.
4.1.4	The applicant is advised to clarify whether boundary fence walls would be proposed along the application site boundary. Demarcation of the fence should be provided on relevant landscape drawings with appropriate legend if fence is proposed.	Noted. Boundary fence walls are to be proposed along the Application Site boundary. Demarcation of the fence is added on relevant landscape drawings. The details of the boundary fence walls will be reviewed at subsequent detailed design stage. Please refer to the revised Indicative Landscape Master Plan and Section Plans in **Appendix C** for consideration.
4.1.5	The applicant should be advised that approval of the application does not imply approval of tree works such as pruning, transplanting and felling under lease. The applicant is reminded to seek approval for any proposed tree works from relevant departments prior to commencement of the works.	Noted.

	Departmental Comments	Responses to Comments
4.2	***Visual*** Urban Design and Visual Perspective	
4.2.1	The Site, bounded by Kam Tin River/Pok Wai South Road and Castle Peak Road – Tam Mi/San Tin Highway, is currently occupied by some industrial and open storage uses. It is located in a rural context with fishponds in the northwest and west, open storage and industrial uses of 1 to 3 storeys to the north and east, and village settlements up to 3 storeys to the further north. Existing urban type developments in Yuen Long New Town (YLNT) are located to its further southwest across Kam Tin River (with BH up to about 175mPD) and some existing and planned medium-rise developments up to about 67mPD are at its further southeast across San Tin Highway and separated by Kam Tin River. A site to the further southwest across Kam Tin River bordering the YLNT and within a transitional location between urban and rural areas was approved by the RNTPC in 2021 for a proposed residential development with a maximum PR of 2.29 and a maximum BH of 75mPD (Application No. A/YL-NSW/274). It is understood that a site to the east across San Tin Highway at Sha Po is identified as a potential public housing site while the appropriate uses and development intensity are subject to engineering feasibility study (EFS).	Noted.
4.2.2	As compared with the last approved scheme under Application No. Y/YL-NSW/3 (a maximum PR of 1.5 and a BHR of 46mPD), the development intensity of the proposed development in terms of BH and PR would be significantly increased. Given the spatial context of the immediate surroundings where fishponds are found in its immediate northwest and some existing and planned medium rise residential developments to its further west across San Tin Highway, the applicant is requested to provide more justifications on the compatibility of the proposed maximum BHR of 115mPD at the site with immediate visual context.	The proposed development intensity is considered to be compatible with the long-term planning context due to the followings:. 1. The Northern Metropolis will become a future economic engine and important employment hub. With the focal economic and innovation development taking place in the San Tin Technopole, the region will be developed into an urban core with high-density developments.

	Departmental Comments	Responses to Comments
	(Con't)	2. According to the Northern Link (NOL) Project Profile published in June 2021, the planned Au Tau Station will be implemented about 600m away to the southeast of the Application Site, which gives rise to the opportunity of releasing the development potential of the valuable land resources at locations close to the station. 3. As identified under the Government's "Study on Existing Profile and Operations of Brownfield Sites in the New Territories" released in November 2019, there is a public housing development site situated right to the opposite of the Application Site across San Tam Road and San Tin Highway. According to preliminary design, the maximum plot ratio would be up to 6.5. 4. A recent planning application (Application No. A/YL-NSW/274) with maximum PR not more than 2.29 for the development of a residential and community hub has been approved by the Board on 26 February 2021, to the southwest of the Application Site. Thus, the subject application would be not only unleash the development potential brought by the policy directives and the planned NOL, but would also be compatible with the changing development context in the vicinity.

	Departmental Comments	Responses to Comments
4.2.3	Detailed Comments It is noted that some design/mitigation measures such as stepped BH profile, building separations, careful façade treatment and sensible building disposition are proposed. The Applicant is advised to elaborate in details with plans and visual illustrations on how these measures could help alleviate the potential visual impact from the proposed development.	The Proposed Development has incorporated the below design interventions to alleviate the potential visual impact from the proposed development: **Stepped Building Height Profile** To minimise any potential impact on the existing developments nearby, a stepped building height profile within the Application Site has been proposed. The taller buildings with 29 storeys (not more than 115 mPD) located closer to Castle Peak Road will descend towards the west to respect the water bodies in the west. **Sensible Building Disposition with Building Separations** Building are generally separated into 2 E-W running clusters with provision of building separations to facilitate visual and wind penetration. Sufficient building separations in compliance with the requirement of PNAP APP-152 are provided to facilitate visual and wind penetration. **Careful Façade Treatment** Careful façade treatment will be adopted to facilitate the Proposed Development blending into the development context. For example, no extensive glass façade will be designed to avoid bird collision. **Landscape Measures** To create a nature-oriented suburban village environment with landscape features to be provided. For example, soft and hard landscape pocket spaces with peripheral planting strip will be provided along the Proposed Development to screen off the possible visual impact from Castle Peak Road and San Tin Highway. For details, please refer to **Figure A** in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
4.2.4	The applicant should mark the building separation on plans for reference.	Sufficient building separations in compliance with the requirement of PNAP APP-152 are provided to facilitate visual and wind penetration.
4.2.5	The cluster of T1 to T3 is elongated in shaped. The applicant is requested to clarify whether the proposed development comply with the building separation requirements of the Sustainable Building Design Guidelines. <u>Visual Impact Assessment</u>	Noted. Sufficient building separations in compliance with the requirement of PNAP APP-152 would be provided to facilitate visual and wind penetration in the Proposed Development.
4.2.6	In the submitted VIA, the applicant has prepared a Proposed Scheme with the proposed developments together with other planned developments to compare against the Existing Condition. However, it should be noted that the layout, development density and BH of the potential public housing development at Sha Po are still yet to be formulated under the EFS and the proposed comprehensive development under separate s.12A application (Application No. Y/YL-NSW/8) is yet to be considered by the TPB. As such, these two development proposals could be served as a scenario testing but should not be included in the Proposed Scheme. Upon revising the photomontages, the applicant should review the rating of all the VPs accordingly.	Noted. For visual assessment purpose, photomontages have been updated to present different development scenarios. (i) **Interim Scenario**: Proposed Development under the existing context; and (ii) **Ultimate Scenario**: Proposed Development with full implementation of the public housing in Sha Po and another proposed residential development to the immediate north of the Application Site. Please refer to the revised VIA in **Appendix B** for consideration.
4.2.7	For the area of visual influence identified in Figure 3.2, it should be noted that the visual envelope is expected to cover the field of views from all sensitive viewers in direct sight of the proposed development according to TPB Guidelines No. 41. Therefore, the proposed are of visual influence should cover all the viewpoints selected, rather than confining the assessment area to be about 320m. Please review.	The proposed area of visual influence has been revised to cover all selected viewpoints. Please refer **to Figure 3.2 in revised VIA in Appendix B** for more details.

	Departmental Comments	Responses to Comments
4.2.8	For VP1, the view is obstructed by trees. Please identify a viewpoint without trees and viewing towards the proposed development for assessment. Regarding VP3, please review if the view angle is correct as the proposed development should be in the central part of the photomontage. For VP4, although the proposed development would be screened off by the trees, its upper portion would still obstruct the open skyview. Please review the rating of these VPs.	**For VP1 –** The existing views along Pok Wai South Road are dominated by roadside greenery (see image below). The Proposed Development will be screened-off by the existing roadside greenery along Pok Wai South Road, only a tiny portion of Proposed Development will be visible behind the roadside greenery. The existing location of VP 1 is considered to be a representable location for assessing the visual impact from Pok Wai South Road.   **Existing View along Pok Wai South Road**

	Departmental Comments	Responses to Comments
	(Con't)	**For VP3 –** Upon cross-checking, the location of the Proposed Development should be accurate and it could barely be seen from this direction, and will be shielded by the roadside vegetation. There will be no overall negative changes on the existing visual elements and sky view at the backdrop. Since a tiny portion of the Proposed Development will still be visible in between of the vegetation, the visual impact in this VP is considered to be negligible / slightly adverse.
4.2.9	For VP5 to VP7, please clarify whether "Approved Scheme for Tung Shing Lei Phase 1" means the approved planning application (Application No. A/YLNSW/274). If affirmative, it should be properly annotated in the photomontages.	Noted. Please note that "Approved Scheme for Tung Shing Lei Phase 1" means the approved planning application (Application No. A/YL-NSW/274). The annotations in the photomontages have been updated. Please refer to the revised photomontages in **Figures 5.1 to 5.8 in Appendix B** for details.
4.2.10	For VP6, the coverage of the photo appears to be wider than the view fan of this VP. Please review.	Noted. The coverage of the photo from VP6 has been updated. Please refer to the revised photomontages in **Figure 5.6 in Appendix B** for consideration.
4.2.11	The applicant is requested to explore a short-range local viewpoint for assessing the visual impact, i.e. one at Nam Sang Wai River Education Trail (i.e. the opposite side of Pok Wai South Road) to its northwest where it can represent the view for travellers walking along this popular trail.	Noted. To further assess the potential visual impact from a short-range local VP, additional visual assessment at VP8 (i.e. Nam Sang Wai River Education Trail), to the north west of the Application Site has been incorporated into the revised VIA (**Figure 5.8 – Appendix B** refers). With reference to the enclosed photomontage, part of the Proposed Development will appear on top of the roadside greenery along Kam Tin River. There will be a small loss of the open skyview. Hence, adverse visual impact is considered negligible.
4.2.12	Please indicate the BH (in mPD) of the existing, planned developments and approved planning applications shown in your photomontage.	Noted. The building height (in mPD) of the existing, planned developments and approved planning applications have been indicated in the photomontages. Please refer to the revised photomontages in **Figures 5.1 to 5.8 in revised VIA in Appendix B** for details.

	Departmental Comments	Responses to Comments
5.	**Comments of the Project Manager (West), Civil Engineering and Development Department**	
5.1	Please note that apart from Hung Shui Kiu/Ha Tsuen New Development Area and Yuen Long South Development, there are already numerous potential housing sites in Yuen Long being or to be studied shortly by CEDD. The accumulative capacity of various infrastructures, in particular traffic, water supply and sewage treatment infrastructures, shall be carefully addressed and agreed by the relevant departments to confirm the technical feasibility of the development under this application.	Noted.
6.	**Comments of the Director of Food and Environmental Hygiene**	
6.1	No Food and Environmental Hygiene Department's (FEHD) facilities will be affected.	Noted.
6.2	Proper licence / permit issued by this Department is required if there is any food business / catering service / activities regulated by the Director of Food and Environmental Hygiene (DFEH) under the Public Health and Municipal Services Ordinance (Cap. 132) and other relevant legislation for the public:	
	a) Under the Food Business Regulation, Cap. 132X, a food business licence is required for the operation of the relevant type of food business listed in the Regulation. For any premises intended to be used for food business (e.g. a restaurant, a food factory, a fresh provision shop), a food business licence from the FEHD in accordance with the Public Health and Municipal Services Ordinance (Cap. 132) shall be obtained. The application for licence, if acceptable by the FEHD, will be referred to relevant government departments such as the Buildings Department, Fire Services Department and Planning Department for comment. If there is no objection from the departments concerned, a letter of requirements will be issued to the applicant for compliance and the licence will be issued upon compliance of all the requirements.	Noted.

	Departmental Comments	Responses to Comments
	b) Depending on the mode of operation, generally there are three types of food business licence/ permit that the operator of shop and services may apply for under the Food Business Regulation (the Regulation): (i) if food is sold to customers for consumption on the premises, a restaurant licence should be obtained; (ii) if food is only prepared for sale for consumption off the premises, a food factory licence should be obtained; (iii) if fresh, chilled or frozen beef, mutton, pork, reptiles (including live snake), fish (including live fish) and poultry is sold, a fresh provision shop licence should be obtained.	Noted.
	c) For the operation of refreshment kiosks, under the Food Business Regulation, Cap. 132X, a Food Factory Licence must be obtained from this department for food business which involves the preparation of food for sale for human consumption off the premises before commencement of such business. If milk, frozen confections, non-bottled drinks, cut fruit etc. are to be sold without preparation of other kind of food, relevant restricted food permits should be obtained.	Noted.
	d) The operation of the eating place must not cause any environmental nuisance to the surrounding. The refuse generated by the proposed eating place are regarded as trade refuse. The management or owner of the site is responsible for its removal and disposal at their expenses. The operation of any business should not cause any obstruction or environmental nuisance in the vicinity.	Noted.

	Departmental Comments	Responses to Comments
6.3	Proper licence issued by this Department is required if related place of entertainment is involved. Any person who desires to keep or use any place of public entertainment for example a theatre and cinema or a place, building, erection or structure, whether temporary or permanent, on one occasion or more, capable of accommodating the public presenting or carrying on public entertainment within Places of Public entertainment (PPE) Ordinance (Cap. 172) and its subsidiary legislation, such as a concert, opera, ballet, stage performance or other musical, dramatic or theatrical entertainment, cinematograph or laser projection display or an amusement ride and mechanical device which is designed for amusement, a Place of Public Entertainment Licence (or Temporary Place of Public Entertainment Licence) should be obtained from FEHD whatever the general public is admitted with or without payment.	Noted.
6.4	There should be no encroachment on the public place and no environmental nuisance should be generated to the surroundings. Its state should not be a nuisance or injurious or dangerous to health and surrounding environment. Also, for any waste generated from such activities/ operation, the applicant should arrange disposal properly at their own expenses.	Noted.
6.5	If FEHD is requested to take up management responsibility of new facilities (e.g. public toilets and refuse collection points), FEHD should be separately consulted. Prior consent from FEHD must be obtained and sufficient amount of recurrent cost may have to be provided to us.	Noted.
6.6	If provision of cleansing service for new roads, streets, cycle tracks, footpaths, paved areas etc, is required, FEHD should be separately consulted. Prior consent from FEHD must be obtained and sufficient amount of recurrent cost may have to be provided to us.	Noted.
6.7	If domestic waste collection service of FEHD is required in future, prior comments from this Department on the waste collection plan, including the accessibility and maneuverability of RCV to RCP, should be sought.	Noted.

	Departmental Comments	Responses to Comments
7.	**Comments of the District Officer (Yuen Long), Home Affairs Department**	
7.1	Please refer to the local comments from the residents of San Tin, Yuen Long.	The concerned area is situated within the same "I(D)" zone under the extant OZP. Since it is a rezoning planning application, for the sake of consistency and comprehensiveness, it is included in the Application Site boundary for rezoning into "R(E)" zone in one go. Although the concerned area is situated in the Application Site, it does NOT form part of the Development Site. It will not form part of the proposed residential development under the indicative Master Layout Plan. Separate access has already been reserved for accessing this piece of Government land under the current indicative Master Layout Plan (see extracted plan below). 

	Departmental Comments	Responses to Comments
	(Con't)	 During construction phase, appropriate mitigation measures will be provided to minimise any possible nuisance to the existing neighbours.
8.	**Comments of Chief Highway Engineer/New Territories West of Highways Department**	
8.1	Please find the following comments on the application from highways maintenance point of view:-	
8.1.1	(a) The proposed access arrangement of the application site from Castle Peak Road – Tam Mi should be commented and approved by TD.	Noted.
8.1.2	(b) If the vehicular accesses at Castle Peak Road – Tam Mi are agreed by TD, the applicant should design and construct them in accordance with the latest Transport Planning and Design Manual of TD and the relevant standard drawings of this Department;	Noted.

	Departmental Comments		Responses to Comments
8.1.3	(c)	It is noted that HyD's maintained slope feature no. 6NE-A/F105 would be affected under the subject development. The applicant should clearly indicated the demarcation of the modified slope to be managed and maintained by the applicant. The applicant should also clearly indicate the modified slope, if any, to be handed over to HyD for maintenance, and submit the associated details and design to HyD for comment. The slope works design should also be submitted to checked and accepted by GEO;	Noted.
8.1.4	(d)	It is noted that covered transport lay-by is proposed within the application site. Please advise the management and maintenance party of the covered transport lay-by;	The covered transport lay-by within the application site would be a privately-operated transport lay-by, to be managed and maintained by the Proposed Development.
8.1.5	(e)	If TD supports the proposed road improvements at Fairview Park Interchange, Castle Peak Road – Tam Mi / Kam Pok Road East from traffic point of view, they shall be implemented by the applicant to the satisfaction of TD and HyD at the applicant's own cost;	Noted.
8.1.6	(f)	The management and maintenance schedule of all proposed road works in the application should be submitted for review;	Noted.
8.1.7	(g)	Adequate drainage measures should be provided at the site access to prevent surface water flowing from the site to nearby public roads or exclusive road drains; and	Noted.
8.1.8	(h)	It is noted that part of the site falls within the boundary of railway influence area. Comment from Railway Development Office of this Department should be sought.	Noted.

	Departmental Comments	Responses to Comments
9.	**Comments of Head of the Geotechnical Engineering Office of Civil Engineering and Development Department**	
9.1	Please be advised that two man-made slopes (Features No. 6NE-A/F98 and 6NE-A/F105) adjoining the application site boundary may affect or be affected by the proposed development. Presumably, details of the investigation and/or assessment of the effects of the proposed development on these features, and vice versa, should be submitted in conjunction with the future development proposal to the building authority for processing.	Noted.

Under Further Information Submitted on 9.9.2022

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Director of Electrical and Mechanical Services**	
1.1	*Electricity Safety*	
1.1.1	In the interests of public safety and ensuring the continuity of electricity supply, the parties concerned with planning, designing, organising, supervising and conducting any activity near the underground cable or overhead line under the mentioned application should approach the electricity supplier (i.e. CLP Power) for the requisition of cable plans (and overhead line alignment drawings, where applicable) to find out whether there is any underground cable and/or overhead line within and/or in the vicinity of the concerned site. They should also be reminded to observe the Electricity Supply Lines (Protection) Regulation and the "Code of Practice on Working near Electricity Supply Lines" established under the Regulations when carrying out works in the vicinity of the electricity supply lines.	Noted.
1.2	*Town Gas Safety*	
1.2.1	Please note that there is a high pressure town gas pipeline (HP pipeline) running along San Tam Road in close vicinity of the subject site.	Noted.
1.2.2	A Quantitative Risk Assessment (QRA) conducted by the project proponent is required to assess the potential risks associated with the HP pipeline, having considered the proposed development and implement mitigation measures if necessary for compliance with the risk guidelines of the Hong Kong Planning Standards and Guidelines.	Noted. A Quantitative Risk Assessment was prepared with respect to the risk guidelines. Please refer to QRA report in **Appendix A** for consideration.
1.2.3	The project proponent is required to observe the requirements of the Electrical and Mechanical Services Department's "Guidance Note on Quantitative Risk Assessment Stud for High Pressure Town Gas Installations in Hong Kong" for carrying out the QRA. The guidance note can be downloaded via the following web-link:- https://www.emsd.gov.hk/en/gas_safety/publications/guidance_notes/index.html	Noted.

	Departmental Comments	Responses to Comments
1.2.4	The project proponent should liaise with The Hong Kong and China Gas Company Limited in respect of the exact locations of existing and planned gas pipes/gas installations in the vicinity to the site and any required minimum set back distance away from them during the planning, design and construction stages of the proposed development.	Noted.
2.	**Comments of the Chief Highway Engineer/New Territories West, Highways Department**	
	My comments on the captioned application have not been fully addressed in the submitted further information.	
2.1	(a) The proposed access arrangement of the application site from Castle Peak Road – Tam Mi should be commented and approved by TD.	Noted. Comments from the Transport Department have been sought under the subject planning application and their responses will be provided in due course.
2.2	(b) If the vehicular accesses at Castle Peak Road – Tam Mi are agreed by TD, the applicant should design and construct them in accordance with the latest Transport Planning and Design Manual of TD and the relevant standard drawings of this Department;	Noted.
2.3	(c) It is noted that HyD's maintained slope feature no. 6NE-A/F105 would be affected under the subject development. The applicant should clearly indicated the demarcation of the modified slope to be managed and maintained by the applicant. The applicant should also clearly indicate the modified slope, if any, to be handed over to HyD for maintenance, and submit the associated details and design to HyD for comment. The slope works design should also be submitted to checked and accepted by GEO;	Noted.
2.4	(d) It is noted that covered transport lay-by is proposed within the application site. Please advise the management and maintenance party of the covered transport lay-by;	The covered transport lay-by within the application site would be a privately-operated transport lay-by, to be managed and maintained by the Proposed Development.

	Departmental Comments	Responses to Comments
2.5	(e) If TD supports the proposed road improvements at Fairview Park Interchange, Castle Peak Road – Tam Mi / Kam Pok Road East from traffic point of view, they shall be implemented by the applicant to the satisfaction of TD and HyD at the applicant's own cost;	Noted.
2.6	(f) The management and maintenance schedule of all proposed road works in the application should be submitted for review;	Noted.
2.7	(g) Adequate drainage measures should be provided at the site access to prevent surface water flowing from the site to nearby public roads or exclusive road drains; and	Noted.
2.8	(h) It is noted that part of the site falls within the boundary of railway influence area. Comment from Railway Development Office of this Department should be sought.	Noted. Comments from Railway Development Office of Highways Department have been sought under the subject planning application their responses will be provided in due course.
3.	**Comments Chief Architect/Central Management Division 2 of Architectural Services Department**	
3.1	Regarding the building height, it is noted that the proposed development mainly consists of 11 nos. of towers with building height ranging from about 58mPD to 115mPD. Since the adjacent areas are mainly "Open Space" and Open Storage" permitted in OZP, the proposed development is undesirable from visual impact point of view and may not be compatible to adjacent developments.	Noted. As explained in the previous submission of responses dated 30 June 2022, the proposed development is considered to be compatible with the changing development context in the vicinity of the site.

	Departmental Comments	Responses to Comments
4.	**Comments of the Chief Engineer/Mainland North, Drainage Services Department**	
	<u>Drainage Impact Assessment</u>	
4.1	Section 5.3 – Please indicate the approx. layout and size of the proposed periphery surface channel on Figure.	According to site survey, the existing periphery surface channel located on the west of the Application Site approximately 2,000mm in width connected to the outfall structure located south side of the site. The site photo showing the existing periphery surface channel and existing 2 x 1,000mm pipe culvert outfall with wingwall. Please refer to **Appendix B** for consideration.   
	Departmental Comments	Responses to Comments
4.2	Section 2 – The proposed drains inside the lot are internal drains of the development which shall be constructed and maintained by the applicant and its successors at their own cost. There is no public drain maintained by DSD nor Drainage Reserve (DR) within the lot and please remove the alleged DR.	The concerned Drainage Reserve (DR) is not within the Application Site of the subject planning application No. Y/YL-NSW/9. Please refer to the separate submission of supplementary information under the planning application No. Y/YL-NSW/8 at the adjoining site for information.
4.3	Figure 4 – Please indicate the sizes of the catchment and the corresponding runoff in Figure 4 for ease of reference.	Noted. The sizes of the catchment and the corresponding runoff have been updated in Figure 4 in the revised DIA in **Appendix C**.
4.4	Section 5.3 and Figures – Our drainage record does not indicate that the existing watercourse at west of the site would connected to the existing box culvert at south. Please provide further information justifying the proposed drainage arrangement.	According to site survey, the photos below showing the inlet and outlet of the existing drainage arrangement. Please refer to **Appendix B** for consideration.  

	Departmental Comments	Responses to Comments
	(Con't)	4.5	Section 6 and Figures – The existing 3000m stormwater channel at north of the site is currently maintained by DSD but is proposed to be made use as internal drainage system of another planning application no. Y/YL-NSW/8. In view of above, the applicant needs to seek consent from them for the proposed stormwater connections to the concerned 3000m channel.	Noted. According to the other planning application No. Y/YL-NSW/8, stormwater connection to the concerned 3000m channel has been allowed for the Proposed Development under this subject planning application No. Y/YL-NSW/9. This application will adopt the same stormwater discharge proposal.
	<u>Sewage Impact Assessment</u>	
4.6	Section 6 and Figures – The proposed sewer inside the adjacent site, i.e. from FTMH2 to DSD1, are internal drains of the development which shall be constructed and maintained by the applicant and its successors at their own cost. There is no public drain maintained by DSD nor Drainage Reserve (DR) within the lot and please remove the alleged DR.	To reach public sewerage system, it is unavoidable to pass through the Proposed Development at the adjacent site (Application No. Y/YL-NSW/8 under separate submission). The proposed sewerage pipeline (from DR1 to DSD 1) will be used by multiple developments. Therefore, by converting it to a public sewerage system with Drainage Reserve (DR) for maintenance access, this public sewer can service both developments. Please refer to the revised SIA in **Appendix D** for consideration.

	Departmental Comments	Responses to Comments
4.7	Section 6.1.2 – The applicant is advised to convey the sewage of the factory to the proposed sewer at north west of the site.	Currently, the existing soy sauce factory has its on-site treatment facility. It is understood that the current soy sauce factory is a discharge licence holder under EPD licence No. WT00027809, which allow them to discharge the treated effluent to the existing channel. After the relocation of the soy sauce factory, the location is unavailable to connect to the public sewerage system, therefore it is proposed to maintain current discharge condition after the relocation, which is the same as the existing practice. Please refer to the revised SIA in **Appendix D** for consideration.
4.8	Section 6.1.3 – The proposed independent sewer for the proposed school to Sha Po SPS is not recommended in view of both construction and maintenance constraints. The applicant is advised to convey the sewage of the proposed school to the proposed sewer at northwest of the site.	The proposed school site situates next to Castle Peak Road – Tam Mi Section at a lower ground level, and there is no public sewer available for connection. The proposed school site is unable to connect to the public sewer at Pok Wai South Road by gravity. As the proposed school site level tie with the existing road level (approximately 5.50mPD). It is not feasible to propose a gravity sewer connection to the northwest of the site due to ground level issue. The estimated daily sewage discharge from the Primary School is only 34.64m^3, the amount is insignificant. (Less of 0.5% capacity of the existing Sha Po SPS). The peak flow from the proposed school is about 277m^3/day, which is insignificant value compared to the capacity of the Sha Po SPS. Therefore, it will not cause any adverse impact to the existing and proposed sewerage system. Please refer to the revised SIA in **Appendix D** for consideration.

	Departmental Comments	Responses to Comments
4.9	Section 6 and Figures – The subject application should have its own independent sewerage disposal arrangement. While this application proposed to connect the sewer to the sewer of the adjacent lot under a separate planning application no. Y/YL-NSW/8, the applicant needs to seek consent them.	Sewage will be discharged to the proposed communal sewer for the multiple developments, including the subject planning application No. Y/YL-NSW/9 and the other planning application No. Y/YL-NSW/8, the communal sewer will be handed over to the government for future maintenance. Drainage Reserve (DR) would be provided for the proposed communal sewer.
4.10	Sections 8.1.1 and 8.1.2 – The proposed sewerage system inside the lot are internal drains of the private development which shall not be maintained by DSD.	Please refer to Item 4.6 above in this response to comment table above.
4.11	Section 8.1.2 – Please clarify what are "respective parties".	The terminal manhole of "R(E)" site will be maintained by "R(E)" site development, and terminal manhole of proposed school site will be maintained by the relevant project proponent respectively.
5.	**Comments of the Director of Environmental Protection**	
5.1	<u>Sewerage Impact Assessment</u> Appendix 3	
5.1.1	For worst case scenario, please assume all pools will undergo backwash at the same time.	Additional checking, with the scenario of assuming all pools to undergo backwash at the same time as the worst case, has been carried out and please refer to **Appendix E** for reference. Total ADWF increases from 7,676m^3/day to 7,697.96m^3/day (excluding the proposed school site), which is about 0.28% only. Such increase is insignificant and will not cause adverse impact to the existing sewerage system. In actual operation, the backwash from the swimming pools will be managed to discharge during the off-peak hours and the worst case scenario will unlikely happen.
5.1.2	The contributing population should be down to the sewer segment rather than SPS, please revise.	The contributing population has been updated down to the sewer segment.

	Departmental Comments	Responses to Comments
	Appendix 4	
5.1.3	For new upstream sewerage, third column "Peaking Factor (excluding stormwater allowance) for facility with new upstream sewerage" can be used.	Appendix 4 of the revised SIA in **Appendix D** has been updated.
5.1.4	Column "U/S" DR3.3 cannot be located in the plan, should it be DR2? Please check.	DR3.3 is the proposed sewage manhole for the school site. Please refer to Figure 4 of the revised SIA in **Appendix D** for consideration.
5.1.5	The sewerage plan shown that the lengths of FTMH2 to DR2 and DR2 to DR1 are similar, but very different in the calculation (i.e. 6m and 121.6m respectively), please check.	The lengths have been updated in the calculation. (FTMH2 to DR2: 16.9m; DR2 to DR1: 13.8m)
5.1.6	For segment DR3.1 to FMG1063023, the length is long and number of bends are identified in the plan, please add manhole in each bend and check the technical feasibility when the bend is about or less than 90 degree.	Appendix 4 of the revised SIA in **Appendix D** has been updated.
5.1.7	Similar to point 6 above, segment DR1 to DSD1 also has the same issue, please check.	The segment DR1 to DSD1 is not under the subject planning application No. Y/YL-NSW/9. Please refer to the separate submission of supplementary information under the planning application No. Y/YL-NSW/8 at the adjoining site for reference.
5.1.8	Backwash from swimming pool should be considered as peak flow and sum up with the peak flow of the developments to check the pipe capacity.	Noted. The backwash from swimming pool has been included as peak flow and sum up to check the pipe capacity.
5.1.9	The capacity of the proposed sewer should not exceed 100%. Please check.	Appendix 4 of the revised SIA in **Appendix D** has been updated.
6.	**Comments of the Chief Engineer/Construction, Water Supplies Department**	
	General Comments on the application:	
6.1	Existing water mains will be affected as shown on the plan. The cost of any necessary diversion shall be borne by the proposed development.	Noted.

	Departmental Comments	Responses to Comments
6.2	In case it is not feasible to divert the affected water mains, a waterworks reserve within 1.5 metres from the center line of the water mains shall be provided to WSD. No structure shall be built or materials stored within this waterworks reserve. Free access shall be made available at all times for staff of the Director of Water Supplies and their contractor to carry out construction, inspection, operation, maintenance and repair works.	Noted.
6.3	No trees or shrubs with penetrating roots may be planted within the waterworks reserve or in the vicinity of the water main shown on the plan.	Noted.
6.4	Government shall not be liable to any damage whatsoever and howsoever caused arising from burst or leakage of the public water mains within and in close vicinity of the site. Specific Comments on the WSIA:	Noted.
6.5	Section 4.1.1 – Please be advised that the application site currently falls within the direct supply zone of Au Tau / Ngau Tam Mei Fresh Water Primary Service Reservoirs (AT/NTM FWPSRs). The application site will later fall within the supply zone of Au Tau Fresh Water Service Reservoirs (AT FWSRs) subject to the operation of shifting supply zone carried out by NTW Region. Please update relevant sections.	Noted. The relevant text in Section 4.1.1 has been amended in the revised WSIA in **Appendix F** for consideration.
6.6	Section 4.1.1 and 5.3.2 – The information about NTMWTW is not correct. Please remove from relevant sections as it is not necessary to be included in this WSIA.	Noted. The relevant sections about NTMWTW have been deleted in the revised WSIA in **Appendix F** for consideration.
6.7	Section 1.2 – The title shall be read as 'Previous Approved Water Supply Impact Assessment'.	Noted. The title has been amended in the revised WSIA in **Appendix F**.

	Departmental Comments	Responses to Comments
6.8	Table 7 – For the water demand build-up of the relocated soy sauce factory, the applicant shall also make reference to the actual water consumption of the existing factory.	As per coordination with existing soy sauce factory, the actual daily water consumption of 70m^3/day has been adopted with reference to the soy sauce factory water bill in May 2022. Please refer to the updated Table 7 and Table 8 in the revised WSIA in **Appendix F** for consideration.
6.9	Table 8, 9 and 10 – "ADWF" should be rewritten as "Mean Daily Demand" ("MDD").	"ADWF" has been revised to "Mean Daily Demand" in Table 7, 8, 9 and 10 in the revised WSIA in **Appendix F** for consideration.
6.10	Section 4.1.4 – The water main connecting to the pedestal fire hydrant PH9099 at Castle Peak Road – Tam Mi shall be diverted and the fire hydrant shall be relocated at appropriate location.	The pedestal fire hydrant PH9099 is kept at existing location and the DN 150 connected to PH9099 is proposed to be tee-off from extended DN 200 fresh water main (see capture below). Please refer to Figure 4 of revised WSIA in **Appendix F** for consideration. 
	Departmental Comments	Responses to Comments
6.11	Appendices – Internal diameter should be adopted in the hydraulic calculations. (e.g. 682mm should be adopted in the calculation of cross-section area of DN700 water main)	Noted. The calculations have been revised accordingly. Please refer to the appendices of the revised WSIA in **Appendix F** for consideration.

Under Further Information Submitted on 25.11.2022

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Agriculture, Fisheries and Conservation received on 7.6.2022**	
1.1	The application site is currently occupied by a low-rise factory and open storage. To the west of the application site is a large cluster of wetlands in the Wetland Conservation Area (WCA) and the Priority Site of Deep Bay Wetland outside Ramsar Site. To the east are a highway and low-rise developments such as vehicle parks and workshops. Although the application site is largely developed and subject to disturbance, it is located within the Wetland Buffer Area (WBA) which aims to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds. Any development within the WBA should be compatible with the surrounding area. However, it seems that the proposed residential development with a maximum plot ration of 2.7 and maximum building height of 115mPD is not compatible with the surrounding area with low-rise buildings. My other specific comments on the Ecological Impact Assessment (EcoIA) are listed below. Please request the applicant to revise the EcoIA accordingly for our further consideration.	The Application Site is located at least about 170m and 150m to the east of the boundaries of the Priority Site and WCA respectively. Kam Tin River, an area of meander, abandoned pond and plantation were located between the Application Site and these sites of conservation importance. There should be sufficient buffer from the Priority Site and the WCA. In local context, according to the Yuen Long District Council Discussion Paper No. 36/2022 published in October 2022, the sites (about 11.8 hectares) in Sha Po to the east across the San Tin Highway of the Application Site is selected for high-density and high-rise public housing development with total plot ratio up to 6.7. In a wider context, the immediate vicinity along San Tin Highway including the current Application Site, the soy sauce factory in the south, Wing Kei Tsuen, Mo Fan Heung and Pok Wai Village etc., had mostly been developed or are existing wasteland. The Application Site is adjacent to San Tin Highway; therefore, the current development is considered as compatible with the nearby land use. In addition, the ecological values of the habitats on the north (abandoned ponds and ponds) and west (Kam Tin River) are rated as low to medium to medium, the proposed residential development within the Application Site would only have low level of disturbance impact to these habitats during the operational phase, given that residential development has low disturbance in nature. Upon further review, the current assessment on the operational phase impact severity is valid. S.6.4.4 and S.6.4.5 in the revised EcoIA in **Appendix A** have been revised accordingly.

	Departmental Comments	Responses to Comments
1.2	3.3.6 and Table 3.1 The survey time should be standardised and conducted in the morning to capture the peak period of bird activity leaving the egretry for their foraging sites. Please specify the starting time and duration of each flightline survey of the Tung Shing Lane Egretry. If some of the surveys were indeed conducted before sunset, please revise survey time from "D" to "D/E" in Table 3.1	Noted. S.3.3.6 and Table 3.1 have been updated in the revised EcoIA in **Appendix A**.
1.3	4.1.6 It seems that the year of the citation is incorrect for the sentence "According to the census data provided by Hong Kong Bird Watching Society (HKBWS), the number of ardeid nests in this egretry decreased by 22.6% from 2018 to 2019 (Anon 2020)". Please check and revise.	Noted. The citation has been provided in the reference list.
1.4	4.2.38 It is noted that 51% (2019) and 65% (2020) of breeding ardeids of Tung Shing Lane Egretry flew in an easterly direction (Zone G, H and I) after passing Yuen Long Highway. Please provide supplementary numbers/ percentage and maps about the flightline of breeding ardeids after they leave Zone G, H and I.	Noted. There were no ardeids flying across the Application Site during the breeding season. Figures 6e and 6f in the revised EcoIA in **Appendix A** have been updated to supplement the direction of the breeding ardeids leaving Zone G, H and I.
1.5	6.3.9, 6.4.3, 6.4.10 Please revise and supplement based on the further information provided according to my comments on 4.2.38. Please also state the percentage of flight-lines that passed through the application site.	Noted. S.6.3.9 and 6.4.12 have been updated in the revised EcoIA in **Appendix A**.

	Departmental Comments	Responses to Comments
1.6	6.4 The factory would be closer to the Kam Tin River after the relocation. Please add assessments about the disturbance impacts (e.g. noise, traffic etc.) and accidental discharge impact during the operation of the relocated factory on the nearby Kam Tin River and the wildlife therein.	The operation of the soy sauce factory would not produce significant noise nor traffic. The sewage from the relocated soy sauce factory is to be discharged according to the existing valid discharge license possessed by the existing soy sauce factory issued by the EPD. The wastewater from the relocated soy sauce factory will be treated by new on-site sewage treatment plant, based on latest treatment technology designed for soy sauce production process. The treated effluent will be discharged into the new stormwater drainage system. Accidental discharge impact is considered minor. Operational phase disturbance impact is considered to be low. Please refer to the revised S.6.4.5 and S.6.4.9 in the revised EcoIA in **Appendix A** for consideration.
1.7	6.4.4 – 6.4.5 Please illustrate the perimeter landscape planting and fencing around the relocated factory in the Landscape Master Plan.	The perimeter planting and fencing would be a sensitive design which would be available in the detailed design stage.
1.8	6.4.10 Instead of just mentioning the height of the factory, the maximum building height of the residential development should also be considered and mentioned in the assessment. Please revise.	Considering that the current residential development and relocated soy sauce factory would not have extensive glass façade, the relocated soy sauce factory will be not more than 8m high, and no breeding ardeid flight lines across or near the Application Site, only occasional winter flight lines were observed. The maximum building height of the residential tower is 115.0 mPD. The range of the building height of the residential towers is 58.0 mPD (14 storeys) to 115.0 mPD (29 storeys). The tallest buildings would be located in the eastern most of the Application Site which are farthest from the rural areas in the west. Since there would not be continuous and extensive reflective glass façade for the residential towers, the potential bird collision impact is considered minor. S.6.4.12 has been updated in the revised EcoIA in **Appendix A**.

	Departmental Comments	Responses to Comments
1.9	7.3.1 While quieter piling methods would be considered where practicable and further at source mitigation measures could be explored only in the detailed design stage, there is no guarantee that adequate measures will be adopted to minimize the construction noise impact to an acceptable level. To further minimize the construction noise impact especially to migratory/ overwintering waterbirds, the applicant is advised to consider additional mitigation measures such as avoiding noisy construction works at the western portion of the application site which is closer to Kam Tin River during dry season.	Upon further review on the mitigation measures for construction noise, S.7.3.1, S.7.3.2 and Table 7.1 in the revised EcoIA in **Appendix A** have been revised.
1.10	Figure 1 The boundary of Conservation Area to the north of the Application site is not clearly shown. Please revise.	Noted. Please refer to Figure 1 in the revised EcoIA in **Appendix A** for consideration.
2.	**Comments of the Commissioner for Transport received on 5.8.2022 and 8.8.2022**	
2.1	<u>Layout</u> The proposed vehicular access at the Underpass of San Tin Highway should be reviewed as it would affect the adjacent junctions such as San Tam Road on the other side of the Underpass. Consideration should be given to use a single vehicular access with the school site to the south of the proposed junction;	The location of the ingress / egress serving the Proposed Development has been reviewed to minimise possible traffic impact to the junction of Castle Peak Road / Unnamed Road underneath San Tin Highway (J4). The separation between vehicular access and J4 is now about 80m and would satisfy TPDM requirements. Please refer to the revised MLP in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
2.2	The number of vehicular access should be reduced for the whole development. Consideration should be given to use a single site ingress / egress for the covered transport layby to avoid the disconnected footpath, as well as for traffic movement from Castle Peak Road – Tam Mi (Southbound) to the proposed Transport Layby;	The total numbers of the vehicular access serving the Proposed Development have been reduced. There are 2 vehicular accesses mainly to serve the (i) Residential Development and (ii) the covered transport lay-by and the Reserved School Site. A separate ingress / egress is also provided to serve the relocated soy sauce factory. Under the current scheme, the location of the proposed covered transport layby is also relocated at the south-western part of the residential portion due to the reduction and relocation of the ingress / egress locations. To avoid possible bundling effect and tail back issue along Castle Peak Road – Tam Mi during peak hours, it is suggested to segregate the traffic by proposing 2 ingress / egress points serving the residential portion as well as the covered transport lay-by. To minimise the possible disturbance to the pedestrian, priority use would also be given to the pedestrians for crossing the ingress / egress while walking along the footpath. Please refer to the revised MLP in **Attachment 1** for consideration.
2.3	The purpose of the access road between the residential development and the reserved school site should be clarified;	The main purpose of the access road is to serve the covered transport layby and the reserved school site. In addition, this access would also provide access for the existing temporary structures in the western portion within Application Site.
2.4	Clarification should be provided for the loading / unloading spaces for Towers T1, T2, T3, T5 and T6. Please be reminded that loading / unloading spaces should be located adjacent to the tower block and avoid crossing of road;	The loading / unloading bay for Tower T1 is located at the ground level, while the loading / unloading bays for Towers 2, 3, 5 and 6 are located at the basement level adjacent to the Towers.

	Departmental Comments	Responses to Comments
2.5	Saw-tooth layout at transport interchange should be provided to provide convenient pedestrian flow within the facility.	According to the TPDM Volume 9 Chapter 8.7 Table 8.7.15, traditional parallel bays have been designed for the transport lay-bys of the Proposed Development with limited numbers of bus bays (i.e. 3 - 4). Subject to the future planning of public transport services, the provision of covered transport lay-by with 2 bus bays and 1 GMB bay will allow adequate hardware facility to serve the future public transport demand generated by the Proposed Development. As such, the current design of the covered transport lay-by is considered to be optimised by means of efficient use of floor space and being in line with the corresponding requirements under TPDM.
2.6	A minimum of 6.0m of clear headroom should be provided at the proposed Transport Layby to accommodate the operation of double-decker buses in accordance with Transport Planning and Design Manual.	Noted. The current assumed floor-to-floor height (i.e. of about 6.5m) is considered to be sufficient to allow a clear headroom of not less than 6.0m to accommodate the operation of the double-decker buses.
2.7	The extent of the proposed set-back along Castle Peak Road – Tam Mi, including the proposed residential development and relocated Soy Factory Portion, for footpath should be clarified, with consideration of the requirements in accordance with Transport Planning and Design Manual. A cycle track from the Pok Wai Road South extension should be considered towards the site.	Under the road improvement proposal, a pedestrian footpath with a minimum width of 2.75m would be provided along the section of Castle Peak Road – Tam Mi abutting the Application Site, which will be widened to 10.3m wide. A pedestrian access would be provided at the north-western tip of the development site for accessing to the cycle track in Pok Wai South Road via the proposed residential development at the northern development site zoned "OU(CDWRA)1" (i.e. submitted under separate planning submission by the same applicant). Detailed design of the proposed pedestrian access will be provided in subsequent implementation stage. Please refer to Section 2.6 and Figure 2.8 in the revised TIA in **Appendix B** for consideration.
2.8	The desirable requirements for internal road layout should be adopted in accordance with PNAP APP-111.	Noted.

	Departmental Comments	Responses to Comments
	Traffic Impact Assessment	
2.9	Link capacity within the area of influence as well as Tai Lam Tunnel and San Tin Highway should be assessed.	Noted. The link capacity within the area of influence has been included in the revised TIA in **Appendix B** for consideration.
2.10	Table 2.2 – The rate of the kindergarten parking spaces should be justified with at least two reference sites with similar locality and background of students.	The high-end provisions of internal transport facilities under HKPSG requirements for kindergarten have been proposed.
2.11	Table 2.3 –	
	(i) Given that the site is far from any railway station in the Northwest New Territories, upper bound of the parking and loading / unloading provisions in accordance with the Hong Kong Planning Standards and Guidelines should be considered;	Having reviewed the factors affecting the carpark provision, a Global Parking Standard at 1 car space per 5 flats was adopted. The proposed provision of car parking spaces for residential portion have been revised. Please refer to Table 2.3 in the revised TIA in **Appendix B** for consideration.
	(ii) The current parking and loading / unloading provisions for the soy sauce should be stated. Justifications should be provided in case the existing parking and loading / unloading provisions could not be provided;	Please note that there is no corresponding requirements under the land lease of existing soy sauce factory. Nevertheless, an occupancy survey was carried out at existing soy sauce factory. It was identified that a maximum of 6 private cars and 2 goods vehicles were parked within the site. Under the current proposal, the provision of parking and loading / unloading facility would be based on the HKPSG requirement for industrial use. A total of 1 motorcycle parking space, 12 private car parking spaces, 16 loading bays and 1 container bay would be provided. The proposed provision would be sufficient to meet the parking / loading demand.
	(iii) The bicycle parking provisions at a rate of 1 space for every 7.5 flats should be considered given its close proximity of the New Territories Cycle Track Network;	Based on the revised TIA report, the high-end provision of bicycle parking spaces (i.e. 1 space per 15 flats) according to HKPSG would be provided. The Applicant will consider to provide more bicycle parking spaces within the Application Site, and the exact no. of bicycle parking spaces will be agreed with TD at detailed design stage.

	Departmental Comments	Responses to Comments
2.12	Paragraph 3.2.2 – The exact date of the traffic survey should be stated. Verification should also be conducted to check if the evening peak would not extend to 8:00pm, given that the commute pattern from the urban area may arrive Northwest New Territories at around 7:00pm;	Noted. The evening peak has been further verified along Castle Peak Road and the peak period is from 5:45pm to 6:45pm. Relevant texts have been updated in the revised TIA in **Appendix B** for consideration.
2.13	Table 3.2 –	
	(i) Junction J12 – There are two lanes towards Kam Tin Road (Eastbound) from Tsing Long Highway slip road. In addition, the left-turn lane at Kam Tin Road (Westbound) towards Tsing Long Highway is a separate lane from the straight movement. The calculation should be reviewed;	Noted. Table 3.2 has been updated in the revised TIA in **Appendix B** for consideration.
2.14	Table 4.1 –	
	(i) The trip rates adopted for kindergarten should be reviewed with consideration of the traffic pattern in Northwest New Territories and the background of the students. At least two reference kindergarten should be provided to demonstrate the trip rate adopted is still valid for now;	Noted. Table 4.1 has been updated in the revised TIA in **Appendix B** for consideration.
2.15	Paragraph 4.4.5 – There is a planned road improvement works at Pok Oi Interchange for providing traffic signals at approaches from Yuen Long Highway. Such consideration should be considered in the assessment. Details of the proposal was presented to Traffic and Transport Committee of the Yuen Long District Council on 9 June 2022, which is available from the link below: - https://www.districtcouncils.gov.hk/yl/doc/2020_2023/tc/committee_meetings_doc/ttc/21838/TTC_paper_2022_14.pdf	Noted. The planned road improvement works at Pok Oi Interchange has been included the revised TIA in **Appendix B** for consideration.
2.16	Table 4.3 – Given that the Year of 2020 is affected by the pandemic, the derivation of growth rate based on AADT Data from ATC with consideration of 2020 data should be reviewed;	Noted. Instead of growth rate based on AADT Data, modelling approach (based on 2019 – based TPEDM Planning Data) has been adopted in the revised TIA in **Appendix B.**

	Departmental Comments	Responses to Comments
2.17	Table 4.4 – As PlanD has published 2019-based TPEDM Planning Data, derivation of growth rate should consider the latest planning data subject to PlanD's comments;	Noted. 2019-based TPEDM Planning Data has been adopted in the revised TIA in **Appendix B**.
2.18	Table 4.5 – we have the following observations: -	
	(i) A/YL/139-1 – Given that Grand YOHO is partially completed, please review the number of trip generation and attraction having considered the surveyed data;	During the survey, Grand Yoho has already been completed by about 80% and corresponding trip generation and attractions have been reflected in the revised TIA in **Appendix B**.
	(ii) A/YL-KTN/567 has been superseded by A/YL-KTN/791;	Relevant texts have been amended in the revised TIA in **Appendix B**.
	(iii) DD107 Lot1928 is now proposed to be converted to an international school;	Relevant texts have been amended in the revised TIA in **Appendix B**.
	(iv) A/YL/205 – The number of trips generated should be reviewed as the development only provides 324 hotel rooms. Please also clarify if the trips generated by the adjacent Youth Hostel as well as Phase III of YOHO Midtown development were considered;	Noted. The residential development (604 units) in Phases II & III and Youth Hostel were included in the revised TIA. Relevant texts have been amended in the revised TIA in **Appendix B**.
	(v) Kam Tin South Development should be considered in the assessment;	Noted. The Kam Tin South Development has been considered in the revised TIA in **Appendix B**.
	(vi) Concurrent planning application no. Y/YL-NSW/7 should be considered in a separate sensitivity test;	Noted. A sensitivity test has been included in the updated TIA. Please refer to Section 4.8 in the revised TIA in **Appendix B** for consideration.
2.19	Table 4.6 –	
	(i) The queue length analysis for Junction J4 should be provided, in particular the assessment at the arm of Underpass of San Tin Highway;	Under the sensitivity test, the DFC of junction J4 is only 0.05 in year 2034. Based on the assessment results, the maximum queue at the arm of Underpass of San Tin Highway is only 1 vehicle.
	(ii) Junction J10 – The assessment without the temporary flyover at Au Tau Interchange should be incorporated in the assessment;	Noted. The assessment without the temporary flyover at Au Tau Interchange has been included in the revised TIA in **Appendix B**.

	Departmental Comments	Responses to Comments
2.20	Figure 4.5 – There is only one give-way at the approach from Castle Peak Road – Yuen Long (Westbound) based on proposal from CEDD;	Noted. Figure 4.5 has been amended in the revised TIA in **Appendix B**.
2.21	Sensitivity tests should be conducted for the following junctions with consideration of the proposed OU(CDWRA)1 in Table 4.9: - (i) Additional 117 and 32 pcu/hr in AM and PM Peak respectively at the approach from San Tam Road (Northbound); (ii) Additional 880 and 473 pcu/hr in AM and PM Peak respectively for southbound at Junctions J7, J8, J9 and J10;	A sensitivity test has been carried out and included in Section 4.9 in the revised TIA in **Appendix B**.
2.22	Development traffic flow diagram should also be provided for the assessment.	Noted. Please refer to Figures 4.10 & 4.11 for the development traffic flow diagram in the revised TIA in **Appendix B**.
2.23	Two sites under the S.12A Planning Application Nos. Y/YL-NSW/8 and Y/YL-NSW/9 which have population intake in 2031 tentatively are in close proximity, hence the traffic and transport impact assessment should be conducted on a holistic approach.	Noted. Please refer to Section 2.5 in the revised TIA in **Appendix B**.
2.24	The proposed provision of public transport interchange ("PTI") in both sites for catering the passenger demand generated from the two proposed development is supported. However, the PTIs should be designed as saw-tooth type PTI for better pedestrian and vehicle circulations. The no. of bus bay provided should be one loading and unloading bay plus two stacking bays for each terminating bus route. The level of provision inside the PTI should be able to accommodate the proposed public transport services.	Noted. Please be clarified that the hardware transport facilities currently designed will be operated in the form of a covered transport layby instead of a public transport interchange.

	Departmental Comments	Responses to Comments
2.25	In both reports, the assumption of percentage of using public transport service is estimated at about 73%. In TCS 2011, the proportion of boardings made by public transport mode was 88% (Para. E.2.14 of TCS 2011). Please justify the use of 73% and suitably review the public transport demand generated by the subject development and the associated level of provisional of no. of bay inside the PTIs.	Referring to Travel Characterised Survey (TCS) 2011 Final Report (Table 3.6), the percentage of using public transport mode (i.e. exclude private car, taxi and Special Purpose Bus (SPB)) would be 73%. The 88% include taxi and SPB such as school coach.
2.26	Please include an assessment on the modal split and make suitable provision for different public transport modes inside the PTIs.	Noted. Please refer to Section 2.5 in the revised TIA in **Appendix B** for consideration.
2.27	Please provide taxi bay (for both urban and NT taxi) in the PTIs.	No taxi bay will be provided in the subject proposed development. However, a loading / unloading bay for taxi will be provided in the transport lay-by in the proposed development situated to the immediate north of the subject Application Site (i.e. the "OU(CDWRA)1" site submitted under separate planning submission by the same applicant).
2.28	Please ensure 12.8m double deck bus could operate inside the PTIs and along the route from the proposed development to the truck road.	Noted.
2.29	For the PTIs, please be reminded on necessity of • Provision of built-in bus ancillary facilities (bus regulator kiosk and rest room with toilets) (see attachment TPDM-Vol. 9 Section 2.7.11) • Provision of E-charging facilities (see attachments Technical Guidelines for Electric PLB, Requirements of Charging-enabling Infrastructure for Electric Franchised Buses and Requirements by EPD on EV charging)	Please be clarified that the hardware transport facilities would be provided as transport layby within the Application Site instead of PTI. These ancillary facilities will be further considered in the detailed design stage.

	Departmental Comments	Responses to Comments
3.	**Comments of Chief Engineer/Railway Development 2-2, Railway Development Office of Highways Department received on 25.5.2022**	
3.1	In Appendix D TIA table 2.1, it is noted that the proposed flat number is 3,115 flats in current scheme (about 8,099 population). Please provide the impact assessment on existing railway network arising from the proposed development.	Noted. The railway impact assessment has been included in Section 2.5.8 – 2.5.13 of the revised TIA in **Appendix B**.
4.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 7.6.2022 and 26.8.2022**	
4.1	***Landscape***	
4.1.1	Dwg. S1-LMP-01 (Rev.A) – The applicant replied that the demarcation of the boundary fence wall is added on the drawings, however, it is not observed on the plan. The applicant is advised to indicate the extent of the proposed fence on plan with appropriate legend.	The indicative alignment of the boundary fence wall is enclosed in **Appendix C2**.
4.2	***Visual Impact Assessment***	
4.2.1	According to para. 4.2.2 of the R-to-C table, the applicant claimed that the proposed development intensity is considered compatible with the long-term planning context due to various policy directives (i.e. Northern Metropolis, the Northern Link and brownfield study) and approved planning application No. A/YL-NSW/274 to the southwest of the Site. Please note that San Tin Technopole is about 3.5km away from the Site. Moreover, the developments around Au Tau Station and approved planning application No. A/YL-NSW/274 are ranging from about 60mPD to 75mPD. However, the applicant did not provide more justifications on the compatibility of the proposed maximum BH of 115mPD with the immediate visual context (such as fishponds to its immediate northwest and some existing and planned medium rise residential developments to its further west across San Tin Highway) as previously requested.	The Application Site is situated adjacent to the northeast of Yuen Long New Town, planned and committed medium-density and medium-rise residential developments (i.e. Park Yoho and the approved planning application No. A/YL-NSW/274), and some village settlements in close proximity (i.e. Wing Kei Tsuen and Mo Fan Heung) to the north and northeast of the Application Site. It is noted that the Application Site is surrounded by medium-rise and medium-density residential developments.

	Departmental Comments	Responses to Comments
	(Con't)	Furthermore, the planned Au Tau Station will be implemented about 600m to the southeast of the Application Site. In addition, according to the Yuen Long District Council Discussion Paper No. 36/2022 published in October 2022, the sites (about 11.8 hectares) in Sha Po to the east across the San Tin Highway of the Application Site is selected for high-density and high-rise public housing development with total plot ratio up to 6.7 and building height up to 185mPD. As such, the Proposed Development is considered to be totally compatible with the latest development context. Since the Application Site is situated in a transitional zone between the developed urban area to the east (i.e. the planned and committed developments across San Tin Highway) and the relatively sub-rural area to the west (i.e. the wetlands and fishponds across the Kam Tin River and the village settlements to the further north), some design measures have been incorporated in the scheme design to mitigate against any possible interface issues in its surrounding settings:- (i) *Stepped building height profile* – The taller buildings (not more than 115mPD) located closer to the Castle Peak Road will step-down towards the west (i.e Kam Tin River). The building height profile is compatible with the potential public housing development to the east across San Tin Highway of the Application Site. The VIA has been conducted to demonstrate the subject proposed development will be visually compatible in its surroundings; and (ii) *Sensible building disposition with provisions of building separations* – The proposed buildings are generally separated into 2 E-W running clusters with provision of building separations to facilitate visual and wind penetration. In conclusion, the Application Site is appropriate for medium rise and medium density developments in view of the surrounding planning context. With adequate design / mitigation measures, the proposed development is compatible with the surrounding environment.

	Departmental Comments	Responses to Comments
4.2.2	While noting the applicant has indicated various design measures (i.e. stepped BH profile, building separations, façade treatment and landscape treatment) in Figure A of the VIA and setback from boundary as stated in para. 11.8.5 of the Planning Statement, please provide indicative dimensions of the building separations and setback on relevant figure/drawing for reference.	Noted. The indicative dimensions of the building separations are provided in Figure A in the revised VIA in **Appendix D** for consideration.
4.2.3	In the submitted revised VIA, the applicant has submitted two scenarios to compare against the existing condition of the Site and its surroundings, i.e. (1) "Interim Scenario": proposed development under existing context, and (2) "Ultimate Scenario": proposed development with full completion of the public housing in Sha Po and another proposed residential development (i.e. Application No. Y/YL-NSW/8).	Noted.
4.2.4	As raised in our previous comments, the layout, development intensity and BH of the potential public housing development at Sha Po are still yet to be formulated under the EFS and the proposed comprehensive development under separate s.12A application No. Y/YL-NSW/8 is yet to be considered by the TPB. As such, these two development proposals could be served as a scenario testing and the "Ultimate Scenario" could be served for reference only.	Noted. More information in relation to the layout, development intensity and BH of the potential public housing development at Sha Po has been released in the Yuen Long District Council Discussion Paper No. 36/2022 published in October 2022. The photomontages and VIA of the subject planning application have been updated accordingly.
4.2.5	The applicant should provide the indicative scheme of the proposed primary school and relocation of soy sauce factory and indicate on the relevant photomontages for assessing the potential visual changes.	The indicative scheme of the proposed primary school and relocated soy sauce factory have been indicated on the photomontages accordingly.
4.2.6	For VP1, since the applicant claimed that existing views of VP1 along Pok Wai South Road are dominated by roadside greenery as per para. 4.2.8 of the R-to-C, the applicant may consider add a viewpoint near the bus stop next to the existing soy sauce factory along Castle Peak Road – Tam Mei to review the short-ranged visual impacts.	Noted. An additional viewpoint near the bus stop next to the soy sauce factory along Castle Peak Road – Tam Mi (VP9) is included to review the short-ranged visual impacts. Please refer to VP9 in the revised VIA in **Appendix D** for consideration.

	Departmental Comments	Responses to Comments
4.2.7	For VP2, the applicant should clarify and provide annotation for the buildings coloured in greyish blue on the right of the photomontage under the "Ultimate Scenario".	Noted. It is clarified that the buildings coloured in greyish blue on the right of the photomontage under the "Ultimate Scenario" are the approved residential developments under Application No. A/YL-KTN/604. The annotations of the buildings have been provided. Please refer to Figure 5.2 in the revised VIA in **Appendix D** for consideration.
4.2.8	For VP3, only part of the proposed development would be screened off by roadside planting while remaining portion would be visible at the centre of the photomontage, resulting potential loss of skyview. The applicant is requested to review the photomontage, the description in table 5.3 and the visual impact rating.	Noted. Please be clarified that a tiny portion of the proposed development will be visible in between of the vegetation under both interim and ultimate scenarios. The relevant texts and Figure 5.3 have been updated in the revised VIA in **Appendix D** for consideration.
4.2.9	For VP5, the proposed development would be visually prominent and to a certain extent, reduce the visual openness to the wetland/fishpond. Please review the visual impact rating.	It should be highlighted that the Proposed Development would only be visually noticeable at the interim stage. Upon full completion of the approved and proposed developments nearby, the Proposed Development would not be visually prominent from this VP5. The relevant texts have been updated in the revised VIA enclosed in **Appendix D** for further consideration.
4.2.10	For VPs 6 and 7, since the proposed development would be observable against the existing low-rise development context as shown in photomontages, the visual impact of this VP is not considered negligible. Please review the visual impact rating.	Noted. The visual impact rating of VP6 and VP7 have been reviewed accordingly.
4.2.11	For VP8, please review the location of the VP8 as the proposed location of VP8 is considered undesirable as it appeared that was taken in the middle of the road and limited in demonstrating the actual visual changes arising from the proposed development. The VP should move further down along the Kam Tin River towards the proposed development.	The location of VP8 has been reviewed. It is now situated to the northwest of the Application Site along the Nam Sang Wai River Education Trail (i.e. Nam Sang Wai Road) near the Nam Sang Wai Fishpond Education Kiosk. Please refer to Figure 5.8 and relevant texts in the revised VIA in **Appendix D** for consideration.
4.2.12	For photomontages that the proposed development may not be visible due to screening/blockage, the applicant is requested to indicate the outline of the proposed development with dashed line.	Noted and updated accordingly.

	Departmental Comments	Responses to Comments
4.2.13	The applicant should review the visual appraisal and the overall visual impact rating of the proposed development after taking into account of our comments above.	Noted. Please refer to the revised VIA in **Appendix D** for consideration.
4.3	***Air Ventilation Assessment***	
4.3.1	**Coverage of Assessment and Surrounding Areas (section 3.1 and Figure 1) –** With reference to the simulation results, it appears that the Proposed Scheme would create air ventilation impacts on the area beyond the minimum coverage for Assessment Area of 1H. As such, the consultant should review and enlarge the Assessment and Surrounding Areas appropriately and rerun the simulations.	Noted. Please note that the coverage of Assessment and Surrounding Areas have been revised and the CFD models have been revised and re-run. Please refer to the updated simulation results and Figure 1 in the revised AVA in **Appendix E**.
4.3.2	**Accuracy of the simulation results (Appendix 3) -** • Referring to the simulation results, there are some VR discontinuities have been found in the simulations around the models. The consultant should clarify the above phenomena and ensure that the simulation results are accurate. • Under SE wind, it found that the Proposed Scheme – Scenario 1 would have VR contour to the far east of the subject site different from that of Approved Scheme and Proposed Scheme – Scenario 2. The consultant should clarify and rectify the simulation results where appropriate.	As the simulation has been revised, please refer to the updated simulation results in the updated Appendix 4 in the revised AVA in **Appendix E**.
4.3.3	**Project Background (section 1.1.2) –** A plan indicating the two approved schemes with the OZP zoning and the boundary of the approved schemes should be provided for clarify sake.	The plan for two approved schemes with the OZP zoning and the boundaries of the approved schemes have been provided in updated Figure 1 in the revised AVA in **Appendix E**.

	Departmental Comments	Responses to Comments
4.3.4	**Mitigation Measures/Good Design Features under both Baseline and Proposed Schemes (sections 1.3 and 1.4) –** The consultant should list out all the mitigation measures/good design measures with dimensions in the text and indicate them on plan and in the computational model. The consultant is also required to demonstrate the performance of these mitigation measures/good design measures based on the simulation results and VR data. The consultant should also cover the implementation of these measures in the report.	Various building separations and building setbacks which could serve as air corridors are provided between the tower blocks and along the site boundary. The mitigation measures with dimensions have been provided. Please refer to updated Section 1.4.4, Appendices 2 and 4 in the revised AVA in **Appendix E.**
4.3.5	**Building heights of the existing developments (paragraph 1.2.6 and Figure 1) –** The consultant should report the building height of the existing buildings within the Surrounding Area with the aid of a diagram.	The building heights of the existing buildings within the surrounding area have been indicated on the updated Figure 1 in the revised AVA in **Appendix E**.
4.3.6	**Approved Scheme and Proposed Scheme –** Please set out the development parameters such as building height, total CFA and site coverage of both schemes.	The development parameters of both schemes have been provided. Please refer to the updated Sections 1.3 and 1.4 in the revised AVA in **Appendix E**.
4.3.7	**Approved Scheme (section 1.3) –** The consultant should clarify that the proposed development under the Planning Application No. A/YL-NSW/241 is considered as the planned development within the Surrounding Area but not part of the subject site under the current application. If affirmative, the consultant should report it in the separate section (not under section 1.3) to avoid confusion. It appears that the application no. Y/YL-NSW/8 covers only the current "OS" zone, not the whole application site. Please state it clearly.	Please be clarified that the proposed development under the Planning Application No. A/YL-NSW/241 is considered as the planned development within the Surrounding Area. Please refer to the updated Sections 1.5 and 2.3 in the revised AVA in **Appendix E**.

	Departmental Comments	Responses to Comments
4.3.8	**Noise barriers, elevated structures, Planning and committed developments (paragraphs 2.2.4 and 3.1.3) –** There is no Appendix 4 have been provided in this submission. The consultant should provide figures to illustrate the modelled noise barriers, elevated structures, planned and committed developments for checking.	Appendix 4 has been provided and the model views have been illustrated in the updated Appendix 4 in the revised AVA in **Appendix E**.
4.3.9	**Proposed Scheme (section 1.4) –**	
	• Paragraph 1.4.1 - The consultant should provide the details and MLP of the proposed developments in both relocated soy sauce factory portion and reserved school site which is also part of the application site.	The details and MLP of both relocated soy sauce factory portion and reserved school site have been provided in updated Section Appendix 2 in the revised AVA in **Appendix E**.
	• Paragraph 1.4.3 – It seems that it should refer to section 1.1.2 but not 1.2.4.	Noted. The relevant texts have been amended in S1.4.3 in revised AVA in **Appendix E**.
4.3.10	**Simulated wind direction under annual condition (section 2 and Table 2.1) –** The consultant should simulate SSE wind (i.e. 7.6%) but not SSW (i.e. 5.8%) wind under annual condition based on their wind frequencies.	Noted. Please refer to the updated Table 2.1 in the revised AVA in **Appendix E**.
4.3.11	**Simulated wind direction under summer condition (section 2 and Table 2.1) –** It is not required to include E wind (i.e. 5.6%) for achieving total 75% of wind frequency under summer condition.	Noted. Please refer to the updated Table 2.1 in the revised AVA in **Appendix E**.
4.3.12	**Topography (section 2.2 and Appendix 3) –** The consultant should describe and discuss the existing of Kai Kung Leng to the northeast of the subject site. Please clarify and correct the labelling on the figures shown in Appendix3.	The relevant discussion has been provided. Please refer to the updated Section 2.2.1 and Appendix 4 in the revised AVA in **Appendix E**.

	Departmental Comments	Responses to Comments
4.3.13	**Height of the tallest building (paragraph 3.1.1) –** In accordance with the AVA Technical Circular No. 1/06, the value of H should be referred to the height of the tallest building on sites. Referring to the MLP of the Proposed Scheme (see Appendix 2), the height of the tallest building is at +115.0mPD (i.e. around 110m) not 100m. The consultant should correct the value of H accordingly.	The value of H has been revised accordingly. Please refer to the updated Section 3.1.1 in the revised AVA in **Appendix E**.
4.3.14	Justification should also be provided for the substantial increase in building mass of the relocated soy sauce factory.	Please be advised that the GFA and therefore the building mass of the relocated soy sauce factory would be the same as the existing soy sauce factory. The relocated soy sauce factory will have total non-domestic GFA of not more than 13,700m^2 and maximum building height (to the main roof) of not more than 8m which is the same as the existing factory in accordance with the lease conditions.
4.3.15	**Test points (section 3.4, Table 4.1 and Figure 4)**	
	(a) Referring to Figure 4, the test point IDs and the base map are very blur and illegible. As such, we could not ascertain accuracy of the information which related to the test points. We would reserve our comments on Figure 4 and Table 4.1 at this juncture.	Figure 4 in the revised AVA in **Appendix E** has been revised accordingly.
	(b) With reference to Figure 4, it shows that some overall test points are too close to some perimeter test points. The consultant should revise it where appropriately.	Figure 4 in the revised AVA in **Appendix E** has been revised accordingly.
	(c) The consultant should evenly distribute the overall test points within the focus area 5.	The overall test points within the focus area 5 have been evenly distributed. Please refer to the updated Figure 4 in the revised AVA in **Appendix E**.
4.3.16	**Directional analysis (section 4.5) –** Simulation results show in this section are illegible.	As the simulation has been revised, please refer to the updated simulation results in the revised AVA in **Appendix E**.

	Departmental Comments	Responses to Comments
5.	**Comments of the Director of Environmental Protection received on 28.6.2022**	
5.1	The fringe of the Site falls within Deep Bay Buffer Zone 2. The applicant should double check and if affirmative, the proposed residential development will constitute a designated project (DO) under Item P.1, Schedule 2 of the EIAO (i.e. a residential development or recreational development, other than New Territories exempted houses within Deep Bay Buffer Zone 1 or 2). An environmental permit under the EIAO is required before the construction and operation of the proposed residential development.	The subject site falls outside Deep Bay Buffer Zone 2 and therefore would not be classified as a Designed Project. 
	Departmental Comments	Responses to Comments
	EIAO Implication	
5.2	Section 1.4.1 and Section 1.4.4: As mentioned above, please check if the fringe of the application site falls within Deep Bay Buffer Zone 2 and if affirmative, the proposed residential development will constitute a designated project (DP) under Item P.1, Schedule 2 of the EIAO (i.e. a residential development or recreational development, other than New Territories exempted houses within Deep Bay Buffer Zone 1 or 2). An environmental permit under the EIAO is required before the construction and operation of the proposed residential development. Please revise these two sections accordingly.	The location of the Application Site and the boundary of Deep Bay Buffer Zone 2 have been reviewed. The Application Site falls outside Deep Bay Buffer Zone 2. Please refer to Item 5.1 in this RtoC table for detailed responses.
5.3	*Air quality*	
5.3.1	Section 1.4.8: Please rectify the typo "…least significant)…" to "…less significant…" in line 6.	Relevant texts have been amended in S3.2.3 in the revised EA in **Appendix F** for consideration.
5.3.2	Section 1.4.9: Please be reminded that it should be the responsibility of the applicant and their consultants to ensure the validity of the chimney data by their own site surveys. Should the information of industrial chimneys be subsequently found to be incorrect, the assessment result as presented in the planning application would be invalidated.	Noted.
5.3.3	Section 1.4.11: Please rectify the typo "…~~form~~ **from** vehicular repair use…" in the last sentence.	Relevant texts have been amended in S1.4.8 in the revised EA in **Appendix F** for consideration.
5.3.4	Section 1.4.12: Please rectify the typo "impact ~~from vehicular repair use~~ **from Sha Po Sewage Pumping Station** is not…" in the last sentence.	Relevant texts have been amended in S1.4.9 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
5.3.5	Section 1.4.16 (a) Please clarify the meaning of "TI" in line 5. (b) Please observe and follow EPD's ProPECC PN2/96 on Control of Air Pollution in Car Parks for the design and operation of the car parks. Car Parks should be designed such that the air quality guidelines set out in the PN are met under all conditions.	Relevant texts have been amended in S3.2.2 in the revised EA in **Appendix F** for consideration.
5.3.6	Section 1.4.17: Please include Pok Wai South Road as one of the nearby roads in this section.	Relevant texts have been amended in S3.3.1 in the revised EA in **Appendix F** for consideration.
5.3.7	Sections 1.4.18 and 1.4.19: Please refer to the latest TD traffic census (i.e. ATC 2020) for the road types of the existing nearby roads (including San Tin Highway and Tsing Long Highway) for the evaluation of the vehicular emission impacts. Please state clearly in the text.	Relevant texts have been amended in S3.3.2 in the revised EA in **Appendix F** for consideration.
5.3.8	Section 1.4.20: Please provide TD's endorsement for the road type of Pok Wai South Road.	The Applicant is seeking advice from TD and correspondence will be provided once available.
5.3.9	Section 1.4.21: Please ensure and state clearly in the text that no air sensitive uses, including fresh air intake of ventilation system or openable windows of the buildings, active recreational uses would be located within the buffer zones. Please also make the necessary amendment to the remarks in Figure 1.4.	There will be no air sensitive uses (including fresh air intake of ventilation system or openable windows of the buildings) active recreational uses located within the buffer zones. Please refer to S3.3.5 and Figure 3.1 in the revised EA in **Appendix F** for consideration.
5.3.10	Section 1.4.22 and Section 5.1.3: Please clarify whether the function of the proposed transport lay-by would be similar to the Public transport interchange. If yes, the applicant should follow EPD's ProPECC PN 1/98 on Control of Air Pollution in Semi-Confined Public Transport Interchanges for the design and operation of the proposed transport lay-by such that the air quality guidelines set out in the PN are met under all conditions.	Relevant texts have been amended in S3.3.6 and S6.1.3 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
5.3.11	Sections 1.4.6 to 1.4.9 and Sections 1.4.17 to 1.4.22: Please group all these sections related to air quality impact assessment to a separate section in the report for better presentation to avoid confusion.	Noted. All sections related to air quality impact assessment have been grouped. Please refer to Section 3 – Air Quality Impact Assessment in the revised EA in **Appendix F** for consideration.
5.3.12	Section 1.5: Please include a separate **Cumulative odour impact assessment section** in the report as odour impact arising from the relocated soy sauce factory and Sha Po Sewage Pumping Station should be one of the environmental concerns for this application.	Based on onsite survey, no noticeable odour can be detected at Sha Po Sewage Pumping Station over 130m away from the Application Site. In addition, as the project is still at its preliminary stage, there is no detailed design for the relocated soy sauce factory. As such, the cumulative odour impact assessment would be carried out in subsequent detailed design stage. Further survey will be conducted to cover Sha Po Sewage Pumping Station and area within 500m to identify if there is any odour impact.
5.3.13	<u>Section for cumulative odour impact assessment</u> (i) According to Section 3.2.5, it is noted that the separation distance between the potential odour source (i.e. open area for aging of semi-product at the relocated soy sauce factory) and the air-sensitive uses of the proposed development would be 80m. The HKPSG buffer distance requirement for odour source cannot be met. The proposed soy sauce factory may cause adverse odour impact on the air-sensitive uses of the proposed development and other nearby ASRs. Cumulative odour impacts associated with planned and existing odour emission sources within 500m assessment area of the project site boundary on the air-sensitive uses of the proposed development and the nearby ASRs shall be assessed **<u>quantitatively</u>** to demonstrate that the odour impact would not be adverse. (ii) Please identify all existing and planned odour emission sources (e.g. Sha Po Sewage pumping station, proposed Soy Sauce Factory to be relocated, on-site sewage STP of the soy sauce factory) within 500m assessment area. Please also indicate the locations of these odour sources in Figure 4.1 for clarity. (iii) Please identify and list out existing and planned ASRs within 500m assessment area (including the subject site) in a location map and table for evaluation of the odour impacts with their separation distances and assessment heights.	Noted. The requirements will be taken into account in the detailed odour impact assessment.

	Departmental Comments	Responses to Comments
5.3.13	(iv) The consultant should provide information about the odour emission sources with justifications (e.g. odour emission source locations, operation hours, odour emission strengths of emission sources including the manufacturing process in the factory, aging process at the open area and the proposed on-site STP, removal efficiency of deodorizing unit, etc.). If necessary, odour sampling and olfactory analysis is required to determine the specific odour emission rate (SOER) of the odour sources. (v) In particular, the consultant should justify with supports why 95% removal efficiency can be achieved for removing the odour from the specific soy sauce making process. (vi) Please clarify whether there is other chimney emissions from the relocated soy sauce factory and state clearly in the cumulative odour impact assessment section. (vii) The consultant should conduct site survey to identify any other potential odour impacts within 500m of the project site boundary (e.g. any odour emission from factories, open storage areas and vehicle repair workshops). Please provide the date of the site survey conducted and the site survey route in this submission. Please also list out the closest separation distances between these potential odour sources and the site boundary. Any other odour emission sources identified within 500m shall also be included in the odour impact assessment. (viii) Please clarify if the population intake will be earlier than the relocation of the soy sauce factory. If positive, the odour impact arising from the existing soy sauce factory on the air-sensitive uses of the proposed development shall also be assessed. (ix) On top of the above mentioned, please note that even if the odour impact assessment results are found to comply with the odour criterion as stipulated in the EIAO-TM at any ASRs, it is still possible to have an I/R interface problem owing to the immediate proximity of the factory to the proposed residential development and school, which is highly undesirable from air quality planning perspective.	
5.3.14	Section 4.2.2: Please justify why the number of construction plants will be unlikely be high.	The sentence has been deleted. Please refer to S5.2.2 in the revised EA in **Appendix F** for consideration.
5.3.15	Section 4.2.4: (a) Owing to the large subject site area (about 8.2 ha), the consultant should provide the scale of the dusty activities including site formation and excavation areas, amount of excavated materials to be handled and no. of dump trucks on the site, etc. to justify that the dust impact would not be adverse with implementation of control measures.	Further estimate on scale of activities, amount of excavated material, truckload, etc. are included. Please refer to S5.2.4 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
	(b) Please also state clearly if there is any concurrent projects within 500m from the site boundary and their cumulative impact should be addressed.	There will be another comprehensive residential development with anticipated concurrent construction works situated to the immediate north of the subject Application Site (i.e. the "OU(CDWRA)1" site submitted under separate planning submission by the same applicant). Please refer to S5.2.4 in the revised EA in **Appendix F** for consideration.
	(c) Please also clarify if a dust monitoring and audit programme will be implemented during the construction stage to ensure that no adverse dust impact will be imposed on the nearby ASRs.	The Proposed Development includes relocation of soy sauce factory, excavation of basement for car parking facilities, erection of residential towers and associated facilities. The site topography is generally flat so that no extensive site formation work is required. In addition, there are well established practices to mitigate dust emission during excavation, piling and superstructure works. It is considered that the potential fugitive dust impact can be practicably mitigated. Therefore, dust monitoring and audit programme are considered not necessary for the Application Site. S5.2.5 in the revised EA in **Appendix F** has been supplemented.
	(d) It is suggested to add "Since the proposed residential development will constitute a designated project under the EIAO, an AQIA including a detailed odour impact assessment is required to demonstrate the compliance of the criteria stipulated in the EIAO-TM." to the last line.	As clarified, the proposed development is not considered a DP under P.1, Schedule 2 of the EIAO. In any case, an odour impact assessment would be carried out in later detailed design stage.
5.3.16	Section 5.1.2 (a) Please revise line 5 to read "…would generate odour are housed indoor<u>, except for the process of ageing of semi-product.</u>"	Relevant texts have been amended in S6.1.2 in the revised EA in **Appendix F** for consideration.
	(b) Please rectify the typo "dThe" in line 11.	Relevant texts have been amended in S6.1.2 in the revised EA in **Appendix F** for consideration.
	(c) Subject to the findings of the odour impact assessment, the relevant text will need to be revised under "Conclusion".	Please be advised that the odour impact assessment would be carried out in later detailed design stage and the situation has now supplemented in "Conclusion". Please refer to S6.1.2 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
5.3.17	Figure 1.4 (a) Please show the proposed layout and locations of the relocated soy sauce factory, residential towers and school site in Figure 4.1. Please also indicate the location of the exhaust of the relocated soy sauce factory and the open area for aging of semi-product in the figure for clarity.	Noted. The proposed layout and locations of the relocated soy sauce factory, residential towers and school site, and the location of the exhaust of the relocated soy sauce factory and the open area for aging of semi-product have been included in Figure 4.1 in the revised EA in **Appendix F** for consideration.
	(b) Please also indicate the shortest separation distance between the relocated soy sauce factory and the nearby ASRs including future air-sensitive uses of the proposed development in the figure for evaluation of the odour impact.	Noted. The shortest separation distances between the relocated soy sauce factory and the nearby ASRs have been included. Please refer to Figure 4.1 in the revised EA in **Appendix F** for consideration.
	(c) Please enlarge the portion of buffer zone to confirm if there is any air-sensitive uses within the buffer zone.	Noted. The portion of buffer zone to confirm if there is any air-sensitive uses within the buffer zone has been included. Please refer to Figure 3.1 in the revised EA in **Appendix F** for consideration.
	(d) Please show the correct buffer zone for Castle Peak Road-Tam Mei since it is found that the buffer zone varies for different section of the road (i.e. it shall be measured from the road kerb of the road with a 10m distance). Please also show the buffer zones from the road kerb of San Tin Highway and Tsing Long Highway in the figure.	Noted. The relevant information has been amended. Please refer to Figure 3.1 in the revised EA in **Appendix F** for consideration.
5.3.18	Please highlight all the changes and amendments in the next submission for easy review.	Noted.
5.4	*Noise impact*	
5.4.1	It is expected that a detailed noise impact assessment (NIA) report would be further submitted under the subsequent section 16 planning application to demonstrate full compliance with the noise criteria under the HKPSG based on the latest design/layout available at that stage. Observations are provided below for the applicant to refine the future NIA submission under the s.16 application.	A detailed NIA will be submitted under the subsequent S16 application. The observations provided below will be taken into account and reflected in the future detailed NIA submission for the subsequent S16 application.

	Departmental Comments	Responses to Comments
	Traffic noise assessment	
5.4.2	Appendix 2.5 (a) The proposed 1.5 dB(A) additional reduction to Acoustic Window by adding SAM is not justified. The quoted noise attenuation values in the reference case have already considered the absorption given by MPA. It is unknown whether the addition of SAM to an AW with MPA can give significant additional reduction, and can be obtained by pure summation of the attenuation values, i.e. 6.9 dB(A) + 1.0 dB(A).	Noted. The relevant details will be considered in the detailed NIA in the subsequent S16 application.
	(b) The proposed 1.5 dB(A) addition reduction to Acoustic Door by adding both MPA and SAM is not justified. Though the addition of MPA or SAM may bring 1.0 dB(A) additional reduction, it is unknown whether the addition of absorptive material to an INMD already with one type of absorptive material can give significant additional reduction.	Noted. The relevant details will be addressed in the detailed NIA in the subsequent S16 application.
5.4.3	Section 2.3.4: Please document TD's agreement on the traffic forecast data in the NIA report once available. In case TD has no comment on the methodology for traffic forecast only, the consultant should provide written confirmation from the respective competent part (e.g. traffic consultant) that TD's endorsed methodology has been strictly adopted in preparing the traffic forecast date, and hence the validity of traffic data can be confirmed.	Noted. The relevant details will be addressed in the detailed NIA in the subsequent S16 application.
5.4.4	Table 2.1: According to Appendix 2.3, should the max noise level for T11-T12 read as 73 dB(A)?	Noted. The relevant details will be amended in the detailed NIA in the subsequent S16 application.
5.4.5	Table 2.2: According to Appendix 2.4, should the max noise level for T12 read as 73 dB(A)?	Noted. The relevant details will be amended in the detailed NIA in the subsequent S16 application.
5.4.6	Appendix 2.4: For Tower 3, the result of NSR S1_T3-P5 is missing. Please supplement.	Noted. The relevant details will be amended in the detailed NIA in the subsequent S16 application.

	Departmental Comments	Responses to Comments
5.4.7	Appendix 2.4: Please remove the heading which does not relate to this development.	Noted. The relevant texts will be amended in the detailed NIA in the subsequent S16 application.
5.4.8	Figure 2.3a: For T8 flat D, please confirm if AD(BT) adopt on 27F?	Noted. The relevant details will be amended in the detailed NIA in the subsequent S16 application.
5.4.9	Appendix 2.4: The inner and outer opening width of the acoustic window / Door (baffle type) are not found in the drawing. Please supplement. For the sake of better presentation, please also provide the dimensions of the acoustic window in the main text.	Noted. The relevant details will be supplemented in the detailed NIA in the subsequent S16 application.
5.4.10	We noted that the predicted maximum traffic noise level of the proposed reserved school is as high as 81 dB(A) without noise mitigation measures. We understand that the detailed design and layout of the proposed reserved school are not available at this stage, please explore alternative layout such that the road traffic noise impact can be minimised. <u>Fixed noise assessment</u>	Noted. The relevant details will be addressed in the detailed NIA in the subsequent S16 application.
5.4.11	We noted that a number of existing fixed noise source (e.g. vehicle workshop and open storage) could be found in the vicinity. The applicant should carry out a fixed noise impact assessment to demonstrate the proposed development would comply with the noise criteria of IND-TM.	Noted. A fixed noise impact assessment will be supplemented to verify the existing fixed noise sources in the detailed NIA in the subsequent S16 application.
5.4.12	Please also find our technical comments on noise model and fixed noise assessment (in attached Annex 2).	Noted. The relevant details will be addressed in the detailed NIA in the subsequent S16 application.

	Departmental Comments	Responses to Comments
5.5	Water quality	
5.5.1	Section 1.4.24 (a) Please clarify whether all wastewater generated from the proposed development, including the relocated soy sauce factory, would be discharging to the public sewerage system, as s.3.4.2 mentioned that the arrangement excluded the soy sauce factory.	It is confirmed that all wastewater generated from the Proposed Development (other than the relocated soy sauce factory) would be discharged to the public sewerage system. The relevant texts have been amended in S1.4.15 and S4.4.2 in the revised EA in **Appendix F** for consideration.
	(b) Please briefly elaborate on the operation phase water quality impact assessment on non-point source pollution control and measures. Best practices as stated in ProPECC PN 5/93 "Drainage Plans Subject to Comment by the Environmental Protection Department" shall be followed. Please also elaborate how the wastewater from swimming pool would be handled with reference to the ProPECC PN 5/93 "Drainage Plans Subject to Comment by the Environmental Protection Department".	The design of the drainage system will make reference to the ProPECC PN 5/93 "Drainage Plans Subject to Comment by the Environmental Protection Department". The operation phase water quality impact assessment on non-point source pollution control and measures have been included in S1.4.15 in the revised EA in **Appendix F**. Swimming pool main drain, footbath main drain and make-up tank drain should be connected to stormwater drains while filtration plant back wash should be discharged to foul sewers. The design measures have been included in S1.4.15 in the revised EA in **Appendix F** for consideration.
	(c) Please further elaborate how the wastewater during operational stage would be handled. Would there be any need of sewage pumping station? If so, please elaborate whether there would be adverse water quality impact during operation, e.g. emergency discharge, etc. As the development locates within Deep Bay catchment with limited assimilative capacity, discharge of raw sewage shall be prevented as far as possible and relevant mitigation measures shall be proposed.	It is confirmed that no sewerage pumping station is proposed in the Application Site. According to the submitted SIA, gravity pipe will be constructed to connect the development to Nam Sang Wai Sewage Pumping Station. All generated wastewater (other than the relocated soy sauce factory) will be discharged to public sewerage system. The relevant texts have been amended in S1.4.15 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
5.5.2	Section 3.4: As public sewerage would be provided by the proposed development during operational phase which would also be available to the relocated soy sauce factory, please also consider to connect the soy sauce factory to public sewer for wastewater and sewage discharge. Please be reminded that effluent from industrial, institutional and commercial premises is subject to control under PCO and a valid licence under WPCO should be obtained before discharge to foul sewers. Unless the relocated soy sauce factory could be connected to public sewer for wastewater and sewage disposal, more detail shall be provided to demonstrate that the relocated soy sauce plant would not have additional loading to Deep Bay as per requirement in TPB-PG No. 12C.	Noted. It is confirmed that all wastewater generated (other than the relocated soy sauce factory) would discharge to the public sewerage system. Wastewater from the relocated soy sauce factory would be treated by onsite sewage treatment plant and discharged to the proposed drainage system same as the current practice of the existing factory. The onsite STP of the relocated soy sauce factory will be designed with latest technology available and no additional loading to Deep Bay will be achieved when comparing with currently permitted level. The relevant texts have been amended in S1.4.15, S4.4.2 and S4.4.4 in the revised EA in **Appendix F** for consideration.
5.5.3	Section 4.4.1 – Water Quality and Construction Wastewater Impact	
	(a) Please elaborate on the whether there would be works in the waterbodies within the site, e.g. channel, watercourses during construction phase and propose mitigation measures accordingly to prevent adverse water quality impact during construction phase.	There would be works in the nearby water body such as existing channel within the adjacent "OU(CDWRA)1" site. The proposed mitigation measures have been included in S5.4.4 in the revised EA in **Appendix F** for consideration.
	(b) Please briefly elaborate to cover whether there would be potential impact for the construction works for sewerage pipeline to the proposed connection points.	There will be offsite construction work for laying of sewer pipeline. The designed mitigation measures have been included in S5.4.4 in the revised EA in **Appendix F** for consideration.
5.5.4	Figure 1.5: Please review whether all relevant WSRs are included, e.g. channel or water courses within the site, CA zone, WBA, WCA, mitigation wetland, shall be indicated, etc.	Noted. The relevant WSRs have been included in Figure 1.3 in the revised EA in **Appendix F** for consideration.
5.6	<u>Waste management and land contamination</u>	
5.6.1	Section 1.4.22: Please provide information on the historical land uses of the application site and address any potential land contamination issues.	Land contamination review has been supplemented in S1.4.16 to S1.4.18 and S5.6 in the revised EA in **Appendix F** for consideration.

	Departmental Comments	Responses to Comments
5.7	**Further comments on the revised SIA as detailed below:**	
5.7.1	General Comment: Please provide the intake year of the project.	Noted. The planned population intake year is same as the completion year, which is 2031. The population intake year has been incorporated under the Section 2.1.1 in the revised SIA in **Appendix G**.
5.7.2	Tables 1 & 2: The average household size of Yuen Long (2.8) stated in "Population and Household Statistics Analysed by District Council District" (2021) should be adopted for person per flat ratio (PPoF). Please update the corresponding calculations and footnotes.	Noted. The sensitivity analysis adopting person per flat ratio (PPoF) of 2.8 is prepared in the Appendix A in the revised SIA in **Appendix G**.
5.7.3	Tables 5 to 10: Please update the tables according to the latest estimation.	Noted. Table 5 to 10 in the revised SIA in **Appendix G** have been reviewed and updated.
5.7.4	Section 6.1.1: Please update the following sentence "The sewers within the site boundary will be constructed in proposed drainage ~~serve~~ reserve as shown in Figure 3."	Noted. The relevant text in Section 6.1.1 in the revised SIA in **Appendix G** has been updated.
5.7.5	Section 6.1.4: FTMH2 should be connected to DR1 according to Figure 4. Please check. Appendix 4 & E	Noted. The relevant text in Section 6.1.4 in the revised SIA in **Appendix G** has been updated.
5.7.6	Manhole FSH1001880 should be connected to three existing sewer/ rising main. However, no increase in ADWF is shown at section FSH1001880-FMH1039721. Please also include the flow contributed by these existing sewers.	Noted. The existing ADWF from the upstream of Kam Tin and Sha Po Pumping Station have been incorporated. The relevant calculation and text in the revised SIA in **Appendix G** have been updated accordingly.
5.7.7	Footnote 3 does not tally with calculation. Please check.	Noted. Appendix 4 in the revised SIA in **Appendix G** has been reviewed and updated.
5.7.8	Please note that flow velocity of section DSD3-FSH1001880 has exceeded the allowable maximum velocity stated in Sewage Manual. Please check.	Noted. Appendix 4 in the revised SIA in **Appendix G** has been updated. The updated flow velocity of section DSD3-FSH1001880 is about 2.45m/s.

	Departmental Comments	Responses to Comments
5.7.9	Apart from SIA, the applicant has not yet submitted the revised environmental assessment to address the previous comments to demonstrate environmental acceptability of the proposed development under the rezoning application. In particular, it is noted from the revised SIA that sewage from the relocated soy sauce factory will be treated by on-site STW before discharging to the new stormwater drainage system and therefore the total sewage flow in the revised SIA did not take into account the sewage flow from the soy sauce factory. The applicant should be reminded to consider making connection of the soy sauce factory to the public sewerage system for wastewater and sewage discharge as far as possible or otherwise, more detailed information should be provided to demonstrate that the relocated soy sauce plant would not have additional loading to Deep Bay as per requirement in TPB-PG NO.12C.	The revised EA is hereby enclosed in **Appendix F** to demonstrate environmental acceptability of the proposed development. The sewage from the relocated soy sauce factory is to be discharged according to existing discharge license. The wastewater from the relocated soy sauce will be treated by new on-site sewage treatment plant (STP), based on latest treatment technology designed for soy sauce production process. The treated effluent will be discharged into the new stormwater drainage system via stormwater terminal manhole. Hence, the wastewater generated by the soy sauce factory should not impose impact to the proposed sewerage system. The sewage discharged from the relocated soy sauce would be the same as the existing soy sauce factory under the existing discharge license. As such, the relocated soy sauce factory will not have additional loading to Deep Bay.
6.	**Comments of the Chief Highway Engineer/ New Territories West, Highways Department received on 31.10.2022**	
6.1	It is noted that HyD's maintained slope feature no. 6NE-A/F105 would be affected under the subject development. The applicant should clearly indicated the demarcation of the modified slope to be managed and maintained by the applicant. The applicant should also clearly indicate the modified slope, if any, to be handed over to HyD for maintenance, and submit the associated details and design to HyD for comment. The slope works design should also be submitted to checked and accepted by GEO;	Noted. The detailed management, maintenance and slope works design will be provided in subsequent detailed design stage.

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	**Responses to Comments**
1.	**Comments of the Chief Engineer / Mainland North, Drainage Services Department received on 4.11.2022**	
	<u>Drainage Impact Assessment</u>	
1.1	Section 3 – Please note that Corrigendum No. 1/2022 of DSD's Stormwater Drainage Manual has recently been issued, the assessment should consider SDM 2018 with the Corrigendum.	Noted. Calculation has been updated based on Corrigendum No. 1/2022 of DSD's Stormwater Drainage Manual.
1.2	Response to Comments Item 4.1 – You have not addressed our comment, it is noted that you have added a legend of "PROPOSED PERIMETER DRAIN" on Figure 4, you shall also indicate the approx. size on the figure.	Noted. The preliminary sizes of the perimeter drain have been indicated on **Figure 4** in the revised DIA (**Appendix A**). The size of the perimeter drain is subject to review in the detailed design stage.
1.3	Section 6.1.1 – There is no public drain maintained by DSD nor Drainage Reserve (DR) within the lot. To avoid confusion, please review and remove the alleged DR as appropriate.	Noted. The Drainage Reserve (DR) has been removed from **Figure 2** and under Section 6.1.1.

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Agriculture, Fisheries and Conservation received on 16.1.2023**	
1.1	S.6.4.4 The impact assessment should base on the existing site condition. Please remove this section.	Noted. The relevant section has been removed. Please refer to the replacement pages of the revised EcoIA submitted on 25.11.2022 in **Appendix A** for consideration.
2.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 16.1.2023**	
2.1	Landscape Master Plan – It is noted that the podium level of block T5 a T6 is higher than that of T1 to T3. The applicant is advised to clarify the accessibility between the two podium gardens. Cross-section should be provided to illustrate the level difference and proposed landscape treatments.	The proposed podium gardens (i.e. T1 to T3 and T5 to T6) will be accessed by Residential Lobby Area / Lifts. The location of the residential lobby area / lifts is highlighted on the LMP for easy reference (see **Appendix B**).
2.2	Section C-C – The uncovered podium greening adjacent to "Tower 1" is not observed on plan. Please clarify and review the drawings.	The uncovered podium greening has been added on the Revised LMP and Section C-C. Please refer to **Appendix B** for consideration.
2.3	Section B-B & C-C – According to the plan, the tree shown in the blow-up "Typical section" does not exist and should be removed.	The trees have been removed. Please refer to the revised Sections B-B and C-C in **Appendix B** for consideration.
2.4	It is noted that tree planting is proposed on top of Basement Carpark. The project proponent is advised to ensure the planting is structurally feasible at early stage of the planning.	It is structurally feasibility of having tree planting on top of basement carpark.

	Departmental Comments	Responses to Comments
1.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 31.1.2023**	
	A. Urban Design and Visual Perspectives: **Revised VIA (Appendix D of FI(3))**	
1.1	According to the revised Indicative Master Layout Plan in Attachment 1 of FI(3), it is observed that the no. of block for club house is increased from one to two, as well as revision in internal road layout.	Noted.
1.2	**Planned/Committed Developments** – on the RNTPC meeting on 9.12.2022, the Board agreed the proposed amendments to the approved Kam Tin North Outline Zoning Plan No. S/YL-KTN/9 to facilitate the public housing development at Sha Po Site (subject to maximum PR and BH of 6.7 and 185mPD respectively) under Amendment Item A and associated Amendment Items B and C for exhibition under section 5 of the Town Planning Ordinance. According to the Press Release dated 3.11.2022, the Land Sharing Pilot Scheme Application No. LSPS/002 for proposed residential development has received endorsement in-principle form the Chief Executive-in-Council. The consultant should reflect the above development proposals as planned developments under baseline condition and suitably revised the photomontages and relevant paragraphs of VIA and planning statement. The applicant is reminded to take into account the planned/committed developments in both Interim and Ultimate Scenarios.	Noted. The public housing development at Sha Po Site and the Land Sharing Pilot Scheme Application No. LSPS/002 for proposed residential development in Tung Shing Lei have been taken into account and incorporated in both Interim and Ultimate scenarios in the revised VIA. The Interim and Ultimate Scenarios have been updated to compare against the Existing Condition of the Site and its surroundings: • **Interim Scenario**: Proposed Development with full implementation of the planned / committed developments under the current context, including the approved residential developments (i) Application No. A/YL-KTN/604; (ii) Application No. A/YL-KTN/663; and (iii) Application No. A/YL-NSW/274; (iv) planned public housing development at Sha Po Site; and (v) planned residential development in Tung Shing Lei under Land Sharing Pilot Scheme. • **Ultimate Scenario**: Proposed Development with full implementation of the planned / committed developments and another proposed residential development to the immediate north of the Application Site. The photomontages and relevant paragraphs in the revised VIA have been updated. Please refer to the revised VIA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
1.3	**Table 5.3** – please clarify whether the appraisal and ratings of visual impact are applicable for both Interim and Ultimate Scenarios.	Please note that the appraisal and ratings of visual impact in Table 5.3 are applicable for both Interim and Ultimate Scenarios.
1.4	**Photomontage of VP2** – the approved scheme under application No. A/YL-KTN/604 as shown in the Ultimate Scenario should also be incorporated in the Interim Scenario.	Noted. The Photomontages of VP2 under both scenarios have been updated. Please refer to Figure 5.2 in the revised VIA in **Appendix B** for consideration.
1.5	**Photomontage of VP9**: - VP9 is located in the top right corner of the application site. A non-domestic portion with four storeys or more is shown on the photomontage while it is stated in the indicative development schedule of the subject application under FI submission received by TPB on 28.11.2022 that non-domestic podium comprises not more than 2 storeys. Please check.	It should be clarified that the non-domestic podium under the proposed development comprises not more than 2 storeys. For the non-domestic portion as viewing from VP9, it is the lift lobby for accessing the roof-top of the non-domestic podium. Nonetheless, the Applicant has reviewed the design of the lift lobby in view of the possible visual impacts as viewing from this view angle. The location of the proposed lift lobby have now been reviewed. Please find the updated MLP, floor plans and section plans in **Appendix C** for consideration. The Photomontage of VP9 under Ultimate Scenario of the VIA in support of the subject planning application has also been updated. Please refer to Figure 5.9 in the revised VIA in **Appendix B** for consideration.
	- Please clarify the bus stop and pubic footpath as shown in Existing Condition fall within the site of application No. Y/YL-NSW/9 or not. Should there is no plan in relocation of bus stop and/or public footpath, they should be shown in the photomontages of Proposed Scheme under both Interim and Ultimate Scenarios as well.	Please note that the bus stop and public footpath as shown in the Existing Condition partially falls within the subject Application Site No. Y/YL-NSW/9. Under the road improvement proposal, the pedestrian footpath with a minimum width of 2.75m would be provided along the section of Castle Peak Road – Tam Mi abutting the Application Site, which will be widened to 10.3m wide. The existing bus stop will be re-provided in the same location after the implementation of road improvement works.

	Departmental Comments	Responses to Comments
	(Con't)	 **Proposed road improvement work near the existing bus stop along Castle Peak Road – Tam Mi (Extracted from revised TIA (Appendix A))**

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 31.1.2023**	
	Urban Design and Visual Perspectives: **Revised AVA IS (Appendix E of FI(3))**	
1.1	**Coverage of Assessment and Surrounding Areas** (section 3.1 and Figure 1) – With reference to the updated simulation results, it is still found that the Proposed Scheme would create air ventilation impacts on the area beyond the revised Assessment Area of 1H. As such, the consultant should review and enlarge the Assessment and Surrounding Areas appropriately and rerun the simulations. Please ensure the planned/committed developments in the enlarged assessment and surrounding areas are also included.	The Coverage of Assessment and Surrounding Areas have been enlarged accordingly. Please refer to the updated simulation results on Table 4.1, Table 4.2, Appendix 4 and 5 in the revised AVA in **Attachment 1**.
1.2	**Accuracy of the simulation results** (Appendix 3) – Referring to the updated simulation results, there are still some VR discontinuities have been found in the simulations around the models. The consultant should clarify the above phenomena and ensure that the modelling is properly carried out and the simulation results are accurate.	Since the model has been rerun, please refer to the updated simulation results in Appendix 4 in the revised AVA in **Attachment 1**.
1.3	**Planned developments around the application site** – The consultant is recommended to take into account the latest planned developments, including but not limited, to (i) amendment Items A, B and C under the draft Kam Tin North OZP no. S/YL-KTN/10 gazetted in January 2023 and (ii) LSPS application no. LSPS/002 approved in November 2022, under both Baseline and Proposed Schemes for assessing the potential cumulative air ventilation impacts in the area.	The mentioned planned developments have been included in our updated CFD model. Please refer to the modelling views in Appendix 4 in the revised AVA in **Attachment 1**.
1.4	**Approved Scheme** (section 1.3) – It appears the approved scheme cover only part of the site. The consultant should set it clearly and describe the use of the remaining site.	Section 1.3 in the revised AVA in **Attachment 1** has been updated. Please note that the Baseline Scenario refers to the Approved Scheme of Application No. Y/YL-NSW/3 (for hotel).

	Departmental Comments	Responses to Comments
1.5	**Evaluation Scenarios** (section 1.5.1) – To avoid confusion, the consultant should mention the baseline scenario rather than the approved schemes and a plan covering the two approved schemes and the soy sauce factory retained in-situ should be provided. For easy reference, Appendix 2 should include the approved scheme of application No. A/YL-NSW/241 while Appendix 3 should include the proposed scheme under application No. Y/YL-NSW/8.	Section 1.5.1 in the revised AVA in **Attachment 1** has been updated. The statement is revised as following: - Proposed Scenario 1 (Appendix 2): Under this scenario, only the Proposed Scheme for the proposed "R(E)" zone would be implemented. - Proposed Scenario 2 (Appendix 3): Under this scenario, both of the Proposed Schemes for the proposed "R(E)" zone and the adjacent proposed " OU(CDWRA)1" zone (under application No. Y/YL-NSW/8) would be implemented.
1.6	**Mitigation Measures/Good Design Features under both Baseline and Proposed Schemes** (sections 1.3 and 1.4) – The consultant should list out all the mitigation measures/good design measures with **exact dimensions** in the text and indicate them on plan and in the computational model not only under the Proposed Scheme but also **under the Baseline Scheme.**	The building separations and building setbacks with dimensions have been provided in the main text and indicated on plans. Please refer to the updated Appendix 3 in the revised AVA in **Attachment 1**.
1.7	Referring to the layout plan shown in Appendix 2, it appears that the Proposed Scheme would incorporate some building separations in E-W direction. The consultant should clarify their functions and revise the report where appropriate.	All building separations have been included in main report and indicated on Plans. Please refer to the Appendix 2 of the revised AVA in **Attachment 1**.
1.8	**Test points** (section 3.4, Table 4.1 and Figure 4) – In view of paragraph above, the consultant should add sufficient overall test points to cover the whole revised Assessment Area and update the list of corresponding test points reported in the table.	All test points have been updated accordingly. Please refer to the updated Section 3.4, Table 4.1 and Figure 4 in the revised AVA in **Attachment 1**.
1.9	**Directional analysis** (section 4.5) and **Conclusion** (section 5) – In view of our comments above, the consultant should update the directional analysis and conclusion based on the updated simulation results for our consideration.	Noted. Please refer to the updated Sections 4.5 and 5 of the revised AVA in **Attachment 1**.

	Departmental Comments	Responses to Comments
2.	**Comments of the Director of Environmental Protection received on 15.2.2023**	
	Comments on Sewerage Impact Assessment	
2.1	Appendix 4 and Appendix A – Please provide the assumed ADWF from SPSPS and KTSPS and the reference of the assumption.	Please refer to Section 7.1.7, Section 7.1.8 and Appendix 4 in the revised SIA in **Attachment 2** regarding the flow assumptions of Sha Po Sewage Pumping Station (SPSPS) and Kam Tin Sewage Pumping Station (KTSPS). In parallel, we are also seeking DSD's confirmation on this set of latest assumed ADWF from SPSPS and KTSPS. We will update the latest progress for information once available.
2.2	Appendix A – The accumulated ADWF and contributing population of FSH1001880 to FMH1039721 remained the same despite having flow from SPSPS and KTSPS accounted. Please check and clarify.	The accumulated ADWF and contributing population of FSH1001880 to FMH1039721 have been updated to include the discharge from SPSPS and KTSPS. The estimated peak discharge from FSH1001880 to FMH1039721 via 1200mm gravity sewer is 0.809m^3/s when flow from SPSPS and KTSPS have been taken into account. Please refer to Appendix 4 in the revised SIA in **Attachment 2**.
2.3	General – Please update the above amendment to the relevant section of revised SIA for Y/YL-NSW/8	Noted.
	Water Quality	
2.4	Noted from the SIA that substantial quantity of sewage will be produced from the residential development and the primary school next to it. Connection of the sewage flow to public foul sewer should be pursued subject to acceptability of the SIA.	The sewage from the proposed residential development and the primary school are proposed to discharge to public foul sewer. Please refer to the revised SIA in **Attachment 2**.

	Departmental Comments	Responses to Comments
2.5	For the relocated soy factory being proposed, it is unclear why connection of the wastewater produced from the site to existing public sewer is not pursued as a matter of priority given that the discharge from the proposed residential development under the same application will be collected and discharged to the public sewers. Please clarify.	The treated effluent from the Soy Sauce Factory is currently discharged according to existing EPD discharge license. As the wastewater from the Soy Sauce Factory is not common domestic sewage and it requires special treatment facilities. Therefore, the wastewater from the relocated Soy Sauce Factory will be treated by new on-site treatment plant based on suitable treatment technology designed for soy sauce production process and the treated effluent will be discharged through their new stormwater drainage system.
2.6	The proposed development will produce surface runoff discharge to Kam Tin River and its meander. In this respect, please consult AFCD for their advice from ecological perspective.	Noted. The application has been circulated to AFCD and all comments from AFCD have been addressed.

Under Further Information Submitted on 25.5.2023

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Environmental Protection received on 15.2.2023**	
	<u>Comments on Environmental Assessment</u> **EIAO Implication**	
1.1	RtC Item 5.1 – We have double check the site boundary and note that the northern fringe of the site falls within Deep Bay Buffer Zone 2. As such, the proposed residential development in this application would constitute a DP under Item P.2, Part 1, Schedule 2 of the EIAO i.e. *a residential development or recreational development, other than New Territories exempted houses within Deep Bay Buffer Zone 1 and 2.* The project proponent will be required to obtain an environmental permit (EP) for the development following the EIAO process before construction and operation of the project.	The buffer zone line is defined based on a study commissioned by Government in 1992. On the other hand, the existing soy sauce factory is already in place as early as 1968. As the buffer zone was defined under situation that the factory has been already in place, it is reasonable to assume that the buffer zone should respect the existing factory use and should not encroach into the factory site. We believe that the project would not constitute a DP and we will keep close monitor with relevant Government departments on the exact accurate alignment of the buffer zone line.
1.2	Besides, it is noted that proposed residential development in the northern portion of the site would adjoin the residential development under the separate planning application No. Y/YL-NSW/8 submitted by the same applicant, and the residential development under the two applications is expected to complete in the same year. As such, <u>it appears the residential development in this application is part and parcel of the residential development under the abovementioned application</u> that would constitute a designated project under the EIAO. If affirmative, the potential environmental impacts of the residential development under the two planning applications should be addressed in the same EIA study in the future.	It is clarified that the two adjoining sites (subject planning application Y/YL-NSW/9 and the separate planning application Y/YL-NSW/8) are proposed under different zonings and are planned and designed to be standalone and will be developed separately so that there should not be any association between them.

	Departmental Comments	Responses to Comments
	General	
1.3	It is noted that under the application, relocation of the soy sauce factory within the application site will be always permitted. As such, although detailed odour impact assessment will be carried out for the residential development following the future planning application process, it is unclear if there is effective mechanism to ensure proper design and the necessary measures identified in the odour impact assessment would be adopted for the new soy sauce factory. Please clarify.	In order to allow more flexibility for the design of the comprehensive developments on the subject planning application Y/YL-NSW/9 and the separate planning application Y/YL-NSW/8, the Applicant will incorporate practical and effective mitigation measures for the relocated soy sauce factory (including siting possible odour sources away from surrounding ASRs and providing mechanical ventilation with deodorization units in the factory) to minimize the odour impact to the surrounding ASRs. For details, please refer to the Odour Impact Assessment in Appendix 4.1 of the revised EA report in **Attachment 1** for consideration.
1.4	It is noted that a section of the Castle Peak Road – Tam Mi section to the east of the site will be widened under the development proposal. In this respect, the applicant should address the environmental implication of the proposed road works. Please also seek TD's advice on the road classification of the said road section for our reference.	As stated in the revised EA in **Attachment 1**, Castle Peak Road – Tam Mi section is classified as Rural Road under annual traffic census. While there is proposal for widening locally, there will be adequate air quality buffer separation (10m) and will meet Chapter 9 of the HKPSG (for local and district distributor). The Applicant is seeking advice from TD and correspondence will be provided once available.
	Air Quality	
1.5	Sections 1.4.13 – Please clarify if it is 200m or 300m in line 2.	It is clarified that the focused area should be 200m from the Application Site. Section 1.4.13 in the revised EA in **Attachment 1** has been updated.
1.6	Section 3.2.2 – Please add "The exhaust (if any) of the proposed car park shall be located away from any nearby ASRs including the air-sensitive uses of the proposed development as far as possible.".	Noted. Section 3.2.2 in the revised EA in **Attachment 1** has been amended.
1.7	Section 3.2.3 – Please clarify and confirm if the existing Soy Sauce Factory will cease operation before commissioning of the proposed development. Otherwise, the odour and chimney emission impacts associated with the existing factory on the proposed development shall be addressed.	It is confirmed that the existing soy sauce factory will be demolished before the population intake of the proposed development. Section 3.2.3 in the revised EA in **Attachment 1** has been revised accordingly.

	Departmental Comments	Responses to Comments
1.8	Sections 3.3.2 and 3.3.3 – Please note that 2021 Traffic Census is available now and please update the text accordingly.	Sections 3.3.2 and 3.3.3 in the revised EA in **Attachment 1** have been updated accordingly.
1.9	Section 3.3.4 and R-t-C 5.3.8 – TD's endorsement of the road type of Pok Wai South Road is still outstanding. Please provide once available.	The Applicant is seeking advice from TD and correspondence will be provided once available.
1.10	Sections 3.3.6 and 6.1.3 – The exhaust of the proposed transport lay-bys shall be located away from any air-sensitive uses (not limited to the proposed development) as far as possible. Please revised Sections 3.3.6 and 6.1.3 accordingly.	Sections 3.3.6 and 6.1.3 in the revised EA in **Attachment 1** have been revised accordingly.
1.11	Section 3.4.2 – Please rectify the typo "see Error! Reference source not found." in line 2-3.	The Odour Impact Assessment has been conducted (see Appendix 4.1 in the revised EA in **Attachment 1**). Therefore, Figure 4.1 has been removed and Section 3.4.2 in the revised EA in **Attachment 1** has been updated accordingly.
1.12	Section 3.4.4, 4.2.6, 4.5.3 and 6.1.7 – Since the HKPSG buffer distance requirement for odour source cannot be met. The proposed soy sauce factory may cause adverse odour impact on the air-sensitive uses of the proposed development and other nearby ASRs. As no detailed cumulative odour impact assessment was provided in the submission, it is unclear to conclude that no significant odour impact would be imposed on any nearby ASRs including the air-sensitive uses of the proposed development. Please revised these sections.	To formulate the odour impact assessment, it is considered necessary for the Applicant to take this opportunity to elaborate on the unconventional and unique soy production process of the subject traditional local soy sauce factory (i.e. Koon Chun) in comparison to other production procedures in a typical food processing factory. Koon Chun Hing Kee Soy & Sauce Factory was found in 1928. The reputable traditional sauces are prepared naturally, where the sauces are naturally fermented under the sun for months. Once fermentation is completed, the sauces are extracted, then cooked and packed within the same factory. By being a traditional local enterprise in small to medium scale, the production line is kept to be an optimal scale with limited manpower to maintain its product quality and consistency.

	Departmental Comments	Responses to Comments
	(Con't)	To help better understand the general production process of the soy sauce factory, a flow diagram has been prepared and enclosed in **Attachment 3** for reference. Some constraints on soy sauce and bean-paste products cooking and processing are also highlighted on the flow diagrams for reference. This would form the basis and assumptions of the supporting technical Odour Impact Assessment enclosed in Appendix 4.1 in the revised EA in **Attachment 1**. From technical perspective, the Odour Impact Assessment has been conducted for assessing the odour impact from the relocated soy sauce factory on the surrounding ASRs based on a conservative assumption to demonstrate the worst case scenario. The current design, layout and on-site measurement results have been taken into account in the assessment. For details, please refer to Appendix 4.1 in the revised EA in **Attachment 1** for consideration.
1.13	Section 4.2.4 and 6.1.2 - (i) The consultant should justify with supports why 95% removal efficiency can be achieved for removing the odour from the soy sauce factory in this planning case or during the later detailed odour impact assessment.	The deodorization unit is targeted to achieve a removal efficiency of not less than 80%. Therefore, 80% removal efficiency for the removal of odour has been assumed for the deodorization unit. Please refer to the Odour Impact Assessment in Appendix 4.1 in the revised EA in **Attachment 1** for consideration. Supporting information of the removal efficiency will be provided in the later stage as only preliminary design is available at this stage.
	(ii) Other than open area for aging of semi-products and exhaust from the enclosed building, please list out all other odour sources from the relocated soy sauce factory including the onsite wastewater treatment plant and clarify if all these other odour emission sources would be fully enclosed and air would be treated with deodourization unit before discharge from the exhaust. Please provide the locations of all odour emission sources (including open area for semi-aging products, all exhausts, etc) in a figure if information is available.	Noted. The Odour Impact Assessment has been conducted with highlights of the odour emission source, deodourization unit and etc. Please refer to the Odour Impact Assessment in Appendix 4.1 in the revised EA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
	(iii) Please note that the exhausts and open area with odour emissions shall be designed to be located away from all nearby ASRs and not limited to the proposed development. Same comment shall be applied for Section 6.1.2 as well.	Please note that the exhausts and open area with odour emissions have been carefully designed and located away from all nearby ASRs. According to the subject planning application, there will be school and residential uses adjacent to the relocated soy sauce factory on its northern side. Therefore, it is considered that area at southern side is the most appropriate.
	(iv) For the open area with semi-aging products, please also consider if any innovative control measures can be implemented to alleviate the odour.	As mentioned in Item 1.12, the sauces are reputable due to its preparation in a traditional and natural way, and bathed under the sun for 3 to 6 months during fermentation process. Under the traditional practice, the concrete tanks in the open area for sun-drying is covered by a transparent covers. Due to the unique production process, only limited numbers of concrete tanks will be opened under a short period of time for stirring and extracting the bean paste to maintain product quality and consistency while preserving the unique favour. This has been verified by site surveys to the existing soy sauce factory, as only 1 to 2 concrete tanks with cover removed for extracting bean paste for subsequent production process. By being a reputable traditional soy sauce factory with long history since Year 1928, this production process and operation model will be respected and strictly followed in the relocated soy sauce factory. The above has been taken into account in the Odour Impact Assessment to assess the residual odour level. For conservative assessment purposes, 3 tanks are assumed to be opened simultaneously to demonstrate the worst case scenario.
1.14	Section 4.2.6 – We understand from Section 4.2.6 and R-t-C 5.3.13 that the cumulative odour impact assessment will be provided at the later detailed design stage of the project. Please add to the end of section 4.2.6 with "The cumulative odour impacts associated with planned and existing odour emission sources within 500m assessment area of the project site boundary on the nearby ASRs (including the air sensitive uses of the proposed development) shall be assessed quantitatively to demonstrate that the odour impact would not be adverse.".	It is clarified that Odour Impact Assessment covering 500m assessment area has been conducted and supplemented (see Appendix 4.1 in the revised EA in **Attachment 1**). In case of any update of design information in future, an updated Odour Impact Assessment will be submitted for further consideration.

	Departmental Comments	Responses to Comments
1.15	Section 5.2.4 – Since the construction activities of the planning application for OU(CDWRA)1 site will be overlapping with the proposed development, please provide the scale of the dusty activities of the planning application for OU(CDWRA)1 site, the separation distance from the proposed development and the distance of the identified ASRs for this project from the planning application for R(E) site to justify if adverse cumulative dust impact is not anticipated.	Noted. Table 5.1 in the revised EA in **Attachment 1** for consideration has been revised accordingly.
1.16	Section 5.2.5 – Please estimate the size of the excavation/ site formation areas at a time and whether there is any phasing of the construction works to justify if adverse construction dust impact from the proposed project is not anticipated with good site practices and implementation of control measures. Since the size of the project area is not small (about 8.2 ha) and there is an ASR (i.e. ASR4) located close to the project site boundary, it is necessary to implement an EM&A programme to monitor the dust impact during the constriction stage if no quantitative dust impact assessment is conducted to justify the dust impact on the nearest ASRs.	Please note that the planning application is at the early stage, the Applicant will consider and provide detailed information including any phasing of the construction works for the excavation / site formation areas in subsequent detailed design stage. Please also note that the consideration of the Environmental Monitoring and Audit (EM&A) programme will be considered during the construction phase. Sections 5.2.5 and 5.2.6 in the revised EA in **Attachment 1** have been revised accordingly.
1.17	Section 6.1.2 – Please review if the 2nd last sentence should be revised as "In addition, it is understood that a separate cumulative odour impact assessment (OIA) should be conducted to demonstrate the acceptability of the project from air quality perspective with relocation of the soy sauce factory.".	Section 6.1.2 has been revised by referring to the newly included Odour Impact Assessment in Appendix 4.1 in the revised EA in **Attachment 1**.
1.18	Figure 3.1 - (i) It seems that part of the building façade of T3 and T5 are located within the buffer zone, please clarify if there is any air-sensitive uses such as open able window within the buffer zone.	Please note that there will be no air sensitive uses, including fresh air intake of ventilation system or operable windows of the buildings, recreational uses would be located within the buffer zones. Please refer to Figure 3.1 in the revised EA in **Attachment 1** for consideration.
	(ii) Please delete "active" in the remarks.	Noted. Relevant texts have been amended accordingly.

	Departmental Comments	Responses to Comments
1.19	Figure 4.1 and R-t-C 5.3.17(b) (i) Please indicate the shortest separation distance between the relocated soy sauce factory and the future air-sensitive uses of the proposed development	Please note that the Odour Impact Assessment has been conducted. The relevant information and drawings are provided in Appendix 4.1 in the revised EA in **Attachment 1** for consideration.
	(ii) For the design of exhaust vent for the relocated soy sauce factory, please locate the exhaust away from the existing villages as far as possible (subject to the detailed odour impact assessment results).	Please note that the Odour Impact Assessment has been conducted. The relevant information and drawings are provided in Appendix 4.1 in the revised EA in **Attachment 1** for consideration.
1.20	Please highlight all the changes/amendments in the next submission for review.	Noted and highlighted.
	Waste & Land Contamination	
1.21	It is noted that potential land contamination issue is identified at the application site. It is mentioned in Section 5.6.15 of the revised EA report that all documents (including CAP, CAR, RAP and RR) would be submitted to EPD for approval prior to commencement of any construction or development works at the site. As such, we have no comment from land contamination management at this stage.	Noted.
2.	**Comments of the Chief Highway Engineer/ New Territories West, Highways Department received on 18.5.2023**	
2.1	Item 6.1 of RtoC table - I will provide further comments when relevant submission in the detailed design stage become available. Please be reminded that the detailed design shall avoid cutting the existing SIMAR slopes into scattered pieces if they are not taken up by the developer and shall be de-registered from SMRIS as necessary.	Noted.
2.2	Apart from 6NE-A/F105, please also note 6NE-A/F98 is also within the application site boundary in the captioned submission.	Noted. Associated details of the affected slopes, which will be handed over to HyD for maintenance, will be submitted for comment at subsequent detailed design stage.

	Departmental Comments	Responses to Comments
3.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 18.5.2023**	
	<u>Detailed comments on revised VIA</u>	
3.1	The applicant is reminded that the "Ultimate Scenario" showing the adjacent uncommitted development (i.e., s.12A application No. Y/YL-NSW/8) could be served for reference only.	Noted.
3.2	VP1: since the upper portion of the proposed development is visible as shown in the photomontage and resulting some visual obstruction of the open skyview, please consider to review the visual impact of VP1 from negligible to slightly adverse.	Noted. The visual impact of VP1 has been updated. Please refer to Table 5.3 in the revised VIA in **Attachment 2** for consideration.
3.3	VP7: the location and viewing angle of VP7 seems do not match with the photomontage. Please check.	By further review of the location of VP7, the viewing angle of the VP7 has been updated accordingly. Please refer to Figure 3.2 in the revised VIA in **Attachment 2** for consideration. It is confirmed that the image as shown on the photomontage (see Figure 5.7) accurately reflects the viewing angle from VP7.
3.4	VP8: according to the photomontage and as stated in table 5.3, the proposed development is not visible at this VP. Please review whether the visual impact rated as slightly adverse is reflecting the photomontage.	Please note that the Proposed Development will be shielded by the roadside vegetation under interim scenario. Under ultimate scenario, the proposed development will not be visible at this VP as it will be blocked by the proposed comprehensive development (under separate submission). The visual analysis has been updated. Please refer to Figure 5.8 and Tables 4.1 and 5.1 in the revised VIA in **Attachment 2** for consideration.

Under Further Information Submitted on 11.8.2023

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

2.	Urban Design and Landscape Section, Planning Department (received on 31.7.2023)	2

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Environmental Protection received on 31.7.2023**	
	Comments on SIA	
1.1	Section 4.1.2 Table 4 and Appendix 2 - Please adopt 0.28 m3/d-person as the UFF for teacher (J11) instead of 0.08 m3/d-person to be conservative and revise the calculations for both the Kindergarten (to NSWSPS) and the Primary School (to SPSPS).	Noted. The revised calculations for both the Kindergarten (to NSWSPS) and the Primary School (to SPSPS) have adopted 0.28m^3/d-person as the UFF for teacher (J11). Please refer to Section 4.1.2 Table 4 and Appendix 2 of the revised SIA in **Attachment 1** for consideration.
1.2	Appendix 4 – a) FSH1001880 to FMH1039721: Assumed U/S SPSPS & KTSPS Discharge is not in line with Y/YL-NSW/8. Please check.	Noted. The discharge from U/S SPSPS & KTSPS are 3,508m^3/d and 6,833m^3d respectively. The assumed U/S SPSPS & KTSPS discharge under Y/YL-NSW/8 has been updated to tally with the subject application Y/YL-NSW/9.
	b) (To SPSPS) DR3.6 is connected to FMH1063023 as shown in Figure 4 instead of FSH1001882. Please check.	Noted. DR3.6 is connected to FMH1063023. Appendix 4 of the revised SIA has been updated to tally with Figure 4 of the revised SIA in **Attachment 1**.
	c) (To NSWSPS) Please continue to annotate the Manhole from FSH0001880 to FSH1001886 in the Figures.	Noted. The manhole annotation from FSH0001880 to FSH1001886 has been incorporated in relevant Figures of the revised SIA in **Attachment 1**.
1.3	Figures - a) Please provide the location of the relocated / new treatment plant and the discharge point of the relocated Soy Sauce Factory.	Noted. Please refer to Figure 6 of the revised SIA in **Attachment 1** for the indicative location of the on-site wastewater treatment plant and the wastewater discharge point of the relocated Soy Sauce Factory for consideration.

	Departmental Comments	Responses to Comments
	b) To reduce the pollution loading to the Kam Tin River, please consider to provide sewer to collect sewage from relocated Soy Sauce Factory.	The treated effluent from the existing Soy Sauce Factory is currently discharged according to the existing EPD discharge licence. As the wastewater from the Soy Sauce Factory is not common domestic sewage and it requires special treatment facilities, the wastewater from the relocated Soy Sauce Factory will be treated by a new on-site treatment plant suitable treatment technology designed for soy sauce production process. The treated effluent will then be discharged through their new stormwater drainage system.
	c) Please seek WQMG's comment on the water quality issue due to the sewage treatment plant.	Noted. The revised Environmental Assessment submitted to TPB on 25 May 2023 which has addressed the water quality issue due to the sewage treatment plant has already been circulated to EPD (including WQMG) for review. No comments from water quality perspective have been received from EPD.
1.4	Appendix 8 – The WPCO licence has been expired, please provide the updated version.	Noted. The updated version of WPCO licence has been provided. Please refer to Appendix 8 of the revised SIA in **Attachment 1** for consideration.
2.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 31.7.2023**	
	<u>Detailed comments on revised VIA</u>	
2.1	The consultant has revised the view fan and viewing angle of various VPs. However, the location of VPs in figure 3.2 and key plan of photomontages in figures 5.1 to 5.9 do not tally. Please rectify	Noted. The location of VPs in Figure 3.2 and the key plan of photomontages in Figures 5.1 to 5.9 have been updated. Please refer to the replacement pages of the VIA in **Attachment 2** for consideration.
2.2	According to the revised VP1 as shown in figure 3.2, the site of application No. Y/YL-NSW/9 does not fall within the view fan of VP1. Please review the accuracy of photomontage and location of VP1.	Noted. The location of VP1 as presented on Figure 3.2 – Location of Vantage Points and on the Key Plan of Figure 5.1 – Photomontages – Viewing from VP1 Pok Wak South Road have been reviewed and updated. Please refer to the Figure 3.2 of the replacement pages of the VIA in **Attachment 2** for consideration.

	Departmental Comments	Responses to Comments
2.3	Our previous comment on VP7 is still valid. According to figure 5.7, Pok Oi Hospital and part of the Grand Yoho/Yoho Mid Town/ Sun Yuen Long Centre are visible in the photomontage of VP7. However, those said developments do not fall within the view fan of VP7 in figure 3.2. Please review.	Noted. The photomontage of VP7 has been reviewed and updated. Please refer to the Figure 5.7 of the replacement pages of the VIA in **Attachment 2** for consideration.

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Commissioner for Transport received on 28.8.2023**	
	Layout	
1.1	Please indicate the width of the footpath along Castel Peak Road – Tam Mi and carry out pedestrian assessment to demonstrate the LOS is sufficient.	As discussed in **Section 2.6** in the revised TIA in **Annex A**, footpath with minimum width 2.75m would be provided along Castle Peak Road – Tam Mi. A pedestrian assessment on the critical footpath sections along Castle Peak Road – Tam Mi is included in **Section 2.7** of the revised TIA. The location of these footpath sections is shown **Figure 2.9** in the revised TIA for consideration.
1.2	The proposed footbridge across Castle Peak Road / San Tin Highway / San Tam Road shall be kept in view and sited close to the future railway network / station;	Noted. The proposed footbridge across Castle Peak Road / San Tin Highway / San Tam Road would be sited close to the future railway station (see **Figure 2.8** in the revised TIA in **Annex A**). The detailed design of the proposed footbridge will be provided in subsequent detailed design stage.
1.3	There are insufficient details on the proposed pedestrian access to/from Pok Wai South Road and the proposed footbridge. The access shall provide pedestrian and cycling connection between Pok Wai South Road and the future railway network / station. Sufficient width of footpath with cycle track shall be provided along the access and the footbridge. Details such as layout, management and maintenance party, etc. shall also be provided. Such connection shall also be considered by widening the existing Castel Peak Road – Tam Mi.	For pedestrian access, as shown in **Figure 2.8** in the revised TIA in **Annex A**, a pedestrian access of 3.5m width would be provided at the western side of the development site through the proposed OU(CDWRA)1 Site Development for cyclist accessing to the existing cycle track in Pok Wai South Road. The detailed layout, management and maintenance party, etc. of the proposed pedestrian access to/from Pok Wai South Road and proposed footbridge would be subject to subsequent detailed design stage.

	Departmental Comments	Responses to Comments
1.4	(Con't)	For cycling track, with reference to the TPB meeting minutes regarding the consideration of representations and comments in respect of the Draft Kam Tin North OZP, CEDD mentioned that there are existing cycle tracks along Castle Peak Road – Tam Mi and Pok Wai South Road. Further widening San Tam Road to provide cycle track is not feasible in view of the technical difficulties imposed by pylons and footbridge structures nearby. To be in line with the implementation proposal of the public housing site, cyclists of the general public would make use of the existing cycle tracks to access between the planned railway station and Pok Wai South Road. 41. In response to a Member's question on the provision of cycle track, Mr Andrew W.C. Lee, SE, CEDD, said that while no cycle track would be provided within the proposed public housing development, there were existing cycle tracks along Castle Peak Road – Tam Mi and Pok Wai South Road, which provided a through-link for cyclists travelling between Yuen Long and San Tin, and beyond. To support the proposed public housing development, traffic improvement works had been proposed under the EFS, including widening of the single two-lane section of San Tam Road to single four lanes (with local narrowing to single three lanes near Pok Wai), junction improvements at Fairview Park Interchange and Au Tau Interchange, etc. During the course of EFS, options of further widening San Tam Road to provide cycle track had been explored and were found subject to many technical difficulties such as the existing site constraints imposed by pylons and footbridge structures nearby. **Extract of Minutes of 1301st Meeting of the Town Planning Board held on 7.9.2023** ***Consideration of Representations and Comments in respect of the Draft Kam Tin North Outline Zoning Plan No. S/YL-KTN/10***

	Departmental Comments	Responses to Comments
	Traffic Impact Assessment	
1.4	Table 2.3 - i. Please consider to provide more motorcycle parking space beyond the Hong Kong Planning Standards and Guidelines (HKPSG) to satisfy the parking demand;	The current proposal on motorcycle parking provision has already adopted the mid-range provision of 1 space per 125 flats according to the requirement in HKPSG (1 motorcycle parking space per 100 - 150 flats).
	ii. Comments from the Social Welfare Department with supporting survey results should be sought on the parking and loading / unloading provisions for the proposed RCHE facilities. Sufficient manoeuvring space shall be provided;	Comments from the Social Welfare Department have been sought previously. Please note that there are no proposed GIC facilities in the subject proposed R(E) site development.
	iii. Bicycle parking provisions at a rate of 1 space for every 7.5 flats should be considered given its close proximity of the New Territories Cycle Track Network;	The current proposal on bicycle parking provision has already adopted the requirements according to the HKPSG (1 bicycle parking space per 15 flats). The Applicant will consider to provide more bicycle parking spaces within the Application Site, and the exact no. of bicycle parking spaces will be agreed with TD at detailed design stage.
1.5	Table 3.3 – Castle Peak Road – Tam Mi is a single two carriageway. The capacity of L8 – L11 shall be reviewed as appropriate;	Noted. The link capacity of L8 – L11 in **Table 3.3** in the revised TIA in **Annex A** has been revised accordingly.
1.6	Table 4.3 – please include planning application A/YL-NSW/241 and the proposed land sharing pilot scheme at Tung Shing Lei for assessing cumulative traffic impact and not be regarded as a sensitivity analysis. Please also review the trip generations for Ref. 8 since they appear to be unreasonably high;	Noted. The previously approved planning application A/YL-NSW/241 for an outlet mall development on the adjacent proposed OU(CDWRA)1 Site (under separate submission) and the land sharing pilot scheme at Tung Shing Lei have been included in the committed development for assessing the cumulative traffic impact. The estimated trip generation for Kam Tin South Developments (Ref. 8) has also been reviewed. Please refer to the revised **Table 4.3** in the revised TIA in **Annex A** for consideration.
1.7	Table 4.6. – it was mentioned that L8 to L11 are taken as 10.3m wide Single two carriageway. Please indicate the width of the carriageway in Figures 2.3 to 2.7 and justify the road capacity. It shall be noted that the hatch areas shall not contribute to the calculation of the road capacity;	Noted. The carriageway width of the proposed widened section along Castle Peak Road – Tam Mi has been indicated in **Figure 2.3** to **Figure 2.7** in the revised TIA in **Annex A**.

	Departmental Comments	Responses to Comments
1.8	The calculations for J10 in Tables 4.4, 4.8 and 4.11 reveal that the traffic flow from varies development will not travel to this roundabout. Elaboration shall be provided for such traffic pattern;	It is anticipated that most of the development traffic travelling through Au Tau Interchange (J10) would utilise the flyover and exclusive turning lanes, except development traffic travelling from Kam Tin. The traffic impact induced upon Au Tau Interchange is therefore insignificant.
1.9	Section 4.8 – the Sha Po public housing development shall be included in the reference case in 2034 design year. Our further comments on traffic flows will provided upon receiving the updated calculation;	Sha Po public housing development has already been included in the committed development as shown in **Table 4.3** in the revised TIA in **Annex A**. Nevertheless, considering potential uncertainty in the implementation programme of this housing development, a sensitivity test has been carried out to assess the traffic condition on the scenario without the aforementioned development as shown in **Section 4.8**.
1.10	Figure 2.2 – the conflicting movements in the proposed junctions will likely to impose road safety hazard. Please consider to adopt left-in left-out arrangement and provide roundabouts for turnaround at Castle Peak Road – Tam Mi;	With thorough review of the overall proposed traffic arrangement in the area, a revised access arrangement has been proposed under the current TIA. As shown in **Figure 2.5** and **Figure 2.6** in the revised TIA in **Annex A**, turn prohibition for southbound traffic along Castle Peak Road – Tam Mi has been proposed at J2 and J3. Instead, a roundabout has been proposed at J5 to serve all potential future users at this junction (i.e. public transport using the covered transport lay-by, reserved school site, existing locals at the temporary structures near Kam Tin River and etc.). For the southbound residential traffic entering the proposed OU(CDWRA)1 and R(E) sites, they will route through this roundabout at J5 and head back northbound along Castle Peak Road – Tam Mi to enter the residential developments. J1 will remain as a priority junction which allows all turning movements. Such traffic arrangement is considered optimal in terms of:- • Minimising potential traffic conflict at J2 and J3 between the southbound traffic entering the residential development sites and those northbound traffic running along Castle Peak Road – Tam Mi; and

<table>
<tr><th></th><th>Departmental Comments</th><th>Responses to Comments</th></tr>
<tr><td></td><td>(Con't)</td><td>• Best serve all kind of users (e.g. public transport using the covered transport lay-by, reserved school site, existing locals at the temporary structures) at J5.</td></tr>
<tr><td>1.11</td><td>Figure 2.4 – there are three conflicting movements for the traffic from the underpass westbound travels towards Castle Peak Road – Tam Mi northbound. This will induce potential road safety hazard. A signalised junction shall be considered;</td><td>Noted. A signalising scheme on Castle Peak Road – Tam Mi / Unnamed Road underneath San Tin Highway (J4) has been proposed as shown in Figure 2.4 in the revised TIA in Annex A.</td></tr>
<tr><td>1.12</td><td>Figure 3.13 – the U turn flow from Castle Peak Road – Yuen Long westbound at J11 appears to be underestimated. Please review;</td><td>A traffic count survey at Pok Oi Interchange (J11) has been carried out in September 2023. The observed traffic flow of J11 has been revised accordingly. Please refer to the updated Figure 3.13 in the revised TIA in Annex A for consideration.</td></tr>
<tr><td>1.13</td><td>Figure 4.10 – the traffic flow split from the development appears to be approx. 65% travelling northwards and approx. 35% travelling southwards. Please justify such traffic pattern;</td><td>The traffic distribution of the development traffic has been reviewed and updated as shown in Figure 4.12 in the revised TIA in Annex A. Currently, 45% of the development traffic generation would travel southwards and 55% would travel northwards, part of this northbound traffic would utilise Fairview Roundabout to eventually travel southbound via San Tin Highway and finally reach Tai Lam Tunnel. As a result, the actual traffic flow split is around 25% northbound and 75% southbound. A detailed breakdown of the development traffic is as in the table below:

<table>
<tr><th>Direction</th><th>Locations</th><th>Split</th></tr>
<tr><td>NB (Castle Peak Road – Tam Mi)</td><td>San Tin / North District</td><td>25%</td></tr>
<tr><td>NB (Castle Peak Road – Tam Mi) and SB (San Tin Highway)</td><td>Tai Lam Tunnel</td><td>30%</td></tr>
<tr><td>SB (Castle Peak Road – Tam Mi)</td><td>Yuen Long Highway / Yuen Long Town / Kam Tin / Local</td><td>45%</td></tr>
</table>
</td></tr>
</table>

	Departmental Comments	Responses to Comments
1.14	Figure 4.7, 4.9 and 4.11 – the straight ahead traffic flows of Kam Tin Road W/B at J10, left turn traffic flow of Kam Ho Road N/B at J14 appear to be identical in observed flow, reference flow and design flow. Please critically review the model and separately include a traffic diagram showing traffic from Kam Tin with inclusion of Kam Tin South Development;	The committed development traffic at Kam Tin has been reviewed and updated in 2034 Reference Traffic Flows as shown in **Figure 4.9** in the revised TIA in **Annex A**. A flow diagram separately showing the traffic generated from Kam Tin South Development has also been prepared and is as shown in **Appendix E** in the revised TIA in **Annex A**.
1.15	Figure 4.15 – according to the Chap. 3.7.4.7 of TPDM Vol. 2, if split phases are provided, channelizing islands should be constructed in order to provide refuges for pedestrians to wait.	Noted. The improvement scheme for Castle Peak Road – Tam Mi / Kam Pok Road East (J15) has been revised accordingly. Please refer to **Figure 4.15** in the revised TIA in **Annex A**.
1.16	Appendix B – the calculation for J11 in 2034 shall be reviewed. Since signalized roundabout will be implemented for Pok Oi Interchange, micro simulation shall be carried out to demonstrate.	Noted. A microsimulation has been conducted to simulate the microscopic traffic condition under the planned signalising scheme at Pok Oi Interchange (J11). The result of the simulation is as shown in **Appendix D** in the revised TIA in **Annex A**.
1.17	Para. 2.5.2: We have reservation on applying the direction split to the resident population in working out the no. of passenger trips during peak hour./ The 25,844 is the no. residents of the developments and should be assumed to the outbound traffic. If inbound traffic is to be assumed based on the directional split of 80:20, the inbound traffic should then be 6,461 ((25844/0.8)*0.2). However, this inbound traffic rate is considered high for a residential site;	Please see **Section 2.5.2** in the revised TIA in **Annex A** with the revised passenger trip estimation. For conservative approach, the outbound/inbound directional split would not be considered under the passenger trip estimation.
1.18	Para. 2.5.2 – 2.5.7: Please separate the public transport assessment for the two planning applications for supporting the proposed no. of bays in each PTI;	The proposed OU(CDWRA)1 (under separate submission) and R(E) Sites will provide a covered transport lay-by separately for each site. **Section 2.5** in the revised TIA in **Annex A** has been revised to demonstrate the public transport assessment separately.

	Departmental Comments	Responses to Comments
1.19	Para. 2.5.5: The transport laybys form a PTI in each site. According to TPDM, saw-tooth design should be adopted. Bus ancillary facilities (i.e. bus regulation office, staff rest area with internal toilet should be provided in accordance with TPDM and EV charging enabling facilities should also be provided. Please provide taxi stand in the PTI for NT taxi and urban taxi;	Noted. Sawtooth bus bays design has been adopted in the revised layout for the covered transport lay-by. Bus ancillary facilities would be further studied in detailed design stage. Please refer to **Appendix A** in the revised TIA in **Annex A** for the revised layout of the covered transport lay-by.
1.20	Para. 2.5.6: no. of passengers per bus should be taken as 90 (i.e. 75% of 120);	Noted. According to the revised passenger trip estimation, bus capacity of 90 has been adopted in the trip estimation. Please refer to **Section 2.5** in the revised TIA in **Annex A** for consideration.
1.21	Swept path analysis of 12.8m bus, GMB, and taxi should be provided along the run in/out of the development, run in/out of PTI and each bus/GMB/taxi bay; and	Please see the revised **Appendix C** with the latest swept path analysis in the revised TIA in **Annex A** for consideration.
1.22	TPD's comment will be provided separately.	Noted.

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Environmental Protection received on 31.7.2023**	
	Comments on Appendix 4.1 – Odour impact assessment	
1.1	Sections 1.4.2 and 2.1.10 – Please justify why the 3 selected scenarios can be considered to represent the worst-case scenario. More different locations of the aging products with the cover opened shall be considered for assessment.	Please note that 15 scenarios for different peripheral locations assumed for the 3 concrete tanks to be opened simultaneously during collecting bean paste have been defined. The scenarios established are based on distribution of the nearby proposed ASRs and the nearby existing & planned ASRs in the surrounding. For each scenario, 3 opened concrete tanks located nearest to ASRs are selected and therefore considered to represent the worst-case scenario.
1.2	Section 2.1.1 – Please revise "Air Quality Objectives (AQOs) and relevant criteria" as "the odour assessment criterion of 5 OU based on an averaging time of 5 seconds as stipulated in Annex 4 of EIAO-TM" in the last sentence.	Relevant section has been updated. Please refer to Section 2.1.2 of the Revised OIA in **Attachment 1** for consideration.
1.3	Section 2.1.3 – Please revise "AQOs and/or odour units" as "odour criterion of 5 OU" in the last line.	Relevant section has been updated. Please refer to Section 2.1.4 of the Revised OIA in **Attachment 1** for consideration.
1.4	Section 2.1.9 a) It is mentioned in Section 4.2.2 of the EA that "While the odorous operations are carried out indoors, there is odour emission from openable window and mechanical ventilation exhaust" and there seems to have a contradiction with this section. Please clarify and rectify the discrepancy. Please also clarify if there is any other odour emission sources (e.g. 1st fermentation process) within the factory building and describe how the odour air from these facilities will be discharged (e.g. from ventilation exhaust?). b) Please clarify and address in this section whether all the odour sources within the relocated soy sauce factory building would be fully enclosed and air would be treated with deodourization unit at the exhaust before being released to the ambient.	It is clarified that the plant room of the wastewater treatment plant, kitchen and fermentation room will be fully enclosed (with window / door closed) and will rely on mechanical means for ventilation. The extracted air of all these odour sources would be treated with deodorization unit at the exhaust before being released to the ambient. The exhaust from the 1st fermentation process within the building of the soy sauce factory would be treated with the deodorization units. Therefore, the OIA has been updated accordingly. Please refer to Section 2.1.10 of the Revised OIA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
1.5	Table 2.2 – Please provide the name of each ASR.	The name of each ASR has been provided. Please refer to Table 2.2 of the Revised OIA in **Attachment 1** for consideration.
1.6	Sections 2.4.4 a) Please provide a figure to show layout design (e.g. how the air is released, number and locations of air exhausts, area of each odourous facility, location of odour sources, etc) and process flow diagram for identification of all odour emission sources within the existing soy sauce factory. Please indicate the odour sampling locations in the figure for clear illustration. Please note that the odour impact arising from the oil interceptor (i.e. sample ID - AS 5 in Annex 2.3) should be included in the cumulative odour assessment. Please supplement.	The location of air exhausts and process flow diagram with identified all odour emission sources within the existing soy sauce factory have been provided. Please refer to Annex 2.1 and Annex 2.3 of the Revised OIA in **Attachment 1** for consideration. According to the latest design of the relocated soy sauce factory, the oil interceptor in the relocated soy sauce factory will be covered in future. Therefore, the odour impact arising from the oil interceptor is no longer a concern.
	b) Based on Annex 2.3, it is noted that the odour samplings were only conducted at the exhausts but not within the factory for each emission source. Unless the design will be exactly the same as the existing factory (e.g. same flow rates and emission areas), it is not possible to assess the relocated factory based on the odour emission rates for the existing factory. Please carry out odour samplings at each emission source within the factory.	Noted. The updated odour samplings at each emission source within the factory have been conducted. Please refer to Section 2.4.8 to Section 2.4.11 of the Revised OIA in **Attachment 1** for consideration.
	c) Please provide more information (e.g. the odour concentrations were measured under full capacity of production process) to justify why the odour sampling taken for the kitchen could represent the worst-case situation for both existing and proposed Relocated Soy Sauce Factory operation in Sections 2.4.4 and 2.4.12. There are several exhausts for the existing factory and it is unjustified why only AS8's odour concentration is used for assessing the odour impact from the whole factory. Even if AS8 can represent the highest odour emissions from Kitchen, it is necessary to include all odour emission rates from other exhausts to cover all odour emissions from the factory. Please critically review the odour impact assessment.	Noted. The updated odour samplings at each emission source within the factory have been conducted. Please refer to Section 2.4.8 to Section 2.4.11 of the Revised OIA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
1.7	Section 2.4.7 a) Please clarify the meaning of "assembly process" in line 10.	"Assembly process" refers to the bottling and packaging process for the products. Please refer to Section 2.4.6 of the Revised OIA in **Attachment 1** for consideration.
	b) The statement "which are dictated by the size of the factory which will be subject to the control under building regime (i.e. submission and approval of General Building Plan)" is misleading since the production scale will also depend on various factors such as the design of the factory and the manpower resources. Suggest to delete the statement and simply point out that the scale and the production process of the relocated soy sauce factory would be similar to the existing one.	Relevant section has been updated. Please refer to Section 2.4.6 of the Revised OIA in **Attachment 1** for consideration.
1.8	Section 2.4.8 – It is noted from Attachment 3 that 3 woks will be used for cooking soy sauce/bean-based products and the other 8 woks will be used for cooking other products (such as hoisin sauce or thick soy sauce) and it seems that these woks are not provided as contingency. Please check and revise. Also, please delete "as necessary" since deodorization is considered in the assessment.	Relevant section has been updated. Please refer to Section 2.4.7 of the Revised OIA in **Attachment 1** for consideration.
1.9	Section 2.4.15 – Please show the locations of the worst affected ASRs in the figures of Annex 4 for clear illustration.	The locations of the worst affected ASRs have been updated. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
1.10	Section 2.4.16 – Based on the preliminary assessment results, odour exceedance zone was found at 12.6mAG near some ASRs and the conclusion of no adverse odour impact from the relocated soy sauce factory is rely on the assumption of 80% odour removal efficiency for removing the odour from the soy sauce factory. Although it is claimed that the DOs design would be further review in the detailed design stage, the consultant shall critically review if the targeted odour removal efficiency is achievable at this stage to justify adverse odour impact from the relocated soy sauce factory is unlikely. Please provide more information to support that 80% removal efficiency is a reasonable assumption. Please supplement.	Noted. The odour removal efficiency has been updated. Supplementary information has also been provided to support the odour removal efficiency. Commissioning testing will be conducted before the operation of the relocated soy sauce factory after the deodorization units are installed if necessary. Please refer to Section 2.4.19 and 3.1.2 of the Revised OIA in **Attachment 1** for consideration.
1.11	Sections 2.4.17 and 3.1.2 – Based on Figure 2.1, it is noted that Sha Po SPS is located within 500 from the proposed relocated soy sauce factory. It is incorrect to conclude that adverse cumulative odour impact from Sha Po SPS on the proposed development is not expected by qualitative assessment and its odour emission rate should be included in the cumulative odour impact assessment. Please supplement and revise the assessment as appropriate.	Noted. Sha Po Sewage Pumping Station has been included and considered in the cumulative odour impact. Please refer to Section 2.4.20 of the Revised OIA in **Attachment 1** for consideration.
1.12	Section 2.5 – Please note that Section 2.5 may subject to change since the odour impact assessment in the application has not yet been cleared.	Noted.
1.13	Table 2.5 – Please state clearly the odour removal efficiency of the deodorizers for the factory and wastewater treatment plant since it is critical for ensuring the odour impact will not exceed the criterion	The odour removal efficiency of the deodorizers for the factory and wastewater treatment plant has been updated and provided. Please refer to Table 2.5 of the Revised OIA in **Attachment 1** for consideration.
1.14	Section 3.1.3 – Please note that if a lower odour removal efficiency is applied at the detailed design stage, a revised odour impact assessment shall be conducted to support that adverse odour impact is not anticipated.	Noted.

	Departmental Comments	Responses to Comments
1.15	Annex 2.3 a) Please note that odour sampling should be conducted at the hottest weather condition to ensure the odour sampling results could cover the worst-case odour impact scenario. Since the odour samplings were conducted at the temperature ranging from 17.2 to 31.6^{o}C (especially for the 2nd sampling for AS8 to AS10), it is likely that the odour sampling results cannot cover the worst-case scenario. Please review and carry out additional odour sampling during hot weather conditions.	All the odour samples were collected during hot weather conditions (~30°C). Please refer to Annex 2.3 of the Revised OIA in **Attachment 1** for consideration.
	b) Please clarify if the odour samplings were conducted on the days and periods with maximum operation of the factory.	It is confirmed that odour samplings were conducted on the days and periods with maximum operation of the factory to avoid underestimation.
	c) Please clarify the distribution of the emissions from the exhausts.	Noted. Please refer to Section 2.4.9 to Section 2.4.10 of the Revised OIA in **Attachment 1** for consideration.
	d) It is necessary to reconduct the odour sampling at each of the odourous process so that representative odour emission rates can be calculated for each odour emission source with a possible different design of the relocated factory.	The odour samples at fermentation room, kitchen, outdoor sun-dry area and opened concrete tank have been reconducted.
	e) As mentioned above, please provide a figure to show the layout design and process flow diagram with indication of all odour emission sources within the existing soy sauce factory. The odour sampling locations should be indicated in the figure for clear illustration. Please supplement. *<u>Odour sampling at the exhaust of the existing factory (AS1, AS2, AS3 and AS8):</u>*	The location of air exhausts and process flow diagram with identified all odour emission sources within the existing soy sauce factory have been provided. Please refer to Annex 2.1 and Annex 2.3 of the Revised OIA in **Attachment 1** for consideration.
1.16	We noted that odour samplings were conducted at four different sampling locations for the exhausts. Please clarify if there are only 4 exhausts and hence one sampling was conducted for each exhaust. Please also clarify if there is no other opening from the factory.	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.

	Departmental Comments	Responses to Comments
1.17	It is noted that the odour concentrations measured at the exhausts (AS1, AS2, AS3 and AS8) are ranged from 117 - 2674 OU/m^3. Please elaborate on the possible reasons for the large difference of the measured odour concentrations.	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.
1.18	Some of the odour sampling results are not representative. For example, the air sampler was placed far away from the exhausts at the sampling locations of AS1 and AS8. The consultant should review the sampling methods and re-conduct the odour sampling. *Odour sampling at Wastewater Treatment Plant (WS1 and WS2)*	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.
1.19	Please justify if it is more conservative to use flux chamber than wind tunnel for odour sampling at the water surface and elaborate on the possible reasons for the much lower SOERs for the wastewater tanks (i.e. WS1 and WS2) than the emissions from the factory.	The wastewater collected to the tanks for the treatment is mainly from the wastewater generated from the kitchen in the factory after passing through the oil interceptor, which is relatively clean. Therefore, less odorous substances will be produced during the aerobic wastewater treatment. According to the on-site observation, the wastewater collected to the tanks was less odorous. Therefore, the SOERs measured are much lower. Wind tunnel can simulate the surface of the wastewater under continuous and steady wind conditions (i.e. steady "laminar" wind conditions) while the odour sample is being collected. However, the odour sample is collected directly and gently from the surface of the wastewater by using flux chamber, while calm conditions can be simulated. As the wastewater level is well below the top level of the edge of the tanks. Therefore, it is considered that it is more appropriate to use flux chamber for odour sampling. Moreover, the size of the tank is limited. As such, it is not practical to use wind tunnel for odour sampling.
1.20	Based on desktop review from google map, there should be 2 wastewater treatment tanks from the existing soy sauce factory. Please clarify if the odour sampling at ID WS1 and WS2 are for the same wastewater treatment tank or for different wastewater tank.	It is clarified that WS1 and WS2 were sampled from different wastewater tanks. The odour samples taken at WS1 and WS2 were the tank undergoing 1st aerobic treatment process and 2nd aerobic treatment process respectively. After 1st aerobic treatment process, the wastewater was less polluted. Therefore, the odour concentration measured at WS2 was lower.

	Departmental Comments	Responses to Comments
1.21	Apart from the wastewater treatment tank, please clarify if there is any other odour emission sources from the wastewater treatment plant. If yes, odour sampling should be conducted at these odour emission sources.	It is clarified that no other odour emission sources are identified from the wastewater treatment plant.
1.22	Based on the photos, WS2 is under an aeration process and its odour emission is likely to be smaller. Please address this in the report. *Odour sampling at open area for tanks of aging of soy (AS6, AS7, AS9 and AS10)*	Relevant section has been updated.
1.23	Please clarify if the flow rate has been measured at where the odour concentration (AS 6, 7, 9 and 10) are taken. If yes, please list out the information in Annex 2.3 (where appropriate) for calculation of specific SOERs.	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.
1.24	The consultant is suggested to measure the specific SOER on the surface of the aging products directly without covering by using the flux chamber/ wind tunnel for assessment purpose.	Noted. Flux chamber has been adopted.
1.25	Please address the difference of odour concentrations at AS6, AS7, AS9 and AS10 and clarify the highest odour emission is found at AS6 owing to the close monitoring location at the aging products with no cover. ANNEX 2.4 *Calculation of Odour Sources Emission Rate (P.163):*	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.
1.26	Please show the calculation of sampled odour concentrations and list them out (in terms of OU/m^3 for ambient air sources, i.e. AS1 to AS10, and in terms of OU/m^2/s for WS1 and WS2) for all emission sources in the Annex.	Relevant section has been updated. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
	For Kitchen OU1-OU2:	
1.27	The consultant assumed that all the odour emissions within the existing factory building are contributed from the kitchen and AS8's odour concentration is adopted. It is unjustified why only AS8's odour concentration is used. In addition, as mentioned above, the odour sampling at AS8 is not taken the worst-case scenario and resampling is necessary.	Please note that the odour samplings have been updated. Please refer to Section 2.4.8 of the Revised OIA in **Attachment 1** for consideration.
1.28	Since there are several exhausts and openable windows at the existing soy sauce factory building and the % distribution of the odour emission from these exhausts and openable window is not provided, it is unjustified to work out the odour emission rate of the proposed building factory/ kitchen based on the odour concentration measured at one exhaust (i.e.AS8) only. The consultant is advised to take odour samples at each odour emission source within the factory building to determine the specific SOERs from each odour source and then using the measured specific SOERs to work out the odour strength of the relocated soy sauce factory building in order to determine the potential odour impact in a more accurate manner. Please review the calculation and odour sampling methodology and revise the report as appropriate.	Please note that the odour samplings have been updated. Please refer to Section 2.4.8 to Section 2.4.11 of the Revised OIA in **Attachment 1** for consideration.
1.29	In addition, it is inappropriate to work out the unmitigated emission rate by multiplying the measured odour concentration at AS8 with the designed exhaust flow rate (i.e. 2674 OU/m^3 x 2.5m/s x $3.30m^2$ x 0.14) since the flow rate at where the odour concentration is measured could be different from designed exhaust flow rate of the relocated factory. Besides, please clarify if a dilution factor of 0.14 is achievable for the relocated factory. Please review and revise as appropriate.	Noted. The calculation of emission rates have been updated. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.

	Departmental Comments	Responses to Comments
	For Wastewater Treatment Plant (OU3):	
1.30	Based on desktop review from google map, there should be 2 wastewater treatment tanks within the existing soy sauce factory. Please clarify if the odour sampling at ID WS1 and WS2 are for the same wastewater treatment tank or for different wastewater tanks and provide the emission area of each wastewater tank for checking the calculation of the emission rate.	It is clarified that WS1 and WS2 were sampled from different wastewater tanks. The odour samples taken at WS1 and WS2 were the tank undergoing 1st aerobic treatment process and 2nd aerobic treatment process respectively. After 1st aerobic treatment process, the wastewater was less polluted. Therefore, the odour concentration measured at WS2 was lower. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.
1.31	Please revise "odour concentration during sampling" as "Specific Odour Emission Rate (SOER)". Suggest to delete "exit velocity" to avoid confusion. Please clarify if the area of 1.85m^2 is the surface area for 2 wastewater tanks in the relocated factory and show how to arrive at the OU/s of 1.97OU/s.	It is clarified that the surface area for the three wastewater tanks would be 79m^2, 79m^2 and 38m^2 respectively and the area of the exhaust for the wastewater treatment plant would be 1.9m^2 (it was 1.85m^2 originally). The calculation of odour emission rates have been updated. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.
	For 2nd Fermentation under Sunshine (OU4) and Concrete Tank with Cover Removed and Collecting Bean Paste Process (OU5 - OU7)	
1.32	It is incorrect to assume the sampling flow rate is 40L/300s = 0.000133m^3/s and adopt this flow rate for calculation of the SOER. The consultant should clarify if the flow rate has been measured at where the odour concentration are taken. If yes, the measured flow rate at where the odour concentration are taken should be used for calculation the SOER.	Noted. Flux chamber has been adopted.
1.33	We note that odour samples at the open area for 2nd Fermentation under Sunshine were collected at AS 7,9,10. Please clarify why the odour concentration of AS9 could be used for calculation of the emission rate from the open area for 2nd Fermentation under Sunshine.	Please note that the odour samplings have been updated. Therefore, this comment is no longer applicable.
1.34	Please clarify if the size of open area for 2nd stage fermentation for model input is based on the relocated factory or the existing factory.	Please note that the size of open area for 2nd stage fermentation is based on the layout of the relocated soy sauce factory, which would be similar as the existing factory.

	Departmental Comments	Responses to Comments
	For open tank for Oil interceptor:	
1.35	Based on the odour sampling result at AS5, we noted that there is odour emission from the open tank for oil interceptor but its odour emission impact is not taken into account in the assessment. Please supplement and assess its odour emission impact.	According to the latest design of the relocated soy sauce factory, the oil interceptor in the relocated soy sauce factory will be covered in future. Therefore, the odour impact arising from the oil interceptor is no longer a concern.
	Calculation of odour emission – Scenario 1-3 (p.164-166):	
1.36	We noted that two ventilation exhausts are proposed for the relocated soy sauce factory building. Please provide the % distribution of the odour emission from these two exhausts with justifications.	It is clarified that the exhausted air would be evenly distributed to 4 exhausts (i.e. 25% for each exhaust).
1.37	Please provide a note to clarify the source of the design parameter including release height, exit temperature, exit velocity and internal diameter under the table.	Notes have been provided for clarification. Please refer to Annex 2.4 of the Revised OIA in **Attachment 1** for consideration.
1.38	Please provide solid justification to demonstrate 80% odour removal efficiency is achievable and clarify if the wastewater treatment plant will be fully enclosed in the relocated factory and the factory will be fully enclosed with two exhausts only.	Noted. The odour removal efficiency has been updated. Supplementary information has also been provided to support the odour removal efficiency. Commissioning testing will be conducted before the operation of the relocated soy sauce factory after the deodorization units are installed if necessary. Please refer to Section 2.4.19 and 3.1.2 of the Revised OIA in **Attachment 1** for consideration. It is clarified that the plant room of the wastewater treatment plant, kitchen and fermentation room will be fully enclosed (with window / door closed) and will rely on mechanical means for ventilation. The extracted air of all these odour sources would be treated with deodourization unit at the exhaust before being released to the ambient.
1.39	Please note that the 3 scenarios with different locations of aging products with cover removed may not represent the worst-case scenario and please provide more scenarios with different locations of uncovered tanks of aging products.	Please note that 15 scenarios for different peripheral locations assumed for the 3 concrete tanks to be opened simultaneously during collecting bean paste have been defined. The scenarios established are based on distribution of the nearby existing and planned ASRs in the surrounding. For each scenario, 3 opened concrete tanks located nearest to ASRs are selected and therefore considered to represent the worst-case scenario.

	Departmental Comments	Responses to Comments
1.40	Please review if the exhaust of the wastewater treatment plant can be relocated further away from any ASR.	Noted. The exhaust of the wastewater treatment plant would be relocated to the southern façade of the relocated soy sauce factory.
1.41	Please revise the assessment and calculation based on our comments provided above.	Noted.
1.42	Annex 2.7 – Please show the locations of the ASRs in the figure of Annex 2.7 for clear illustration. It is also necessary to present the contour plots at the worst hit level(s) of each scenario to demonstrate no ASRs are within odour exceedance zone. Please note that apart from 1.5mAG and 12.6mAG, other levels with odour exceedance shall also be shown. Please supplement.	The contour plots have been updated. Please refer to Annex 2.7 of the Revised OIA in **Attachment 1** for consideration.
1.43	Attachment 3 – Please address if there is any odour emission from fermentation room. If yes, its odour emission impact should be included in the assessment.	Please note that the odour emission from fermentation room has been included in the revised assessment.
	Comments on Air Modelling	
1.44	The input of land use parameters are not consistent with the reported values. Please review and rectify.	Noted. The input for the land use parameters has been updated. Please refer to Annex 2.2 of the Revised OIA in **Attachment 1** for consideration.
1.45	Input Parameters of Odour Source in AERMOD is not correct. Please review and re-run.	Noted. The Input Parameters of Odour Source in AERMOD has been updated.
1.46	Please use the updated AERMOD and AERMET version for the assessment.	Noted. The updated AERMOD and AERMET version has been used in the assessment.
1.47	Please review the setting of OSHEIGHTS as 8.5 instead of 9 in AERMET setting.	Noted. The AERMET setting has been updated.
1.48	The contour plots has been shifted and please provide correct model files for review.	The contour plots have been updated. Please refer to Annex 2.7 of the Revised OIA in **Attachment 1** for consideration. The updated model files will be provided accordingly.

Under Further Information Submitted on 19.1.2024

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Chief Highway Engineer/New Territories West, Highways Department received on 26.10.2023**	
1.1	My previous comments have not been fully addressed in the further information. The applicant is requested to provide a full set of RtoC of all previous comments for review and retention.	Noted. The full set of RtoC of all previous comments (see Item 1.3 and 1.4 below) has been incorporated for review and retention.
1.2	FI(8) RtoC, Item 2.1: My comment remains valid. *"I will provide further comments when relevant submission in the detailed design stage become available. Please be reminded that the detailed design shall avoid cutting the existing SIMAR slopes into scattered pieces if they are not taken up by the developer and shall be de-registered from SMRIS as necessary."*	Noted.
	FI(8) RtoC, Item 2.2: Please note the concerned slope(s), 6NE-A/F105 and 6NE-A/F98, would be taken over by NTW Slope Section if it would be registered as SIMAR features adjoining public local roads managed by TD and maintained by HyD. The project proponent shall complete registration and updating of all existing boundary modified / newly formed / upgraded man-made slopes / retaining walls / geotechnical features accordance with DEVB TC(W) No. 2/2018 for all affected features within the application site or in the immediate vicinity of the application site. The project proponent shall also be responsible for de-registration of SIMAR features if they were demolished by the development works.	Noted. The Applicant commits to complete registration and updating of all existing boundary modified / newly formed / upgraded man-made slopes / retaining walls / geotechnical features accordance with DEVB TC(W) No. 2/2018 for all affected features within the Application Site or in the immediate vicinity of the Application Site, if any during the subsequent detailed design stage. The Applicant also commits to be responsible for de-registration of SIMAR features if the concerned slope(s) were demolished by the development works.

	Departmental Comments	Responses to Comments
1.3	***Previous comments received on 25.5.2022, 5.8.2022 and 31.10.2022*** Please find the following comments on the application from highways maintenance point of view:-	
	(a) The proposed access arrangement of the application site from Castle Peak Road – Tam Mi should be commented and approved by TD;	Noted. Comments from the Transport Department have been sought under the subject planning application. Please find the latest RtoC (Section 4 below) and revised TIA (**Appendix D**) to address TD's comments.
	(b) If the vehicular accesses at Castle Peak Road – Tam Mi are agreed by TD, the applicant should design and construct them in accordance with the latest Transport Planning and Design Manual of TD and the relevant standard drawings of this Department;	Noted.
	(c) It is noted that HyD's maintained slope feature no. 6NE-A/F105 would be affected under the subject development. The applicant should clearly indicated the demarcation of the modified slope to be managed and maintained by the applicant. The applicant should also clearly indicate the modified slope, if any, to be handed over to HyD for maintenance, and submit the associated details and design to HyD for comment. The slope works design should also be submitted to checked and accepted by GEO;	Noted. Should there be any slope feature to be affected by the Proposed Development, associated details and design will be submitted for consideration at subsequent detailed design stage. In terms of management and maintenance, the area that falls within the site will be maintained by the Proposed Development and the area falling outside the site will be handed over to HyD for maintenance subject to the satisfaction of HyD.
	(d) It is noted that covered transport lay-by is proposed within the application site. Please advise the management and maintenance party of the covered transport lay-by;	The covered transport lay-by within the Application Site would be a privately-operated transport lay-by, to be managed and maintained by the Proposed Development.
	(e) If TD supports the proposed road improvements at Fairview Park Interchange, Castle Peak Road – Tam Mi / Kam Pok Road East from traffic point of view, they shall be implemented by the applicant to the satisfaction of TD and HyD at the applicant's own cost;	Noted.

	Departmental Comments	Responses to Comments
	(f) The management and maintenance schedule of all proposed road works in the application should be submitted for review;	Noted. The management and maintenance schedule of all proposed road works under the revised TIA in the application will be provided in subsequent detailed design stage.
	(g) Adequate drainage measures should be provided at the site access to prevent surface water flowing from the site to nearby public roads or exclusive road drains; and	Noted.
	(h) It is noted that part of the site falls within the boundary of railway influence area. Comment from Railway Development Office of this Department should be sought.	Noted. The Further Information submitted to TPB on 25.11.2022, which included an impact assessment on existing railway network arising from the Proposed Development, has already addressed the comments from Railway Development Office of Highways Department (RDO, HyD) and circulated to relevant departments. No further comments have been received from RDO, HyD.
1.4	***Previous comments received on 18.5.2023***	
	(i) I will provide further comments when relevant submission in the detailed design stage become available. Please be reminded that the detailed design shall avoid cutting the existing SIMAR slopes into scattered pieces if they are not taken up by the developer and shall be de-registered from SMRIS as necessary.	Noted.
	(ii) Apart from 6NE-A/F105, please also note 6NE-A/F98 is also within the application site boundary in the captioned submission.	Noted. The detailed management, maintenance and slope works design of the affected slopes (i.e. 6NE-A/F105 and 6NE/A/F98) will be provided in subsequent detailed design stage for comments and consideration.

	Departmental Comments	Responses to Comments
2.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 26.10.2023, 17.11.2023 & 4.12.2023**	
	Comments on FI-9 *Urban Design*	
2.1	VP9 - The location of VP9 in figure 3.2 and key plan of photomontages in figure 5.9 do not tally. Please rectify.	Noted. The location of VP9 in the key plan of photomontages in Figure 5.9 has been updated and tally with the location of VP9 in Figure 3.2. Please also note that all the photomontages have been updated based on the latest scheme. Please refer to the revised VIA in **Appendix A** for consideration.
	Comments on FI-10 *Urban Design*	
2.2	As stated in the applicant's cover letter, the overall building layout (e.g. towers, podium and covered transport layby) has been updated. The Consultant should review and confirm whether the previously submitted VIA and AVA are still valid. *Landscape*	The overall building layout has been updated. Please refer to the revised VIA in **Appendix A** for consideration. The revised AVA is under progress and will be provided subsequently.
2.3	Having reviewed the submission, it is noted that there are some minor changes in the proposed layout. The applicant is advised to submit the revised Landscape Master Plan to tally with the current scheme.	The overall building layout has been updated. Please refer to the revised Landscape Design Proposal in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
3.	**Comments of the Director of Environmental Protection received on 31.7.2023**	
	<u>Comments on EA</u> **General**	
3.1	RtC 1.1 – As stated in our previous advice, we have double checked the site boundary and note that the northern fringe of the site falls within the boundary of Deep Bay Buffer Zone 2, and hence the residential development would constitute a designated project under Item P.1 in Part 1, Schedule 2 of the EIAO. Please note that our previous advice remains valid.	Noted. The Applicant will check with relevant authority regarding the survey and the alignment of Deep Bay Buffer Zone 2 before any construction work. In case it is confirmed to be a DP, the EIAO procedure will be strictly followed to obtain EP before construction and operation of the proposed development.
3.2	RtC 1.2 – It is noted that the residential development under this application would adjoin the residential development under the separate application No. Y/YL-NSW/8. Besides, it is noted that these applications were submitted in the same period and by the same applicant. Hence, it is unclear if the residential developments in these applications are planned independently and could be considered as having no association. Please clarify.	It is clarified that these are two separate developments. They are planned independently and self-sustainable.

	Departmental Comments	Responses to Comments
3.3	RtC 1.3 – As stated in our previous comment, it is unclear if there is an effective mechanism to ensure proper design and necessary measures identified in the odour impact assessment will be adopted for the new soy sauce factory. Our comment still has not been addressed.	Please note that there is an effective mechanism to ensure proper design and necessary measures identified in the odour impact assessment will be adopted for the relocated soy sauce factory: 1. General Building Plan of the relocated soy sauce factory will be circulated to EPD for consideration and approval; 2. After GBP approvals with Occupation Permit, the relocated soy sauce factory will have to apply Food Factory License from Food and Environmental Hygiene Department (FEHD) under the Food Business Regulation before operation. 3. Food Factory License has to be renewed every year and will seek EPD's comments via FEHD if there is any changes observed; and 4. The Air Pollution Control Ordinance provides a legal framework for enforcement. The relocated soy sauce factory will take appropriate effective measures to ensure that no visible" cooking fumes nor objectionable odour would be emitted.

	Departmental Comments	Responses to Comments
	Air Quality Impact Assessment in the EA	
3.4	Sections 3.2.3 and 4.2.1 – Based on Annex 2.3, it is noted that wastewater treatment plant and open tank for oil interceptor should also be considered as odour sources. Please supplement.	Please note that the wastewater treatment plant will be provided in the relocated soy sauce factory. It will be fully enclosed (with window / door closed) and will rely on mechanical means for ventilation. The extracted air of the wastewater treatment plant would be treated with deodourization unit before being released to the ambient. This odour source has been incorporated in the revised odour impact assessment. According to the latest design of the relocated soy sauce factory, the oil interceptor in the relocated soy sauce factory will be covered in future. Therefore, the odour impact arising from the oil interceptor is no longer a concern. Relevant texts have been amended accordingly. Please refer to the revised EA in **Appendix C** for consideration.
3.5	Section 3.3.3 – Please note that the road type of Castle Peak Road - Tam Mi (from Kam Tin Rd to Fairview Park Boulevard) should be Primary Distributor according to TD's ATC 2021 and hence 20m buffer instead of 10m buffer shall be allowed. Please revise the text and show the 20m buffer zone from Castle Peak Road - Tam Mi in Figure 3.1. Since part of the residential development will encroach into the buffer zone, please review the layout plan to ensure that no air-sensitive use will be within the buffer zone.	Please note that Castle Peak Road – Tam Mi should be considered as rural road which is comparable to District Distributor while San Tin Highway is considered a Primary Distributor. Therefore, 10m buffer zone from Castle Peak Road – Tam Mi should not be affected.
3.6	Section 3.3.4 – Please follow up and supplement TD's endorsement for the road type of Pok Wai South Road.	Please find TD's endorsement for the road type of Pok Wai South Road at Appendix 4.1 of the revised EA in **Appendix C**.

	Departmental Comments	Responses to Comments
3.7	Sections 3.3.6, 3.4.3 and 6.1.3 – Please note that the latest Practice Note for Control of Air Pollution in Semi-Confined Public Transport Interchanges (ProPECC PN1/22) has been published. The applicant should follow the latest ProPECC PN 1/22 for the design and operation of the covered transport lay-by. Please revise Sections 4.3.7, 4.4.3 and 6.1.2 accordingly.	Noted. Relevant texts have been amended accordingly. Please refer to the revised EA in **Appendix C** for consideration.
3.8	Section 3.3.6 – Please clarify if all the internal roads are EVA since the access roads leading to the covered lay-bys will have HGV/FB and 5m buffer distance shall be allowed from any air-sensitive uses.	It is clarified that all internal roads are EVA. Therefore, the 5m buffer distance is not applied to the internal roads. Relevant texts have been amended accordingly. Please refer to Section 4.3.4 of the revised EA in **Appendix C** for consideration.
3.9	Sections 3.4.2, 4.5.2, 4.5.3 and 6.1.2 – Please note that these sections may subject to change since the odour impact assessment in the application has not yet been cleared.	Noted. Relevant texts have been amended accordingly. Please refer to the revised EA in **Appendix C** for consideration.
3.10	Section 3.4.3 – Please revise "active recreational uses" as "recreational uses in open space" in line 2 and add "for roads and chimneys" after buffer zones in line 3.	Noted. Relevant texts have been amended accordingly. Please refer to the revised EA in **Appendix C** for consideration.
3.11	Section 4.2.3 – Based on the odour sampling results (Annex 2.3), it is noted the odour concentration at the open area (i.e. AS7, AS9, AS10) for 2nd fermentation process is 91, 92 and 63 OU/m^3 respectively. The odour impact from the open area/ concrete tanks for 2nd fermentation process is not insignificant. Please revise the text accordingly.	Noted. Relevant texts have been amended accordingly. Please refer to Section 5.2.3 of the revised EA in **Appendix C** for consideration.

	Departmental Comments	Responses to Comments
3.12	Section 4.2.4 – We noted that deodorization unit is proposed to be installed at the exhaust outlets of the soy sauce factory and 80% odour removal efficiency has been assumed. Please provide solid justifications to support that 80% removal efficiency can be achieved for removing the odour from the soy sauce factory.	Noted. The odour removal efficiency has been updated. Supplementary information has also been provided to support the odour removal efficiency. Commissioning testing will be conducted before the operation of the relocated soy sauce factory after the deodorization units are installed if necessary. Please refer to Section 2.4.19 and 3.1.2 in Appendix 5.1 of the revised EA in **Appendix C**.
3.13	Section 4.2.5 and 4.5.2 – Since Sha Po SPS is located within 500m from the proposed relocated soy sauce factory, its odour impact should be included in the cumulative odour impact assessment. Please supplement in Sections 4.2.5 and 4.5.2. Please delete ", if" in line 9.	Noted. Sha Po Sewage Pumping Station has been included and considered in the cumulative odour impact. Please refer to Section 2.4.20 in Appendix 5.1 of the revised EA in **Appendix C**.
3.14	Section 5.2.4 a) Please clarify if there is any other concurrent project in the vicinity of the proposed development apart from NSW/8 planning application and their cumulative impacts (if any) should be addressed in this section.	According to the Draft Kam Tin North Outline Zoning Plan No. S/YL-KTN/10 gazetted by TPB in January 2023, a newly proposed public housing development has been committed to the east across San Tin Highway of the subject Application Site at Sha Po. The relevant cumulative impacts have been discussed. Please refer the Section 6.2.4 of the revised EA in **Appendix C**.
	b) For all concurrent projects, please address if dust control measures shall be in place and whether close liaison with the contractor of the concurrent projects shall be conducted to avoid any dusty activities to be taken place at the same time to further justify if adverse cumulative dust impact is not anticipated.	Noted. The Applicant would establish communication channel with the contractor of nearby concurrent project (i.e. Y/YL-NSW/8). In particular, there would be close liaison to avoid dusty activities be taken place at the same time or at locations near to each other to minimise the fugitive dust impact. Please refer to Sections 6.2.4 and 6.2.8 of the revised EA in **Appendix C**.

	Departmental Comments	Responses to Comments
3.15	Sections 5.2.5 and 5.2.6 – Instead of a consideration, it is considered necessary to implement a dust monitoring programme during the construction stage and phasing of the construction works to ensure that no ASRs will be subject to adverse air quality impact owing to the size of the project site and the presence of concurrent projects in close vicinity. Please state clearly in these sections.	The Applicant is committed to implement a dust monitoring programme as necessary. Please refer to Section 6.2.6 of the revised EA in **Appendix C** for consideration.
3.16	Section 5.2.7 – Please add "provide electric power supply to the on-site machinery as far as practicable in order to minimize any air emissions" and "erect higher hoarding along the site boundary of the project where there is ASR in close proximity" as control measures.	Noted. The control measures have been supplemented in Sections 6.2.8 and 6.2.9 of the revised EA in **Appendix C**.
3.17	Section 6.1.2 – Please review if on-site sewage treatment plant" in line 10 and "onsite STP" in line 11 should read "onsite wastewater treatment plant".	Noted. The Section 7.1.2 of the revised EA in **Appendix C** has been updated accordingly.
3.18	Figure 3.1 – Please show the 20m buffer zone from Castle Peak Road – Tam Mi (from Kam Tin Rd to Fairview Park Boulevard) in the figure.	Please note that Castle Peak Road – Tam Mi should be considered as rural road and comparable to District Distributor while San Tin Highway is considered a Primary Distributor. Therefore, the buffer zone presented in Figure 4.1 of the revised EA in **Appendix C** should not be affected.
3.19	Figure 4.1 – Based on Appendix 4.1, it is noted there is an exhaust outlet located at the north of the proposed soy sauce factory. Please show its location in Figure 4.1 with its separation distances from the nearby ASRs for clear illustration.	Noted. The exhaust air louver for all exhausts (including wastewater treatment plant, kitchen and fermentation room) will be located on southern façade of the relocated soy sauce factory. Therefore, the separation distances presented in Figure 5.1 of the revised EA in **Appendix C** should not be affected.

	Departmental Comments	Responses to Comments
4.	**Comments of Commissioner for Transport received on 12.12.2023**	
4.1	Table 2.2: We re-iterate that motorcycle parking space beyond HKPSG shall be considered. Based on our observation, the current proposal appears insufficient to meet the parking demand. We re-iterate that bicycle parking space of 1 space for every 7.5 flats shall be considered. Based on our observation, the current proposal appears insufficient to meet the demand. Table 2.5: Please provide the details of the proposed bus routes (e.g. the O-D, headway, the estimated no. of vehicles required to operate the proposed bus routes etc.)	The current proposal on motorcycle parking provision has already adopted the mid-range provision of 1 space per 125 flats according to the requirement in HKPSG (1 motorcycle parking space per 100 - 150 flats). The current proposal on bicycle parking provision has already adopted the requirements according to the HKPSG (1 bicycle parking space per 15 flats). The Applicant will consider to provide more bicycle parking spaces within the Application Site, and the exact no. of bicycle parking spaces will be agreed with TD at detailed design stage.
4.2	Table 3.3 and 4.6: The link assessment for Castle Peak Road - Tam Mi northbound and southbound shall be separated. Please update the relevant tables. The link assessment on flyover above Au Tau Interchange shall be included in the report.	Noted. Table 3.3, Table 4.6 and Table 4.8 of the revised TIA in **Appendix D** have been revised accordingly.
4.3	Figure 2.2: Please consider to provide exclusive left turn lane to enter the development.	The access arrangement has been updated. Please refer to Figure 2.2 of the revised TIA in **Appendix D** for the latest access arrangement.
4.4	Figure 2.3: Please provide sufficient layby next to school site to avoid queuing back of vehicles on public road. The entrance of school site is too close to the proposed junction.	Please note that lay-bys would be provided within the school site area as suggested in the standard layout for 30-classroom primary school given in Figure 1 of HKPSG Chapter 3. Location of the school site entrance has been revised as shown in Figure 2.2 of the revised TIA in **Appendix D**.
4.5	Figure 2.4: The layout of the junction of Castle Peak Road - Tam Mi / unnamed access road is different from the submission in Y/YL-NSW/8.	Please note that lay-bys would be provided within the proposed school site as suggested in the standard layout for 30-classroom primary school given in Figure 1 of HKPSG Chapter 3. Location of the proposed school site entrance has been revised as shown in Figure 2.2 of the revised TIA in **Appendix D**.

	Departmental Comments	Responses to Comments
4.6	Figure 2.7: Vehicles waiting at Castle Peak Road - Tam Mi Southbound to enter PTI and G/IC site will affect the traffic flow. Please review the arrangement.	Please refer to Figure 2.2 of the revised TIA in **Appendix D** for the latest access arrangement. The covered transport lay-by would be provided in the subject Application Site and is served by the junction of Castle Peak Road – Tam Mi / Vehicular Access of R(E) Site – Residential Portion and Covered Transport Layby / Unnamed Road underneath San Tin Highway (J4) in the form of a roundabout. Assessment result indicated that the roundabout would have sufficient capacity to accommodate the traffic. In addition, a minimum 30m separation between the run-in/out of the covered transport lay-by and the edge of the J4 roundabout would be maintained. The access road connected to the junction of Castle Peak Road – Tam Mi / Vehicular Access of OU(CDWRA)1 Site - GIC Portion (J1) would only provide service for the GIC facilities under the separate planning submission.
4.7	Figure 2.8: The layout of the proposed footbridge shall be provided. The pedestrian path and cycle track along Castle Peak Road - Tam Mi and footbridge shall be connected to future MTR station. Please review such routing in particular in San Tam Road. It is assumed that the footbridge will be designed and constructed by the development.	Pedestrian path and cycle track have been proposed to connect between the Pok Wai South Road and Castle Peak Road – Tam Mi. A subway connection instead of footbridge has also been proposed to connect the proposed development and future Au Tau Station. Please refer to Figure 2.8 of the revised TIA in **Appendix D** for the preliminary layout of the proposed pedestrian path, cycle track and subway.
4.8	Please note comment from TCD on the proposed improvement scheme at J15, Junction of Castle Peak Road - Tam Mi / Kam Pok Road East. *According to the Chap. 3.7.4.7 of TPDM Vol. 2, if split phases are provided, channelising islands should be constructed in order to provide refuges for pedestrians to wait.* *(Refer to: https://home.td.hksarg/manuals/tpdm/v2/c3/Volume2_Chapter37.htm)*	As shown in Figure 4.15 of the revised TIA in **Appendix D**, channelising island has already been incorporated in the improvement scheme at the junction of Castle Peak Road / Kam Pok Road East (J15).

	Departmental Comments	Responses to Comments
4.9	Please review the figure in the 2021's observed flow as it seems the underestimated figures have been adopted.	Reference was made to the multiple sets of Fairview Interchange observed flows as disclosed in some recently approved TIA reports. It is found that the 2021 observed flow at Fairview Interchange reported in our submitted TIA report are generally in line with these referenced figures. However, for conservative approach, several adjustments to our 2021 observed flows were made as shown in Figure 3.12 of the revised TIA in **Appendix D**.
4.10	Please advise whether existing cautionary crossing at Castle Peak Road-Tam Mi (NB) to Fairview Park Interchange will be re-provided.	As shown in Figure 4.14 of the revised TIA in **Appendix D**, cautionary crossing at the approach arm of Castle Peak Road – Tam Mi (NB) at Fairview Interchange will be re-provided.
4.11	Please coordinate and incorporate the proposed improvement under proposed housing development at Sha Po.	The planned improvement works under Sha Po Public Housing Development has been considered. Please refer to Figure 4.1 and Figure 4.14 of the revised TIA in **Appendix D**.
4.12	Please indicate the slip road/ road name for each arm for further consideration.	Noted. Junction capacity analysis result of Fairview Interchange (J14) in Appendix B of the revised TIA in **Appendix D** has been revised accordingly.
4.13	Please review Section 4.7. The rezoning of application no. Y/YL-NSW/7 has been approved on RNTPC meeting on 10 Nov 2023. The information from the latest TIA of the application no. Y/YL-NSW/7 shall be adopted.	Noted. Information from the latest TIA for the approved planning application no. Y/YL-NSW/7 has been adopted.
4.14	Section 4.8: Sha Po Public Housing Development shall be included in the assessment. This section could be deleted for clarity.	Noted.
4.15	Bus ancillary facilities (e.g. bus regulator office, staff resting area with internal toilet should be provided in accordance with TPDM. Please indicate the location of these facilities on Appendix A.	As per TPDM requirement, a minimum area of $72m^2$ will be available within the covered transport lay-by for the provision of operator's facility. The detailed design of the covered transport lay-by would be provided in subsequent detailed design stage.

	Departmental Comments	Responses to Comments
4.16	EV charging enabling infrastructure are required in the proposed PTI to support the operation of terminating routes. Since e-charging policy is promulgated by EPD, their comments should be sought for any exception.	EV charging facilities would be provided in the proposed covered transport lay-by. The detailed design of the covered transport lay-by would be provided in subsequent detailed design stage.
4.17	The management office of the private PTI should allow the allocation of public transport services within the PTI by TD.	Noted.
4.18	Appendix B: The calculation for J11 as a pure signalised junction shall be reviewed. We reiterate that micro-simulation shall be carried out and assess the junction capacity after implementation.	Micro-simulation has been conducted to simulate the microscopic traffic condition under the planned signalising scheme at Pok Oi Interchange (J11) with this future design flow. The result of the micro-simulation is as shown in Appendix D of the revised TIA in **Appendix D**.
4.19	TPD's comment will be provided separately.	Noted.

Under Further Information Submitted on 9.2.2024

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

2.	Environmental Protection Department (received on 26.10.2023)	3

	Departmental Comments	Responses to Comments
1.	**Comments of Chief Town Planner/Urban Design and Landscape of Planning Department received on 28.8.2023 & 17.11.2023**	
	AVA	
1.1	**Coverage of Assessment and Surrounding Areas** (section 3.1 and Figure 1) – While it is understood from the consultant's R-t-C that the Assessment and Surrounding Areas have been enlarged, the consultant has also indicated that both of Proposed Scenarios 1 and 2 would create air ventilation impact on the pedestrian wind environment beyond the enlarged Assessment Area in the section of directional analysis. As such, the consultant should review the simulation results and ensure the further revised Assessment Area is large enough to assess all potential air ventilation impact created by the proposed developments.	Please note that the indicative scheme has been updated in response to the comments from the Transport Department, as well as latest developments in relation to the adjacent transport context. All simulations have also been updated and remodelled based on the latest indicative scheme. According to the latest simulation results, the Assessment Area is large enough to assess all potential air ventilation impact created by the proposed development. Therefore, no further extension of the Assessment Area is required.
1.2	**LVR and SAVRs** (section 4.1) – Referring to the tables 4.1 and 4.2, it seems that the Proposed Scenarios 1 and 2 would have better LVR and SAVR for some focus areas under both annual and summer conditions. However, such phenomena could not reflect in the VR contours. As such, there are doubts on (i) the accuracy of the simulation results; (ii) test points locations; and (iii) coverage of the Assessment Area.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. Please refer to the revised AVA in **Appendix A** for consideration. Please also note that the surrounding area of the Application Site is characterized by rivers, wetlands, ponds, etc. Due to the inaccessibility of these areas by pedestrians, no test points would be assigned and located in these areas. Therefore, the VR contours would not be able to reflect such phenomena.
1.3	**Summer weighted VR contours** (section 4.5) – With reference to the summer weighted VR contours, it appears that the Proposed Scenario 2 has much higher VR (see red colour patched located near the top right corner of the VR contour) than the Baseline and Proposed Scenario 1. As such, the accuracy of the simulation results is doubtful.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. Please refer to the revised AVA in **Appendix A** for consideration.

	Departmental Comments	Responses to Comments
1.4	**Discontinuities in the VR contours** (Appendix 4) – Referring to the updated simulation results, there are still some VR discontinuities have been found in the simulations around the models. Without explanation regarding the above phenomena, it is questionable that the modelling is properly carried out and the simulation results are accurate.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. Please refer to the revised AVA in **Appendix A** for consideration.
1.5	**Mitigation Measures/Good Design Features under both Baseline and Proposed Schemes** (sections 1.3 and 1.4) – We would like to reiterate that the consultant is required to list out all the mitigation measures/good design measures with **exact dimensions** in the text and indicate them on plan and in the computational model not only under the Proposed Scheme but also **under the Baseline Scheme**.	Good design measures including building separations between building clusters within the residential development portion as well as against the relocated soy sauce factory building have been incorporated under the current Proposed Scheme to facilitate the wind penetration. The dimensions of these features that the Proposed Scheme have been annotated in Appendix 3 of the revised AVA in **Appendix A** for reference. Please note that the current Proposed Scheme is to demonstrate that the subject rezoning application is technically feasible from air ventilation point of view. Upon approval of the subject rezoning application, an s16 planning application in support of the proposed residential development will be submitted for approval. These proposed building separations may be subject to detailed design review. The good design measures under the Baseline Scheme (No. Y/YL-NSW/3) have also been indicated. Please refer to Appendix 1 of the revised AVA in **Appendix A** for reference.
1.6	**E-W aligned building separations** (Appendix 2) – While the consultant has claimed that all proposed building separations have been indicated on plan, however there is no indication of those E-W aligned building separations.	Noted. The proposed building separations have been indicated. Please refer to Appendix 2 of the revised AVA in **Appendix A** for consideration.
1.7	**Test points** (section 3.4, Table 4.1 and Figure 4) – In view of paragraph 1 above, the consultant should add sufficient overall test points to cover the whole revised Assessment Area and update the list of corresponding test points reported in the table.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. According to the latest simulation results, the Assessment Area is large enough to assess all potential air ventilation impact created by the proposed development. Therefore, no further extension of the Assessment Area is required.

	Departmental Comments	Responses to Comments
1.8	**Directional analysis** (section 4.5) and **Conclusion** (section 5) – In view of our comments above, the consultant should update the directional analysis and conclusion based on the updated simulation results for our consideration.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. Please refer to the revised AVA in **Appendix A** for consideration.
	Urban Design	
1.9	As stated in the applicant's cover letter, the overall building layout (e.g. towers, podium and covered transport layby) has been updated. The Consultant should review and confirm whether the previously submitted VIA and AVA are still valid.	Please note that all simulations have been updated and remodelled based on the latest indicative scheme. Please refer to the revised AVA in **Appendix A** for consideration.
2.	**Comments of the Director of Environmental Protection received on 26.10.2023**	
	Comments on SIA	
2.1	It is still unclear why the sewage generated by the new soy sauce factory is not discharged to nearby sewerage system as proposed for the residential and school developments at the site. Since the site is located within Deep Bay catchment area, the proposed discharge arrangement for the soy sauce factory would have potential implication on the water quality in Deep Bay. As such, the consultant is advised to provide justifications for the sewage management proposal for the soy sauce factory. In addition, the consultant should be reminded that the requirements of no net increase in Deep Bay should be adhered to, and the potential water quality impact should be duly addressed in the Environmental Assessment for the application if the said sewage arrangement is to be put forward.	Please note that the sewage generated by the relocated soy sauce factory will be discharged to the public sewerage system leading to Sha Po Sewage Pumping Station under the current discharge arrangement. Please refer to the revised SIA in **Appendix B** for consideration.
2.2	For the effluent discharge by the new soy sauce factory, the consultant is reminded that a new discharge license under the WPCO would be required.	The relocated soy sauce factory will apply for a new discharge license under the WPCO to allow the effluent discharge to the public sewerage system.

	Departmental Comments	Responses to Comments
2.3	S.7.1.4, S.7.1.5 and Figure 5 & 5b: (a) According to the Final Report for the EFS for Sha Po public housing development, no upgrading of existing rising mains from Sha Po Sewage Pumping Station (SPSPS) to Nam Sang Wai Sewage Pumping Station (NSWSPS) and Yuen Long Sewage Treatment Works (YL STW) was proposed under the project. The consultant should liaise with CEDD to clarify the availability of the new rising mains between SPSPS and NSWSPS. (b) Please liaise with CEDD to ensure there is sufficient sewer capacity between manhole 13 and SPSPS to accommodate the anticipated flow from the subject site.	Noted. The Applicant will consult CEDD when more information about the upgrading works of the existing Sha Po Sewage Pumping Station (SPSPS) is available. CEDD has been consulted and the detailed information regarding sewer between manhole 13 and SPSPS is still pending from CEDD. Therefore, it is proposed that sewer connection from DR3.1 to SPSPS to be constructed by the Applicant until CEDD's information received. The proposed sewer will be further reviewed for connection to CEDD's constructed sewer manhole.

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Director of Environmental Protection received on 19.1.2024**	
	<u>Comments on the Odour Impact Assessment</u>	
1.1	Sections 1.4.2 and 2.4.7 – Please incorporate RtC#1.1 to the section.	Relevant sections have been updated. Please refer to Sections 1.4.2 and 2.4.18 of the Revised OIA for consideration.
1.2	Section 2.1.5 – Please list out the dates of site surveys.	The dates of site surveys have been incorporated. Please refer to Section 2.1.5 of the Revised OIA for consideration.
1.3	Section 2.1.6 – Please clarify if there is any operation later than 6pm. If positive, the maximum operation hours shall be adopted for assessment.	It is clarified that the Relocated Soy Sauce Factory would be operated from 8:00 a.m. to 6:00 p.m., Monday to Friday. The majority of the potential odour emissions process such as soy sauce extraction bean paste collection, and food processing in the kitchen would be processed during operation hours. The fermentation processes in the fermentation room and outdoor sun-drying area would run 24 hours a day to create an optimal environment for fermentation of the soybean. Additionally, the wastewater treatment plant would also operate around the clock. Please refer to Section 2.1.9 of the Revised OIA for consideration.
1.4	Section 2.1.10 – (a) Please incorporate R-t-C #1.35 into this section.	Relevant section has been updated. Please refer to Section 2.1.19 of the Revised OIA for consideration.
	(b) Please clarify if the fermentation room is separated from the kitchen.	It is clarified that the fermentation room is separated from the kitchen. Please refer to Section 2.1.18 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	(c) Not only for hygiene reason, please note that the windows and doors of fermentation room and kitchen shall be closed at all times. Otherwise, the odour impact assessment results are invalid since there are other openings for odour emissions. Please state this clearly in the section.	It is clarified that the windows and doors of the kitchen and fermentation room will be closed due to hygiene requirement and to avoid any odour released to the environment via the windows and doors at all times. Please refer to Section 2.1.19 of the Revised OIA for consideration.
1.5	Table 2.2 – Please list out the separation distance of each ASR from the site boundary of the relocated soy sauce factory.	The separation distances of each ASR from the site boundary of the Relocated Soy Sauce Factory have been incorporated in the Table 2.2 of the Revised OIA for consideration.
1.6	Section 2.4.1 – For the quantitative air quality impact assessment, the consultant is reminded that an updated version of the PATH model will be released in early 2024. To tally with the latest version of PATH, 2019 met data shall be adopted for model runs.	Noted. The air model have been re-run with adoption of the 2019 meteorological data to tally with the latest version of PATH.
1.7	Section 2.4.5 – (a) Please elaborate how the soy sauce within the covered concrete tanks would be extracted and clarify if there is any odour emission during the extraction process. If positive, its odour samples shall also be taken for the assessment.	The soy sauce would be extracted into the storage tanks through pipelines. This is a closed system that does not require the cover of the concrete tank to be opened. Please refer to Section 2.1.12 of the Revised OIA for consideration.
	(b) Please check if "other" in the 2nd last line shall read "the".	Relevant section has been updated. Please refer to Section 2.1.12 of the Revised OIA for consideration.
1.8	Section 2.4.6 – Instead of using "similar scale", please confirm if the operation capacity and throughput will be the same as the existing factory and revise the text accordingly. Otherwise, the odour samples collected at the existing factory may not be able to represent the worst-case scenario.	It is clarified that the scale and the production process of the Relocated Soy Sauce Factory would be the same as the existing soy sauce factory, and it is not possible to increase the production rate in one particular stage of process to increase the throughput. Please refer to Section 2.1.13 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
1.9	Section 2.4.7 – (a) Please revise "assumed to be provided" as "will be provided" since deodorization is considered in the assessment.	Relevant section has been updated. Please refer to Section 2.1.16 of the Revised OIA for consideration.
	(b) Please clarify whether there are 11 woks in the existing factory to justify the odour emission rates derived from the existing factory is applicable to the relocated factory.	Relevant section has been updated. Please refer to Section 2.1.14 of the Revised OIA for consideration.
1.10	Sections 2.4.9 – (a) Please incorporate R-t-C #1.15b into this section.	Relevant section has been updated. Please refer to Section 2.4.7 of the Revised OIA for consideration.
	(b) Please address in Sections 2.4.9, 2.4.10 and Annex 2.4 (P.100) if the odour samples for kitchen/ 1st fermentation room were taken when all the windows/ doors/ openings of these facilities are closed with only one exhaust fan was in operation and hence all the air within these facilities could be assumed to be emitted through the exhaust fan only.	It is confirmed that the odour samples for kitchen / 1st fermentation room were taken when all the windows / doors / openings of these facilities were closed with only one exhaust fan was in operation. Therefore, the exhaust fan is the only emission point of these facilities. Please refer to Sections 2.4.6 & 2.4.7 and Annex 2.4 of the Revised OIA for consideration.
	(c) Since the odour samples were collected at about 30degC only, please justify if the odour samples could represent the worst-case scenario and whether a conversion factor for temperature is required to adjust the odour emission rates. Same comment applied to Section 2.4.10 as well.	The results of the Revised OIA demonstrate that the current rezoning application is technically feasible from odour perspective. If the Government considers appropriate to review the design of the factory at subsequent implementation stages, the Revised OIA can be further reviewed with further odour samples to be collected under different weather conditions and submitted to Government for review (i.e. under S16 planning application). Relevant proposed mitigation measures can also be reviewed (if necessary) accordingly. Please refer to Section 2.4.11 of the Revised OIA for consideration.
	(d) Please provide the no. of samples collected at the fermentation room and whether they were collected under the conditions of full capacity operation and during the time with the maximum odour emission process. Same comment applied to Section 2.4.10 as well.	Relevant sections have been updated. Please refer to Sections 2.4.5 to 2.4.7 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	(e) Please check if "kitchen" in 2nd last line shall read "fermentation room".	Relevant section has been updated. Please refer to Section 2.4.6 of the Revised OIA for consideration.
1.11	Section 2.4.11 – (a) Please provide the reason why the odour impact from the 3rd aeration tank is insignificant. Since no odour sample was collected at the 3rd aeration tank, please clarify how the emission rates of the 3rd aeration tank was estimated (e.g. based on the SOERs of other sampled aeration tank) with justifications.	It is clarified that the 3rd storage tank is the tank for the storage and discharge of the treated wastewater. According to the observation during onsite survey, odour was not observed at 3rd storage tank. Therefore, the emission rate of the 3rd storage tank was calculated based on the SOER of the 2nd aeration tank as a conservative approached. Please refer to Section 2.4.9 of the Revised OIA for consideration.
	(b) Suggest to delete "(representing ambient odour concentration among the open area of concrete tanks)" in line 1 -2 since it may not be correct.	Relevant sections have been updated. Please refer to Sections 2.4.5 to 2.4.7 of the Revised OIA in **Attachment 1** for consideration.
1.12	Section 2.4.12 – Please confirm if the maximum operation hours will be from 8am to 6pm since the actual operation times shall be known for assessment.	It is clarified that the maximum operation hours would be from 8am to 6am which is the maximum number of operation hours. Please refer to Section 2.4.12 of the Revised OIA for consideration.
1.13	Section 2.4.15 and Annex 2.4 (P.101 – 115) – Please clarify if the 1st fermentation process would only be conducted during 8am to 6pm. If this is a continuous process that operated 24 hours a day, its odour emission should not be limited to 8am to 6pm. Please check and revise the assessment if necessary.	It is clarified that the fermentation room would be operated 24 hours a day. The assumptions and air models have been revised and re-run accordingly. Please refer to Section 2.4.16 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
1.14	Section 2.4.16, Annexes 2.3 and 2.4 – It is noted that a hypothetical worst-case scenario with 11 woks being used simultaneously in the kitchen would be adopted for assessment. Please clarify if it is possible to have 11 woks to be used at the same time in the kitchen. If positive, please clarify how the emission rates based on the maximum no. of woks in use can be estimated with odour samples taken at the kitchen of the existing factory. The consultant should also clarify how many woks are being used in the kitchen during the odour sampling and adjustment factor (with justifications) should be adopted in the calculation if necessary.	It is clarified that only 1 wok would be used for cooking the product each time. After one wok of product is being cooked, the cooked product would be pumped to the packaging area. Then another wok would be used for cooking the product (i.e. the above process would be repeated again). No adjustment factor would be required as only one wok would be used at each time. Please refer to Section 2.1.15 of the Revised OIA for consideration.
	Please revise the assessment and calculation based on our comments provided above.	The assessment and calculation have been updated accordingly.
1.15	Section 2.4.17 – As mentioned above, please list out all identified ASRs and specify the locations of concrete tanks in the sunshine aging area in figures to demonstrate the worst-case impact scenario for each ASR could be captured based on the 15 scenarios.	All identified ASRs and locations of concrete tanks have been incorporated. Please refer to Section 2.4.18, Table 2.3 and the figures in Annex 2.4 of the Revised OIA for consideration.
1.16	Sections 2.4.19, 3.1.2, Table 2.5 and R-t-C 10 – (a) It is unclear to conclude that the targeted odour removal efficiency of 87.5% is not an aggressive / conservative assumption with limited information. Please revise the text accordingly.	Relevant sections have been updated. Please refer to Sections 2.4.20 and 3.1.2 of the Revised OIA for consideration.
	(b) Since no solid justification could be provided at this stage, apart from commissioning test, regular monitoring of the odour removal efficiency during operation stage shall also be conducted to ensure the targeted odour removal efficiency could be achievable. If it is verified in the commissioning test that the targeted odour removal efficiency could not be achieved, a revised odour impact assessment based on the actual DO performance shall be conducted to support that adverse odour impact is not anticipated on the nearby ASRs. Please provide more details about the commissioning test.	Relevant sections have been updated. Please refer to Sections 2.4.20 and 3.1.2 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	(c) Since the performance of the DO is crucial to ensure no adverse odour impact will be imposed on the nearby ASRs, it is necessary to conduct regular monitoring to ensure the odour removal efficiency can be maintained. Other than the commissioning test, please supplement the regular odour monitoring programme in the report (e.g. conduct odour sampling at every 3 months at the inlet and outlet of the DO, if there is a failure of DO to achieve the target odour removal efficiency during the regular monitoring, the factory shall investigate the problem, clean the DO and conduct maintenance/replace the DO if necessary and consider if the operation process shall be ceased or the exhaust points shall be closed for the kitchen, fermentation room and wastewater treatment plant until the DO is resumed normal, etc.). An odour complaint and regular patrol system shall also be implemented and the details shall be supplemented in the report as well. Please revise Sections 2.4.19 and 3.1.3 accordingly.	Relevant sections have been updated. Please refer to Sections 2.4.20 and 3.1.2 of the Revised OIA for consideration.
1.17	Section 2.4.20 and Annex 2.5 – (a) If the odour emission rates of Sai O Trunk Sewer SPS will be adopted for Sha Po SPS, please clarify if they are both for collection of same type of sewage. For the exhaust flow rate, exit velocity, stack height and odour removal efficiency, please check with DSD if relevant information can be provided instead of using the assumptions of other EIA reports.	Although request of information for Sha Po SPS has been sent to DSD, no reply was obtained from DSD. Therefore, the information of Sai O Trunk Sewer SPS has been referred and adopted for the assessment. As the majority of the sewage collected by the Sha Po SPS and Sai O Trunk Sewer SPS both are from the surrounding residential developments and village houses. Although freshwater is being supplied as flushing water in the area near SPSPS and salted water is being supplied as flushing water in the area near Sai Oi Trunk Sewer SPS, flushing water would only contribute a small portion of the sewage and the majority of the sewage generated should be from kitchen and bathing. Therefore, it is anticipated that the effect on the amount of odour generated from the sewage by using different types of flushing water should not be significant. As such, the usage of the assumptions of the proposed Sai O Trunk Sewer Sewage Pumping Station are considered appropriate.

	Departmental Comments	Responses to Comments
	(Cont'd)	In addition, the odour removal efficiency is from the Preliminary Environmental Review Section of the Final Report for Agreement No. CE 10/2020 (CE) Site Formation and Infrastructure Works for Proposed Public Housing Developments at Sha Po, Shap Pat Heung and Tai Kei Leng, Yuen Long - Feasibility Study, which was provided by DSD. Please refer to Section 2.4.21 of the Revised OIA for consideration.
	(b) Suggest to remove the 2nd last sentence since it is unjustified.	Relevant section has been updated. Please refer to Section 2.4.21 of the Revised OIA for consideration.
1.18	Section 2.5.4 and Annex 2.7 – (a) Please clarify if the worst hit level for odour is at 1.5mAG for each scenario.	According to the predicted results, all predicted results of the ASRs are well below the criterion. The worst hit level for the contour plots of each scenario is determined based on the predicted results of S4 and S5, which is at 1.5mAG. Since some of the emission sources are located at higher level, an additional test has been conducted for some additional test points (T01 to T09) for different levels (1.5mAG to 110.5mAG) in order to capture the worst-hit level for the potential odour impact at the surrounding locations, although no air sensitivity receivers are located at those locations. As shown by the results, the highest predicted result would be at T2 at 24.7mAG. Therefore, the worst hit levels for the contour plots for 1.5mAG and 24.7mAG are provided in Annex 2.7 of the Revised OIA in Attachment 1 for consideration.
	(b) Since the exhausts of the relocated factory are located at 12.0mAG, it is necessary to present the contour plots at higher levels to demonstrate the worst hit levels have been captured. Please supplement.	Please refer to the responses of Item 1.18(a) of the subject RtoC above.

	Departmental Comments	Responses to Comments
1.19	Table 2.5 – Please clarify if there are 3 different sets of DOs and exhausts for kitchen, fermentation room and wastewater treatment plant.	It is clarified that 4 sets of odour removal system for the exhausts for kitchen & fermentation room and 1 set of odour removal system for wastewater treatment plant will be adopted, and respectively. Please refer to Table 2.5 of the Revised OIA for consideration.
1.20	Section 3.1.1 – Please revise "Three scenarios" as "Fifteen scenarios" in line 3.	Relevant section has been updated. Please refer to Section 3.1.1 of the Revised OIA for consideration.
1.21	Section 3.1.3 – Please incorporate our previous comment 1.14 into this section.	Relevant section has been updated. Please refer to Section 3.1.3 of the Revised OIA for consideration.
1.22	Figure 2.3 – Please identify if there is any ASRs in the south direction of the relocated factory across Tsing Long Highway that shall be included in the assessment.	Additional ASR – S6 (Resting Place at Castle Peak Road – Tam Mi) has already been identified and no other ASR has been identified in the south direction of the relocated factory across Tsing Long Highway. In addition, according to the onsite survey and desktop review, the nearest ASRs identified in the south direction of the Relocated Soy Sauce Factory across Tsing Long Highway would be Park YOHO which is over 300m away from the boundary of the Relocated Soy Sauce Factory. Therefore, no nearby ASR has been identified in this direction. Please refer to Figure 2.3 of the Revised OIA for consideration.
1.23	Annex 2.1 (P.42) – (a) Please clarify where the "Boiler and Fermenter" are located (e.g. in 1st fermentation room?)	It is clarified that the "Boiler and Fermenter" are located the 1st fermentation room. Please refer to Annex 2.1 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	(b) Please clarify if electricity is used for the factory. Otherwise, please note that the emissions from fuel combustion shall also be assessed.	According to the design at this stage, electricity will be used for the Relocated Soy Sauce Factory. Therefore, emissions from fuel combustion have not been anticipated. The use of electricity will be further reviewed in the next stage. If necessary, impact of emissions from fuel combustion will be assessed in the next stage (i.e. under S16 planning application). Please refer to Annex 2.1 of the Revised OIA for consideration.
	(c) Please clarify if there is any odour emissions at the packaging area and their potential odour impact shall also be assessed.	It is clarified that no odour was observed at the packaging area during onsite surveys. Please refer to Annex 2.1 of the Revised OIA for consideration.
1.24	Annex 2.1 (P.43) – Please state clearly if all the frying and boiling processes are carried out in the kitchen.	It is clarified that the frying and boiling process are carried out in the kitchen. Please refer to Annex 2.1 of the Revised OIA for consideration.
1.25	Annex 2.3 – General comment, it is very confusing to understand how each odour sample is taken based on the odour sampling reports in Annex 2.3. Please tidy up all the reports to summarize the sampling method for each odour source, no. of samples taken, range of temperatures for sampling, etc. More specific comments on the sampling methodology are given below.	Noted. A summary has been incorporated in Annex 2.3 of the Revised OIA for consideration.
1.26	Annex 2.3 (P.55) – (a) Please indicate the location of kitchen and 1st fermentation room clearly in the figure.	Noted. Please refer to the figures in Annex 2.3 of the Revised OIA for consideration.
	(b) Please label each odour sample, e.g. odour sample from the exhaust, odour sample from the closed concrete tank, etc. in the figure.	Noted. Please refer to the figures in Annex 2.3 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	(c) For WS1 and WS2, please clarify if only 1 sample was collected at each type of aeration tanks. Please note that at least 2 samples shall be collected for each source and justify if aeration tanks are the only odour emission sources for wastewater treatment plant. Please provide more detailed information about the wastewater treatment process as support to justify if there are other emission sources for the plant.	According to the observation during onsite surveys, aeration tanks are opened to the environment, which are the only odour emission sources for wastewater treatment plant. Please also refer to the responses provide in Item 1.10(c) in the subject RtoC above.
1.27	Annex 2.3 (P.59) – Please note that the sample source for concrete tanks shall not be ambient air but water surface (for open tank) or tank surface (for covered tank) and hence these samples shall only be used as reference. In addition, please specify the location of "Exhaust Fan Outlet" in the table.	Relevant section has been updated. Please refer to Annex 2.3 of the Revised OIA for consideration.
1.28	Annex 2.3 (P.59 to 62) – Please note that the client locations shown on these pages are different from those indicated in the figure on page 55. Please rectify the inconsistencies.	Relevant section has been updated. Please refer to Annex 2.3 of the Revised OIA for consideration.
1.29	Annex 2.3 (P.60) – Please note that 29.4 degC to 30.7 degC are not considered as a worst-case scenario for temperature. Please carry out additional odour sampling at hotter weather, sunny and clam wind conditions or apply a temperature conversion factor based on literature review.	Please refer to the responses provide in Item 1.10(c) in the subject RtoC above.
1.30	Annex 2.3 (P.69) – Please note that the range of 30.0 to 30.8 degC are not considered as a worst-case scenario for temperature, especially during the time when there is light rain. Please carry out additional odour sampling at hotter weather, sunny and clam wind conditions at the exhaust outlets for assessment. For those odour samples taken inside the fermentation room and kitchen, they may be used as reference if they are not included in the assessment.	Please note that the hoods of the exhausts are facing downwards. Therefore, the odour samples collected should not be affected by the light rain and the odour samples collected are considered as valid. Please also refer to the responses provide in Item 1.10(c) in the subject RtoC above.

	Departmental Comments	Responses to Comments
1.31	Annex 2.3 (P.71 and 72) – It is noted that there are several exhaust outlets as shown in the photos. Please clarify if there is more than 1 outlet for the fermentation room and kitchen of the existing factory. If positive, at least 2 odour samples shall be taken at each outlet at the same time and the total odour emissions from all the outlets shall be included in the assessment.	It is clarified that only one exhaust fan was being operated and the windows/ doors/ openings were closed (i.e. the air was extracted to the outdoor via the exhaust fan only) while the odour samples were being collected. The exhaust fan is the only emission point while the odour sample was being collected. Therefore, it is appropriate to adopt the collected data for the emission calculations.
1.32	Annex 2.3 (P.79) – Please clarify if only flux chamber is used for collecting the odour samples for the concrete tanks and remove "Vacuum Chamber &" from the table.	It is clarified that only the measured odour concentration for the concrete tanks collected by flux chamber were used for the air modelling and assessment. The odour samples for the concrete tanks collected by Vacuum Chamber are for reference only and would not be used for the air modelling and assessment.
1.33	Annex 2.4 (P.84-98) – Please show the locations of all ASRs in the figures of Annex 2.4 for clear illustration if all the worst-case scenarios are covered. As mentioned above, please add ASRs at the southern side of the factory (across Tsing Long Highway). If there are ASRs at the southern side, more scenarios are considered necessary.	Please refer to the responses provide in Item 1.22 in the subject RtoC above. The locations of all ASRs have been incorporated in the figures of Annex 2.4 of the Revised OIA for easy reference.
1.34	Annex 2.4 (P.99) – It is noted that only one odour sample was taken for 1st and 2nd aeration tank respectively. The consultant is advised to take at least two samples for each tank to eliminate sampling uncertainty and reduce the chance of under-estimation of their odour emission strengths. As mentioned above, additional sampling is required for wastewater treatment plant and the exhaust air from kitchen and fermentation room, hence the odour concentrations/SOER shall be revised accordingly.	Please refer to the responses provide in Item 1.10(c) in the subject RtoC above.

	Departmental Comments	Responses to Comments
1.35	Annex 2.4 (P.100) (a) Please rectify the typo "Nunber of Exhaust (Future)" in the 1st and 2nd tables. <u>For Waste Water Treatment Plant (OU5):</u> (b) It is noted that the odour emission rate of the 3rd aeration tank was estimated based on the SOER of the 2nd aeration tank. Please provide justification for this assessment approach or odour samples at the 3rd aeration tank shall be taken. (c) The odour emission from the 2nd aeration tank may be underestimated if the odour sample is collected during aeration process. To avoid underestimation, the consultant is suggested to conduct additional sampling at 2nd aeration tank under its calm condition to evaluate its odour impact. (d) Please clarify if the surface areas listed in the table are for the 3 wastewater tanks of the existing factory and add "(existing)" in the relevant rows.	Relevant section has been updated. Please refer to Annex 2.4 of the Revised OIA for consideration. Please refer to the responses provide in Item 1.11(a) in the subject RtoC above. As advised by the design engineer of wastewater treatment plant, aeration treatment is being adopted for the treatment of wastewater generated from the kitchen. Therefore, fine bubble aeration would ensure the aerobic bacteria and other micro-organisms to decompose the organic contaminants in the wastewater and mixing would also take place that there is no settling of suspended solid. Dissolved oxygen control is also integrated with the aeration as such different amount of oxygen (i.e. air bubble) would be provided by the system automatically such that the wastewater never turns septic and no unpleasant odour will be generated. Therefore, it is not practical to collect the odour sample without aeration process as well as it is not the real situation to collect the odour sample without aeration. Please refer to Section 2.1.17 of the Revised OIA for consideration. It is clarified that the surface areas listed in the table are for the 3 wastewater tanks of the existing factory. Please refer to Annex 2.4 of the Revised OIA for consideration.

	Departmental Comments	Responses to Comments
	For Control Area (OU1 - OU4):	
	(e) As mentioned above, it is inappropriate to use the odour concentration at 1 exhaust to represent the emissions from the fermentation room and kitchen if there are more than 1 exhaust. Please carry out additional sampling to cover all the exhaust points and revise all the emission calculations.	Please refer to the responses provide in Item 1.31 in the subject RtoC above.
	(f) For "Outdoor Sun drying Area/2nd fermentation under sunshine (OU6)" in the subtitle of table 3, please specify whether it means the covered fermentation tank.	Relevant section has been updated. Please refer to Annex 2.4 of the Revised OIA for consideration.
1.36	Annex 2.4 (P.101 -115) – Please address in note [2] if the areas of the odour emission sources are provided by the project E&M consultant.	Relevant section has been updated. Please refer to Annex 2.4 of the Revised OIA for consideration.
1.37	Annex 2.4 (P.116) – Please justify why the unmitigated odour emission rate, exhaust diameter and exit velocity of the Sha Po SPS could be assumed to be the same as Sai O Trunk SPS. Please note that site visit shall be conducted and aerial photos shall be studied to determine the exhaust diameter of Sha Po SPS instead of making reference to the other SPSs or seek DSD's input on the stack parameters.	Please refer to the responses provide in Item 1.11(a) in the subject RtoC above. The exhaust diameter for Sha Po SPS has been determined by conducting onsite survey. Please refer to Annex 2.4 of the Revised OIA for consideration.
1.38	Annex 2.7 – (a) Please update the contour plots based on the revised assessment results and present all the plots in a larger scale.	The contour plots have been updated. Please refer to Annex 2.7 of the Revised OIA for consideration.
	(b) Please present the 5 OU/m^3 contour lines in a different color for clear illustration.	Please note that the revised predicted results are well below 5OU/m^3. Therefore, no 5 OU/m^3 contour line is presented.
	(c) Please show the contour plots at higher levels for each scenario to demonstrate no ASRs are within odour exceedance zones.	Please refer to the responses provide in Item 1.18(a) in the subject RtoC above.
1.39	Comments on air modelling will be provided once available.	Noted.

Under Further Information Submitted on 31.5.2024

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of the Chief Engineer / Construction of Water Supplies Department received on 16.2.2024**	
	Comments on WSIA	
1.1	6.1.2 – The proposed 400mm dia. fresh water main shall be separated into a 300mm dia. water main for fresh water supply and a 150mm dia. water main for flushing water supply to the "R(E)" site.	Noted. A DN300 fresh water main and a DN150 flush water main are proposed to separate the fresh water supply and flushing water supply respectively. Please refer to the revised WSIA in **Appendix A** for consideration.
1.2	Figure 4 – All water mains to be handed over to the Government after completion must be laid under future public roads/footpaths/government lands.	Noted.
2.	**Comments of the Director of Environmental Protection received on 27.3.2024, 18.4.2024 & 6.5.2024**	
	Comments on EA A. Air Quality	
2.1	Section 4.2.1 – Please clarify when the site surveys were conducted.	It is clarified that the site surveys were conducted on 23 & 25 October 2021 and 07 November 2023. Please refer to S.4.2.1 of the revised EA in **Appendix B** for consideration.
2.2	Sections 4.2.3 and 5.2.1 – As discussed in the technical meeting with the consultant dated 20.2.2024, the odour impact arising from the oil interceptor shall be included in the assessment and the relevant odour samples shall be taken. The relevant texts shall be revised. Suggest to delete "On the other hand, since the manufacturing operations are housed indoors and there is absence of major fixed noisy equipment onsite... No significant industrial/fixed noise impact can be observed under existing situation." from Section 4.2.3 since they are not related to air quality impact.	Relevant sentences have been removed. Please refer to S.4.2.3 of the revised EA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
2.3	Section 4.3.2 – Please note that Traffic Census in 2022 is now available and please use the latest TC for reference.	Noted. The latest Traffic Census in 2022 has been incorporated. Please refer to S.4.3.2 of the revised EA in **Appendix B** for consideration.
2.4	Sections 4.3.4, 4.3.5, 4.4.3, 4.4.4, 7.1.3 – Please revise "significant air quality" as "adverse air quality" in the text.	Relevant sections have been updated. Please refer to the revised EA in **Appendix B** for consideration.
2.5	Section 4.3.5 – Please delete "on other 3 sides" in lines 8-9.	Relevant text has been removed. Please refer to S.4.3.5 of the revised EA in **Appendix B** for consideration.
2.6	Section 4.3 – Please address the induced traffic by the relocated soy sauce factory during operational phase and evaluate whether it would cause any adverse air quality impacts on the nearby ASRs.	Since the relocated soy sauce factory would have the same scale as the existing factory, there will be no additional induced traffic after relocation and adverse air quality impacts due to the induced traffic from the relocated soy sauce factory during operational phase is not anticipated. Please refer to S.4.3.6 of the revised EA in **Appendix B** for consideration.
2.7	Sections 4.4.2, 5.2.4, 5.2.5 and 7.1.2, Appendix 5.1 – Please note that these sections may subject to change since the odour impact assessment in the application has not yet been finalized.	Noted.
2.8	Section 5.2.5 – Please delete ", if" in line 9.	Relevant text has been removed. Please refer to S.5.2.5 of the revised EA in **Appendix B** for consideration.
2.9	Section 6.2.4 – Please show all the concurrent project sites with the proposed development in a map.	The concurrent projects in the vicinity have been included and discussed. Please refer to S.6.2.5 and Figure 6.2 of the revised EA in **Appendix B** for consideration.
2.10	Section 7.1.6 – Please revise "dust emissions" to "air emissions" in line 2.	Relevant text has been updated. Please refer to S.7.1.6 of the revised EA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
2.11	Figure 4.1	
	a) Please show the location of the planned covered transport lay-by and its exhausts to demonstrate that they are located away from all nearby ASRs.	The location of the planned covered transport lay-by and its exhausts have been incorporated in Figure 4.1 of the revised EA in **Appendix B** for consideration.
	b) Please clarify if the legend for PTI refers to the proposed covered transport lay-by. Please note that 5m buffer distance shall be allowed for the access roads leading to the covered transport lay-by. Please also clarify why a 5m buffer distance shall be allowed for the section of access road to the north of T2 as shown in the figure.	Yes, it should refer to the proposed covered transport lay-by and the legend has been updated. It is clarified that the section of access road to the north of T2 refers to westbound of the access road, leading to the covered transport lay-by. 5m buffer distance for both directions (i.e. eastbound and westbound) of the access roads leading to and from the covered transport lay-by are provided. Please refer to Figure 4.1 of the revised EA in **Appendix B** for consideration.
	c) Please show the buffer zone of Castle Peak Road -Tam Mei from its road kerb.	As proposed under the current planning application, there will be road widening work for Castle Peak Road – Tam Mi. The buffer zone from the road kerb after proposed road widening is presented on Figure 4.1 of the revised EA in **Appendix B** for consideration.
	<u>B. Noise</u>	
	General comments	
2.12	It is noted that this s.12a planning application has also incorporated another proposed development (NSW/8) to the immediate <u>south</u> of the site with the same tentative completion year in the noise assessment. If the other proposed development is not confirmed, any scenario without the relevant development, or as an interim stage, should be taken into account to ensure the worst-case scenario would be assessed and compliance with the NCO.	It is clarified that the Proposed Development to the immediate <u>north</u> (i.e. Y/YL-NSW/8) would be developed by the same developer with the same tentative completion year (i.e. 2031). Nevertheless, should there be any review of development phasing (e.g. development scenarios without the concerned development) in future, the noise impact assessment would be updated and be submitted under the future S16 planning application to assess this worst case scenario to ensure compliance with relevant standard and the NCO.

	Departmental Comments	Responses to Comments
2.13	The consultant proposed fins with acoustic windows to mitigate the traffic noise impact. Please note that the noise reduction performance of combined noise mitigation measures for traffic noise impact will need to be further substantiated; mock-up test maybe required to demonstrate that adequate noise reduction can be achieved. *Specific comments*	Noted. The current indicative scheme will be further updated and modified in subsequent S16 planning application stage and the package of noise mitigation measures would also be further updated correspondingly. Mock test will be conducted later for substantiating noise reduction performance, if necessary.
2.14	S.2.3.4 – Please document TD's agreement on the traffic forecast data in the report once available. In case TD has no comment on the methodology for traffic forecast only, the consultant should provide written confirmation from the respective competent party (e.g. traffic consultant) that TD's endorsed methodology has been strictly adopted in preparing the traffic forecast data, and hence the validity of traffic data can be confirmed.	Noted. The Applicant is now under active coordination with TD and endorsement on the methodology of the traffic forecast will be provided immediately once available.
2.15	Appendix 3.1 – Please further justify that the maximum allowable SWL during daytime, evening and nighttime has a 10 dB(A) difference.	The difference is referenced from the approved Northern Link EIA report (AEIAR-259/2024), which presents the maximum allowable SWL of each fixed plant source during daytime / evening and night-time as 10 dB(A). Please refer to Appendix 3.1 of the revised EA in **Appendix B** for consideration.
	<u>C. Waste Management</u>	
2.16	Table 5.5 – Please update the latest CWP record to tally with Section 5.6.9, i.e. no record is found as of 13.10.2023.	The comment is understood to be for the separate planning application Y/YL-NSW/8. Please refer to revised EA under Y/YL-NSW/8 for consideration.
2.17	Please be informed that the comment on the waste management (Section C of the attachment) should be revised to read "Table6.5".	The comment is understood to be for the separate planning application Y/YL-NSW/8. Please refer to revised EA under Y/YL-NSW/8 for consideration.
2.18	Please update the latest CWP record to tally with Section 6.6.8, i.e. 2 CWP records are found as of 13.10.2023.	Relevant sections have been updated. Please refer to Table 6.5 of the revised EA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
	Comments on the Odour Impact Assessment	
2.19	General - It is noted that the odour impact assessment (OIA) report states that the proposed Relocated Soy Sauce Factory is proposed to be under Column 2 of the proposed schedule of uses for the proposed zoning (i.e., Residential (Group E)) of the captioned planning application. The consultant is asked to provide written documentation confirming the validity of the statement.	The proposed Relocated Soy Sauce Factory, classified as an 'industrial use', is now proposed to be under Column 2 of the proposed schedule of uses for the proposed Residential (Group E) zone. A subsequent S16 planning application with support of various technical assessments (including Environmental Assessment) will be required to submit for consideration and approval of Government departments and Town Planning Board. Please refer to the revised proposed schedule of uses in **Attachment 2** for consideration.
2.20	Section 2.1.2. – Please revise "odor units' in line 4 to "odor impacts".	Relevant text has been updated. Please refer to S.2.1.2 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.21	Section 2.1.15. – Please provide more details to justify that there is no odor during the packaging process since the cooked products shall have strong smell, e.g. fully enclosed system with no exhaust during the whole packaging process.	The details of the packaging process has been further supplemented. Please refer to S.2.1.15 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.22	Section 2.4.12. – Please clarify if bean paste collection is taken in the kitchen since it is mentioned in Section 2.1.18 that the bean paste is collected outdoor from the concrete tanks.	It is clarified that the bean paste collection is taken from the concrete tanks. Please refer to S.2.4.12 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.23	Section 2.4.17. – Suggest to remove the last sentence since it is duplicated with the 2nd last sentence.	Relevant sentence has been removed. Please refer to S.2.4.17 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
2.24	Section 2.4.20. – Please revise "For instance, odor samplings can be collected at every 3 months at the inlet and outlet of the odor removal systems, if…" to "Odor samples shall be collected in every month at the inlet and outlet of the odor removal systems. If…". and add "and the site boundary of the factory. Remedial actions shall be taken to rectify the odor problem if it is confirmed to be related to the operation of the factory." to the end of the section. Please also delete "if necessary" in line 11 since it is essential to conduct commissioning test. Same amendments applied to Section 3.1.2.	Relevant sentences have been updated. Please refer to S2.4.20 and S.3.1.4 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.25	Section 2.5.4. – Suggest to remove the last sentence since it is unjustified.	Relevant sentence has been removed. Please refer to S.2.5.4 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.26	Table 2.5. – Please add "at a time" after "only 1 concrete tank" and "3 concrete tanks" under "Outdoor Sun-drying Area".	Relevant sentences have been updated. Please refer to Table 2.5 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.27	Section 3.1.1. – The sentence "The odour strength in this assessment under reasonably worst possible scenario has been derived based on odour samples collected at the existing factory, future mechanical ventilation system 2 design with odour removal facilities incorporated." seems incomplete, please review. Please also revise to read"..... also accounted **for in** fifteen scenarios ....."	Relevant sentence has been removed. Please refer to S.3.1.1 of the revised OIA in Appendix 5.1 of the revised EA in **Appendix B** for consideration.
2.28	Annex 2.4 – Page 97/186, Please rectify the typo "Number of Exhaust (Future)" in the 1st, 2nd and 3rd tables.	Relevant text has been updated. Please refer to Annex 2.4 of the revised EA in **Appendix B** for consideration.

	Departmental Comments	Responses to Comments
	Comments on revised SIA	
2.29	Figures: a) Please provide the alignment of the twin rising mains connected from SPSPS to FSH1001881.	Noted. Figure 3 and 4 of the revised SIA in **Appendix C** have been updated to incorporate the alignment of the twin rising mains connected from SPSPS to FSH1001881.
	b) It seems the existing twin rising mains falls within the site area of the relocated soy sauce factory. Please check and seek DSD's consent of the maintenance responsibility.	In case any part of the existing twin rising mains falls within the site area of the relocated soy sauce factory, they will be diverted under public road. The exact alignment of the twin rising mains will be verified on site in the next stage. Rising mains under government land shall continue to be maintained by DSD.
2.30	Appendix 4: Backwash from swimming pool should only be added on top of the calculated peak flow values, rather than including in accumulated ADWF.	Please note that the backwash from swimming will NOT be directly discharged to drainage system. The backwash flow will enter a buffer tank designed to contain a full day backwash volume, with controlled flowrate form the buffer tank, no instantaneous spike of flow will occur during backwash discharge to drainage system, i.e. discharge to empty the buffer tank will last for 12 hours. Please refer to Note under Table 9 of the revised SIA in **Appendix C** for consideration.
2.31	Appendix 5: There are two columns indicating sewer sizes. Please check.	Noted. Please be clarified that the proposed sewer size is 900mm and the other column has been deleted. Please refer to Appendix 5 of the revised SIA in **Appendix C** for consideration

	Departmental Comments	Responses to Comments
3.	**Comments of Chief Engineer/Mainland North, Drainage Services Department received on 28.3.2024**	
	Sewerage Impact Assessment	
3.1	Please advise the tentative completion year of the subject development.	The subject development is tentatively to be completed by 2031.
3.2	Section 8: Please indicate that the project proponent will be responsible for the implementation of the required sewerage works.	The project proponent will be responsible for the implementation of the required sewerage works proposed under the SIA. Please refer to Section 8 of the revised SIA in **Appendix C** for consideration.
3.	Table 6: Please elaborate the source or breakdown of ADWF of soy sauce factory.	The ADWF of soy sauce factory has been updated to 118m^3/d for sewage flow estimation. Please refer to Appendix 8 of the revised SIA in **Appendix C** for the detailed breakdown of ADWF of soy sauce factory.
3.4	It is noted that the existing RM from SP SPS are located within the subject development. Please elaborate more on the maintenance responsibility and the access to maintenance.	In case any part of the existing twin rising mains falls within the site area of the relocated soy sauce factory, they will be diverted under public road. The exact alignment of the twin rising mains will be verified on site in the next stage. Rising mains under government land shall continue be maintained by DSD.
3.5	Table 9 and Section 9.1.7: Please seek SIG/EPD's advice that the capacity for the subject development has been reserved in the downstream NSW SPS. For instance, please carry out hydraulic assessment on the capacity of NSW SPS, taking into account the existing and other planned developments in the catchment (i.e. what if the population intake is later than the upgraded SP SPS?).	The revised SIA covered sewage projection scenario of upgraded SPSPS discharge to NSWSPS, in conjunction with other existing and planning developments, the capacity checking is presented in Table 11 of the revised SIA in **Appendix C** for consideration.

	Departmental Comments	Responses to Comments
3.6	Section 8 and Figures: There are neither public drains maintained by DSD nor Drainage Reserve (DR) within the lot. Please remove the alleged DR to avoid confusion.	A section of sewer within the other private development (Application No.: Y/YL-NSW/8) is proposed to be public sewer, because it is unavoidable for the proposed development to cross the other private development (Application No.: Y/YL-NSW/8) in order to reach the existing public sewer. Therefore, by handover such section of sewer to DSD could allow multiple developments to discharge to public sewage system. Upon completion of the proposed development, the project proponent is proposed to surrender the portion of land where the sewer is located to the government authority for maintenance access. Details of the surrendered land will be further discussed with the relevant government authority during subsequent land exchange stage. Please refer to Sections 6 and 8 of the revised SIA in **Appendix C** for consideration.
3.7	Section 8.1.3: DSD will not maintain any sewer drains located within private lot. Please review the proposed sewer alignment and location of terminal manholes, if they are proposed to be handed over to this office.	The gravity sewer downstream to the conversion chamber will be constructed by the project proponent and will be handed over to DSD for maintenance. Upon completion of the proposed development, the project proponent is proposed to surrender the portion of land where the sewer is located to the government authority for maintenance access. Details of the surrendered land will be further discussed with the relevant government authority during subsequent land exchange stage. Please refer to Section 8 and SIA/Figure 4 of the revised SIA in **Appendix C** for consideration.
3.8	SIA/Figure 5: For DR3.0.3 to Sha Po Sewage Pumping Station, please consider to make use of/provide spare capacity combining the sewer drains of Sha Po public housing (i.e. Manhole 13 afterwards) to avoid duplication of public sewer drains. Please liaise with the project proponent in this regard in future.	Proposed sewerage arrangement for primary school and relocated soy sauce factory has been revised. Please refer to Figure 4 of revised SIA in **Appendix C** for the proposed sewerage arrangement. Please also note that Figure 5 has been removed from the revised SIA.

	Departmental Comments	Responses to Comments
	Drainage Impact Assessment	
3.9	Section 4.3.2: Please add "… site DIA report under s.12A Planning Application No. Y/YL-NSW/8…".	Relevant section has been updated. Please refer to S.4.3.2 of the revised DIA in **Appendix D** for consideration.
3.10	DIA/Figure 4: Perimeter drains should also be provided along the Residential area and northern side of Soy Sauce Factory.	The perimeter drains have been provided along the Residential area and northern side of Soy Sauce Factory. Please refer to DIA/Figure 4 in the revised DIA in **Appendix D** for consideration.
3.11	Section 5.2.3: Please add the runoff amount to be reduced in this section.	Relevant section has been updated. Please refer to S.5.2.3 of the revised DIA in **Appendix D** for consideration.
3.12	Section 5.3.3: Please delete "…proposed development improves current drainage system and therefore…" in last sentence.	Relevant section has been updated. Please refer to S.5.3.3 of the revised DIA in **Appendix D** for consideration.
3.13	Section 7.1.3: Please revise the last sentence as "The 3m open channel (proposed to be decked) ~~is~~ discharges to…".	The 3m open channel is proposed to be a realigned box culvert. Please refer to S.7.1.3 of the revised DIA in **Appendix D** for consideration.
3.14	Figures: Please include Drainage Reserve (DR), in accordance with SDM, for the proposed decked 3m open channel in figures. Please note that the decked surface structure should be maintained by the lot owner. Please add one section in the text to discuss DR and include the above in section 6.	The concerned channel has been discussed and included in S.6.2 of the revised DIA in **Appendix D**. Please noted that the Drainage Reserve is located at "OU(CDWRA)1" Site (i.e. Planning Application No. Y/YL-NSW/8) only. Please refer to the revised DIA under Planning Application No. Y/YL-NSW/8 for the details of the Drainage Reserve.

4.	**Comments of Chief Town Planner/Urban Design and Landscape Section of Planning Department received on 14.2.2024 & 18.4.2024**	
	Comment on VIA	
4.1	VP5 – according to the VP location and viewfan as shown in the submission, only part of the proposed public housing in Sha Po falls within the viewfan and the subject proposed development is located towards the left of the viewfan. However, the photomontage is not reflecting the above. Please review.	The location, viewfan and photomontages of VP5 have been reviewed and revised. Please refer to Figure 3.2 and Figure 5.5 in the replacement pages of the VIA in **Appendix E** for consideration. Other relevant figures with keyplans in the VIA have also been updated to reflect the revised location and viewfan of VP5. Please refer to the replacement pages of the VIA in **Appendix E** for reference.
	Comment on Landscape Design Proposal	
4.2	The applicant is advised to provide the dimension of the buffer planting along the western boundary. Buffer planting should be maximized in the northwest and along the west boundary.	The dimension of the buffer planting under the current proposed scheme is about 3m in width. Further greening opportunities such as buffer planting (if available after taking into consideration of various requirements for provision of footpath along the western site boundary for connecting to the existing local footpath adjacent to the site) will be explored at subsequent s16 stage.

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Chief Town Planner/Urban Design and Landscape Section of Planning Department received on 9.4.2024**	
1.1	**Coverage of Assessment and Surrounding Areas** (section 3.1 and Figure 1) – While the Consultant's R-to-C state that the Assessment Area is larger enough to assess all the potential air ventilation impacts, the simulation results show that both of Proposed Scenarios 1 and 2 would create air ventilation impacts on the pedestrian wind environment beyond the Assessment Area when compared with the Baseline Scenario. As such, it is required to review and enlarge the Assessment Area appropriately. It is the consultant's due diligence to address our comments in a proper manner and to avoid abortive work. We would reserve our comments on the SVR, LVR, SAVR and directional analysis (section 4) and conclusion (section 5) at this juncture.	The assessment area has been further extended to cover about 1,000m from the Application Site boundary to assess all the potential air ventilation impact. Please refer to Figure 1 of the revised Air Ventilation Assessment report for the extended Assessment Area. Section 4 and Section 5 of the report have also been updated with the latest simulation result.
1.2	**Discontinuities in the VR contours (**Appendix 4) – Referring to the updated simulation results, there are still some VR discontinuities have been found in the simulations around the models. The consultant should clarify the above phenomena and ensure that the modelling is properly carried out and the simulation results are converged to standard criteria (i.e. ≤ 0.001) and accurate.	The apparently discontinuities pattern is in fact arising from relatively sharp change in elevation for the mountain among some areas further apart outside the surrounding area. The topography in the CFD model has been modified to minimise the effect due to sharp change. It is confirmed that the simulation result is converged to standard criteria of 0.001.
1.3	**Mitigation Measures/Good Design Features under both Baseline and Proposed Schemes** (sections 1.3 and 1.4) – It is understood the proposed building separations and setbacks may be amended and subjected to the detailed design in future. However, the consultant is required to report the **exact dimensions of** all the mitigation measures/good design measures for complete information. It is very misleading and confusing to present the minimum width of different proposed building separations. For example, the building separation between T2 and T9 is obviously only a bit wider than building separation between T5 and the relocated Soy Sauce Factory. However, they are reported as "Not less than 25m" and "Not less than 15m" in width respectively.	The width of the proposed building separations and setbacks based on the current scheme have been amended in Appendices 2 and 3 of the revised report. Section 1.4 of the report has also been amended accordingly.

	Departmental Comments	Responses to Comments
1.4	**Test points** (section 3.4, Table 4.1 and Figure 4) – In view of paragraph 1 above, the consultant should add sufficient overall test points to cover the whole revised Assessment Area and update the list of corresponding test points reported in the table.	Test points have been added with respect to the extended Assessment Area. Table 4.1 and Figure 4 of the revised report have been updated according to the latest arrangement of the test points and simulation results.
1.5	**Directional analysis** (section 4) and **Conclusion** (section 5) – In view of our comments above, the consultant should update the directional analysis and conclusion based on the updated simulation results for our consideration.	Noted. Section 4 and Section 5 of the revised report have been updated according to the updated simulation results.

Under Further Information Submitted on 23.8.2024

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Environmental Protection Department received on 26.7.2024**	
1.1	**Comments on revised EA**	
1.1.1	Since the EIA Ordinance implication of the Project shall be addressed in later stage and it does not affect the current rezoning process, please delete Sections 1.4.1-1.4.4 and the relevant heading of "EIA Ordinance Implication" from the EA.	The EA has been revised accordingly **(see Appendix A)**.
1.1.2	Figures 1.3 –	
	i. Please remove the line indicating Deep Bay Buffer Zone 2 from the figure to avoid confusion.	Figure 1.3 of the EA has been revised accordingly **(see Appendix A)**.
	ii. Please consider to place the captions for Wetland Buffer Area, and Conservation Area into the legend item for consistency and clarity. Also, please clarify the meaning of blackly hatched area and add a legend for it. 	Figure 1.3 of the EA has been revised accordingly for consistency and clarity **(see Appendix A)**. It is also clarified that the blackly hatched area refers to the proposed wetland restoration area under the adjacent planning application (No. Y/YL-NSW/8), a legend has also been added in Figure 1.3 for clarity **(see Appendix A)**.

	Departmental Comments	Responses to Comments
1.1.3	Section 1.4.12 Line 2 to 5 – According to the SIA in FI – 15, the treated effluent from the sewage treatment plant of the relocated soy sauce factory would be conveyed to NSWSPS. Please revise this discrepancy.	Section 1.4.12 of the EA has been revised accordingly **(see Appendix A)**.
1.1.4	Section 2.3.4 – Please document TD's agreement on the traffic forecast data in the report once available.	The traffic consultant of the project team is currently liaising with TD. TD's endorsement will be provided once available.
1.1.5	Section 4.3.2 – Pease check the road type of San Tam Road.	It is observed that San Tam Road is classified as Rural Road in the Traffic Census 2022. Sections 4.3.2 and 4.3.3 of the EA have been revised **(see Appendix A)**.
1.1.6	Section 5.2.5 – Please supplement the mitigation measures proposed in the OIA.	Proposed mitigation measures for the relocated soy sauce factory as shown in the OIA have been supplemented in Section 5.2.5 of the revised EA **(see Appendix A)**.
1.1.7	Section 5.5.3 – Please revise to read "…in place, **no insurmountable environmental impacts arising from the operation of the relocated soy sauce factory are anticipated**."	Section 5.5.3 of the EA has been revised accordingly **(see Appendix A)**.
1.1.8	Section 6.7.1 – Please revise the second sentence to read "No insurmountable environmental impacts are anticipated from the Proposed Development with the implementation of environmental mitigation measures." and delete the last sentence.	Section 6.7.1 of the EA has been revised accordingly **(see Appendix A)**.
1.1.9	Section 7.1.1 – Please revise "… considered insignificant, …" in line 2 to "considered **acceptable**"	Section 7.1.1. of the EA has been revised accordingly **(see Appendix A)**.
1.1.10	Section 7.1.6 – Please revise to read "… demonstrate that the predicted noise levels at selected NSRs comply with relevant noise criteria and no at-receiver …"	Section 7.1.6 of the EA has been revised accordingly **(see Appendix A)**.
1.1.11	Section 7.1.6 – Please revise the sentence to read "No insurmountable environmental impacts are anticipated with the implementation of environmental mitigation measures.	Section 7.1.6 of the EA has been revised accordingly **(see Appendix A)**.

	Departmental Comments	Responses to Comments
	Comments on the OIA	
1.1.12	Section 2.1.15 – Please update the figure in Annex 2.1 to ensure the consistency with the statements provided in this section.	Figures in Annex 2.1 of the EA have been revised accordingly **(see Appendix A)**.
1.1.13	Section 3.1.2 –	
	i. Please check whether there are only **some** odorous operations would be housed indoor.	Section 3.1.2 of the EA has been revised accordingly **(see Appendix A)**.
	ii. Please beef up the discussion on the mitigation measures such as the specification of the proposed odour removal system.	Section 3.1.2 of the EA has been revised accordingly **(see Appendix A)**.
1.2	**Comments on revised SIA**	
1.2.1	R-t-C 2.30 - please supplement the information in the responses fully in the SIA.	Noted. The backwash arrangement mentioned in R-t-C 2.30 has been incorporated into note and assumption point no.5 (highlight) under Table 9 of the revised SIA **(see Appendix D)**.
1.2.2	Section 3.1.5, 7.1.4 - suggest removing information that is irrelevant to the currently proposed Scheme.	Section 3.1.5 is relevant information to the development showing existing public twins sewage rising mains partially encroached into private lot. While Section 7.1.4 refers to FS Report of SPPHD from public domain indicating SPPHD's contribution to combined sewage checking downstream.
1.2.3	Table 6 & 7, Appendices 7 & 8 - please clarify the sewage flow of the soy sauce factory.	As advised by soy sauce factory operator, the estimated sewage flow of the relocated soy sauce factory is 118m^3/day, as shown in Table 6 & 7 of the revised SIA **(see Appendix D)**. The existing discharge licence of the current sewage treatment plant of soy sauce factory can be referred to Appendix 7 of the revised SIA **(see Appendix D)**. The breakdown of the proposed sewage flow from relocated soy sauce factory can be referred to Appendix 8 of the revised SIA **(see Appendix D)**.

	Departmental Comments	Responses to Comments
1.2.4	Section 7.1.5 - please clarify if "13.219 m3/day" should read "13,219 m3/day".	Please be clarified that 13,219 m^3/day is the proposed sewage flow from SPPHD and the corresponding sentence has been removed. Section 7.1.5 has been replaced by Section 7.1.4 in the revised SIA **(see Appendix D)**.
1.2.5	Section 7.1.6 - rather than making reference to the utilisation of SPSPS, please adopt references and assumptions relevant to KTSPS for estimated ADWF of KTSPS.	Noted. The flow from KTSPS under Section 7.1.6 has been revised and replaced by Section 7.1.5 to incorporate the daily sewage flow provided by DSD **(see Appendix D)**.
1.2.6	Section 7.1.10 - The treatment capacity of YLEPP in 2031 is anticipated to be 100,000 m3/day, please review the utilisation rate of the planned YLEPP at the planned population intake of the development taking consideration of all upstream sewage flow of the planned YLEPP, including but not limited to KTSPS and SPSPS.	Noted the treatment capacity of YLEPP in 2031 is anticipated to be 100,000 m^3/day, the figure is adopted for the calculation of utilization rate in the revised SIA. The upstream sewage catchments considered refer to Table 12 and Section 7.1.10 has been replaced by Section 7.1.9 of the revised SIA for consideration **(see Appendix D)**.
1.2.7	Section 7.1.11 - please check the cross reference of 7.1.5.	Section 7.1.11 has been replaced by Section 7.1.9 of the revised SIA, and the cross reference should be section 7.1.4 of the revised SIA **(see Appendix D)**.
1.2.8	Section 8.1.1 - please check if "FMTH2" should read "FTMH2", please state manhole no. of the last manhole.	"FTMH2" is the correct name for proposed terminal manhole, Section 8.1.1 of the revised SIA has been revised **(see Appendix D)**.
1.2.9	Section 8.1.2 - please seek DSD's consent on the proposed maintenance responsibility and land exchange.	DSD's consent has been sought and it is noted that DSD has no objection to the maintenance of the proposed communal sewer provided that the drainage/sewerage facilities would be located on Government Land. Please refer to DSD's comment under item 3.7 below on the proposed maintenance responsibility.
1.2.10	Section 8.1.3 - please clarify the name of Government department that the gravity sewer to be handed over and seek his necessary consent accordingly.	The gravity communal sewer mentioned in Section 8.1.3 has been replaced by Section 8.1.4 of the revised SIA and is proposed to hand over to DSD **(see Appendix D)**. We understand the maintenance responsibility is subject to the confirmation of DSD, which is related to final land status to be decided during land exchange stage. (i.e. after this Planning Application). Since the proposed gravity sewer would be identical regardless of the maintenance responsibility, it is advised to review / confirm their maintenance responsibility at later stage.

	Departmental Comments	Responses to Comments
1.2.11	Section 8.1.3 - please provide description for MH01 to FSH1001880.	Description for MH01 to MH05 is included in Section 8.1.4 of the revised SIA **(see Appendix D)** while MH05 to FSH1001880 is under separate submission which refers to SIA under Planning Application No.: Y/YL-NSW/8.
1.2.12	Section 9.1.4 - please clarify if "MH1" should read "MH01".	"MH01" should be read in Section 9.1.4 of the SIA which is amended accordingly **(see Appendix D)**.
1.2.13	Figures 3 & 4 - please clarify if the alignment between manhole FSH1001880 and FSH1001881 is needed.	The alignment between manhole no. FSH1001881 and FSH1001880 presents incoming sewage flow from rising mains (without peaking factor). Also, the existing twin rising mains is shown on the figure due to other clarification purpose as per item 1.2.2 above.
1.2.14	Figures 4 - please advise the rationale for the rising main between FTMH3 and FTMH4 and conversion chamber.	Due to level difference, the sewage from the relocated soy sauce factory and reserved school site is unable to connect to public sewer by gravity, therefore rising mains is proposed.
1.2.15	Please further update the revised SIA submitted under Y/YL-NSW/8 with consideration of the above comments where appropriate.	Noted.

	Departmental Comments	Responses to Comments
2.	**Comments of Urban Design & Landscape Section of Planning Department received on 5.8.2024**	
	<u>Comments on the Revised AVA</u>	
2.1	**Planned development under planning application No. Y/YL-NSW/8** (para. 1.4.4) – As the planned development under planning application No. Y/YL-NSW/8 is not part of the application site, the consultant should present it in section 2.3 but not section 1.4 to avoid confusion.	Noted. The discussion of planning application No. Y/YL-NSW/8 is included in section 2.3 instead of section 1.4 of the AVA **(see Appendix B)**.
2.2	**Test points corresponding to each focus area** (Tables 4.1 and 4.2) – It is found that some of the corresponding test points listed in the table for some focus areas (see below) do not tally with those highlighted in Figure 4. The consultant should confirm and revise the following as appropriate.	Noted. The arrangement and grouping of test points have been revised. Figure 4b is added to the revised AVA to demonstrate the grouping of special test points within the Application Site **(see Appendix B)**.
	• Focus Area 2 – Overall test point T144 should be included.	Noted, test point T144 has been included in Focus Area 2
	• Focus Area 3 – Overall test points T551 to T556 should be included.	Noted, test points T550 to T556 are included in Focus Area 3
	• Focus Area 8 – Overall test point T143 should be included, while overall test point T122 should be excluded.	Noted, test point T143 is included in Focus Area 8 while test point T122 is moved to Focus Area 20
	• Focus Area 6 – Special test points S09 and S10 should be included.	Noted, test points S09 to S10 are included in Focus Area 6
	• Focus Area 22 – Overall test point T283 should be included.	Noted, test point T283 has been included in Focus Area 22.
	• Focus Area 30 – In order to demonstrate the performance of proposed mitigation measures, the consultant should group the relevant special test points along each proposed mitigation measure.	Noted, special test points have been divided from Focus Area 30-35 to demonstrate the performance of proposed mitigation measures.

	Departmental Comments	Responses to Comments
2.3	**Comparison of weighted average VR for some focus areas under annual condition** (para. 4.4.1 and section 5)	
	• Referring to Table 4.1, it appears that the Proposed Scenario 2 would have slightly better VR on focus areas 1, 24, 26 and 30 when compared with the Baseline Scenario. However, such observations have not been reported in text.	Noted. Refer to our responses to comments of item 2.2 above, the test point grouping has been revised. Table 4.1 and Table 4.2 of the AVA are updated with added special test point and revised grouping. Para. 4.4.1 and Section 5 of the AVA have also been revised accordingly **(see Appendix B)**.
	• Referring to Table 4.1, it appears that the Proposed Scenario 1 would have slightly better VR on focus areas 1, 26 and 30 when compared with the Baseline Scenario. However, such observations have not been reported in text.	Noted. Para. 4.4.1 and Section 5 of the AVA have been revised **(see Appendix B)**.
2.4	**Comparison of weighted average VR for some focus areas under annual condition** (para. 4.4.2 and section 5)	
	• Referring to Table 4.2, it appears that the Proposed Scenario 2 would have slightly better VR on focus areas 14, 15 and 26 when compared with the Baseline Scenario. However, such observations have not been reported in text.	Noted. Para. 4.4.2 and Section 5 of the AVA have been revised **(see Appendix B)**.
	• Referring to Table 4.2, it appears that the Proposed Scenario 1 would have slightly better VR on focus areas 14, 15 and 26 when compared with the Baseline Scenario. However, such observations have not been reported in text.	Noted. Para. 4.4.2 and Section 5 of the AVA have been revised **(see Appendix B)**.
	• Referring to Table 4.2, it appears that the all three scenarios would have comparable VR on focus areas 10 but not focus area 15. However, such observations have not been reported in text.	Noted. Para. 4.4.2 and Section 5 of the AVA have been revised **(see Appendix B)**.

	Departmental Comments	Responses to Comments
2.5	**Overall performance under annual condition** (section 4.5) – Referring to the simulation simulations, it appears that both Proposed Scenarios 1 and 2 would have a lower VR in the highlighted area (see orange circle below) when compared with the Baseline Scenario under annual condition. However, such phenomenon has not been discussed in text.  Baseline Scenario Proposed Scenario 1 Proposed Scenario 2	Noted. Para. 4.5.1 and 4.5.2 of the AVA have been revised **(see Appendix B)**.
2.6	**NNE wind** (para. 4.6.1) – According to the Appendix 5, it appears that the Proposed Scenario 2 would have lower SVR and comparable LVR when compared with the Baseline Scenario under NNE wind. However, such observation has not been reported in text	Noted. Para. 4.6.1 of the AVA has been revised **(see Appendix B)**.

	Departmental Comments	Responses to Comments
2.7	**NE wind** • Para. 4.6.6 – According to the Appendix 5, it appears that both of the Proposed Scenarios 1 and 2 would have higher SVR and comparable LVR when compared with the Baseline Scenario under NE wind. However, such observation has not been reflected in text. • Para. 4.6.10 (last sentence) - Considering there is no benchmarking criteria for AVA, we would not able to ascertain whether the Proposed Scenarios 1 and 2 would achieve "sufficient" air ventilation for the pedestrian wind environment. The consultant should rewrite the sentences and focus on the comparison of the performance between the Baseline Scheme and the Proposed Scenarios 1 and 2 to avoid confusion.	Noted. Para. 4.6.6 of the AVA has been revised **(see Appendix B)**. Noted. Para. 4.6.10 of the AVA has been revised **(see Appendix B)**.
2.8	**ENE wind** (para. 4.6.11) – According to the Appendix 5, it appears that the Proposed Scenario 1 would have comparable SVR and LVR when compared with the Baseline Scenario under ENE wind, while the Proposed Scenario 2 would have slightly higher SVR and LVR when compared with the Baseline Scenario under ENE wind. However, such observation has not been reflected in text.	Noted. Para. 4.6.11 of the AVA has been revised **(see Appendix B)**.
2.9	**E wind** (para. 4.6.15) – According to the Appendix 5, it appears that the Proposed Scenario 2 would have higher SVR and slightly higher LVR when compared with the Baseline Scenario under E wind. However, such observation has not been reported in text.	Noted. Para. 4.6.15 of the AVA has been revised **(see Appendix B)**.
2.10	**ESE wind** (para. 4.6.19) – According to the Appendix 5, it appears that the Proposed Scenario 2 would have slightly lower SVR and comparable LVR when compared with the Baseline Scenario under ESE wind. However, such observation has not been reported in text.	Noted. Para. 4.6.19 of the AVA has been revised **(see Appendix B)**.

	Departmental Comments	Responses to Comments
2.11	**SE wind** (para. 4.6.25) – Referring to the simulation results, it could not ascertain and conclude that the overall wind permeability would be enhanced under Proposed Scenario 1 under SE wind. The consultant should clarify and revise the text where appropriate.	Noted. Para. 4.6.25 of the AVA has been revised **(see Appendix B)**.
2.12	**SSE wind**	
	• Para. 4.6.27 – According to the Appendix 5, it appears that the Proposed Scenario 1 would have slightly higher SVR and comparable LVR when compared with the Baseline Scenario under SSE wind. However, such observation has not been reported in text.	Noted. Para. 4.6.27 of the AVA has been revised **(see Appendix B 2)**.
	• Para. 4.6.30 (last sentence) – The consultant should clearly state that there is no adverse air ventilation impact is anticipated on the pedestrian frequently access area.	Noted. Para. 4.6.30 of the AVA has been revised **(see Appendix B)**.
2.13	**SSW wind** (para. 4.6.36) – According to the Appendix 5, it appears that the Proposed Scenario 1 would have comparable SVR and LVR when compared with the Baseline Scenario under SSW wind. However, such observation has not been reported in text.	Noted. Para. 4.6.36 of the AVA has been revised **(see Appendix B)**.
2.14	**SW wind**	
	• Para. 4.6.40 (line 3) – The consultant should clarify whether the discussion in this paragraph is referred to SW wind but not SSW wind.	Noted. Para. 4.6.40 of the AVA has been revised **(see Appendix B)**.
	• Para. 4.6.42 (last sentence) – The consultant should correct the typo "imprived".	Noted. Para. 4.6.42 of the AVA has been revised **(see Appendix B)**.
2.15	**WSW wind** (para. 4.6.43) – According to the Appendix 5, it appears that the Proposed Scenario 1 would have slightly lower SVR and comparable LVR when compared with the Baseline Scenario under WSW wind. However, such observation has not been reported in text.	Noted. Para. 4.6.43 of the AVA has been revised **(see Appendix B)**.

	Departmental Comments	Responses to Comments
2.16	**Conclusion** (section 5) – In view of our comments above, the consultant should update the conclusion where appropriate.	Noted. Section 5 of the AVA has been revised **(see Appendix B)**.
2.17	**15m-wide building separation between T11 and T12 at OU(CDWRA) site** (Appendix 3) – The consultant should indicate the 15m-wide building separation between T11 and T12 at OU(CDWRA) site on plan clearly.	Noted. Building separation between T11 to T12 has been marked in Appendix 3 of the revised AVA **(see Appendix B)**.
3.	**Comments of Drainage Services Department received on 10.7.2024**	
	<u>Drainage Impact Assessment</u>	
3.1	According to Technical Note to prepare a drainage submission, the applicant should refer to DSD Advice Note No. 1 and should also employ a qualified engineer (Registered Professional Engineer in the Civil Engineering discipline) to complete the DIA. The completed drainage submission should be signed and certified by the engineer before it is submitted to DSD for comment.	Noted. Please refer to RPE signature after the report cover **(see Appendix C)**.
3.2	Please note that Corrigendum No. 1/2024 of DSD's Stormwater Drainage Manual has been issued, the assessment should consider SDM 2018 with the Corrigendum.	Noted. Please refer to Section 3.1.1 and Appendices of the revised DIA, which has adopted the Corrigendum No. 1/2024 of DSD's Stormwater Drainage Manual 2018 **(see Appendix C)**.
3.3	Please indicate the approx. size of the proposed peripheral surface channel on figures.	Noted. Please refer to revised Figure 5 and Appendices F3 & F4 of the revised DIA for the proposed peripheral surface channel **(see Appendix C)**.

	Departmental Comments	Responses to Comments
	Sewerage Impact Assessment	
3.4	R-to-C no. 3.4: Please confirm if diversion is needed at this stage or not. Detailed diversion scheme should be provided for diverting the existing rising mains which are always in operation.	There is no imminent need to divert the existing twin rising mains during the current section 12A rezoning stage. The details of the subject diversion scheme will be formulated at later land exchange stage.
3.5	SIA/ Figures 3 and 4: In the legend, the existing rising main should read existing twin rising mains.	The legend of the existing rising main has been revised as existing twin rising mains accordingly **(see Appendix D)**.
3.6	Section 8.1.1: Please clearly define what the respective parties are.	Section 8 of the SIA report has been updated, with more description on the proposed maintenance responsibility for individual items **(see Appendix D)**. All the sewerage infrastructure proposed in the SIA will be constructed by the private development, while the future maintenance responsibilities are divided among different parties following the terminal manholes. The terminal manhole (FTMH2) and the upstream sewer for R(E) private residential development will be constructed and maintained by the residential development. The terminal manhole (FTMH3) and the upstream sewer for Primary School will be maintained by operating school, which include the proposed sewage pump house and associated rising mains. The terminal manhole (FTMH4) and the upstream sewer for the relocated Soy Sauce Factory will be maintained by the Soy Sauce Factory, which include the proposed sewage pump house and associated rising mains.

	Departmental Comments	Responses to Comments
3.7	Section 8 and Figures: Please confirm with relevant government departments if they have no objection to take-over the proposed surrendered land, also please advise its maintenance responsibility. Please note that DSD would only maintain the drainage/ sewerage facilities located on Government Land but not the surrendered land.	The maintenance matrix of the proposed drainage, sewer and the associated public access will be agreed and determined at later land exchange stage with relevant government departments following the acceptance of this S.12A rezoning application which is mainly to confirm the "general suitability" of the subject housing site for a medium-density residential use in view of the upcoming major improvement in public transport and change in townscape of this area brought about by the recently gazetted Northern Link (NOL) development and the recently approved high-rise, high-density Sha Po North public housing development on the adjacent site. Under the current proposal, the Applicant would hand over the future public access to the government, as indicated in Figure 4 of the revised SIA with blue highlight upon completion of the proposed sewerage works **(see Appendix D)**. Should the future public access yet to be assigned to any government department, the proposed "OU" development may temporarily take up the maintenance responsibility. Since the proposed drainage / sewerage facilities would be identical regardless of the maintenance responsibility, it is advised to review / confirm their maintenance responsibility at later stage.
3.8	Section 8 and Figures: For the proposed surrendered land, constraints were observed from public sewerage maintenance point of view. There is no proper access to the sewers as the proposed land was surrounded by private land. Also, the sharp change/ change in right angle of sewers is considered no desirable. Please review the sewerage arrangement as appropriate.	Kindly note that the proposed communal sewer will run underneath a public access (about 5m in width) coloured light blue as indicated in Figure 4 of the revised SIA **(see Appendix D)**. This public access can serve the maintenance purpose of the communal sewer. The proposed public access as shown in report figure(s) is indicative only. Subject to detailed design, the preliminary swept path analysis for this public access indicates that turning radius and manoeuvring are feasible for maintenance vehicle along this public access. In addition, the proposed sewerage arrangement has been revised to eliminate sharp change/change on right angle of sewers. Please refer to updated Section 8, Figure 3 and Figure 4 of the revised SIA **(see Appendix D)**.

	Departmental Comments	Responses to Comments
4.	**Comments of Transport Department received from June 2024 to August 2024**	
4.1	Please consider providing two exit lanes for RE Site Access.	Please note that the traffic volume of ingress traffic at RE Site Access from both the NB and SB direction of Castle Peak Road - Tam Mi is relatively low (both not more than 140 pcu), it is thus foreseen that one exit lane would be able to cater such movement without causing significant impact to the operational performance of the roundabout (J4). Please refer to Figure 2.4 of the revised TIA **(see Appendix E)**.
4.2	Please consider providing sufficient merging length for EB exist lanes of Au Tau Interchange.	Please find attached our revised improvement scheme for Au Tau Interchange (J10) incorporating the sufficient merging length and exclusive left-turn lane from Castle Peak Road – Tam Mi SB to Kam Tin Road EB. Please refer to Figure 4.14 of the revised TIA **(see Appendix E)**.
4.3	Please consider providing at least 2m of footpath along Castle Peak Road – Tam Mi SB to facilitate the pedestrian coming from the unnamed road underneath San Tin Highway.	Please refer to the revised Figure 2.2 and Figure 2.4 of the TIA **(see Appendix E)** with at least 2m wide along Castle Peak Road – Tam Mi SB between the unnamed road underneath San Tin Highway and the crossing near reserved school site.
4.4	Please liaise with responsible TE for the Fairview Park Interchange.	Further to our discussion with responsible TE, on the Fairview Park Interchange, it is advised to make minor revisions to Figure 4.15 which does not show the hatch on the inner lane of the Interchange. Please refer to Figure 4.15 of the revised TIA **(see Appendix E)**.
4.5	Please liaise with TO for the PTI design in RE site.	Noted. Responsible TO has no major comment in this stage.

	Departmental Comments	Responses to Comments
4.9	Section 4.7 - the calculation for J7 shall be reviewed. It is noted that some of the junctions would be overloaded under the scenario without Sha Po Public Housing Site. In this connection, the planned improvement work for these junctions shall be carried out by the applicant if there is programme mis-match between the development and Sha Po Public Housing Site.	Cycle time of 120 seconds has been adopted for the junction assessment for J7, which resulted in 22% and 59% reserve capacity in AM peak and PM peak respectively. The assessment result in Section 4.7 indicates that J10 (Au Tau Interchange) and J14 (Fairview Interchange) would be overloaded under the scenario without Sha Po Public Housing Site. Consequently, the applicant will consider to implement the following improvement measures should there be a programme mismatch between the proposed development and Sha Po Public Housing Site. • Widening of Castle Peak Road – Yuen Long eastbound approach at Au Tau Interchange (refer to Figure 4.21 of the revised TIA **(see Appendix E)**); • Addition of a segregated left turn lane from the San Tin Highway northbound slip road approach Castle Peak Road – Tam Mi southbound at Fairview Park Interchange (refer to Figure 4.22 of the revised TIA **(see Appendix E)**);
4.10	Figure 2.2 – • Double white line shall be provided between northbound and southbound traffic. • Please review the size of the central island of the proposed roundabouts with consideration of including directional signs	Please refer to the revised Figure 2.2 of the TIA **(see Appendix E)** with double white line provided between northbound and southbound traffic. Size of central island at J4 roundabout would be further reviewed in subsequent design stages in accordance with TPDM requirement on directional sign.
4.11	Figure 2.4 - Please consider to allow a central divider between the roundabout and junction for school site.	Please refer to the revised Figure 2.4 of the TIA **(see Appendix E)** with central divider provided between J4 and J5. The width of central divider would be further reviewed in subsequent design stages.

	Departmental Comments	Responses to Comments
4.12	Figure 4.8 - the applicant is reminded to closely liaise with Highways Department and project team of NM Highway for the potential interface of modification of Fairview Park Interchange (J14).	Noted.
4.13	It is noted from your previous RtC that 55% of the traffic generation from the proposed development would travel northwards via Fairview Park Interchange to San Tin, North District or Tai Lam Tunnel. However, in Fig. 4.12 - Development Traffic Flows, only 45% of the trips in AM peak would travel northwards. Please holistically update the figure together with the junction calculations.	Please note that the total northbound traffic would remain at 55%. Referring to the attached OU+RE development flow figure, the total traffic flow of the proposed developments during the AM peak is 5+5+230+285+170+35+145+20+15=910 pcu, while the total traffic flow traveling northwards via Fairview Peak Roundabout is 230+195+80=505 pcu. Therefore, the percentage of trips during the AM peak that travel northwards are 505/910=55%.
4.14	For the junction calculation of Fairview Park Interchange, please review the input parameters for all scenarios, including but not limited to the followings:-	
	• Please explain why the entry angle for Arm A is changed from 65 degrees (2021 AM Observed Traffic) to 40 degrees (2034 AM Reference Traffic Flows).	Typographical error is identified, entry angle for Arm A in 2021 Observed Case has been revised to 40 degrees.
	• Please justify the adoption of 7.3m as approach half width in 2034 AM Design Traffic Flows with improvement.	The distance of 7.3m was measured in the approach upstream at least 50m from the stop-line. Please refer to Figure 4.15 of the TIA **(see Appendix E)** for demonstration of the measurement.
4.15	Please explore the possibility of providing exclusive left turn lane for Arm F and Arm G.	As demonstrated in Figure 4.12 of the TIA **(see Appendix E)**, the development traffic accessing Fairview Interchange via the approach arm of San Tam Road SB (Arm F) and San Tam Road NB (Arm G) is minimal as compared to Sha Po Public Housing Development traffic. Given the precedent and the relatively insignificant traffic contribution from the proposed development, undertaking improvement works of this scale cannot be reasonably justified. Nevertheless, local widening at these approach arms were proposed to enhance the operational performance of the roundabout.

	Departmental Comments	Responses to Comments
4.16	Please summaries the proposed improvement schemes under the scenario without Sha Po Public Housing Site.	Please see below and attached: 1) J7 (J/O Castle Peak Road-Tam Mi / San Tam Road) Figure 4.2 of the TIA **(see Appendix E)** • Widening of Castle Peak Road - Tam Mi eastbound approach arm • The interface of improvement works for J7 implemented by the Proposed Development, Sha Po Public Housing Development, and other Planned Development 2) J10 (Au Tau Interchange) Figure 4.21 of the TIA **(see Appendix E)** • Extension of planned exclusive left-turn lane at Castle Peak Road - Tam Mi southbound approach under approved planning application A/YL-KTN/604 (Arm A) • Extension of existing exclusive left-turn lane at Kam Tin Road westbound approach (Arm B) • Widening of Castle Peak Road - Yuen Long eastbound approach (Arm C) 3) J14 (Fairview Interchange) Figure 4.22 of the TIA **(see Appendix E)** • Addition of a segregated left-turn lane from San Tin Highway northbound slip road to Castle Peak Road - Tam Mi southbound (Arm A) • Widening of Castle Peak Road - Tam Mi northbound approach (Arm B) • Widening of San Tin Highway southbound slip road approach (Arm E)

	Departmental Comments	Responses to Comments
4.17	Please review the presentation of Figure 4.21 and Figure 4.22 to ensure the proposed improvement schemes under the scenario without Sha Po Public Housing Site are clearly indicated.	Please refer to the revised Figure 4.21 and Figure 4.22 of the TIA **(see Appendix E)** with legend and clear colour scheme for easy understanding.
4.18	Please clarify whether the road serving the reserved school site is public road or not.	The road serving the reserved school site would be handed over to highway department for future maintenance, subject to departmental comments in the next stage. Please refer to Figure 2.2 of the TIA **(see Appendix E)**.
4.19	Please consolidate all comments and responses for an updated TIA report and RtoC table.	The consolidated TIA reports and RtoC table for OU and RE site has been submitted on August 1st 2024.
4.20	Similar to the sensitivity case in MP/6, 7 and 8, please include sensitivity case to cater for the traffic flow from residential development under NTM/5, 6 and 7.	Please refer to supplement section 4.9 for traffic impact assessment results under Sensitivity Analysis (III), for residential development under NTM/5 and NTM/6 **(see Appendix E)**. As per information available from Town Planning Board, Y/YL-NTM/7, this proposed development will be implemented in tandem with the implementation of the planned San Tin Station and the ST/LMC DN. As per RODP presented under LC Paper No. CB(1)506/2023(03), a comprehensive land use plan and road network has been recommended. With the proposed transportation facilities under ST/LMC DN, Y/YL-NTM/7 would not be considered as a stand-alone residential development, therefore, Y/YL-NTM/7 would not be included as part of the sensitivity case scenario.

<table>

	Departmental Comments	Responses to Comments
4.22	• For 2021 Observed Traffic Flows calculation, please review the input parameters for approach half width (V) and Entry angle (A) for arm F and update the calculation as necessary. • There should be no change in the input parameters for arm A as no change in the geometry of the entry lane in arm A. Please review the calculation for all scenarios. • For 2034 Design Traffic Flows calculation, the approach half width for arm B should remain unchanged (i.e. adopt 5.0m instead of 5.5m). Please update the calculations. • For 2024 Design Traffic Flows calculation, the approach half width for arm E should remain unchanged (i.e. adopt 6.3m instead of 5.5m). Please update the calculations. • For scenarios with recommended junction improvement works by this project, please update the approach half width for arm B as per your response from your preceding email.	Calculation Sheets of J14 have been revised and included under Appendix B of the revised TIA **(see Appendix E)**.

Under Further Information Submitted on 18.11.2024

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from “I(D)”, “OS” and ‘Road’ Zones to “R(E)” Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Drainage Services Department received on 9.10.2024**	
	<u>Drainage Impact Assessment</u>	
1.1	Please advise the rationale of adopting different rainfall intensity in calculations.	Please be advised that DIA adopted 3 different rainfall intensities to access different purposes: - 1. 200-year rainfall intensity with 4-hour duration is adopted for estimating the required storage volume of detention pond. 2. 200-year rainfall intensity using storm constants is adopted to assess the catchments peak runoff for checking the flow capacity of the box culvert. (Urban drainage trunk system) 3. 50-year rainfall intensity is adopted to assess the capacities of the proposed u-channel with site (urban drainage branch systems).
1.2	Appendix F4: Please also indicate the checking for all sizes of u-channels.	Proposed u-channel checking has been included in Appendix F5 of the revised DIA **(see Appendix A)**.
1.3	DIA/ Figure 4: Please advise why there is no u-channel provided in the eastern side of site. Please advise how the surface runoff could be intercepted and collected. Peripheral drains should be provided for the proposed development.	U-channel has been proposed at the eastern side of the Application Site to collect surface runoff from Catchment A2 and A3. For details, please refer to Figure 4 of the revised DIA **(see Appendix A)**.

	Departmental Comments	Responses to Comments
	Sewerage Impact Assessment	
1.4	Previous comment 3.5 has not been fully addressed. SIA/ Figure 4: In the legend, the existing rising main should read existing twin rising mains.	Noted. Figure 4 of the SIA is updated accordingly **(see Appendix B)**.
1.5	SIA/ Figure 4: For the light blue legend, please add a remark "(to be confirmed during land exchange stage)" after "… to DSD for maintenance".	Noted. Figure 4 of the SIA is updated accordingly **(see Appendix B)**.
2.	**Comments of Environmental Protection Department received on 9.10.2024**	
	Environmental Assessment	
2.1	Please document TD's agreement on the traffic forecast data in the report once available.	The Applicant is given to understand that TD has no in-principle objection to the latest TIA submitted in late Aug 2024. Correspondence of TD's agreement on traffic forecast data is now under preparation and will be provided once available.
2.2	S.5.2.5 – "They will be installed at location farthest away from proposed residential development which is air sensitive in nature." - Please suitably incorporate this statement into the Section 2.4.20, Section 2.6, and Section 3 of the OIA.	The mentioned statement has been incorporated under Sections 2.1.19, 2.4.20, 2.6.1 and 3.1.4 of the revised OIA accordingly **(see Appendix C)**.
	Sewerage Impact Assessment	
2.3	R-t-C 1.2.1 & Note under Table 9 – Suggesting revising as " off-peak discharge to public sewer will be controlled and discharge from buffer tank will last for ~~be emptied within~~ 12 hours."	Noted. The note under Table 8 of SIA is revised accordingly **(see Appendix B)**.
2.4	Section 7.1.4 – It is noted that the proposed development will no longer utilize SPSPS, please clarify if the hydraulic checking under Appendix 5 is necessary.	Noted. Since the sewerage proposal for the proposed development will no longer utilize SPSPS, the hydraulic checking under Appendix 5 is no longer applicable. Appendix 5 and relevant content has been removed in the revised SIA accordingly **(see Appendix B)**.

	Departmental Comments	Responses to Comments
2.5	Section 7.1.5 & Table 11 – Please take into consideration the sewage flow from other planned developments in the vicinity which utilise KTSPS. Please clarify if the pump rate of SPSPS is the upgraded pump rate of SPSPS.	Section 7.1.5 of the revised SIA has considered the current average daily flow of KTSPS (2,478m3/day) to assess capacity of NSWSPS and YLEPP in Table 12 of revised SIA **(see Appendix B)**. Table 11 of the revised SIA has adopted the pump rate of KTSPS ($0.377m^3/s$) and the existing pump rate of SPSPS ($0.201m^3/s$) for checking of the existing DN1200 gravity sewer towards NSWSPS **(see Appendix B)**. A separate sensitivity analysis is presented in Appendix 8 of revised SIA with consideration of "*KTSPS under 100% utilisation*" and "*upgraded design sewage flow to SPSPS*" **(see Appendix B)**.
2.6	Table 11, Table 12 & Appendix 4 – Please include existing sewage flow of NSWSPS and sewage flow from planned development utilising KTSPS, NSWSPS and YLEPP in assessing the capacity of KTSPS, NSWSPS and YLEPP.	Noted. In addition to Table 11 and Table 12 in SIA, a sensitivity analysis is presented in Appendix 8 of revised SIA. This sensitivity analysis has adopted some more conservative assumptions with inclusion of:- 1. 100% utilisation of the design capacity of KTSPS ($17,133m^3$/day) and 2. Upgraded design sewage flow to SPSPS ($16,727m^3$/day) for NSWSPS and YLEPP capacity checking **(see Appendix B)**.
2.7	It is observed that the estimated sewage flow of the relocated soy sauce factory is larger than the limit of discharge flow rate of the existing WPCO licence, please be reminded that a valid WPCO licence should be in place for the operation of the relocated soy sauce factory.	Noted. Valid WPCO license would be obtained for the operation of the relocated soy sauce factory.
2.8	Figure 4 & Appendix 4 – Please clarify the inconsistency of internal diameter of the sewer from FTMH1 to MH07.	Figure 4 of the SIA has been revised to be consistent with the hydraulic calculations with Appendix 4 **(see Appendix B)**.

	Departmental Comments	Responses to Comments
3.	**Comments of Urban Design & Landscape Section of Planning Department received on 2.10.2024**	
	<u>Comments on the Revised AVA</u>	
3.1	Para. 4.4.1 and para. 5.1.5– According to Table 4.1, the Proposed Scenario 1 would have higher VR at Focused Group 33 (i.e. Eastern building setback) when compared with the Baseline Scenario. The consultant should include this in text where appropriate.	Noted, Para. 4.4.1 and Para. 5.1.5 of the AVA are revised accordingly **(see Appendix D)**.
3.2	Para. 4.4.2:-	
	i. According to Table 4.2, the Proposed Scenario 2 would have higher VR at Focused Group 16 (i.e. Park Yoho Venezia) when compared with the Baseline Scenario. The consultant should include this in text where appropriate.	Noted, Para. 4.4.2 and Para. 5.1.9 of the AVA are revised accordingly **(see Appendix D)**.
	ii. According to Table 4.2, the Proposed Scenario 1 would have higher VR at Focused Group 31 (i.e. building separation between T9/T10) when compared with the Baseline Scenario. The consultant should include this in text where appropriate.	Noted, Para. 4.4.2 and Para. 5.1.8 of the AVA are revised accordingly **(see Appendix D)**.
3.3	Conclusion (para. 5.1.4 to para. 5.1.10) – The consultant should update the comparison of VR among three scenarios based on the results listed in Tables 4.1 and 4.2 to avoid confusion. Such comparison should be focused on comparing the Proposed Scenario 1 with Baseline Scenario as well as the Proposed Scenario 2 with Baseline Scenario.	The conclusion had been revised to focus on comparison between Proposed Scenario 1 with Baseline Scenario and between Proposed Scenario 2 with Baseline Scenario. Para. 5.1.4 to para. 5.1.10 of the AVA are revised accordingly **(see Appendix D)**.

Latest Further Information to address departmental comments received in Jan 2025

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from "I(D)", "OS" and 'Road' Zones to "R(E)" Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long (Application No. Y/YL-NSW/9)

	Departmental Comments	Responses to Comments
1.	**Comments of Environmental Protection Department received on 6.1.2025**	
	<u>Environmental Assessment</u>	
1.1	The applicant should provide TD's agreement of the traffic forecast data for completeness once it is available.	Please note that TD's agreement has been obtained and enclosed in the revised EA **(see Appendix E of the Consolidated Planning Statement)**.
	<u>Sewerage Impact Assessment</u>	
1.2	RtC 2.7 & Note under Table 6 – Please include the responses under the Note under Table 6.	The soy sauce factory originally had a WPCO license for treated effluent discharge to existing stream (SIA Appendix 6 refers.). After relocation of the soy sauce factory, the treated effluent will be proposed to be discharged to a new sewerage system. The application of corresponding WPCO license for operation of the relocated soy sauce factory is to be applied and obtained by the operator of relocated soy sauce factory. The statement is included in Note under Table 6 of revised SIA **(see Appendix G of the Consolidated Planning Statement)**.
1.3	Section 4.3.1 – Should "Planning Departing" read "Planning Department.	The typo in Section 4.3.1 of the SIA has been revised **(see Appendix G of the Consolidated Planning Statement)**.
1.4	Para 5.2.4 Table 9 & Appendix 4: Please check the peaking factor adopted which is inconsistent. Please rectify.	Please be advised the peaking factor in Table 9 (PF = 4) represents combined sewage discharge to communal sewer starting at manhole FSH1001880. Hydraulic checking under Appendix 4 is a more detailed presentation showing various peaking factors adopted due to different contributing population for proposed new sewer within the Application Site, while sewage discharge merged with existing communal sewer, peaking factor of 4 including existing upstream sewerage is adopted in accordance with GESF table T-5.

	Departmental Comments	Responses to Comments
1.5	Appendix 3: Please check the Notes for "Retail F&B GFA" and "Kindergarten GFA".	The Notes for "Retail F&B GFA" and "Kindergarten GFA" should be swapped, the Notes references have been corrected in Appendix 3 of the revised SIA **(see Appendix G of the Consolidated Planning Statement)**.
1.6	Appendix 4: Please advise the pipe material under Notes (3)-(5).	The DSD record plan specified the existing sewer sizes but without pipe material information, which will be confirmed on site in detailed design stage. Due to the uncertainty, a conservative slimed concrete sewer roughness is assumed in the hydraulic assessment. In case the sewer is found to be verified clay or PE pipes, such roughness will be improved resulting in better hydraulic performance. Pipe material will be confirmed in detailed design to the satisfaction of DSD.
1.7	Section 7.1. 9 & Table 12 – The sewage flow from planned developments utilising SPSPS, KTSPS, NSWSPS and YLEPP have not been considered in the capacity checking, please provide the information under Appendix 8 in the main text.	In view of limited planned developments data available, Table 12 conducted a capacity checking based on existing latest flow information available. On the other hand, a hypothetical sensitivity analysis under Appendix 8 adopted the maximum capacity of upgraded SPSPS, maximum capacity of KTSPS, and planned discharge from Light Public Housing to conduct the flow assessment as the worst case scenario. As per the findings of the sensitivity analysis, there are remaining capacity for both NSWSPS and the planned YLEPP. The sensitivity test is enclosed in **Appendix G of the Consolidated Planning Statement** for easy reference.

	Departmental Comments	Responses to Comments
2.	**Comments of Planning Department received on 17.1.2025**	
2.1	Please update Figure 1.2 in the EA with the latest boundary.	The drawings of the EA has been revised in accordance with the latest boundary **(see Appendix E of the Consolidated Planning Statement)**.
2.2	Please consider to change the primary school (to be handed over to the Government) to private school to be implemented by the project proponent.	Noted. The original rezoning proposal was formulated with reference to the requirements under Hong Kong Planning Standard and Guidelines. In view of the estimated population increase due to the subject proposed development, the Applicant previously proposed a reserved site for school use in the indicative scheme originally submitted to Town Planning Board in Year 2022. Lately, upon departmental circulation, it is understood that it is not necessary to reserve a site for public sector primary school in the proposed development. In the event that the reserved site is to be developed for educational purposes to be implemented by private sector, the future operator will make required application(s) and registration(s) to relevant Government authorities for approval under the prevailing policy. In view of the nature of the subject rezoning application, the proposed development is still at early land-use planning stage. There may be future changes in demographic context, district-wide planning context as well as site circumstances in the locality. Should there be any changes in land-use planning, there will be supporting applications submitted for Government department's consideration and approval.
2.3	Since the application site would cover the existing residential quarters to the western part of the Site, please check relevant technical documents to amend the application site boundary to cover it.	The existing temporary structures are situated on Government land at present. Should there be any developments / redevelopments of the piece of Government land that is currently occupied by existing temporary settlements at the western portion of the subject R(E) zone, the concerned party is required to submit relevant planning and lands submissions (e.g. S16 planning application or land exchange) for the proposed use on their own.

	Departmental Comments	Responses to Comments
2.4	Please confirm a 8-classroom kindergarten is proposed at the retail portion of the developments.	The floor space currently proposed for non-domestic use at the retail portions include GFA for shops and services, eating place, school and etc. use. According to current design assumption, a private 8-classrooms kindergarten is proposed at the retail portion. The standard of provision will comply with relevant standard and operation manual.
2.5	Please confirm whether the subway will be constructed by both developments (i.e. development under Y/YL-NSW/8 and 9) or it will be constructed by either one of the developments.	The subway will be implemented by the project proponent of either one of the developments (which is the earlier one) depending on the development timeline. The project proponent will also further coordinate the implementation timeline of both developments and the implementation of the subway to the planned Au Tau Station
2.6	As raised in the public comment from the Hong Kong and China Gas Company Limited, the project proponent should conduct a Quantitative Risk Assessment (QRA) to evaluate the potential risk and determine/implement the necessary mitigation measure(s) if required. Please confirm that the project proponent will conduct a QRA and liaise with The Hong Kong and China Gas Company Limited in respect of the exact locations of the existing and planned gas pipes/gas installations in the vicinity to the Site and any required minimum set back distance away from them during the planning, design and construction stages of the proposed development.	A quantitative risk assessment has already been prepared and submitted in Sept 2022 (FI 2) with respect to the risk guidelines. As concluded by the assessment, no further mitigation measures are required.
2.7	Please update the indicative Master Layout Plan with legend (in dark green) changed to 'PODIUM/COMMERCIAL/RETIAL/CLUBHOUSE'.	Noted, the figure has been revised accordingly **(see Figure 4.2 of the Consolidated Planning Statement)**.
2.8	Please update the planning statement and its drawings/appendices, including the Figure 2.3 and 2.4 showing BH profile and planned developments in the area.	Noted, the figures has been revised accordingly **(see Figures 2.3 and 2.4 of the Consolidated Planning Statement)**.
2.9	Please make sure the building separations in Figure A of VIA is tally with the building separation plan in the Appendix II and III of the AVA.	Noted.
2.10	Please provide a figure attached to the planning statement showing both the indicative scheme of Y/YL-NSW/8 and 9 for members' easy reference.	Noted, the figure is include as **Figure 4.12 of the Consolidated Planning Statement**.

	Departmental Comments	Responses to Comments
2.11	If the junction improvement works are not implemented (e.g. for Sha Po development), any proposed arrangement for such situation?	A sensitivity test has been prepared and submitted in Aug 2024 (FI 17) to assess the possible traffic implications if Sha Po Public Housing Development and its corresponding improvement works are not in place before completion of the proposed developments. As per the sensitivity test, traffic improvement works will have to be implemented for J7 (Castle Peak Road – Tam Mi / San Tam Road) and J10 (Yuen Long Eastbound at Au Tau Interchange) that include:- J7: Widening of San Tam Road southbound approach by removing existing hatch marking and setback of existing verge fronting Park Yoho to allow 2 nos. of full lane entering J7 **(see Figure 4.22 of Appendix D of the Consolidated Planning Statement)**. J10: Widening of Castle Peak Road – Yuen Long eastbound approach at Au Tau Interchange **(see Figure 4.23 of Appendix D of the Consolidated Planning Statement)**.

	Departmental Comments	Responses to Comments
2.12	Please briefly explain the differences of PR between Y/YL-NSW/8 and Y/YL-NSW/9.	The differences in PRs between the two planning applications are mainly due to their differences in site configuration and site area. For instance, Y/YL-NSW/8 has a larger site area, which is at present occupied by a single temporary development namely the Construction Sector imported Labour Quarters and also has included a Wetland Creation Area of 2.8 ha in Development Site. In comparison, the residential development portion of Y/YL-NSW/8 are relatively smaller after taking various site and planning constraints into consideration. These considerations include designation of a site for relocation of Soy Sauce Factory, provision of a reserved site for school use and provision of access road serving different portions as well as the existing temporary structures on the Government land on the western portion. The above renders different equivalent PRs in the two planning applications. Having said that, both of the Proposed Developments (under Y/YL-NSW/8 & 9) are still a compatible medium-density-medium-rise developments in their surrounding land-use planning context. They are both situated in close proximity to existing and committed traffic infrastructures (e.g. Tsing Long Highway and Au Tau Station). There are also a numbers of committed and approved developments in the vicinity (e.g. the approved residential development in Tung Shing Lei under LSPS No. 002, Sha Po Public Housing Development Park YOHO and etc.). Overall speaking, a descending BH and development intensity profile from the Sha Po Public Housing Development in the east to Nam Sang Wai area to the further northwest could be achieved.

Proposed Schedule of Uses for "Residential (Group E)"

RESIDENTIAL (GROUP E)
(for rural areas only)

Column 1 Uses always permitted	Column 2 Uses that may be permitted with or without conditions on application to the Town Planning Board

Schedule I: for open air development or for building other than industrial building

Ambulance Depot
Government Use (Police Reporting Centre, Post Office only)
Rural Committee/Village Office
Utility Installation for Private Project

Eating Place
Educational Institution
Flat
Government Refuse Collection Point
Government Use (not elsewhere specified)
Hotel
House (other than rebuilding of New Territories Exempted House or replacement of existing domestic building by New Territories Exempted House permitted under the covering Notes)
Institutional Use (not elsewhere specified)
Library
Office
Petrol Filling Station
Place of Recreation, Sports or Culture
Private Club
Public Clinic
Public Convenience
Public Transport Terminus or Station
Public Utility Installation
Public Vehicle Park (excluding container vehicle)
Recyclable Collection Centre
Religious Institution
Residential Institution
School
Shop and Services
Social Welfare Facility
Training Centre

(Please see next page)

Column 1 Uses always permitted	Column 2 Uses that may be permitted with or without conditions on application to the Town Planning Board

Schedule II: for existing industrial development (including relocation of existing industrial development falling within the same "R(E)")

Eating Place (Canteen only)
Government Refuse Collection Point
Government Use (not elsewhere specified)
Public Utility Installation
Recyclable Collection Centre
Rural Workshop
Utility Installation for Private Project
Warehouse (excluding Dangerous Goods Godown)

Industrial Use
Office
Petrol Filling Station
Public Convenience
Public Vehicle Park (excluding container vehicle)
Shop and Services (ground floor only)
Vehicle Repair Workshop
Wholesale Trade

Planning Intention

This zone is intended primarily for phasing out of existing industrial uses through redevelopment for residential use on application to the Town Planning Board. Whilst existing industrial uses and relocation of existing industrial development falling within the same "R(E)" zone will be tolerated, new industrial developments are not permitted in order to avoid perpetuation of industrial/residential interface problem.

(Please see next page)

Remarks

(a) In determining the maximum gross floor area and building height for uses under Schedule I above, no new development, or addition, alteration and / or modification to or redevelopment of an existing building (except redevelopment to 'New Territories Exempted House') shall result in a total development and / or redevelopment in excess of the maximum plot ratio of 2.73, and a maximum building height of 115mPD, or the gross floor area and building height of the building which was in existence on the date of the first publication in the Gazette of the notice of the interim development permission area plan, whichever is the greater.

(b) In determining the maximum gross floor area and building height for the purposes of paragraph (a) above, any floor space that is constructed or intended for use solely as car park, loading/unloading bay, plant room and caretaker's office, or caretaker's quarters and recreational facilities for the use and benefit of all the owners or occupiers of the domestic building or domestic part of the building, provided such uses and facilities are ancillary and directly related to the development or redevelopment, may be disregarded. Any floor space that is constructed or intended for use solely as public vehicle park, public transport facilities or Government, institution or community facilities may also be disregarded.

(c) In determining the maximum non-domestic gross floor area and building height for uses under Schedule II above, no new development, or addition, relocation, alteration and / or modification to or redevelopment of an existing building (except redevelopment to 'New Territories Exempted House') shall result in a total development and / or redevelopment in excess of the maximum non-domestic gross floor area of 13,700m^2 and building height of 15mPD, or the non-domestic gross floor area and building height which was in existence on the date of the first publication in the Gazette of the notice of the interim development permission area plan, whichever is the greater.

(d) In determining the maximum gross floor area for the purposes of paragraph (c) above, any floor space that is constructed or intended for use solely as car park, loading / unloading bay, plant room (including essential and non-essential plant rooms serving the industrial use) and caretaker's office, provided such uses and facilities are ancillary and directly related to the development or redevelopment, may be disregarded.

(e) Based on the individual merits of a development or redevelopment proposal, minor relaxation of the gross floor area and/or building height restrictions stated in paragraphs (a) to (c) above may be considered by the Town Planning Board on application under section 16 of the Town Planning Ordinance.

Proposed Explanatory Statement for "Residential (Group E)"

LAND-USE ZONING

"Residential (Group E)" ("R(E)") (Total Area: 8.16 ha.)

This zone covers the area to the south of Wing Kei Tsuen and the west of Castle Peak Road – Tam Mi. This zone is intended primarily for phasing out of existing industrial uses through redevelopment for residential use on application to the Town Planning Board. Whilst existing industrial uses and relocation of existing industrial development falling within the same "R(E)" zone will be tolerated, new industrial developments are not permitted in order to avoid perpetuation of industrial/residential interface problem. The Applicant(s) will be required to submit adequate information to demonstrate that the new residential development will be environmentally acceptable, and suitable mitigation measures, if required, will be implemented to address the potential industrial/residential interface problem.

Developments or redevelopment within site zoned "R(E)" under Schedule I for open air development or for building other than industrial building are subject to a maximum plot ratio of 2.73 and a maximum building height of 115mPD. The existing / relocated industrial developments under Schedule II are subject to a maximum non-domestic gross floor area of 13,700m^2 and building height of 15mPD. In order to facilitate operation, the relocated soy sauce factory will have a high ceiling requirements due to its special industrial nature, which about 7,300m^2 of the floor area will have a high headroom of about 8m and about 6,400m^2 of the floor area will have a headroom of about 5m. The industrial use will include manufacturing and food processing factory/workshop of soy, sauce, preserve fruits or vegetables or Chinese sweetmeats. No domestic buildings shall be erected thereon except ancillary premises that the District Commissioner, New Territories (Lands Department) may consider reasonable for accommodating staff and workers employed on the premises.

A primary school shall be provided upon phasing out of the existing industrial uses through redevelopment for residential use. Any floor space that is constructed or intended for use solely as public vehicle park, public transport facilities or Government, institution or community facilities shall be disregarded from GFA calculations.

To provide flexibility for innovative design, minor relaxation of the gross floor area, building height and site coverage restrictions may be considered by the Board through the planning permission system. Each application will be considered on its individual planning merits.

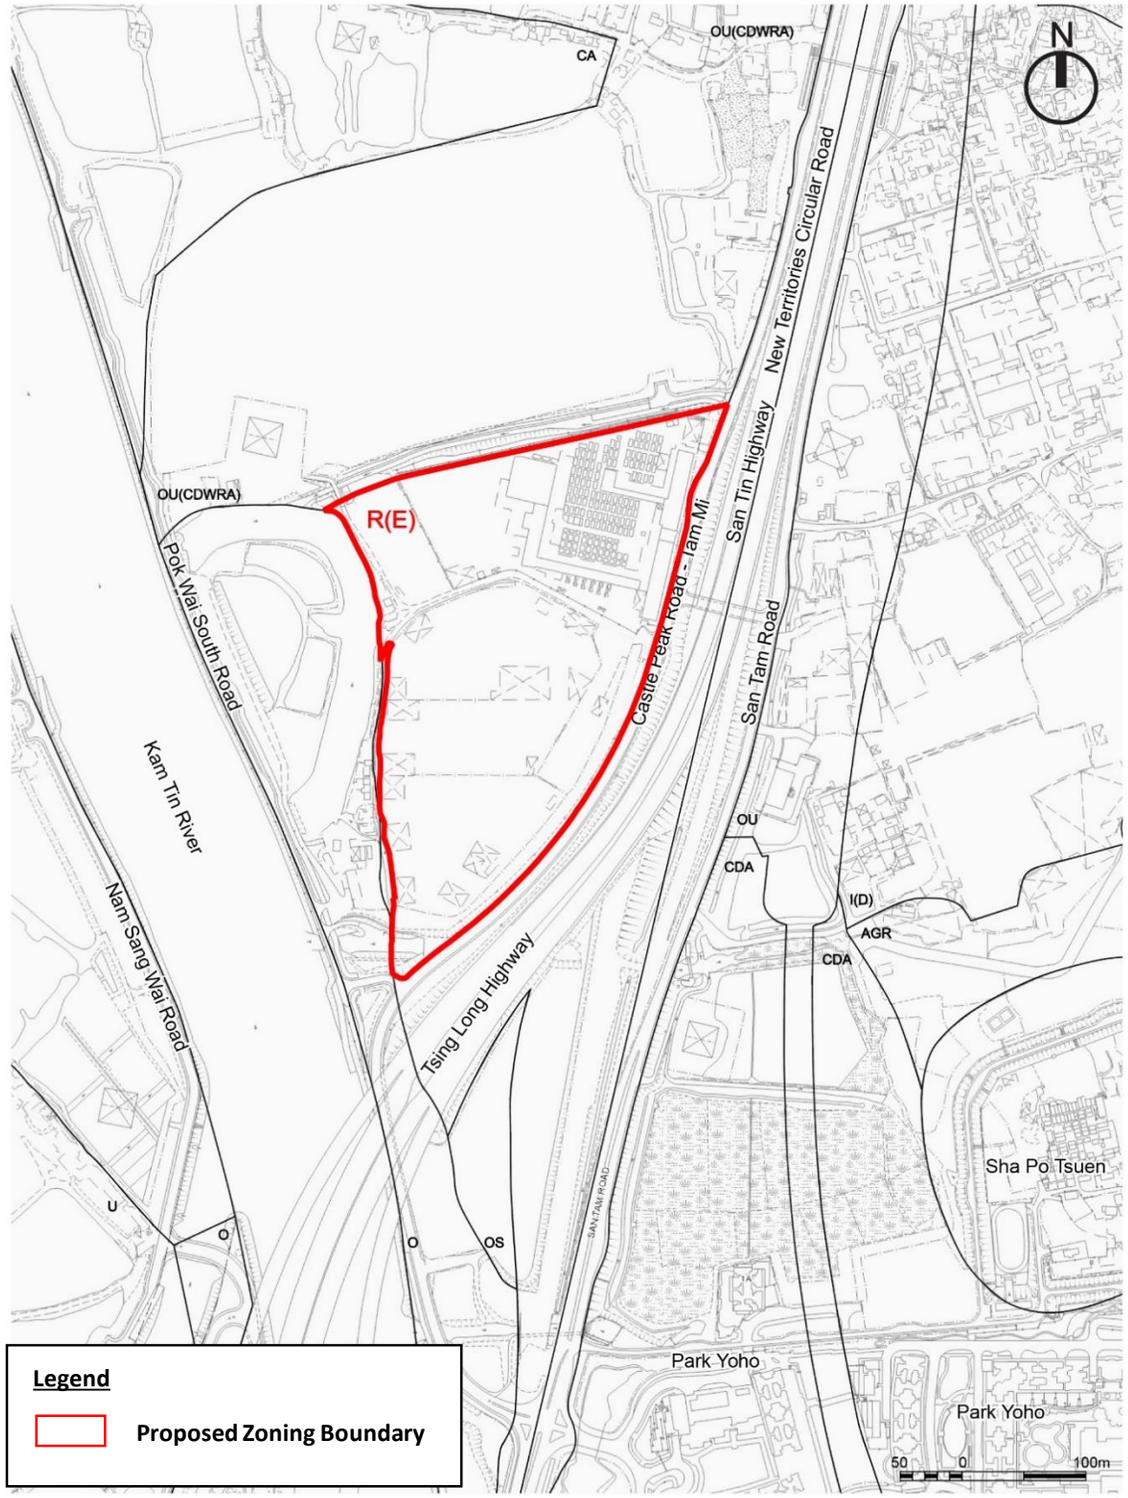
Y/YL-NSW/9

Section 12A Planning Application for Proposed Amendments to the Nam Sang Wai Outline Zoning Plan from “I(D)”, “OS” and ‘Road’ Zones to “R(E)” Zone at Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road - Tam Mi, Yuen Long

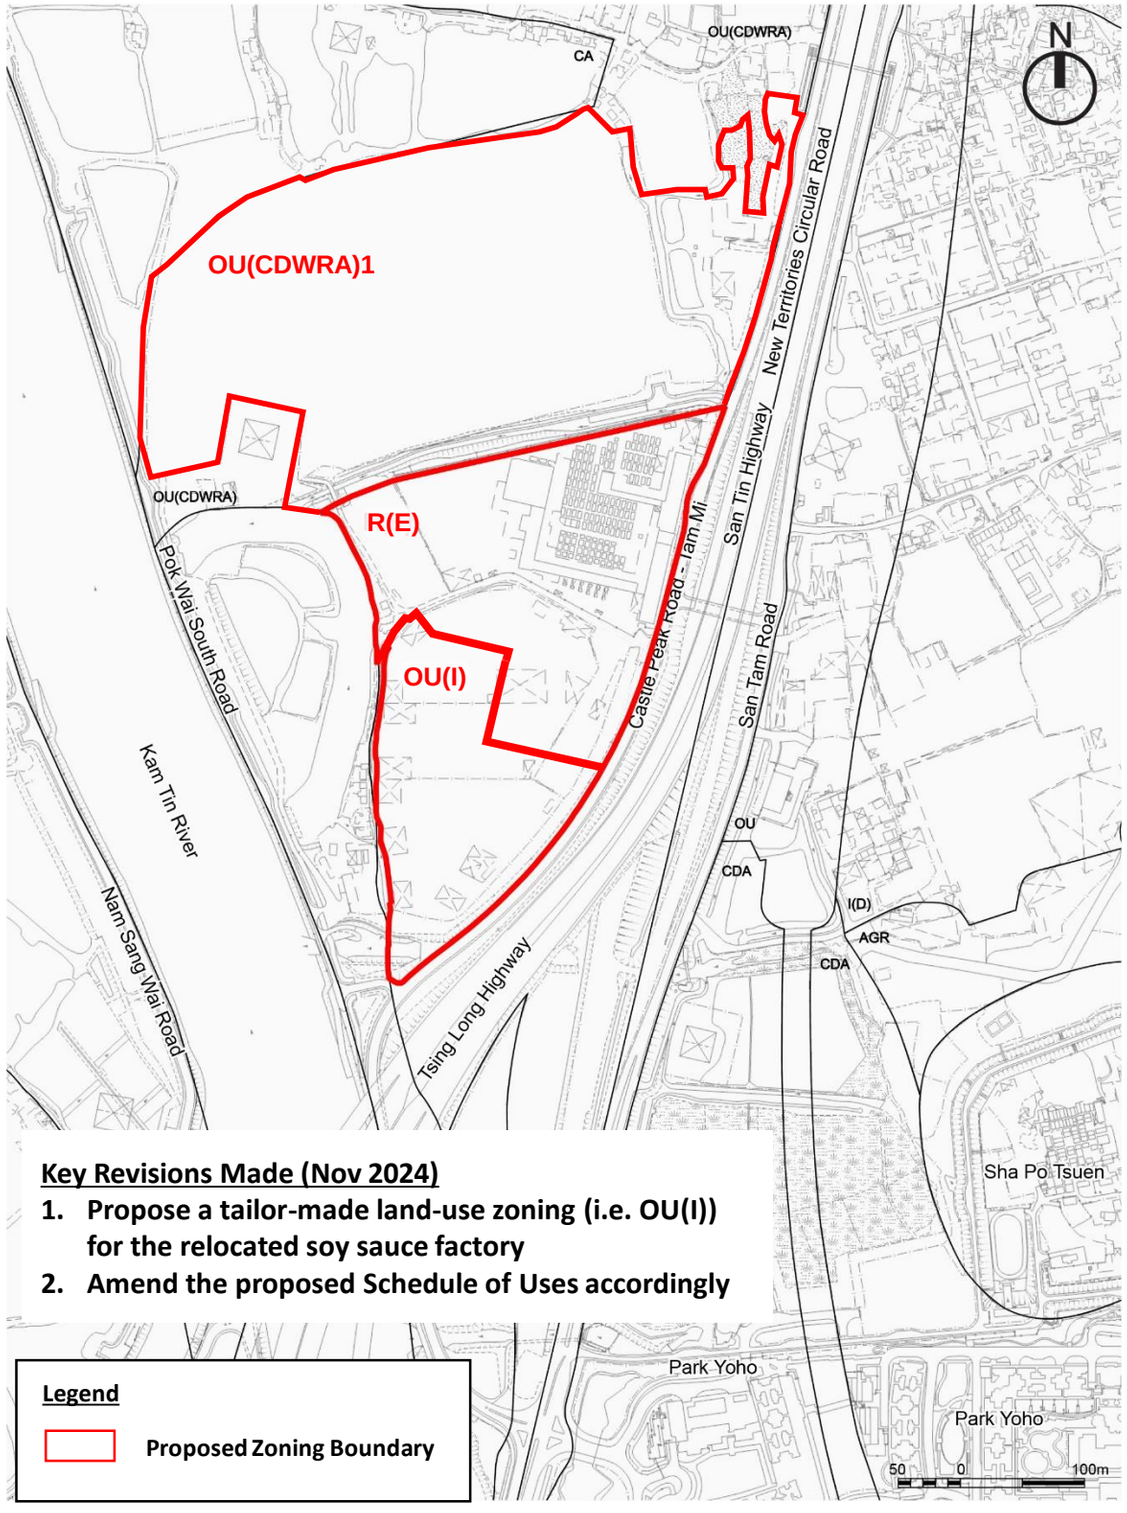
STUDY OF ZONING BOUNDARIES & OZP AMENDMENTS

(NOV 2024)

Possible Alternative Scenario (Nov 2024)



Submitted Proposed OZP Amendment



Key Revisions Made (Nov 2024)

1. **Propose a tailor-made land-use zoning (i.e. OU(I)) for the relocated soy sauce factory**
2. **Amend the proposed Schedule of Uses accordingly**

Alternative Scenario (Nov 2024)

Planning Intention

This zone is intended primarily for phasing out of existing industrial uses through redevelopment for residential use on application to the Town Planning Board. Whilst existing industrial uses will be tolerated, new industrial developments are not permitted in order to avoid perpetuation of industrial/residential interface problem.

With reference to previous GBP submission for the relocated soy sauce factory, "soy sauce factory" is defined as "Industrial" use.

Only "minor" alteration and modification of existing soy sauce factory will be allowed in future before relocation as per the Cover Notes of the OZP.

Proposed OZP Amendments

- **Residential (Group E)**

Remarks

a) *In determining the maximum gross floor area (GFA) and building height for uses under Schedule I above, no new development, or addition, alteration and / or modification to or redevelopment of an existing building (except redevelopment to 'New Territories Exempted House') shall result in a total development and / or redevelopment in excess of a* ***maximum GFA of 126,242m² and a maximum building height of 115mPD****, or the plot ratio and building height of the building which was in existence on the date of the first publication in the Gazette of the notice of the interim development permission area plan, whichever is the greater.*

Represents the total GFA of the Proposed Development at the Residential Portion of the subject R(E) zone:

1. Domestic GFA: 115,942m²
2. Commercial Uses: 3,900m²
3. Covered Transport Lay-by: 6,400m²

b) *In determining the maximum plot ratio and building height for the purposes of paragraph (a) above, any floor space that is constructed or intended for use solely as car park, loading/unloading bay, plant room and caretaker's office, or caretaker's quarters and recreational facilities for the use and benefit of all the owners or occupiers of the domestic building or domestic part of the building, provided such uses and facilities are ancillary and directly related to the development or redevelopment, may be disregarded.* ***Any floor space that is constructed or intended for use solely as public vehicle park, public transport facilities or Government, institution or community facilities may also be disregarded.***

The floor area of the reserved school site will be disregarded from GFA calculations

c) *Based on the individual merits of a development or redevelopment proposal,* ***minor relaxation of the GFA and / or building height restrictions*** *stated in paragraphs (a) to (b) above may be considered by the Town Planning Board on application under section 16 of the Town Planning Ordinance.*

Should there be any developments / redevelopments of the piece of Government land that is currently occupied by existing temporary settlements at the western portion of the subject R(E) zone, the concerned party is required to submit S16 planning application with minor relaxation of development restrictions for TPB's approval.

Proposed OZP Amendments

- **Residential (Group E)**

"Residential (Group E)" ("R(E)")

This zone covers the area to the south of Wing Kei Tsuen and the west of Castle Peak Road – Tam Mi. This zone is intended primarily for phasing out of existing industrial uses through redevelopment for residential use on application to the Town Planning Board. Whilst existing industrial uses falling within the same "R(E)" zone will be tolerated, new industrial developments are not permitted in order to avoid perpetuation of industrial/residential interface problem. The Applicant(s) will be required to submit adequate information to demonstrate that the new residential development will be environmentally acceptable, and suitable mitigation measures, if required, will be implemented to address the potential industrial/residential interface problem.

Developments or redevelopment within site zoned "R(E)" under Schedule I for open air development or for building other than industrial building are subject to a maximum GFA of 126,242m^2 and a maximum building height of 115mPD. In determining the maximum GFA and building height for uses under Schedule II for existing industrial development, no addition, alteration and / or modification to an existing building shall result in a total development in excess of the maximum GFA of the existing building.

A primary school shall be provided upon phasing out of the existing industrial uses through redevelopment for residential use. Any floor space that is constructed or intended for use solely as public vehicle park, public transport facilities or Government, institution or community facilities shall be disregarded from GFA calculations.

To provide flexibility for innovative design, minor relaxation of the plot ratio and / or building height restrictions may be considered by the Board through the planning permission system. Each application will be considered on its individual planning merits.

Proposed OZP Amendments

- **OU (Industrial Use)**

OTHER SPECIFIED USES

Column 1 *Uses always permitted*	*Column 2* *Uses that may be permitted with or without conditions on application to the Town Planning Board*
For "Industrial Use" only	
Government Refuse Collection Point *Government Use (not elsewhere specified)* *Public Convenience* *Public Utility Installation*	*Eating Place* *Government Refuse Collection Point* *Government Use* *Industrial use* *Public Convenience* *Public Vehicle Park (excluding container vehicle)* *Public Utility Installation* *Rural Workshop* *Shop and Services* *Utility Installation for Private Project* *Warehouse (other than Dangerous Goods Godown)* *Wholesale Trade*

Planning Intention

This zone is intended primarily for industrial uses that cannot be accommodated in conventional flatted factories due to extensive land and/or high ceiling requirements. It is also intended for the relocation and redevelopment of existing informal industrial uses, which are operated in workshop premises in rural area, to properly designed permanent industrial buildings.

Some "special" plant rooms serving the soy sauce factory may be considered as GFA accountable non-essential plant rooms by BD. They include steam boiler rooms, fan rooms, air compressor room, photo voltaic (PV) panel room, LPG store, DG chemical store, waste water treatment plant and associated plant rooms.

Remarks

a) *No new development, or addition, alteration and / or modification to or redevelopment of an existing building shall result in a total development and / or redevelopment in excess of the maximum non-domestic GFA of 13,700m^2 and a maximum building height of 15mPD, or the non-domestic GFA and building height of the building which was in existence on the date of the first publication in the Gazette of the notice of the interim development permission area plan, whichever is the greater.*

b) *In determining the maximum GFA for the purposes of paragraphs (a) above, any floor space that is constructed or intended for use solely as car park, loading / unloading bay,* ***plant room (including essential and non-essential plant rooms serving the industrial use)*** *and caretaker's office, provided such uses and facilities are ancillary and directly related to the development or redevelopment, may be disregarded.*

c) *Based on the individual merits of a development or redevelopment proposal, minor relaxation of the plot ratio, GFA and / or building height restrictions stated in paragraphs (a) and (b) above may be considered by the Town Planning Board on application under section 16 of the Town Planning Ordinance.*

Proposed OZP Amendments

- **OU (Industrial Use)**

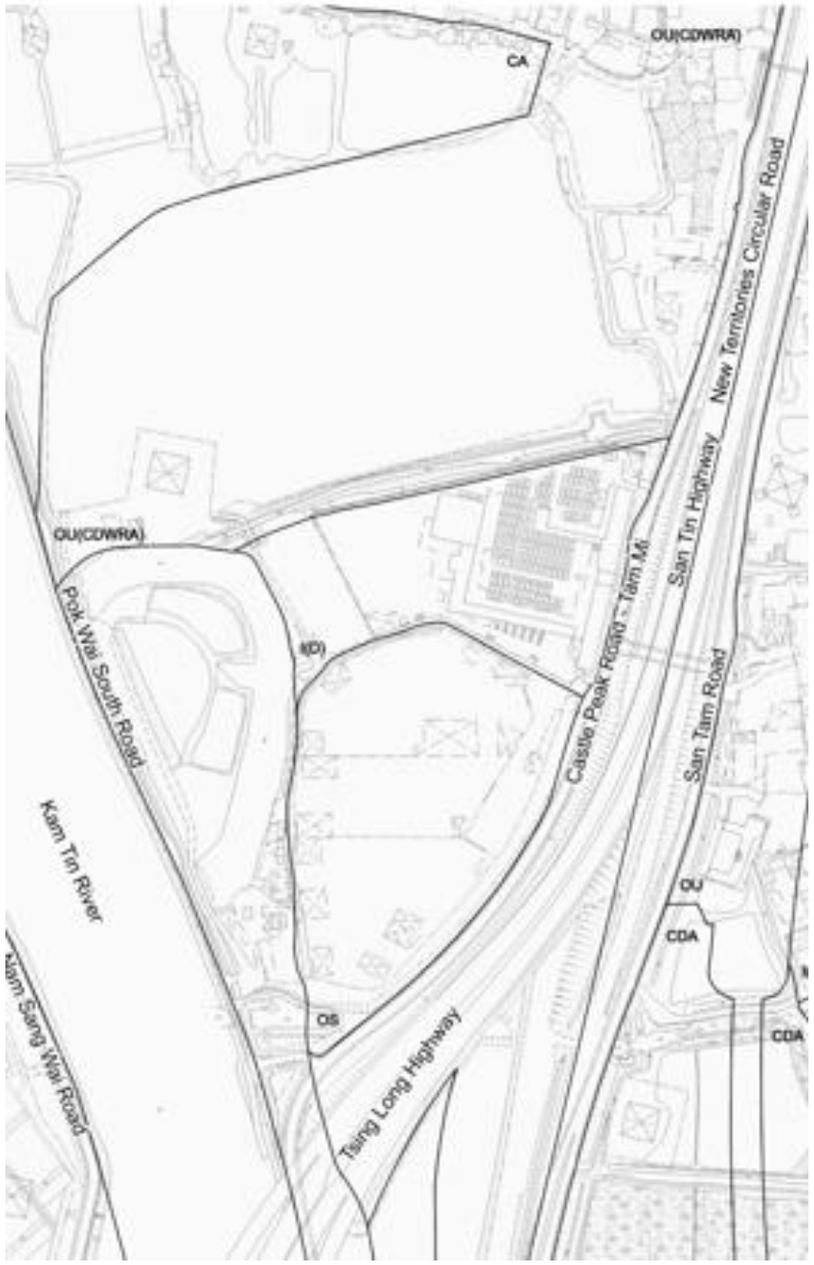
"OU (Industrial Use)" ("OU(I)")

The planning intention of this zone is primarily to provide land for industrial uses that cannot be accommodated in conventional flatted factories due to extensive land and/or high ceiling requirements. It is also intended for the relocation and redevelopment of existing informal industrial uses and an existing soy sauce factory at Castle Peak Road – Tam Mi Section to south-west of Mo Fan Heung, which are operated in workshop premises in rural area, to properly design permanent industrial buildings.

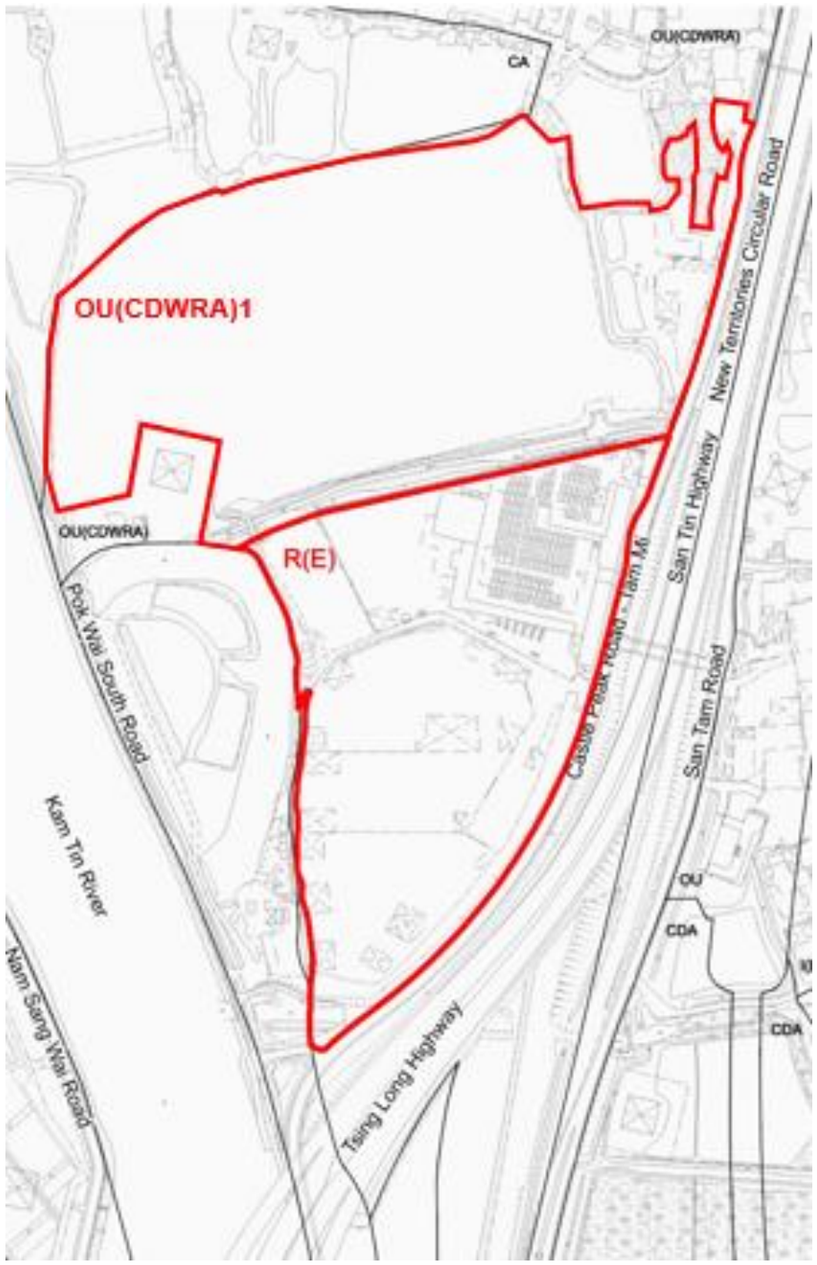
The maximum non-domestic GFA of 13,700m^2 and maximum building height of 15mPD are for redevelopment of an existing soy sauce factory at Castle Peak Road – Tam Mi Section to south-west of Mo Fan Heung. In order to facilitate operation, the relocated soy sauce factory will have a high ceiling requirements due to its special industrial nature, which about 7,300m^2 of the floor area will have a high headroom of about 8m and about 6,400m^2 of the floor area will have a headroom of about 5m. The factory will include manufacturing and food processing factory / workshop of soy, sauce, preserve fruits or vegetables or Chinese sweetmeats. No domestic buildings shall be erected thereon except ancillary premises that the District Commissioner, New Territories (Lands Department) may consider reasonable for accommodating staff and workers employed on the premises.

Summary

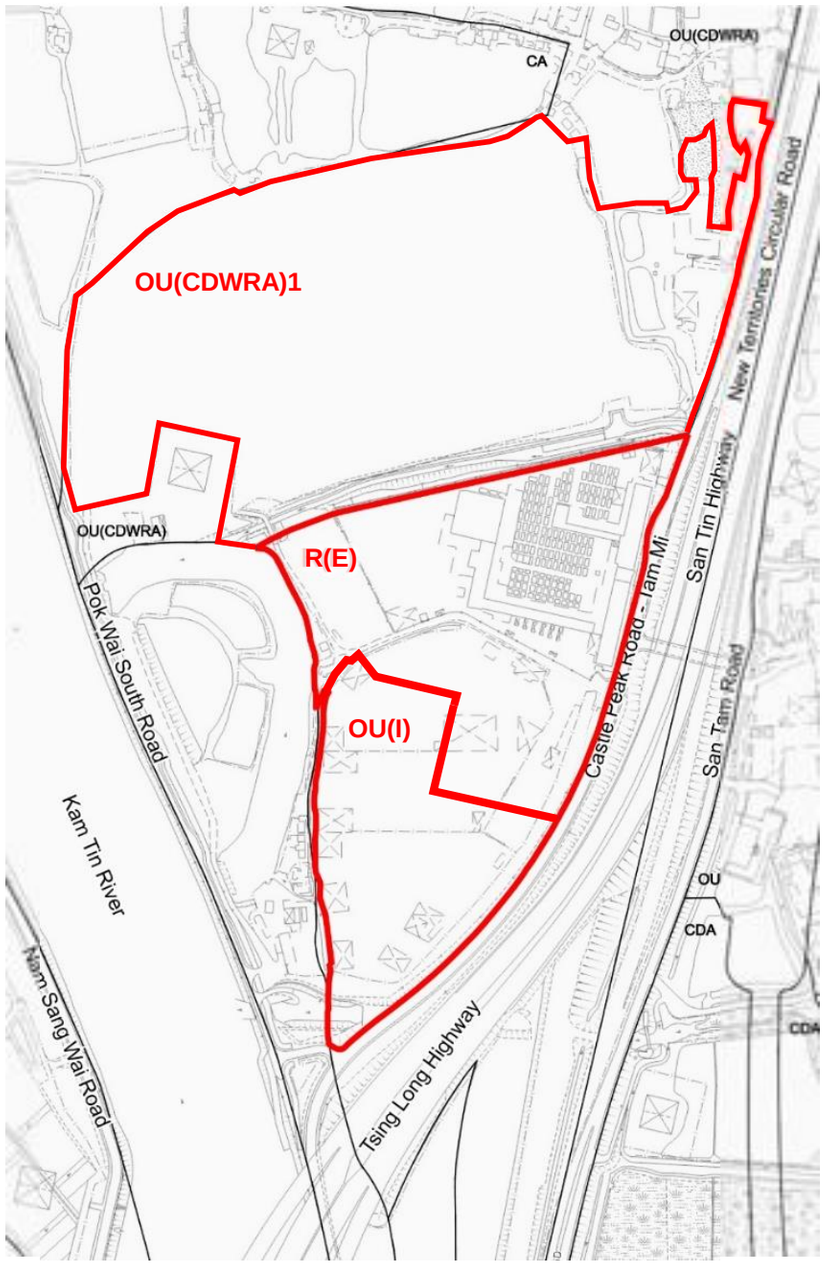
EXISTING OZP



SUBMITTED VERSION



ALTERNATIVE SCENARIO (NOV 2024)



Previous planning Applications covering the Application Site

Approved Applications

No.	Application No.	Use(s)/Development(s)	Date of Consideration (RNTPC/TPB)
1.	A/YL-NSW/2	Proposed Container Storage Yard	30.12.1994 by TPB (5 years*)
2.	A/YL-NSW/70	Temporary Container Storage Yard for a Period of 5 Years	28.1.2000 by RNTPC
3.	A/YL-NSW/158	Proposed Container Storage Yard	17.6.2005 by TPB (5 years)
4.	A/YL-NSW/194	Renewal of Planning Approval for Temporary Container Storage Yard for a Period of 5 Years	12.2.2010 by RNTPC
5.	A/YL-NSW/234	Temporary Container Storage Yard for a Period of 5 Yeras	6.2.2015 by RNTPC
6.	Y/YL-NSW/3	To rezone the site from "Open Storage" to "Commercial"	18.3.2016 by RNTPC
7.	A/YL-NSW/276	Temporary Container Storage Yard for a Period of 5 Years	20.3.2020 by RNTPC

Notes:
* The application on permanent basis was rejected by the Board on review but was granted approval to extend the validity of the planning permission on temporary basis from 3 years to 5 years in view of the need for the applicant to comply with the approval conditions and to maintain the viability of the proposed development.

Rejected Applications

No.	Application No.	Use(s)/Development(s)	Date of Consideration (RNTPC/TPB)	Rejection Reason(s)
1.	A/DPA/YL-NSW/18	Proposed Container Storage Yard	13.5.1994 Rejected by TPB	(1) to (3)
2.	Z/YL-NSW/5	To rezone the site from "Open Storage" to "Other Specified Uses" annotated "Comprehensive Residential Development to include Wetland Restoration Area"	15.2.2003 Rejected by RNTPC	(4) to (8)
3.	A/YL-NSW/183	Proposed Temporary Lard Factory for a Period of 3 Years	1.8.2008 Rejected by RNTPC	(4) and (9)

Rejection Reason(s):

(1) The proposed development would be affected by the imminent implementation of the proposed Route 3 (Country Park Section) project.

(2) Insufficient information had been included in the submission to demonstrate that the proposed development would not have adverse operational noise impacts on the nearby settlements and the proposed mitigation measures were insufficient to minimize such impacts.

(3) The proposed development would be affected by the implementation of the proposed Main Drainage Channels of Yuen Long and Kam Tin Stage I, Phase 2.

(4) The rezoning request/proposed development was not in line with the then TPB-PG No. 12B in that there was insufficient information to demonstrate that the proposed development would not have negative impacts on the ecological value of the surrounding areas.

(5) There was insufficient information to demonstrate that the proposed development would not result in industrial/residential interface problem with the adjoining industrial development.

(6) There was insufficient information to demonstrate that the proposed development would not result in adverse sewerage impact on the surrounding areas.

(7) There was insufficient information to justify the deviation of the BH height restriction stipulated under the then "OU(CDWRA)" zone, i.e. "maximum 6 storeys including 1 storey of carport".

(8) Approval of the rezoning request would set an undesirable precedent and attract similar applications for relaxation of BH restrictions for the area, the cumulative impacts of which would have adverse visual implications to the area.

(9) There was insufficient information to demonstrate that the proposed development would not have adverse ecological, environmental, sewage and drainage impacts on the surrounding areas.

Government Departments' Detailed Comments

1. Comments of the Commissioner for Transport (C for T):

The following requirements should be imposed to the planning application:

(a) The submission of a consolidated Traffic and Transport Impact Assessment (TIA).

(b) The design and provision of vehicular access and car parking and loading / unloading facilities for the proposed development.

(c) The design and implementation of road and junction improvement works, as proposed by the applicant.

(d) More bicycle parking space towards a ratio of 1 space per 7.5 flats to be considered.

(e) A design and implementation of the proposed pedestrian and bicycle subway (as shown in Figure 2.8 of the TIA) as proposed by the applicant.

(f) In the case of programme mis-match of the development and Sha Po Public Housing Development, the design and implementation of the proposed improvement works by the applicant, including but not limited to Section 4.7 of TIA.

(g) The proposed road layout shall be coordinated with interfacing projects.

2. Comments of the Director of Environmental Protection (DEP):

The fringe of the application site (the Site) falls within the boundary of Deep Bay Buffer Zone 2. The applicant shall double check and if affirmative, the proposed residential development at the Site will constitute a designated project under Item P.1, Schedule 2 of the Environmental Impact Assessment Ordinance (EIAO). An environmental permit under the EIAO is required before the construction and operation of the proposed residential development

Detailed comments on the Sewerage Impact Assessment

1. Appendix 3: Please ensure all the relevant notes are marked on the calculation of item "Retail F&B GFA".

2. Appendix 5: Please check the calculation of the total DWF of Light Public Housing and revise relevant parts of the report where necessary

3. Comments of the Secretary for Education:

Provision of Kindergarten (KG)

(a) While KGs in Hong Kong are privately run and the provision of KG places is market driven all along, taking into account the existing provision of KG in the vicinity, there may be scope to allow flexibility for better utilisation of the planned KG premises for alternative gainful uses to meet the more pressing demands for other community services, if need be.

(b) Regarding an 8-classroom KG planned in the captioned site, her comments/ concerns for matters regarding Schedule of Accommodation, GFA and parking and loading/unloading spaces for the proposed KG as below for reference/ consideration.

Schedule of Accommodation (SoA) and Gross Floor Area (GFA) for a 6-classroom KG

(c) Please be informed that the "SoA for KG premises" has been revised to improve the learning environment by increasing the indoor floor area for each student by 20%. The revised recommended SoA for a 6-classroom KG has come into effect from October 2017 which is recommended for reserving space in developing new KGs as far as practicable, and is available for reference in Appendix 3 of the "Operation Manual for Pre-primary Institutions" (OM). We wish to point out that the total area for all items excluding toilet and outdoor play area as stated in the revised SoA for a 6-classroom KG is 551 square metres, and we trust that the toilet and sanitary facilities for students and staff should be adequately provided and outdoor play area should be provided whenever possible in the proposed KG. For your reference, for some KG premises having marked in GIC sites, the GFA for 6-classroom KG is approximate 900 square metres.

(d) As for a KG with more than 6 classrooms which targets to accommodate greater number of students and school staff, the revised SoA for 6 classrooms may not fully meet the needs of more students and teaching staff. Under such situation, you may consider making adjustment to increase the indoor areas (e.g. multi-purpose area/room, small group teaching rooms, etc.) as far as practicable. Moreover, you may also consider adjusting the numbers and/or size for the items where deemed necessary (e.g. reasonable provision of general facilities, such as Staff Office, Administrative Office, General Store, Kitchen, Laundry and Toilet etc.) to cater for the greater number of teaching staff and students as far as practicable

Safety concerns on L/UL spaces for KG school buses

(e) While parking and L/UL requirements for KG school buses are beyond our Bureau's purview, the developer concerned may refer to the Table 11, Section 2 of Chapter 8 "Internal Transport Facilities" of the HKPSG for relevant requirements as necessary. The developer is also advised to note the following safety concerns on L/UL space in respect of the KG students' use:

(i) designated L/UL period for KG school buses so as to avoid possible danger to KG students owing to the clash in using the space with other users; and

(ii) the safety of KG students walking between the L/UL spaces to the KG premises should be ensured at all time.

(f) Meanwhile, the developer should ascertain the premises for the proposed KG can meet the various requirements laid down in:

(i) the Education Ordinance, Education Regulations and relevant statutory requirements; and

(ii) "Operation Manual for Pre-primary Instiutions"
Relevant link: https://www.edb.gov.hk/attachment/en/edu-system/preprimary-kindergarten/about-preprimary-kindergarten/Operation_Manual_eng.pdf

4. Comments of the Director of Chief Engineer/Construction, Water Supplies Department (CE/C, WSD):

Detailed comments on the WSIA

Figure 4 – The 150mm dia. water main for flushing water supply to the "R(E)" site could source from the existing 300mm dia. fresh water main crossing San Tin Highway instead of from the existing 700mm dia. fresh water main on the east bound of San Tin Highway.

5. Comments of the Director of Electrical and Mechanical Services (DEMS)

Electricity Safety

(a) in the interests of public safety and ensuring the continuity of electricity supply, the parties concerned with planning, designing, organising and supervising any activity near the underground cable or overhead line under the application should approach the electricity supplier (i.e. CLP Power) for the requisition of cable plans (and overhead line alignment drawings, where applicable) to find out whether there is any underground cable and/or overhead line within and/or in the vicinity of the concerned site. They should also be reminded to observe the Electricity Supply Lines (Protection) Regulation and the "Code of Practice on Working near Electricity Supply Lines" established under the Regulation when carrying out works in the vicinity of the electricity supply lines.

Town Gas Safety

(b) The project proponent is required to observe the requirement of the Electrical and Mechanical Services Department's "Guidance Note on Quantitative Risk

Assessment (QRA) Study for High Pressure Town Gas Installations in Hong Kong" for carrying out the QRA that can be downloaded via the following link:

https://www.emsd.gov.hk/en/gas_safety/publications/guidance_notes/index.html

(c) The project proponent should liaise with The Hong Kong and China Gas Company Limited in respect of the exact locations of the existing and planned gas pipes/gas installations in the vicinity to the Site and any required minimum set back distance away from them during the planning, design and construction stages of the proposed development.

6. Comments of the Project Manager (West), Civil Engineering and Development Department (PM(W), CEDD)

Apart from Hung Shui Kiu/Ha Tsuen New Development Area and Yuen Long South Development, there are already numerous potential housing sites in Yung Long being or to be studied by CEDD. The accumulative capacity of various infrastructures, in particular traffic, water supply and sewage treatment infrastructures, shall be carefully addressed and agreed by the relevant departments to confirm the technical feasibility of the development under the current application.

7. Comments of the Director of Food and Environmental Hygiene (DFEH):

(a) No Food and Environmental Hygiene Department's (FEHD) facilities will be affected.

(b) Proper licence/permit issued by his department is required if there is any food business/catering service/activities regulated by the DFEH under the Public Health and Municipal Services Ordinance (Cap.132) and other relevant legislation for the public. Under the Food Business Regulation, Cap.132X, a food business licence is required for the operation of the relevant type of food business listed in the Regulation (e.g. a restaurant, a refreshment kiosk, etc.). The application for licence, if acceptable by FEHD, will be referred to relevant government departments such as the Buildings Department, Fire Services Department and Planning Department for comment. If there is no objection from the departments concerned, a letter of requirements will be issued to the applicant for compliance and the licence will be issued upon compliance of all the requirements.

(c) Depending on the mode of operation, generally there are three types of food business licence/ permit that the operator of shop and services may apply for under the Food Business Regulation (the Regulation):

(i) if food is sold to customers for consumption on the premises, a restaurant licence should be obtained;

(ii) if food is only prepared for sale for consumption off the premises, a food factory licence should be obtained;

(iii) if fresh, chilled or frozen beef, mutton, pork, reptiles (including live snake), fish (including live fish) and poultry is sold, a fresh provision shop licence should be obtained.

(d) For the operation of refreshment kiosks, under the Food Business Regulation, Cap. 132X, a Food Factory Licence must be obtained from this department for food business which involves the preparation of food for sale for human consumption off the premises before commencement of such business. If milk, frozen confections, non-bottled drinks, cut fruit etc. are to be sold without preparation of other kind of food, relevant restricted food permits should be obtained.

(e) The operation of the eating place must not cause any environmental nuisance to the surrounding. The refuse generated by the proposed eating place are regarded as trade refuse. The management or owner of the site is responsible for its removal and disposal at their expenses. The operation of any business should not cause any obstruction or environmental nuisance in the vicinity.

(f) proper licence issued by his department is required if related place of entertainment is involved. Any person who desires to keep or use any place of public entertainment for example a theatre and cinema or a place, building, erection or structure, whether temporary or permanent, on one occasion or more, capable of accommodating the public presenting or carrying on public entertainment within Places of Public entertainment (PPE) Ordinance (Cap. 172) and its subsidiary legislation, such as a concert, opera, ballet, stage performance or other musical, dramatic or theatrical entertainment, cinematograph or laser projection display or an amusement ride and mechanical device which is designed for amusement, a Place of Public Entertainment Licence (or Temporary Place of Public Entertainment Licence) should be obtained from FEHD whatever the general public is admitted with or without payment.

(g) there should be no encroachment on the public place and no environmental nuisance should be generated to the surroundings. Its state should not be a nuisance or injurious or dangerous to health and surrounding environment. Also, for any waste generated from such activities/operation, the applicant should arrange disposal properly at their own expenses.

(h) If FEHD is requested to take up management responsibility of new facilities (e.g. public toilets and refuse collection points), FEHD should be separately consulted. Prior consent from FEHD must be obtained and sufficient amount of recurrent cost may have to be provided to us.

(i) If provision of cleansing service for new roads, streets, cycle tracks, footpaths, paved areas etc, is required, FEHD should be separately consulted. Prior

consent from FEHD must be obtained and sufficient amount of recurrent cost may have to be provided to us.

(j) If domestic waste collection service of FEHD is required in future, prior comments from this Department on the waste collection plan, including the accessibility and maneuverability of RCV to RCP, should be sought.

8. Comments of the Leisure and Cultural Services (DLCS):

(a) If trees in the concerned area will be affected, the applicant should observe DEVB TC(W) No. 4/2020 on tree preservation and compensate the greenery loss due to the proposed development.

(b) If there are any venues and roadside amenity areas under the purview of Leisure and Cultural Services Department (LCSD) affected, the applicant should advise LCSD first.

(c) If the roadside amenity areas is inevitably be affected, the applicant should act in accordance with the prevailing and relevant guidelines and technical circulars and seek prior consent from LCSD in early planning stage.

為配合北部都會區最新策略性規劃框架，以及可以紓緩目前房屋短缺問題，擬議建中密度房屋，中密度房屋對環境及設計對該區的規劃有其優點，例如採用階梯式建築方法，盡量減低環境影響，而且計劃對自然生態沒有嚴重影響，這可以提升居住環境，所以贊成以上發展項目。

支持 Y/YL-NSW/9：

一. 項目地盤荒廢多年，浪費土地資源

二. 發展可提供三千多伙單位供應。
總綫房屋供應只是所產生問題！

三. 基建提供不同就業機會，對經濟有利。

我非常支持該項目，
在當區發展中密度房屋建設適合當區的土地用途和密度。帶動社區就業機會，提供更多就業機會給港人。
項目的配套非常完善，包括建商場，可解決區內購物設施不足的問題。

我支持以上項目。
因發展項目可配合政府政策配合北部都會區
最新的策略性規劃框架，使更多港人居住北部
同時可以通過已規劃的北環線所增強的基
礎設施能力，釋放申請地點的發展潛力。
基于上述，望城規會审批通過。

本人居於元朗區，對此規劃申請很同意。

元朗市中心已經太擁迫，而此申請包含了商場設施，既可以為該區市民提供日常生活所需，也可以避免為元朗市中心增加添擁力。一舉兩得。

而且，將來的北環線車站會位於附近，也很利市民出入。

項目發展好處：-
- 增加房屋供應，提供良好環境，美化當區.
- 由荒地引起的問題，得以解決，增加土地供應，
- 建築設計方面，以中密度及階梯式建築物設計增加通風，俱環保意識及元素.
- 而且配套方面有商場及食店，提供生活所需，
- 不會对元朗市中心造成壓力.

所以支持上述項目.

我是新界居民，我支持北部都會區最新規劃！
因為發展可以紓緩目前房屋短缺問題。擬議建3,115住宅單位、
平均單位400多平方尺，交通方便，將來附近有北環線的鐵路站，計劃
對自然生態，沒有嚴重影響。促進社區就業，提高本區生活質素。
該區的居民便不用跨區上班，亦能減少交通擠塞的問題，所
以我同意Y/YL-NSW/9規劃！

正文府房策是以增加房屋供應，以上項目配合政府正策，提供近三千的伙。而且以中型發展非常合適，因將來西北主要集約，可以盛載更多人口，而且充份只會浪費主有業土地，所以我十分支持。

是次發展商接近機鐵路民的項目，鄰近元朗市中心使日後入住的三千多個家庭，無論在交通、民生、購物等日常所需都不需為元朗中心構成任何壓力！（這點是十分重要的用立通配套完備—將來北環線的落成將為當區市民帶來極大的方便。這一連串的北環線基礎設施，若必能增強該區的運輸潛力。這一切的發展，當能配合北部都會區最新的策略性規劃框架，完備了都會區的一切所需而400多子多呎的中小型單位細貨，亦是港人最切合的單位種類！再者，由新地引發的種種問題如污水接收及蚊蟲等都可以解決！祈望政府能快點落實批核，讓港人可以多一個安居的選擇吧！謝！

小市民

我支持發展南生圍的住宅項目（Y/YL-NSW/9）

本港房屋供不應求，政府應積極推動房屋政策發展，盡量發展已有土地而非一直填海！南生圍環境優美，有宜居之地，而且未來北環線鐵路亦途經南生圍，若發展住宅必然能提升北環線使用率，亦方便當地居民！

期望政府加快審批，推出更多中小型住宅，助港人盡快上車！

本人非常支持上述規劃申請，因為興建3,100多個平均為400多平方尺的住宅單位，而中小型是最切合港人的需要，並能配合政府增加房屋供應的政策，符合地區規劃的最新情況。鑒因申請地盤原有的規劃意向，有助釋放位於濕地緩衝區內的土地的發展潛力。

本人支持上述規劃申請，因商規劃能提供3000多個中密度平均400多平方尺的中小型住宅單位，是最切合港人的需要，亦能舒緩現時房屋嚴重短缺的問題。

而中密度的房屋建設，是最適合該區的土地用途和密度，亦和附近的土地規劃互相協調。

Details of the Comment (use separate sheet if necessary)

我十分贊成 Y/YL-NSW/9 這個城規項目。香港房屋供應短缺，所以政府理應批準這類能增加房屋供應，又能起到穩定樓價的綜合發展住宅項目。因應新的發展會減少原區內的荒地，減少蚊蟲對區內居民的影響，增加優美的綠化環境，提高區內的生活質數，并且還能提供更多的就業機會，包括建築、零售、物業管理等多方面，原區的居民可減少舟車勞頓之苦，獲得更多原區工作的機會。

支持是次規劃申請地點改劃為住宅地帶。
地點位於北部都會區內，附近未來會興建北環線鐵路，
若能興建房屋住宅，不但能配合政府的未來發展政策，
亦能提供更多住宅單位以紓緩香港長期房屋短缺的
問題。
此外，是次規劃申請地點本為已整頓開發之土地，而非
自然景觀／未開發之原始生態地，故計劃對自然生態
影響甚低。

支持這項申請，原因如下：

1. 如果改建為住宅的話，這裏交通十分方便，現在鄰近新田公路，將來更有附近有北環線的鐵路站，方便居民出入。

2. 由於如果住宅落成，將有商場和購物設施的配套，這樣可以促進區內的就業機會。

3. 這個項目擬興建中小型單位，十分切合港人「小家庭」的需求。

我支持該項目發展。
原因如下：
① 現時香港房屋需求大，~~[illegible]~~該項目擬建3115個住宅單位，平均每一個400多平方尺是大型住宅項目。可以緩解港人對房屋的需求。
② 環境優美，對面南山圍風景靚，在此處可以觀望深圳市區。
③ 項目交通便利，靠近新田公路，以后附近有北環線的鐵路站，方便該區居民日常出行。

本人支持此擬議發展項目，由工業地帶、露天貯物及道路地帶改劃為住宅地帶，作綜合發展用途。特區政府早前發布《北部都會區發展策略》，為現時以效區特色為主的新界東北部帶來都市化的轉變；擬議的發展正正能配合北部都會區最新的策略性規劃框架，北部都會區將會成為未來經濟和就業重要地區，因此不斷增長的人口對住宅需求十分大，擬議的發展能提供更多住宅去解決所需。

擬議項目建3115住宅單位，平均每單位400多平方尺，能滿足到一般家庭實際需要，以及負擔能力，因此此發展能為該區帶來正面的影響。

我十分同意和支持這次的申請。首先，這個計劃會興建3115住宅單位，而且每個單位面積有平均四百多呎，十分適合一些剛結婚想置業的小家庭，舒緩房屋短缺的問題。
其次，由於這個計劃地點是遠離元朗市中心，所以人口增長也不會對該區造成壓力。
最後，這個計劃亦會包括興建商場配套，可解決區內購物設施不足的問題。

項目可以透過已規劃的北環線所增設的基礎設施能力，釋放申請地點的發展潛力，提高密度與附近的土地規劃互相協調，而符合最近政府的相關政策，可以有效釋放位於「濕地後衛區」內的土地發展潛力，所以支持此發展

本人非常支持上述規劃申請，因為興建3100多個平均400多平方呎的住宅單位，最切合港人對中小型單位的居住需要，規劃紓緩了目前嚴重的房屋短缺問題，而且樓宇的密度和鄰近的土地規劃協調，對該區的自然生態不造成嚴重破壞及影響。

我是一名元朗區的居民，很同意以上申請。
有新的住宅，就會吸引經濟活動，從而便會有就業機會。
讓區內市民可以就近工作，不用跨區工作。

而且，已有商場等設施，亦可解決市民日常所需。

另一方面，已位於將來的北環線附近，居民日常出入將會很方便。

我每逢假日，都會到 項目 附近一帶，
因那近濕地，環境十分優美，而
且元朗市中心比較遠，人口增長不會有
太大壓力對於元朗市中心，而且 項目 配套
亦好，有商場，海之居民日常所需，交通
也十分方便，因近知道有關將來有北環線，
所以非十分贊同。

建議政府通過 Y/YL-NSW/9 之申請項目.

選址未來可提供超過 3000 伙中小型的住宅單位，令更多市民可以負擔切合大眾的需要。項目包括商場配套，既可以滿足未來住客的購物需求，同時亦可促進社區就業，符合政府未來的發展重心，北部都會區及職住平衡的發展藍圖。

希望申請能盡快通過並落實建設，以推出更多房屋供應滿足港人的住屋需求。

是次要擬議發展區的土地多個住宅單位，務能真正解決到香港青年的住屋！尤其交通極為方便，對出就是新的北環線鐵路站亦會未不久將來興建，使香港的市民可以便捷地往來各區，這是十分令人欣喜的！加上項目設計採用塔樓式建築物高層興建，使外觀十分和諧一致，而400呎以下單位亦為港人最歡的中小型樓式，希望此項目發展時，能夠動員多於此項計劃，使每個家庭，包括有質學生，亦能有自己小小窩的夢想，希望政府加快落實此物業項目早日修成，讓市民快點得到安穩好日子！

作為新界居民是原意配合北部都會區
最新的策略性規劃框架，今次的申請項
目是在基建、工程、環境、視線及園境各方面均
不會造成負面影響，亦對自然生態環境沒有
嚴重影響。

我十分支持該申請的。

我支持擬議發展之改劃申請，
申請可有效釋放位於濕地緩衝區之內的土地
發展潛力，將工業用地轉化為住宅用地，
以紓緩房屋短缺的問題，
同時增加區內的就業機會，效果正面。

-擬議的發展符合政府最近的政策，可以釋放「綠地緩衝區」內的土地發展潛力。

-改劃為專住宅能紓緩目前嚴峻的房屋供應問題。

-規劃之地點鄰近新田公路，鄰來附近更有北環線的鐵路站，令交通更方便，使項目更加吸引。

所以我贊成這項擬議之更改。

支持以上項目發展原因：
- 配合政府政策，有效釋放濕地緩衝區，增加土地供應。
- 採用優質的設計方案，例如階梯式建築物高度不同影響環境，能使空氣流通。
- 中密度屋苑建設，適合當區土地用途。
- 交通方面，鄰近新田公路，附近地鐵有北環線鐵路，方便居民使用。
- 建設設計對自然生態沒有嚴重影響

本人是新界居民，十分支持上述的申請。因為申請項目符合了最近政府的相關政策，可以有效釋放位於濕地緩衝區內的土地的發展潛力；亦配合了北部都會區最新的策略性規劃框架。

对就業机会和社區發展都是十分正面的。

作為一名元朗區民，本人很同意此申請，因為元的發展密度只是中密度與周圍的環境尚算協調。而且，此規劃並沒有對周圍的環境、視覺等各種帶來負面的影響，~~無該樂同~~最重要者，元讓位於濕地緩衝區的土地得到釋放，善加利用。

北數都會區特區成為未來的經濟和就業的重要樞紐，都會區的發展更必將來不斷增長的就業人口，因此十分需要住宅發展去配合住屋需求，本擬議發展提供3115個住宅單位，平均每個400多平方尺，適合家庭居住，可舒緩將來不斷增加人口的住屋需求。

另外，本講地點位於深水灣道與的邊陲，遠離元朗市中心，於此處發展住宅項目，人口增長都不會對元朗市中心造成壓力。

綜合以上兩點，本人支持擬議發展項目。

本人十分認同此個擬議的更改，理由是：

- 擬議將興建3115個住宅單位，平均每個400多平方呎，有助紓緩香港迫切的房屋供應短缺問題。
- 項目對附近的自然生態環境沒有重大的影響。
- 也配合了政府的增加房屋供應政策，符合地區規劃的最新情況，加強了申請地盤原有的規劃意向。

我贊成這個建議申請之修改，理由是：

(i) 項目預期能提供3115個住宅單位，可幫助解決目前嚴重的房屋供應短缺的問題。
(ii) 因項目遠離元朗市中心，所造成的人口增加不會對元朗市中心造成很大的壓力。
(iii) 項目配合政府的增加房屋供應政策，符合地區規劃的最新情況，並回申請地盤的原來規劃的意向。

本人贊成Y/YL-NSW/9城規項目。現時香港房屋供應短缺，供不應求，而這個城規項目以中密度房屋建設適合該區的土地用途和密度，採用階梯式建築物高度，設計上不會對基建、工程、環境、視覺及風境各方面造成負面影響，能為本港提供3,115個住宅單位，平均每個單位約400多平方尺，更切合真正用家的需求，回應市民大眾對房屋的急切需求。

香港北部都會區之發展，交通及居住方面的發展十分重要，鄰近申請地點已規劃北環線，將來的交通網絡定必逐漸完善，此處將來會提供很多就業機會，因此於此處建置個人住宅就業，滿足住宅需求。
擬就申請供應中小型單位以合港人需要。另外 中密度高度建設適合當區的土地用途和密度。

支持 Y/YL-NSW/9 的申請，原因如下：

① 香港住屋問題存在已久，政府現有意以發展北部都會區提升住宅供應量。此申請項目正能為當區提供超過 3,000 伙單位，有效紓緩住宅供應不足的問題。

② 地點鄰近新田公路，未來亦將會設立北環線與東中一個鐵路站，具有發展成商住用地的極大潛力，香港需要更多商業合適的土地規劃。

Details of the Comment :

本人支持在香港元朗凹頭的發展生宅項目，並認為該項目對於當區的經濟發展、就業促進及居民生活質素提升均有積極作用。以下為本人支持該項目的理由：

首先，建築發展可有效促進當地經濟增長。住宅項目的興建不僅可直接帶動建築相關行業的發展，還能創造大量就業機會，從而提高居民的收入水平。尤其是物業管理和配套設施的運營，將需要大量人手，為社區帶來長期穩定的就業機會，進一步促進社區的繁榮。

其次，該項目的選址在元朗凹頭，得益於已規劃的北環線基礎設施能力的增強，該地點的發展潛力得以釋放。中密度的房屋建設亦符合當區的土地用途及現有的發展密度，不會對周邊環境及基礎設施造成負擔。此外，項目還將配套商場設施，有助解決當地購物設施不足的問題，為居民提供便利的生活條件。

交通方面，該地段鄰近新田公路，且將來北環線的鐵路站亦將在附近，方便居民出行，有助進一步吸引人口流入。項目擬建的3,115個住宅單位，每個單位平均面積400-500多平方尺，符合當前市場對中小型住宅單位的需求，亦與附近的土地規劃協調一致，避免破壞整體規劃的平衡。

該項目經過嚴謹的環境評估，結果顯示對自然生態不會造成嚴重影響，且在基建、工程、環境及園境等方面不會有負面影響。因此，該項目不僅能提升居民的生活品質，還能與政府增加房屋供應的政策目標保持一致。

意見詳情
Details of the Comment :

I am writing to express my support for the proposed residential development project in this part of Yuen Long. Below are the reasons for my support:

First and foremost, in terms of transportation, the location is near San Tin Highway, and a future railway station on the Northern Link will be in close proximity, making the area highly accessible. The project plans to build about 3,100 flats, with an average unit size of over 400-500 square feet, catering to the current demand for small to medium-sized units. The development density is in line with the surrounding land use, maintaining consistency in local planning.

Furthermore, the project is ideally located in Au Tau, Yuen Long, which stands to benefit from the improved infrastructure capacity provided by the planned Northern Link. This will unlock the development potential of the site. The medium-density housing design is well-suited to the area's current land use and density, ensuring that it blends harmoniously with the surrounding developments. In addition, the project includes a shopping mall, addressing the current lack of retail facilities in the area and enhancing residents' convenience.

At last but not the least, construction developments play a key role in driving economic growth. The building of residential units will not only stimulate the construction sector but also create a substantial number of jobs, boosting local employment. In particular, property management and the operation of supporting facilities will require a large workforce, providing long-term employment opportunities and further fostering community prosperity.

我贊同該規劃的更改，因為：

項目住宅採用階梯式建築發展高度，令採光及空氣流通更好，增加規劃的增益。

項目鄰近新田公路，將來附近更有北環線鐵路站，使居民交通更便利。

項目在基建、環境、工程、視覺及園境各個方面都沒有重大負面影響。

為配合政府政策，此方案提供中密度房屋建設，適合當區的土地用途，增加該區房屋供應，每建3千多個單位，平均400方平方尺，這是適合房屋大小的面積，小型家庭會得舒適的應求，而且在該區興建房屋能提供及促進社區就業，促進經濟增長，所以支持以上方案。

希望政府盡快通過申請，加快興建並推出更多中小型住宅單位，緩和港人住房短缺嚴重問題。選址既鄰近北環線未來的鐵路站，又靠近新田公路，是為可達性高的珍貴土地。另外，選址位於政府發展的北部都會區範圍內，與元朗市中心有段距離，此項目並不會造成元朗市中心人口再增長而產生壓力。

擬議發展善用深地綫鄰區的土地資源去發展廉屋及私營的土地資源地盡其用，符合政府土地短缺指標。

擬建約15住宅單位，當中小型單位（大約400多天），切合很多小家庭的需求。

該項目位處元朗比例低人口密度的區域，不會給元朗市中心造成太大的交通壓力及影響。

因此，如發展確能為社區帶來正面的影響。

此項目將工業地帶改劃為住宅地帶是適切的！

由於擬議發展與附近的建築相類似，提供中密度的房屋，在視覺上不會造成不良的效果。此發展地點位於政府大力發展的北部都會區內，交通配套及其他生活配套將會有周全的發展，適合市民居住。發展項目已將对生態影響的因素低到最低，对自然生態沒有太傷害。

贊成這項申請。

一、這個住宅項目所提供的住宅是會採用階梯式建築物高度，這樣便不會阻擋附近其他居民的景觀，更可令空氣流通。

二、這項目的設施密度與附近的土地使用互相協調，更不會造成當地的生態環境破壞。

三、它提供的三千多個住宅單位部分400多尺的中小型單位，而此種尺寸的單位正是港人最需求的。

綜合以上原因，請盡快審批此項目！

以上 Y/YL-NSW/9 的規劃申請，本人十分支持。因香港現時土地供應不足，如此項目能興建 3100 多伙中小型住宅單位，將有助增加住房供應量，亦能滿足香港市民對住屋的殷切需求。同時，此項目配以商場設施，為當区居民提供日常日活購物配套，便利居民生活所需，值得支持。

近年香港經濟不景，基建有促進經濟發展，增加 GPD，Y/YL-NSW/9 是基建項目，落成前後會創造不同就業機會。項目有近三千多伙，也以中小型單位，均合港人所需，也近公路和政府的環線車站，十分方便，全力支持。

我是一名居於新界的居民，本人因此十分留意新界發展，我人認為此項申請項目很好，能解決住房需求。此處鄰近南生圍濕地，未免伐失，適合居住。地點現時在新田公路附近，將來必有此新線鐵路站，交通方便。
新發展需要大量人手，可以促进就業，对经济有正面影響。

擬議的項目可促進/增加社區的就業
機會。令該區居民不需遠離區上班。

項目的發展又可以紓緩當前的嚴重
房屋短缺問題，尤其是住宅。

項目又包括興建商場等配套設施，
可紓解區內購物設施不足的問題。

因此我十分贊成這個項目。

我建一個是香港主要基建項目之一，不但有效疏解香港經濟發展帶來的勞力人口就業設施以外，對於香港多達十數萬人口就業不足的問題，此項基建項目絕對是有幫助的。項目事業及非事業相當龐大的以非常之證實此項基建項目令共建立約達三千住宅單位，有400多平方尺，適合一家四口居住，加上香港人口出生率一般為一至兩個小朋友在地點方面，鐵路沿線附近人口較多，容易補新人口需要。從，對來這條北環線的鐵路計，無論設施等都非常之方便，隨之而來經濟場發展相信此項基建是無負利而無一害。

我十分認同擬議之改劃，原因如下：
無論是建築過程中或是落成後都需要大量人手，
例如建築工人及物業管理，能促進就業，改
善該區居民的就業機會。
項目又遠離元朗市中心，所增加的人口
不會對元朗市中心的各項設施造成沉重壓力。

香港面對多方面困境，一定要找方法解決，其中可以用最速去改善使連空缺。
項目不但提供三千多個就業單位供應，增加本港房屋供應，更配合政府房屋政策，加上要配落成前後都要大量人手卸和不同崗位，有助增加新業機會，我十分支持。

我覺得這個申請項目建議發展把現時已不合時宜的「工業」地帶改劃發展房屋項目，更能地盡其用，帶動社區發展，同時又能推動社區就業機會，全區內區外的市民增益不小，值得支持。地點位置不屬於元朗市中心，即使日後居住人口增長，亦不會令元朗區構成不便或壓力。

絕對贊成通過申請項目!!!

未來北環線凹頭站距離申請地點僅約0.5公里，故申請地點是珍貴的發展土地，本項申請可釋放該地的發展潛力。

項目亦符合最近政府的相關政策，有效釋放位於「濕地緩衝區」內的土地發展潛力。

住屋短缺問題亦有望藉項目提供約三千個住宅單位而得以紓緩。

Y/YL-NSW/9 提供近三千多伙單位供應，是大型基建項目，除了增加本港房屋供應和政府房第一致，更是此都重要政策。項目落成前後都需要大量不同人手。落成前要大量建造業工人，落成後要大量物業管理，服務人手，所以我十分支持以上項目。

申請項目將興建11樓住宅樓宇，為區來帶來3,115伙中小型住宅單位，平均每伙單位約400 sq.ft.，符合大多港人的需要，更有助紓緩香港長久住房供應不足的問題。

項目另有預留土地興建商場配套，應付區內住戶的日常消費。更預留約6000 sq.ft.作小學用途，滿足未來區內人口對教育設施的潛在需求。由上述可見，申請項目細心合理，有為香港市民考慮需求，值得支持！

①發展可以紓緩目前房屋短缺問題。
②項目包括建商場配套，解決區內購物設施不足的問題
③建成後有3115個單位供應，平均每個單位400呎平方呎。
希望盡快審批通過。

意見詳情（如有需要，請另頁說明）
Details of the Comment (use separate sheet if necessary)

Y/YL-NSW/19 這個城規申請項目能提供3,115個住宅單位，正正能配合政府政策以增加房屋供應，能符合地區規劃又能夠回申請地盤原有的規劃意向。申請項目避開人口稠密的元朗市中心，所以基本人口增長並不會對元朗市中心造成壓力，反之一個新的住宅發展項目能增加更多的就業機會，受惠的包括建築、零售、物業管理等多方面。基於以上原因本人十分支持，並期望政府能盡快審批。

基建有助改善知使通經濟，項目正是一項基建項目，提供三千多伙，令港人所需以上預算佔400呎為主。當然對於當區來說不同人手。對更大量建築工人，技術人員，及更物業管理，零售服務人員，增加不同人手時就業機會，有以上好處我十分認同！

這個申請符合市民的期望及政府政策及未來發展藍圖，我真心
希望政府能給予大力支持！

選地緩衝區本身具有重要生態功能，通過合理開發和利用，
不僅可以滿足城市的房屋需求，還能維護當地的自然環境，
達至經濟發展與生態保護的雙贏。而此申請既能配合北部
都會區的政府策略性發展藍圖，又達到有效釋放土地的
發展潛力，再者已有完善科學的調查及評估顯示計劃對自然
生態沒有嚴重影響。

Y/YL-NSW/9 此規劃申請，本人十分支持，因它能提供3100多個宅單位，為香港社會提升住屋供應數量，紓緩住屋短缺這社會問題。
另外，透過興建住宅及商場項目，相信能為例如建築業，飲食業、客戶服務及管理行業創造更多工作職位，有助推動社會經濟。同時，配以商場商店這些配套，亦大大便利居民的生活所需！

我同意開生圍是項發展：
1) 能配合北部都會區最新的規劃框架
2) 能增加約3100個合乎中小型家庭的單位
3) 在環境、視覺、園境方面不會太多影響及和周邊環境更集親。
而且建築發展可促進當地的經濟，所以同意發展。

我[redacted]贊同這項擬議之改劃，原因是：

擬議將興建3115個住宅單位，平均每個單位400多平方尺。十分適合今香港一般家庭的人口結構，又可改善香港的住屋供應問題。

不論是建築過程中需要大量建築工人，或是建成後也需要大量人手如物業管理，可促進就業，尤其是現時建築行業或低迷及開工不足。

由工业地带及顯示為「道路」的地方改為住宅地带，我個人是讚成的。
因建筑行业需要聘请很多不同種類的员工，这樣可提供大量就业机会，涵蓋各种專业技能。还有效改善原区的基本設施，能提升住宅质量，奖建学校，医院和交通设施。
雖然位置不是位於元朗市中心，但政府早前已規畫北环線的鐵路站，交通未是十分方便，也因為该位置是靠远離元朗市中心，該項因人口增長应不会对元朗市中心構成壓力。
規劃興建了115住宅单位，平均每个单位500多平方尺，相对較細单位價錢会靠便宜，讓更多人能夠負擔得起，能吸引不同背景的人群，也能滿足单身人仕或小家庭的居住需求，提供整活的居住選擇，所以政府能加快審批，供应中小型单位，切合港人的真正需要。

Details of the Comment (use separate sheet if necessary)

我十分同意Y/YL-NSW/9的項目申請。

1. 如果此地改建為住宅後，會興建一些配套，如商場店舖等。由於這些配套部需要增聘大量人口，這樣便能提供大量就業職位，增加就業機會。

2. 如上一點所說，這裏改建住宅後將會增建一些商場配套設施，這樣能改善區內購物設施不足的問題。

我支持這擬議發展。首先，要將這地段改建為住宅定必需要大量建築業工人。完成後，更需要大量物管人手，這定可提供大量就業機會，刺激本港經濟。

另外，如成功改建住宅，將可為市場上提供3115住宅單位，平均每個單位面積更有400多平方尺，十分適合本港家庭的需求。

由此可見，此項目的推行將能為本港帶來益处，請批出！

本人非常同意是項申請，主要是因為可為本港紓緩高房價的問題。
政府一向積極地建屋，解決市民居住需要，把該地改劃為住宅地帶配合政府的政策，增加房屋供應。
此地鄰近將來的北環線，交通方便。
此申請提供的主要是中小型單位，切合港人需要。

本人支持上述規劃申請，原因如下：

1. 現時建築業因樓市低迷面對挑戰，新項目能促進業界就業，振興經濟；
2. 項目擬建3000多個小型住宅單位，切合港人對住宅的需求，長遠穩定樓價；
3. 項目包括商場配套，能滿足區內居民購物需要；
4. 將來有北環線鐵路站，該區居民出入更便利。

本人支持申請地點由工業地帶改劃為住宅地帶。由於此附近規劃發展北部都會區，因此於北部都會區發展住宅可滿足該區將來的人口的居住需要。另外，發展項目可增加工作机會，促進就業。

申請地點位於「綠化緩衝區」地帶，生態价值不高，不會对自然環境造成重大影響。

所以發展項目是值得支持的。

這個項目的位置十分適合興建大型屋苑， 以配合未來鐵路發展計劃。 因僻近為南生圍，位置環境清優， 空氣清新，很適合居住的首要條件。位置屬於大灣區1小時生活圈範圍內，加上政府已在早前規劃的交通配套-北環線(凹頭站)，來往錦上路連接港島/九龍/新界或北上大灣區也十分方便，位置實屬旺中帶靜的理想居所。 發展商計劃興建3千多伙住宅，單位，絕對能夠舒緩政府現時缺乏土地及住宅的供應問題，屋苑擁有私人會所，單位面積主要以4百多呎為主，適合現時大部份年輕家庭上車機會。

計劃內有大型商場設施，可彌補附近購物店舖的不足及幫助製造大量的就業機會。 這些設施不僅改善居民生活質量，規劃往往帶來社區設施；如公園/學校及社區中心，增強了社區互動。目前位置的倉地若改建為住宅不僅能提升地區的整體吸引力外，還可提高周邊的地價價值。這對經濟，政府稅收及基本設施發展也有正面的影響。

整個規劃設施，可以幫助滿足不斷增長的住屋需求外，還能促進社會經濟及環保等多方面的益處。

將地點改為住宅會帶來一個大型建築項目，而建築項目會涉及到設計、施工、裝修等不同工種，而每一個工種都直接創造大量的工作機會，改善本港的失業率。而建築項目會吸引投資者當住宅項目完成後，會吸引更多投資者投資於住宅區內的不同設施，為當地的經濟注入活力。
而且項目為中小型的單位，更切合小型家庭的需要，加上項目地點不是在元朗市中心，因此會對元朗區成成不良影响。項目更能幫助政府解決房屋不足上有一定幫助，所以個人十分贊成此地改為住宅項目。

本人支持此項發展。

① 政府致力發展北部都會區，此發展能配合政府策略，亦配合政府一直增加高度供應的政策。

② 發展中小型住宅單位符合分支家庭需求，提供多些選擇。

③ 促進當區就業，解決某階層開工不足或失業的問題。

支持 Y/YL-NSW/9：

因項目土地閒置多年，況貴珍貴土地。現符合政策，釋放濕地緩衝區土地建樓，增加土地供應，項目有近三千多個單位。項目因周沒有重大稀有生物，植物，發展不會對自然環境有太大影響，加快落實。

本人了解過這個項目後, 認為絕對讚成這個規劃, 因本人也是居住元朗區, 所以對元朗地段相對十分熟悉. 有關元朗市中心大型屋苑樓價目前已不便宜, 加上香港一直存有土地及房屋嚴重短缺問題, 隨著很多舊樓老化加速, 房屋需求不斷上升. 發展商興建私樓是有助於增加市場上的住屋需求, 若增加多點中低密度的房屋建設, 這樣才讓多點低收入市民或年青人加快入場外, 項目也能幫助社會增加大量就業機會; 無論是建設期間的施工工作, 或是隨後產生的管理及相關服務行業的就業機會. 加上政府在早前已規劃了北環線, 對於凹頭的交通帶來非常方便, 未來對需要到市區工作的人仕或北上也慳了不小時間.
而發展商也能幫助社區提供多點公共設施, 這樣也能提升整體區域的生活便利性和舒適度.
新建的住宅隨了可以改善或優化社區的美觀及環境; 也讓市民的生活質素提高一點.
新建設施應能符合最新的環保規範, 而舊建築可能無法達到現代環保要求, 因此支持新建私樓可減少整個都市的環保負擔.
按這個Y/YL-NSW/9規劃, 可完全配合政府的北部都會區規劃框架, 所以望政府審慎考慮.

本港欠缺土地問題嚴重，把合適土地改變為住宅用地來興建住宅是必要的選擇。而建築發展更能促進經濟，需要聘用大量人手，增加就業機會，型式雙贏局面。
建區住宅能配合北部都會區發展框架，配合附近北環線鐵路站，交通更為方便。住宅單位平均為400多呎兩房戶，切合香港大部份家庭之需求。選址亦對附近的自然生態未有造成大影響。本人極之讚同及希望盡早批准改變土地規劃用途，以配合北部都會區之發展需求。

政府於2029年北環綫落成通後，對於現在落馬洲附近的項目確實互相配合得宜！使當地的交通方便快捷這點配套十分重要！加上當時的三千多個單位，平均每個都有400多呎，這正合小家庭入住。和這個位置亦鄰近元朗市中心車站，故又會對市中心造成任何壓力！和能可使市民的就業率加強。希望政府快點落實這項目！使更多人有更多機會之餘，使市民有多一個又美觀又好環境的住宅選擇，更可使市民由繁華的九龍區經過又限區高住，使所有的民生都平均發展。便者能能盡早加完成！謝謝

我是很贊成此 Y/YL-NSW/9 的項目申請，原因如下：

① 近期香港都有就業不足的問題，如此申請項目獲批准，將會有其他設施配套，例如：商場，餐廳，零售。這樣便會提供大量的就業機會，可舒緩就業不足的問題。

② 區內的配套本來就是不足以滿足居民需求。如此項目落成，增加增加其他配套，可讓區內市民有多些選擇。而且此項目的落成供應更能暫時舒緩房屋短缺的問題。

我支持把申請項目改劃為住宅用途。原因如下：

① 北環線已經有交通帶動到的發展能力和基礎設施，應該多釋放申請地點的土地。
② 這申請計劃沒有對自然生態有嚴重影響
③ 地方發展有包括建商場和道路交通設施，可促進就業

請加快審批，釋放發展潛力。

香港經濟很差，有很多商店，食店都倒閉，市況一片消條，開始有人失業。所以我很支持以上項目，項目是基建項目，會大量聘請人手，落成後，商場屋苑會請不同人手，如物業管理，所以項目發展對本港經有利；加上配合本港樓宇政策，增加供應量，更配合北都發展，我非常支持以上項目。

支持項目申請理由如下：

一、發展符合政府最近的相关政策及未來策略性發展，包括有效釋放「濕地緩衝区」的土地潛力和發展北都提升住宅供應量。

二、申請已進行全面技術評估，確認了計劃對自然生態沒有嚴重影响。在基建、工程、環境、視覺均不會造成負面影响。

意見詳情
Details of the Comment :

Supporting Property Development in Yuen Long, Tam Mei: A Vision for Sustainable Growth

The proposed property development in Yuen Long, Tam Mei, aligns with Hong Kong's strategic planning framework and presents a unique opportunity for growth in the region. This initiative is not only timely but essential for meeting the community's needs while ensuring ecological balance and economic viability.

1. Alignment with Strategic Planning

The development is designed to complement the latest strategic planning framework for the Northern Metropolis. By integrating modern infrastructure and planning principles, it aims to enhance the overall livability and sustainability of the area.

2. Leveraging Enhanced Infrastructure

The project benefits from the planned Northern Link, which significantly boosts the area's infrastructure capabilities. This improvement will unlock the development potential of the site, enabling more efficient transportation and access, ultimately resulting in a more connected community.

3. Suitable Housing Solutions

The proposal includes the construction of mid-density residential units that are well-suited to the land use and density of the region. This approach not only addresses the pressing need for housing but also ensures that the development harmonizes with the existing community fabric.

4. Addressing Local Needs

In addition to residential units, the project incorporates commercial facilities, which will address the current shortage of shopping amenities in the area. This development aims to create a vibrant community hub, enhancing the quality of life for residents.

877

5. Convenient Transportation Access

The location near the San Tin Highway and the future Northern Link Line railway station ensures excellent transportation access. This connectivity will facilitate seamless commuting for residents, making it an attractive option for families and individuals alike.

6. Meeting Community Demand

With plans to construct 3,115 residential units, focusing on medium and small-sized homes, the development directly responds to the community's housing needs. This variety will cater to diverse demographics, including young families and first-time buyers.

7. Harmonizing with Local Planning

The proposed development density is carefully coordinated with nearby land use plans, ensuring that it fits within the broader urban context. This thoughtful integration promotes cohesive growth, contributing to the region's overall development.

8. Minimal Environmental Impact

A thorough assessment confirms that the project will not impose significant negative impacts on the local ecology. Efforts are in place to protect the natural environment, ensuring that development and conservation can coexist.

9. Comprehensive Development Benefits

The project is designed to have no adverse effects on infrastructure, engineering, environmental quality, visual aesthetics, or landscaping. By prioritizing sustainable practices, this initiative aims to enhance the overall appeal of Yuen Long.

10.Supporting Government Initiatives

This development supports the government's policy to increase housing supply and aligns with the Northern Metropolis development plan. By facilitating growth in Yuen Long, it plays a crucial role in addressing the city's housing challenges.

In conclusion, the proposed property development in Yuen Long, Tam Mei, represents a forward-thinking solution that balances ecological integrity, social needs, and economic growth. It is an opportunity to create a thriving community that meets the demands of the present while planning for a sustainable future.

意見詳情（如有需要，請另頁說明）
Details of the Comment (use separate sheet if necessary)

我支持Y/YL-NSW19的申請項目。原因如下：

此項目如成功改為住宅，將會有三千多個住宅單位落成，這些中小型住宅最為適合香港人的住屋需要，尤其是剛新婚的年輕人，可以滿足到他們盡快上車的需求。此外，近年香港房屋短缺，很多港人都會驟業問題而煩惱，年青人更因為此問題而不敢生育，導致生育率下降，人口老化問題加劇。希望當局盡快通過此審批，可以多供應中小型單位，切合港人需求。

本人一向支持興建屋，因此本人十分支持此項目發展，改劃作住宅用途。

擬議發展建中小型住宅，能提供3115伙單位，切合港人小家庭置業，解決住屋需要。地鐵東鐵沿北環線設站，交通方便。

此發展改劃對自然生態沒有不良影響，未與附近許覺衝突。

本人十分支持該發展項目。

土地發展建住宅單位是符合政府發展政策、擬建315個中小型住宅單位更迎合社區需求。

在該區發展中密度住宅房屋與附近的土地規劃互相協調，望城規會可加快審批通過。

自從政府規劃了北環線（凹頭站）後，該區的位置變得十分方便，加上這個地區乃屬於大變區的部份，如能將這工業地帶改為興建低或中密度中小型屋苑，未來環境必定加以改善。屋苑除了擁有私人會所，還可設立大型商場，這些設施不單改善了居民生活質素，規劃還可帶來社區設施；例如學校，社區中心或商業區等，讓生活更舒適。新的樓宇可以以環保的建築為主，這樣更可維護大自然外，並增加綠地，符合政府一直推行的環保主題，對自然生態是沒有最重影響的。這計劃還可以增加大量就業機會：施工、管理層及未來的服務行業就業機會。
加上這個計劃絕對符合政府早前推行的北部都會區發展計劃，整體可配合政府政策增加房屋供應，未來市民可減輕租樓壓力，所以本人絕對支持這個發展計劃。

未來北部都會區是香港重要的發展區域，人口
必然會有增長，申請將具有發展潛力的土地改劃
為住宅用地，既可以提供超過3000伙單位，
以紓緩本地住房不足的問題。此外，申請包括
建商場的配套，以解決區內購物設施不足的問題。

再者，申請的發展密度與附近土地用途和密度
互相協調，對生態亦無嚴重影响。

故支持申請通過！

關於申請 Y/YL-NSW/9 從工業區重新劃分為住宅區的評論

尊敬的先生/女士

本人對上述修改圖則的申請提出異議。

1. 我是居住在規劃申請 Y/YL-NSW/9 中提議的開發地點旁邊的居民。

2. 我反對申請，因為它使我的居住區惡化，對自然環境造成破壞，對生態產生負面影響。

3、如按計劃進行，施工工程將在附近人員附近的道路上造成機器產生的煙氣、異味、噪音、灰塵、振動等滋擾。 這影響了我和住在附近的家人。

4. 發展項目的建設工作將對其周邊地區造成衝擊。 這不僅會產生噪音，還會影響我們房屋的地基。 它可能會對我們的家造成損害。

5. 該申請不符合濕地緩衝區的規劃意圖，即大規模開發將威脅到米埔內后海灣國際重要拉姆薩爾濕地的生態。

6. 申請將影響河流及河岸附近野生動物的生計。 附近經常可以看到各種野生動物，包括牛、魚、烏龜和鳥類。 如果將其納入重新分區計劃，將使環境不適合上述野生動物。

7. 目前，我家是觀星的好地方。 我可以輕鬆地從我的位置觀看流星雨以及不同的天文現象。 當開發使社區變得太亮而無法在夜間觀看天空時，所有這些活動將不再可能。 這將影響我作為天文愛好者的生活質量。

8. 我在該地區看到了很多與自然保護有關的樹木、花卉和蔬菜。 發展將對所有這些產生負面影響。

9. 重新分區計劃的擬建項目將為濕地緩衝區引入數以萬計的新居民。 這將不可避免地給鄰近的濕地保護區帶來長期的干擾。

感謝您的關注。

感謝您考慮我以上反對規劃申請 Y/YL-NSW/9 的原因

Comments regarding Application Y/YL-NSW/9 to rezone from Industrial to Residential

Dear Sir / Madame

I would like to lodge an objection to the abcve application for amendment of plan.

1. I am a frequent visitor to the Nam Sang Wai region for its scenery and visiting my relatives. My relatives live in an area included in the Planning Application Y/YL-NSW/9.

2. I object to the application because it affects the living neighborhood, causes damage to the nat ural environment and has negative impact on the ecology.

3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from mac hine, odour, noise, dust and vibration on the road near the people around.

4. The application is not compatible with the planning intention of Wetland Buffer Zone that lar ge scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.

5. The application will affect the livelihood of the wildlife in the river and near the riverbank. V arious wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.

7. The proposed project for the rezone plan will introduce tens of thousands of new residents to t he Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetlan d Conservation Area.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

有關的規劃申請編號 **The application no. to which the comment relates:**	Y/YL-NSW/9
「提意見人」姓名/名稱 **Name of person making this comment:**	先生 Mr. Cham Ka Hung Daniel, BBS MH BH JP

意見詳情
Details of the Comment :

I refer to the application Y/YL-NSW/9, please be informed that after consulted the residents in the vicinity area of the application site, I strongly object on the application for the following reasons:

(1) There is no acceptable justification to re-zone the subject site from I(D), OS to R(E), all the developments in the vicinity (including Fairview Park, Palm Springs and Villages at the vicinity) are low density [the zoning are R(C), R(D) and V]. Increase the plat ratio from 1.6 of existing I(D) zone to 2.5 is considered too excessive, and any development in that parameter is not compactable to the land use in that area in the OZP. It is not in harmony and in line with the developments in the vicinity. Increase the building high from 13M to 115 mPD is considered too excessive, and it is visually intrusive from the vicinity as shown in the photo images provided by the applicant, and the BH of the proposed development of up to 115mPD is generally higher than that of the surrounding existing developments and causes adverse visual impact. The proposed development is considered incompatible with the surrounding land uses which are predominated by fish ponds, wetland, low-rise and low-density residential dwellings/village houses and unused/vacant land.

(2) The site is adjacent to valuable wetland with distinct and valuable ecological values. The development of 29 storeys proposed by the applicant is considered too excessive and will affect the ecological values of the nearby wetland area. The proposed development in the re-zoning application is against the planning intention and direction mentioned in the Explanatory Statement.

(3) Piecemeal re-zoning without overall study and review of other zones in the OZP will jeopardize the long-term planning and land uses in this and other sensitive and low-rise development areas in this OZP. Extensive development will jeopardize the conservation value of the nearby wetland in the vicinity and Deep Bay area. There are valuable wetlands with distinct and valuable ecological values in the adjacent areas and the wetland nearby; the re-zoning application has not addressed these issues to a satisfactory level.

(4) The layout of the development being surrounded by the proposed high towers will increase the bird-window collision risks as well as lead to habitat fragmentation that reduces the ecological carrying capacity, and degrade the ecological function of the area.

(5) The Site and adjacent ponds are utilised by wetland-dependent birds and is connected with the wetland ecosystem in Deep Bay. The large-scale residential development will result in irreversible loss of wetland and disturbance impact (e.g. human activities, light glare, noise) to the nearby wetland habitat. It fails to comply with the "no-net-loss in wetland" principle.

(6) approving the application would set an undesirable precedent for similar applications for large-scale development in the area.

(7) The additional traffic generated from the development will affect the traffic volume of Castle Peak Road, Au Tau Round About and Pok Oi Round About as well as Fairview Park Round About.

(8) The critical junctions at the round-abouts mentioned in (7) will be overloaded and the additional traffic generated by the 724 vehicles in the proposed site will further deteriorate the adverse traffic at those junctions.

(9) Castle Peak Road at that area is a narrow road with junctions at Sha Po and Fairview Park Boulevard, the traffic generated at peak hours will seriously affect the traffic at both junctions and it is expected that there will be many complaints from the villagers and residents nearby in the future, Transport Department will be blamed if the new traffic generated by the new development deteriorates the current traffic situation in that area and in Pok Oi Round-about in the future.

(10) The application site falls within Deep Bay Buffer Zone 2 and the proposed development cannot meet the "Town Planning Board Guidelines for Application for Developments within Deep Bay Buffer Zones" in that: there is insufficient information in the submission to demonstrate that the proposed development will have insignificant impacts on the environment, ecology, sewerage and traffic in the area including the Mai Po Nature Reserve and Inner Deep Bay; the development will affect the existing wetland and fish ponds in the vicinity; and there is insufficient information in the submission to demonstrate that the proposed development will not have adverse impacts on the ecology in the area including the Mai Po Nature Reserve and Inner Deep Bay area.

(11) The approval of the application will set an undesirable precedent for similar applications in this ecologically sensitive area. The other sites nearby have applied for similar extensive development and to increase the plot ratios as well the flat units substantially, more sites will follow the undesirable precedent case to apply for increase of Plot Ratio and building height as well as development intensity if this application is approved. Any additional development apart from the original planning intension will further deteriorate the traffic, sewage, visual, land use compatibility of the area. It will set a very undesirable precedent case for similar application in this area in the future.

(12) TPB has received 8 re-zoning applications in recent months in Nam San Wai , Mai Po and Ngau Tam Mei OZP, with proposed 23,700 flats. Approval of this application will encourage more and more intensive development application which will affect the whole area without long term comprehensive studies. The planning parameters and intension of the site under the current OZP were considered appropriate and suitable. Any approval of re-zoning to the requested planning parameter would jeopardize the planning intention of the whole area.

Daniel K.H. CHAM BBS MH BH JP (Chairman, Tin Shui Wai South Area Committee)

Comments regarding Application Y/YL-NSW/9 to rezone from Industrial to Residential

Dear Sir / Madame

I would like to lodge an objection to the above application for amendment of plan.

1. I am a frequent visitor to the Nam Sang Wai region for its scenery and visiting my relatives. My relatives live in an area included in the Planning Application Y/YL-NSW/9.

2. I object to the application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology.

3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near the people around.

4. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.

5. The application will affect the livelihood of the wildlife in the river and near the riverbank. Various wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.

7. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

意見詳情
Details of the Comment :

本人反對是次申請，原因如下：

是項申請連同（Y/YL-NSW/8），涉及36幢樓高10至29層的住宅大廈，地積比率達2.2倍至2.5倍，預計為當區帶來約2萬6千人，隨著附近多個發展項目先後闖關甚至獲開綠燈，將嚴重、進一步破壞南生圍生境。

這些發展多在「濕地緩衝區」，而濕地緩衝區的規劃本是為了保護「濕地保育區」內的魚塘和濕地的生態完整，並禁止進行會對「濕地保育區」內的魚塘的生態價值帶來負面干擾影響的發展。若將「濕地緩衝區」變成另一個發展區，不單無助解決房屋問題，更損害濕地緩衝作用，是保護后海灣濕地生態系統的倒退舉動。

縱容開發「濕地緩衝區」空間作發展之用將令「濕地保育區」處於險境，帶來負面生態影響，如影響雀鳥飛行路線、削減冬候鳥覓食空間、打擾鷺鳥繁殖等。

對市民生活而言，龐大的發展規模亦會為當區帶來大量人口，將會衍生不同環境壓力和問題。綜合各發展規劃資料，估計該區居住人口將有近七萬六千人，相等兩個左右的太古城人口，可能會加劇交通擠塞問題，或增加污水處理量負擔等。

因此，本人認為必須嚴格遵守「濕地保育區」及「濕地緩衝區」的規劃管制，以確保后海灣濕地生態的完整性及附近市民的居住環境不受影響。若將最後防線都拱手讓予發展商，建成密麻麻的高樓，對后海灣一帶生態將後患無窮，「濕地緩衝區」也將名存實亡。

我反對此項計劃。

將「工業 (丁類)」地帶、「露天貯物」變爲住宅，是典型先破壞，後發展。此等不應鼓勵。亦影響附件濕地，破壞野生動物棲息地。一旦破壞，難以恢復。申請人及批准者，將爲此附上全責。

意見詳情
Details of the Comment :

本關注組對編號 Y/YL-NSW/9 項目申請表示強烈反對！

此申請項目位處濕地緩衝區範圍內，
項目擬建的11棟住宅高度由14至29層，
樓層之高，竟然比另一個位於濕地緩衝區外，
已建成的大型屋苑 (峻巒)，
樓層11至16層還要高出2至3倍，
當中更超過8成 (9棟) 是高於16層。

此項目位處濕地緩衝區範圍，與南生圍只是一河之隔，
是鳥類飛往南生圍、山貝河、錦田河，
甚至香港唯一國際重要濕地米埔及內后海灣，
覓食或棲息的必經範圍。

多棟高樓大廈建於申請地點，
不但直接阻礙鳥類飛往上述區域覓食或棲息，
更會永久影響申請地點及附近地區的氣流，
大量增加區內的噪音及晚上的光害，
而且大量窗戶的出現，更會增加鳥撞玻璃的「窗殺」機會，
上述各環境壓力因素均是直接或間接傷害在區內生活的鳥類，
影響米埔及內后海灣國際重要濕地的生態功能，
並與濕地緩衝區建立原意違背。

此項目申請連同 Y/YL-NSW/8的住宅樓層之高，
不但嚴重高越鄰近的建築物，
而且更比濕地緩衝區外的大型屋苑 (峻巒) 還要高出多倍。

此項目申請連同 Y/YL-NSW/8共同為區內帶來的
累計生態影響及破壞實在是完全不能接受！

故此，本關注組重申對項目申請表示強烈反對！

To the Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Date: 22-May-2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My family is resident of DD107 since 1979. We rent the land by the river from the government via Short Term Tenancy (#0427).
2. We have a house built on the government land. We have been paying rates to the government. My parents and brother are still living in this family home since it was build 43 years. All of them are retired people.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.

(b) The noise and odour will irritate him and make him tense all the time

(c) The vibration caused by the construction activities will interfere his rest and cause damage to the structure of our house.

(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father to travel to hospital and other daily activities.

7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

Dear Secretary of the Town Planning Board,

I would like to lodge an objection to the above application for amendment of plan.

1. I am a regular visitor to the Nam Sang Wai region for its scenery as well as visiting my relatives in the region. My relatives live within the proposed rezone plan.
2. I object to the application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology.
3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near the people around. This affects my relatives who live in the neighborhood.
4. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
5. The application will affect the livelihood of the wildlife in the river and near the riverbank. Various wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.
7. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

Maggie Ho Man Kei

19

Wildlife currently living in the proposed rezoned plan
will be significantly affected by development in the application.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Governmen: Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家寶

Tse Ka Po.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceed, the planned development will make the environment of our

house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government L and from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long DD107 since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9 .
2. We have a house built on the government land. We have been paying rates to the government. My husband and I are still living in this family home since it was built 43 years. We are retired p eople now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewh ere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in T uen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recov ery.
5. We object to the application because we are unable to move out of our family house. If the ap plication proceed, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, n oise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we ar e paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the healt h of my husband and me will be seriously threatened:
(a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
(b) The noise and odour will irritate us and make us tense all the time
(c) The vibration caused by the construction activities will interfere our rest and cause damage t o the structure of our house.
(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. T hat hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that lar ge scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the env ironment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of o ur efforts for nature conservation. The development can cause adverse impact on all this if we ha ve to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conse rvation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indi cative master layout plan of the application highlights an area with the remark "Government Lan d NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in th e development, I think it should not be included in the rezoning area of this application in the fir st place. The application should be modified to exclude this highlighted government land (togeth er with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

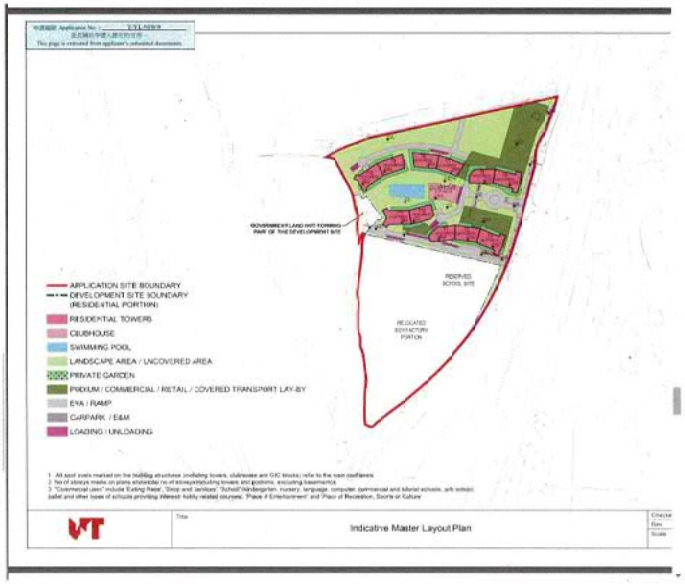
Evidence for Comment #4

My husband, aged 75, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #11:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

By e-mail: tpbpd@plard.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. **Not in line with the planning intention of Wetland Buffer Area (WBA)**
According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

網址 Website:www.cahk.org.hk

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of arceids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1968

電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man

致 城市規劃委員會

就規劃申請 A/YL - NSW/9 項目之意見書

環保觸覺（本會）就規劃編號為 A/YL - NSW/9，即元朗青山公路 - 潭尾段以西丈量約份第 107 約地段第 8 號餘段(部分)、第 8 號 A 分段餘段、第 12 號、第 13 號、第 14 號 B 分段第 2 小分段、第 14 號 B 分段餘段、第 14 號 C 分段餘段、第 16 號、第 17 號、第 31 號 B 分段餘段、第 33 號餘段、第 36 號餘段、第 45 號、第 55 號 A 分段及第 1740 號 A 分段餘段和毗連政府土地，把申請地點由「其他指定用途」註明「綜合發展包括濕地修復區」地帶改劃為「其他指定用途」註明「綜合發展包括濕地修復區 1」地帶，表示強烈反對。

本申請發展，與 A/YL - NSW/8 之申請實為相連用地，亦為同一發展項目，地盤總面積達 371,650 平方米，發展密度達 2.2 倍地積比，涉興建 43 棟建築物，建築物最高達 29 層，最高達 110 米，發展規模接近 10,000 個單位，並有超過 1200 個車位，是一個大型豪宅項目。項目位置濕地保護區邊陲，即使計劃提及保留濕地修復區，但如此大規模的住宅發展勢必對濕地生態帶來嚴重而不可逆轉的破壞。

用地影響冬候鳥的飛行路線，作高密度住宅發展並不合適

本發展區位於濕地緩衝區，接近保護區邊陲，生態價值並非發展商申請文件指生態價值低。早年同一個發展商在同一位置申請其它發展，當時所遞交的文件指出，當地位置與濒危的黑臉琵鷺和其他冬候鳥的飛行路線重疊。部分候鳥和鷺鳥會在附近的南生圍及錦田河畔覓食，不少研究發現候鳥和鷺鳥覓食期間的飛行高度較低。以小白鷺為例，台灣的觀察顯示，河道上飛行高度最高約 17 公尺，移動到覓食地時最高飛行高度為 21 公尺。本發展申請的建築物最高達 110 米，明顯影響到候鳥的飛行路線，不同的緩解措施並不能解決影響雀鳥飛行路線的問題。

如果雀鳥飛行路線受阻，有機會影響到雀鳥覓食，本項目多棟高層住宅甚至有機會令雀鳥被窗殺 (bird-building collisions 或 bird-window collisions)，日間住宅窗戶，或一些半戶外環境，如公廁或游泳池等設立的鏡子，鏡像效果導致鳥類無法分辨影像真偽，以為反射的遠景或山林影像可以飛過，因此一頭撞上。夜間撞擊的原因則為燈塔效應 (beacon effect)，當夜間空氣濕度較高，或有霧氣或霧霾時，建築物的燈光會吸引遷徙中的鳥類，導致鳥類迷航而誤撞建物。世界各地每年都有多起窗殺案例，美國每年約有 3 億 6500 萬 - 9 億 8800 萬起案例、加拿大約 1600 - 4200 萬起及南韓每年約 800 多萬隻野鳥死亡。

申請不符合規劃指引

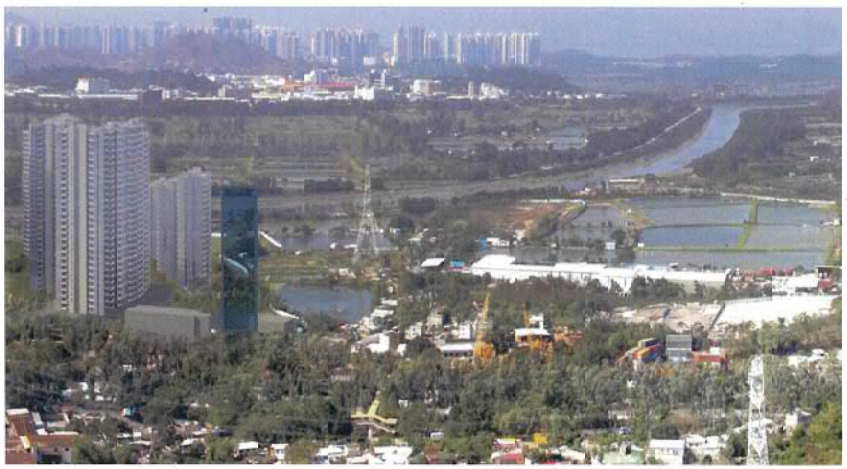
規劃指引編號 12C 指出，在濕地保育區外圍的濕地緩衝區內，若有關環境已受破壞地區進行住宅／康樂發展，以遷離／取代現有的露天貯物或貨櫃後勤用途，以及／或修復已喪失的濕地的建議，如果生態影響評估及其他影響評估的結果令城規會滿意，城規會才可能會酌情給予批准發展住宅用途。當中需要滿足多項條件，包括住宅發展計劃包括取代現有露天貯物和貨櫃後

環保觸覺 Green Sense
電話：8100 4877
傳真：3011 9577
地址：長沙灣郵政信箱 80710 號
電郵：info@greensense.org.hk
網頁：www.greensense.org.hk

勤用途的建議，以及／或附有詳盡的濕地修復建議，而其生態影響評估和其他影響評估又令城規會滿意，則城規會可給予特別考慮。這類計劃應配合四周的土地用途和區內的鄉郊環境。

由發展商提交的文件內模擬圖可見，建議發展建築物高而密集，與附近低密度發展格格不入，而建築物的燈光亦有機會影響到鄰近漁塘甚至南生圍生態。香港的特有螢火蟲新種 — 米埔屈翅螢，在錦田河和山貝河出口(南生圍和大生圍)的紅樹林就有少量分佈，螢火蟲及部分昆蟲具趨光性，由本發展所產生的燈光極大機會影響到米埔屈翅螢及其它昆蟲的生態，顯示不符合規劃指引編號 12C 對生態的要求。

如果住宅發展計劃包括取代現有露天貯物和貨櫃後勤用途的建議，以及／或附有詳盡的濕地修復建議，而其生態影響評估和其他影響評估又令城規會滿意，則城規會可給予特別考慮。本項目現時並非作露天貯物和貨櫃後勤用途，所以不應考慮改劃成住宅區的申請。



發展商提交的模擬圖

影響全區土地規劃

當局剛剛提交北環線項目申請環境影響評估研究概要，計劃於本項目鄰近地點設站。若然過早批准相關申請，除了有機會影響鐵路設計外，未來更有機會影響全區整體規劃。

申請人在文件因《北部都會區發展策略》的發展策略性規劃情況的轉變，而計劃將用地轉作住宅用途。但本會留意到本申請的部分位置，屬政府《北部都會區發展策略》中建議的南生圍濕地公園範圍之內，若批準此項申請，反而有機會影響整個《策略》的落實。

環保觸覺
Green Sense
電話：8100 4877
傳真：3011 9577
地址：長沙灣郵政信箱 80710 號
電郵：info@greensense.org.hk
網頁：www.greensense.org.hk

北部都會區發展策略 P.51

政府在 2014 年 12 月制定和公布《長遠房屋策略》(下稱《長策》)。為逐步扭轉目前供求失衡的局面，《長策》採用「供應主導」和「靈活變通」的策略，並確立三個主要策略性方向：

(a) 提供更多公共租住房屋（公屋）單位，並確保合理運用現有資源；
(b) 提供更多資助出售單位，進一步豐富資助自置居所的形式，促進現有單位的市場流轉；
(c) 透過穩定的土地供應及適當的需求管理措施，穩定住宅物業市場，並在私人住宅物業銷售和租務上推動良好做法 。

現時發展商申請興建豪宅項目，似乎與《長策》的方向有所偏離。

考慮是次申請若批准恐成不良先例，**本會促請城規會否決是次申請。**

為減少行政開支及紙張，請勿郵寄確認信予本會。回覆請致電 8100-4877 或電郵至 info@greensense.org.hk 與劉先生聯絡。

環保觸覺
二零二二年五月二十七日

新界 元朗
新田區 壆圍村
Pok Wai Village Representatives' Office
元朗壆圍村78號

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由壆圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至壆圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

27 May 2022

Dear Sir/Madam,

Section 12A Application for rezoning "OU(CDWRA)" to a new sub-zone "OU(CDWRA)1" (Application No. Y/YL-NSW/8) and rezoning "I(D)", "OS" and "Road" to "R(E)" (Application No. Y/YL-NSW/9) on Nam Sang Wai Outline Zoning Plan in support of a Comprehensive Development, West of Castle Peak Road – Tam Mi, Yuen Long

1. Green Power, a local charitable green group, would like to draw Town Planning Board's attention to our concerns about two above-captioned Section 12A applications located within Wetland Buffer Area (WBA) of Mai Po and Inner Deep Bay Ramsar Site with rezoning in support of a comprehensive development, west of Castle Peak Road – Tam Mi, Yuen Long on Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8(NSWOZP):

   (i) Application No. **Y/YL-NSW/8** – to rezone "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" ("OU(CDWRA)") to a new sub-zone "OU(CDWRA)1", and

   (ii) Application No. **Y/YL-NSW/9** – to rezone "Industrial (Group D)"("I(D)"), "Open Storage"("OS") and "Road" to "Residential (Group E)"("R(E)") .

2. Regarding Y/YL-NSW/8, the site area is about 11.6 ha including 2.4ha Government land (20.5%). A 2.8ha wetland restoration area (24.1%) is proposed in northwestern part of the Application Site and 25 blocks of high-rise building (not more than 29 storeys) and 5 blocks of medium-high building (not more than 5 storeys) in the remaining residential area.

3. Regarding Y/YL-NSW/9, the site area is about 8.2ha including 1.6ha Government lands (19.3%). A 2.7 ha relocated soy sauce factory (33.7%) is proposed in southern part of the Application Site and 11 blocks of high-rise building (6 and 5 blocks of not more than 27 and 29 storeys respectively) and 2 blocks of medium-high building (not more than 2 storeys) in the residential area. A school site of about 0.62ha (7.6%) has been reserved to the southeast of the residential area.

4. The two Application Sites are contiguous. Thus, the total area of two sites is 19.8ha including 4.0 ha government land (20.0%). The combined application site has wetland restoration area of 2.8 ha (14.2%) in northwestern part, relocated soy sauce factory of 2.7 ha (13.9%), reserved school site of 0.62ha (3.1%). The total residential area in the two Application is 13.5ha (8.8 + 4.7ha) (68.1%).

5. The two Application Sites fall within the Wetland Buffer Area (WBA) of the Deep Bay Area that serves an ecological function to protect the globally important wetland — the Mai Po Ramsar site. According to the Town Planning Board Guideline (TPB PG) 12B, WBA intends to "*...prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*"(Section 6.4).

6. The Application Sites, which are designated as WBA under TPB PG 12B, only partly fulfills the recommendation for wetland restoration (Section 6.7.1), "*Development proposals to restore lost fish ponds or to replace existing undesirable uses by wetland habitats are encouraged*", as only 14.2% of the site (2.8 ha) is proposed for wetland restoration area in view that 20.0% of the two Application Sites is government land. We opine that the government land in WBA should be to serve public's interest of wetland conservation.

7. In Section 6.7 of TPB PG 12B, "*for those disturbed areas directly abutting the WCA, the development should provide a wetland and visual buffer to separate the development from WCA to minimize its impact on the wetland...*" In view that the row of six high-rise buildings (44 to 79m) adjacent to the restored wetland area are only 40m away from Wetland Conservation Area (WCA) to the north of the two Application Sites, they not only degrade the buffering function of WBA but also fail to *provide visual buffer to separate the development from WCA*.

8. According to the Section 9.7.12, EXPLANATORY STATEMENT of NSWOZP, "*development or redevelopment shall not result in a total development or redevelopment intensity in excess of a total plot ratio of 0.4 and a maximum building height of 6 storeys*" that is the highest development density of residential land use in NSWOZP.

9. Development of 36 blocks of high-rise buildings at the two Application Sites is proposed by the Applications with plot ratio of not more than 2.2 to 2.5 that will very likely breach the statutory limits of plot ratio and building height of NSWOZP as mentioned in paragraph 6. Therefore, the two applications are not compatible with both the TPB PG and the zoning intention and restrictions of NSWOZP.

10. In particular, the application site is on the eastern bank of Kam Tin River which is an important habitat for waterfowls, especially the migratory birds in winter time. The high-rise buildings in the two Application Sites may interfere the flight paths of the birds, impose glare nuisance at the nighttime and disturb the foraging or roosting behaviours of the birds in the river.

11. The two Applications are anticipated to provide a total of 9940 (6825 + 3115) residential units (Executive Summary, submitted document of the Application) which will accommodate a population of about 27,000 (2.7 persons per household, 2021 Population By-census). However, "*the planned population in the Area will be about 28,900 persons.*" (Section 6.2, EXPLANATORY STATEMENT of NSWOZP). The proposed population of the two Applications is 93% of the planned population of the whole Scheme Area of NSWOZP. Together with existing population in NSWOZP, existing infrastructure, utilities and transport system in Yuen Long area cannot support such substantial increase in population.

12. A total of 1208 (810 + 398) vehicle parking spaces will be provided in the two Application Sites. The accommodated vehicles will deteriorate the air quality, impose noise impacts on humans and wildlife arising from increased traffic flow, and worsen the traffic congestion problems of Yuen Long area during the operational phase of the proposed development.

13. We opine that the Board's decision should comply with the TPB PG 12B, in which "*development/redevelopment which may have negative impacts on the ecological value of the WCA would not be supported by the (Town Planning) Board, unless the ecological impact assessment can demonstrate that the negative impacts could be mitigated through positive measures*".

14. The two Applications should demonstrate their associated ecological benefits. Its ecological objectives, i.e. target taxa/species, habitat types, should be stated so that the master layout and management plan of the proposed restored wetland can be assessed accordingly. Adequate size and feasible long-term operation and maintenance of proposed restored wetland area should be available, and corresponding management and financial responsibility should be clarified and confirmed.

15. Regarding water pollution, Zero Discharge Policy should be observed. Therefore, the dry weather stormwater should not be discharged directly into the neighbouring river channels, i.e. Kam Tin River. Effluent from the two Application Sites should also not to increase the pollution loading of Deep Bay. Proper facilities should be in place to prevent chemicals generated in the proposed development, e.g. vehicle fuel and lubricating oil, fertilizers and pesticides, from discharging to neighboring river channels.

16. During the construction phase, the fishponds, wetlands and farmlands in vicinity are vulnerable to illegal dumping of soil debris and construction and demolish wastes. Regrettably, existing enforcement measures to prevent illegal dumping are ineffective and successful prosecutions are rare. Most importantly, destroyed wetland habitats are difficult to reinstate. Thus, effective measures should be in place to avoid illegal and/or eco-vandalistic dumping of wastes generated from the application site.

17. In view of the foreseeable rise in sea level and increased flood risk brought about by climate change, the proposed development should neither weaken the climate resilience of Deep Bay Area nor impose flood risk in the Application Sites and neighbouring areas.

Thank you very much for your kind attention. For any inquiries, please contact the undersigned at Green Power (T[redacted]

By email only

27 May 2022

Dear Sir/Madam,

Comments on the planning application to rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" at Tam Mei, Yuen Long (Y/YL-NSW/9)

The Hong Kong Bird Watching Society (HKBWS) objects to the rezoning application based on the following reasons.

1 Not in line with the intention of Wetland Buffer Area (WBA) under the Town Planning Board Planning Guideline No. 12C

1.1 The application site falls within WBA in Deep Bay area. According to the Town Planning Board Guideline No. TPB PG-NO. 12C, *'in considering development proposals in the Deep Bay Area, the Board adopts the Study's recommended principle of "no-net-loss in wetland"'*, in terms of both "area" and "function".

1.2 WBA in particular, is *"to protect the ecological integrity of the fish ponds and wetland within the Wetland Conservation Area (WCA) and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* Moreover, *"As a substantial amount of the fish ponds within the WBA have already been lost over time through filling and certain areas have been degraded by the presence of open storage use, these degraded areas may be considered as target areas to allow an appropriate level of residential/recreational development so as to provide an incentive to remove the open storage use and/or to restore some of the fish ponds lost."*[1]

1.3 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of 2-storey non-domestic buildings. It is located just next to the important wetlands (i.e. Kam Tin River, fishponds in Nam Sang Wai area, etc) within WCA. The proposed high-rise buildings would inevitably cause negative ecological impacts on the surroundings, which is not in line with WBA.

2 Not in line with the general planning intention zoning of the Outline Zoning Plan

2.1 According to the approved Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8[2], the general planning intention is to *"conserve the ecological value of the fish ponds which form an integral part of the wetland ecosystem in the Deep Bay Area... The planning intention of the area further away from the fish ponds is to protect the ecological integrity of the wetland ecosystem, and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* The application site is located within the "Industrial (Group D)" zone, where *"developments are restricted to a maximum plot ratio of 1.6, a maximum site coverage of 80% and a maximum building height of 13m"*.

2.2 The proposed high-rise residential development is clearly incompatible with the nearby **open and low-density** rural landscape, and would lead to huge disturbance to the adjacent ecologically sensitive wetlands, and would further reduce the existing buffer function performed by the application site and WBA. We therefore consider the proposed residential development is not in line with the above planning intention, and we urge the Town Planning Board (Board) to reject this application.

3 **Significant ecological importance of Kam Tin River and the wetlands in the vicinity of the application site**

3.1 Deep Bay area, including the intertidal mudflats of Kam Tin River, fishponds, abandoned ponds in Nam Sang Wai area, are of high ecological value and conservation importance and providing important habitats for birds, particularly wintering and migratory waterbirds, and wetland dependent birds.

3.2 However, according to the Ecological Impact Assessment Report (EcoIA) submitted by the applicant, there is no map showing the locations of bird species of conservation importance, we are concerned this is overlooking the potential impacts on water birds and their habitats in the Study Area.

3.3 From the applicant's submission, 103 bird species were recorded within the Study Area while 54 bird species were recorded within the site. Wetland-dependent birds of conservation concern were also recorded, including Black-winged Kite, Eastern Buzzard, globally "Endangered" Black-faced Spoonbill, Grey-headed Lapwing, Whimbrel, Purple Heron, Yellow Bittern, etc.

3.4 Grey-headed Lapwing (*Vanellus cinereus*) of Local Concern is constantly recorded in the section of Kam Tin River near the current rezoning site, with a peak count of around 20 which is most likely the largest flock recorded in Hong Kong [3,4]. There are also roosting sites of this scarce winter visitor at the ponds nearby within WCA. Besides, globally "Vulnerable" Common Pochard (*Aythya ferina*) and Pheasant-tailed Jacana (*Hydrophasianus chirurgus*) listed as "Near Threatened" in the Red List of China's Vertebrates, were also recorded in this channel near the site. The intertidal mudflat within Kam Tin River and the surrounding wetlands, provide foraging and roosting grounds to various winter migrants, and should be considered as important habitats.

3.5 Moreover, there is a newly recorded colony near Kam Po Road, which is situated about 1.8km away from the proposed residential towers at Tung Shing Lane. As most birds flew less than 2km from their nests, but some can

[3] Fellowes *et al.* (2002)
[4] HKBWS unpublished data.

reach a distance as far as 4km due to the surrounding topography of the egretry. In order to safeguard these breeding egrets and herons, the nesting locations together with feeding grounds and flight paths/corridor of the birds should all be protected, such that the breeding egrets and herons can access their foraging grounds and wetlands. However, there is no information/data showing the number of nests, the number of flightlines recorded from the flightline survey, the proportion of different flight directions, their flight heights and their land points, etc.

3.6 Given that the application site is very close to the wetland ecosystem in Deep Bay, and it potentially serves as flight paths for both breeding ardeids and migratory birds to access their foraging, roosting or breeding grounds, we consider that the existing low level of disturbance, **openness and corridor provided by the existing rural landscape** within WBA should be maintained.

4 **Adverse ecological impacts due to the proposed high-rise residential development**

4.1 The rezoning proposal is just next to the **"Inner Deep Bay and Shenzhen River catchment" Important Bird and Biodiversity Area**, which is recognized by the BirdLife International[5]. We are concerned the development would have adverse impacts on the habitat quality and wildlife.

4.2 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of non-domestic buildings. Comparing with the existing permitted maximum building height and the previously approved rezoning application (no. Y/YL-NSW/3), there is a substantial increase in the scale and density of the proposed residential development (Table 1).

[5] http://datazone.birdlife.org/site/factsheet/inner-deep-bay-and-shenzhen-river-catchment-area-iba-hong-kong-(china)

Table 1. The changes between different development parameters of the current proposed residential and school development (Y/YL-NSW/9), the previously approved Outlet Mall application (no. Y/YL-NSW/3), and the existing permitted development parameters of existing zoning

	"Industrial (Group D)" zoning	Previously approved rezoning application (Y/YL-NSW/3)	Current application (Y/YL-NSW/9)	Percentage increase comparing with the previously approved rezoning application
Plot Ratio	1.6	1.5	2.2	↑ ~46.6%
Maximum Building Height	<13m	<46mPD	<115mPD	↑ 150%

4.3 Such a high-rise development will significantly affect the flight path of both breeding and migratory birds and their activities, hence threatening their survival and their population.

4.4 Moreover, located just next to the Deep Bay Area, we are highly concerned the high-rise residential towers would become well-lit façades (created by lightings from each household) during night-time, and would be highly visible over a large area, including the Mai Po wetlands, due to the building height. However, the applicant stated in Section 6.4.8 of the Ecological Impact Assessment that "*the wildlife in the surrounding would be tolerant with night-time light given the existing highway viaduct and other roads with overnight traffic lighting*" and also suggested that the potential impacts on ardeid night roosts at Kam Tin River and the cormorant night roost in Nam Sang Wai would be "*remote and minor given the long separation distances*". We consider such claim is invalid.

4.5 First, the relatively low intensity and low elevation of the existing light source is not comparable to that created by the future scale of high-rise developments at the current proposed site and the adjacent sites. Second, according to the Light Pollution Guidelines for Wildlife under the Convention on Migratory Species[6], "*where there is important habitat for migratory shorebirds within 20 km of a project, consideration should be given as to whether that light is likely to have an effect on those birds.*" This 20 km buffer is based on "*a precautionary approach that sky glow can cause a change in behaviour in other species up to 15 km away*". Moreover, artificial light can in fact "*disorient flying birds, affect stopover selection, and cause their death through collision with infrastructure. Birds may starve as a result of disruption to foraging, hampering their ability to prepare for breeding or migration*"[7].

4.6 In short, **we are highly worried that** the intensified visual, noise and human disturbances impacts brought by massive population of 8,099 people of the proposed residential development, would significantly **deteriorate the habitat quality** of the surrounding important wetlands and the wildlife.

5 **Cumulative ecological impacts and undesirable precedent set on Deep Bay area**

5.1 Cumulative ecological impacts to the fishponds of Deep Bay area need to be carefully assessed given that a number of other residential developments have already been proposed and approved in close proximity of the application site. We are concerned all the potential residential and commercial developments would all cumulatively cause significant impacts on the flight path of breeding ardeids, wetlands important to migratory birds, and also the breeding ardeids of significant ecological importance.

5.2 Moreover, the approval of this rezoning application for the high-rise development would set undesirable precedent to the similar applications in the whole Deep Bay area. As such, we object to the proposed high-rise residential development.

6 **Justifications for the decision and comments made by Government departments and the Board**

According to the Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 10, Section 2.1 (ii), the Board has the responsibility to, *"restrict uses within conservation zones to those which sustain particular landscapes, ecological and geological attributes and heritage features"*. We note that all other Government bureaux/departments are also bound to the HKPSG, and the Agriculture, Fisheries and Conservation Department (AFCD) and the Planning Department (PlanD) have the responsibility to advise the Board on the ecological[8] and planning aspects in particular. Given AFCD's mission to conserve natural environment and safeguard the ecological integrity[9], and the proposed development is not in line with the planning intention of the statutory zoning, HKBWS would also expect AFCD and PlanD to object to this application. Should AFCD, PlanD or the Board feels otherwise, we urge that the appropriate justifications are provided.

The HKBWS respectfully requests the Board to take our comments into consideration and **reject** the current application. Thank you for your kind attention.

Yours faithfully,

「提意見人」姓名／名稱 Name of person/company making this comment CHAN CHUN SUM
簽署 Signature 陳春心 日期 Date 25/7/2022

From : Ms Chan Chun Sum
To : The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,
Date: 25-July-2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long DD107 since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9 .
2. We have a house built on the government land. We have been paying rates to the government. My husband and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceed, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.

(b) The noise and odour will irritate us and make us tense all the time

(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.

(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

From: Tse Tak Yip (Email: [redacted])

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Date: 25-Jul-2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceed, the planned development will make the environment of our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Date: 26 July 2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". 新 界 元 朗

新 田 區 堡 圍 村

Pok Wai Village Representatives' Office

元 朗 堡 圍 村 7 8 號

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由堡圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至堡圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

關於潭尾以西申請編號 Y/YL-NSW/9 持反對意見

敬啟者：

據申請地點曰「工業（丁類）」地帶、「露天貯物」地帶及顯示為「道路」的地方改劃為「住宅（戊類）」地帶。

故此本人有以下之意見：

一．發展商申請毗連政府土地，本區極需預留政府的土地用來改善地區的設施。

二．古洞發展、洪水橋發展、元朗南發展、錦田南發展、新田及牛潭尾發展，以上發展區有非常多的露天貯存及工業使用者，政府收取以上土地後，由於用地不足，因上述規劃需要而被清拆，搬遷，受規劃影響不同界別的人士一直有強烈意見，認為政府應商討涵蓋的土地業權人的露天貯存及工業使用者如何安置。

三．此地段鄰近尚有多項大型發展申請
1) 錦繡迴旋處交通堵塞問題多年一直未有解決，若增加居住人口密度，祇會令交通堵塞問題更加惡劣。
2) 開發地鄰近「米埔世界自然保護區」，保護區環境將會受到破壞。

若上述問題尚未解決，堅決反對在此地發展大型住宅。

「提意見人」姓名/名稱 **Name of person making this comment:**	女士 Ms. Maggie Ho

意見詳情
Details of the Comment :

I object to the application Y/YL-NSW/9.

1. I am a frequent visitor to the Nam Sang Wai region for its scenery and visiting my relatives. My relatives live in an area included in the Planning Application Y/YL-NSW/9.

2. I object to the application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology.

3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near the people around.

4. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.

5. The application will affect the livelihood of the wildlife in the river and near the riverbank. Various wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.

7. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9.

I object to the subject application as it has huge negative impact on the the ecology of Kam Tin River and the wetlands in the vicinity of the application site. The high rise residential developme nt will affect the flight path of breeding and migratory birds, hence threatening their survival an d their population.
The approval of this rezoning application for high-rise development would set undesirable prece dent to similar applications in the whole Deep Bay area.

意見詳情
Details of the Comment :

I object to the application because it affects the living neighborhood, causes damage to the natur al environment and has negative impact on the ecology.
The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
The application will affect the livelihood of the wildlife in the river and near the riverbank. Vari ous wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is inc luded in the rezone plan, it will make the environment not suitable for the above wildlife.

意見詳情
Details of the Comment :

I would like to lodge an objection to the Application Y/YL-NSW/9 for amendment of plan.

1. I am a resident living just next to the development site proposed in the Planning Application Y/YL-NSW/9.

2. I object to the application because it deteriorates my living neighborhood, causes damage to t he natural environment and has negative impact on the ecology.

3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from mac hine, odour, noise, dust and vibration on the road near the people around. This affects me and m y family who live in the neighborhood.

4. The construction work of the development will create shock to its surrounding area. This not only causes noise but also affect the foundation of our houses. It may cause damage to our home .

5. The application is not compatible with the planning intention of Wetland Buffer Zone that lar ge scale development will threaten the ecolcgy of internationally important Ramsar Site in Mai Po Inner Deep Bay.

6. The application will affect the livelihood of the wildlife in the river and near the riverbank. V arious wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

7. At present, my home is a great place for stargazing. I can easily watch meteor showers as well as different astronomical phenomenon from my place. All these activities will no longer be possi ble when development makes the neighborhood too bright for watching the sky at night. This wi ll have impact on my quality of life as an astronomy lover.

8. The proposed project for the rezone plan will introduce tens of thousands of new residents to t he Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetlan d Conservation Area.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Town Planning Board
15/F North Point Government Offices
333 Java Road
North Point
Hong Kong

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. **Not in line with the planning intention of Wetland Buffer Area (WBA)**
According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1968
The Conservancy Association
會址: 香港新界葵涌貨櫃碼頭路 77-81 號 Magnet Place 一期 13 樓 1305-6 室
電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man
Campaign Manager

Date: 29 July 2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is fourd to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka Lap.

29 July 2022

Dear Sir/Madam,

Comments on the planning application to rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" at Tam Mei, Yuen Long (Y/YL-NSW/9)

The Hong Kong Bird Watching Society (HKBWS) objects to the rezoning application based on the following reasons.

1 **Not in line with the intention of Wetland Buffer Area (WBA) under the Town Planning Board Planning Guideline No. 12C**

1.1 The application site falls within WBA in Deep Bay area. According to the Town Planning Board Guideline No. TPB PG-NO. 12C, *'in considering development proposals in the Deep Bay Area, the Board adopts the Study's recommended principle of "no-net-loss in wetland"'*, in terms of both "area" and "function".

1.2 WBA in particular, is *"to protect the ecological integrity of the fish ponds and wetland within the Wetland Conservation Area (WCA) and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* Moreover, *"As a substantial amount of the fish ponds within the WBA have already been lost over time through filling and certain areas have been degraded by the presence of open storage use, these degraded areas may be considered as target areas to allow an appropriate level of residential/recreational development so as to provide an incentive to remove the open storage use and/or to restore some of the fish ponds lost."*[1]

1.3 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of 2-storey non-domestic buildings. It is located just next to the important wetlands (i.e. Kam Tin River, fishponds in Nam Sang Wai area, etc) within WCA. The proposed high-rise buildings would inevitably cause negative ecological impacts on the surroundings, which is not in line with WBA.

2 **Not in line with the general planning intention zoning of the Outline Zoning Plan**

2.1 According to the approved Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8[2], the general planning intention is to *"conserve the ecological value of the fish ponds which form an integral part of the wetland ecosystem in the Deep Bay Area... The planning intention of the area further away from the fish ponds is to protect the ecological integrity of the wetland ecosystem, and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* The application site is located within the "Industrial (Group D)" zone, where *"developments are restricted to a maximum plot ratio of 1.6, a maximum site coverage of 80% and a maximum building height of 13m"*.

2.2 The proposed high-rise residential development is clearly incompatible with the nearby **open and low-density** rural landscape, and would lead to huge disturbance to the adjacent ecologically sensitive wetlands, and would further reduce the existing buffer function performed by the application site and WBA. We therefore consider the proposed residential development is not in line with the above planning intention, and we urge the Town Planning Board (Board) to reject this application.

3 **Significant ecological importance of Kam Tin River and the wetlands in the vicinity of the application site**

3.1 Deep Bay area, including the intertidal mudflats of Kam Tin River, fishponds, abandoned ponds in Nam Sang Wai area, are of high ecological value and conservation importance and providing important habitats for birds, particularly wintering and migratory waterbirds, and wetland dependent birds.

3.2 However, according to the Ecological Impact Assessment Report (EcoIA) submitted by the applicant, there is no map showing the locations of bird species of conservation importance, we are concerned this is overlooking the potential impacts on water birds and their habitats in the Study Area.

3.3 From the applicant's submission, 103 bird species were recorded within the Study Area while 54 bird species were recorded within the site. Wetland-dependent birds of conservation concern were also recorded, including Black-winged Kite, Eastern Buzzard, globally "Endangered" Black-faced Spoonbill, Grey-headed Lapwing, Whimbrel, Purple Heron, Yellow Bittern, etc.

3.4 Grey-headed Lapwing (*Vanellus cinereus*) of Local Concern is constantly recorded in the section of Kam Tin River near the current rezoning site, with a peak count of around 20 which is most likely the largest flock recorded in Hong Kong [3,4]. There are also roosting sites of this scarce winter visitor at the ponds nearby within WCA. Besides, globally "Vulnerable" Common Pochard (*Aythya ferina*) and Pheasant-tailed Jacana (*Hydrophasianus chirurgus*) listed as "Near Threatened" in the Red List of China's Vertebrates, were also recorded in this channel near the site. The intertidal mudflat within Kam Tin River and the surrounding wetlands, provide foraging and roosting grounds to various winter migrants, and should be considered as important habitats.

3.5 Moreover, there is a newly recorded colony near Kam Po Road, which is situated about 2.2km away from the proposed residential towers at Tung Shing Lane. As most birds flew less than 2km from their nests, but some can reach a distance as far as 4km due to the surrounding topography of the egretry. In order to safeguard these breeding egrets and herons, the nesting locations together with feeding grounds and flight paths/corridor of the birds should all be protected, such that the breeding egrets and herons can access their foraging grounds and wetlands. However, there is no information/data showing the number of nests, the number of flightlines recorded from the flightline survey, the proportion of different flight directions, their flight heights and their land points, etc.

3.6 Given that the application site is very close to the wetland ecosystem in Deep Bay, and it potentially serves as flight paths for both breeding ardeids and migratory birds to access their foraging, roosting or breeding grounds, we consider that the existing low level of disturbance, **openness and corridor provided by the existing rural landscape** within WBA should be maintained.

4 **Adverse ecological impacts due to the proposed high-rise residential development**

4.1 The rezoning proposal is just next to the **"Inner Deep Bay and Shenzhen River catchment" Important Bird and Biodiversity Area**, which is recognized by the BirdLife International[5]. We are concerned the development would have adverse impacts on the habitat quality and wildlife.

4.2 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of non-domestic buildings. Comparing with the existing permitted maximum building height and the previously approved rezoning application (no. Y/YL-NSW/3), there is a substantial increase in the scale and density of the proposed residential development (Table 1).

[3] Fellowes *et al.* (2002)
[4] HKBWS unpublished data.
[5] http://datazone.birdlife.org/site/factsheet/inner-deep-bay-and-shenzhen-river-catchment-area-iba-hong-kong-(china)

Table 1. The changes between different development parameters of the current proposed residential and school development (Y/YL-NSW/9), the previously approved Outlet Mall application (no. Y/YL-NSW/3), and the existing permitted development parameters of existing zoning

	"Industrial (Group D)" zoning	Previously approved rezoning application (Y/YL-NSW/3)	Current application (Y/YL-NSW/9)	Percentage increase comparing with the previously approved rezoning application
Plot Ratio	1.6	1.5	2.2	↑ ~46.6%
Maximum Building Height	<13m	<46mPD	<115mPD	↑ 150%

4.3 Such a high-rise development will significantly affect the flight path of both breeding and migratory birds and their activities, hence threatening their survival and their population.

4.4 Moreover, located just next to the Deep Bay Area, we are highly concerned the high-rise residential towers would become well-lit façades (created by lightings from each household) during night-time, and would be highly visible over a large area, including the Mai Po wetlands, due to the building height. However, the applicant stated in Section 6.4.8 of the Ecological Impact Assessment that "*the wildlife in the surrounding would be tolerant with night-time light given the existing highway viaduct and other roads with overnight traffic lighting*" and also suggested that the potential impacts on ardeid night roosts at Kam Tin River and the cormorant night roost in Nam Sang Wai would be "*remote and minor given the long separation distances*". We consider such claim is invalid.

4.5 First, the relatively low intensity and low elevation of the existing light source is not comparable to that created by the future scale of high-rise developments at the current proposed site and the adjacent sites. Second, according to the Light Pollution Guidelines for Wildlife under the Convention on Migratory Species[6], "*where there is important habitat for migratory shorebirds within 20 km of a project, consideration should be given as to whether that light is likely to have an effect on those birds.*" This 20 km buffer is based on "*a precautionary approach that sky glow can cause a change in behaviour in other species up to 15 km away*". Moreover, artificial light can in fact "*disorient flying birds, affect stopover selection, and cause their death through collision with infrastructure. Birds may starve as a result of disruption to foraging, hampering their ability to prepare for breeding or migration*"[7].

4.6 In short, **we are highly worried that** the intensified visual, noise and human disturbances impacts brought by massive population of 8,099 people of the proposed residential development, would significantly **deteriorate the habitat quality** of the surrounding important wetlands and the wildlife.

5 Cumulative ecological impacts and undesirable precedent set on Deep Bay area

5.1 Cumulative ecological impacts to the fishponds of Deep Bay area need to be carefully assessed given that a number of other residential developments have already been proposed and approved in close proximity of the application site. We are concerned all the potential residential and commercial developments would all cumulatively cause significant impacts on the flight path of breeding ardeids, wetlands important to migratory birds, and also the breeding ardeids of significant ecological importance.

5.2 Moreover, the approval of this rezoning application for the high-rise development would set undesirable precedent to the similar applications in the whole Deep Bay area. As such, we object to the proposed high-rise residential development.

6 Justifications for the decision and comments made by Government departments and the Board

According to the Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 10, Section 2.1 (ii), the Board has the responsibility to, *"restrict uses within conservation zones to those which sustain particular landscapes, ecological and geological attributes and heritage features"*. We note that all other Government bureaux/departments are also bound to the HKPSG, and the Agriculture, Fisheries and Conservation Department (AFCD) and the Planning Department (PlanD) have the responsibility to advise the Board on the ecological[8] and planning aspects in particular. Given AFCD's mission to conserve natural environment and safeguard the ecological integrity[9], and the proposed development is not in line with the planning intention of the statutory zoning, HKBWS would also expect AFCD and PlanD to object to this application. Should AFCD, PlanD or the Board feels otherwise, we urge that the appropriate justifications are provided.

The HKBWS respectfully requests the Board to take our comments into consideration and **reject** the current application. Thank you for your kind attention.

Yours faithfully,
Wong Suet Mei

333 Java Road, North Point,
Hong Kong,
Date: 2-Oct-2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long DD107 since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9 .
2. We have a house built on the government land. We have been paying rates to the government. My husband and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceed, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Resicential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#C427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceed, the planned development will make the environment of our

house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Date: 6 Oct 2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse.

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1968
The Conservancy Association
會址: 香港新界葵涌貨櫃碼頭路 77-81 號 Magnet Place 一期 13 樓 1305-6 室
電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add. Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man
Campaign Manager

新界 元朗
新田區塱圍村
Pok Wai Village Representatives' Office
元朗塱圍村78號

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅(戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視野及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦綸迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由塱圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦綸迴旋處一段長期擠塞，車龍往往排至塱圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

元朗區議會
YUEN LONG DISTRICT COUNCIL

關於青山公路潭尾段以西申請編號 Y/YL-NSW/9 持反對意見

敬啟者:

一. 現時政府規劃洪水橋發展、古洞發展、元朗南發展，而這三處規劃發展需要收取大量土地，而這三處土地上有許多物流行業經營，而物流行業在此時正需要 OS 用地作為補償，收地同時同樣需要提供土地給因這三處土地發展而受影響行業。讓受影響行業搬來此處繼續營生，故此地不適宜改變任何用途，希望能提供因以上三處土地發展而受影響物流行業在此地繼續持續發展。

二. 發展商規劃地鄰近醬油廠，是香港為數不多現存醬油廠老字號，醬油廠已經成為香港歷史文化一部份，同時也是元朗歷史文化一部份，若將醬油廠因規劃發展用途而輕率處理，將會減少市民了解香港歷史文化，希望古物古蹟辦實地考評醬油廠是否需要作為古蹟保育保留!

三. 錦田河旁邊濕地保育區、濕地緩沖區是雀鳥活動地方，附近更有不少受保護動物，若過度開發只會令濕地減少，影響濕地周邊生態環境，濕地多樣性生態是需要靠大家一起保護，故應保留此地不應過度開發。

四. 規劃地段鄰近-博愛迴旋處、錦繡迴旋處，兩大迴旋處交通堵塞問題存在已久，市民投訴多年一直未能引起相關部門重視，亦未曾有任何方案舒緩繁忙時段交通措施，若將來規劃興建多項大型建築，擠憂人口爆增超出現時交通負荷，建議將現時規劃申請合併作為交通評估，比單一交通評估更能體現問題: 元朗米埔-錦塱 Y/YL-MP/6、元朗牛潭尾 Y/YL-NTM/5、青山公路潭尾段 Y/YL-NSW/8、石湖圍 Y/YL-NTM/8、石湖圍 Y/YL-NTM/6、Y/NTM/7、南生圍榮基村 Y/YL-NSW/7、新田練板村 Y/YL-ST/1、潭尾以西 Y/YL-NSW/9、米埔-攸塱 Y/YL-MP/7、Y/YL-MP/8。

意見詳情
Details of the Comment :

I am against the above application.

The application is not compatible with the Wetland Buffer Zone.
Its development will threaten the ecology of the internationally important Ramsar Site in Mai Po Inner Deep Bay.
It causes damage to the natural environment and nuisance including noise and dust that affects people living there at present.

I objects to the amendment of plan in the application.

I object to the application Y/YL-NSW/9 related to DD107.

The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
it will also make the environment no longer suitable for the wildlife currently living in the neigh borhood.

I have strong objection to the application and its proposed development.

I oppose the rezone application and its proposed development.

The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.

The application is NOT acceptable.

333 Java Road, North Point, Hong Kong
(E-mail: tpbpd@pland.gov.hk)

By email only

7 October 2022

Dear Sir/Madam,

Comments on the planning application to rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" at Tam Mei, Yuen Long (Y/YL-NSW/9)

The Hong Kong Bird Watching Society (HKBWS) objects to the rezoning application based on the following reasons.

1 **Not in line with the intention of Wetland Buffer Area (WBA) under the Town Planning Board Planning Guideline No. 12C**

1.1 The application site falls within WBA in Deep Bay area. According to the Town Planning Board Guideline No. TPB PG-NO. 12C, *'in considering development proposals in the Deep Bay Area, the Board adopts the Study's recommended principle of "no-net-loss in wetland"'*, in terms of both "area" and "function".

1.2 WBA in particular, is *"to protect the ecological integrity of the fish ponds and wetland within the Wetland Conservation Area (WCA) and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* Moreover, *"As a substantial amount of the fish ponds within the WBA have already been lost over time through filling and certain areas have been degraded by the presence of open storage use, these degraded areas may be considered as target areas to allow an appropriate level of residential/recreational development so as to provide an incentive to remove the open storage use and/or to restore some of the fish ponds lost."*[1]

1.3 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of 2-storey non-domestic buildings. It is located just next to the important wetlands (i.e. Kam Tin River, fishponds in Nam Sang Wai area, etc) within WCA. The proposed high-rise buildings would inevitably cause negative ecological impacts on the surroundings, which is not in line with WBA.

2 **Not in line with the general planning intention zoning of the Outline Zoning Plan**

2.1 According to the approved Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8[2], the general planning intention is to *"conserve the ecological value of the fish ponds which form an integral part of the wetland ecosystem in the Deep Bay Area... The planning intention of the area further away from the fish ponds is to protect the ecological integrity of the wetland ecosystem, and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* The application site is located within the "Industrial (Group D)" zone, where *"developments are restricted to a maximum plot ratio of 1.6, a maximum site coverage of 80% and a maximum building height of 13m"*.

2.2 The proposed high-rise residential development is clearly incompatible with the nearby **open and low-density** rural landscape, and would lead to huge disturbance to the adjacent ecologically sensitive wetlands, and would further reduce the existing buffer function performed by the application site and WBA. We therefore consider the proposed residential development is not in line with the above planning intention, and we urge the Town Planning Board (Board) to reject this application.

3 **Significant ecological importance of Kam Tin River and the wetlands in the vicinity of the application site**

3.1 Deep Bay area, including the intertidal mudflats of Kam Tin River, fishponds, abandoned ponds in Nam Sang Wai area, are of high ecological value and conservation importance and providing important habitats for birds, particularly wintering and migratory waterbirds, and wetland dependent birds.

3.2 However, according to the Ecological Impact Assessment Report (EcoIA) submitted by the applicant, there is no map showing the locations of bird species of conservation importance, we are concerned this is overlooking the potential impacts on water birds and their habitats in the Study Area.

3.3 From the applicant's submission, 103 bird species were recorded within the Study Area while 54 bird species were recorded within the site. Wetland-dependent birds of conservation concern were also recorded, including Black-winged Kite, Eastern Buzzard, globally "Endangered" Black-faced Spoonbill, Grey-headed Lapwing, Whimbrel, Purple Heron, Yellow Bittern, etc.

3.4 Grey-headed Lapwing (*Vanellus cinereus*) of Local Concern is constantly recorded in the section of Kam Tin River near the current rezoning site, with a peak count of around 20 which is most likely the largest flock recorded in Hong Kong [3,4]. There are also roosting sites of this scarce winter visitor at the ponds nearby within WCA. Besides, globally "Vulnerable" Common Pochard (*Aythya ferina*) and Pheasant-tailed Jacana (*Hydrophasianus chirurgus*) listed as "Near Threatened" in the Red List of China's Vertebrates, were also recorded in this channel near the site. The intertidal mudflat within Kam Tin River and the surrounding wetlands, provide foraging and roosting grounds to various winter migrants, and should be considered as important habitats.

3.5 Moreover, there is a newly recorded colony near Kam Po Road, which is situated about 2.2km away from the proposed residential towers at Tung Shing Lane. As most birds flew less than 2km from their nests, but some can reach a distance as far as 4km due to the surrounding topography of the egretry. In order to safeguard these breeding egrets and herons, the nesting locations together with feeding grounds and flight paths/corridor of the birds should all be protected, such that the breeding egrets and herons can access their foraging grounds and wetlands. However, there is no information/data showing the number of nests, the number of flightlines recorded from the flightline survey, the proportion of different flight directions, their flight heights and their land points, etc.

3.6 Given that the application site is very close to the wetland ecosystem in Deep Bay, and it potentially serves as flight paths for both breeding ardeids and migratory birds to access their foraging, roosting or breeding grounds, we consider that the existing low level of disturbance, **openness and corridor provided by the existing rural landscape** within WBA should be maintained.

4 **Adverse ecological impacts due to the proposed high-rise residential development**

4.1 The rezoning proposal is just next to the **"Inner Deep Bay and Shenzhen River catchment" Important Bird and Biodiversity Area**, which is recognized by the BirdLife International[5]. We are concerned the development would have adverse impacts on the habitat quality and wildlife.

4.2 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of non-domestic buildings. Comparing with the existing permitted maximum building height and the previously approved rezoning application (no. Y/YL-NSW/3), there is a substantial increase in the scale and density of the proposed residential development (Table 1).

[3] Fellowes *et al.* (2002)
[4] HKBWS unpublished data.

EAAFP

Table 1. The changes between different development parameters of the current proposed residential and school development (Y/YL-NSW/9), the previously approved Outlet Mall application (no. Y/YL-NSW/3), and the existing permitted development parameters of existing zoning

	"Industrial (Group D)" zoning	Previously approved rezoning application (Y/YL-NSW/3)	Current application (Y/YL-NSW/9)	Percentage Increase comparing with the previously approved rezoning application
Plot Ratio	1.6	1.5	2.2	↑ ~46.6%
Maximum Building Height	<13m	<46mPD	<115mPD	↑ 150%

4.3 Such a high-rise development will significantly affect the flight path of both breeding and migratory birds and their activities, hence threatening their survival and their population.

4.4 Moreover, located just next to the Deep Bay Area, we are highly concerned the high-rise residential towers would become well-lit façades (created by lightings from each household) during night-time, and would be highly visible over a large area, including the Mai Po wetlands, due to the building height. However, the applicant stated in Section 6.4.8 of the Ecological Impact Assessment that "*the wildlife in the surrounding would be tolerant with night-time light given the existing highway viaduct and other roads with overnight traffic lighting*" and also suggested that the potential impacts on ardeid night roosts at Kam Tin River and the cormorant night roost in Nam Sang Wai would be "*remote and minor given the long separation distances*". We consider such claim is invalid.

4.5 First, the relatively low intensity and low elevation of the existing light source is not comparable to that created by the future scale of high-rise developments at the current proposed site and the adjacent sites. Second, according to the Light Pollution Guidelines for Wildlife under the Convention on Migratory Species[6], "*where there is important habitat for migratory shorebirds within 20 km of a project, consideration should be given as to whether that light is likely to have an effect on those birds.*" This 20 km buffer is based on "*a precautionary approach that sky glow can cause a change in behaviour in other species up to 15 km away*". Moreover, artificial light can in fact "*disorient flying birds, affect stopover selection, and cause their death through collision with infrastructure. Birds may starve as a result of disruption to foraging, hampering their ability to prepare for breeding or migration*"[7].

4.6 In short, **we are highly worried that** the intensified visual, noise and human disturbances impacts brought by massive population of 8,099 people of the proposed residential development, would significantly **deteriorate the habitat quality** of the surrounding important wetlands and the wildlife.

5 **Cumulative ecological impacts and undesirable precedent set on Deep Bay area**

5.1 Cumulative ecological impacts to the fishponds of Deep Bay area need to be carefully assessed given that a number of other residential developments have already been proposed and approved in close proximity of the application site. We are concerned all the potential residential and commercial developments would all cumulatively cause significant impacts on the flight path of breeding ardeids, wetlands important to migratory birds, and also the breeding ardeids of significant ecological importance.

5.2 Moreover, the approval of this rezoning application for the high-rise development would set undesirable precedent to the similar applications in the whole Deep Bay area. As such, we object to the proposed high-rise residential development.

6 **Justifications for the decision and comments made by Government departments and the Board**

According to the Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 10, Section 2.1 (ii), the Board has the responsibility to, *"restrict uses within conservation zones to those which sustain particular landscapes, ecological and geological attributes and heritage features"*. We note that all other Government bureaux/departments are also bound to the HKPSG, and the Agriculture, Fisheries and Conservation Department (AFCD) and the Planning Department (PlanD) have the responsibility to advise the Board on the ecological[8] and planning aspects in particular. Given AFCD's mission to conserve natural environment and safeguard the ecological integrity[9], and the proposed development is not in line with the planning intention of the statutory zoning, HKBWS would also expect AFCD and PlanD to object to this application. Should AFCD, PlanD or the Board feels otherwise, we urge that the appropriate justifications are provided.

The HKBWS respectfully requests the Board to take our comments into consideration and **reject** the current application. Thank you for your kind attention.

Yours faithfully,
Wong Suet Mei

22nd December 2022

Town Planning Board
15/F North Point Government Offices
333 Java Road
North Point
Hong Kong

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school 1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1968
The Conservancy Association
會址: 香港新界葵涌貨櫃碼頭路 77-81 號Magnet Place 一期 13 樓 1305-6 室 電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.ht
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man

Date: 28-Dec-2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan

1. I am a resident of the land lot in Yuen Long DD107 since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9 .
2. We have a house built on the government land. We have been paying rates to the government. My husband and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceed, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Attachments of evidence in support of my comments in the letter

Evidence for Comment #1

My family rent the goverrment land since 1979 via Short Term Tenancy (#0427).
We have a house on the land and pay government rates and rent.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceed, the planned development will make the environment of our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odor, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and smell will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

I oppose the application Y/YL-NSW/9.
I lives in the neighbourhood of the proposed development area.
Currently, there is traffic jam at peak hours on the roads nearby, particularly the roundabout near Fairview Park.
The population introduced by the proposed development is going to make the situation worse.
The roads simply cannot support so many people coming to my neighbourhood.

意見詳情
Details of the Comment :

I am against the application.

I am a frequent visitor to the Nam Sam Wai countryside.
Various wildlife including cows, fish, tortoise and birds are often seen in the neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

I am strongly against the development associated with the application Y/YL-NSW/9

意見詳情
Details of the Comment :

I am against the above application.

The proposal is not in line with conservation for the WetLand Buffer Zone.
It causes damage to the rural environment.
It has negative impact on the ecology.
It introduces traffic jam as nuisance to existing residents.

29 December 2022

Dear Sir/Madam,

Comments on the planning application to rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" at Tam Mei, Yuen Long (Y/YL-NSW/9)

The Hong Kong Bird Watching Society (HKBWS) objects to the rezoning application based on the following reasons.

1 **Not in line with the intention of Wetland Buffer Area (WBA) under the Town Planning Board Planning Guideline No. 12C**

1.1 The application site falls within WBA in Deep Bay area. According to the Town Planning Board Guideline No. TPB PG-NO. 12C, *'in considering development proposals in the Deep Bay Area, the Board adopts the Study's recommended principle of "no-net-loss in wetland"'*, in terms of both "area" and "function".

1.2 WBA in particular, is *"to protect the ecological integrity of the fish ponds and wetland within the Wetland Conservation Area (WCA) and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* Moreover, *"As a substantial amount of the fish ponds within the WBA have already been lost over time through filling and certain areas have been degraded by the presence of open storage use, these degraded areas may be considered as target areas to allow an appropriate level of residential/recreational development so as to provide an incentive to remove the open storage use and/or to restore some of the fish ponds lost."*[1]

1.3 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of 2-storey non-domestic buildings. It is located just next to the important wetlands (i.e. Kam Tin River, fishponds in Nam Sang Wai area, etc) within WCA. The proposed high-rise buildings would inevitably cause negative ecological impacts on the surroundings, which is not in line with WBA.

2 **Not in line with the general planning intention zoning of the Outline Zoning Plan**

2.1 According to the approved Nam Sang Wai Outline Zoning Plan No. S/YL-NSW/8[2], the general planning intention is to *"conserve the ecological value of the fish ponds which form an integral part of the wetland ecosystem in the Deep Bay Area... The planning intention of the area further away from the fish ponds is to protect the ecological integrity of the wetland ecosystem, and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds."* The application site is located within the "Industrial (Group D)" zone, where *"developments are restricted to a maximum plot ratio of 1.6, a maximum site coverage of 80% and a maximum building height of 13m"*.

2.2 The proposed high-rise residential development is clearly incompatible with the nearby **open and low-density** rural landscape, and would lead to huge disturbance to the adjacent ecologically sensitive wetlands, and would further reduce the existing buffer function performed by the application site and WBA. We therefore consider the proposed residential development is not in line with the above planning intention, and we urge the Town Planning Board (Board) to reject this application.

3 **Significant ecological importance of Kam Tin River and the wetlands in the vicinity of the application site**

3.1 Deep Bay area, including the intertidal mudflats of Kam Tin River, fishponds, abandoned ponds in Nam Sang Wai area, are of high ecological value and conservation importance and providing important habitats for birds, particularly wintering and migratory waterbirds, and wetland dependent birds.

3.2 However, according to the Ecological Impact Assessment Report (EcoIA) submitted by the applicant, there is no map showing the locations of bird species of conservation importance, we are concerned this is overlooking the potential impacts on water birds and their habitats in the Study Area.

3.3 From the applicant's submission, 103 bird species were recorded within the Study Area while 54 bird species were recorded within the site. Wetland-dependent birds of conservation concern were also recorded, including Black-winged Kite, Eastern Buzzard, globally "Endangered" Black-faced Spoonbill, Grey-headed Lapwing, Whimbrel, Purple Heron, Yellow Bittern, etc.

3.4 Grey-headed Lapwing (*Vanellus cinereus*) of Local Concern is constantly recorded in the section of Kam Tin River near the current rezoning site, with a peak count of around 20 which is most likely the largest flock recorded in Hong Kong [3,4]. There are also roosting sites of this scarce winter visitor at the ponds nearby within WCA. Besides, globally "Vulnerable" Common Pochard (*Aythya ferina*) and Pheasant-tailed Jacana (*Hydrophasianus chirurgus*) listed as "Near Threatened" in the Red List of China's Vertebrates, were also recorded in this channel near the site. The intertidal mudflat within Kam Tin River and the surrounding wetlands, provide foraging and roosting grounds to various winter migrants, and should be considered as important habitats.

3.5 Moreover, there is a newly recorded colony near Kam Po Road, which is situated about 2.2km away from the proposed residential towers at Tung Shing Lane. As most birds flew less than 2km from their nests, but some can reach a distance as far as 4km due to the surrounding topography of the egretry. In order to safeguard these breeding egrets and herons, the nesting locations together with feeding grounds and flight paths/corridor of the birds should all be protected, such that the breeding egrets and herons can access their foraging grounds and wetlands. However, there is no information/data showing the number of nests, the number of flightlines recorded from the flightline survey, the proportion of different flight directions, their flight heights and their land points, etc.

3.6 Given that the application site is very close to the wetland ecosystem in Deep Bay, and it potentially serves as flight paths for both breeding ardeids and migratory birds to access their foraging, roosting or breeding grounds, we consider that the existing low level of disturbance, **openness and corridor provided by the existing rural landscape** within WBA should be maintained.

4 **Adverse ecological impacts due to the proposed high-rise residential development**

4.1 The rezoning proposal is just next to the **"Inner Deep Bay and Shenzhen River catchment" Important Bird and Biodiversity Area**, which is recognized by the BirdLife International[5]. We are concerned the development would have adverse impacts on the habitat quality and wildlife.

4.2 The proposed development consists of 11 residential towers with 14 to 29 storeys high and 2 blocks of non-domestic buildings. Comparing with the existing permitted maximum building height and the previously approved rezoning application (no. Y/YL-NSW/3), there is a substantial increase in the scale and density of the proposed residential development (Table 1).

[3] Fellowes *et al.* (2002)
[4] HKBWS unpublished data.
[5] http://datazone.birdlife.org/site/factsheet/inner-deep-bay-and-shenzhen-river-catchment-area-iba-hong-kong-(china)

Table 1. The charges between different development parameters of the current proposed residential and school development (Y/YL-NSW/9), the previously approved Outlet Mall application (no. Y/YL-NSW/3), and the existing permitted development parameters of existing zoning

	"Industrial (Group D)" zoning	Previously approved rezoning application (Y/YL-NSW/3)	Current application (Y/YL-NSW/9)	Percentage increase comparing with the previously approved rezoning application
Plot Ratio	1.6	1.5	2.2	↑ ~46.6%
Maximum Building Height	<13m	<46mPD	<115mPD	↑ 150%

4.3 Such a high-rise development will significantly affect the flight path of both breeding and migratory birds and their activities, hence threatening their survival and their population.

4.4 Moreover, located just next to the Deep Bay Area, we are highly concerned the high-rise residential towers would become well-lit façades (created by lightings from each household) during night-time, and would be highly visible over a large area, including the Mai Po wetlands, due to the building height. However, the applicant stated in Section 6.4.8 of the Ecological Impact Assessment that "*the wildlife in the surrounding would be tolerant with night-time light given the existing highway viaduct and other roads with overnight traffic lighting*" and also suggested that the potential impacts on ardeid night roosts at Kam Tin River and the cormorant night roost in Nam Sang Wai would be "*remote and minor given the long separation distances*". We consider such claim is invalid.

4.5 First, the relatively low intensity and low elevation of the existing light source is not comparable to that created by the future scale of high-rise developments at the current proposed site and the adjacent sites. Second, according to the Light Pollution Guidelines for Wildlife under the Convention on Migratory Species[6], "*where there is important habitat for migratory shorebirds within 20 km of a project, consideration should be given as to whether that light is likely to have an effect on those birds.*" This 20 km buffer is based on "*a precautionary approach that sky glow can cause a change in behaviour in other species up to 15 km away*". Moreover, artificial light can in fact "*disorient flying birds, affect stopover selection, and cause their death through collision with infrastructure. Birds may starve as a result of disruption to foraging, hampering their ability to prepare for breeding or migration*"[7].

4.6 In short, **we are highly worried that** the intensified visual, noise and human disturbances impacts brought by massive population of 8,099 people of the proposed residential development, would significantly **deteriorate the habitat quality** of the surrounding important wetlands and the wildlife.

5 Cumulative ecological impacts and undesirable precedent set on Deep Bay area

5.1 Cumulative ecological impacts to the fishponds of Deep Bay area need to be carefully assessed given that a number of other residential developments have already been proposed and approved in close proximity of the application site. We are concerned all the potential residential and commercial developments would all cumulatively cause significant impacts on the flight path of breeding arceids, wetlands important to migratory birds, and also the breeding ardeids of significant ecological importance.

5.2 Moreover, the approval of this rezoning application for the high-rise development would set undesirable precedent to the similar applications in the whole Deep Bay area. As such, we object to the proposed high-rise residential development.

6 **Justifications for the decision and comments made by Government departments and the Board**

According to the Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 10, Section 2.1 (ii), the Board has the responsibility to, *"restrict uses within conservation zones to those which sustain particular landscapes, ecological and geological attributes and heritage features"*. We note that all other Government bureaux/departments are also bound to the HKPSG, and the Agriculture, Fisheries and Conservation Department (AFCD) and the Planning Department (PlanD) have the responsibility to advise the Board on the ecological[8] and planning aspects in particular. Given AFCD's mission to conserve natural environment and safeguard the ecological integrity[9], and the proposed development is not in line with the planning intention of the statutory zoning, HKBWS would also expect AFCD and PlanD to object to this application. Should AFCD, PlanD or the Board feels otherwise, we urge that the appropriate justifications are provided.

The HKBWS respectfully requests the Board to take our comments into consideration and **reject** the current application. Thank you for your kind attention.

Yours faithfully,

Date: 29 December 2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of DD107 since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

Attachments of evidence in support of my comments in the letter

Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427). We have a house on the land and pay government rates and rent.

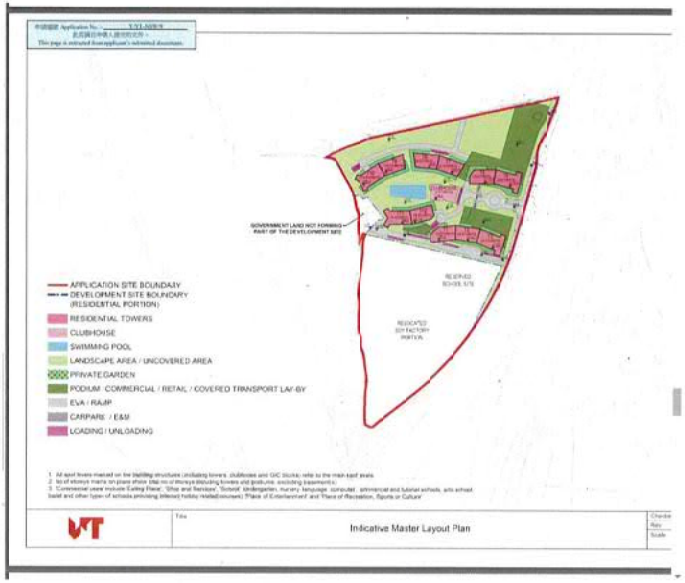
Evidence for Comment #4

My father, aged 75, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka-Lap.

Attachments of evidence in support of my comments in the letter

Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427). We have a house on the land and pay government rates and rent.

Date: 30 December 2022.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

I oppose to the above planning application. The proposed development is not in line with the planning intention of wetland buffer area. It has adverse impact on the ecology of Kam Tin River and the wetlands in the vicinity of the application site. The proposed high-rise residential development will introduce a huge number of population that cannot be supported by the present traffic infrastructure.
The application should not be approved.

The proposed high-rise residential development is clearly incompatible with the nearby open and low-density rural landscape. It would lead to huge disturbance to the adjacent ecologically sensitive wetlands. I urge the TPB to reject the application.

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)
According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school 1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely

not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man

I object to the above application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology. The application is not compatible with the intention of Wetland Buffer zone. It will threaten the important Ramsar Site in Mai Po Inner Deep Bay. The proposed project for the rezone plan will introduce thousands of new residents to the Wetland Buffer Area. This will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area. I strongly oppose the application Y/YL-NSW/9.

Date: 6 Apr 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of DD107 since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact

that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka-Lap.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of DD107 since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance

such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse.

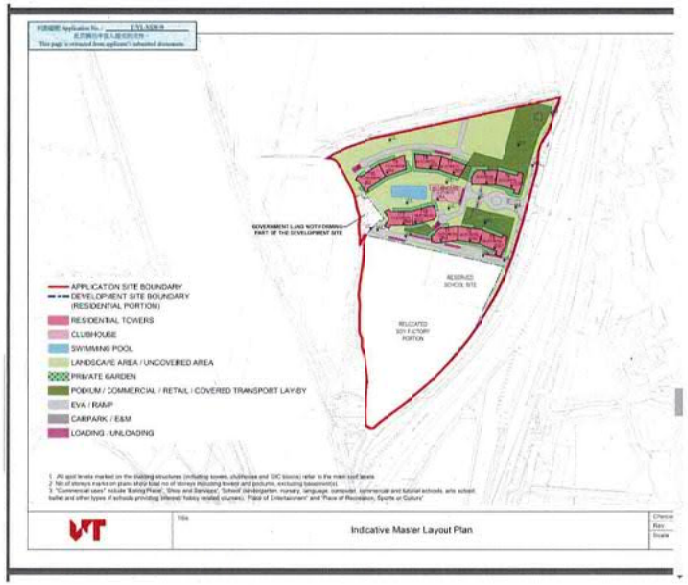
Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. Please find attached details of my comments for your consideration. The letter has also been copied to other relevant departments.

My contact details are as follows.

Name : Chan Chun Sum
[redacted]

Thank you for your attention.

Best regards,
Chan Chun Sum.

From : Ms Chan Chun Sum

To : The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Date: 5-Apr-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long DD107 since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will

deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.

(b) The noise and odour will irritate us and make us tense all the time

(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.

(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Attachments of evidence in support of my comments in the letter

Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427). We have a house on the land and pay government rates and rent.

Date: 6 Apr 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家寶

Tse Ka Po.

本人反對 Y/YL-NSW/9 的規劃申請。

本人認為申請跟濕地發展有衝突，數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

本人懇請規劃署否決這項申請。

本人強烈反對 Y/YL-NSW/9 的申請

地產商近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magnet Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	52.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoorbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1958
The Conservancy Association
會址: 香港新界葵涌貨櫃碼頭路 77-81 號 Magnet Place 一期 13 樓 1305-6 室
電話 Tel.:(852)2728 6781 傳真 Fax.:(852)2728 5538
電子郵件 E-mail:cahk@cahk.org.hk
Add.: Units 1305-6, 13/F, Tower 1, Magset Place, 77-81 Container Port Road, Kwai Chung, New Territories, H.K.
網址 Website:www.cahk.org.hk

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
Ng Hei Man

Date: 5-Jun-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot [redacted] since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of [redacted]. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I oppose the application.

I lives in the neighborhood of the proposed development area.
Currently, there is traffic jam at peak hours on the roads nearby,
particularly the roundabout near Fairview Park.
The population introduced by the proposed development is going to make
the situation worse.
The roads simply cannot cope with so many people coming to my neighborhood.

TPB should reject the application.

I would like to lodge an objection to the above application.
It damages the natural environment of the neighboring Wetlands Buffer
Area. It has adverse impact on the ecology including birds and trees.
The new population creates heavy traffic to the area. That is nuisance
to existing residents of the neighborhood.
I urge the Town Planning Board to reject the application.

I oppose the application Y/YL-NSW/9 .

The application and its development is not in line with the planning intention of Wetland Buffer Area that protects the ecological integrity of the fish ponds and wetland. It has negative ecological impact including disruption of flight lines of water birds and light disturbance.

The application should be rejected.

Date: 7 Jun 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of DD107 since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse.

新 界 元 朗

新 田 區 堡 圍 村

Pok Wai Village Representatives' Office

元 朗 堡 圍 村 7 8 號

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由堡圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至堡圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

Town Planning Board
15/F North Point Government Offices
333 Java Road
North Point
Hong Kong

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school 1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

網址 Website:www.cahk.org.hk

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

關於潭尾以西申請編號 Y/YL-NSW/9 持反對意見

敬啟者：

隨文件獲悉，申請地由「工業（丁類）」地帶、「露天貯物」地帶及顯示為「道路地方改劃為「住宅（戊類）」地帶，本人持反對意見。

一. 潭尾有非常多露天貯物及物流行業使用者，受上述規劃影響，而被迫搬遷，香港物流及運輸業欠缺長遠規劃，物流業一直佔本港經濟重要位置之一，政府應支持物流業持續發展，提供更多發展用地為必需，現時物流業用地長期供不應求，本港露天物流業用地更是短缺，露天貯物場所地方大，上蓋可提供給工業使用者興建倉庫，能滿足儲存倉存放大型貨物，但因未來新界土地發展而減少相關用地，規劃同時同樣需要保留現有土地給受影響行業，讓受影響行業繼續營生，故此 不適宜改變此地用途，應讓受影響物流行業繼續持續發展。

二. 潭尾發展申請地鄰近醬油廠，此醬油廠是現時香港為數不多現存醬油廠老字號，因應城市規劃發展，具有本土歷史文化建築已越來越少，醬油廠的存在已成為民眾了解元朗歷史文化的一部份，故希望古物古蹟辦實地考評活化醬油廠，將醬油廠作為古蹟保育保留！為民眾及下一代保留珍貴歷史文化。

二. 錦繡迴旋處交通堵塞問題長期未獲解決，臨近迴旋處現時有多項住宅申請，發展計劃是否有就交通配套設施作出規劃?

同時建議將現時規劃申請中個案合併作為交通評估，比單一交通評估更能體現問題所在：元朗米埔-錦墨 Y/YL-MP/6、元朗牛潭尾 Y/YL-NTM/5、青山公路潭尾段 Y/YL-NSW/8、石湖圍 Y/YL-NTM/8、石湖圍 Y/YL-NTM/6、Y/NTM/7、南生圍榮基村 Y/YL-NSW/7、新田練板村 Y/YL-ST/1、潭尾以西 Y/YL-NSW/9、米埔-攸墨 Y/YL-MP/7、Y/YL-MP/8、墨圍 A/YL-NSW/314。

此致

North Point
Hong Kong

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school
		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

意見詳情
Details of the Comment :

The proposed development aligns with the latest strategic planning framework for the northern metropolitan area. Due to its distance from the city center of Yuen Long, the project's population growth would not exert pressure on the central area of Yuen Long. Moreover, the project's plann ing takes into consideration minimal adverse effects on the natural ecology.

The infrastructure capacity, bolstered by the planned Northern Link, would unlock the developm ent potential of the application site. Across various aspects such as infrastructure, engineering, e nvironment, aesthetics, and landscaping, there would be no detrimental impacts. Issues arising fr om barren land would be addressed, aiming to beautify the local environment, enhance residenti al surroundings, and promote green spaces.

The project's density aligns with nearby land planning, ensuring mutual coordination. Furthermo re, the inclusion of a shopping mall as part of the project would address the inadequacy of shopp ing facilities in the area. Accelerated approval processes would facilitate the supply of small to medium-sized units, catering to the needs of the local population.

In conclusion, this application strongly supports government policies aimed at increasing housin g supply and is in line with the latest regional planning considerations, solidifying the original pl anning intentions for the application site. Therefore, I strongly support this application.

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

[redacted]

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (15)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could block most light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since 1968
The Conservancy Association
[redacted]

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts. We especially worry that exclusion of some particular projects, such as Y/YL-NSW/8 (just situated at the north of the subject site), Northern Link, etc., would downplay interactions between the environmental impacts of the project and the environmental impacts of other developments.

Over the past decade, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. Approving the captioned application would set undesirable precedent for similar applications for large-scale development in the area. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. Please find attached details of my comments for your consideration. The letter has also been copied to other relevant departments.

My contact details are as follows.

Name : Bryan Tse Ka-Shu
[redacted]

Thank you for your attention.

Regards,
Bryan Tse.

From: Bryan Tse

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Cc: Lands Department
Environmental Protection Department
Home Affairs Department
District Lands Office, Yuen Long
District Planning Officer/Fanling, Sheung Shui & Yuen Long East

Date: 15 September 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of DD107 since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in currert home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse.

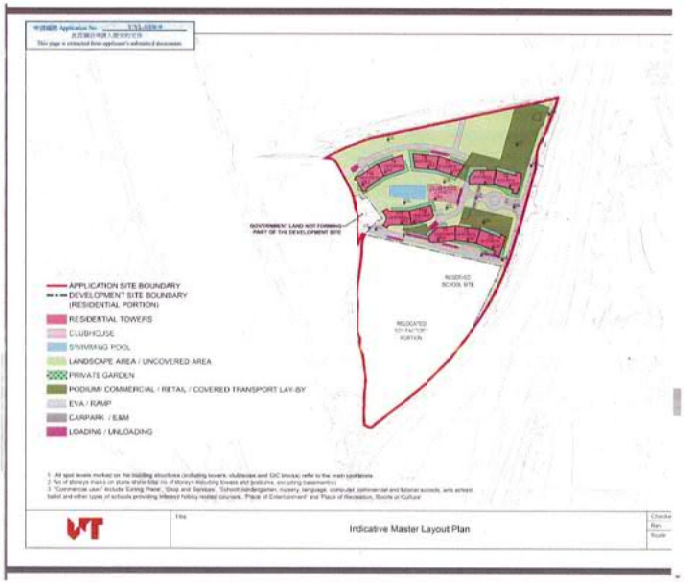
Evidence for Comment #4

My father, aged 75, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government lanc where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

反對申請

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出紮綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與濒危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. Please find attached details of my comments for your consideration. The letter has also been copied to other relevant departments.

My contact details are as follows.
Name : Tse Ka Lap
[redacted]

Thank you for your attention.

Regards,
Tse Ka Lap.

From: Tse Ka-Lap

[redacted]

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Cc: District Planning Officer/Fanling, Sheung Shui & Yuen Long East

Date: 16 Sept 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grourds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka-Lap.

Attachments of evidence in support of my comments in the letter

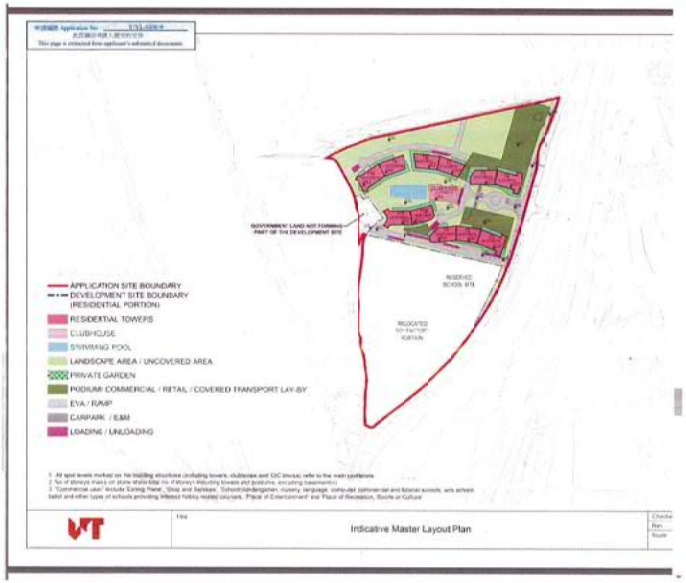
Evidence for Comment #4

My father, aged 75, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

本人反對是次申請。
申請擬議的發展多在濕地後衛區，
濕地後衛區是為了保護濕地的生態完整，
是次申請將令濕地保育區處於險境，
對市民生活而言，發展規模在當區引入
大量人口，衍生負荷環境壓力，加劇交通
擠塞問題，增加污水負担。
本人反對規劃申請。

I strongly object to the above application.
The site is adjacent to valuable wetland with distinct ecological values. The development of 29 storeys proposed is excessive and will affect the nearby wetland. The layout of the development includes high towers that will increase the risks of bird window collision. It lead to habitat fragmentation reducing the ecological carrying capacity. The additional traffic will also affect the traffic volume of Castle Peak Road which is a narrow road nearby.

我反對此項規劃申請。
改變用途變成「全宅」是典型先破壞，後發展
此舉不應被鼓勵，亦影响附近濕地，
破壞野生動物棲息地。
有關計劃亦影响現有居民的生活環境，
發展商不應剝奪原地居民的權益。

Date: 16-Sept-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 75 years old. My wife is 74 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NCT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land

covers the neighborhood of cur family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Date: 16-Sept-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long [redacted] since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 74 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house adverse to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

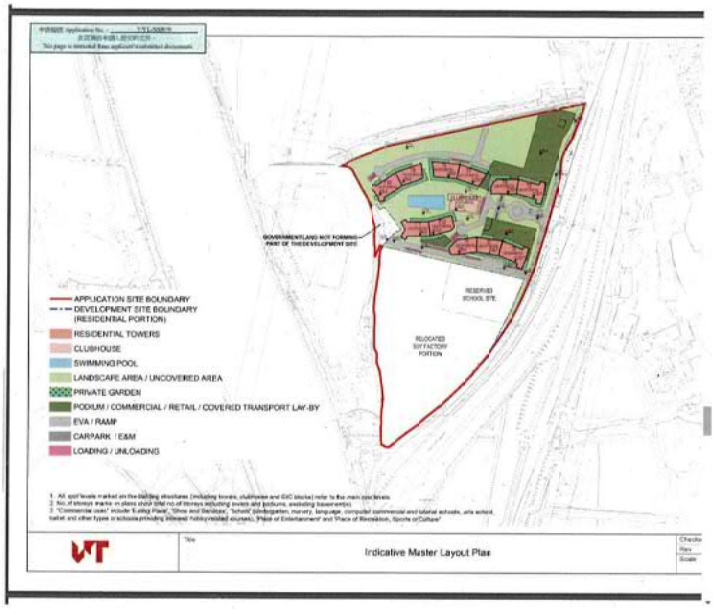
Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #11:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceed, the planned development will make the environment of our house adverse to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of waterbirds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.

12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家寶

To: The Secretary, Town Planning Bo

I would like to lodge an objection to the above application for amendment of plan.

1. I am a frequent visitor to the Nam Sang Wai region for its scenery and visiting my relatives. My relatives live in an area included in the Planning Application Y/YL-NSW/9.

2. I object to the application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology.

3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near the people around.

4. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.

5. The application will affect the livelihood of the wildlife in the river and near the riverbank. Various wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.

6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.

7. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

I oppose the application Y/YL-NSW/9 .

The application and its development is not in line with the planning intention of Wetland Buffer Area that protects the ecological integrity of the fish ponds and wetland. It has negative ecological impact including disruption of flight lines of water birds and light disturbance.

The application should be rejected.

I oppose the application.

I lives in the neighborhocd of the propcsed development area.
Currently, there is traffic jam at peak hours on the roads nearby,
particularly the roundabout near Fairview Park.
The population introduced by the propcsed development is going to make
the situation worse.
The roads simply cannot cope with so many pecple coming to my neighborhood.

TPB should reject the application.

I oppose the application.

I lives in the neighborhood of the proposed development area.
Currently, there is traffic jam at peak hours on the roads nearby, particularly the roundabout near Fairview Park.
The population introduced by the proposed development is going to make the situation worse.
The roads simply cannot cope with so many people coming to my neighborhood.

TPB should reject the application.

Objection!

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

簽署 Signature Bryan Tse 日期 Date 17/11/2023

[redacted]

From: Bryan Tse Ka-Shu
[redacted]

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Cc: District Planning Officer/Fanling, Sheung Shui & Yuen Long East

Date: 17 Nov 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy [redacted] The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to

the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

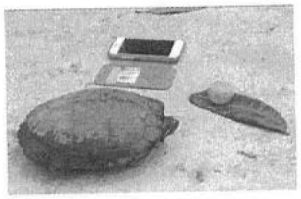
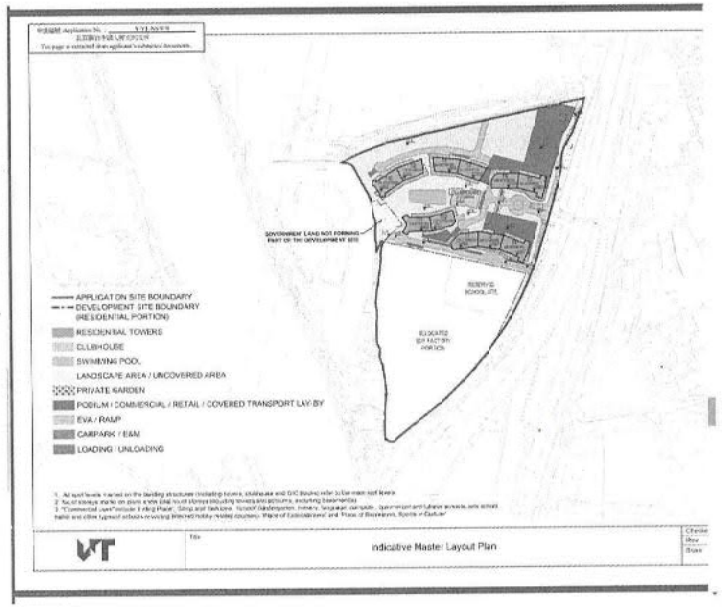
My father, aged 76, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.



Evidence for Comment #8

Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house [redacted]) from the proposed plan application.

Hong Kong,

Date: 18-Nov-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long [redacted] since 1979. My husband rent the land by the river from the government via Short Term Tenancy [redacted] found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 75 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will

deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
(b) The noise and odour will irritate us and make us tense all the time
(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. I have been a resident of the affected area DD107 for more than 40 years. I am living with my family in our house built on government land [redacted] The proposed application has a huge impact on our livelihood. As tenant of DD107 and major stakeholder of the development raised in the application, we strongly object to the Town Planning Application Y/YL-NSW/9. I would appreciate it if your department would take into consideration my reasons in the attached pages in objection to the planning application.
Please find attached details of my comments for your consideration.
The letter has also been copied to other relevant departments.

My contact details are as follows.

Name : Tse Tak Yip

Date: 20-Nov-2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy [redacted]. The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of [redacted] I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 75 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in these few years. I am now recuperating [redacted] after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house detrimental to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Date: 18 Nov 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy [redacted] The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating [redacted] after treatment as he us very weak. Staying in current home is a crucial part for his recovery.

5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Varicus wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". Date: 23 November 2023.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. My family rent the land by the river from the government via Short Term Tenancy [redacted]. The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in these few years. He is now recuperating [redacted] after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master laycut plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家潼

Tse Ka Po.

Attachments of evidence in support of my comments in the letter

GENERAL DEMAND NOTE

[redacted]

DLOYL - SHORT TERM TENANCY (STT)

15/09/2020

01/10/2020

6,420.00

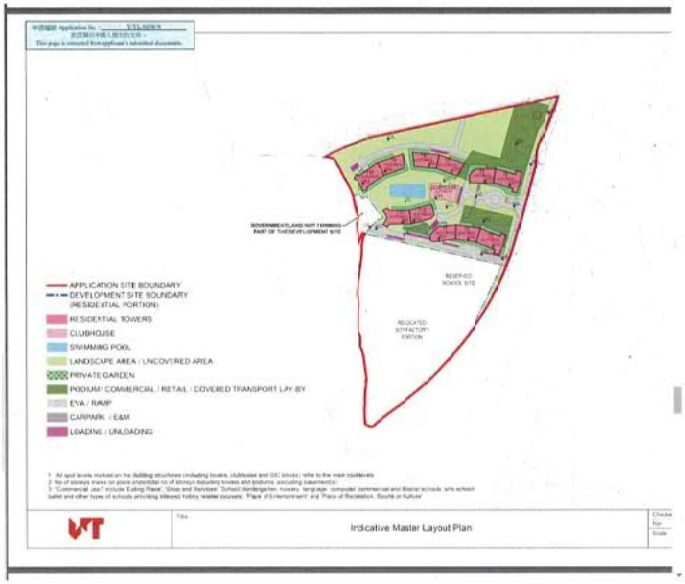
Evidence for Comment #4

My father, aged 76, has been suffering from cancer. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is locatec [redacted] arious wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the deve opment, this shculd not be included in the rezoring area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

新鴻基地產近日率先向城規會申請，句元朗再生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

本人反對申請

致：規劃署 tpbpd@plancd.gov.hk
香港北角渣華道333號北角政府合署15/F,

台鑑：
我反對計劃大綱反對元朗計畫_Y/YL-NSW/9

保護自然，不是去任由開發， 米埔雀鳥自然保護區，候鳥種類繁多，這裏離開漁塘邊不到300m，是眾多雀鳥活動覓食空間， 雀鳥在覓食區飛行高度不會高過樹頂 ，不應建設高樓大廈，土地應保持自然原狀， 保持綠化環境，我返對在這裏建屋，返對在這裏填土及有任何挖土工程，破壞自然，破壞自然生態。
人口增多， 污水處理及環境污染變成一個極嚴重問題， 沒有完善的污水處理系統 ，我反對在這裏增加太多人口，盡量保持最低限度發展， 保護米埔河道沼澤及土地自然原狀，保護米埔雀鳥自然保護區及附近的生態環境。

這地區只距離米埔濕地三百米，也是米埔鳥類保護區旁，鳥類覓食的地方，
政府應保護候鳥及鳥類的權益，支持環保。 保護自然生態，保護候鳥生活空間，香港米埔濕地及毗連土地，都是候鳥及鳥類生活空間，這些空間，都是香港唯一的，米埔是我們和鳥類生活的安樂窩，請政府應慎重考慮。

故此；

我反對計劃大綱 Y/YL-NSW/9

此申請鄰近濕地，卻故登沒納入濕地保育或緩衝區裏面，非常可疑。兼且詳細的生態評估也欠奉，對候鳥影響屬未知之數，跟政府所說「防患未然」的保育生態價值方法背道而馳，一味強調離后海灣3公里遠，彷彿候鳥會可繞過彎去鄰邊魚塘覓食。其實河旁已經是魚塘，樓卻是摩天，多數高過100米，成30層，真的沒有影響？請城規會明察。

新 界 元 朗
新 田 區 墈 圍 村
Pok Wai Village Representatives' Office

RECEIVED
24 JAN 2024
Town Planning Board

敬啟者：

反對元朗青山公路-潭尾段以西丈量約分第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和吐鄉政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅(戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由墈圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擁塞，車龍往往排至墈圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

規劃委員會

墈圍村代表

From: Bryan Tse Ka-Shu

Tel:

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Poirt,
Hong Kong,

Cc: District Planning Officer/Fanling, Sheung Shui & Yuen Long East

Date: 23 Jan 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of since 1979. They rent the land from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to

the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

Hong Kong,

Date: 23-Jan-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long since 1979. My husband rent the land from the government via Short Term Tenancy (#C427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are stil living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of . I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, ocour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Varicus wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NCT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this shoulc not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reascns for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家濬

Tse Ka Po.

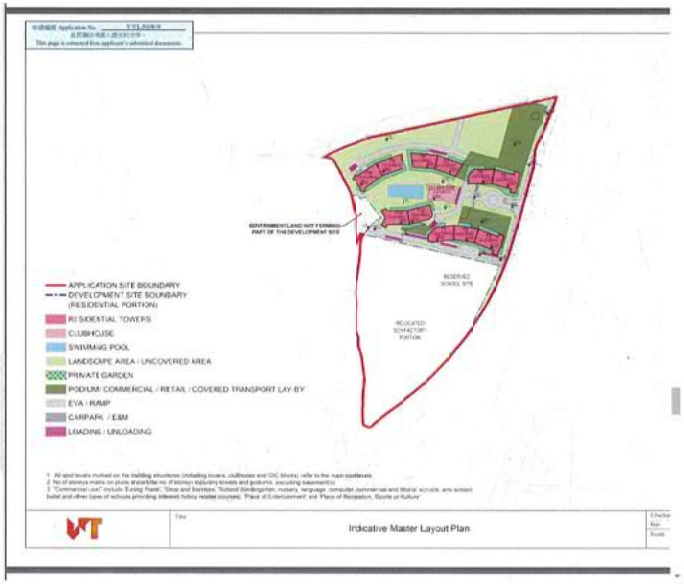
Evidence for Comment #4

My father, aged 76, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhcod. If it is included in the rezore plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoring area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

意見詳情
Details of the Comment :

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I urge the town planning board to reject the application.

Date: 21-Feb-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of [redacted] I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land

covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendmert of plar.

1. I am a resident of [redacted] since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is fourd to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government

Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone ED107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. Please find attached details of my comments for your consideration. The letter has also been copied to other relevant departments.

My contact details are as follows.

Name : Chan Chun Sum

[redacted]

Thank you for your attention.

Regards,

Chan Chun Sum

From : Ms Chan Chun Sum

To : The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Date: 18-Feb-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the [redacted] since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will

deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lurg issue.
(b) The noise and odour will irritate us and make us tense all the time
(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

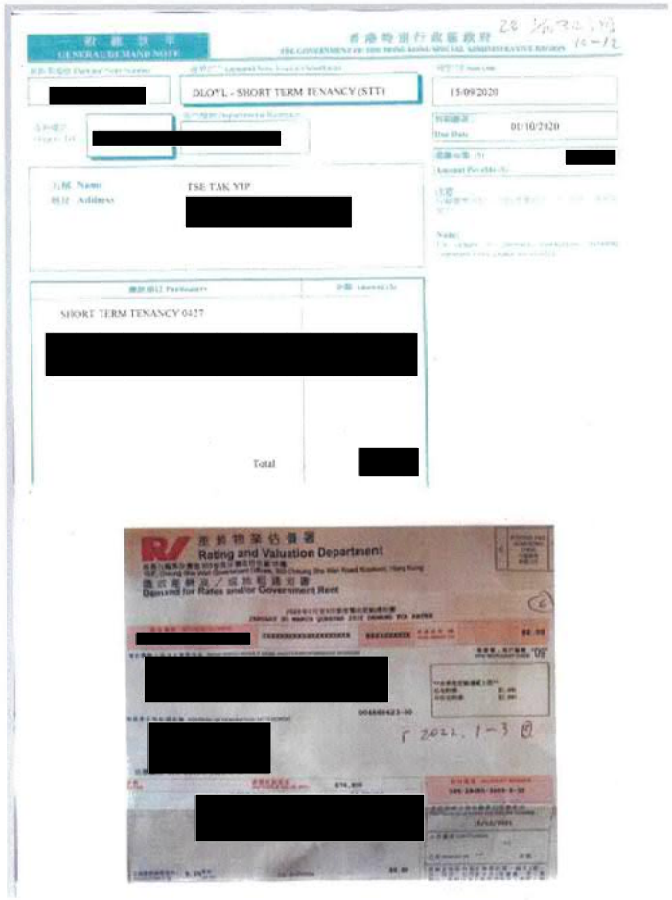
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is includec in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Attachments of evidence in support of my comments in the letter



Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427).
We have a house on the land and pay government rates and rent.

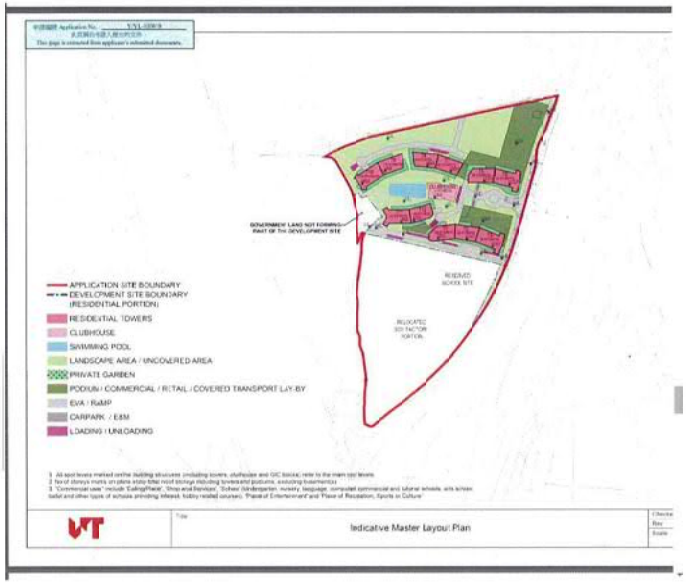
Evidence for Comment #4

My husband, aged 76, has been suffering from cancer and is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #11:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house [redacted]) from the proposed plan application.

Date: 18 Feb 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers

the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

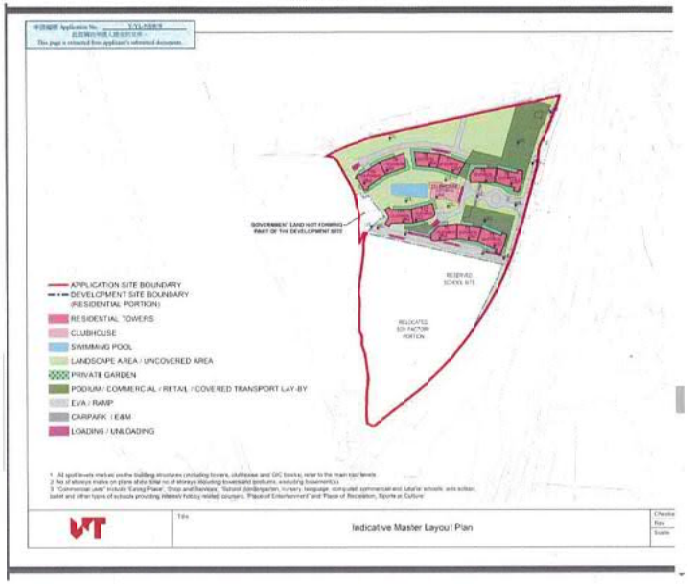
I would like to lodge an objection to the above application.
It damages the natural environment of the neighboring Wetlands Buffer Area. It has adverse impact on the ecology including birds and trees.
The new population creates heavy traffic to the area. That is nuisance to existing residents of the neighborhood.
I urge the Town Planning Board to reject the application.



Evidence for Comment #12:

I oppose the application Y/YL-NSW/9 .

The application and its development is not in line with the planning intention of Wetland Buffer Area that protects the ecological integrity of the fish ponds and wetland. It has negative ecological impact including disruption of flight lines of water birds and light disturbance.

The application should be rejected.

Y/YL-NSW/8
Lots 8 RP (Part), 8 S.A RP, 12, 13, 14 S.B ss.2, 14 S.B RP, 14 S.C RP, 16, 17, 31 S.B RP, 33 RP, 36 RP, 45, 55 S.A and 1740 S.A RP in D.D.107 and Adjoining Government Land, West of Castle Peak Road – Tam Mi, Yuen Long
Site area : About 116,231sq.m Includes Government land of about 23,864sq.m
Zoning : "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area"
Proposed Amendment : Rezone to "Other Specified Uses" annotated 'Comprehensive Development to include Wetland Restoration Area 1" / 25 Blocks – 6,825 Units / 115mPD / PR 2.3 (2.25) /OS 17,745sq.m / 687 (784) Vehicle Parking / 2 Clubhouses / 1 GIC / 2.8ha Wetlands

Y/YL-NSW/9
Lots 1910 RP (Part) and 1743 S.C RP (Part) in D.D.107 and Adjoining Government Land, West of Castle Peak Road – Tam Mi, Yuen Long
Site area: About 81,550sq.m Includes Government land of about 15,714sq.m
Zoning: "Industrial (Group D)", "Open Storage" and area shown as 'Road"
Proposed Amendment: Rezone to "Res (Group E)" / 11 Blocks – 3,115 Units / 115 (103.5)mPD / PR 2.73 (2.7) /OS 8,099sq.m / 355 (421) Vehicle Parking / Clubhouses / Relocated Soy Factory

Dear TPB Members,

The inevitable increases to the PR and height. All teh better to further block the views of the mountains from many locations.

There has also been considerable change to the layout and of course none of it for the better of the community.

Both sites are clearly more asphalt and fewer trees.The Wetland element has been shrunk.But most alarming is the reduction in the already apltry GIC facilities from 3 locations to only one. This on sites that include almost 40,000sq.mts of government land. The residential element has almost completely wiped out the intention of 'CDA'. Public expectations would be for the provision of a substantial 'GIC' node, ideally this would be located close to the school so that there could be facilities like dormitories for disabled children who could have easy access to educational facilities. The lots are owned by the same developer so there should be

considerable opportunity to find an optimal solution.

The concept of CDA zoning is that it should provide a comprehensive living environment that includes a variety of services and facilities.

https://www.legco.gov.hk/yr01-02/english/panels/plw/papers/plw0426cb1-571-7e.pdf
*3. As we can see, there are a number of merits to the "CDA" zoning: - it allows comprehensive design and layout, - **it provides certain amount of government, institution and community (GIC) facilitate to fulfill district needs.***

Not only are community facilites being neglected, the Wetland area will be enclosed and privatized and thereby add nothing to the country's vision of common prosperity.

While the 9 portion is not zoned "CDA", the size of the site and extent of government land included indicate that even with "Res E" zoning there is a responsibility on the part of PlanD to ensure that any development ncludes provision of facilities that address the pressure the thousands of additional residents would impose on existing community health and care amenities.

In view of the glut of unsold units being witheld, and thousands more vacant for longer periods, large compounds like these are no longer necessary.

The plans should be withdrawn.

Subject: Re: Y/YL-NSW/8 and 9 Tam Mei Wetlands

Dear TPB Members,

According to the PR the recent amendments made to the Town Planning ordinance are to speed up the process.

However it is quite clear that this statement is misleading. While the rights of residents to participate in the prccess have been drastically reduced, developers face no constraints on their practices that prolong the application on some developments for years by submitting endless 'additional informatic n'.

The site has been trashed for the construction of the Covid isolation centre and is now planned to be used to as accommodation for imported construction workers.

Essentially the dynamic of the district has been irreversibly impacted. The application based on the 'before' scenario is no longer realistic.

The application should be withdrawn until there is a definitive date for the dismantling of the current structures and the city has come to terms with global warming and the need to conserve more of our wetlands in order to prepare the city for the impacts of climate change.

Subject: Re: Y/YL-NSW/8 and 9 Tam Mei

Dear TPB Members,

Again we have plans that include significant quantities of government land, almost 40,000sq.mts combined, but the information supplied by HK's largest developers is not posted for the general public, and taxpayers, to scrutinize.

The recreational and community facilities are totally inadequate. We are talking about a community of almost 30,000 so where are the 3 basket ball courts and the other active sports facilities in line with HKPSG?

The small footprint dedicated to GIC is on isolated and left over portions of the site (8 only nothing on 9). Some of it is alongside Castle Peak Road, totally inappropriate with regard to the need for natural ventilation as there would be alarming levels of noise and air pollution. The lots not part of the development in between the 3 blocks have disproportionate amount of land taken up with EVA.

Then there is the scurrilous WRA, much of it a long narrow strip in front of joined and wall effect towers that would render the water courses nothing more than ornamental pools subject to extensive traffic, light and noise pollution.

The fact that most of the towers are joined should be a matter of concern as this not only reduces general ventilation but also deprives the residents of any form of cross ventilation. We can see from the recent surge in temperatures that 40C degrees will be common. There is urgent need not only to mandate that construction provide better insulation but also that the practice of having units with ventilation from only one side be prohibited.

One of the excuses for the development frenzy is that it will provide a better standard of living but the layouts indicate that these new development areas will have a more inferior level of ventilation than the older towers in urban districts with windows in kitchens and bathrooms that allow cross currents.

But of course its all about maximizing profits for developers while government depts turn a blind eye to the consequences.

Dear TPB Members,

Strongest objections, this plan stinks.

As the two applications are in fact one development, then they will be considered together.

The manner in which Sun Hung Kai and Henderson Land have manipulated the justification for this development is truly shocking and indicates that the offer of part of the site to accommodate Covid isolation facilities was nothing more than a cynical ploy to excavate a large area so that it could then be claimed that the environmentally sensitive location was degraded and should now be developed as part of the Northern Metropolis.

That the destruction was achieved in such a short time by China Construction and with all the normal environmental assessments waived indicates a degree of collusion between the two developers, the construction company and the Hong Kong government.

The fact that all this was achieved in a few months and that so much public money was spent on the construction of the facilities that were never used and will now be sent to the landfill indicates that we are entering a new phase in which manipulation of the system and disregard for rules and regulations will be the norm.

The plans should be rejected because they are truely immoral.

Town Planning Board

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅(戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由墈圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至墈圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

From : Ms Chan Chun Sum

To : The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong,

Date: 22-Mar-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will

deter orate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.

(b) The noise and odour will irritate us and make us tense all the time

(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.

(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Varicus wildlife including cows, fish, tortoise and bircs are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addit on to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruct on to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government

Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝茶濮

Tse Ka Po.

Date: 22-Mar-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of since 1979. I rent the land by the river from the government via Short Term Tenancy (#D427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we canrot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land

covers the neighborhooc of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your considerat on for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

反對!

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I urge the town planning board to reject the application.

I would like to lodge an objection to the above application for amendment of plan.

1. I am a regular visitor to the Nam Sang Wai region for its scenery as well as visiting my relatives in the region. My relatives live within the proposed rezone plan.
2. I object to the application because it affects the living neighborhood, causes damage to the natural environment and has negative impact on the ecology.
3. If the plan goes ahead, the construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near the people around. This affects my relatives who live in the neighborhood.
4. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
5. The application will affect the livelihood of the wildlife in the river and near the riverbank. Various wildlife including cows, fish, tortoise and birds are often seen in its neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
6. I have seen a lot of trees, flowers and vegetables in the region related to nature conservation. The development can cause adverse impact on all these.
7. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Wetland Conservation Area.

I would greatly appreciate your consideration for my above reasons to oppose the planning application Y/YL-NSW/9

Town Planning Board

Date: 5 May 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce 'ers of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

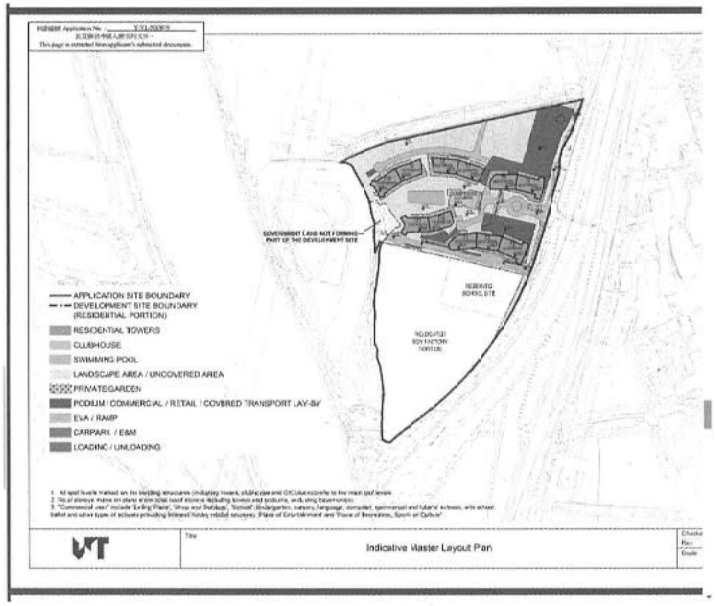
Evidence for Comment #4

My father, aged 76, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located just next to the river. Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document
"Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Date: 8 May 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. My family rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

Date: 3-May-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendmert of plan.

1. I am a resident of the land lot in Yuen Long [redacted] since 1979. My husband rent the lanc by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this lanc covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on the government land of DD107. I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my currert home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generatec by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Attachment: Scan2024-05-10_反對 AYL-NSW 314 及 AYL-NSW9 規劃申請.pdf

現提出上述規劃申請反對

新界 元朗
新田區學圍村
Pok Wai Village Representatives' Office
[redacted]

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅(戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由學圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至學圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

[redacted]

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentiallyinduce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

長春社 Since1968
The Conservancy Association

[redacted]

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could blockmost light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

長春社 Since1968
The Conservancy Association
[redacted]

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts.

Over the past decade, there were already cumulative loss of wetlands in the Deep Bay wetland ecosystem. For instance, the majority of Tin Shui Wai, Yuen Long Industrial Estate, Fairview Park and Palm Spring as well as Futian District of Shenzhen were all built on wetland. Furthermore, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. According to our research, 9 planning applications and 1 Land Sharing Pilot Scheme application[1] have been submitted within WBA since the announcement of Northern Metropolis in Policy Address 2021. The plot ratio of those applications, ranging from 1.2 to 4.14, is much higher compared with the previous applications. If all applications are approved, an additional 31,579 units, with a population of 84,422 would be brought into WBA and threatened wetland ecosystem.

In future, the adjacent San Tin technopole, Northern Link, San Tin Technopole under Northern Metropolis Development Strategy would further increase development pressure within the region. In such case, the proposed development would merely constitute greater pressure in the already rather fragile Deep Bay ecosystem. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
The Conservancy Association

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I urge the town planning board to reject the application.

意見詳情
Details of the Comment :

我們了解政府要發展及要建屋計劃，米埔鳥類保護區，是候鳥最為重要的中途補給站，我們必須要保護及預留雀鳥棲息及覓食的土地空間，不受發展影響。由魚塘邊的首300-500m的地方，應完全保護綠化及保留所有樹木，所有建築物高度不能超過三層，應盡量避免發展，而之後的300-500m的地方，即1 km內限制在最高5層內，附近就是鳥類棲息及覓食的空間，所有建築物不能高於樹木，保護綠化及所有樹木，溪流及農地。在附近建設2-3座大型污水的處理廠，未來人口將巨大增長，要將所有污水淨化，不能污染米埔濕地，破壞環境，保護濕地自然環境。

這裏距離米埔魚塘濕地只有300-500米，發展接近米埔鳥類保護區會嚴重影響保護候鳥生活環境，未來人口大量增長，人流會帶來垃圾、廢物、廢水，若處理不當會引致河流污染，不適當處理污水令水源直接流入河中引致河水污染，這裏的溪河與米埔候鳥保護區極為接近，流水會即時流進雀鳥保護區並直接污染環境，發生無法挽救的惡果，而這裏沒有污水處理是一個極大問題，怎樣保証排走的水是清潔沒有污染的淨水是主要的問題。

這裏附近亦沒有污水渠，沒有污水處理廠，污水會污染地下水源並會流入清澈溪流中。現在每天都見到有污水源源不斷地從地盤流入米埔濕地，也看見很多垃圾從地盤掉入清澈的河道中，這些垃圾及污水污染物都會流到旁邊（距離約500米）的魚塘濕地及雀鳥保護區，會引來永久及嚴重的影響。政府應保護濕地，優先處理污水垃圾問題，防止污染問題的出現。

附近完全沒有污水處理廠，未來人口增多，污水處理問題更要首先解決，我們這裏也是米埔濕地唯一一條清澈溪流，清澈的水源流往米埔濕地，整體規劃水源及污水處理，可能在這裏先建設一個大型區域性的污水處理廠，保護米埔濕地生態更為重要，保護候鳥生活環境，香港米埔濕地及毗連土地，都是候鳥及鳥類生活空間，都是香港唯一的，米埔是我們和鳥類生活的安樂窩，請政府應慎重考慮。

Date: 26 June 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on the government land. We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

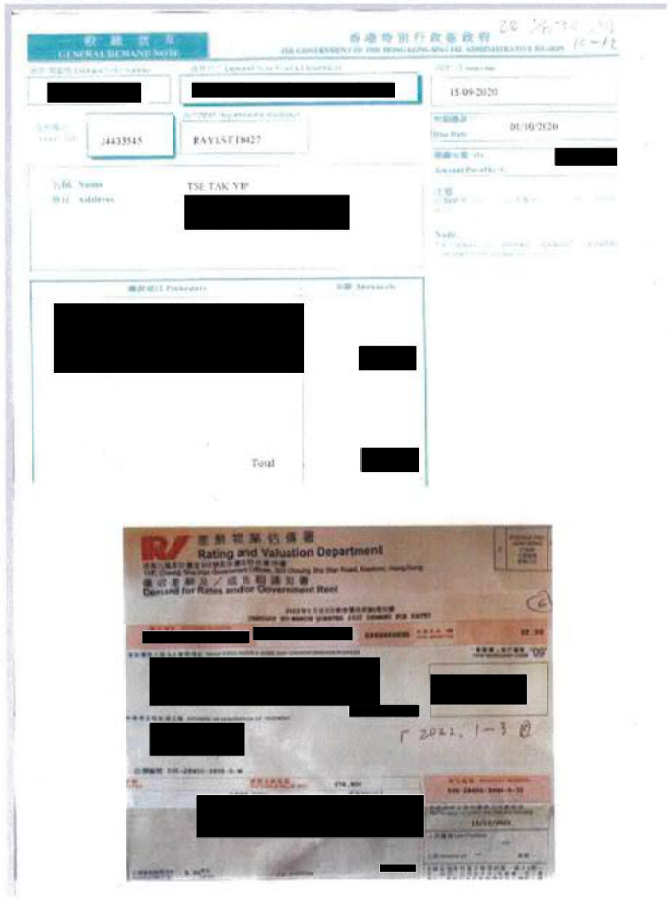
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse Ka-Shu.

Attachments of evidence in support of my comments in the letter



Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427).
We have a house on the land and pay government rates and rent.

I oppose the application Y/YL-NSW/9 .

The application and its development is not in line with the planning intention of Wetland Buffer Area that protects the ecological integrity of the fish ponds and wetland. It has negative ecological impact including disruption of flight lines of water birds and light disturbance.

The application should be rejected.

反對申請!

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I urge the town planning board to reject the application.

I would like to lodge an objection to the above application.
It damages the natural environment of the neighboring Wetlands Buffer Area. It has adverse impact on the ecology including birds and trees.
The new population creates heavy traffic to the area. That is nuisance to existing residents of the neighborhood.
I urge the Town Planning Board to reject the application.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the goverrment rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Varicus wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

新界 元朗
新田區堡圍村
Pok Wai Village Representatives' Office

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅(戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由堡圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至堡圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

Hong Kong,

Date: 30-Jun-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendmert of plan.

1. I am a resident of the land lot in Yuen Long since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land itogether with our family house from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built on I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 75 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

本人強烈反對有關申請。

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

懇請城規會否決有關申請。

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅戊類)」地帶
(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由壆圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，耳龍往往排至壆圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school 1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentiallyinduce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could blockmost light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

長春社 Since1968
The Conservancy Association
[redacted]

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts.

Over the past decade, there were already cumulative loss of wetlands in the Deep Bay wetland ecosystem. For instance, the majority of Tin Shui Wai, Yuen Long Industrial Estate, Fairview Park and Palm Spring as well as Futian District of Shenzhen were all built on wetland. Furthermore, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. According to our research, 9 planning applications and 1 Land Sharing Pilot Scheme application[1] have been submitted within WBA since the announcement of Northern Metropolis in Policy Address 2021. The plot ratio of those applications, ranging from 1.2 to 4.14, is much higher compared with the previous applications. If all applications are approved, an additional 31,579 units, with a population of 84,422 would be brought into WBA and threatened wetland ecosystem.

In future, the adjacent San Tin technopole, Northern Link, Ngau Tam Mei development under Northern Metropolis Development Strategy would further increase development pressure within the region. In such case, the proposed development would merely constitute greater pressure in the already rather fragile Deep Bay ecosystem. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
The Conservancy Association

(申請編號：A/YL-NSW/9)

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由壆圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至壆圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

Hong Kong,

Date: 22-Sep-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

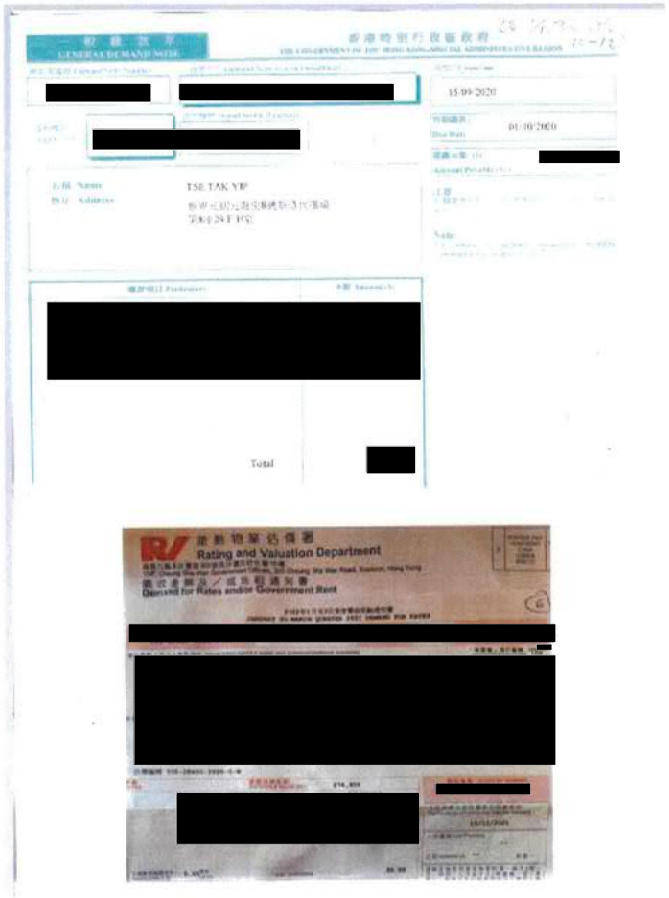
1. I am a resident of the land lot in Yuen Long [redacted] since 1979. My husband rent the land by the river from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built [redacted] We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air cuality and impose respiratory problems that can be dangerous to my husband for his lung issue.
   (b) The noise and odour will irritate us and make us tense all the time
   (c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located just [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, I think it should not be included in the rezoning area of this application in the first place. The application should be modified to exclude this highlighted government land (together with our family house by the river) from the proposed plan application.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Regards,
Chan Chun Sum.

Attachments of evidence in support of my comments in the letter



Evidence for Comment #1

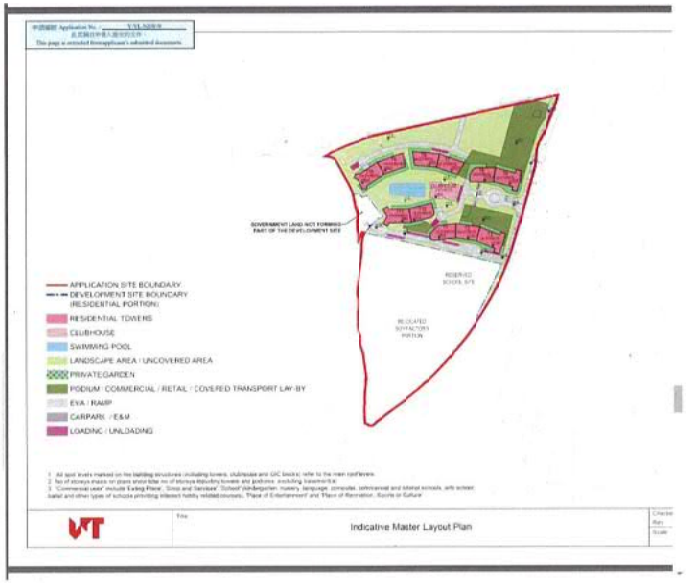
My family rent the government land since 1979 via Short Term Tenancy (#0427).
We have a house on the land and pay government rates and rent.

Evidence for Comment #4

My husband, aged 76, has been suffering from cancer and is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #11:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident [redacted] since 1979. My family rent the land [redacted] from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built [redacted] We have been paying rates to the government. My parents and I have been living in our family home for the last 43 years. All of us are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road

near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家寶

Tse Ka Po.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land [redacted] from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built [redacted] I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 76 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Date: 21 Sept 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built [redacted] We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 75, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

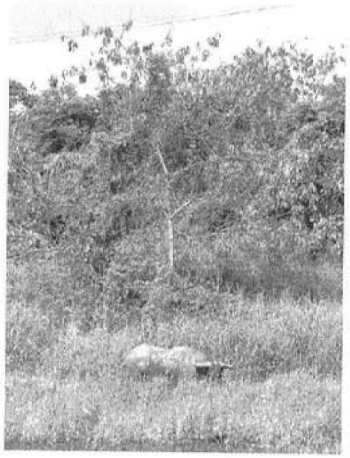
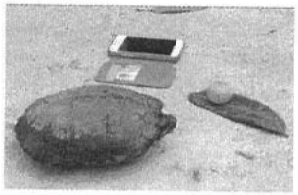
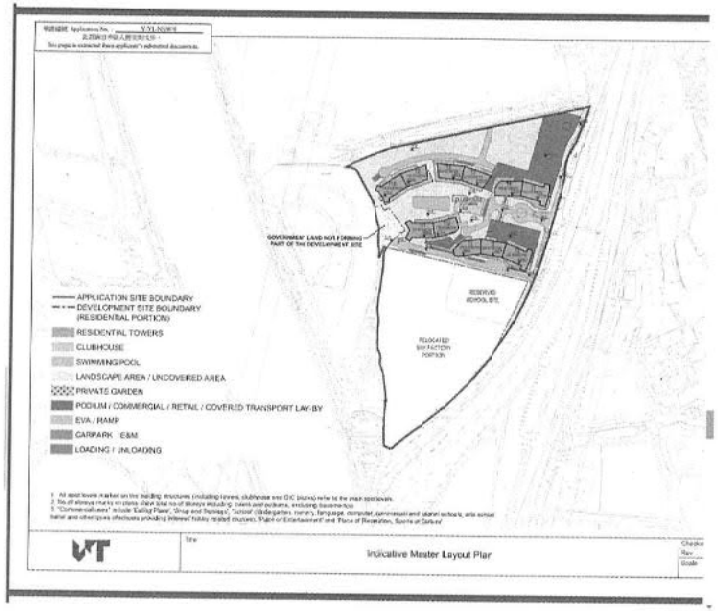
My father, aged 76, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.





Evidence for Comment #8

Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Subject: Objection to Planning Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the planning application Y/YL-NSW/9 listed by the Town Planning Board. Please find attached details of my comments for your consideration.

My contact details are as follows.

Name : Tse Ka Lap

[redacted]

From: Tse Ka-Lap
29H, Block 8, Yoho Town, 8 Yuen Lung St, Yuen Long, N.T., Hong Kong.
Tel: 24714969

To: The Secretary, Town Planning Board,
15/F, North Point Government Offices,
333 Java Road, North Point,
Hong Kong.

Date: 24 Sept 2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built [redacted] We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot acapt to move elsewhere.
4. My father, aged 76, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact or all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka-Lap.

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school

		1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentiallyinduce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

長春社 Since1968
The Conservancy Association

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish ponds. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could blocknost light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the

[redacted]

height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts.

Over the past decade, there were already cumulative loss of wetlands in the Deep Bay wetland ecosystem. For instance, the majority of Tin Shui Wai, Yuen Long Industrial Estate, Fairview Park and Palm Spring as well as Futian District of Shenzhen were all built on wetland. Furthermore, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. According to our research, 9 planning applications and 1 Land Sharing Pilot Scheme application[1] have been submitted within WBA since the announcement of Northern Metropolis in Policy Address 2021. The plot ratio of those applications, ranging from 1.2 to 4.14, is much higher compared with the previous applications. If all applications are approved, an additional 31,579 units, with a population of 84,422 would be brought into WBA and threatened wetland ecosystem.

In future, the adjacent San Tin technopole, Northern Link, Ngau Tam Mei development under Northern Metropolis Development Strategy would further increase development pressure within the region. In such case, the proposed development would merely constitute greater pressure in the already rather fragile Deep Bay ecosystem. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
The Conservancy Association

我們了解政府要發展及要建屋計劃，米埔鳥類保護區，是候鳥最為重要的中途補給站，我們必須要保護及預留雀鳥棲息及覓食的土地空間，不受發展影響。由魚塘邊的首300-500m的地方，應完全保護綠化及保留所有樹木，候鳥在米埔濕地保護區覓食，飛行高度不會高過樹木，所有建築物高度不能超過三層，應盡量避免發展，而之後的300-500m的地方，即1 km內限制在最高5層內，附近就是鳥類棲息及覓食的空間，所有建築物不能高於樹木，保護綠化及所有樹木，溪流及農地。在附近建設2-3座大型污水的處理廠，未來人口將巨大增長，要將所有污水淨化，不能污染米埔濕地，破壞環境，保護濕地自然環境。

這裏距離米埔魚塘濕地只有300-500米，發展接近米埔鳥類保護區會嚴重影響保護候鳥生活環境，未來人口大量增長，人流會帶來垃圾、廢物、廢水，若處理不當會引致河流污染，不適當處理污水令水源直接流入河中引致河水污染，這裏的溪河與米埔候鳥保護區極為接近，流水會即時流進雀鳥保護區並直接污染環境，發生無法挽救的惡果，而這裏沒有污水處理是一個極大問題，怎樣保証排走的水是清潔沒有污染的淨水是主要的問題。

這裏附近亦沒有污水渠，沒有污水處理廠，污水會污染地下水源並會流入清澈溪流中。現在每天都見到有污水源源不斷地從地盤流入米埔濕地，也看見很多垃圾從地盤掉入清澈的河道中，這些垃圾及污水污染物都會流到旁邊（距離約500米）的魚塘濕地及雀鳥保護區，會引來永久及嚴重的影響。政府應保護濕地，優先處理污水垃圾問題，防止污染問題的出現。

本人反對 Y/YL-NSW/9

新鴻基地產近日率先向城規會申請，向元朗青生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該司一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

1 9 DEC 2024

敬啟者：

反對元朗青山公路-潭尾段以西丈量約份第 107 約地段第 1910 號餘段(部份) 及
第 1743 號 C 分段(部份)和毗鄰政府土地
把申請地點由「工業(丁類)」地帶，「露天貯物」地帶改劃為「住宅戊類)」地帶
(申請編號：A/YL-NSW/9)
Y

就上述規劃申請 A/YL-NSW/9，本村一致通過反對上述申請，理由如下：

1. 該項發展計劃涉及 81,550 平方米，發展面積龐大，密度非常高，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，發展計劃涉及 266,166 平方米，11,937 住宅單位，最保守估計涉及 5 萬人的住宅項目，對現有環境影響巨大，嚴重影響鄰近村落居民。
2. 發展的屋宇高度 103 米，該區域的西邊及南邊完全被該發展樓宇阻擋，該發展區域樓宇與本村鄰近屋宇的高度有明顯的差距，破壞當區的環境及視角環境，影響本村村民屋宇視覺及通風，對附近村民權益有實在的損害及侵佔。
3. 該發展區估算約有 3,115 戶及 398 多部車輛使用，但相信該車輛的估計數目嚴重偏少，若加上相鄰的 A/YL-NSW/7 及 A/YL-NSW/8 發展項目，保守估計會增加 4,000 輛車輛，肯定遠超現有青山公路及新潭路的負荷，而現有的錦繡迴旋處及凹頭迴旋處更難負荷，將嚴重影響該區交通系統。

現時由墨圍村往青山公路一段已經公共交通設施嚴重不足，而青山公路出錦繡迴旋處一段長期擠塞，車龍往往排至墨圍路東出口，若再加上相關 266,166 平方米發展，人口增加約 5 萬多人，肯定嚴重影響本村村民公共交通及青山公路交通。

此致

By e-mail: tpbpd@pland.gov.hk

Dear Sir/Madam,

Comments on the Section 12A Application No. Y/YL-NSW/9

The Conservancy Association (CA) OBJECTS to the captioned application.

1. Not in line with the planning intention of Wetland Buffer Area (WBA)

According to the Town Planning Board Guidelines for Application for Developments within Deep Bay Area (TPB PG-No. 12C), the application site is located within WBA. The planning intention of WBA is "*to protect the ecological integrity of the fish ponds and wetland within the WCA and prevent development that would have a negative off-site disturbance impact on the ecological value of fish ponds*".

A Section 12A application Y/YL-NSW/3 has once been submitted to Town Planning Board at part of the site currently zoned "Open Storage" in 2014 to facilitate a development of shopping mall cum hotel. We note that number of buildings, maximum building height, and numbers of storeys of proposed development (Table 1) are higher than the previous one.

Table 1 Development parameter of Y/YL-NSW/3 and Y/YL-NSW/9

	Y/YL-NSW/3	Y/YL-NSW/9
No. of block	4 (shopping mall cum hotel development)	11 residential towers 1 school 1 relocated soy sauce factory
Maximum building height	46mPD	<115mPD
No. of storeys	11	<28

The proposed development would also introduce an additional of population of 8,099, and 3,115 flats. In general, it appears that much higher level of development would be resulted in the subject site. Such large development scale would potentially induce adverse off-site disturbance impacts on adjacent wetland in WCA, affect ecological function and integrity of Deep Bay wetland ecosystems. We opine that this is definitely not in line with the TPB PG-No. 12C and planning intention of WBA.

2. Incompatible with development scale outside WBA

Figure 2.4 of the Planning Statement demonstrates development intensity profile of the site and its surrounding environment outside WBA. The applicant makes reference to the proposed public housing development in Sha Po Tsuen, with a plot ratio of 6.5, and demonstrate that the plot ratio of proposed development is following a gradual descending development density from east of San Tin Highway towards WBA and Deep Bay area. However, such observation fails to consider the development density in adjacent environment, particularly Park Yoho (Table 2).

Table 2 Development parameters of current application and Park Yoho

	Y/YL-NSW/9	Park Yoho	Park Yoho Phase 2	Park Yoho Phase 3
Plot ratio	<2.5	1.024	1.64	1.254
Building height (storeys)	<115mPD (<28)	62.2mPD (16)	62.2mPD (16)	66.35mPD (18)

In short, the development scale of the proposed application is not only incompatible with the rural, low-density development in WBA, but also the development density outside WBA.

3. Adverse ecological impacts

Despite provision of Ecological Impact Assessment (EcoIA), we are still doubtful that at least some of the potential ecological impacts remains unsolved:

i. Disturbance on bird species at Kam Tin Main Drainage Channel (MDC): From the EcoIA, high diversity of waterbird species such as Black-faced Spoonbill, Chinese Pond Heron, Northern Shoveler, Pied Avocet, etc., can be spotted at the channel in the west of the application site. Off-site negative impact, such as construction noise during construction phase and human activities during operation phase, would adversely affect foraging behavior of these birds. However, it seems that the EcoIA still fails to justify how these impacts can be avoided or mitigated.

ii. Disruption on flight lines of waterbirds: The EcoIA of Y/YL-NSW/3 has once revealed that a total of 8 Black-faced Spoonbill, listed as "Endangered" under IUCN Red List, were recorded flying at the west of subject site parallel to Kam Tin MDC in December 2012 and January 2013. It also showed that all flight lines, including major and minor, pass through the north of subject site towards Kam Tin MDC, the adjacent mitigation wetland and fish pords. In this way, we still worry that potential disruption on flight lines on waterbirds would be resulted.

iii. Light disturbance: Additional light source from residential towers and open space would pose disturbance on birds and other wildlife, such as night roost of ardeids at Kam Tin MDC. Section 6.4.9 of the EcoIA mentions that "*Since the Yuen Long Highway viaduct is located between these night roosts and the Application Site and is very close to the night roost, the night roosts are largely within the shadow zone of the viaduct such that the viaduct could blockmost light to these night roosts of the Application Site*". However, the proposed residential towers are 28-29 storeys high and we are very doubtful how such evaluation can apply to such high-rise residential towers. We opine that the applicant fails to evaluate potential light impact properly and suggest measures to avoid or mitigate potential light disturbance during the construction and operation phase.

iv. Bird collision: Even though Section 6.4.10 of the EcoIA mentions that the current residential development would not have extensive glass façade, the height of residential towers, as mentioned above, would be substantial and they tends to have more areas of glass. Meanwhile, nocturnal avian collision with buildings is not clearly identified and evaluated in the EcoIA. Therefore, we do not agree with the conclusion mentioned in Table 7.1 of the EcoIA that no mitigations are required for bird collision.

長春社 Since1968
The Conservancy Association
[redacted]

4. Potential cumulative impacts

Section 8.1.1 mentioned that "*For those planning projects which were within the 500m Study Area but withdrawn or no approval status, it is considered not appropriate to include those projects as concurrent projects for the purpose of this cumulative impact assessment*". Such definition of concurrent projects would lead to great under-estimation of potential cumulative impacts.

Over the past decade, there were already cumulative loss of wetlands in the Deep Bay wetland ecosystem. For instance, the majority of Tin Shui Wai, Yuen Long Industrial Estate, Fairview Park and Palm Spring as well as Futian District of Shenzhen were all built on wetland. Furthermore, many large-scale development applications inside WBA around Nam Sang Wai have been approved or submitted for approval. The entire region has been under high development pressure. According to our research, 9 planning applications and 1 Land Sharing Pilot Scheme application[1] have been submitted within WBA since the announcement of Northern Metropolis in Policy Address 2021. The plot ratio of those applications, ranging from 1.2 to 4.14, is much higher compared with the previous applications. If all applications are approved, an additional 31,579 units, with a population of 84,422 would be brought into WBA and threatened wetland ecosystem.

In future, the adjacent San Tin technopole, Northern Link, Ngau Tam Mei development under Northern Metropolis Development Strategy would further increase development pressure within the region. In such case, the proposed development would merely constitute greater pressure in the already rather fragile Deep Bay ecosystem. Development would further encroach into lands with conservation and landscape values, decreasing overall quality of the environment.

Yours faithfully,
The Conservancy Association

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built on [redacted] We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retirec people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 77, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in

current home is a crucial part for his recovery.

5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Tse Ka Lap.

Date: 18-Dec-2024.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of [redacted] since 1979. I rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. I have my family house built [redacted] I have been paying rates to the government (see attached evidence of receipts below for rate and rent paid to government). I live with my family here for the last 43 years. I am retired now.
3. I am 77 years old. My wife is 76 years old. We are used to living in my family house here and cannot adapt to move elsewhere.
4. I have been suffering from cancer since 2021 (see attached evidence of medical letter below) and received treatments in Tuen Mun Hospital and St Teresa Hospital in January 2022. I am now recuperating in the above address after treatment and I am very weak. Staying in my current home is critical for my recovery with a stable environment.
5. I object to the application because I am unable to move out of my house. If the application proceeds, the planned development will make the environment of

our house adverse to my health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for me and my wife to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that my health will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my health because of my lung issue.
   (b) The noise and odour will irritate me and make me tense all the time
   (c) The vibration caused by the construction activities will interfere my rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to my access due to increased traffic and damages to the existing roads/paths. That hinders me from my travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood (see attached evidence of wildlife animal pictures below). If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, my wife and I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NCT forming part of the Development Site" (see attached evidence of documents of map from Town Planning Board below). It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝德業

Tse Tak Yip.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. My parents and brother are residents of [redacted] since 1979. They rent the land by the river from the government via Short Term Tenancy (#0427). The government land is found to be included in the planning application Y/YL-NSW/9.
2. We have a house built [redacted] We have been paying rates to the government. My parents have been living in our family home for the last 43 years. They are retired people now.
3. My parents are over 70 years old. They are used to living in the house and cannot adapt to move elsewhere.
4. My father, aged 77, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he us very weak. Staying in current home is a crucial part for his recovery.
5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to my parents' health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to

the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.

6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,
Bryan Tse.

Dear Sir/Madam,

Comments regarding Application Y/YL-NSW/9 to rezone DD107 and Adjoining Government Land from Industrial to Residential

I would like to lodge an objection to the above application for amendment of plan.

1. I am a resident of the land lot in Yuen Long[redacted]ince 1979. My husband rent the land[redacted]from the government via Short Term Tenancy (#0427). I found my house area included in the application Y/YL-NSW/9.
2. We have a house built[redacted]We have been paying rates to the government. My husband, my son and I are still living in this family home since it was built 43 years. We are retired people now.
3. I am 76 years old now. I am used to living in my family house. I cannot adapt to move elsewhere.
4. My husband, aged 77, has been suffering from cancer since 2021 and received treatments in Tuen Mun Hospital and St Teresa Hospital in 2022. He is now recuperating in the above address after treatment as he is very weak. Staying in current home is a crucial part for his recovery.
5. We object to the application because we are unable to move out of our family house. If the application proceeds, the planned development will make the environment of our house detrimental to our health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my husband and me will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will

deteriorate the air quality and impose respiratory problems that can be dangerous to my husband for his lung issue.

(b) The noise and odour will irritate us and make us tense all the time

(c) The vibration caused by the construction activities will interfere our rest and cause damage to the structure of our house.

(d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my husband from travel to hospital and our other daily activities.

7. The app ication is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, I have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.

5. I object to the application because my father is unable to move out of his house. If the application proceeds, the planned development will make the environment of our house detrimental to his health. The construction work will cause nuisance such as flue gases from machine, odour, noise, dust and vibration on the road near our house. There are no other places for my parents to move due to the fact that we cannot afford market rental price that is much higher to what we are paying the government rates and rent at present.
6. Our house is adjective to the footprint of the development site of the application that the health of my father will be seriously threatened:
   (a) The dust and flue gas generated by the vehicles and machines will deteriorate the air quality and impose respiratory problems that can be dangerous to my father for his lung issue.
   (b) The noise and odour will irritate him and make him tense all the time
   (c) The vibration caused by the construction activities will interfere his rest. The construction will also shock the foundation of our house and cause damage to the structure of our house.
   (d) The heavy vehicles passing by our house will cause not only the aforementioned threats but also obstruction to his access due to increased traffic and damages to the existing roads/paths. That hinders my father from his frequent travel to hospital for medical treatment and other daily activities.
7. The application is not compatible with the planning intention of Wetland Buffer Zone that large scale development will threaten the ecology of internationally important Ramsar Site in Mai Po Inner Deep Bay.
8. Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.
9. Over years, we have planted a lot of trees, flowers and vegetables around our house as part of our efforts for nature conservation. The development can cause adverse impact on all this if we have to move away from our house.
10. The proposed project for the rezone plan will introduce tens of thousands of new residents to the Wetland Buffer Area. It will unavoidably bring long term disturbances to the adjacent Conservation Area.
11. The development plan causes disruption of flight lines of water birds that pass through the area of main drainage channel and adjacent mitigation wetland. The application site is very close to the wetland ecosystem in Deep Bay, and this is on the way of the migratory birds to access their breeding grounds. The open corridor provided by the existing rural landscape with the Wetland Buffer Zone should be maintained.
12. In addition to the above reasons for rejecting the application, I also want to note that the indicative master layout plan of the application (referring to "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9") highlights an area with the remark "Government

Land NCT forming part of the Development Site". It appears that this land covers the neighborhood of our family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. A better arrangement would be for the application to exclude this highlighted government land altogether with my family home.

Thank you for your kind attention.

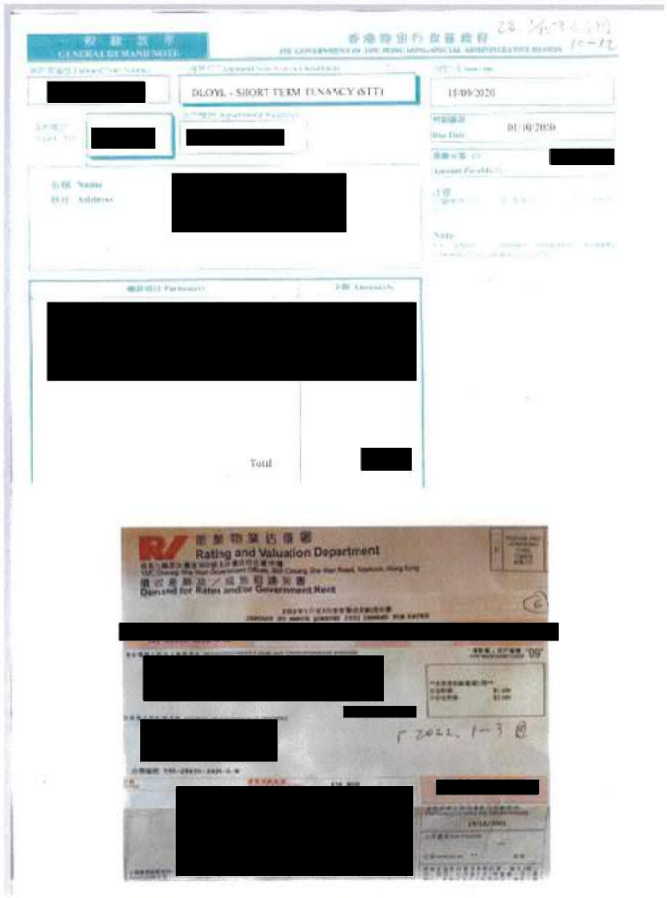
I would greatly appreciate your consideration for my above reasons for objecting to the planning application Y/YL-NSW/9

Yours faithfully,

謝家寶

Tse Ka Po.

Attachments of evidence in support of my comments in the letter



Evidence for Comment #1

My family rent the government land since 1979 via Short Term Tenancy (#0427). We have a house [redacted] and pay government rates and rent.

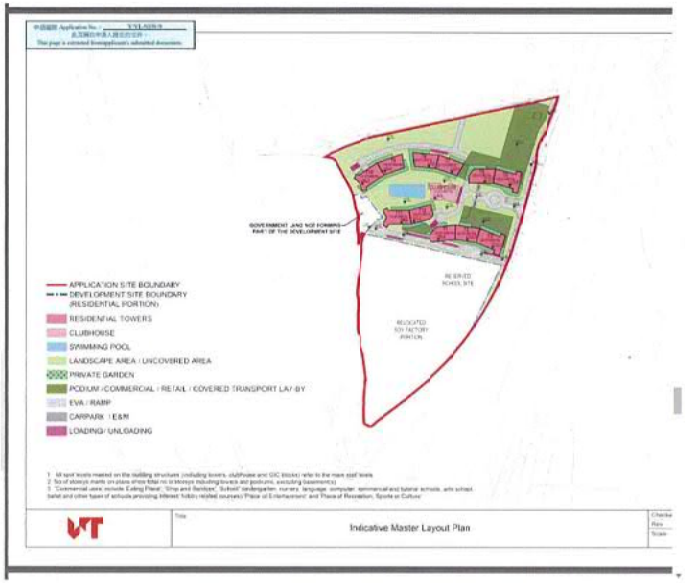
Evidence for Comment #4

My father, aged 76, has been suffering from cancer since 2021. He is receiving medical treatments. The family home and stable environment are critical to his recovery.

Evidence for Comment #8

Our house is located [redacted] Various wildlife including cows, fish, tortoise and birds are often seen in our neighborhood. If it is included in the rezone plan, it will make the environment not suitable for the above wildlife.



Evidence for Comment #12:

Extracted from Page 16 of the Town Planning Board document "Broad Development Parameters of the Indicative Development Proposal in Respect of Application No. Y/YL-NSW/9" (s12a_Y_YL-NSW_9_0_gist.pdf)

The above indicative mater layout plan highlights an area with the remark "Government Land NOT forming part of the Development Site". It appears that this land covers the neighborhood of my family house. If the government land where our family house is not going to be used in the development, this should not be included in the rezoning area of this application in the first place. The application should exclude this highlighted government land (together with my family house by the river) from the proposed plan application.

Details of the Comment :

I strongly oppose the application Y/YL-NSW/9.

The development has negative impact on the ecology of the Nam San Wai area. The construction damages the natural environment that populates wildlife including water birds and fish. It causes pollution affecting residents of the neighborhood. It causes traffic jam with the increased population and vehicles.

I urge the town planning board to reject the application.

反對！

新鴻基地產近日率先向城規會申請，向元朗南生圍潭尾的濕地緩衝區「開刀」，連同邊陲的土地大規模發展近一萬伙住宅，相信是政府提出鬆綁濕地後，提出的首宗大型發展項目申請。一直跟進濕地發展的長春社表示，新地數年前就該同一地盤發展提交的生態影響評估，揭示地盤與瀕危的黑臉琵鷺和其他冬候鳥的飛行路線重疊，質疑該發展商以生態價值低為由發展濕地緩衝區，是嚴重低估對生態的影響，而今次的發展密度之高遠超以往的規模，憂慮一旦申請獲批，將立下壞先例。

本人反對申請。

Since the proposed rezoning from "Industrial (Group D)", "Open Storage" and area shown as "Road" to "Residential Developments" is in close vicinity to existing High Pressure gas pipeline along San Tam Road, the rezoning/project proponent should conduct Quantitative Risk Assessment (QRA) to evaluate the potential risk and determine/implement the necessary mitigation measure(s) if required. The QRA should take into account the future population of the area, such as those in the existing buildings, in the proposed development, and in other approved developments, etc. where applicable. The rezoning/project proponent should consult our company in the design stage and closely coordinate with our company during the construction stage, and provide protective measures.

KFBG's comments on two planning applications
27/05/2022 12:22

From: [redacted]
To: "tpbpd@pland.gov.hk" <tpbpd@pland.gov.hk>
File Ref:

1 attachment

220527 s12a NSW 8 & 9.pdf

Dear Sir/ Madam,

Attached please see cur comments regarding two applications. There is ONE pdf file attached to this email. If you cannot see/ download/ open this file, please notify us through email.

Best Regards,

Ecological Advisory Programme
Kadoorie Farm and Botanic Garden

Appendix Vc of RNTPC Paper No. Y/YL-NSW/9A

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

The Secretary,
Town Planning Board,
15/F, North Point Government Offices,
333, Java Road, North Point,
Hong Kong.
(Email: tpbpd@pland.gov.hk)

27th May 2022 **By email only**

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

香港新界大埔林錦公路
Lam Kam Road, Tai Po, New Territories, Hong Kong
Email: eap@kfbg.org

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

of) these high-rise developments in this locality.

10. Thank you for your attention.

27th May 2022. **By email only**

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

香港新界大埔林錦公路
Lam Kam Road, Tai Po, New Territories, Hong Kong
Email: eap@kfbg.org
1

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

333, Java Road, North Point,
Hong Kong.
(Email: tpbpd@pland.gov.hk)

27th May 2022. **By email only**

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

香港新界大埔林錦公路
Lam Kam Road, Tai Po, New Territories, Hong Kong
Email: eap@kfbg.org

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

of) these high-rise developments in this locality.

10. Thank you for your attention.

(Email: tpbpd@pland.gov.hk)

27th May 2022. **By email only**

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1"
(Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)"
(Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

Y/YL-NSW/8	**Y/YL-NSW/9**	**Park Yoho (Completed and Approved Phases)**	**Crescent Green & Riva (Completed)**
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

[1]Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

香港新界大埔林錦公路
Lam Kam Road, Tai Po, New Territories, Hong Kong
Email: eap@kfbg.org

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

of) these high-rise developments in this locality.

10. Thank you for your attention.

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We consider our views as shown in the previous submission would still be largely relevant; it is attached in **Appendix 1**, for your reference. We would also like to clarify that the height of the potential public housing site at Sha Po is now proposed to be not more than 185 mPD[1].

2. We also urge the Board to liaise with Agriculture, Fisheries and Conservation Department as to whether their recent study relating to the proposed Wetland Conservation Parks (WCPs) (Tender Ref.: AFCD/CON/01/22)[2] includes the captioned application sites and/ or their immediate surroundings. We urge the Board to consider whether these applications would affect this study and/ or the future WCPs, and whether the applicants have carried out (or need to carry out) any assessments relating to the potential impacts on the WCP(s).

3. Thank you for your attention.

1. We consider our views as shown in the previous submission would still be largely relevant; it is attached in **Appendix 1**, for your reference. We would also like to clarify that the height of the potential public housing site at Sha Po is now proposed to be not more than 185 mPD[1].

2. We also urge the Board to liaise with Agriculture, Fisheries and Conservation Department as to whether their recent study relating to the proposed Wetland Conservation Parks (WCPs) (Tender Ref.: AFCD/CON/01/22)[2] includes the captioned application sites and/ or their immediate surroundings. We urge the Board to consider whether these applications would affect this study and/ or the future WCPs, and whether the applicants have carried out (or need to carry out) any assessments relating to the potential impacts on the WCP(s).

3. Thank you for your attention.

27th May 2022. **By email only**

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

[redacted]

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

[redacted]

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

[redacted]

of these high-rise develcpments in this locality.

10. Thank you for your attention.

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilisirg by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.3 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcoIAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any

of) these high-rise developments in this locality.

10. Thank you for your attention.

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)
&
To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. We consider our general views regarding these two applications would still be similar to those as shown in our previous submissions, and thus our previous submissions are attached under this letter for your reference. However, we urge the Board to also make reference to the latest development parameters of each development mentioned as they may have changed.

3. Thank you for your attention.

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We consider our views as shown in the previous submission would still be largely relevart; it is attached in **Appendix 1**, for your reference. We would also like to clarify that the height of the potential public housing site at Sha Po is now proposed to be not more than 185 mPD[1].

2. We also urge the Board to liaise with Agriculture, Fisheries and Conservation Department as to whether their recent study relating to the proposed Wetland Conservation Parks (WCPs) (Tender Ref.: AFCD/CON/01/22)[2] includes the captioned application sites and/ or their immediate surroundings. We urge the Board to consider whether these applications would affect this study and/ or the future WCPs, and whether the applicants have carried out (or need to carry out) any assessments relating to the potential impacts on the WCP(s).

3. Thank you for your attention.

Dear Sir/ Madam,

To rezone the application site from "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area" to "Other Specified Uses" annotated "Comprehensive Development to include Wetland Restoration Area 1" (Y/YL-NSW/8)

To rezone the application site from "Industrial (Group D)", "Open Storage" and area shown as 'Road' to "Residential (Group E)" (Y/YL-NSW/9)

1. We refer to the captioned.

2. These two sites are adjacent to each other and within Wetland Buffer Area (WBA). The former one is also adjoining the Wetland Conservation Area (WCA), Conservation Area (CA) zone and existing fish ponds. Kam Tin Main Drainage Channel (KTMDC) is located to the west of both sites and is considered to be a habitat of medium ecological value as well as utilising by many waterbird species of conservation importance. There should be no doubt that generally speaking both sites are within an area of conservation concern.

3. We would like the Board to look at the development parameters of these applications and some nearby existing/ approved large-scale residential developments (e.g., those within 1 km from the planned Au Tau Station), as follows:

[redacted]

嘉道理農場暨植物園公司
Kadoorie Farm & Botanic Garden Corporation

Y/YL-NSW/8	Y/YL-NSW/9	Park Yoho (Completed and Approved Phases)	Crescent Green & Riva (Completed)
- Within WBA - Adjoining WCA	Within WBA	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway)	- Outside WBA - Well separated from WBA by existing highways/ viaducts (e.g., Tsing Long Highway and Yuen Long Highway); - Actually located further south as compared to Park Yoho
Domestic: Not more than 110.5 mPD Non-domestic: Not more than 25.8 mPD Composite: Not more than 115 mPD	Domestic: Not more than 103.5 mPD Non-domestic: Relocated soy sauce factory: not more than 8 m Clubhouse: Not more than 18.5 mPD Composite: Not more than 115 mPD	62.2 – 66.35 mPD	82 – 83.5 mPD

*Data are from the gists and the submitted Planning Statements (i.e., Figure 2.3)

4. According to the information from the submitted Planning Statements, there is also a 'planned residential development' (160 mPD) located to the east of both sites; but it is called 'Potential Public Housing Site – Sha Po' and is not categorised as an approved/ completed residential development. In addition, it is located to the east of San Tin Highway, Castle Peak Road – Tam Mi Section and San Tam Road; thus it is well separated from the WBA and the

[redacted]

fish pond area within WCA.

5. We visited the locality, both daytime and nighttime, where the sites are located in late May 2022; we would like the Board to look at some photos in **Figure 1** (please see also an aerial photo at **Figure 2**). As shown, the sites are NOT adjacent to any high-rise residential developments at present and those existing high-rise developments such as Park Yoho and Crescent Green/ Riva are indeed separated by the existing highways/ viaducts from both sites.

6. Both Planning Statements mention the following: '*It is evident that the area is gradually transforming from a sub-urban area to an urban township with development intensity gradually descending towards the north across San Tin Highway, then towards the Deep Bay.*' Based on the parameters aforementioned and the on-site photos, we would like the Board to seriously ask the applicants as to what 'area' they are referring to and how this statement can be substantiated.

7. A total of about 9,940 flats (about 6,825 from Y/YL-NSW/8 and about 3,115 from Y/YL-NSW/9) would be developed under these two proposals. We urge the Board to seriously consider whether these flats would significantly change the disturbance level of the locality. We urge the Board to liaise with relevant authorities as to whether the road/ cycle track alongside the KTMDC and close to both application sites are heavily used or not at present, especially during weekdays; some on-sites photos taken in late May 2022 are in **Figure 3** for your reference. As mentioned above, KTMDC is of medium ecological value and utilised by a variety of waterbirds of conservation importance, and many of these birds would be disturbance sensitive (please refer to our other submissions regarding developments within the Mai Po/ Deep Bay areas). According to the Ecological Impact Assessments (EcolAs) submitted for these applications, we can see the following statement:

> '*The latest design of the development would not have any dedicated paths/ roads leading to the nearby sensitive habitats to allow the residents* ((included '*or the soy sauce factory operators*' as well in the EcoIA of Y/YL-NSW/9)) *to access directly.*'

8. We urge the Board to consider whether it is feasible/ possible to completely prevent the future residents of these developments to use the road/ cycle track adjacent to the KTMDC, and how these developments, or any of them, would transform the area.

9. Finally, we urge the Board to consider the potential cumulative impacts of approving (any
