1. Introduction

1.1 General

1.1.1 Ove Arup and Partners Hong Kong Limited (Arup) was commissioned by the West Development Office (WDO) of the Civil Engineering and Development Department (CEDD) of the Government of Hong Kong Special Administrative Region (HKSAR) on 30 September 2020 to provide Consultancy Services for the Design and Construction Supervision of Hung Shui Kiu / Ha Tsuen New Development Area (HSK/HT NDA) Package A Works for Second Phase Development (the Consultancy). Under the Review Phase of the Consultancy, technical assessments including reports on Traffic and Transport Impact Assessments Review (TTIA), report on Drainage and Sewerage Impact Assessments Review (DSIA), Report on Water Supply and Utilities Impact Assessments Review (WSUIA) had been completed, which was based on the planning parameters adopted in the Approved S16 Planning Application (No. A/HSK/452) for proposed minor relaxation of plot ratio and/or building height restrictions for the proposed/permitted public and private housing developments, proposed social welfare facilities, proposed shop and services, eating place, school, office, educational institution, institutional use, off-course betting centre, place of entertainment, private club, public convenience, recycle collection centre and training centre at non-domestic podium within public housing developments in HSK/HT NDA in April 2023.

1.1.2 This Planning Application is submitted in accordance with Section 16 of the Town Planning Ordinance to seek approval of the Town Planning Board for the proposed flat and shop and services and eating place at non-domestic podium within "Government, Institution or Community (1)" ("G/IC(1)") of Planning Area 34E of Hung Shui Kiu/ Ha Tsuen New Development Area ("the Application Site"). The Proposed Development has a total Plot Ratio of 6.5, comprising residential developments on top of non-domestic podium.

1.1.3 This updated SIA report will be based on the accepted DSIA Report No. REP-031-07 (F3D) for the HSK/HT NDA development under Review Phase of the Consultancy.

1.2 Scope of Updated Technical Assessments

1.2.1 The scope of updated technical assessment for sewerage comprises the following:

- Update the previous SIA conducted using the new development parameters (site area, population, type, mix, etc.) given by CEDD;

- Undertake a review of the proposed sewerage network and identify if there would be any deficiency / inadequate capacity based on the new development parameters;
- Propose the preliminary modification measures for the purpose of the SIA; and
- Submit the SIA to support S16 application.

1.2.2 This section outlines the assessment of the sewerage impact potentially induced by the proposed development parameters at Site No. 4-1 (i.e. the Application Site) in HSK/HT NDA and includes:

- Estimation of sewage flows arising from the Application Site;
- Assessment of potential impact on the existing and planned sewerage system imposed by the Application Site; and
- Proposed preliminary sewerage system modification works, if considered necessary.

2. Planning Data and Sewage Flow Estimation

2.1 Baseline Population and Employment Data

2.1.1 The baseline sewerage catchments and population within the proposed HSK/HT NDA is based on the following planned and committed developments:

- S16 Planning Application No. A/HSK/452 (approved on 23 Jun 2023);
- Updated planned population and employment figures at nine housing sites advised by the Housing Department (i.e. Site No. 4-3, 4-4, 4-5, 4-6, 4-22, 4-24, 4-28, 5-16 and 5-17); and
- Planning Application No. A/HSK/573 – Proposed Minor Relaxation of Domestic Plot Ratio Restriction (From 4.5 to 5) for Mixed Use Development (in Planning Areas 28A and 28B of HSK/HA NDA) (i.e. Site No. 4-25a, 4-25b, 4-25c, and 4-29) (approved on 15 Aug 2025).

2.2 Proposed Development

2.2.1 The proposed development information for the Application Site (i.e. Site No. 4-1) is summarized in in **Table 2.1**. The Indicative Scheme is shown in **Appendix A**.

Table 2.1 Proposed Development Parameters for the Application Site

Development Parameters	Proposed Development
Application Site	About 7,760m^2
Total Plot Ratio (PR)	6.5
- Domestic PR	*6*
- Non-domestic PR	*0.5*
Total Gross Floor Area (GFA)	50,440m^2
- Domestic GFA	*46,560m^2*
- Non-domestic GFA	*3,880m^2*
No. of Blocks	4 nos. of residential towers on top of 5-storey retail, carpark cum clubhouse podium
Population	About 2,420
Clubhouse GFA	About 2,095.2m^2

2.3 Sewerage Parameters and Assumptions

2.3.1 The assumptions for sewage flow estimation have been adopted with reference to those stated in the accepted DSIA (Report No. REP-031-07) (F3D) for the HSK/HT NDA. The relevant sewerage parameters and assumptions are presented in the following paragraphs.

2.3.2 **Error! Reference source not found.**The following unit flow factors for domestic and commercial activities in accordance with EPD's Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning (GESF) are adopted:

Table 2.2 Unit flow Factors for Different Land Uses

Land Use specified in GESF	Unit Flow Factor (m^3/person/day)	Remark
Domestic		
Residential – Private (R1)	0.19 (1)	
Commercial		
General	0.28 (1)	Sum of flows due to employee (0.08m^3/person/day) & General territorial average (0.20m^3/person/day)
J10 – Restaurants & Hotels	1.58 (1)	Sum of flows due to employee (0.08m^3/person/day) & General territorial average (1.50m^3/person/day)

***Notes*:**

(1) Referenced from EPD's Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning Table T-1 and T-2.

2.3.3 As human activities fluctuates throughout the day, sewage flow is likewise not uniform with peaks in certain periods. As such, peaking factor is proposed to accommodate for potential spike in sewage flow. Peaking factor serves to cater for seasonal/diurnal fluctuation and normal amount of infiltration and inflow. Peaking factors (including stormwater allowance) have been adopted in accordance with EPD's GESF as shown in **Table 2.3**.

Table 2.3 Peaking Factors for Various Population Ranges

Population Range	Peaking Factor (including stormwater allowance) for facility with existing upstream sewerage	Peaking Factor (excluding stormwater allowance) for facility with new upstream sewerage
Sewers		
< 1,000	8	6
1,000 – 5,000	6	5
5,000 – 10,000	5	4
10,000 – 50,000	4	3
> 50,000	Max ($7.3/N^{0.15}$, 2.4)	Max ($6/N^{0.175}$, 1.6)
Sewage Treatment Works, Preliminary Treatment Works and Pumping Stations		
< 10,000	4	3
10,000 – 25,000	3.5	2.5
25,000 – 50,000	3	2
> 50,000	Max ($3.9/N^{0.065}$, 2.4)	Max ($2.6/N^{0.065}$, 1.6)

Notes:

(1) Referenced from EPD's GESF Table T-5; N = Contributing population in thousands.

2.3.4 Average dry weather flows (ADWF) were estimated by applying appropriate unit sewage flow factors according to their development type, and peak flows were calculated by multiplying the ADWF by the peaking factor, which account for the peak flows and provide adequate safety margin in planning sewage facilities. A return liquid allowance of 2.5% is also applied to all estimated ADWFs.

3. Assessment of Sewerage Impact

3.1 Existing and Planned Sewerage Infrastructure

3.1.1 The sewerage system in North-west New Territories (NWNT) serves the major urban developments in Tin Shui Wai and Tuen Mun - Yuen Long Corridor and small developments on the periphery of Yuen Long. Two sewerage catchments, Yuen Long Sewerage Catchment and San Wai Sewerage Catchment, correspond to two sewage treatment works, Yuen Long Sewage Treatment Works (YLSTW) and San Wai Sewage Treatment Works (SWSTW) respectively.

3.1.2 SWSTW is planned to serve major developments in Yuen Long Town, Au Tau, Tin Shui Wai, Ping Shan, Lau Fau Shan, Shap Pat Heung and covered part of the area within HSK/HT NDA including Hung Shui Kiu and Ha Tsuen. The remaining areas within HSK/HT NDA are unsewered areas. YLSTW serves the eastern part of the NWNT.

3.1.3 To cater for the forecast sewage flow due to population growth in the NWNT, DSD commenced the works contract no. DC/2013/10 in May 2016 - "Upgrading of San Wai Sewage Treatment Works – Phase 1" to upgrade the SWSTW from preliminary treatment to chemically enhanced primary treatment plus disinfection facilities and increase the ADWF treatment capacity to 200,000 m^3/day. Phase 1 upgrading works of SWSTW at a site adjacent to the existing SWSTW had been completed in the end of 2020.

3.1.4 Under DSD Agreement No. CE30/2006 (DS), Ha Tsuen Sewage Pumping Station (HTSPS) was expanded with an additional 1200mm diameter rising main constructed in parallel with the existing twin 1200mm diameter rising mains. Upon completion of the expansion works in 2014, the design capacity of HTSPS has been increased to 193,100 m^3/day.

3.1.5 Four new sewage pumping stations (SPS) (i.e. SPS1 to SPS4) are proposed to convey sewage flow from the HSK/HT NDA to the upgraded SWSTW – Phase 1 and the planned Hung Shui Kiu Effluent Polishing Plant (HSKEPP) (ADWF treatment capacity of 90,000 m^3/day).

3.1.6 The effluent of the upgraded SWSTW and the HSKEPP will be discharged to the existing NWNT Effluent Tunnel which has a total hydraulic capacity of 440,000 m^3/day and subsequently discharged via the existing Urmston Road Submarine Outfall.

3.2 Sewerage Impact

3.2.1 The ADWF generated from the proposed development at the Application Site is estimated in accordance with EPD's GESF and are summarised in **Table 3.1**.

Table 3.1 Estimation of ADWF from the Proposed Development

Development and Type	GFA (m^2)	Population /Employee	Unit Flow Factor (m^3/day/head)	Design ADWF (m^3/day) (1)
Domestic (Private R1)	46,560	2,420	0.19	471
Non-domestic (Commercial – Non-catering)	2,716 (3)	96 (2)	0.28	28
Non-domestic (Commercial – Catering/Restaurants)	1,164 (3)	60 (2)	1.58	97
Clubhouse (Commercial – General)	2095.2	70 (2)	0.28	20
			Total	616

Notes:

(1) Design ADWF includes a return liquid allowance of 2.5%.

(2) Reference from Table 8 of PlanD's Commercial and Industrial Floor Space Utilization Survey.

(3) Assume total non-domestic GFA (i.e. 3,880 m^2) comprises 70% non-catering and 30% catering GFA.

3.2.2 In the Indicative Scheme formulated for the purpose of technical assessment, a swimming pool is proposed (subject to change at the detailed design stage). Since the discharge of the swimming pool will be only undertaken occasionally, the sewage from the swimming pool is planned to be discharged during non-peak hours to reduce the loading on public sewer. Thus, the swimming pool's backwashing flow will be excluded from the peak sewage flow of the proposed development.

3.2.3 The flow increment compared to the baseline scenario is summarised in **Table 3.2**.

Table 3.2 Sewage Flow Comparison for Site No. 4-1

Scenario	Design ADWF (m^3/day) (1)
Baseline (Refer to **Section 2.1**)	447
Proposed	616
Difference	+169

Notes:

(1) Design ADWF includes a return liquid allowance of 2.5%.

3.2.4 With the proposed residential development in this S16 Planning Application, the additional sewage flow generated from Site No. 4-1 would be conveyed to SPS3, then SPS2, and eventually to the planned HSKEPP.

3.2.5 For the avoidance of doubt, there is no additional sewage flow to SPS1 and SPS4 due to the proposed development. **Table 3.3** summarises the design pumping capacities of the proposed SPS2 and SPS3, and a comparison of design sewage flow under base case and proposed condition.

Table 3.3 Sewage Pumping Capacities and Sewage Flow Comparison

SPS	ADWF (m^3/day) (1)				Capacity Shortfall (m^3/day) *(Proposed ADWF– Pumping Capacity)*	Remarks
	Pumping Capacity	Base Case	Increment under Proposed Condition	Proposed Condition *(Base Case + Increment)*		
SPS2	47,229 (2)	47,229	+169 (0.4%)	47,398	169 (0.4%)	Pumping Capacity < Proposed ADWF
SPS3	12,341 (2)	12,341	+169 (1.4%)	12,511	169 (1.4%)	

Notes:

(1) Design ADWF includes a return liquid allowance of 2.5%.

(2) Refer to latest updated SIA for 9 nos. Housing Sites (i.e. 4-3, 4-4, 4-5, 4-6, 4-22, 4-24, 4-28, 5-16 and 5-17), the pumping capacity of SPS2 and SPS3 under original base case scenario are 46,121 m^3/day and 12,341 m^3/day respectively. Due to the concurrent planned and committed developments in the vicinity, SPS2's pumping capacity under base case is required to be further increased from 46,121 m^3/day to 47,229 m^3/day.

3.2.6 Both SPS2 and SPS3 have a capacity shortfall of 169 m^3/day. Upgrading works are required to handle a respective total ADWF of 47,398 m^3/day and 12,511 m^3/day.

3.2.7 **Table 3.5** summarises the comparison of sewage flow to planned HSKEPP under base case and proposed condition.

Table 3.5 Treatment Works Capacities and Sewage Flow Comparison

Sewage Treatment Works	Treatment Capacity (m^3/day)	ADWF (m^3/day) (1)			Capacity Shortfall (m^3/day)
		Base Case	Increment under Proposed Condition	Proposed Condition	
HSKEPP	90,000	87,421 (2)	+169 (0.2%)	87,591	-

Notes:

(1) Design ADWF includes a return liquid allowance of 2.5%.

(2) Including sewage flow from SPS2 and two-third of SPS4.

3.2.8 It is noted that the 0.2% increment of sewage flow could be absorbed by the planned HSKEPP without any adverse sewerage impact.

3.2.9 Based on the hydraulic checking in **Appendix C**, the proposed gravity sewer within HSK/HT NDA Second Phase Development have sufficient capacity to cater for the additional sewage flow imposed by the proposed development.

4. Proposed Sewerage Modification Works

4.1.1 The design guidelines, standards and criteria used for the preliminary design of the proposed sewerage system and the proposed sewerage improvement schemes are as follows:

- EPD's Technical Paper Guidelines for Estimating Sewage Flows (GESF) for Sewerage Infrastructure Planning Version 1.0; and
- DSD's Sewerage Manual Part 1 (Key Planning Issues and Gravity Collection System) and Part 2 (Pumping Stations and Rising Mains), Third Edition, May 2013.

4.1.2 Refer to **Section 3.2.6**, pump and pump motor upgrading works are required and proposed at SPS2 and SPS3 to achieve a net positive pump outflow during peak flow condition. Due to the relatively small increase in pumping capacity, it is anticipated that the current pump model / physical size can be retained. The increase in pumping capacity should be achievable by enlarging the respective pump impeller diameter and upgrading the corresponding pump motor. As the pump physical size does not increase, the pumping station's physical dimensions would not have to be modified to accommodate the increase in pumping capacity.

4.1.3 The design capacity and utilization ratio after proposed modification is tabulated in **Table 4.1**.

Table 4.1 SPS Arrangement after Proposed Pump Modification Works

SPS	Design Accumulated ADWF under Proposed Condition (m^3/day)	Design Pumping Capacity (in ADWF) after Modification (m^3/day)	Utilization Ratio	Design Total Pump Rate (in peak flow) after Modification (l/s)
SPS2	47,398	47,398 (Upgraded)	100%	1,650 (Upgraded)
SPS3	12,511	12,511 (Upgraded)	100%	435 (Upgraded)

4.1.4 **Table 4.2** summarizes the flow velocity of rising mains upon proposed pump modification in SPS2 and SPS3. The flow velocities under all conditions are well within the design limit of 1 m/s to 3 m/s. As such, no adverse impact on rising mains is envisaged.

Table 4.2 SPS Rising Main Size and Flow Velocity

SPS	Rising Main Diameter (mm)	Flow Velocity under Proposed Condition (m/s)	
		Using 1 Pipe (During Maintenance)	Using 2 Pipes (Normal Condition)
SPS2	2 x DN900 DI pipes	2.34	1.17
SPS3	2 x NS560 HDPE pipes	2.61	1.30

5. Summary

5.1.1 This report estimated the sewage flows generated from the proposed development at Site No. 4-1 in comparison with that from the base case scenario, assessed the potential impact and recommended sewerage modification works to mitigate the potential impact.

5.1.2 According to the assessment, the proposed development would induce an additional ADWF of 169 m^3/day, imposing extra sewage flow to proposed SPS2 and SPS3 (within HSK/HT NDA Second Phase Development), and planned HSKEPP.

5.1.3 The pumping capacity of proposed SPS2 and SPS3 are found to be marginally insufficient. The pumps and ancillary equipment are required to be upgraded, such that the total pump rates will be increased to cater for the additional sewage flow from the proposed development.

5.1.4 Other than the proposed pump modification works in SPS2 and SPS3, the hydraulic assessment suggested that the proposed development would incur no adverse sewerage impacts to other existing and proposed sewerage infrastructure, including the planned HSKEPP, proposed gravity sewers and rising mains.

5.1.5 Upon implementing the proposed modification / upgrading works at SPS2 and SPS3, no adverse impact to the existing and planned sewerage system is envisaged due to the proposed development.

NOTES

1. FOR GENERAL NOTES AND LEGEND REFER TO DRAWING NO. 278463/C4/SEW/1001.
2. FOR DETAILS OF STANDARD MANHOLES TYPES E1, F1, G1, L AND H REFER TO LATEST DSD STANDARD DRAWINGS. 01
3. FOR DETAIL OF SPECIAL MANHOLE TYPE SP-L AND SP-1 REFER TO DRAWING NO. 278463/C4/SEW/1302 -1303.
4. THE COVER LEVELS SHOWN FOR MANHOLES ARE APPROXIMATE ONLY.THE FINAL COVER LEVELS SHALL BE VERIFIED ON SITE TO MATCH WITH THE FINISHED ROAD/GROUND LEVELS.
5. THE ANNOTATION TP INDICATED IN THE MANHOLE SCHEDULE REFERS TO TAPPING PIPE.
6. FOR DETAIL OF SPECIAL MANHOLE TYPE SP-F/D REFER TO DRAWING NO. 278463/C4/DRA/1306. 01

Appendix C

Sewerage Calculations

Base Case Scenario

1. Sewage flow build-up:

a. S16 Planning Application No. A/HSK/452 (approved on 23 Jun 2023)

b. Updated planned population and employment figures at nine housing sites advised by the Housing Department (i.e. Site No. 4-3, 4-4, 4-5, 4-6, 4-22, 4-24, 4-28, 5-16 and 5-17)

c. No. A/HSK/573 – Proposed Minor Relaxation of Domestic Plot Ratio Restriction (From 4.5 to 5) for Mixed Use Development (in Planning Areas 28A and 28B of HSK/HA NDA) (i.e. Site No. 4-25a, 4-25b, 4-25c, and 4-29) (approved on 15 Aug 2025)

2. Estimation of sewage flow by SPS and phasing

Table 3 Calculation for Sewage Generation Rate of the Proposed Development (By Site)

Subject Site 28A

Site 28A-1

1. Residential

Total number of residential units	=	1148	units
Total number of residents	=	3214	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**867.9**	m^3/day

2. Club House

Assumed area	=	1435.3	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	47	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**13.3**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	50	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumptio	=	75	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	18.75	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.38	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.5625	m^3/day
Design flow for Swimming Pool Backwashing	=	**3.1**	litre/sec

Part of ADWF of Site 4-29

Total Flow from the Proposed Development (Site 28A-1)

Flow rate	=	881.2	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	881.2	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	3264	people (refer to Section 12 of GESF)
Peaking factor	=	6	(refer to Table T-5 of GESF for a population between 1000-5000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**61.2**	litre/sec
Peak flow (with swimming pool)	=	**64.3**	litre/sec

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Site 28A-2

1. Residential

Total number of residential units	=	1535	units
Total number of residents	=	4298	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**1160.5**	m^3/day

2. Club House

Assumed area	=	1918	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	63	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**17.7**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	50	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumptio	=	75	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	18.75	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.38	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.5625	m^3/day
Design flow for Swimming Pool Backwashing	=	**3.1**	litre/sec

4. Commercial (Retail)

GFA	=	1000	m^2
Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
Total number of employees	=	35	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail)
Sewage generation rate	=	**9.8**	m^3/day

5. Commercial (F&B)

GFA	=	1000	m^2
Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurants)
Total number of employees	=	51	employees
Design flow	=	1580	litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurant & Hotels)
Sewage generation rate	=	**80.6**	m^3/day

6. PTI

Assumed area	=	15000	m^2
Assumed floor area per employee	=	26.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Transport)
Total number of employees	=	570	employees
Design flow	=	180	litre/employee/day -- (refer to Table T-2 of GESF - J3 Transport, Storage & Communiccation)
Sewage generation rate	=	**102.6**	m^3/day

Total Flow from the Proposed Development (Site 28A-2 - PTI)

Flow rate	=	102.6	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	102.6	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	380	people (refer to Section 12 of GESF)
Peaking factor	=	8	(refer to Table T-5 of GESF for a population between <1,000 incl. stormwater allowance)
Peak flow	=	**9.5**	litre/sec

Total Flow from the Proposed Development (Site 28A-2 - exclude PTI)

Flow rate	=	1268.6	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	1268.6	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	4698	people (refer to Section 12 of GESF)
Peaking factor	=	6	(refer to Table T-5 of GESF for a population between <1,000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**88.1**	litre/sec
Peak flow (with swimming pool)	=	**91.2**	litre/sec

Part of ADWF of Site 4-29

Total Flow from the Proposed Development (Site 28A-2)

Flow rate	=	1371.2	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	1371.2	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	5078	people
Peaking factor	=	5	(refer to Table T-5 of GESF for a population 5000-10000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**79.3**	litre/sec
Peak flow (with swimming pool)	=	**82.5**	litre/sec

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Site 28A-3

1. Residential

Total number of residential units	=	1617	units
Total number of residents	=	4528	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**1222.5**	m^3/day

2. Club House

Assumed area	=	2021	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	67	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**18.7**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	50	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumptio	=	75	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	18.75	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.38	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.5625	m^3/day
Design flow for Swimming Pool Backwashing	=	**3.1**	litre/sec

4. Commercial (Retail)

GFA	=	21851	m^2
Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
Total number of employees	=	765	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail)
Sewage generation rate	=	**214.1**	m^3/day

5. Commercial (F&B)

GFA	=	21851	m^2
Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurants)
Total number of employees	=	1114	employees
Design flow	=	1580	litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurant & Hotels)
Sewage generation rate	=	**1760.8**	m^3/day

Total Flow from the Proposed Development (Site 28A-3)

Flow rate	=	3216.0	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	3216.0	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	11911	people (refer to Section 12 of GESF)
Peaking factor	=	4	(refer to Table T-5 of GESF for a population between 10000-50000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**148.9**	litre/sec
Peak flow (with swimming pool)	=	**152.0**	litre/sec

Part of ADWF of Site 4-29

Remark: The Proposed Development will have phasing based on indicative preliminary deisgn. This calculation is prepared base on 7 phasing (3 on Site 28A and 4 on Site 28B), serving only as an assumption for the Sewerage Appraisal.

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Subject Site 28B

Site 28B-1

1. Residential

Total number of residential units	=	958	units
Total number of residents	=	2682	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**724.2**	m^3/day

2. Club House

Assumed area	=	1198	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	40	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**11.1**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	37.5	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumption)	=	56.25	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	14.0625	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.28	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.421875	m^3/day
Design flow for Swimming Pool Backwashing	=	**2.3**	litre/sec

Total Flow from the Proposed Development (Site 28B-1)

Flow rate	=	735.3	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	735.3	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	2723	people (refer to Section 12 of GESF)
Peaking factor	=	6	(refer to Table T-5 of GESF for a population between 1000-5000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**51.1**	litre/sec
Peak flow (with swimming pool)	=	**53.4**	litre/sec

Part of ADWF of Site 4-25b

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Site 28B-2

1. Residential

Total number of residential units	=	958	units
Total number of residents	=	2682	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**724.2**	m^3/day

2. Club House

Assumed area	=	1198	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	40	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**11.1**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	37.5	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumption)	=	56.25	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	14.0625	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.28	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.421875	m^3/day
Design flow for Swimming Pool Backwashing	=	**2.3**	litre/sec

Total Flow from the Proposed Development (Site 28B-2)

Flow rate	=	735.3	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	735.3	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	2723	people (refer to Section 12 of GESF)
Peak flow (without swimming pool)	=	6	(refer to Table T-5 of GESF for a population between 1000-5000 incl. stormwater allowance)
Peak flow (with swimming pool)	=	**51.1**	litre/sec
	=	**53.4**	litre/sec

Part of ADWF of Site 4-25b

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Site 28B-3

1. Residential

Total number of residential units	=	500	units
Total number of residents	=	1400	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**378.0**	m^3/day

2. Club House

Assumed area	=	625	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	21	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**5.8**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	37.5	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumption)	=	56.25	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	14.0625	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.28	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.421875	m^3/day
Design flow for Swimming Pool Backwashing	=	**2.3**	litre/sec

4. Commercial (Retail)

GFA	=	700	m^2
Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
Total number of employees	=	25	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail)
Sewage generation rate	=	**6.9**	m^3/day

5. Commercial (F&B)

GFA	=	700	m^2
Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurants)
Total number of employees	=	36	employees
Design flow	=	1580	litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurant & Hotels)
Sewage generation rate	=	**56.4**	m^3/day

6. Office

GFA	=	16504	m^2
Assumed floor area per employee	=	18.2	m^2 per employee -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Business Services)
Total number of employees	=	908	employees
Design flow	=	0.08	m^3/employee/day -- (refer to Table T-2 of GESF - J6 Finance, Insurance, Real Estate & Business Services)
Sewage generation rate	=	**72.6**	m^3/day

Total Flow from the Proposed Development (Site 28B-3)

Flow rate	=	519.7	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	519.7	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	1925	people (refer to Section 12 of GESF)
Peaking factor	=	6	(refer to Table T-5 of GESF for a population between 1000-5000 incl. stormwater allowance)
Peak flow	=	**36.1**	litre/sec
Peak flow (with swimming pool)	=	**38.4**	litre/sec

Total ADWF of Site 4-25a

Extracted from Appendix 5 - Sewerage Appraisal under No. A/HSK/573

Site 28B-4

1. Residential

Total number of residential units	=	1486	units
Total number of residents	=	4161	residents (refer to Census and Statistics Department 2021 data - average household size of 2.8 in Hung Shui Kiu)
Design flow	=	270	litre/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	**1123.4**	m^3/day

2. Club House

Assumed area	=	1857	m^2 (Assume 2.5% of residential GFA)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
Total number of employees	=	61	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social, Personal Services)
Sewage generation rate	=	**17.2**	m^3/day

3. Proposed Swimming Pool (Indoor)

Area of Swimming Pool	=	37.5	m^2 (Assume)
Depth of Swimming Pool	=	1.5	m
Volume of Swimming Pool (Ordinary Assumption)	=	56.25	m^3
Turnover Rate	=	4	hr
Required Surface Loading Rate of Filter	=	14.0625	$m^3/m^2/hr$
Filter Areas required	=	1	m^2
Adopted Surface Loading Rate of Filter	=	50	$m^3/m^2/hr$
Adopted Filter Area	=	0.28	m^2
Backwash Duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for Swimming Pool Backwashing	=	0.421875	m^3/day
Design flow for Swimming Pool Backwashing	=	**2.3**	litre/sec

4. Commercial (Retail)

GFA	=	16474	m^2
Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
Total number of employees	=	577	employees
Design flow	=	280	litre/employee/day -- (refer to Table T-2 of GESF - J4 Wholesale & Retail)
Sewage generation rate	=	**161.4**	m^3/day

5. Commercial (F&B)

GFA	=	16474	m^2
Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurants)
Total number of employees	=	840	employees
Design flow	=	1580	litre/employee/day -- (refer to Table T-2 of GESF - J10 Restaurant & Hotels)
Sewage generation rate	=	**1327.5**	m^3/day

Total Flow from the Proposed Development (Site 28B-4)

Flow rate	=	2629.5	m^3/day
Flow rate with P_{CIF} (Yuen Long - 1.0)	=	2629.5	m^3/day (refer to Table T-4 of GESF - Yuen Long - 1.0)
Contributing population	=	9739	people (refer to Section 12 of GESF)
Peaking factor	=	5	(refer to Table T-5 of GESF for a population between 5000-10000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	**152.2**	litre/sec
Peak flow (with swimming pool)	=	**154.5**	litre/sec

Total ADWF of Site 4-25c

Remark: The Proposed Development will have phasing based on indicative preliminary deisgn. This calculation is prepared base on 7 phasing (3 on Site 28A and 4 on Site 28B), serving only as an assumption for the Sewerage Appraisal.

Notes:

(1) Denotes the name of SPS to which the sewage flow is discharged

(2) Implementation phases in accordance with the latest development schedule enclosed in Appendix F

(3) Total projected population contributing to the respective SPS

(4) Estimated ADWF from the catchment area of its own respective SPS

(5) Cumulative ADWF of the SPS (i.e. SPS2 will receive sewage flow from SPS1 and SPS3)

- SPS2 will receive sewage flow from SPS1 and SPS3.
- SPS4 will receive sewage flow from existing Tin Wah Road Sewage Pumping Station (TWRSPS):

ADWF (m^3/day)	43,546

- HTSPS will receive sewage flow from Agreement No. CE 92/2017 (CE) Tan Kwai Tsuen Public Housing Development (TKT PHD) project for subsequent treatment at SWSTW:

ADWF (m^3/day)	4,960

(6) Cumulative ADWF of the SPS taking into account the Return Liquid Allowance (RLA) of 2.5%

RLA (%)	2.5

(7) Contributing population N calculated in accordance with EPD's GESF

(8) Peaking factor P calculated in accordance with EPD's GESF

(9) Estimated peak flow Q to the respective SPS

Proposed Scenario

1. Sewage flow build-up for the Application Site
2. Estimation of sewage flow by SPS and phasing

Proposed Scenario

Baseline (Extracted from S16 Planning Application No. A/HSK/452 (approved on 23 Jun 2023))							
Site No.	Zoning	Domestic GFA (m^2)	Average Flat Size (m^2)	Total Number of Flat	Total ADWF (m^3/day)	Design ADWF (1) (m^3/day)	Remarks
4-1	G	33600	70	480	436	447	- Divisional Fire Station cum Ambulance Depot - 140 workers - Divisional Fire Station cum Ambulance Depot - minimum site allocation of 3,830 sqm + Drill Yard of 1,635 sqm - 4 storeys podium for fire station/ambulance depot (Part of 1st-2nd floor will accommodate double-storey fire engine parking) - Two 31-storey residential towers (1 storey lobby + 30 storeys flats) (Reference: Existing footprint of developed FSD quarters)

(1) Design ADWF includes a return liquid allowance of 2.5%

Proposed Development							
Site No.	Zoning	GFA (m^2) (2)	Population	UFF (m^3/head/day)	Total ADWF (m^3/day)	Design ADWF (1) (m^3/day)	Remarks
4-1	Domestic (R1)	46560	2420	0.19	460	471	- Assume person per flat ratio of 2.6, with reference to the latest C&SD projection of average household size starting from 2031
	Non-domestic (Commercial – General)	2716	96	0.28	27	28	- Assume worker density of 3.5 based on "Retail Trade" activity under Table 8 of CIFSUS by PlanD
	Non-domestic (Restaurants)	1164	60	1.58	95	97	- Assume worker density of 5.1 based on "Restaurants" activity under Table 8 of CIFSUS by PlanD
	Clubhouse (Commercial – General)	2095.2	70	0.28	20	20	- Assume worker density of 3.3 based on "Community, Social & Personal Services" activity under Table 8 of CIFSUS by PlanD
				Total	601	616	

(1) Design ADWF includes a return liquid allowance of 2.5%
(2) Assume total non-domestic GFA (i.e. 3,880 m^2) comprises 70% non-catering and 30% catering GFA.

Estimation of backwash flow from proposed swimming pools

Indoor swimming pool

Pool length =	20	m	
Pool width =	9	m	
Pool depth =	1.5	m	
Pool volume =	270	m^3	
Turnover rate =	6	hours	
Filter loading rate =	48	m^3/m^2/hr	
Filter area required =	270 / 6 / 48 =	0.94	m^2
Backwash flow rate =	0.5	m^3/m^2/mins.	
Backwash duration =	3	mins./day	
Daily backwash flow =	0.94 x 3 x 0.5 =	1.41	m^3/day

Outdoor swimming pool

Pool length =	30	m	
Pool width =	9	m	
Pool depth =	1.5	m	
Pool volume =	405	m^3	
Turnover rate =	6	hours	
Filter loading rate =	48	m^3/m^2/hr	
Filter area required =	405 / 6 / 48 =	1.41	m^2
Backwash flow rate =	0.5	m^3/m^2/mins.	
Backwash duration =	3	mins./day	
Daily backwash flow =	1.41 x 3 x 0.5 =	2.12	m^3/day
Total daily backwash flow =	1.41 + 2.12 =	3.53	m^3/day
