1. INTRODUCTION

1.1 Project Background

1.1.1 The Application Site situated at 42-44 Yiu Wa Street and 28-29 Canal Road East is currently vacant with previous building demolished. It is intended to redevelop the Application Site to include residential flat with shop and services/eating place.

1.1.2 It is therefore to seek approval from Town Planning Board ("TPB") under Section 16 of the Town Planning Ordinance for the proposed flat with shop and services/eating place.

1.1.3 Ramboll Hong Kong Limited is commissioned by the applicant to prepare an Environmental Assessment (EA) in support of the planning application. The EA report will assess the major environmental issues (i.e. environmental noise, air quality, construction phase environmental impact) of the Application Site and the surrounding area.

1.2 Application Site and its Environ

1.2.1 The Application Site is located on east side of Canal Road East and Canal Road Flyover. It is also bounded by Yiu Wa Street on north side and a back alley on south side. The area of the Application Site is approximately 274.2m^2.

1.2.2 The Application Site, together with other adjacent lots on east side of Canal Road East and Canal Road Flyover, falls within area currently zoned as "Commercial" ("C") under Draft Wan Chai Outline Zoning Plan (OZP) No. S/H5/32. Generally, it is surrounded by commercial buildings on north, east and south sides.

1.2.3 On the other hand, the areas on opposite side of Canal Road East and Canal Road Flyover are zoned as "Other Specified Uses (MIXED USE)". Both commercial and residential uses can be found.

1.2.4 The location of the Application Site and its surrounding environs are shown in **Figure 1.1.**

1.3 Proposed Development

1.3.1 The Proposed Development includes 1 residential tower with 22 residential storeys erected on a podium with 1 storey of retail use, one storey of clubhouse and two storeys of E&M facilities.

1.3.2 Under the Proposed Scheme, the plot ratio of residential use is proposed as 9.47 and with the total domestic GFA of about 2,595 m^2. The building height of the residential tower is +102.9 mPD. A podium (with retail use, clubhouse and E&M facilities) with +24.65 mPD is located underneath the proposed residential tower within the Application Site.

1.3.3 The Proposed Composite Redevelopment is tentatively completed in 2030. The population intake year for the proposed development will be no later than Year 2030.

1.4 Appraisal of Environmental Impact

Noise

1.4.1 The Application Site is bounded by roads on two sides. The potential road traffic noise impact has been assessed in this study. Direct noise mitigation measures have been recommended to minimise the potential road traffic noise impact.

1.4.2 The Application Site is located in an area used mainly for commercial and residential purposes. No active industrial operation can be observed. Major industrial noise impact

would be due to fixed noisy facilities. Onsite survey has been conducted to understand the noise environment. Noisy facilities have been identified. Quantitative fixed noise impact assessment has been conducted to evaluate the potential fixed noise impact.

1.4.3 The development is not environmentally polluting in nature. Should there be any fixed noisy facilities (e.g. fan system, HVAC for retail, clubhouse) provided in future, it will be designed to follow the HKPSG requirement (i.e. acceptable noise level minus 5 decibels) to ensure that there is no adverse impact on any noise sensitive use in the surrounding.

Air Quality

1.4.4 With respect to the potential vehicular emission impact, the Application Site is affected by open road emissions from nearby carriageways such as Canal Road Flyover, Canal Road East, Canal Road West, Leighton Road, and carriageways further away.

1.4.5 No portal within 500m from the Application Site has been identified.

1.4.6 There is absence of chimney emission observed in the surrounding. However, several open-area bus terminus (BT), open-area public light bus (PLBT) and on-street parking for goods vehicles/ buses/ coaches within 500m from the Application Site have been identified.

1.4.7 No helicopter and marine emission within 500m from the Application Site has been identified.

1.4.8 A quantitative air quality impact assessment is prepared to address the potential air quality impact that would be generated from the aforementioned emissions.

1.5 Organisations of the Report

1.5.1 This Environmental Assessment report contains the following chapters: -

- Chapter 2 to evaluate and assess potential road traffic noise impact on the Proposed Development at the Application Site, and propose practicable noise mitigation measures to attenuate the impact;
- Chapter 3 to evaluate and assess potential fixed noise impact on the Proposed Development at the Application Site, and propose practicable noise mitigation measures to attenuate the impact;
- Chapter 4 to evaluate the potential air quality impact on the Proposed Development at the Application Site, and propose practicable mitigation measures to attenuate the impact.

2. TRAFFIC NOISE IMPACT ASSESSMENT

2.1 Introduction

2.1.1 This road traffic noise impact assessment is prepared to address potential road traffic noise impact on the noise sensitive uses of the Proposed Development and to recommend mitigation measures where practicable to attenuate the impact.

2.1.2 The Proposed Development consists of residential, retail, and other ancillary facilities such as clubhouse, transformer room and E&M rooms. The residential dwelling is noise sensitive in nature and will rely on opened window for ventilation purpose. All other uses are either non-noise sensitive in nature or do not rely on opened window for ventilation purpose.

2.2 Assessment Criteria

2.2.1 Noise standards are recommended in the Hong Kong Planning Standards and Guidelines (HKPSG) for planning against noise impact from sources such as road traffic, railway and aircraft.

2.2.2 Under the HKPSG, the criterion for road traffic noise impact for dwellings, is $L_{10(1\text{-hour})}$ 70 dB(A). The criteria apply to habitable rooms which rely on openable windows for ventilation.

2.3 Assessment Methodology

2.3.1 In this assessment, the potential noise impact arising from nearby carriageways on the Proposed Development has been assessed based on the proposed master layout plan (MLP)**.**

2.3.2 It involved the prediction of future noise impacts on Noise Sensitive Receivers (NSRs) arising from traffic flows along road carriageways situated within or in the vicinity of the Application Site. Calculation of predicted road traffic noise were based on the worst case peak hour traffic flows projected within a 15-year period from the target completion and occupation date (Year 2030) of the proposed development.

2.3.3 For worst-case scenario evaluation, the assessment year was chosen to be year 2045, which has the maximum forecasted traffic flow within the 15-year period. The year 2045 traffic forecast data is prepared by project traffic consultant and attached in **Appendix 2-1**.

2.3.4 The U.K. Department of Transport's procedure "Calculation of Road Traffic Noise" (CRTN) was used to predict the hourly $L_{10(1\text{-hour})}$ noise levels generated from road traffic at NSRs. Practicable environmental mitigation measures have been recommended, where necessary. The predicted noise levels were compared with the relevant HKPSG noise standards.

2.3.5 The road surfacing type of all carriageways within 300m assessment area of the Application Site is assumed impervious. Speed limit of 50 km/hr is assumed for all roads generally, except Canal Road Flyover and Wong Nai Chung Gap Flyover (70 km/hr).

2.4 Noise Sensitive Receivers

2.4.1 A number of Noise Sensitive Receivers (NSRs), which are likely to be subject to worst road traffic noise impact of the corresponding habitable rooms, were selected for the assessment. All assessment points were taken at 1.2 m above the floor and 1 m away from the façade of openable windows of rooms of sensitive use (living room, bedroom).

2.4.2 **Figure 2.1** illustrates the location of all NSRs for the road traffic noise impact assessment.

2.5 Assessment Result without Noise Mitigation Measures (Base Scenario)

2.5.1 The predicted road traffic noise levels on all NSRs based on the development scheme with no further direct noise mitigation measures has been assessed. **Appendix 2-2** shows the predicted road traffic noise level under peak traffic flow condition representing worst case scenario within 15 years from the completion of the proposed development.

2.5.2 According to the assessment result, there are exceedance of road traffic noise standards at various locations of the residential towers facing road and up to 81 dB(A), with maximum 66 number of exceedance (i.e. compliance rate = 0%) under AM peak scenario (the worst case scenario).

2.6 Proposed Noise Mitigation Measures

2.6.1 The following noise mitigation measures have been considered and adopted where appropriate with the noise mitigation measures incorporated into the building layout design (including podium, building setback of the residential towers) were assessed.

Fixed Glazing (with or without Maintenance Window)

2.6.2 For window façade that are not necessary to serve ventilation purpose yet exposed to significant road traffic noise, fixed glazing (with or without maintenance window) (not for ventilation purpose) is proposed. The fixed glazing if with maintenance window will be equipped with a removable handle or key lock system to ensure the maintenance window remains locked except for cleaning and maintenance purposes. The purpose of fixed glazing (not for ventilation purpose) will be stated in relevant documents such as sales brochure, GBP and DMC in future.

Minimum 1.5m high solid balustrade

2.6.3 Minimum 1.5m high solid balustrade at 5/F flat roof is proposed to protect the dwellings at the 5/F.

Enhanced Acoustic Balcony (Baffle Type) [EAB(BT)]

2.6.4 "Application of Innovative Noise Mitigation Designs in Planning Private Residential Developments against Road Traffic Noise Impact" (ProPECC PN 5/23) issued by EPD is referred in this planning application. For EAB(BT) with a full-height side wall, solid parapet at the front (and 70% permeability fence on the side), sound absorptive material (SAM) applied only to the balcony ceiling, inner sliding door with gap width of 100mm and overlapping length of at least 100mm, a noise reduction of 8 dB(A) is achievable with reference to room area of 14m^2. Moreover, additional 3 dB(A) reduction can offer for tilting the EAB(BT) with not less than 30^o horizontal incident angle to the dominant line source. Altogether, 11.0 dB(A) is assumed as the maximum noise reduction and adopted in this study for habitable room of residential towers using EAB(BT).

Acoustic Window (Baffle Type) [AW(BT)]

2.6.5 According to ProPECC PN 5/23, there is configuration of AW(BT) with opening of around 0.5 m^2, inner sliding door with gap width of 100mm to 175mm and overlapping length of at least 100mm with the referenced room area of 8m^2. Noise reduction of 6 dB(A) is achievable. Further, addition of SAM of NRC ≥ 0.7 applied only to the top and outer opening side of the mullion can offer an additional 1.5 dB(A). Moreover, additional 1 dB(A) reduction can offer for tilting the AW(BT) with not less than 30^o horizontal incident angle to the dominant line source. Altogether, 8.5 dB(A) is assumed as the

maximum noise reduction and adopted in this study for habitable room of residential towers using AW(BT).

2.6.6 The configuration of EAB(BT) and AW(BT) are shown in **Appendix 2-3**.

2.7 Assessment Result with Noise Mitigation Measures (Mitigated Scenario)

2.7.1 According to the assessment result under mitigated scenario in **Appendix 2-4**, the predicted results at all NSRs could comply with relevant standard. The proposed road traffic noise mitigation measures are shown in **Figure 2.2**. No adverse road traffic noise impact on the Proposed Development is anticipated.

2.7.2 A schedule of noise mitigation measures is shown in **Appendix 2-5**.

2.8 Conclusion

2.8.1 Road traffic noise impact assessment has been carried out for the proposed development. Noise mitigation measures including fixed glazing (with or without maintenance window), enhanced acoustic balcony (baffle type), acoustic window (baffle type) and minimum 1.5m high solid balustrade are provided. The noise mitigation measures are tentative only and subject to future scheme refinement.

2.8.2 With the proposed noise mitigation measures in place, no adverse road traffic noise impact on the Proposed Development is anticipated. The feasibility of meeting relevant road traffic noise standard is demonstrated.

3. FIXED NOISE IMPACT ASSESSMENT

3.1 Introduction

3.1.1 This fixed noise impact assessment is prepared to address potential fixed noise impact on the noise sensitive uses of the Proposed Development and to recommend mitigation measures where practicable to attenuate the impact.

3.1.2 The Proposed Development consists of residential, retail, and other ancillary facilities such as clubhouse, transformer room and E&M rooms. The residential dwelling is noise sensitive in nature and will rely on opened window for ventilation purpose. All other uses are either non-noise sensitive in nature or do not rely on opened window for ventilation purpose.

3.2 Assessment Criteria

3.2.1 According to the Technical Memorandum for the Assessment of Noise from Places other than Domestics Premises, Public Places or Construction Sites ("IND-TM") issued under the Noise Control Ordinance, the Proposed Development is situated in urban area. Canal Road Flyover acts as an Influencing Factor (with daily flow over 30,000 veh according to the latest annual traffic census 2024).

3.2.2 Therefore, Area Sensitivity Rating "C" is adopted accordingly, which is affected by the IF. Respectively standards during day & evening time and night time are Leq(30min) 70 dB(A) and 60 dB(A).

3.3 Assessment Methodology

3.3.1 A noise prediction software, CadnaA, is used to model and predict the fixed noise impact. The modelling methodology for propagation is based on the prediction procedures in ISO 9613-2 "Acoustics — Attenuation of sound during propagation outdoors, Part 2: Engineering method for the prediction of sound pressure levels outdoors"

3.4 Identification of Fixed Noise Sources

3.4.1 Based on onsite survey along the periphery of the Application Site, no noticeable noise from any fixed noise sources can be identified. According to further review including referencing to aerial photos and photos taken in the surrounding with study area of 300m from site noise sources have been identified in the surrounding as tabulated below and shown in **Figure 3.1.**

Table 3.1 Identified Fixed Noise Sources within the 300m Study Area

^No night time operation

3.4.2 According to the site survey, most of the identified fixed noise sources are located at roof or inaccessible location. Direct noise measurement is not possible and relevant details of the identified noise sources are not available at this stage despite that request has been made to the operators of these potential noisy facilities, letters for the request of information for the identified fixed noise sources to the operators are shown in **Appendix 3-1**.

3.4.3 Only the operator of Leighton Hill Community Hall had provided the information (shown in **Appendix 3-2**). While some of the operators including Lee West Commercial Building, Vulcan House and Masjid Ammar and Osman Ramju Sadick Islamic Centre

were replied by tele-conversation, they did not provide information on the fixed noise sources nor permit noise measurements. For the remaining operators, no reply is received yet. Besides, the respective owner or estate management have been approached to request for access for direct noise measurement or provision of noise data during the site survey. No access consent can be obtained from any of the parties. Since direct measurement is not practicable possible, the noise strength of the identified noise sources has been assumed based on equipment catalogue (if equipment model information is provided) or reference equipment catalogue model of similar scale. The reference equipment catalogue is shown in **Appendix 3-3**. Input of the fixed noise sources in CadnaA is shown in **Appendix 3-4**.

3.5 Noise Sensitive Receivers

3.5.1 A number of representative Noise Sensitive Receivers (NSRs), corresponding to habitable rooms which are likely to be subject to worst noise impact were selected for the assessment. All assessment points were taken at 1 m away from the façade of openable windows of rooms of sensitive use (living room, bedroom).

Figure 3.2 illustrates the locations of the representative NSRs for road traffic noise impact assessment. The computer model built using CadnaA is shown **Appendix 3-5**.

3.6 Assessment Result without Noise Mitigation Measures (Base Scenario)

3.6.1 **Appendix 3-6** shows the predicted noise level at the representative NSRs. According to the assessment results, the predicted noise levels at all representative NSRs would comply with relevant standards without noise mitigation. No adverse fixed noise impact on the Proposed Development is anticipated.

3.7 Impact due to Future Fixed Noise Sources of the Proposed Development

3.7.1 The Proposed Development will inevitably contain noisy facilities such as ventilation system, fan system and HVAC (for clubhouse and retail uses). However, in this early planning stage, building services consultant/contractor has not been engaged and there is absence of any detail regarding potential noisy facilities. In all circumstances, the requirement under HKPSG is fully observed (i.e. acceptable noise level minus 5 decibels). In future detailed design of the project, same requirement will be imposed so that the relevant noise standard will be met by various means such as selection of quiet equipment, use of shielding device, acoustic louvers, silencers, semi/full-enclosure. Upon availability of details of fixed noise sources, the assessment of fixed noise impact can be conducted with respect to the said planning approval condition. With abundance of direct noise mitigation measures to control and suppressed the generated noise level, no adverse noise impact due to operation of potentially noisy facilities of the Proposed Development is anticipated.

3.8 Conclusion

3.8.1 According to the result of fixed noise impact assessment, no adverse fixed noise impact due to surrounding fixed noise sources on the Proposed Development is anticipated with the recommended noise mitigation is considered necessary.

3.8.2 This is in early planning stage of the study so that there is no detail of future fixed noise sources onsite available. With abundance of direct noise mitigation measures to control and suppressed the generated fixed noise level, no adverse noise impact due to operation of potentially noisy facilities of the Proposed Development is anticipated.

4. AIR QUALITY IMPACT ASSESSMENT

4.1 Introduction

4.1.1 This section predicts air quality pollutant concentration at the Proposed Development, informing the provision of air quality mitigation measures to ensure future residents are not exposed to adverse air quality impact. The assessment considers vehicular emissions from road networks, open-area bus terminus (BT), open-area public light bus (PLBT) and on-street parking for goods vehicles/ buses/ coaches within 500m of the site boundary. As mentioned in **Section 1.4.5** to **Section 1.4.7**, no portal, chimney, helicopter and marine emissions within 500m Assessment Area was identified. The air pollutants assessed are Nitrogen Dioxide (NO_2), Respirable Suspended Particulate (RSP) and Fine Suspended Particulate (FSP). Concentrations of these pollutants are predicted at air sensitive receivers (ASRs) within the Proposed Development through the use of quantitative computer modelling, and are compared with the relevant Air Quality Objectives (AQOs).

4.1.2 The assessment area of 500m from the Application Site is shown in **Figure 4.1**.

4.2 Legislative Requirements and Evaluation Criteria

Assessment Criteria

4.2.1 The principal legislation regulating air emissions in Hong Kong is the *Air Pollution Control Ordinance (APCO)* (Cap. 311). The new Hong Kong Air Quality Objectives (AQO) enacted on 11/4/2025 would be adopted for this AQIA. They are listed in **Table 4-1** below.

Table 4-1 Hong Kong Air Quality Objectives

Pollutants	Averaging Time	Concentration Limit[i] (μg/m³)	No. of exceedances allowed per calendar year
Sulphur Dioxide (SO_2)	10-min	500	3
	24-Hour	40	3
Respirable Suspended Particulates (PM_{10}) [ii]	24-Hour	75	9
	Annual	30	NA
Fine Suspended Particulates ($PM_{2.5}$) [iii]	24-Hour	37.5	18
	Annual	15	NA
Nitrogen Dioxide (NO_2)	1-Hour	200	18
	24-Hour	120	9
	Annual	40	NA
Ozone (O_3)	8-Hour	160	9
	Peak Season	100	NA
Carbon Monoxide (CO)	1-Hour	30,000	0
	8-Hour	10,000	0
	24-Hour	4,000	0
Lead (Pb)	Annual	0.5	NA

Notes:

[i] All measurements of the concentration of gaseous air pollutants, i.e. sulphur dioxide, nitrogen dioxide, ozone and carbon monoxide, are to be adjusted to a reference temperature of 293 Kelvin and a reference pressure of 101.325 kilopascal.

[ii] Respirable suspended particulates (PM_{10}) mean suspended particles in air with a nominal aerodynamic diameter of 10 μm or less.

[iii] Fine suspended particulates ($PM_{2.5}$) mean suspended particles in air with a nominal aerodynamic diameter of 2.5 μm or less.

Air Pollution Control (Fuel Restriction) Regulations

4.2.2 The Air Pollution Control (Fuel Restriction) Regulations were enacted in 1990 and amended in 2008 to restrict the types of fuel for use and their sulphur contents in commercial and industrial processes to reduce sulphur dioxide (SO_2) emissions. In November 2024, the Regulations were amended to further tighten the control requirements of liquid fuels and remove the restrictions on the use of liquid and solid fuel in Sha Tin Fuel Restriction Area. Gaseous fuel, conventional solid fuel with a sulphur content not exceeding 1% by weight or liquid fuel with a sulphur content not exceeding 0.001% by weight and a viscosity not more than 6 centistokes at 40°C, such as Ultra Low Sulphur Diesel (ULSD), are permitted to be used. The Regulations do not apply to any fuel-using equipment that is used or operated in premises solely as a dwelling or is used or operated in or on a vessel, motor vehicle, railway locomotive or aircraft.

Hong Kong Planning Standards and Guidelines

4.2.3 Section 3 and Table 1.3 in Chapter 9 of the Hong Kong Planning Standards and Guidelines (HKPSG) present the principal framework for planning against air pollution and a summary of common pollution sources, which includes industrial processes, motor vehicles, construction and reclamation sites, odour sources, dusty uses, etc. The recommended buffer distances are reproduced in **Table 4-2** and **Table 4-3**.

Table 4-2 HKPSG's Recommended Minimum Buffer Distance from Roads

Type of Road	Buffer Distance	Permitted Uses
Trunk Road (including expressway) and Primary Distributor	> 20 m	Active and passive recreation uses
	3 – 20 m	Passive recreational uses
	< 3 m	Amenity areas
District Distributor	> 10 m	Active and passive recreational uses
	< 10 m	Passive recreational uses
Local Distributor	> 5 m	Active and passive recreational uses
	< 5 m	Passive recreational uses
Under Flyovers	-	Passive recreational uses

Table 4-3 HKPSG's Recommended Minimum Buffer Distance from Industrial Chimneys

Difference in Height between Industrial Chimney Exit and the Site	Buffer Distance	Permitted Uses
< 20 m	> 200 m	Active and passive recreation uses
	5 – 200 m	Passive recreational uses
20 m – 30 m	> 100 m	Active and passive recreational uses
	5 – 100 m	Passive recreational uses
30 m – 40 m	> 50 m	Active and passive recreational uses
	5 – 50 m	Passive recreational uses
> 40 m	> 10 m	Active & Passive recreational uses

Existing Air Quality

4.2.4 The nearest general air quality monitoring station (AQMS) to the Application Site is the Central/Western AQMS. The five most recent years of air quality monitoring data, 2020 to 2024, from this station are summarized in **Table 4-6**. According to the AQMS monitoring data presented in **Table 4-6**, exceedances in annual average of FSP concentrations are recorded in from 2020 to 2021, respectively, while 8-hour average and peak season average O_3 concentrations in 2022.

4.2.5 The future background air quality data was extracted from the Pollutants in the Atmosphere and their Transport over Hong Kong model version 3.0 (PATH v3.0) released by EPD in January 2024.

4.2.6 As the tentative year of completion of the Proposed Development is 2030, the year of 2030 at Level 1 hourly background concentrations of NO_2, RSP and FSP in Grids (40,29), (41,29) (40,28) and (41,28) have been adopted for the purpose of this assessment and summarized in **Table 4-4**.

Table 4-4 EPD Air Quality Monitoring Data in Central/Western AQMS and Latest Version of PATH v3.0 (Grid 41,29) (Year 2030) (Level: L1)

Pollutant	Averaging time	Parameter	AQO [1] (μg/m³)	Concentration [2] (μg/m³)								
				2020	2021	2022	2023	2024	PATH v3.0 in Year 2030 (40,29, L1)	PATH v3.0 in Year 2030 (41,29, L1)	PATH v3.0 in Year 2030 (40,28, L1)	PATH v3.0 in Year 2030 (41,28, L1)
RSP (PM_{10})	24-hour	10th highest	75	60	65	52	53	62	53	53	52	51
	Annual	Maximum	30	25	26	22	22	24	21	20	20	19
FSP ($PM_{2.5}$)	24-hour	19h highest	37.5	33	34	33	29	35	31	31	31	30
	Annual	Maximum	15	**16**	**16**	14	14	14	13	13	12	12
NO_2	1-hour	19th highest	200	128	149	142	142	130	86	85	69	69
	24-hour	10th highest	120	67	75	62	62	63	36	35	28	28
	Annual	Maximum	40	32	33	30	32	32	19	17	14	13
SO_2	10-minute	4th highest	500	31	51	62	36	22	19	22	21	22
	24-hour	4th highest	40	9	10	7	7	7	6	7	7	7
O_3	8-hour	10th highest	160	140	155	**197**	153	157	**169**	**170**	**168**	**171**

	8-hour	Maximum	10,000	-	-	-	-		520	512	504	500
	24-hour	Maximum	4000	-	-	-	-		497	492	486	483

Note:
[1] Air Quality Objectives enacted on 11 April 2025.
[2] Bolded and underlined values exceed the relevant AQO.

4.3 Construction Phase Air Quality Impact Assessment

Identification of Potential Construction Air Quality Impacts

4.3.1 The major air quality impact of concern during the construction phase will be the potential fugitive dust and gaseous emission. The Project is at the early planning stage, the construction works of the proposed development will be commenced in Year 2030. The major air quality impacts during the construction phase of the Proposed

Development are expected to arise from construction activities such as foundation works and superstructure construction.

4.3.2 There will be potential impacts from the criteria pollutants (e.g. nitrogen oxides (NO_x), sulphur dioxide (SO_2), and carbon monoxide (CO)). Emission from diesel trucks for the haulage of materials and construction plants will contain high percentage of smoke particulate and unburned hydrocarbons in comparison with petrol driven vehicles. The Application Site is of ~0.028 ha so that development scale is very low. There is no basement proposed so that deep excavation is not necessary. The anticipated number of construction plants that result from the construction works will not be excessive due to the site constraint of the site area. Therefore, significant impact on the existing air quality is not envisaged. Under Air Pollution Control (Non-road Mobile Machinery) Emission Regulation and Air Pollution Control (Fuel Restriction) Regulation, there is also adequate control for emission from on-site machinery and non-road vehicles. In all circumstances, the contractor will be required to observe all relevant regulations and maintain all equipment in good condition to avoid any excessive emission.

4.3.3 There will be potential impacts of odorous and volatile organic compounds (VOCs) emissions from fitting-out works. The major emission source of VOCs and odour is anticipated from the use of solvent-based paints/coatings. To minimise VOCs emission and usage of organic cleaning solvent, water-based paint, which is VOC-free, will be used for fitting-out works. Since the work areas would be above ground and in an indoor setting, with proper mechanical ventilation devices (fans and blower) while keeping windows open for ventilation, odour generated from fitting-out works will be able to disperse and will not accumulate in the surrounding areas. Therefore, VOCs and odorous emission should be limited and should not induce significant environmental and health impact.

Representative Air Sensitive Receivers

4.3.4 There are ASRs located within 500m from the Proposed Development and considered as Air Sensitive Receivers (ASRs). **Figure 4.2** shows the separation distance between the Application Site and the nearby ASRs which are expected to be worst affected and also listed in **Table 4-5**.

Table 4-5 Representative Air Sensitive Receivers for Construction Phase

ASR ID	ASR	Land Uses	Height (m)	Shortest Distance to Application Site
ASR1	Honest Building	Commercial	83	2m
ASR2	Yee Hing Building	Residential	46.7	4m
ASR3	Vulcan House	Commercial	77.2	14m
ASR4	Zing!	Commercial	118.3	0m
ASR5	Nam Hing Fong	Commercial	91	10m
ASR6	37 Yiu Wa Street	Residential	24.7	11m
ASR7	25A-24 Canal Road West	Residential	27.1	46m

Potential Concurrent Projects

4.3.5 According to the desktop research, it is expected that the construction works of the nearby construction sites (such as District Court Building at Caroline Hill Road and Lee Garden Eight, as well as the construction sites at 13-15 Wood Road and 22-24 Leighton Road) will be completed/ almost completed within 1 to 2 years. Therefore, it is anticipated that the construction works of these construction sites will be completed

before the commencement of the construction works of the Proposed Development, and hence no cumulative air quality impact would be expected. In addition, the Special School at 30 Oi Kwan Road is identified which may be considered as concurrent projects. It is anticipated that the construction work will be carried out concurrently with the construction works of the Proposed Development. However, it is anticipated that mitigation measures for fugitive dust and gaseous emission would be implemented at these construction sites to reduce the impact generated. In all circumstances, it is believed that best management practice will be implemented for all concurrent projects. Moreover, it is recommended that the contractors of all the concurrent projects in the vicinity should have close liaison to avoid any dusty activities to be taken in place at the same time or at locations nearby to minimise the cumulative dust impact. The locations of the potential concurrent projects are shown in **Figure 4.2**.

Mitigation Measures for Construction Air Quality Impact

4.3.6 Fugitive dust emission arising from conversion activities can be effectively suppressed by incorporating proper mitigation measures into work procedures through contractual clauses, good site management, and close monitoring by the resident engineers. The contractor shall be required to follow the requirements of the Air Pollution Control (Construction Dust) Regulations. With the adoption of good practices, it is expected that emission of construction dust can be kept at an acceptable level. The recommended dust mitigation measures are described below. In addition, EPD's recommended pollution control clause for construction contracts will be incorporated and required in future tender document to ensure that all relevant environmental protection and pollution control ordinances are observed and complied with. Moreover, an EM&A program shall be implemented to monitor the dust impact arising from the construction activities associated with the Proposed Development during construction phase.

4.3.7 The dust control measures detailed below shall also be incorporated into the Contract Specification where practicable as an integral part of good construction practices:

- Any debris that may dislodge dust particles shall be covered entirely by impervious sheeting or stored in a debris collection area sheltered on the top and the 3 sides;
- Every debris chute shall be enclosed by impervious sheeting or similar materials;
- Before debris is dumped into a debris chute, it shall be sprayed with water or a dust suppression chemical so that it remains wet when it is dumped;
- Spray water when conducting dusty operation, such as breaking, grinding, sand papering and wood cutting work;
- Fit vacuum cleaner to grinding, sand papering or wood cutting machines;
- Maximise the use of electricity and minimise reliance on diesel-fuelled equipment as far as practicable; and
- Maintain good house-keeping and increase the cleaning frequency of the surrounding areas.

General Site Management

4.3.8 Appropriate working methods should be devised and arranged to minimise dust emissions and to ensure any installed control system and/or measures are operated and/or implemented in accordance with their design merits. No free falling of construction debris should be allowed, which should be let down by hoist or enclosed tunnel to the ground.

4.3.9 Frequent mist/ water spraying should be applied on dusty areas when conducting dusty operation. The amount of water spraying should be just enough to dampen the material without over-watering.

4.3.10 Hoarding of not less than 2.4m high from ground level along site boundary, which is next to a road or other public area should be provided.

Vehicles and Unpaved Site Roads

4.3.11 Dust emission from unpaved roads comes predominantly from travelling of vehicles. Areas within the site where there are regular vehicle movements should have an approved hard surface. Speed controls at an upper limit of 10km/hr should be imposed and their movements should be confined to designed roadways within the site. All dusty vehicle loads should have side and tail boards covered by tarpaulin extending at least 300mm over the edges of the side and tail boards. Wheel-wash troughs and hoses should be provided at exit points of the site.

Material Stockpiling and Handling

4.3.12 The amount of stockpiling should be minimised where possible. Construction material or debris should be covered and stored inside enclosed areas. Other control measures such as enclosed or semi-enclosed windboard should be used, where applicable, to minimise dust emission. Regular watering is needed at areas such as storage piles, where there could be potential dust emission. Placing dusty material storage piles near ASRs should be prevented.

4.3.13 The dust control measures detailed below shall also be incorporated into the Contract Specification where practicable as an integral part of good construction practices:

- All demolished items (including vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from site clearance) that may dislodge dust particles shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides within a day of demolition;
- Where a site boundary adjoins a road, streets or other accesses to the public, hoarding of not less than 2.4 m high from ground level should be provided along the entire length except for a site entrance or exit;
- The working area of any excavation or earth moving operation shall be sprayed with water or a dust suppression chemical immediately before, during and immediately after the operation so as to maintain the entire surface wet;
- Use of regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather;
- Use of frequent watering for particularly dusty construction areas and areas close to ASRs;
- Side enclosure and covering of any aggregate or dusty material storage piles to reduce emissions. Where this is not practicable owing to frequent usage, watering shall be applied to aggregate fines;
- Open stockpiles (if any) shall be avoided or covered. Prevent placing dusty material storage piles near ASRs;
- Any stockpile of dusty materials shall be either covered entirely by impervious sheeting; placed in an area sheltered on the top and the 3 sides; or sprayed with water or a dust suppression chemical so as to maintain the entire surface wet.
- Stockpiles of C&D materials should be kept covered by impervious sheets for the foreseeable inclement weather such as typhoon or heavy rain.

- Tarpaulin covering of all dusty vehicle loads transported to, from and between site locations;
- Establishment and use of vehicle wheel and body washing facilities at the exit points of the Site;
- Imposition of speed controls for vehicles on unpaved site roads, 8 km per hour is the recommended limit;
- Routing of vehicles and position of construction plant should be at the maximum possible distance from ASRs;
- Every stock of more than 20 bags of cement or dry pulverized fuel ash (PFA) should be covered entirely by impervious sheeting or placed in an area sheltered on the top and the 3 sides;
- Cement or dry PFA delivered in bulk should be stored in a closed silo fitted with an audible high-level alarm which is interlocked with the material filling line and no overfilling is allowed;
- Cement, PFA or any other dusty materials collected by fabric filters or other air pollution control system or equipment shall be disposed of in totally enclosed containers;
- Silos used for the storage of cement or dry pulverized fuel ash shall not be overfilled;
- Loading, unloading, transfer, handling or storage of bulk cement or dry PFA should be carried out in a totally enclosed system or facility, and any vent or exhaust should be fitted with an effective fabric filter or equivalent air pollution control system;
- The electric power supply shall be provided for on-site machinery as far as practicable and diesel generators shall be avoided to minimize the gaseous and PM emissions;
- Locate all the dusty activities away from any nearby ASRs as far as practicable; and
- Erection of higher hoarding at the locations with ASRs in immediate proximity to the project site boundary.

4.4 Operational Phase Air Quality Impact Assessment

Identification of Air Pollution Sources

4.4.1 Potential air quality impacts during the operational phase would be associated with the vehicular emissions from open sections of existing roads within the 500m Assessment Area.

4.4.2 Apart from vehicular emissions from the existing roads within the 500m Assessment Area, vehicular emissions from the open-area bus terminus (BT), open-area public light bus (PLBT) and on-street parking for goods vehicles/ buses/ coaches within the 500m Assessment Area may contribute to the cumulative air quality impact on the representative ASRs for the operational phase. The assessment area of 500m from the boundary of the Application Site is shown in **Figure 4.3**.

4.4.3 Vehicular emission comprises mainly Nitrogen Oxides (NO_x), Respirable Suspended Particulates (RSP), Fine Suspended Particulates (FSP). Nitric Oxide (NO) and Nitrogen Dioxide (NO_2) are the most important constituents of NO_x, and NO_2 is mainly formed from the oxidation of emitted NO. Therefore, NO_2, RSP and FSP would be considered in the operational phase air quality impact assessment.

4.4.4 As mentioned in **Section 1.4.5** to **Section 1.4.7**, no portal, chimney, helicopter and marine emissions within 500m Assessment Area was identified. Emissions from major point sources within 4km Area (if any), might contribute to the cumulative air quality impact on the identified ASRs.

4.4.5 Gloucester Road Refused Collection Point is identified as the odour sources within 500m from the Application Site. The location of the identified odour source is shown in **Figure 4.4**. According to Table 1.3 in Chapter 9 of the HKPSG, 200m buffer distance is required from general odour sources to sensitive uses. No odour sources are identified within 200m buffer distance from the Application Site based on the desktop research and onsite survey in March 2026. Accordingly, the requirement of the HKPSG could be satisfied and no adverse odour impact is anticipated.

4.4.6 NO_x, RSP and FSP emission from major point sources within 4km Area (if any), might contribute to the cumulative air quality impact on the identified ASRs.

Representative Air Sensitive Receivers

4.4.7 Representative ASRs of the Proposed Development within the Application Site would be selected for the assessment of the air quality impacts arising from the surrounding air pollution sources during the operational phase.

4.4.8 The locations of the representative ASRs during operational phase are shown in **Figure 4.5** and summarized in **Table 4-6**.

Table 4-6 Representative ASRs for Operational Phase

ASR ID	Local Ground mPD	Flagpole Height, mAG	Assessment Height, mPD
A1 – A7	4.65	1.5 – 98.225	6.15 – 102.875

Overview of Assessment Approach

4.4.9 Cumulative AQIA at the representative ASRs would be undertaken with reference to EPD's "*Guidelines on Assessing the 'TOTAL' Air Quality Impacts*", taking into account Tier 1, Tier 2 and Tier 3 emission source contributions:

- Tier 1 contributions – no emission from the Application Site is anticipated;
- Tier 2 contributions – other key emission sources within the study area (500m Assessment Area from the Application Site) may have the potential to contribute to the cumulative air quality impact, including vehicular emissions;
- Tier 3 contributions – represents background contributions which include other potential emission sources not captured by Tier 1 and Tier 2 contributions.

4.4.10 The proposed residential use at the Application Premises is expected to commence operation in 2030, and the predicted hourly background concentrations of NO_2, RSP, FSP, and O_3 in 2030 in the relevant PATH grids obtained from the PATH model v3.0 would be adopted as the background contributions.

Vehicular Emissions from the Open Roads

4.4.11 Vehicular emissions from open roads within the 500m Assessment Area would be considered in the assessment. The traffic forecast data including the 24-hour traffic flows and vehicle compositions provided by the Project Traffic Consultant, CKM Asia Limited, would be adopted in the assessment. Confirmation of the adopted traffic forecast data has been sought from Transport Department (TD) and the reply from TD for the traffic forecast will be provided when it is available.

4.4.12 All existing roads within the 500m Assessment Area would be identified and included for the vehicular emissions. The assessment year for air pollution impacts shall be calculated based on the highest emission strength within the next 15 years upon completion year of the Proposed Development. Traffic forecast for the identified roads for 3 design years, including 2030 (i.e. commencement of Proposed Development), 2038 (i.e. eight years after commencement), and 2045 (i.e. fifteen years after commencement) would be produced. The traffic forecast data for each design year to be provided include a breakdown of hourly traffic flows for 18 vehicle types (as per the EMFAC-HK model v4.3) and the hourly traffic speed for 24 hours for each of the identified roads. The traffic forecast projection has been submitted to TD for endorsement by the Project Traffic Consultant.

Vehicular Emissions from Bus Terminus/ Public Light Bus Terminus/ On-street Parking Spaces

4.4.13 Two Bus Termini (BT), nine Public Light Bus Termini (PLBT) and three on-street parking spaces of goods vehicles/ buses/ coaches are found within 500m Assessment Area from the Application Site, including Yee Wo Street Bus Terminus, Broadwood Road (Wong Nai Chung Road) Bus Terminus, Jaffe Road PLB Terminus (Near Siu On Plaza), Jaffe Road PLB Terminus (Near 500 Jaffe Road), Lockhart Road PLB Terminus, Jardine's Bazaar PLB Terminus (Near Capitol Centre), Jardine's Bazaar PLB Terminus (Near Tang Lung Chau Market), Lan Fond Road PLB Terminus (Near Lee Garden One), Lan Fond Road PLB Terminus (Near Lan Fong Road No. 2-16), Lee Garden Road PLB Terminus, Sun Wui Road PLB Terminus, parking of buses/ coaches near Gloucester Road, goods vehicles near Lockhart Road and goods vehicles/ buses/ coaches near Oi Kwan Road, as shown in **Figure 4.3**. Those vehicular emissions would have the potential to cause air quality impacts to the Application Site during the operational phase. The detailed assessment approaches for BT, PLBT and on-streeting parking spaces are shown in **Sections 4.4.27** and **4.4.28**.

Industrial Emissions in the Vicinity of the Application Site

Sources within 500m Assessment Area

4.4.14 The area within 500m Assessment Area is zoned Commercial (C), Residential (R), Other Specific Uses (OU), Open Space (O), Green Belt (GB) and Government, Institution or Community (G/IC). There is no area zoned "industrial" within 500m Assessment Area.

4.4.15 Based on onsite survey conducted on 27 February and 1 April 2026, it was confirmed that there was no active chimney identified within 500m Assessment Area. It is confirmed that the chimney emission data have been validated and updated by consultant's own survey. It is understood that if there are any errors subsequently found in their chimney data used, the assessment results may be invalidated.

Marine Vessel Emissions in the Vicinity of the Application Site

Sources within 500m Assessment Area

4.4.16 Based on onsite survey conducted on 27 February and 1 April 2026, no marine emission source was identified within the assessment area.

Sources within 4km Area from the Application Site – Ocean Terminal

4.4.17 Within 4km from the boundary of the Application Site, the major point sources – the cruise vessels at Ocean Terminal, have been identified. Locations of the major point sources are shown in **Figure 4.6**. Considering the presence of high-rise buildings in between the Proposed Development and the Ocean Terminal, there would be no direct impact from the Ocean Terminal on the identified ASRs for the Proposed Development.

Therefore, the Ocean Terminal would not be included for the air modelling regarded as background emissions.

Air Dispersion Model, Meteorological Data and Modelling Assumptions

Latest Version of PATH

4.4.18 Hourly meteorology data for a full year is extracted from PATH v3.0 provided by EPD (meteorological data year 2019, Grid (41,29)). Hourly mixing heights lower than 119m or higher than 2009m were corrected to 119m or 2009m respectively to align with the real meteorological data recorded by the Hong Kong Observatory (HKO) in 2019. Hourly wind speeds lower than 0.5m/s (i.e. calm wind condition) are corrected to 0.5m/s.

4.4.19 The hourly background concentrations of NO_2, RSP and FSP in Year 2030 are extracted from PATH v3.0 provided by EPD (Grid (41,29)) to predict the total air quality concentrations at ASRs.

Air Dispersion Model

4.4.20 The dispersion of NO_2, RSP and FSP were modelled using AERMOD software released by Lakes Environmental Software. The model is based on the principle of Gaussian dispersion and is widely accepted by EPD. It is used in this assessment to predict both concentration and deposition of pollutants from point and area sources.

Land Use Implications on Albedo Value, Bowen Ratio and Surface Roughness

4.4.21 Landuse types surrounding the Application Site, the albedo, Bowen ratio for the 10km x 10 km area, surface roughness for the 1km area, and the Surface File and Profile File to be used as input in AERMOD are downloaded and extracted from the AERMET tool in the SAMP v2.1. The relevant information is provided in **Appendix 4-1**.

Source Description and Emission Inventory

4.4.22 Emissions from chimneys, marine vessels, portals, open roads, BT and PLBT were assessed. **Table 4-7** shows a summary of the sources and the associated air pollutants of concern.

Table 4-7 Summary of Emission Sources

Sources		NO_x	RSP	FSP
(i)	Chimney [1]	X	X	X
(ii)	Marine Vessels [1]	X	X	X
(iii)	Portals [1]	X	X	X
(iv)	Open Roads	✓	✓	✓
(v)	BT, PLBT & On-street Parking Sites	✓	✓	✓

Note:
[1] No active chimneys, marine vessels and portals identified within 500m Assessment Area from the Application Site

(i) Chimney Emissions

Sources within 500m Assessment Area

4.4.23 Based on onsite survey conducted on 27 February and 1 April 2026 as mentioned in **Section 4.4.15**, it was confirmed that there was no active chimney identified within 500m Assessment Area from the Application Site, which complies with all recommended separation distances as stipulated in Chapter 9 of HKPSG.

(ii) Marine Vessels Emissions

Sources within 500m Assessment Area

4.4.24 Based on onsite survey conducted on 27 February and 1 April 2026 as mentioned in **Section 4.4.16**, it was confirmed that there was no active chimney identified within 500m Assessment Area from the Application Site.

(iii) Portal Emissions

4.4.25 Based on a desktop study, no portal within the 500m Assessment Area have been identified.

(iv) Open Roads Emissions

4.4.26 Air pollutant concentration at the Proposed Development due to the emission from the nearby road networks (vehicular tailpipe emissions) was assessed. The emission factor of each road within 500m Assessment Area from the Application Site was calculated with the latest EMFAC-HK issued by EPD.

(v) Emissions of Bus Terminus/ Public Light Bus Terminus / On-street Parking Spaces

4.4.27 According to the desktop study and on-site survey conducted in Feb and Apr 2026, no public transport interchange was identified, and two BT and nine PLBT were identified, which are located within the 500m assessment area. The locations of the identified BT and PLBT are shown in **Figure 4.3**. All of the identified termini are lay-by type and their scale are small which serve for few bus/ PLB routes only. Considering the small scale and considerable far distance from the Application Site, broad-brush approach has been adopted for applying starting emission on the relevant roads in order to assessing the air quality impact. With this approach, the air quality impact assessed is considered not underestimated. Details of identified bus and PLB terminus are summarised in **Table 4.8**.

Table 4.8 Identified BT and PLBT within 500m Assessment Area

Name	Type	Served Route(s) (Bus/PLB)	Horizontal Distance to Application Site (m)
Yee Wo Street Bus Terminus	Bus (lay-by)	5B (*Overnight services only)	470
Broadwood Road (Wong Nai Chung Road) Bus Terminus	Bus (lay-by)	1P (*Special departures from 07:20 to 08:48 on weekdays only)	350
Jaffe Road PLB Terminus (Near Siu On Plaza)	PLB (lay-by)	10, 31, 10P, N31	410
Jaffe Road PLB Terminus (Near 500 Jaffe Road)	PLB (lay-by)	5	460
Lockhart Road PLB Terminus	PLB (lay-by)	69X	420
Jardine's Bazaar PLB Terminus (Near Capitol Centre)	PLB (lay-by)	40, N40, 40X	430
Jardine's Bazaar PLB Terminus (Near Tang Lung Chau Market)	PLB (lay-by)	36X	470

Lan Fond Road PLB Terminus (Near Lee Garden One)	PLB (lay-by)	21A, 21M, 14M	340
Lan Fond Road PLB Terminus (Near Lan Fong Road No. 2-16)	PLB (lay-by)	14M, 30	280
Lee Garden Road PLB Terminus	PLB (lay-by)	26	270
Sun Wui Road PLB Terminus	PLB (lay-by)	28	320

4.4.28 In addition to BT and PLBT, three on-street parking spaces were identified within 500m assessment area, which are for parking of buses/ coaches near Gloucester Road (at a distance of ~390m from the Application Site), goods vehicles near Lockhart Road (at a distance of ~340m from the Application Site) and goods vehicles/ buses/ coaches near Oi Kwan Road (at a distance of ~310m from the Application Site). As those on-street parking spaces are located far from the Application Site and the number of parking spaces are limited, the air pollutants arisen from the on-street parking spaces are included in the assessment by using the broad-brush approach for applying starting emission on the relevant roads in order to assess the air quality impact. With this approach, the air quality impact assessed is considered not underestimated. The details of starting emission included in this assessment are discussed in **Section 4.4.49**.

Methodology of EMFAC-HK Modelling

Objective

4.4.29 The aim of conducting EMFAC Model is to calculate project-specific vehicle emission factor for criteria air pollutants (e.g. NO, NO_2, FSP and RSP) arising from vehicular tailpipe emission on the road carriageways within 500m Assessment Area of the Application Site.

4.4.30 EPD's Smart Air Modelling Platform v2.1 (SAMP v2.1), which is embedded with EMFAC-HK Model version 4.3, is used to generate the model input files for modelling the emission from open roads.

EMFAC-HK Model

4.4.31 The latest available EMFAC-HK Model version 4.3 dated 13 January 2021 (the EMFAC-HK Model) has been adopted.

Guideline and Document

4.4.32 Several guidelines and documents published by EPD, which are available from the following EPD EMFAC-HK website (the EPD website), are referred to for EMFAC-HK Model input:

- http://www.epd.gov.hk/epd/english/environmentinhk/air/guide_ref/emfac-hk.html (the EPD website)
- Guideline on Modelling Vehicle Emissions (Released in January 2021) (the EPD Guideline)
- 2018 Licensed Vehicle by Age and Technology Group Fractions (the EPD Document)

Traffic Data

4.4.33 Three sets of traffic data predicted by the Project Traffic Consultant, include hourly traffic flows with a composition of 18 vehicle classes according to "Guideline on

Modelling Vehicle Emissions" as shown in **Table 4-9**. Traffic forecast of Year 2030, 2038 and 2045 based on the traffic count are included in **Appendix 4-2**, which shows the number of trips travelled and the hourly average speed (kph) of road carriageways respectively and are used in the assessment.

Table 4-9 EMFAC-HK Vehicle Classes

Vehicle Class Description	Fuel Type	Gross Vehicle Weight (tonnes)	Symbol 1 (in csv output file)	Symbol 2 (in bcd output file & traffic data)
Private Cars (PC)	ALL	ALL	PC	PC
Taxi	ALL	ALL	Taxi	Taxi
Light Goods Vehicles (<=2.5t)	ALL	<=2.5t	LGV<=2.5t	LGV3

Heavy Goods Vehicles (>24t)	ALL	>24t	HGV>24t	HGV9
Non-franchised Buses (>24t)	ALL	>24t	NFB>24t	NFB9

4.4.34 The estimated 18-class distribution as defined in EMFAC-HK was derived by sectoring the relevant classes in the Transport Department's Annual Traffic Census record or vehicle distribution obtained from manual traffic count surveys, in proportion to the recorded distribution in EPD document: "2018 Vehicle Licensed Number by Age and Technology Group Fractions".

4.4.35 All concerned roadways shall be characterized with speed limits. Average speeds of 24 hours were prepared for each road.

4.4.36 The established road traffic data, including traffic flow, 24-hour vehicle mix and 24-hour average speed was provided by the Project Traffic Consultant. Confirmation from the Transport Department (TD) has been sought and the reply from TD for the traffic forecast will be provided when it is available. It should be noted that the traffic forecasts for the assessment have been produced strictly in accordance with the methodology of the traffic forecast.

EMFAC-HK Input Parameters

Geographical Area

4.4.37 "Hong Kong" is selected as the Geographical Area.

Calendar Year

4.4.38 In order to determine the highest emission scenario and the worst assessment year, EMFAC-HK model runs have been carried out with emission factors and the predicted traffic forecast for 2030 (i.e. completion year of the Proposed Development), 2038 (i.e. eight years after completion year), and 2045 (i.e. fifteen years after completion year).

Season or Month

4.4.39 Per the EPD's Guideline, "Annual" is selected in this study to evaluate the highest vehicle emission within the Model Year.

Mode and Output

4.4.40 EMFAC-HK Model is run in Emfac mode for calculating area fleet average emissions.

Temperature and Humidity

4.4.41 The information of temperature and relative humidity from PATH meteorological output in the corresponding grids was used in this assessment.

4.4.42 In accordance with a *Guideline of Use of Temperature and Relative Humidity Data for Vehicular Emission Factor Prediction* published by EPD in March 2021, the daily profile of lowest temperature and relative humidity data in each hour for each month available at SAMP v2.1 was applied for the calculation of emissions from open roads and portal for both short-term (i.e. hourly or daily average) and long-term (i.e. annual average) air quality impact. Since the 500m Assessment Area mainly covered 4 different grids (Grid (40, 28), Grid (40, 29), Grid (41, 28) and Grid (41, 29)), the minimum quarterly temperatures and relative humidities among these covered PATH grids were applied for the calculation of emissions from BT/PLBT for both short-term and long-term air quality impact.

Speeds

4.4.43 The average speed data provided by the Project Traffic Consultant for every hour of each road would be used for the subsequent calculation. As mentioned in **Section 4.4.36**, confirmation from TD has been sought and the reply from TD for the traffic forecast will be provided when it is available.

Exhaust / Evaporation Technology Fractions

4.4.44 Vehicle classes are grouped with different exhaust and evaporation technology group indexes and technology fractions. Each technology group represents a distinct emission control technology. Default exhaust and evaporation technology fractions are adopted in this assessment.

Population and Accrual Rate

4.4.45 Default vehicle populations forecast and accrual rate in EMFAC-HK Model is adopted.

Trips and VKT

4.4.46 Default trips and VKT for HK total are adopted. Detailed emission rates were generated with respect to the combination of temperature, RH and speed for running exhaust emission, and combination of temperature and duration of idling time for start emission.

Calculation of Vehicular Emission Factors by EMFAC-HK Model Output

Running Exhaust Emission Factor

4.4.47 Running exhaust fleet average emission factor (g/km) for NO_2, NO, RSP and FSP arising from all combinations of lowest hourly temperature and RH (see **Section 4.4.42**) with respect to each combination of speed and vehicle class have been adopted.

4.4.48 For each road, hourly composite running exhaust emission factor (NO_2/NO/RSP/FSP) will be determined by:

Hourly composite running exhaust emission factor (NO_2/NO/RSP/FSP) (g/veh-km)

= ∑ [hourly running exhaust fleet average emission factor for each vehicle class x % composition of corresponding vehicle class]

Starting Emission Factor

4.4.49 In general, no starting emission will be applied if the subject roads are with double yellow line and for the roads classified as District Distributor, Primary Distributor, Trunk Road and Expressway. In view of the PLB terminus and on-site street parking spaces within 500m assessment area, e.g. Canal Road East, Canal Road West, Wan Chai Road, Morrison Hill Road, Leighton Road, Percival Street, Wong Nai Chung Road and Gloucester Road, starting emission of 16 vehicle classes (excluding FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the PLB terminus and on-site street parking spaces. Based on the desktop review, the bus routes departure from Yee Wo Street Bus Terminus and Broadwood Road (Wong Nai Chung Road) Bus Terminus would mainly pass by Hennessy Road and Wong Nai Chung Road respectively. To avoid any underestimation of emission from the bus terminus, the start emissions of FBSD and FBDD are assigned to these roads as broad-brush approach. Details of the roads with starting emission are shown in **Appendix 4-2**.

4.4.50 The number of trip is dependent on the vehicle population. The default value of trip in the EMFAC-HK Model is the number of trips within HK given a defined vehicle population. Since there is no project-specific vehicle population data, it is proposed to estimate the number of trips within the 500m Assessment Area with respect to the project-specific vehicle-kilometer-travelled (VKT) given the assumption that the VKT is related to vehicle population.

4.4.51 It is assumed that there is starting emission on all of the roads within 500m Assessment Area. For the local and rural roads within the 500m Assessment Area , the number of trips is estimated by scaling the number of trips for vehicle class within the entire HK using the ratio of VKT for local and rural roads within the 500m Assessment Area to VKT for local and rural roads within the entire HK.

$$Trip\ for\ local\ and\ rural\ roads\ within\ the\ study\ area = Trip\ for\ local\ and\ rural\ roads\ within\ HKSAR * \frac{VKT\ for\ local\ and\ rural\ roads\ within\ the\ study\ area}{VKT\ for\ local\ and\ rural\ roads\ within\ HKSAR}$$

Note: For particular vehicle class and particular hour

4.4.52 The same method was also adopted in the approved Liantang EIA (Register No.: AEIAR-161/2011). The estimation of % of VKT for local and rural roads within HK is shown in **Appendix 4-3**.

4.4.53 In this assessment, the estimated VKT for local and rural roads with possible starting emission amounts to ~21.7384% of total VKT, which is calculated by raw data of 2024 provided by TD. It is confirmed that the methodology provided by TD, and the methodology set out in Appendices E and K of the ATC 2024 are strictly followed for the calculation of the values of Average Daily Vehicle-Kilometre for different types of roads in different regions and the calculated values are consistent with TD's published figures for the relevant regions, road types, and the overall road network. Trip per VKT for local and rural road for each class will be determined by:

Trip/VKT (1/veh-km) for each vehicle class

= HK total number of trips for each vehicle class ÷ (HK total VKT travelled for each vehicle class x % of daily vehicle-km for local and rural roads in Hong Kong).

4.4.54 Based on the hourly traffic flow from the Project Traffic Consultant, the hourly total starting emission (gram/km) for each vehicle class along each road will be determined by:

Hourly total starting emission (g/km) for each vehicle class = starting emission rate for each vehicle class x Trip/VKT for each vehicle class x traffic flow for each vehicle class along each road

4.4.55 The hourly total starting emission for each road is the sum of hourly total starting emission (gram/km) for each vehicle class along the same road. The hourly composite starting emission factor is calculated by dividing the value using the hourly traffic flow:

Hourly total starting emission (g/km) = Σ [hourly total starting emission for each vehicle class]

Hourly composite starting emission factor (g/veh-km) = hourly total starting emission ÷ hourly total traffic flow

Assessment Year

4.4.56 The air quality impact of the vehicular emissions are typically calculated based on the highest emission strength from the traffic forecast data within the first 15 years after the completion of the Proposed Development (i.e. between 2030 and 2045). The assessment year is selected to represent the highest emission scenario given the combination of vehicular emission factors and traffic flow for the same year. The worst assessment year has been determined based on the highest NO_x, RSP and FSP emission scenario using the EMFAC-HK model. Sensitivity tests have been conducted to determine the worst-case scenario given the combination of vehicular emission factors and the projected traffic flow for the following selected years within 15 years after the completion of the Proposed Development. The representative years are 2030 (i.e. completion year), 2038 (i.e. eight years after completion year) and 2045 (fifteen years after completion year). A zero emission vehicle scenario option is selected in SAMP v2.1 for calculating open road and portal emission. Details of sensitivity analysis of the emission inventories of the vehicular emission from open roads is shown in **Appendix 4-4**. Based on the results, the greatest total emission for NO_x, RSP and FSP is in Year 2030, therefore, Year 2030 has been selected as the worst-case model year for the air quality.

Vehicular Emission Dispersion Modelling Approach

4.4.57 In line with EPD's "Guidelines on Choice of Models and Model Parameters", vehicular emission impacts arising from open roads will be modelled by AERMOD – a model that was developed by USEPA based on Gaussian dispersion.

Meteorological Data

4.4.58 Hourly meteorological data of Grid (41,29) for a full year is extracted from the PATH v3.0 released by EPD in January 2024. Hourly wind speeds lower than 0.5m/s (i.e. calm wind condition) are corrected to 0.5m/s. Hourly Pasquill stability classes are extracted from the PATH v3.0. Hourly mixing heights are capped between the minimum and maximum values measured at King's Park AWS (2019), i.e. 119m and 2009m.

Noise Barrier and Semi-Enclosure

4.4.59 Neither vertical nor cantilevered noise barriers are found within 500m from the Application Site according to the findings from onsite visits. Therefore, no noise barriers are considered in the model assessment.

Road Elevation

4.4.60 The base elevation is the elevation of the ground surface underneath the road link in meter above Principal Datum (mPD). The height of the road surface above ground (in mAG) should be added to the base elevation to calculate the release height in mPD.

Post-processing of Modelling Results and Background Pollutant Contribution

4.4.61 Pollutant dispersion from vehicular emissions have been simulated using the AERMOD model. Dispersion results and background pollutant contributions have been combined and post-processed for the different averaging periods required for comparison with the relevant AQOs.

Ozone Limiting Method for Short-term Cumulative NO_2 Assessment

4.4.62 The conversion of NO_x to NO_2 is a result of a series of complex photochemical reactions and determines the prediction of near field impact of NO_x emissions. To determine vehicular emission impacts, the emission factors of NO_2 are extracted from the results of the EMFAC-HK Model version 4.3 and the emission factors of NO are calculated from the emission factors of NO_x and NO_2 for all motor vehicle types. For the marine emissions, initial NO_2 to NO_x ratio for cruises and other marine sources is assumed as 10% with reference to *Technical Support Document (TSD) for NO2-related AERMOD Modifications* issued by U.S. Environmental Protection Agency.

4.4.63 For NO_x in particular, an algorithm has been built-in to convert a portion of NO_x predicted at ASRs into NO_2 using the Ozone Limiting Method (OLM) when they mix with the ambient O_3. The OLM assumes a conversion process that is stoichiometrically limited by the ambient O_3 levels, and hence the latter can be used to predict the maximum convertible NO_2 from NO_x for superimposing onto the initial "out-of-tailpipe / in-stack" NO_2 levels as the base level. OLM has been applied for the sum of the vehicular, industrial and marine vessels emission sources to compare with the available ozone for conversion to NO_2.

$$[NO_2]_{Predicted} = [NO_2]_{initial} + Min([NO]_{Predicted}\ or\ \frac{46}{48}[O_3]_{PATH})$$

Jenkin Method for Long-term Cumulative NO_2 Assessment

4.4.64 For the long-term cumulative NO_2 assessment (i.e. predictions of annual average NO_2 concentration), Jenkin Method was adopted for the conversion of cumulative annual average NO_x to cumulative annual average NO_2. The details of Jenkin Method for this assessment extracted from the SAMP v2.1 are shown in **Appendix 4-5**.

Background Pollutant Contribution

4.4.65 The latest Pollutants in the Atmosphere and their Transport over Hong Kong model (PATH v3.0) released by EPD is used to estimate the background air quality. Since year 2030 has been selected as the assessment year, PATH v3.0 for year 2030 of Grid (41,29) has been adopted as the background concentration.

Cumulative Pollutant Concentrations at ASRs

4.4.66 The predicted NO_2, RSP and FSP results from AERMOD (Tier 2 contributions) at the relevant assessment heights of each ASR have been added up with the PATH background concentrations (Tier 3) on an hour-by-hour basis. Relevant time-period averages of the 8,760 hourly results for NO_2, RSP and FSP at the ASRs have been calculated for comparison with the respective assessment criteria to evaluate compliance.

Assessment Results

4.4.67 The predicted results of NO_2, RSP and FSP at all identified ASRs are summarized in **Table 4-10** and **Appendix 4-6**. Contour plots at corresponding levels with the highest air quality impact for 1-hour average NO_2 & 24-hr average NO_2 & annual average NO_2, 24-hour average RSP & annual average RSP, 24-hour average FSP & annual average FSP at 1.5m above ground (i.e. G/F) are shown in **Appendix 4-7**.

Table 4-10 Predicted Cumulative Concentrations of Pollutants at Representative Air Sensitive Receivers during Operational Phase

ASR	Predicted Cumulative Concentration (µg/m³)						
	NO_2			RSP		FSP	
	19th Highest Hourly Average	10th Highest 24-hr Average	Annual Average	10th Highest 24-hr Average	Annual Average	19th Highest 24-hr Average	Annual Average
	AQO = 200	AQO = 120	AQO = 40	AQO = 75	AQO = 30	AQO = 37.5	AQO = 15
A01	85-130	36-69	18-33	53	20-21	31-32	13
A02	85-130	36-69	18-33	53	20-21	31-32	13
A03	85-130	36-70	18-34	53	20-21	31-32	13
A04	85-118	36-60	18-29	53	20-21	31-32	13
A05	85-116	36-57	18-28	53	20-21	31-32	13
A06	85-113	36-56	18-28	53	20-21	31-32	13
A07	85-118	36-59	18-29	53	20-21	31-32	13
A08	85-130	36-69	18-33	53	20-21	31-32	13

NO_2

4.4.68 The predicted results of the 19th highest 1-hour average, 10th highest 24-hour average and annual average NO_2 concentration at all identified ASR at selected levels are summarized in **Appendix 4-6**. The results indicate that 19th highest 1-hour average, 10th highest 24-hour average and annual average NO_2 concentration at all locations of the Proposed Development would comply with the relevant Hong Kong's AQOs.

RSP

4.4.69 The predicted results of the 10th highest 24-hour average and annual average RSP concentrations for all identified ASRs at selected levels are summarized in **Appendix 4-6**. The results indicate that RSP concentrations at all locations of the Proposed Development would comply with the relevant Hong Kong's AQOs.

FSP

4.4.70 The predicted results of the 19th highest 24-hour average and annual average FSP concentrations for all identified ASRs at selected levels are summarized in **Appendix 4-6**. The results indicate that FSP concentrations at all locations of the Proposed Development would comply with the relevant Hong Kong's AQOs.

5. CONCLUSION

5.1.1 The environmental noise, air quality, construction phase environmental impacts including risk of land contamination have been assessed in this report with respect to the Proposed Development at Application Site.

Noise

5.1.2 According to the result of road traffic noise impact assessment, no adverse road traffic noise impact due to surrounding roads on the Proposed Development is anticipated with the recommended noise mitigation measures in place. Noise mitigation measures include fixed glazing (with or without maintenance window), enhanced acoustic balcony (baffle type), acoustic window (baffle type) and minimum 1.5m high solid balustrade.

5.1.3 According to the result of fixed noise impact assessment, no adverse fixed noise impact due to surrounding fixed noise sources on the Proposed Development is anticipated. No noise mitigation is considered necessary.

5.1.4 This is in early planning stage of the study so that there is no detail of future fixed noise sources onsite available. Any fixed noisy facilities (e.g. fan system, HVAC for clubhouse) provided onsite in future will be designed to follow the HKPSG requirement (i.e. acceptable noise level minus 5 decibels) to ensure that there is no adverse impact on any noise sensitive use in the surrounding. Fixed noise impact assessment will be conducted with respect to noisy equipment onsite in later stage when relevant design information is available and will be submitted for the purpose to discharge relevant planning condition if this application is approved.

Air Quality

5.1.5 The predicted concentrations of assessment parameters (NO_2, RSP and FSP) at all ASRs of the Application Site are expected to be within the relevant AQOs. Therefore, no adverse air quality impact on the Proposed Development is anticipated.

5.1.6 No odour sources are identified within 200m buffer distance from the Application Site. Also, as no adverse odour impact is anticipated, it is considered that odour impact assessment would not be required.

Cruises Hotelling at Ocean Terminal

OT2

OT1

運碼頭
Terminal

Remark: Considering the presence of high-rise buildings in between the Site and Cruises Hotelling at Ocean Terminal, there would be no direct impact from Cruises Hotelling at Ocean Terminal on the identified ASRs for the Proposed Development. Cruises Hotelling at Ocean Terminal would not be included for the air modelling regarded as background emissions.

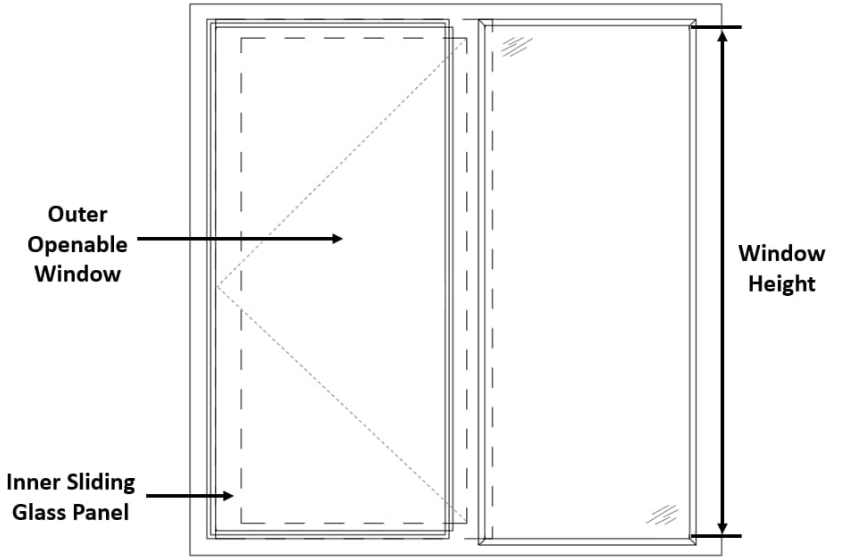
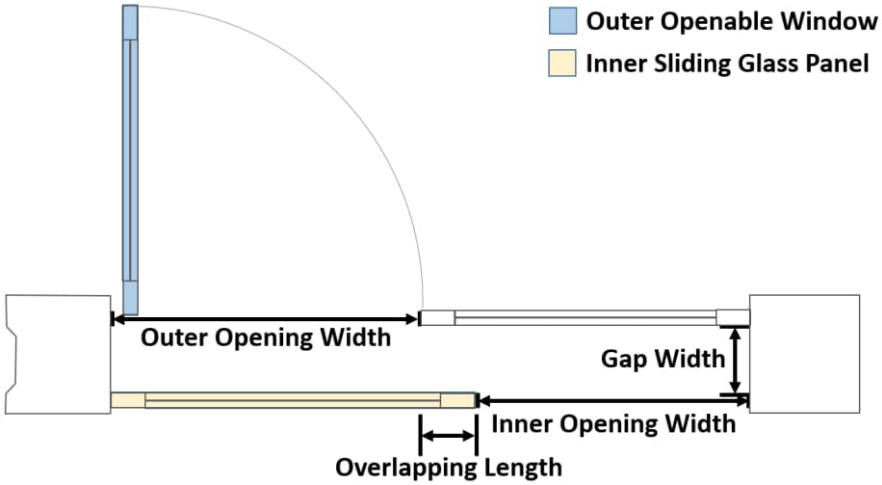
Appendix 2-3 Referenced Configuration of Acoustic Window and Enhanced Acoustic Balcony (Baffle Type)

(I) Possible design of "Acoustic Window (Baffle Type)" for 8m² and 18m² habitable rooms (i.e. dining room, living room or bedroom)



INTERNAL VIEW (NOT TO SCALE)



PLAN (NOT TO SCALE)

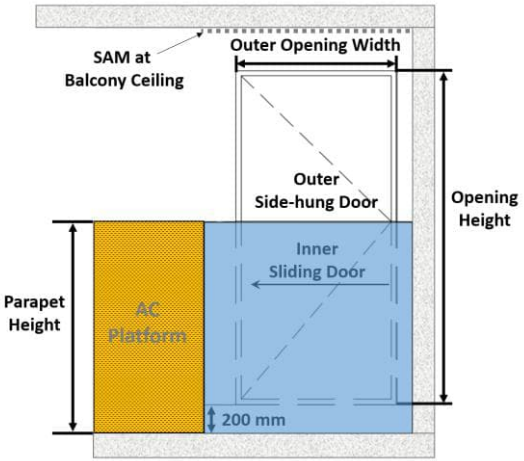
Possible Designs of "Acoustic Window (Baffle Type)" for 8m² and 18m² rooms					
Room Size (m^2)	**Room Dimensions (mm^3)**	**Inner Window Opening (mm^2)**	**Outer Window Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
8	**3200 (W) x 2500 (D) x 3400 (H)**	**580 (W) x 870 (H)**	**600 (W) x 870 (H)**	**≥ 100**	**100 to 175**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**750 (W) x 1500 (H)**	**750 (W) x 1500 (H)**	**≥ 100**	**100 to 175**

Notes:

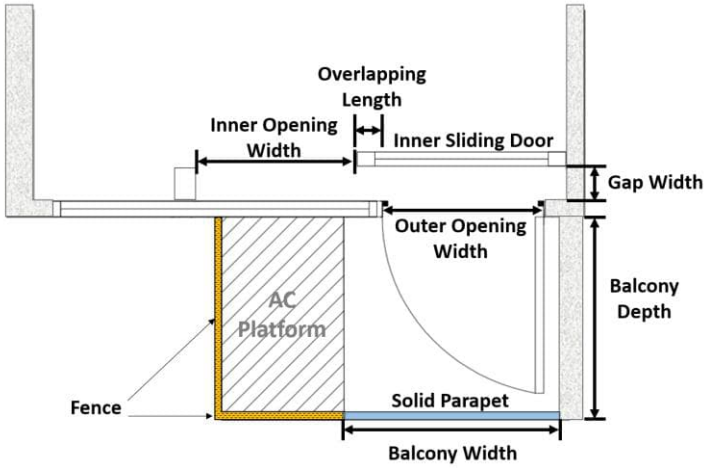
a. These are feasible designs of AW(BT) for 8m² and 18m² rooms.

b. For optimum performance of noise reduction, the air gap should have a pane-to-pane overlapping length of ≥ 100mm and a gap width between 100mm and 175mm, with the inner sliding glass panel in a closed position. The window pane shall be ≥ 6mm in thickness.

(II) Possible designs of "Enhanced Acoustic Balcony (Baffle Type)" in 14m^2 and 18m^2 habitable rooms (i.e. dining room, living room or bedroom)



EXTERNAL VIEW (NOT TO SCALE)



PLAN (NOT TO SCALE)

Fence (≥ 70% Permeability) Solid Parapet

Possible Designs of "Enhanced Acoustic Balcony (Baffle Type)" for 14m^2 and 18m^2 rooms								
Room size (m^2)	**Room Dimensions (mm^3)**	**Balcony Width (mm)**	**Balcony Depth (mm)**	**Parapet Height (mm)**	**Inner Opening (mm^2)**	**Outer Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
14	**3400 (W) x 4100 (D) x 3100 (H)**	**≥ 1440**	**≥ 1300**	**≥ 1450**	**1025 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**≥ 2055**	**≥ 1300**	**≥ 1450**	**1150 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**

Notes:
1. These are feasible designs of EAB for 14m^2 and 18m^2 rooms. The room with EAB should meet the natural lighting and ventilation requirements in regulations 30 & 31 of the Building (Planning) Regulations (B(P)R). The AC platform should comply with the requirements under Appendix B of Code of Practice on Access for External Maintenance 2021 (AfEM Code), and balconies for residential buildings should comply with the criteria and conditions set out in Joint Practice Note (JPN) 1 for application of exemption from gross floor area and/or site coverage under the B(P)R.
2. SAM at balcony ceiling refers to sound absorptive material of noise reduction coefficient ≥ 0.7. It is an essential feature to attain the basic noise reduction performance in Annex B.
3. Comparable noise performance is anticipated should the AC platform be replaced by balcony with solid parapet.

Table 1: Summary on RNR of Acoustic Window (Baffle Type) (for use in NIA) *Plan not to scale		Correction dB(A) L10(1hr)	
		8m²	18m²
	**(a) Provision of AW(BT) parallel to dominant line source** (whichever side the outer side-hung window is)	- **6.0** - **7.5 (added SAM[1])**	- **7.0** - **8.5 (added SAM[1])**
	**(b) Tilting the AW(BT) in (a) above to 30° - 60° horizontal incident angle to dominant line source** (whichever side the outer side-hung window is)	- **7.0** - **8.5 (added SAM[1])**	- **8.0** - **9.5 (added SAM[1])**
 D = Distance from architectural fin to nearest window frame should be at most 900mm.	**(b1) If tilted AW(BT) is at 30° horizontal incident angle to dominant line source** **+ 1.5m long full-height architectural fin[2]** *** AW(BT) + architectural fin should be considered as ONE package of noise mitigation measures. Outer side-hung window of AW(BT) and architectural fin should be installed at the side nearer to dominant line source.**	- **8.0** - **9.5 (added SAM[1])**	- **9.0** - **10.5 (added SAM[1])**

Table 1: Summary on RNR of Acoustic Window (Baffle Type) (for use in NIA) *Plan not to scale		Correction dB(A) L10(1hr)	
		8m^2	18m^2
 D = Distance from architectural fin to nearest window frame should be at most 900mm.	**(b2) If tilted AW(BT) is at 60° horizontal incident angle to dominant line source** **+ 1.5m long full-height architectural fin[2]** *** AW(BT) + architectural fin should be considered as ONE package of noise mitigation measures. Outer side-hung window of AW(BT) and architectural fin should be installed at the side nearer to dominant line source.**	**- 9.0** **- 10.5 (added SAM[1])**	**- 10.0** **- 11.5 (added SAM[1])**

Note 1: The additional Sound Absorptive Material (SAM) shall be of Noise Reduction Coefficient ≥ 0.7 and applied at top and outer opening side of mullion. The material of SAM is subject to the requirements of section 3 of Building (Construction) Regulation.

Note 2: The 1.5m long full-height architectural fin may be subject to the requirements for natural lighting and ventilation, gross floor area and site coverage under the B(P)R.

Table 2: Summary on RNR of Enhanced Acoustic Balcony (Baffle Type) (for use in NIA) *Plan not to scale		Correction dB(A) L10(1hr)	
		14m²	18m²
	**(a) Provision of EAB(BT) parallel to dominant line source**	- **8.0** - **9.5 (added SAM[1])**	- **9.0** - **10.5 (added SAM[1])**
	**(b) Tilting the EAB(BT) in (a) above to 30° - 60° horizontal incident angle to dominant line source**	- **11.0** - **12.5 (added SAM[1])**	- **11.0** - **12.5 (added SAM[1])**
Note 1: The additional Sound Absorptive Material (SAM) shall be of Noise Reduction Coefficient ≥ 0.7 and applied at top and outer opening side of the mullion. The material of SAM is subject to the requirements of section 3 of Building (Construction) Regulation.			

[i] *Should there be any variation on the proposed INMD, or practitioners and professionals consider that a higher RNR value should be adopted, justifications together with technical documents, e.g. corrections based on acoustic principles, laboratory testing reports, in-situ measurement reports, etc. should be submitted to the EPD for consideration. For requirements of laboratory measurement or in-situ measurement requirements, practitioners and professionals may contact the EPD for further details. As RNR varies with room size, practitioners and professionals may like to propose the preferred RNR to the EPD for consideration if different room size is encountered in the NIA study. Having said that, information indicates that for* ***Tables 1 and 2****:*

- *Variations of room size within +/- 10% would not affect the RNR;*
- *Variations of floor-to-ceiling height within +/- 5% would not affect the RNR; and*
- *Variations of window / door opening size within +/- 5% would not affect the RNR.*

Management Office
Holiday Inn Express Hong Kong Causeway Bay
33 Sharp Street East,
Causeway Bay, Hong Kong

Dear Sir/Madam,

S16 Planning Application for Proposed Composite Building at 42-44 Yiu Wa Street, Causeway Bay – Request Information of the Chillers, Cooling Towers and VRV at Holiday Inn Express Hong Kong Causeway Bay

We are commissioned by the applicant of the captioned lot to assess environmental noise impact on the proposed composite redevelopment at the captioned site. The location plan of the Proposed Development with 300m noise impact study area is attached for your reference.

We would like to have some enquires regarding the fixed noise sources (e.g. chillers, water-cooling towers or varied refrigerant volume system (VRV)) of Holiday Inn Express Hong Kong Causeway Bay. We would be grateful if you could provide following information for the purpose of Environmental Assessment:

Chillers / Cooling Towers / VRV

1. The locations and numbers of chillers / cooling towers / VRV, their sound data (noise level), model and cooling capacity, if available
2. Operation hours of these equipment
3. Number of operating equipment between 23:00 and 07:00 hours
4. Noise Mitigation Measures for the chillers / cooling towers / VRV (e.g. noise enclosure, silencer, etc.)

In addition, it would be grateful if we could have your permission in carrying out on-site noise measurement at the rooftop of the building. Due to the tight programme of this project, your prompt response on or before 9 March 2026 would be very much appreciated.

Should you have any questions on this submission, please do not hesitate to contact our Michael Wong at 3465 2815 (email: mcfwong@ramboll.com) or the undersigned at 3465 2826 (email: slai@ramboll.com).

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

Simon Lai
Senior Environmental Consultant

Management Office
Wifi Boutique Hotel
366 Lockhart Road,
Wan Chai, Hong Kong

Dear Sir/Madam,

S16 Planning Application for Proposed Composite Building at 42-44 Yiu Wa Street, Causeway Bay – Request Information of the Chillers, Cooling Towers and VRV at Wifi Boutique Hotel

We are commissioned by the applicant of the captioned lot to assess environmental noise impact on the proposed composite redevelopment at the captioned site. The location plan of the Proposed Development with 300m noise impact study area is attached for your reference.

We would like to have some enquires regarding the fixed noise sources (e.g. chillers, water-cooling towers or varied refrigerant volume system (VRV)) of Wifi Boutique Hotel. We would be grateful if you could provide following information for the purpose of Environmental Assessment:

Chillers / Cooling Towers / VRV

1. The locations and numbers of chillers / cooling towers / VRV, their sound data (noise level), model and cooling capacity, if available
2. Operation hours of these equipment
3. Number of operating equipment between 23:00 and 07:00 hours
4. Noise Mitigation Measures for the chillers / cooling towers / VRV (e.g. noise enclosure, silencer, etc.)

In addition, it would be grateful if we could have your permission in carrying out on-site noise measurement at the rooftop of the building. Due to the tight programme of this project, your prompt response on or before 9 March 2026 would be very much appreciated.

Should you have any questions on this submission, please do not hesitate to contact our Michael Wong at 3465 2815 (email: mcfwong@ramboll.com) or the undersigned at 3465 2826 (email: slai@ramboll.com).

Yours faithfully,
For and on behalf of

Dear Sir/Madam,

S16 Planning Application for Proposed Composite Building at 42-44 Yiu Wa Street, Causeway Bay – Request Information of the Chillers, Cooling Towers and VRV at Lee Theatre

We are commissioned by the applicant of the captioned lot to assess environmental noise impact on the proposed composite redevelopment at the captioned site. The location plan of the Proposed Development with 300m noise impact study area is attached for your reference.

We would like to have some enquires regarding the fixed noise sources (e.g. chillers, water-cooling towers or varied refrigerant volume system (VRV)) of Lee Theatre. We would be grateful if you could provide following information for the purpose of Environmental Assessment:

Chillers / Cooling Towers / VRV

1. The locations and numbers of chillers / cooling towers / VRV, their sound data (noise level), model and cooling capacity, if available
2. Operation hours of these equipment
3. Number of operating equipment between 23:00 and 07:00 hours
4. Noise Mitigation Measures for the chillers / cooling towers / VRV (e.g. noise enclosure, silencer, etc.)

In addition, it would be grateful if we could have your permission in carrying out on-site noise measurement at the rooftop of the building. Due to the tight programme of this project, your prompt response on or before 9 March 2026 would be very much appreciated.

Should you have any questions on this submission, please do not hesitate to contact our Michael Wong at 3465 2815 (email: mcfwong@ramboll.com) or the undersigned at 3465 2826 (email: slai@ramboll.com).

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

We would like to have some enquires regarding the fixed noise sources (e.g. chillers, water-cooling towers or varied refrigerant volume system (VRV)) of Craigengower Cricket Club. We would be grateful if you could provide following information for the purpose of Environmental Assessment:

Chillers / Cooling Towers / VRV

1. The locations and numbers of chillers / cooling towers / VRV, their sound data (noise level), model and cooling capacity, if available
2. Operation hours of these equipment
3. Number of operating equipment between 23:00 and 07:00 hours
4. Noise Mitigation Measures for the chillers / cooling towers / VRV (e.g. noise enclosure, silencer, etc.)

In addition, it would be grateful if we could have your permission in carrying out on-site noise measurement at the rooftop of the building. Due to the tight programme of this project, your prompt response on or before 9 March 2026 would be very much appreciated.

Should you have any questions on this submission, please do not hesitate to contact our Michael Wong at 3465 2815 (email: mcfwong@ramboll.com) or the undersigned at 3465 2826 (email: slai@ramboll.com).

Yours faithfully,
For and on behalf of

(1) Cooling: entering evaporator water temp. 16°C; leaving evaporator water temp. 10°C; ambient air temp. 35°C; full load operation. (2) Data is calculated at ambient air temperature 5°C, inlet water temperature 16°C.

FC-125: BO-1 to BO-4, VC-3 to VC-6, BR-1 to BR-3, LT-8 to LT-9, PW-1, PW-2, OH-1, OH-2, RC-1 to RC-3

Derived SWL = 64 + 20*log(1.13*sqrt(1.65*3.65)) + 8 = 80.9

FC-400: LT-1, LT-2

Derived SWL = 68 + 20*log(1.13*sqrt(4.6*4.3)) + 8 = 90.0

FC-450: CR-1 to CR-3
Derived SWL = 69 + 20*log(1.13*sqrt(5.2*4.4)) + 8 = 91.7

NOISE LEVEL	Measuring point D=1.13$\sqrt{L \times W}$		dBA	60	61	62	63	64	65	65	66	66	67	68	68	69	70	71	71

Note: Nominal cooling capacity is based on 131 / min/ RT(1RT=3,900 Kcal /hr) at 37 ℃ hot water in, 32℃ cold water out 27℃ ambient wet bulb. The SPLs are measured 1.13$\sqrt{W \times L}$ horizontally away from air intake side of the tower at 1.5m above the foundation level. Pump head of the cooling tower is approximate equal to the height of tower(H). Dimension shown in this catalogue is metric sized and specifications are subject to change without further notice for technical improvement of our products.

FC-600: TS-6 to TS-8, TS-14, TS-15, TS-20 to TS-24, LT-3, JCH-3 to JCH-8

Derived SWL = 70 + 20*log(1.13*sqrt(6.9*4.3)) + 8 = 93.8

GUARANTEE:

All components are guaranteed against defective material for a period of one(1) year. When return to RYOWO with transportation prepaid, all parts found by factory inspection to be defective will be repaired or replaced without charge, FOB Hong Kong or FOB ShenZhen, PRC. No liability will be assumed for loss or damage resulting form misuse of our products.

FC-175: JL-1, JL-2, OH-3, OH-4, LC-1 to LC-9, LC-11 to LC-17, EE-1, EE-2

Derived SWL = 66 + 20*log(1.13*sqrt(2*4)) + 8 = 84.1

SPECIFICATION FOR FT SERIES

FT-250: LW-1, LW-2, OP-3

Derived SWL = 63 + 20*log(16) + 8 = 95.1

FT-300: OP-1, OP-2, OP-4

Derived SWL = 64 + 20*log(16) + 8 = 96.1

NOTE : Nominal cooling capacity is based on 13 ℓ / min / RT (1 RT=3,900 Kcal / hr) at 37ºC inlet water tpmperature, 32ºC outlet water temperature and 27ºC ambient wet bulb temperature.

The SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level.

Pump head is obtained by adding resistance of piping/condenser and the tower height(H).

The unit dimension in this catalogue is metric. Specifications listed in this catalogue are subject to change without further noticefor technical improvement of our products.

备注:
*1 室内温度: 27℃DB, 19℃WB / 室外温度: 35℃DB
*2 室内温度: 20℃DB / 室外温度: 7℃DB, 6℃WB
*3 四面运转音是按照 GB18837 要求进行四点测试得到的值, 正面运转音为公司内部测量值, 在实际安装状态下, 因为周围噪音及反射的原因, 一般高于样本登载值
*4 室内/外机配管连接口管径与室外机配管连接口管径不同时 (☆标识处), 要进行变径处理, 以室内/外机配管连接口管径为主
*5 在-15～-5℃DB进行制冷运转时, 需满足以下条件
a. 室内机连接率不超过100%
b. 根据室内/室外温度的不同, 必须开启的室内机最小额定制冷量如右表所示
*6 根据MCA来选择电气配管线规格, 根据MFA来选择熔丝或空气开关

室外干球温度 A	室内湿球温度 B	最小开启室内机的额定制冷量 C
-15° CDB≤A<-5° CDB	17° CWB≤B	C＞2.2kW
	14° CWB≤B<17° CWB	C＞2.8kW
	11° CWB≤B<14° CWB	C＞3.6kW
	8° CWB≤B<11° CWB	C＞5.6kW
