Revised Traffic Impact Assessment

Application for Permission Under Section 16 of the Town Planning Ordinance (Cap. 131) for Proposed Comprehensive Development including Flats, Retail and Community Facilities and Minor Relaxation of Plot Ratio and Building Height Restriction in "Comprehensive Development Area" Zone at Various Lots in S.D.4 and Adjoining Government Land, Kau Wa Keng, Kwai Chung

Traffic Impact Assessment Report

Rev. E | January 2026

Job number 299277-02

1 INTRODUCTION

1.1 Background

1.1.1 The Application Site falls within the "Comprehensive Development Area" zone at Various Lots in S.D.4 and Adjoining Government Land, Kau Wa Keng, Kwai Chung on the Approved Kwai Chung Outline Zoning Plan (OZP) No. S/KC/32. The location of application site is shown in **Figure 1.1**.

1.1.2 The Applicant submitted a S16 Planning Application No. A/KC/489 with a Master Layout Plan (MLP) covering the entire "CDA" zone with a pragmatic phasing strategy having due regard to the multiple land ownership pattern to increase certainty in realizing the planning intention of the whole "CDA" zone. The comprehensive development proposed in the Planning Application No. A/KC/489 (hereafter referred to as the "**Approved Scheme**"), comprises 14 residential blocks with an overall PR of not more than 5 and maximum BH of not more than +120mPD.

1.1.3 The Planning Application No. A/KC/489 was deliberated in the TPB Metro Planning Committee Meeting held on 14 July 2023 (the TPB Meeting). During the TPB meeting, TPB members raised concerns on the provision of social welfare facilities and retail shops, as quoted from the meeting minutes[1]

- *"Some Members considered that retail facilities should be provided in the Proposed Development to cater for the daily needs of the future residents."* and *"Some Member shared the view that the provision of social welfare facilities in the Proposed Development was inadequate…"*.
- *"the development intensity of the Proposed Development could be increased for better land utilisation, e.g. provision of retail and more GIC facilities."*.

After deliberation, the Planning Application No. A/KC/489 was approved with conditions.

[1] Minutes of 722nd Meeting of the Metro Planning Committee held at 9:00 a.m. on 14.7.2023

1.1.4 The Applicant takes the initiative to review the **Approved Scheme** and endeavours to take forward the provision of more of social welfare facilities and retail shops. The **Proposed Scheme**, keeping the phasing strategy adopted in the **Approved Scheme**, comprises 15 building blocks (including 14 building blocks with residential use) with domestic PR of not more than 6 and maximum BH of not more than +147.55mPD. Non-domestic PR of not more than 0.5 is designated for proposed retail shops, existing historical buildings, and social welfare facilities to nurture an inclusive and liveable community in the convenient location of Kwai Chung Area.

1.1.5 Arup Hong Kong Limited (Arup) was commissioned to carry out a Traffic Impact Assessment (TIA) report in support of the Section 16 application for the application site.

1.2 Objectives of this Report

1.2.1 The purpose of this report is to evaluate the potential traffic impact associated with the proposed residential development and community facilities, in support of the Section 16 application for the application site.

1.3 Scope of Study

1.3.1 The tasks for this TIA study are outlined as follows:

- Carry out traffic surveys at critical junctions to appreciate current traffic condition;
- Update the inventory regarding traffic circulation patterns, traffic conditions, as well as the constraints of the existing and future committed road network in the vicinity of the application site based on the latest information available;
- Assess the volume of traffic likely to be generated by the Proposed Development;
- Set up the reference scenario with reference to the **Approved Scheme** at the site location, i.e. reference scenario with an overall PR of not more than 5;
- Identify the likely traffic generation should the application site be developed into Proposed Development;
- Compare the above two traffic scenarios for evaluation of the likely traffic impact, if any, associated with the Proposed Development;
- Assess future traffic condition, taking into account any future traffic growth, as well as the traffic generated by the Proposed Development and other planned/committed development, if any, to be built in the vicinity;
- Review the access arrangement for the Proposed Development and to make recommendation;
- Recommend car parking provisions and goods vehicle loading/unloading arrangements;
- Carry out pedestrian surveys at pedestrian facilities in the vicinity to appreciate current walking condition;
- Assess pedestrian walking condition, taking into account any future population and employment growth generated by the Proposed

Development and other planned/committed development, if any, to be built in the vicinity

- Assess utilization of public transport services, taking into account any future population and employment growth generated by the Proposed Development and other planned/committed development, if any, to be built in the vicinity; and
- Review the vehicular and pedestrian impact for the Interim Scenarios of the Proposed Developments to be developed by phases.

1.4 Structure of the Report

1.4.1 The structure of this TIA report is as follows:

Chapter	Title	Aims
1	Introduction	Provide project background and scope of the Study
2	Existing Traffic Condition	Review and appreciate the existing traffic condition
3	The Subject Development	Provide information of the Proposed Development
4	Traffic Impact Assessment (Full Development of Proposed Scheme)	Illustrate the results of Traffic Impact Assessment – full development of the CDA
5	Traffic Impact Assessment (Interim Scenario)	Illustrate the results of Traffic Impact Assessment – partial development of lots owned by the applicant
6	Conclusion	Summarize the findings of this Study

2 EXISTING TRAFFIC CONDITION

2.1 Site Characteristics

2.1.1 The application site is located in "Comprehensive Development Area" Zone at Various Lots in S.D.4 and Adjoining Government Land, Kau Wa Keng, Kwai Chung. It is bounded by existing village houses to the north, Lai King Hill Road to the south, Castle Peak Road – Kwai Chung to the east and Princess Margaret Hospital to the west. **Figure 1.1** shows the location and the environs of the application site.

2.2 Existing Road Network

2.2.1 The application site is well-served by a comprehensive road network to and from all districts. Some major roads in the vicinity of the application site are listed as follows:

- Lai King Hill Road is district distributor, in single two-lane configuration. It connects Kwai Fuk Road to the north and Lai Wan Road to the south. Lai King Hill Road serves traffic between Kwai Chung, New Territories West and Kowloon.
- Ching Cheung Road is an urban trunk road, in dual three-lane configuration running in east-west direction. It connects Kwai Chung Road to the north and Castle Peak Road to the south. It connects Kwai Chung and Kowloon.
- Lai Wan Road is local distributor running in north-south direction. It connects Mei Lai Road to the north and a private road of Mei Foo Sun Chuen to the south.
- Mei Lai Road is a district distributor with two traffic lanes in both traffic direction connecting Mei Foo Bus Terminus and Lai King Hill Road.
- Castle Peak Road – Kwai Chung is a primary distributor, dual two-lane carriageway running north-south direction. It connects Tai Wo Interchange to the north and Ching Cheung Road to the south.

2.3 Existing Junction and Link Performance

2.3.1 To appreciate the existing traffic conditions, comprehensive classified traffic counts were conducted at the following identified key junctions in the vicinity of the application site. Locations of these surveyed junctions are listed below and shown in **Figure 2.1**.

J1	-	Lai King Hill Road / King Lai Path	(Signalized Junction)
J2	-	Lai King Hill Road / Chung Shan Terrance / Estate Road	(Signalized Junction)
J3	-	Lai King Hill Road / Kwai Chung Interchange	(Signalized Junction)
J4	-	Mei Lai Road / Lai Wan Road	(Signalized Junction)
J5	-	Mei Lai Road / Cheung Sha Wan Road	(Signalized Junction)
J6	-	Lai King Hill Road Pedestrian Crossing near Site Access	(Signalized Junction)

2.3.2 The counts were undertaken on 12th March 2024 during the periods of 07:00 – 10:00 and 17:00 – 20:00 hours. The AM and PM peak hours were found to be 07:45 – 08:45 and 17:30 – 18:30 respectively. The observed traffic flows during these peak hours are presented in **Figure 2.2**.

Junction Capacity Assessment

2.3.3 Junction capacity analysis was carried out at the identified key junctions in the vicinity of the application site. Results of the capacity assessment are shown in **Table 2.3.1** below and detailed calculations are appended in **Appendix A**.

Table 2.3.1 Year 2024 Existing Junction Performance

Junction		Type	Performance (1)	
			AM	PM
J1	Lai King Hill Road / King Lai Path	Signalized	>100%	>100%
J2	Lai King Hill Road / Ching Shan Terrance / Estate Road	Signalized	>100%	>100%
J3	Lai King Hill Road / Kwai Chung Interchange	Signalized	29%	53%
J4	Mei Lai Road / Lai Wan Road	Signalized	>100%	>100%
J5	Mei Lai Road / Cheung Sha Wan Road	Signalized	64%	69%
J6	Lai King Hill Road Pedestrian Crossing near Site Access	Signalized	>100%	>100%

Note:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions.

2.3.4 Results of the analysis indicate that the identified key junctions in the vicinity of the application site are currently operating satisfactorily during both AM and PM peak hours.

Link Capacity Assessment

2.3.5 The road link capacity assessment has also been carried out to examine the volume to capacity (V/C) ratio of the identified key road links. Locations of these identified key road links are shown in **Figure 2.1**.

2.3.6 Results of the capacity assessment are shown in **Table 2.3.2** below. The assessment framework for the road links is based on the ratio of surveyed traffic volume over the link capacity (V/C) to measure the utilization of the road link.

Table 2.3.2 Year 2024 Existing Link Performance (1)

Road Link (2)		Direction	Unit	Link Capacity	Traffic Flows		Volume/Capacity (V/C) Ratio	
					AM	PM	AM	PM
L1	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	1,090	1,085	0.46	0.45
			veh/hr	2,200	903	895	0.41	0.41
L2	Lai King Hill Road (8m wide section)	Two-way	pcu/hr	1,850	655	515	0.35	0.28
			veh/hr	1,700	544	427	0.32	0.25
L3	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	550	545	0.23	0.23
			veh/hr	2,200	452	452	0.21	0.21
L4	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	700	675	0.29	0.28
			veh/hr	2,200	568	559	0.26	0.25
L5	Kwai Chung Interchange (6.8m wide section)	NB	pcu/hr	2,800	885	525	0.32	0.19
			veh/hr	2,600	731	435	0.28	0.17
L6	Kwai Chung Interchange (6m wide section)	SB	pcu/hr	1,400	425	575	0.30	0.41
			veh/hr	1,300	353	475	0.27	0.37

Notes:
(1) Link capacity estimated according to TPDM Vol.2 Ch.2.4, for single 2-lane carriageway (for L1 to L4 with road width of 8m and 10m) or for dual 2-lane carriageway (for L5 and L6 with road with of 6m and 6.8m). Data in terms of veh/hr and pcu/hr are converted according to survey pcu factor.
(2) For conservative approach, the road links are assessed based on the greatest traffic flows at the road sections of corresponding roads within AOI.

2.3.7 Results of the analysis indicate that the accessed road link has sufficient link capacity to cater for the existing traffic flows.

2.4 Public Transport Facilities

2.4.1 The application site is served by various modes of public transport services as shown in **Figure 2.3**. The MTR Mei Foo Station is located about 500m from the application site, but it involves steep road and crossing footbridge at different level, which is estimated to be an 8-minute walking journey. There are also a number of franchised bus and Green Minibus (GMB) service routes operating within the surrounding road network. A summary of the public transport services operating in the vicinity of the application site is provided in **Table 2.4.1**.

Table 2.4.1 Existing Franchised Bus and GMB Services

Route No.	Origin / Destination	Peak Headway (mins)
Franchised Bus		
6	Star Ferry ↔ Lai Chi Kok	8-20
30	Tsuen Wan (Allway Gardens) ↔ Cheung Sha Wan	25-30
32H	Cheung Shan ↔ Lai Chi Kok	60
42	Tsing Yi (Cheung Hong Estate) ↔ Shun Lee	15-20
45	Kowloon City Ferry ↔ Kwai Chung (Lai Yiu Estate)	25-30
46	Jordan (West Kowloon Station) ↔ Kwai Chung (Lai Yiu Estate)	20-30
46X	Hin Keng ↔ Mei Foo	5-12
171	Lai Chi Kok ↔ South Horizons	10-20
171A	Lei Tung Estate → Lai Chi Kok	Weekday special departures
171P	South Horizons → Lai Chi Kok	Weekday special departures
904	Lai Chi Kok ↔ Kennedy Town (Belcher Bay)	18-30
905	Lai Chi Kok ↔ Exhibition Centre Station	8-23
905A	Exhibition Centre Station → Lai Chi Kok	Weekday special departures
905P	Lai Chi Kok → Wan Chai (Harbour Road)	Weekday special departures
N171	Lai Chi Kok ↔ Ap Lei Chau Estate	Night services only
N241	Hung Hom Station ↔ Tsing Yi (Cheung Wang Estate)	Night services only
GMB		
90A	Kwai Chung Hospital ↔ Mei Foo Station	Weekday special departures
90M	Highland Park ↻ Mei Foo Station	4-6 (circular)
90P	Princess Margaret Hospital ↔ Mei Foo Station	6-8
92M	Wah Yuen Chuen ↻ Mei Foo Station	5-10 (circular)

2.4.2 In summary, the subject development would have good accessibility to the public transport services via adjacent road network and the existing MTR Mei Foo Station, despite steep road and crossing footbridge at different level.

2.5 Existing Pedestrian Condition

2.5.1 To appreciate the existing conditions, comprehensive pedestrian count surveys were conducted at the critical footpath in the vicinity, as shown in **Figure 2.4**. The pedestrian counts were undertaken on typical weekdays during the AM and PM peak periods on 12th March 2024.

2.5.2 In order to address the performance of the critical footpath, Level of Service (LOS) assessment of the critical footpath has been conducted.

2.5.3 LOS assessment is carried out based on the definitions presented in the Highways Capacity Manual 2000. **Table 2.5.1** shows the various LOS 'quantified' in terms of pedestrian flow rates.

Table 2.5.1 Level of Service (LOS) for Walkway

LOS	Flow rate for Walkway (ped/min/m)	Description
A	≤ 16	Pedestrians basically move in desired paths without altering their movements in response to other pedestrians. Walking speeds are freely selected, and conflicts between pedestrians are unlikely.
B	16 – 23	Sufficient space is provided for pedestrians to freely select their walking speeds, to bypass other pedestrians and to avoid crossing conflicts with others. At this level, pedestrians begin to be aware of other pedestrians and to respond to their presence in the selection of walking paths.
C	23 – 33	Sufficient space is available to select normal walking speeds and to bypass other pedestrians primarily in unidirectional stream. Where reverse direction or crossing movement exists, minor conflicts will occur, and speed and volume will be somewhat lower.
D	33 – 49	Freedom to select individual walking speeds and bypass other pedestrians is restricted. Where crossing or reverse-flow movements exist, the probability of conflicts is high and its avoidance requires changes of speed and position. The LOS provides reasonable fluid flow; however considerable friction and interactions between pedestrians are likely to occur.
E	49 – 75	Virtually, all pedestrians would have their normal walking speeds restricted. At the lower range of this LOS, forward movement is possible only by shuffling. Space is insufficient to pass over slower pedestrians. Cross- and reverse-movement are possible only with extreme difficulties. Design volumes approach the limit of walking capacity with resulting stoppages and interruptions to flow.
F	> 75	Walking speeds are severely restricted. Forward progress is made only by shuffling. There are frequent and unavoidable conflicts with other pedestrians. Cross- and reverse-movements are virtually impossible. Flow is sporadic and unstable. Space is more characteristic of queued pedestrians than of moving pedestrian streams.

Source: Extracted from Exhibit 18-3 of Highway Capacity Manual (HCM) 2000

2.5.4 Footpaths with LOS A to C are considered as desirable with sufficient space for pedestrian to select normal walking speeds to bypass. For footpaths with LOS D represent freedom to select individual walking speeds and bypass other pedestrians is restricted. Unless there are any site constraints, improved measures should be sought for footpath with LOS D or poorer.

2.5.5 **Table 2.5.2** summarized the observed AM and PM peak pedestrian flow and LOS in surveyed footpath and crossing.

Table 2.5.2 Year 2024 Level of Service in AM and PM Peaks at Key Footpath

Footpath		Actual Width (m)	Effective Clear Width (1) (m)	Two-way Peak Hourly Flow (ped/hr)		Flow Rate (2) (ped/min/m)		LOS (Level)	
				AM	PM	AM	PM	AM	PM
F1 (W)	Lai King Hill Road Northern Footpath	2.5	1.5	90	55	1.2	0.7	A	A
F1 (E)	Lai King Hill Road Northern Footpath	2	1	77	66	1.5	1.3	A	A
F2	Lai King Hill Road Southern Footpath	2.8	1.8	225	140	2.5	1.6	A	A
F3	Wah Lai Path Footpath	9.5	8.5	220	130	0.5	0.3	A	A

Notes:
(1) Effective clear width = Actual width (on-site measurement) minus 0.5m dead width on both sides, and minus the width of passengers queuing at bus stops.
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

2.5.6 The results presented in **Table 2.5.2** revealed that the walking condition on the critical footpath in the vicinity of the application site is satisfactory during both AM and PM peaks hours in Year 2024.

Table 2.5.3 Year 2024 Level of Service in AM and PM Peaks at Key Pedestrian Crossing

Crossing Facility		Clear Width (m)	Cycle Time (s)		Green Time Proportion		Pedestrian Capacity (1) (ped/hr)		Two-way Pedestrian Flow (2) (ped/hr)		Volume/ Capacity (V/C) Ratio	
			AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
C1	Pedestrian Crossing Across Lai King Hill Road	6.2	90	90	19%	19%	2,240	2,240	145	90	0.06	0.04

Notes:
(1) Crossing Capacity (ped/hr) = K (1,900 ped/m/hr) × Green Time Proportion × W (width of crossing)
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

2.5.7 The results presented in **Table 2.5.3** revealed that the concerned pedestrian crossing facility is operating satisfactorily during both AM and PM peaks in Year 2024.

3 THE SUBJECT DEVELOPMENT

3.1 Development Schedule

3.1.1 The Applicant intends to develop the application site into residential use with community facilities. The Proposed Development will comprise 4 phases, namely as follows:

- Phase 1A (P1A)
- Phase 1B (P1B)
- Remaining Phase A (RPA)
- Remaining Phase B (RPB)

3.1.2 The Proposed Development will be constructed in phases and the entire development is envisaged to be completed by Year 2032.

3.1.3 The Proposed Development schedule is summarized in **Table 3.1.1,** and the master layout plan is presented in **Figures 3.1**.

Table 3.1.1 Proposed Development Parameters

Proposed Development	Site Area (sqm)	Non-domestic Facilities	Domestic			
			Plot Ratio	No. of Blocks	Flat Mix	
Phase 1A	About 13,577.341	• Home Care Services for Frail Elderly Persons (HCS for Frail Elderly Persons) (4-team size non-kitchen based) • Residential Care Home for the Elderly (RCHE) (100 places) • School Social Work Office (SSWO) (Hong Kong Family Welfare Society) • Retail GFA: 2,285.323 sqm	6	5	FS≤40m²	1,221
					40m²<FS≤70m²	651
					70m²<FS≤100m²	109
					Total	1,981
Phase 1B	About 10,111.772	• Neighbourhood Elderly Centre (NEC) • Residential Care Home for the Elderly (RCHE) (100 places) • Retail GFA: 1,516.286 sqm	6	2	FS≤40m²	910
					40m²<FS≤70m²	485
					70m²<FS≤100m²	81
					Total	1,476
Remaining Phase A	About 7,934.713	• 60-place Day Care Centre for the Elderly (DE) • Office Base of On-site Pre-school Rehabilitation Services (OPRS) (Capacity: 125) • 120-place Day Care Centre for the Elderly (DE) (non-kitchen based) • Retail GFA: 1,437.357 sqm	6	2	FS≤40m²	714
					40m²<FS≤70m²	381
					70m²<FS≤100m²	63
					Total	1,158
Remaining Phase B	About 16,689.341	• 60-place Special Child Care Centre (SCCC) • Residential Care Home for the Elderly (RCHE) (150 places) • Child Care Centre (CCC) (100 places) • Retail GFA: 832.970 sqm	6	5	FS≤40m²	1,502
					40m²<FS≤70m²	801
					70m²<FS≤100m²	134
					Total	2,437
Total	**About 48,313.167**		**6**	**14**	**FS≤40m²**	**4,347**
					40m²<FS≤70m²	**2,318**
					70m²<FS≤100m²	**387**
					Total	**7,052**

3.2 Vehicular Access Arrangement

3.2.1 One vehicular access is proposed for the CDA site along Lai King Hill Road, entering the site via P1A as shown in **Figure 3.2**.

3.2.2 The vehicular access will have conflict with the existing pedestrian crossing and bus stop on Lai King Hill Road Eastbound. It is proposed to shift the pedestrian crossing and the bus stop eastwards, to provide separation distance among the proposed pedestrian crossing, the proposed bus stop and the proposed vehicular access, as shown in **Figure 3.3**.

3.2.3 The swept path analysis for 12m-long coach at vehicular access is shown in **Figure 3.4**.

3.2.4 The major ingress and egress routes for vehicular traffic approaching and leaving the application site are illustrated in **Figure 3.5** and **Figure 3.6** respectively.

3.3 Internal Transport Facilities Provision

3.3.1 The internal transport facilities provision for the proposed residential development will be provided in accordance with the high-end requirements of Hong Kong Planning Standards and Guidelines (HKPSG).

3.3.2 There is no standard requirement of internal transport facilities provision for the proposed GIC facilities under HKPSG, corresponding internal transport facilities provision is recommended with reference to operational need of projects with similar use.

3.3.3 The internal transport facilities provision for the Proposed Development is summarized in **Table 3.3.1** to **Table 3.3.7** below.

Table 3.3.1 HKPSG Required Internal Transport Facilities Provision – P1A

Type of Development	HKPSG Standard					Low-end Requirement (nos.)	High-end Requirement (nos.)
Private Housing ***Total Flat nos. 1,981*** **Block Nos. 5**	**Residential Parking Spaces**						
	Global Parking Standard (GPS)	1 car space per 4 – 7 flats			Flat No.		
	Demand Adjustment Ratio (R1)	Flat Size (FS) (m^2 GFA)	**FS≤40**	**0.5**	1,221	78.49	137.36
			40<FS≤70	**1.2**	651	100.44	175.77
			70<FS≤100	**2.4**	109	33.63	58.86
			100<FS≤130	4.1	-	-	-
			130<FS≤160	5.5	-	-	-
			FS>160	7	-	-	-
	Total				1,981	212.57	371.99
	Accessibility Adjustment Ratio (R2)	Within a 500m-radius of rail station		0.75		213	372
		Outside a 500m-radius of rail station		**1**			
	Development Intensity Adjustment Ratio (R3)	Domestic Plot Ratio (PR)	0.00<PR≤1.00	1.3			
			1.00<PR≤2.00	1.1			
			2.00<PR≤5.00	1			
			5.00<PR≤8.00	**0.9**			
			PR>8.00	0.75			
	Parking Requirement = GPS × R1 × R2 × R3						
	Visitor Parking Spaces						
	5 visitor spaces per block in addition to the recommendations, or as determined by the Authority.					**25**	**25**
	Total Parking Car Parking Spaces					**238 (*inclusive accessible parking spaces*)**	**397 (*inclusive accessible parking spaces*)**
	Accessible Parking Spaces						
	1 space for 1 – 50 total number of car parking space in the lot; 2 spaces for 51 – 150 total number of car parking space in the lot; 3 spaces for 151 – 250 total number of car parking space in the lot; 4 spaces for 251 – 350 total number of car parking space in the lot; 5 spaces for 351 – 450 total number of car parking space in the lot; 6 spaces for above 450 total number of car parking space in the lot					3	5
	Motorcycle Parking Spaces						
	1 motorcycle parking space per 100 – 150 flats excluding non-residential elements.					14	20
	L/UL Bay						
	Minimum of 1 loading / unloading bay for goods vehicles within the site for every 800 flats or part thereof, subject to a minimum of 1 bay for each housing block or as determined by the Authority.					3	5
Retail GFA: 2,285.323 sqm	**Private Car**						
	1 car space per 150 – 300 m^2 GFA					8	16
	Accessible Car Parking						
	1 space for total number of car parking spaces below 50					1	1
	Motorcycle						
	5 to 10% of the total provision for private cars					1	2
	Loading/Unloading Bay						
	1 loading/unloading bay for goods vehicles for every 800 – 1200 m^2 GFA					2	3
	LGV (65%)					1	2
	HGV (35%)					1	1

3.3.4 The proposed internal transport facilities for each phase of the Proposed Development will be self-contained within the respective phasing boundary. Highlighted plans of internal transport are shown in **Appendix B** and swept path analysis at critical movement are shown in **Appendix C**.

Car Parking Space Provision

3.3.5 A total of 1,396 nos. car parking spaces (including 18 nos. accessible car parking spaces) for residential development and another 43 nos. car parking spaces (including 4 nos. accessible car parking spaces) for retail use as per HKPSG high-end requirements will be provided in the basement levels, which will be accessed via the corresponding car-ramp for each site.

3.3.6 A total of 4 nos. car parking spaces (including 3 nos. accessible car parking spaces) will be provided on ground floor for GIC Facilities according to the schedule of accommodation from Social Welfare Department.

Visitor Car Parking Provision

3.3.7 A total of 70 nos. visitor car parking spaces (part of total 1,396 nos. private car parking provision), as per HKPSG high-end requirements will be provided in the basement levels, which will be accessed via the corresponding car-ramp for each site.

Motorcycle Parking Space Provision

3.3.8 A total of 72 nos. motorcycle parking spaces for residential development and another 6 nos. motorcycle parking spaces for retail use as per HKPSG high-end requirements will be provided in the basement levels, which will be accessed via the corresponding car-ramp for each site.

Private Car / Taxi Pick-up / Drop-off Provision

3.3.9 A total of 3 nos. private car/taxi pick-up/drop-off spaces will be provided on ground floor for GIC Facilities according to the schedule of accommodation from Social Welfare Department.

Goods Vehicle Loading / Unloading Bay Provision

3.3.10 A total of 14 nos. HGV loading/unloading bays for residential development and another 4 nos. HGV loading/unloading bays and 5 nos. LGV loading/unloading bays for retail use as per HKPSG high-end requirement will be provided on ground floor.

3.3.11 A total of 3 nos. LGV loading/unloading bays will be provided on ground floor for GIC Facilities according to the schedule of accommodation from Social Welfare Department.

Parking Space and Loading / Unloading Bay Provision for Private Light Bus

3.3.12 A total of 15 nos. parking spaces, 1 no. loading / unloading bay to be shared with other welfare facilities, and 2 nos. loading / unloading bay to be shared-used with ambulance, for private light bus, will be provided on ground floor according to the schedule of accommodation from Social Welfare Department.

Parking Space and Loading / Unloading Bay Provision for Ambulance

3.3.13 A total of 1 no. lay-by for ambulance exclusively will be provided on ground floor according to the schedule of accommodation from Social Welfare Department.

Parking Space and Loading / Unloading Bay Provision for Coach

3.3.14 1 no. parking space and 1 no. loading / unloading bay for coach will be provided on ground floor according to the schedule of accommodation from Social Welfare Department.

4 TRAFFIC IMPACT ASSESSMENT (FULL DEVELOPMENT OF PROPOSED SCHEME)

4.1 Trip Generation and Attraction of Proposed Development

4.1.1 The likely amount of traffic generated and attracted by the Proposed Development was calculated based on "Traffic Rates for Non-Residential Developments at 95% Confidence Level" adopted in the Transport Planning and Design Manual (TPDM) Vol.1 Table 1 of Annex D. The adopted rate and associated trip are shown in **Table 4.1.1**.

Table 4.1.1 Adopted Trip Generation and Attraction Rates for the Proposed Development

Development	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
Private Housing: High-Density / R(A) (pcu/hr/flat) (1)	0.0718	0.0425	0.0286	0.0370
Private Housing: High-Density / R(A) (pcu/hr/flat) (2)	0.0888	0.0515	0.0356	0.0480
Private Housing: High-Density / R(B) (pcu/hr/flat) (3)	0.1887	0.0942	0.0862	0.1214
Retail (pcu/hr/100m2 GFA) (4)	0.2296	0.2434	0.3100	0.3563

Notes:
(1) Trip Rate based on "Traffic Rates for Residential Developments at 95% Confidence Level" in the Transport Planning and Design Manual (TPDM) Vol.1 Table 1, for average flat size 60m^2
(2) Trip Rate based on "Traffic Rates for Residential Developments at 95% Confidence Level" in the Transport Planning and Design Manual (TPDM) Vol.1 Table 1, for average flat size 70m^2.
(3) Trip Rate based on "Traffic Rates for Residential Developments at 95% Confidence Level" in the Transport Planning and Design Manual (TPDM) Vol.1 Table 1, for average flat size 100m^2.
(4) Trip Rate based on "Traffic Rates for Non-Residential Developments at 95% Confidence Level" in the Transport Planning and Design Manual (TPDM) Vol.1 Table 2.

4.1.2 The traffic generation and attraction trips for the design scenarios in Year 2035 is estimated in **Table 4.1.2**.

Table 4.1.2 Traffic Generation and Attraction of Proposed Development (pcu/hr)

Proposed Development	Development Parameters		AM		PM	
			Generation	Attraction	Generation	Attraction
Phase 1A	FS≤40m²	1,221	88	52	35	45
	40m²<FS≤70m²	651	58	34	23	31
	70m²<FS≤100m²	109	21	10	9	13
	Retail: 2,285.323 sqm		5	6	7	8
	Sub-total		**172**	**102**	**74**	**97**
Phase 1B	FS≤40m²	910	65	39	26	34
	40m²<FS≤70m²	485	43	25	17	23
	70m²<FS≤100m²	81	15	8	7	10
	Retail: 1,516.286 sqm		3	4	5	5
	Sub-total		**126**	**76**	**55**	**72**
Remaining Phase A	FS≤40m²	714	51	30	20	26
	40m²<FS≤70m²	381	34	20	14	18
	70m²<FS≤100m²	63	12	6	5	8
	Retail: 1,437.357 sqm		3	3	4	5
	Sub-total		**100**	**59**	**43**	**57**
Remaining Phase B	FS≤40m²	1,502	108	64	43	56
	40m²<FS≤70m²	801	71	41	29	38
	70m²<FS≤100m²	134	25	13	12	16
	Retail: 832.970 sqm		2	2	3	3
	Sub-total		**206**	**120**	**87**	**113**
Proposed Feeder Service (1)			***12***	***12***	***0***	***0***
	Total		**616**	**369**	**259**	**339**

Note:
(1) Details of proposed feeder service refer to Section 4.7.

4.1.3 As indicated in **Table 4.1.2**, the total trip generated by the Proposed Development would be around 985 pcu/hr and 598 pcu/hr (two-way) during the AM and PM peak periods respectively.

4.2 Adjacent Developments

4.2.1 In addition to the development flow, the traffic generated and attracted by adjacent major planned/committed developments in the vicinity of the Proposed Development, including redevelopment of Princess Margret Hospital and Kwai Chung Hospital (S16 planning application No. A/KC/451), expansion of Princess Margaret Hospital Lai King Building, redevelopment of Salvation Army Lai King Home, and private residential development at Lai Kong Street were taken into account for the traffic forecast.

4.3 Future Traffic Growth

4.3.1 The Proposed Development is targeted for completion in Year 2032. In order to assess the traffic impact of the development-related traffic on the adjacent road network, Year 2035 (i.e. 3 years after completion) is adopted as the design year of the study.

Annual Traffic Census

4.3.2 Reference was made to Annual Traffic Census (ATC) on annual average daily traffic (AADT) at counting stations in the vicinity of the Proposed Development and the corresponding traffic flows are summarized in **Table 4.3.1** below.

Table 4.3.1 Annual Average Growth Rate by ATC

Station No.	2017 AADT	2018 AADT	2019 AADT	2020 AADT	2021 AADT	2022 AADT	2023 AADT	Annual Average Growth Rate from 2017 to 2023
5443	6,720	6,820	7,590	7,590	7,880	7,800	8,060	+3.08%
4623	10,140	10,260	10,310	10,160	10,610	9,070	9,500	-1.08%
3859	16,090	16,300	14,920	14,400	15,860	13,880	14,920	-1.25%
4628	3,520	3,680	3,580	3,500	4,050	3,720	3,940	+1.90%
5476	10,890	11,190	11,430	12,210	11,870	11,450	12,930	+2.90%
4003	56,220	57,820	57,520	54,350	56,080	53,180	56,820	+0.18%
Total	**103,580**	**106,070**	**105,350**	**102,210**	**106,350**	**99,100**	**106,170**	**+0.41%**

4.3.3 The ATC historic data indicates a growth of traffic in recent years in the region with around +0.41% p.a.

Territorial Population and Employment Data Matrix (TPEDM)

4.3.4 Reference was also made to 2019-based TPEDM published by Planning Department. **Table 4.3.2** below summarizes the estimated and projected population and employment data as well as their respective annual average growth rate of Kwai Chung District in 2019, 2026 and 2031.

Table 4.3.2 Annual Average Growth Rate by TPEDM

Year	2019	2026	2031
Population	319,150	315,800	319,700
Employment	195,950	192,350	183,600
TOTAL	**515,100**	**508,150**	**503,300**
Annual Average Growth Rate	**-0.19%** **(from 2019 to 2026)**	**-0.19%** **(from 2026 to 2031)**	

4.3.5 From the table above, the annual average growth rates from 2019 to 2026 and from 2026 to 2031 are -0.19% and -0.19% respectively based on population and employment data.

4.3.6 For conservative purpose, growth rate of **+0.5% p.a.** is selected to produce the traffic forecasts for 2024 – 2035.

4.4 Assessment Scenarios

4.4.1 To evaluate the associated traffic impact likely to be induced by the Proposed Development, two scenarios were analysed and compared. The first scenario (i.e. Year 2035 Reference Scenario) assumed the existing land lot to be developed as the **Approved Scheme** overall PR of not more than 5, whereas the second scenario (i.e. Year 2035 Design Scenario) assumed that the **Proposed Scheme** with domestic PR of not more than 6 and non-domestic PR of not more than 0.5 is in place.

Scenario 1

Year 2035 Reference Scenario

= Year 2024 observed traffic flows × growth factor during the period of Year 2024 – 2035

plus traffic generations of adjacent major planned/committed developments in the vicinity

plus trips generated and attracted by the **Approved Scheme** overall PR of not more than 5 (Planning Application No. A/KC/489)

Scenario 2

Year 2035 Design Scenario

= Year 2024 observed traffic flows × growth factor during the period of Year 2024 – 2035

plus traffic generations of adjacent major planned/committed developments in the vicinity

plus trips generated and attracted by **Proposed Scheme** with domestic PR of not more than 6 and non-domestic PR of not more than 0.5

4.4.2 The forecasted traffic flows for the above two scenarios are presented in **Figures 4.1** to **4.2** respectively. The development traffic flows are also presented in **Figure 4.3**.

4.4.3 Additional **Baseline Scenario** at the design Year 2035, with traffic generations of adjacent major planned/committed developments in the vicinity but without trips generated and attracted by the development under A/KC/489, is setup as supplementary information for comparison. The forecasted traffic flows are presented in **Figure 4.4**.

4.5 Junction Capacity Assessment

4.5.1 Junction capacity assessment was carried out at the identified key junctions for Year 2035 Reference and Design scenarios. Assessment results are summarized in **Table 4.5.1** below and the detailed calculations are appended in **Appendix A**.

Table 4.5.1 Year 2035 Future Junction Performance

Junction		Type	Performance (1)					
			2035 Baseline		2035 Reference		2035 Design	
			AM	PM	AM	PM	AM	PM
J1	Lai King Hill Road / King Lai Path	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J2	Lai King Hill Road / Ching Shan Terrance / Estate Road	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J3_a	Lai King Hill Road / Kwai Chung Interchange (2)	Signalized	21%	46%	3%	29%	-2%	20%
J3_b	Lai King Hill Road / Kwai Chung Interchange (3)	Signalized	7%	24%	-13%	5%	-17%	-2%
J3_c	Lai King Hill Road / Kwai Chung Interchange (4)	Signalized	18%	44%	15%	29%	15%	25%
J4	Mei Lai Road/ Lai Wan Road	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J5	Mei Lai Road/ Cheung Sha Wan Road	Signalized	56%	60%	38%	50%	34%	48%
J6	Lai King Hill Road Pedestrian Crossing near Site Access	Signalized	>100%	>100%	>100% (5)	>100% (5)	>100% (5)	>100% (5)

Notes:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions.
(2) J3 under existing junction configuration.
(3) J3 with TD planned improvement works.
(4) The junction modification scheme in approved planning application (No. A/KC/489) is incorporated for assessment.
(5) J6 with the proposed Lai King Hill Road and pedestrian crossing rearrangement.

4.5.2 The above results reveal that the identified key junctions would operate within capacity with the Proposed Development in Year 2035, with the implementation of the junction modification scheme in approved planning application (No. A/KC/489) for J3. It is anticipated that Proposed Development would not induce adverse traffic impact to the surrounding road network, the junction improvement works at J3 will be implemented before the completion and population intake of any phase of the Application Site.

4.5.3 For J3, the TD's planned improvement scheme and the approved junction modification scheme is shown in **Appendix D** for reference.

4.6 Link Capacity Assessment

4.6.1 Link capacity assessment was carried out at the identified road links for Year 2035 Reference and Design scenarios. Assessment results are summarized in **Table 4.6.1** below.

Table 4.6.1 Year 2031 Future Link Performance [1]

Road Link [2]		Direction	Unit	Link Capacity	Traffic Flows (pcu/hr)						Volume/Capacity (V/C) Ratio					
					Baseline Scenario		2035 Reference		2035 Design		Baseline Scenario		2035 Reference		2035 Design	
					AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
L1	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	1,160	1,145	1,712	1,475	1,855	1,562	0.49	0.48	0.72	0.62	0.78	0.65
			veh/hr	2,200	955	946	1,419	1,227	1,529	1,299	0.43	0.43	0.65	0.56	0.70	0.59
L2	Lai King Hill Road (8m wide section)	Two-way	pcu/hr	1,850	695	540	1,247	870	1,390	957	0.38	0.29	0.67	0.47	0.75	0.52
			veh/hr	1,700	575	450	1,035	725	1,144	799	0.34	0.26	0.61	0.43	0.67	0.47
L3	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	580	575	1,132	905	1,275	992	0.24	0.24	0.47	0.38	0.53	0.42
			veh/hr	2,200	477	477	937	752	1,046	826	0.22	0.22	0.43	0.34	0.48	0.38
L4	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	725	710	960	853	1,014	888	0.30	0.30	0.40	0.36	0.42	0.37
			veh/hr	2,200	601	591	798	713	844	743	0.27	0.27	0.36	0.32	0.38	0.34
L5	Kwai Chung Interchange (6.8m wide section)	NB	pcu/hr	2,800	935	555	1,123	729	1,165	773	0.33	0.20	0.40	0.26	0.42	0.28
			veh/hr	2,600	773	460	930	605	965	642	0.30	0.18	0.36	0.23	0.37	0.25
L6	Kwai Chung Interchange (6m wide section)	SB	pcu/hr	1,400	450	610	775	742	843	778	0.32	0.44	0.55	0.53	0.60	0.56
			veh/hr	1,300	373	501	643	613	699	642	0.29	0.39	0.49	0.47	0.54	0.49

Notes:
(1) Link capacity estimated according to TPDM Vol.2 Ch.2.4, for single 2-lane carriageway (for L1 to L4 with road width of 8m and 10m) or for dual 2-lane carriageway (for L5 and L6 with road with of 6m and 6.8m). Data in terms of veh/hr and pcu/hr are converted according to survey pcu factor.
(2) For conservative approach, the road links are assessed based on the greatest traffic flows at the road sections of corresponding roads within AOI.

4.6.2 As shown in the table above, the identified road section would continue to have sufficient link capacity to cater for the future traffic demand with the Proposed Development by Year 2035. The Proposed Development would not induce adverse traffic impact to the surrounding road network.

4.7 Future Occupancy of Public Transport Services

4.7.1 The Proposed Development is targeted for completion in Year 2032. In order to assess the likely impact induced by the Proposed Development on public transport connection, Year 2035 (i.e. 3 years after the target completion year of the Proposed Development) is adopted as the design year of the public transport assessment, which is in line with the design year adopted in traffic impact assessment.

Existing and Future Baseline Demand (w/o Proposed Development)

4.7.2 Occupancy surveys for the existing public transport were carried out on 12th March 2024 during the periods of 07:00 – 10:00 and 17:00 – 20:00 hours at the public transport facilities in the vicinity. The survey results and estimated baseline demand of franchised bus and GMB routes in the vicinity are presented in **Table 4.7.1**. Similar to the traffic forecast, a growth rate of **+0.5% p.a.** is adopted for projecting the baseline passenger demand to Year 2035, **without** demand generated by the Proposed Development.

Table 4.7.1 Peak Hour Trips & Passenger Demand of Franchised Bus and GMB Routes (without the Proposed Development)

Route No.	Origin / Destination		(a) Observed Peak Hour Trips (trips/hr)		(b) Observed Total Capacity		(c) Observed Occupancy Rate (%)		(d) = (b) × (c) Year 2024 Existing Passenger Demand		(e) = (d) × +0.5% p.a. Notes:
(1) From **Table 4.7.3**

Future Public Transport Demand Generated by the Proposed Development

4.7.4 Increase in demand on public transport service is anticipated due to the Proposed Development, the anticipated population of the Proposed Development is approximately 19,038. According to "Travel Characteristics Survey (TCS) 2011" published by Transport Department, the daily mechanised trip rate is 1.83 trips per person and the AM and PM peak accounted for about 12% and 10% of the daily trips. Considering this travel pattern in TCS 2011, it is estimated that the Proposed Development would generate a total of 4,181 pax/hr (i.e. 19,038 × 1.83 × 0.12) and 3,484 pax/hr (i.e. 19,038 × 1.83 × 0.10) during the AM and PM peak hour respectively. The anticipated trips generated is summarized in **Table 4.7.3** below.

Table 4.7.3 Passenger Trips Generated from the Proposed Development

Development Parameters		
No. of Flats	7,052 flats	
Population	19,038 (1)	
Peak Hours Trip Generation (2)	**AM**	**PM**
	4,181 pax/hr	**3,484 pax/hr**

Notes:
(1) Person Per Occupied Flat (PPOF) of 2.7 is assumed to be based on the 2021 census of Kwai Tsing District.
(2) According to "Travel Characteristics Survey (TCS) 2011" published by Transport Department, the daily mechanized trip rate is 1.83 trips per person, while the AM and PM peak accounted for about 12% and 10% of the daily trips.

4.7.5 With reference to the transport modal split of working population in Kwai Tsing District Council District, as reported in the "2021 Population Census" published by the Census and Statistics Department, the corresponding passenger demand from the Proposed Development are summarized in **Table 4.7.4**.

Table 4.7.4 Modal Split and Passenger Demand from the Proposed Development

Mode of Transport	Proportion (1)	Passenger Demand from Proposed Development (pax/hr)	
		AM	PM
MTR	40.0%	1,673	1,394
Bus	30.1%	1,258	1048
GMB	10.0%	417	347
PV & Taxi	4.7%	198	165
On foot	10.5%	439	366
Others	4.7%	196	163
Total	100%	4,181	3,484
Total in Public Transport	**80.1%**	**3,348**	**2,789**

Notes:
(1) For a conservative assessment purpose, it is assumed that all passengers heading to Lai King or Mei Foo MTR station will take bus or GMB services for interchange, therefore these are included as the road-based public transport demand.

4.7.6 According to the above table, it is estimated that the total passenger demand of public transport associated with the Proposed Development in the AM and PM peak hour would be approx. 3,348 pax/hr and 2,789 pax/hr respectively.

Public Transport Demand Allocation at Adjacent Public Transport Facilities

4.7.7 The subject site is located approx. 350m from Lai Chi Kok Bus Terminus, which is considered a reasonable walking distance. According to the interview survey conducted in March 2024, approx. 35% of residents of Kau Wa Keng Old Village and Kau Wa Keng San Tsuen are currently using the franchise bus service at the Lai Chi Kok Bus Terminus. A composition 65% and 35% of the estimated public transport demand would use services at Lai King Hill Road and Lai Chi Kok Bus Terminus respectively.

4.7.8 With reference to the portfolio of workplace of Kwai Chung residents to different destinations (i.e. the New Territories, Kowloon and Hong Kong Island), as reported in the "2021 Population Census", the passenger direction split by public transport mode from the Proposed Development is estimated in **Table 4.7.5**.

Table 4.7.5 Portfolio of Workplace of Kwai Chung Residents to Different Destinations and Directional Split on Lai King Hill Road

Main Mode of Transport to Place of Work	Number of Persons		
	MTR	Bus	PLB
Work in the same district	3,170	6,983	4,761
Work in another district (Hong Kong Island)	23,751	5,740	793
Work in another district (Kowloon)	28,903	15,666	2,104
Work in another district (New Towns)	8,833	18,939	9,128
Work in another district (Other areas in the New Territories)	4,518	4,681	442
Sub-Total	**69,175**	**52,009**	**17,228**
Directional Split on Lai King Hill Road **Westbound**	20,512	24,099	10,538
	30%	**46%**	**61%**
Directional Split on Lai King Hill Road **Eastbound**	48,663	27,910	6,690
	70%	**54%**	**39%**

4.7.9 By taking the estimated passenger demand for each transport mode from **Table 4.7.4**, and applying the directional split provided in **Table 4.7.5**, the adequacy results in AM and PM Peak are summarized in **Table 4.7.6**.

Table 4.7.6 Passenger Demand from Proposed Development Allocation the Adjacent Public Transport Facility

Location	(a) Spare Capacity Available for the Proposed Development (1)		(b) Overall Demand from the Proposed Development (2)		(c) = (a) – (b) Adequacy	
	AM	PM	AM	PM	AM	PM
KAU WA KENG BUS STOP (LAI KING HILL ROAD WEST BOUND)						
Bus	1697	1777	702	585	995	1192
GMB	386	126	254	212	132	**-86**
KAU WA KENG BUS STOP (LAI KING HILL ROAD EAST BOUND)						
Bus	1803	2200	1203	1002	600	1198
GMB	80	163	163	135	**-83**	28
LAI CHI KOK BUS TERMINUS						
Bus	2360	2519	1026	855	1334	1664

Notes:
(1) From **Table 4.7.4**.
(2) It is assumed that all passengers heading to Lai King or Mei Foo MTR station will take bus/GMB for interchange for conservative assessment of the public transport demand.

4.7.10 The results reveal that the spare capacity of the assessed franchised bus will be adequate to cater for the public transport demand associated with Proposed Development in both AM and PM Peak Hour.

4.7.11 The spare capacity of the assessed GMB routes would be inadequate to cater for the public transport demand associated with Proposed

Development in the on Eastbound in the AM Peak Hour and Westbound in the PM Peak Hour.

Proposal of Feeder Service

4.7.12 According to the **Table 4.7.6**, it is estimated that the GMB demand associated with the Proposed Development would overload the existing GMB service on Lai King Hill Road.

4.7.13 To cater for the shortage in public transport services, the applicant proposed to provide feeder services to the nearby MTR station or bus interchange and to minimise adverse impact to the existing public transport services. Feeder service from the application site to Lai King Station is proposed. To allow planning flexibility subject to the actual road situation, the feasible type of vehicle can be franchised bus / GMB. Detail of the proposed feeder service is summarized below in **Table 4.7.7**. The bold-up plan of the proposed feeder service pick-up/drop-off space is shown in the MLP in drawing **Figure 4.5**.

Table 4.7.7 Proposed Feeder Service for the Application Site

Item	Proposed Feeder Service (by GMB)		Flexibility Review on Feeder Service (by Franchised Bus)	
Routing	To/from Application Site and nearby MTR Station / Bus Interchange			
Average Handing Capacity	19 Passengers		90 Passengers	
Headway	10 - 15 minutes (subject to road traffic condition)		60 minutes (subject to road traffic condition)	
Level of Service in Peak Hour	5 trips/hr		1 trips/hr	
Hourly Capacity	Approx. 95 pax/hr		Approx. 90 pax/hr	
Shortfall in PT services [1]	***83 pax/hr***	***86 pax/hr***	***83 pax/hr***	***86 pax/hr***

Notes:
(1) From **Table 4.7.5**.

4.7.14 The proposed feeder service would provide adequate capacity for approximate 95 pax/hr or 90 pax/hr in the AM and PM peak hour, to cater for the exceeded peak hour passenger trip generation for an approximate 83 pax/hr and 86 pax/hr in the AM and PM peak hour respectively.

4.7.15 Subject to the actual demand, the proposed feeder service could be reviewed and adjusted accordingly.

Queuing Space Assessment

4.7.16 In view of the additional public transport demand, a queuing space assessment has been carried out to evaluate the impact on the existing bus and GMB stops at Lai King Hill Road, and at the proposed internal feeder pick-up/drop-off space within development. The queuing assessment results are shown in **Figure 4.6** and **Table 4.7.8**.

Table 4.7.8 Queuing Assessment at Lai King Hill Road Roadside Bus Stop

	AM	PM
KAU WA KENG BUS STOP (LAI KING HILL ROAD WEST BOUND)		
Roadside Bus Stop PT Demand (1)	956	797
Peak Hour Bus Trip (2)	16	18
Ave. Waiting Passengers	60	45
Observed Peak Waiting Passengers	5	3
Waiting Area at Bus Stop	*80*	
Average Pedestrian Space	*1.23*	*1.67*
LOS Level	***A***	***A***
KAU WA KENG BUS STOP (LAI KING HILL ROAD EAST BOUND)		
Roadside Bus Stop PT Demand (1)	1366	1137
Peak Hour Bus Trip (2)	16	19
Ave. Waiting Passengers	86	60
Observed Peak Waiting Passengers	14	3
Waiting Area at Bus Stop	*85*	
Average Pedestrian Space	*0.85*	*1.34*
LOS Level	***C***	***A***
INTERNAL FREEDER PICKUP DROPOFF WITHIN DEVELOPMENT		
Demand for Feeder Service(3)	***83 pax/hr***	***86 pax/hr***
Peak Hour Bus Trip (3)	5	5
Ave. Waiting Passengers	17	18
Waiting Area at Bus Stop	*72*	
Average Pedestrian Space	*4.24*	*4.00*
LOS Level	***A***	***A***

Notes:
(1) From **Table 4.7.6**, including GMB
(2) From **Table 4.7.2**
(3) From **Table 4.7.7**

4.7.17 Referring to **Table 4.7.8** above, the results reveal that the queuing space at both traffic direction of the Kau Wa Keng Bus Stop, and the internal feeder pick-up/drop-off space within development will be adequate to cater for the public transport demand associated with Proposed Development in both AM and PM Peak Hour.

4.8 Pedestrian Impact Assessment

Pedestrian Generation

4.8.1 Similar to **Chapter 4.7 Section 4.7.2**, pedestrian generation from the Proposed Development for AM and PM Peak is estimated with reference to "Travel Characteristics Survey (TCS) 2011" published by Transport Department and "2021 Population Census" published by Census and Statistics Department. The pedestrian generation is shown in **Table 4.8.1** below.

Table 4.8.1 Pedestrian Generation by the Proposed Development

Pedestrian Generation (ppl/hr) (1)	
AM Peak	**PM Peak**
3,787	3,155

Note:
(1) Pedestrian generation by the Proposed Development is assumed to be people who will take MTR, road-based transport and walk. The pedestrian trip generation and attraction been derived based on the modal split in **Table 4.7.2**.

Assessment Scenarios

4.8.2 Similar to the traffic impact assessment, Year 2035 is adopted as the design year of pedestrian assessment. Annual growth rate of +**0.5% p.a.** is adopted to produce the pedestrian forecasts for 2024 – 2035 to derive Year 2035 peak hour background pedestrian flows. Additionally, the future pedestrian volumes generated by the Proposed Development are taken into account for Year 2035 pedestrian flows.

4.8.3 Similarly, to evaluate the associated pedestrian impact likely to be induced by the Proposed Development, two scenarios were analysed and compared.

4.8.4 The first scenario (i.e. Year 2035 Reference Scenario) refers to the future pedestrian flows assumed the existing land lot to be developed as the **Approved Scheme** overall PR of not more than 5, while the second scenario (i.e. Year 2035 Design Scenario) refers to the future pedestrian flow with the **Proposed Scheme** with domestic PR of not more than 6 and non-domestic PR of not more than 0.5 is in place.

4.8.5 As mentioned in **Chapter 3.2**, it is proposed to shift the pedestrian crossing due to conflict with proposed western vehicular access of the Proposed Development.

4.8.6 Having considered the location of public transport facilities, it is expected the pedestrians generated by the development would mainly pass through the pedestrian crossing at Lai King Hill Road, then access to the bus stops at Lai King Hill Road westbound or to the Mei Foo MTR Station via Lai Yan Court. The assumed route for pedestrian flow generated and the locations of assessed pedestrian facilities are shown in **Figure 4.7**.

Performance of Pedestrian Facilities in Year 2035

4.8.7 In order to address the performance of the concerned pedestrian facilities, Level of Service (LOS) assessment of the critical footpaths have been conducted for Year 2035 Reference and Design Scenarios.

4.8.8 **Table 4.8.2** to **Table 4.8.5** summarized the peak pedestrian flow and the pedestrian assessment results at the critical footpaths under the Year 2035 Reference and Design Scenarios.

Table 4.8.2 Design Year 2035 Level of Service in AM and PM Peaks along Key Footpath under Reference Scenario

Footpath		Actual Width (m)	Effective Clear Width (1) (m)	Two-way Peak Hourly Flow (ped/hr)		Flow Rate (2) (ped/min/m)		LOS (Level)	
				AM	PM	AM	PM	AM	PM
F1(W)	Lai King Hill Road Northern Footpath	4.5	3.5	2,265	765	12.9	4.4	A	A
F1(E)	Lai King Hill Road Northern Footpath	2	1	780	670	15.6	13.4	A	A
F2	Lai King Hill Road Southern Footpath	2.8	1.8	1,715	1,260	19.1	14.0	B	A
F3	Wa Lai Path Footpath	9.5	8.5	1,290	1,030	3.0	2.4	A	A

Notes:
(1) Effective clear width = Actual width (on-site measurement) minus 0.5m dead width on both sides, and minus the width of passengers queuing at bus stops.
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

Table 4.8.3 Design Year 2035 Level of Service in AM and PM Peaks along Key Pedestrian Crossing under Reference Scenario

Crossing Facility		Clear Width (m)	Cycle Time (s)		Green Time Proportion		Pedestrian Capacity (1) (ped/hr)		Two-way Pedestrian Flow (2) (ped/hr)		Volume/ Capacity (V/C) Ratio	
			AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
C1	Pedestrian Crossing Across Lai King Hill Road	6.2	90	90	20%	20%	2,360	2,360	1,715	1,260	0.73	0.53

Notes:
(1) Crossing Capacity (ped/hr) = K (1,900 ped/m/hr) × Green Time Proportion × W (width of crossing)
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

Table 4.8.4 Design Year 2035 Level of Service in AM and PM Peaks along Key Footpath under Design Scenario

Footpath		Actual Width (m)	Effective Clear Width (1) (m)	Two-way Peak Hourly Flow (ped/hr)		Flow Rate (2) (ped/min/m)		LOS (Level)	
				AM	PM	AM	PM	AM	PM
F1(W)	Lai King Hill Road Northern Footpath	4.5	3.5	2,700	1,145	15.4	12.5	B	A
F1(E)	Lai King Hill Road Northern Footpath	2	1	920	735	18.4	14.7	B	A
F2	Lai King Hill Road Southern Footpath	2.8	1.8	2,010	1,625	22.3	18.1	B	B
F3	Wa Lai Path Footpath	9.5	8.5	1,500	1,195	3.5	2.8	A	A

Notes:
(1) Effective clear width = Actual width (on-site measurement) minus 0.5m dead width on both sides, and minus the width of passengers queuing at bus stops.
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

Table 4.8.5 Design Year 2035 Level of Service in AM and PM Peaks along Key Pedestrian Crossing under Design Scenario

Crossing Facility		Clear Width (m)	Cycle Time (s)		Green Time Proportion		Pedestrian Capacity (1) (ped/hr)		Two-way Pedestrian Flow (2) (ped/hr)		Volume/ Capacity (V/C) Ratio	
			AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
C1	Pedestrian Crossing Across Lai King Hill Road	6.2	90	90	20%	20%	2,360	2,360	2,010	1,625	0.85	0.69

Notes:
(1) Crossing Capacity (ped/hr) = K (1,900 ped/m/hr) × Green Time Proportion × W (width of crossing)
(2) Pedestrian flow rates are computed based on effective clear width, with 1.2 peak factor applied for the peak minute flow rate.

4.8.9 As shown in the tables above, the assessed footpaths and pedestrian crossing would be operating with desirable walking conditions at LOS "A" to "B" and V/C ratio less than 0.9 under both Reference and Design Scenario in Year 2035. The pedestrian facilities would hence be adequate to cater for the additional pedestrian demand generated from the Proposed Development in design Year 2035.

5 TRAFFIC IMPACT ASSESSMENT (INTERIM SCENARIO)

5.1.1 As the applicant is currently not the only land owner of this Application Site, phased development of this Application Site is proposed with Phase 1A, Phase 1B developments to be developed by the Applicant. The implementation of the Remaining Phases A and B will be subject to actual development plan by third-parties.

5.1.2 Interim traffic assessment is conducted to reveal the traffic impact with only completion and population intake of the proposed Phase 1A, Phase 1B developments to be developed by the Applicant, and the development of Remaining Phase A and Remaining Phase B by third-parties.

Assessment Scenarios

5.1.3 To evaluate the associated traffic impact likely to be induced by the partial completion of the site, interim scenarios assuming the phased development are set up as below

Interim Scenario A, assuming only completion of P1A & P1B

Year 2035 Interim Scenario A

= Year 2024 observed traffic flows × growth factor during the period of Year 2024 – 2035

plus traffic generations of adjacent major planned/committed developments in the vicinity

plus trip generation and attraction of the proposed P1A and P1B

Interim Scenario B, assuming only completion of P1A & P1B & RPA

Year 2035 Interim Scenario B

= Year 2035 Interim Scenario A

plus trip generation and attraction of Remaining Phase A

Interim Scenario C, assuming only completion of P1A & P1B & RPB

Year 2035 Interim Scenario C

= Year 2035 Interim Scenario A

plus trip generation and attraction of Remaining Phase B

Trip Generation and Attraction

5.1.4 The traffic generation and attraction trips for the interim scenarios in Year 2035 is summarized in **Table 5.1.1**.

Table 5.1.1 Traffic Generation and Attraction of Proposed Residential Development (pcu/hr)

Proposed Development	AM		PM	
	Gen	Att	Gen	Att
Phase 1A	172	102	74	97
Phase 1B	126	76	55	72
Remaining Phase A	100	59	43	57
Remaining Phase B	206	120	87	113
Interim Scenario A (P1A+P1B)	**298**	**178**	**129**	**169**
Interim Scenario B (P1A+P1B+RPA) (1)	**398**	**237**	**172**	**226**
Interim Scenario C (P1A+P1B+RPB) (1)	**504**	**298**	**216**	**282**

5.1.5 As indicated in **Table 5.1.1**, the total trip generated by the Proposed Development in the AM and PM peak would be around 476 pcu/hr and 298 pcu/hr (two-way) under Interim Scenario A, 635 pcu/hr and 398 pcu/hr (two-way) under Interim Scenario B, and 802 pcu/hr and 498 pcu/hr (two-way) under Interim Scenario C respectively.

5.1.6 The forecasted traffic flows for the above assessment scenario are presented in **Figures 5.1** to **Figure 5.3**.

5.2 Junction Capacity Assessment

5.2.1 Junction capacity assessment was carried out at the identified key junctions for Year 2035 Interim Scenario A, Interim Scenario B and Interim Scenario C. Assessment results for the key junctions are summarized in **Table 5.2.1** below and the detailed calculations are appended in **Appendix A**.

Table 5.2.1 Year 2035 Future Junction Performance

Junction		Type	Scenario A		Scenario B		Scenario C	
			Performance (1)		Performance (1)		Performance (1)	
			AM	PM	AM	PM	AM	PM
J1	Lai King Hill Road / King Lai Path	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J2	Lai King Hill Road / Ching Shan Terrance / Estate Road	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J3_a	Lai King Hill Road / Kwai Chung Interchange (2)	Signalized	13%	42%	8%	35%	2%	27%
J3_b	Lai King Hill Road / Kwai Chung Interchange (3)	Signalized	-4%	15%	-9%	10%	-13%	3%
J3_c	Lai King Hill Road / Kwai Chung Interchange (4)	Signalized	16%	39%	15%	34%	15%	30%
J4	Mei Lai Road/ Lai Wan Road	Signalized	>100%	>100%	>100%	>100%	>100%	>100%
J5	Mei Lai Road/ Cheung Sha Wan Road	Signalized	45%	54%	41%	52%	37%	50%
J6	Lai King Hill Road Pedestrian Crossing near Site Access (5)	Signalized	>100%	>100%	>100%	>100%	>100%	>100%

Notes:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions.
(2) J3 under existing junction configuration.

(3) J3 with TD planned improvement works.
(4) The junction modification scheme in approved planning application (No. A/KC/489) is incorporated for assessment.
(5) J6 with the proposed Lai King Hill Road and pedestrian crossing rearrangement.

5.2.2 The above results reveal that for all Interim Scenarios, all identified key junctions would operate within capacity in Year 2035, with implementation of the junction modification scheme in approved planning application (No. A/KC/489) for J3. The junction improvement works at J3 will be implemented before the completion and population intake of any phase of the Application Site.

5.3 Link Capacity Assessment

5.3.1 Link capacity assessment was carried out at the identified road links for Year 2035 Interim Scenarios. Assessment results are summarized in **Table 5.3.1** below.

Table 5.3.1 Year 2035 Future Link Performance (1)

Road Link (2)		Direction	Unit	Link Capacity	Traffic Flows (pcu/hr)						Volume/Capacity (V/C) Ratio					
					Interim Scenario A		Interim Scenario B		Interim Scenario C		Interim Scenario A		Interim Scenario B		Interim Scenario C	
					AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM
L1	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	1,517	1,356	1,628	1,425	1,744	1,495	0.63	0.57	0.68	0.60	0.73	0.63
			veh/hr	2,200	1,246	1,124	1,340	1,183	1,435	1,241	0.57	0.51	0.61	0.54	0.65	0.56
L2	Lai King Hill Road (8m wide section)	Two-way	pcu/hr	1,850	1,052	751	1,163	820	1,279	890	0.57	0.41	0.63	0.44	0.69	0.48
			veh/hr	1,700	863	627	955	685	1,052	743	0.51	0.37	0.56	0.40	0.62	0.44
L3	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	937	786	1,048	855	1,164	925	0.39	0.33	0.44	0.36	0.49	0.39
			veh/hr	2,200	765	654	857	712	954	770	0.35	0.30	0.39	0.32	0.43	0.35
L4	Lai King Hill Road (10m wide section)	Two-way	pcu/hr	2,390	869	800	916	830	967	859	0.36	0.33	0.38	0.35	0.40	0.36
			veh/hr	2,200	722	668	762	694	804	718	0.33	0.30	0.35	0.32	0.37	0.33
L5	Kwai Chung Interchange (6.8m wide section)	NB	pcu/hr	2,800	1050	666	1088	702	1127	738	0.38	0.24	0.39	0.25	0.40	0.26
			veh/hr	2,600	869	552	901	582	933	612	0.33	0.21	0.35	0.22	0.36	0.24
L6	Kwai Chung Interchange (6m wide section)	SB	pcu/hr	1,400	644	694	709	722	778	751	0.46	0.50	0.51	0.52	0.56	0.54
			veh/hr	1,300	534	571	588	595	645	619	0.41	0.44	0.45	0.46	0.50	0.48

Notes:
(1) Link capacity estimated according to TPDM Vol.2 Ch.2.4, for single 2-lane carriageway (for L1 to L4 with road width of 8m and 10m) or for dual 2-lane carriageway (for L5 and L6 with road with of 6m and 6.8m). Data in terms of veh/hr and pcu/hr are converted according to survey pcu factor.
(2) For conservative approach, the road links are assessed based on the greatest traffic flows at the road sections of corresponding roads within AOI.

5.3.2 As shown in the table above, the identified road section would continue to have sufficient link capacity to cater for the future traffic demand with the Proposed Development by Year 2035. The Proposed Development would not induce adverse traffic impact to the surrounding road network during the interim stage.

5.4 Public Transport Services – Interim Scenario

5.4.1 The increase in demand on public transport service under the Interim Scenarios are estimated with the same methodology as presented in **Chapter 4.7** and summarized in **Table 5.4.1** below.

Table 5.4.1 Passenger Trips Generated from Proposed Development in Interim Scenario

	Interim Scenario A		Interim Scenario B		Interim Scenario C	
No. of Flats	3,457 flats		4,615 flats		5,894 flats	
Population (1)	9,333		12,459		15,912	
Peak Hours Passenger Trip Generation (2) (pax/hr)	AM	PM	AM	PM	AM	PM
	2,050	1,708	2,736	2,280	3,495	2,912
Passenger Demand for MTR (40%)	820	683	1,094	912	1,398	1,165
Passenger Demand for Bus (30.1%)	617	514	824	686	1,052	877
Passenger Demand for GMB (10%)	205	171	274	228	350	291
KAU WA KENG BUS STOP (LAI KING HILL ROAD WEST BOUND)						
Bus	344	287	460	383	587	489
GMB	125	104	167	139	213	178
KAU WA KENG BUS STOP (LAI KING HILL ROAD EAST BOUND)						
Bus	590	491	787	656	1005	838
GMB	80	67	107	89	137	113
LAI CHI KOK BUS TERMINUS						
Bus	503	419	671	559	858	715

Notes:
(1) Person Per Occupied Flat (PPOF) of 2.7 is assumed to be based on the 2021 census of Kwai Tsing District.
(2) According to "Travel Characteristics Survey (TCS) 2011" published by Transport Department, the daily mechanized trip rate is 1.83 trips per person, while the AM and PM peak accounted for about 12% and 10% of the daily trips.

Table 5.4.2 Adequacy of Passenger Demand from Proposed Development Allocation the Adjacent Public Transport Facility in Interim Scenario

Location	Spare Capacity Available for the Proposed Development (1)		Adequacy in Interim Scenario A		Adequacy in Interim Scenario B		Adequacy in Interim Scenario C	
	AM	PM	AM	PM	AM	PM	AM	PM
KAU WA KENG BUS STOP (LAI KING HILL ROAD WEST BOUND)								
Bus	1697	1777	1353	1490	1237	1394	1110	1288
GMB	386	126	261	22	219	**-13**	173	**-52**
KAU WA KENG BUS STOP (LAI KING HILL ROAD EAST BOUND)								
Bus	1803	2200	1213	1709	1016	1544	798	1362
GMB	80	163	**0**	96	**-27**	74	**-57**	50
LAI CHI KOK BUS TERMINUS								
Bus	2360	2519	1857	2100	1689	1960	1502	1804

Notes:
(1) From **Table 4.7.3**

5.4.2 Referring to **Table 5.4.1** and **Table 5.4.2** above, the results reveal that the spare capacity of the assessed franchised bus will be adequate to cater for the public transport demand associated with Proposed Development in both AM and PM Peak Hour under all interim Scenarios A, B and C, and the spare capacity of the assessed GMB routes would be inadequate to cater for the public transport demand associated with Proposed Development in the on Eastbound in the AM Peak Hour and Westbound in the PM Peak Hour under Interim Scenarios A, B, and C.

5.4.3 Similar to **Chapter 4.7**, to cater for the shortage in public transport services, the applicant proposed to provide feeder services to the nearby MTR station or bus interchange and to minimise adverse impact to the existing public transport services. Feeder service from the application site to Lai King Station is proposed. To allow planning flexibility subject to the actual road situation, the feasible type of vehicle can be franchised bus / GMB. Detail of the proposed feeder service is summarized below in **Table 5.4.3.**

Table 5.4.3 Proposed Feeder Service for the Application Site

Item	AM	PM	AM	PM
Routing	To/from Application Site and nearby MTR Station / Bus Interchange			
Type of vehicle	GMB		franchised bus	
Average Handing Capacity	19 Passengers		90 Passengers	
Headway	15 minutes (subject to road traffic condition)		60 minutes (subject to road traffic condition)	
Level of Service in Peak Hour	4 trips/hr		1 trip/hr	
Hourly Capacity	Approx. 76 pax/hr		Approx. 90 pax/hr	

5.4.4 The proposed feeder service would provide adequate capacity for approximate 76 pax/hr or 90 pax/hr in the AM and PM peak hour, to cater for the exceeded peak hour passenger trip generation in the Interim Scenarios. Subject to the actual demand, the proposed feeder service could be reviewed and adjusted accordingly.

5.5 Pedestrian Walking Condition – Interim Scenario

5.5.1 In **Chapter 4.8**, it is revealed that under the ultimate stage, the assessed footpaths and pedestrian crossing would be operating with desirable walking conditions. The pedestrian facilities would hence be adequate to cater for the additional pedestrian demand generated from the P1A and P1B of the Proposed Development.

Additional Pedestrian Enhancements

5.5.2 In view that the residents living in existing Kau Wa Keng Old Village and Kau Wa Keng San Tsuen will be using the existing footpaths adjacent to the boundary of P1A and P1B to/from Lai King Hill Road, the Applicant would take the opportunity of the Phase 1A, Phase 1B accessibility for these two existing villages. Widened public access will be provided at all times. **Diagram 1** below illustrated the proposed additional pedestrian enhancement.

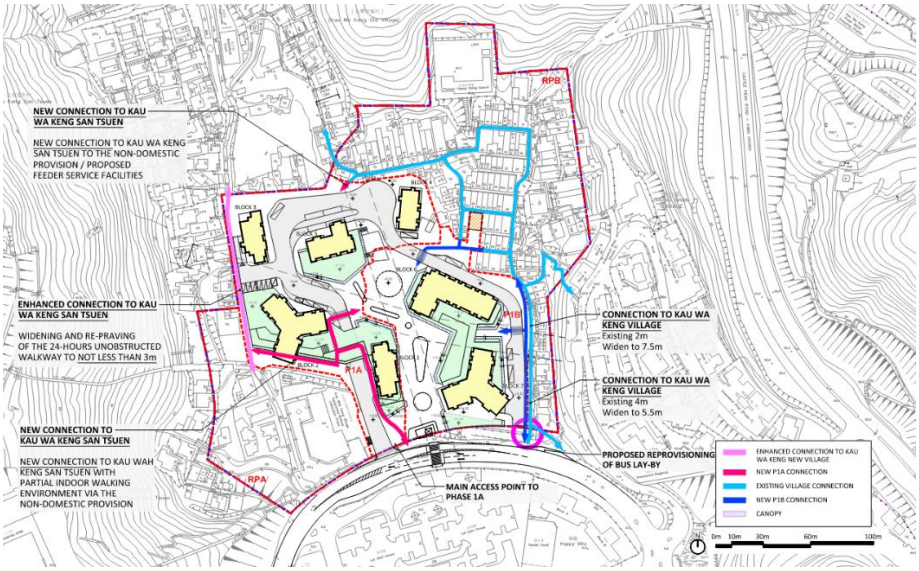

Diagram 1 Proposed Additional Pedestrian Enhancements

5.5.3 Kau Wa Keng San Tsuen is currently accessible from Lai King Hill Road via the existing footpath along the nullah at the western fringe of the P1A and RPA. In the Interim Scenario, the footpath section within P1A is proposed to be widened from the existing 1.5 m width to not less than 3m wide (through zone) in accordance with the Hong Kong Planning Standards and Guidelines (HKPSG) width standard for footpaths/walkways in rural land use, and to be open for public access at all times and connects with the existing footpath within RPA.

5.5.4 In addition, new connections to Kau Wa Keng San Tsuen with partial indoor walking environment via the non-domestic provision and the proposed feeder service facilities will be provided within P1A.

5.5.5 The existing walkway to Kau Wa Keng Old Village from Lai King Hill Road falls entirely within RPB, which is currently 2m in width at the narrowest section. In the Interim Scenario, voluntary setbacks will be provided along the eastern boundary of P1B such that the walkway will be widened from the current minimum of 2m to a minimum of 5.5 m.

To further enhance walkability of pedestrians to/from Kau Wa Keng Old Village, widening / improvement existing staircase or new ramp at the or Kau Wa Keng Old Village access will be provided. Street furniture and landscaping features such as path lighting and tree planting will be provided along the widened part of walkway within P1B.

5.5.6 With the above additional pedestrian enhancement, it is expected that the performance of the existing pedestrian facilities would be maintained if not improved.

6 CONCLUSION

6.1 Summary

6.1.1 The Application Site falls within the "Comprehensive Development Area" zone at Various Lots in S.D.4 and Adjoining Government Land, Kau Wa Keng, Kwai Chung on the Approved Kwai Chung Outline Zoning Plan (OZP) No. S/KC/32.

6.1.2 The Applicant submitted a S16 Planning Application No. A/KC/489. The comprehensive development proposed in the Planning Application No. A/KC/489 ("**Approved Scheme**"), comprises 14 residential blocks with an overall PR of not more than 5 and maximum BH of not more than +120mPD.

6.1.3 The Planning Application No. A/KC/489 was deliberated in the TPB Metro Planning Committee Meeting held on 14 July 2023 (the TPB Meeting). During the TPB meeting, TPB members raised concerns on the provision of social welfare facilities and retail shops, as quoted from the meeting minutes[1]

- *"Some Members considered that retail facilities should be provided in the Proposed Development to cater for the daily needs of the future residents."* and *"Some Member shared the view that the provision of social welfare facilities in the Proposed Development was inadequate…"*.
- *"the development intensity of the Proposed Development could be increased for better land utilisation, e.g. provision of retail and more GIC facilities."*.

After deliberation, the Planning Application No. A/KC/489 was approved with conditions.

[1] Minutes of 722nd Meeting of the Metro Planning Committee held at 9:00 a.m. on 14.7.2023

6.1.4 The Applicant takes the initiative to review the **Approved Scheme** and endeavours to take forward the provision of more of social welfare facilities and retail shops. The **Proposed Scheme**, keeping the phasing strategy adopted in the **Approved Scheme**, comprises 15 building blocks (including 14 building blocks with residential use) with domestic PR of not more than 6 and maximum BH of not more than +147.55mPD. Non-domestic PR of not more than 0.5 is designated for proposed retail shops, existing historical buildings, and social welfare facilities to nurture an inclusive and liveable community in the convenient location of Kwai Chung Area.

6.1.5 A Traffic Impact Assessment (TIA) study was carried out to evaluate the likely traffic impact associated with the Proposed Development, in support of the Section 16 application for the application site.

6.1.6 The proposed provision of internal parking and servicing facilities for each site of the subject development is in full compliance with the HKPSG requirements and will be self-contained within the respective

site boundary. Vehicles will access to/from each site of the subject development through the vehicular access at Lai King Hill Road.

6.1.7 The identified key junctions in the vicinity were assessed with respect to traffic generation of the Proposed Development upon Year 2035 (3 years after the target Completion Year 2032), taking into account the traffic generation by the major planned/recently constructed developments in the vicinity.

6.1.8 Traffic impact assessment scenarios were set up for the Proposed Development, namely Year 2035 Reference scenario (the existing land lot to be developed as the **Approved Scheme** overall PR of not more than 5) and Year 2035 Design scenario (the existing land lot to be developed as the **Proposed Scheme** with domestic PR of not more than 6 and non-domestic PR of not more than 0.5 is in place).

6.1.9 The junction assessment results revealed that the identified key junctions would operate within capacity with the Proposed Development in Year 2035, with the implementation of the junction modification scheme in approved planning application (No. A/KC/489). It is anticipated that the implication to the road network with the Proposed Development would be minimal.

6.1.10 Assessment results also revealed that the identified key road links would continue to operate within capacity under both Reference and Design scenarios with the Proposed Development by Year 2035.

6.1.11 Based on the public transport utilization assessment, the results reveal that the overall spare capacity of the assessed franchised bus and GMB routes would not be adequate to cater for the public transport demand associated with Proposed Development.

6.1.12 To cater for the shortage in public transport services, the applicant proposed to provide feeder services to the nearby MTR station or bus interchange to minimise adverse impact to the existing public transport services. Feeder service from the application site to Lai King Station is proposed. Detail of the proposed feeder service is discussed in **Chapter 4.7**.

6.1.13 Pedestrian impact assessment has been conducted and the walking condition on the critical footpath in vicinity of the application site is desirable during both AM and PM peaks in Year 2035. No adverse pedestrian impact will be generated by the Proposed Development.

6.1.14 Interim traffic assessment is conducted to reveal the traffic impact with only completion and population intake of the proposed Phase 1A, Phase 1B developments to be developed by the Applicant, and the development of Remaining Phase A and Remaining Phase B by third-parties.

6.1.15 The interim junction assessment results revealed that all identified key junctions would operate within capacity with the completion and population intake of Remaining Phase A and Remaining Phase B, with the implementation of the junction modification scheme in approved planning application (No. A/KC/489).

6.1.16 The interim link capacity assessment results revealed that the identified key road links would continue to operate within capacity under interim scenarios with the Proposed Development by Year 2035.

6.1.17 It is viewed that both the public transport services and the pedestrian facilities would be sufficient to cater for the pedestrian demand in the interim scenarios given that it had be assessed that there is no capacity issue in the ultimate stage.

6.1.18 Additional pedestrian enhancement schemes have been proposed to improve the accessibility and walking condition for the residents living in existing Kau Wa Keng Old Village and Kau Wa Keng San Tsuen. With the additionally proposed pedestrian enhancements, it is expected that the performance of the existing pedestrian facilities would be maintained if not improved.

6.2 Conclusion

6.2.1 It could be concluded that the Proposed Development will not induce insurmountable traffic impact on the surrounding road network and thus is feasible from the traffic engineering point of view.

Appendix D

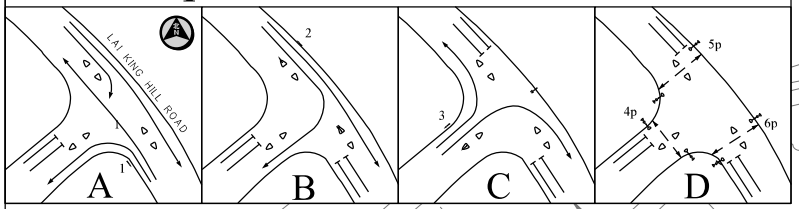
Planned Junction Improvement Schemes

Legend

- To be implemented by HyD
- RM/RM — Road markings be painted/ replaced/ modified.
- Ducting and necessary civil works to be provided for installation of the traffic light signal aspects/ poles.
- Exg. Dropped Kerbs with Tactile Warning Strips & the Beam Barrier to be modified same as the dimension between the exg. refuge islands.
- Proposed Type II Railing at Junction to be installed

- To be implemented by EMSD
- Proposed push buttons to be installed (offset <600mm from crossing)
- Proposed pedestrian signals with e-audible/push buttons mounted on existing poles (offset <600mm from crossing)
- Proposed pedestrian signals with e-audible/push buttons mounted on new poles (offset <600mm from crossing)
- Proposed additional green arrow to be installed on the secondary signal pole

Proposed method of control



運輸署 Transport Department	TRAFFIC SURVEY AND SUPPORT DIV.	Location: Lai King Hill Road J/O Kwai Chung Interchange, Kwai Chung		WRF No.: WR/HY/TS/KT/24/01759 WR/EM/TS/KT/24/00044
