FIRE SERVICES NOTES:

1. HOSE REEL SYSTEM

1.1 HOSE REEL SHALL BE PROVIDED AT POSITIONS AS INDICATED ON PLANS.
1.2 THERE SHALL BE SUFFICIENT HOSE REELS TO ENSURE THAT EVERY PART OF THE BUILDING CAN BE REACHED BY A LENGTH OF NOT MORE THAN 30M OF HOSE REEL TUBING. ONE ACTUATING POINT AND ONE AUDIO WARNING DEVICE TO BE LOCATED AT EACH HR POINT. THE ACTUATING POINT SHOULD INCLUDE FACILITIES FOR THE FIRE PUMP START DEVICE INITIATION.
1.3 A MODIFIED HOSE REEL SYSTEM OF 2,000 LITRES WATER TANK TO BE PROVIDED FOR THE ENTIRE BUILDING AS INDICATED ON PLAN.
1.4 NO FIRE SERVICES INLET TO BE PROVIDED FOR THE MODIFIED HOSE REEL SYSTEM.
1.5 WATER SUPPLY FOR THE MODIFIED HOSE REEL SYSTEM TO BE SINGLE END FEED FROM THE GOVERNMENT TOWN MAIN.
1.6 TWO FIXED FIRE PUMPS (DUTY/STANDBY) TO BE PROVIDED AT F.S. & SPR. PUMP ROOM.
1.7 THE HR SYSTEM INSTALLED SHOULD BE IN ACCORDANCE WITH PARA. 5.14 OF THE CODE OF PRACTICE FOR MINIMUM FIRE SERVICE INSTALLATION AND EQUIPMENT 2022.
1.8 AN INSTRUCTION PLATE SHALL BE PROVIDED NEXT TO THE BREAK GLASS UNIT FOR OPERATION OF HOSE REEL.

2. AUTOMATIC SPRINKLER SYSTEM

2.1 AUTOMATIC SPRINKLER SYSTEM SUPPLIED BY A 135,000L SPRINKLER WATER TANK AND HAZARD CLASS OH3 SHALL BE PROVIDED TO THE ENTIRE BUILDING/ STRUCTURE IN ACCORDANCE WITH LPC RULES INCORPORATING BS EN12845: 2015 AND FSD CIRCULAR LETTER 5/2020.
2.2 THE SPRINKLER TANK, SPRINKLER PUMP ROOM, SPRINKLER INLET AND SPRINKLER CONTROL VALUE GROUP SHALL BE CLEARLY MARKED ON PLANS.
2.3 THE CLASSIFICATION OF THE AUTOMATIC SPRINKLER INSTALLATION TO BE ORDINARY HAZARD GROUP 3.
2.4 ONE NUMBER 135,000 LITRES SPRINKLER WATER TANK TO BE PROVIDED AS INDICATED ON PLANS.
2.5 SPRINKLER CONTROL VALVE SET AND SPRINKLER INLET TO BE PROVIDED AS INDICATED ON PLANS.
2.6 THE MAXIMUM STORAGE AREAS SHALL BE 50m^2 FOR ANY SINGLE BLOCK, WITH NO LESS THAN 2.4m CLEARANCE AROUND THE BLOCK.
2.7 TYPE OF STORAGE METHOD FOR THE BUILDING IS AS FOLLOWS:
(A) STORAGE CATEGORY: CATEGORY (I)
(B) STORAGE HEIGHT: NOT EXCEEDING 4M
(C) STORAGE: ST1

3. FIRE ALARM SYSTEM

3.1 FIRE ALARM SYSTEM SHALL BE PROVIDED THROUGHOUT THE ENTIRE BUILDING IN ACCORDANCE WITH BS 5839-1: 2017 AND FSD CIRCULAR LETTER N0.6/2021. ONE ACTUATING POINT AND ONE AUDIO WARNING DEVICE SHOULD BE LOCATED AT EACH HOSE REEL POINT. THE ACTUATION POINT SHOULD INCLUDE FACILITIES FOR FIRE PUMP START AND AUDIO / VISUAL WARNING DEVICE INITIATION.
3.2 AN ADDRESSABLE TYPE FIRE ALARM PANEL TO BE PROVIDED AND LOCATED INSIDE G/F F.S. & SPR. PUMP ROOM.

4. MISCELLANEOUS F.S. INSTALLATION

4.1 PORTABLE FIRE EXTINGUISHER WITH SPECIFIED TYPE AND CAPACITY TO BE PROVIDED AT LOCATIONS AS INDICATED ON PLANS.
4.2 SUFFICIENT EMERGENCY LIGHTING SHALL BE PROVIDED THROUGHOUT THE ENTIRE BUILDINGS/STRUCTURES IN ACCORDANCE WITH BS 5266-1:2016, BS EN 1838:2013 AND FSD CL 4/2021.
4.3 SUFFICIENT DIRECTIONAL AND EXIT SIGN SHALL BE PROVIDED IN ACCORDANCE WITH BS 5266: PART 1 AND FSD CIRCULAR LETTER 5/2008.
4.4 NO EMERGENCY GENERATOR TO BE PROVIDED FOR SERVING THE EMERGENCY POWER. DUPLICATED POWER SUPPLIES FOR ALL FIRE SERVICES INSTALLATIONS COMPRISING A CABLE CONNECTED FROM ELECTRICITY MAINS DIRECTLY BEFORE THE MAIN SWITCH.
4.5 WHEN A VENTILATION/ AIR CONDITIONING CONTROL SYSTEM TO A BUILDING IS PROVIDED, IT SHALL STOP MECHANICALLY INDUCED AIR MOVEMENT WITHIN A DESIGNATED FIRE COMPARTMENT.
4.6 NO DYNAMIC SMOKE EXTRACTION SYSTEM SHALL BE PROVIDED SINCE FIRE COMPARTMENT NOT EXCEEDING 7000 CUBIC METRES AND THE AGGREGATE AREA OF OPENABLE WINDOWS OF THE RESPECTIVE COMPARTMENT EXCEEDS 6.25% OF THE FLOOR AREA OF THAT COMPARTMENT.

Appendix III - Response to the Head of the Geotechnical Engineering Office, Civil Engineering and Department (H(GEO), CEDD) and a Revised Geotechnical Planning Review Report (GPRR)

Comments of the H/GEO, CEDD (Contact Person: Mr. Kevin SO; Tel: 2762 5371)		
(1)	There are suspected unauthorised land filling/site formation works occurred at Feature No. 3NW-C/F22 (which is within and/or in the vicinity of the captioned application site) as well as on the adjoining Government lands/private lots (which are close to the captioned application site).	Noted.
(2)	Hence, the site topography might have been modified by the suspected unauthorised works, including formation of some unauthorised retaining structures within and/or in the vicinity of the application site. Please be advised that this Office has no information regarding the exact location and proper design and construction of any of these unauthorised retaining structures of concern.	Noted.
(3)	The presence of any unauthorised retaining structures might affect or be affected by the proposed development in the application site. As shown in the topographic survey plan in the Geotechnical Planning Review Report (GPRR), it appears that an approximate 10m vertical level difference (from +10.0 mPD to 20.6 mPD) could be identified in the western side of the application site. Hence, the applicant should provide adequate cross sections to showcase the profile of these unauthorised retaining structures (which were probably formed under the suspected unauthorised works), the location and their geometrical relationship with the subject. application site. Given the above, the applicant should incorporate, in the next revision of the GPRR, the geotechnical review of these retaining structures, and the	It is noted that the existing retaining structure is outside the proposed development. There is no public information regarding the design and construction of existing retaining structures. It is proposed a no building area of 11m (which is height of the existing structure) from the toe of the existing structure. Please see sections in Figure 7 and no building area in Appendix B for your perusal (**enclosed**).

	proposal of mitigation measures if considered necessary (such as upgrading works and/or no-built zone at the toe of these retaining structures, which might affect or be affected by the proposed development).	
(4)	During a site inspection on 9.2.2026, this Office identified the above-mentioned unauthorised retaining structures, which were located in close proximity to the application site. In addition, warehouses were identified to be in operation on top of the unauthorised retaining structures.	Noted. The cover level of proposed channel should made with existing ground level on site. Please refer to updated Appendix A, Appendix D and Figure 3.2 (**Appendix II**).
(5)	The applicant should submit the proposed building works and associated site formation works to BD for approval as required under the provisions of the Buildings Ordinance.	Noted.

PROPOSED TEMPORARY WAREHOUSE (EXCLUDING DANGEROUS GOODS GODOWN) WITH ANCILLARY FACILITIES FOR A PERIOD OF 5 YEARS, LOT 138 (PART) IN D.D. 52, FU TEI AU, SHEUNG SHUI, NEW TERRITORIES

Geotechnical Planning Review Report

CONSTRUCTION & DESIGN COMPANY LIMITED

Table of Contents

List of Table

List of Figure

List of Appendix

1 Introduction

1.1 Background

1.1.1 The applicant seeks planning permission from the Town Planning Board (the Board) to use Lot 138 (Part) in D.D. 52, Fu Tei Au, Sheung Shui, New Territories (the Site) for 'Proposed Temporary Warehouse (Excluding Dangerous Goods Godown (D.G.G.)) with Ancillary Facilities for a Period of 5 Years'.

1.1.2 This Geotechnical Planning Review Report is prepared based on desk study and available documentary to support the aforementioned planning application in geotechnical aspect.

1.2 Objectives of this Report

1.2.1 The main objectives of this report are as followings:-

- Describe the geology of the Application Site.
- Indicate the location of existing features within and surrounding the Application Site and the land status.
- Review of how the Proposed Development have effects on the manmade slopes or retaining walls.
- Assess on the geotechnical feasibility of the Proposed Development.

2 Site Description

2.1 Site information and Topography

2.1.1 The development site situates beside Man Kam To Road near Hung Kiu San Tsuen. It has an area of about 2,151m^2. The site location plan and aerial photo view are shown in **Figure 1** and **Figure 2** respectively.

2.1.2 In general, the site is a flat ground with level various from approx. +9.8 mPD to + 11 mPD, gently falling from northwest to southeast.

2.1.3 The application site area is mostly open area comprising paved area or shallow vegetation. According to records in slope information system, there is an existing feature **3NW-C/F 22** at the western boundary

2.1.4 According to the site visit and topographic survey, the existing feature **3NW-C/F 22** within the Application Site is no longer exists and the level difference is retained by a retaining structure under other development at the west side of the site. Brid view photos and topographic survey records are shown in **Appendix F** and **G** respectively. The ground level outside the retaining wall is generally flat.

2.2 Existing Man-made Features

2.2.1 There is 1 registered feature in vicinity of the Application Site. The location of the feature is shown in **Figure 3**. Records of the slopes are retrieved from the SIS System of GEO and SIMAR of Lands Department, they are summarized in **Table 2.1**.

Table 2.1 - Existing Geotechnical Feature adjoining to the Application Site

Feature No.	Location	Max. Height (m)	Length (m)	Angle (°)	Material	Consequence-to-life	Maintenance Parties
Adjoining to the Application Site							
3NW-C/F 22	FU TEI AU, SHEUNG SHUI, NEW TERRITORIES	9	148	30	Vegetated: 95 Other: 5	1	Sub Div. 1: LandsD Sub Div. 2: DD52 LOT137 Sub Div. 3: DD52 LOT138

2.2.2 Sub Div. 3 is located within the Application Site. According to the site visit and topography survey the existing feature **3NW-C/F 22** within the Application Site is no longer exist and the level difference is retained by an existing retaining structure under other development.

2.2.3 A Copy of the SIMAR reports and Slope Information System records are attached in **Appendix A** and **B** respectively.

3 Review of Desk Study Information

3.1 Site Geology

3.1.1 The geology of the Study Area is shown on 1:20000 scale HGM20 Series Solid and Superficial Geology Map Sheet 3, Published by the GEO, HKSAR. The Application Site is generally underlain by debris flow deposits. A part print of geological map is presented in **Figure 4**.

3.2 Schedule Area

3.2.1 The Site is located outside the Schedule Area No. 2 (North-western New Territories) and Schedule Area 3 (The Railway Protection Zone). Plan of the Schedule Areas are enclosed in **Appendix C**.

3.3 Existing Ground Investigation Data

3.3.1 There is no existing ground investigation (GI) information within the site. The nearest identified GI (TP PP2) are located approximately 150 m away to the west of the site which is carried out by Gammon (Hong Kong) Limited in Nov 1985.

3.3.2 The location and information of the borehole is enclosed in **Appendix D**.

Table 3.1 - Summary of GIU Report

GIU Report no.	Title of the Report	Done by	Date
06883	Improvement to Man Kam To Road from Jockey Club Road to Lin Ma Hang Road Site Investigation Report	Gammon (Hong Kong) Limited	1985

3.3.3 The trial pit record indicated it is covered with approx. 0.3m thick layer of FILL and follow by approx. 0.9m thick ALLUVIUM below ground level. Then it is underlain by sandy silt.

3.4 Landslide History

3.4.1 According to the GEO's Enhanced Natural Terrain Landslide Inventory (ENTLI) data, there is neither recent nor relict relevant natural terrain landslide identified for the Application Site.

3.4.2 Other landslides as recorded in ENTLI are indicated in **Figure 5** for reference.

3.5 Historical Landslide Catchment

3.5.1 There is no relevant Historical Landslide Catchments (HLC) (MFJV, 2007), identified adjoining to the Application Site. The HLC of nearby Area are shown in **Figure 7** for reference.

4 Proposed Works

4.1 Site formation works

4.1.1 The site area is 2,151 m^2. The Application Site is proposed to be entirely filled with concrete of not more than 0.2m depth to facilitate a flat surface for maneuvering of vehicle and site formation of structures. No new slopes/ retaining walls is required to support the minor site formation works.

4.2 Temporary Structures

4.2.1 The proposed Application Site is applying for temporary warehouse for a period of 5 years. A 2-storey structure and a 1-storey structure are provided at the Site for warehouse (excluding D.G.G.), site office, washroom etc. The proposed development layout plan is shown in **Appendix E**.

4.2.2 In view of loadings from low-rise temporary structures is comparatively general, no foundation is proposed for the temporary structures. Excavation for drainage, sewerage and utilities works are minimal, no deep Excavation and Lateral Support (ELS) is anticipated.

5 Works effect on Existing Features

5.1.1 According to the topographic survey and site photos, the existing feature **3NW-C/F 22** within the Application Site is no longer exists and the level difference is retained by a retaining structure under other development. Cross sections showing the relocation of existing retaining structure and the site boundary are shown in **Figure 7** for reference. It is noted that the retaining structure is unauthorized and there is no information regarding its design and construction. The retaining structure is about 10.6m height, it is proposed a no building zone from 11m of external face of existing retaining structure. The proposed no building zone is also shown in **Figure 7**.

5.1.2 The ground level outside the retaining wall is generally flat. No deep excavation and lateral support is anticipated for low-rise temporary structures. In view of the above minor site formation works and low-rise temporary structures, effect on adjoining existing features is minimal.

5.1.3 Proposed building works and associated site formation works to be submitted BD for approval as required.

6 Conclusion

6.1.1 A geotechnical planning review has been conducted for Application Site. The physical conditions as well as the geological conditions of the Application Site have been reviewed and discussed.

6.1.2 Existing feature **3NW-C/F 22** within the Application Site is no longer exists and the level difference is retained by a retaining structure under other development. If excavation is required in close proximity of the existing retaining wall, ELS, monitoring, stabilization works are to be proposed if find necessary after detail assessment in detail design stage.

6.1.3 In conclusion, the proposed development at the Application Site is not anticipated to case adverse geotechnical impact to the nearby area and considered geotechnically feasible.

SITE INVESTIGATION REPORT
JOB NO 133

EDD CONTRACT NO. GC/85/08
W.O. Q7/2/15.4
IMPROVEMENT TO MAN KAM TO ROAD FROM JOCKEY CLUB ROAD TO LIN MA HANG ROAD

1. Introduction

In October 1985, Gammon (Hong Kong) Limited was awarded a two year term contract to carry out site investigation and associated geotechnical works in the Eastern New Territories for the Geotechnical Control Office of the Engineering Development Department.

This particular report presents the results of a land site investigation for the Improvement to Man Kam To Road, New Territories (see Key Plan). The site work was carrried out during the period from 6-11-85 to 6-12-85.

2. The Site

The site is located approximately between 31048E, 31363E to 41509N, 43521N near Sheung Shui.

3. Geology

According to the 1 : 50 000 scale geological map of Hong Kong (1972), the site is underlain by Metamorphosed sedimentary and Volcanic rock of Lok Ma Chau Formation.

It should be noted that decomposition of the bedrock is common in Hong Kong and at this completely to highly decomposed VOLCANIC was encountered to between 0.0m and 10.0m. In addition a layer of Alluvium/Fill which varied between 6.3m and 4.0m in thickness was encountered overlying the decomposed VOLCANIC.

3 SW 1B
3 NW 21B, D
3 NW 16D.

4. Fieldwork

4.1 Drillholes

21 drillholes (B1-B8, D2-D9, S1-S5) were sunk at the positions given on the Drillhole Location Plan, using water flush rotary drilling techniques employed 106(120mm) casings. Standard penetration tests with Liner samples and Mazier samples were taken in the superficial deposits and completely decomposed material as specified and the information is reported at the relevant depth as specified and the information is reported at the relevant depth on the drillhole log. the sample depth given refers to the base of the sample.

Drillholes were extended to the depth specified in the works order or as directed on site. In rock or boulders, TNW or T2101 water flush double tube swivel core drilling was employed to produce rock cores. The cores were photographed and have been presented with the relevant drillhole log.

During drilling regular water level readings were taken before and after overnight rest periods and these readings are reported in the drillhole logs.

The soils encountered in the drillholes have been described generally in accordance with BS5930, the Code of Practice for Site Investigations. the classification of the descriptions used is presented in Appendix A.

The ground levels at the drillholes were taken by Gammon (Hong Kong) Limited and drillholes were sunk at positions specified by the Geotechnical Control Office.

4.2 Trial Pits

9 trial pits (PP1, PP2, PP4, PP5, PS1-PS5) were excavated to 2.5m to inspect the ground conditions. One block sample was taken 1.5m depth in each trial pit for testing.

4.3 Field Installations

Piezometers were installed in D2-D9, S1-S3 to the depths instructed by the Engineer on site. The piezometer were of the Casagrande type with porous tips connected to 19mm internal diameter P.V.C. riser pipes. The installation details have been presented in the section of Piezometer Details. Groundwater level readings taken in the piezometer are given in the section of Piezometer Readings.

APPENDIX A - SOIL AND ROCK DESCRIPTIONS

SOIL DESCRIPTION

COHESIVE SOILS For the preparation of borehole logs the soil description may report the following information as appropriate :

Soil strength (consistency)
Bedding (if present)
Colour
Silt,sand or gravel content
Soil name (in Capitals)
Other qualifying remarks

A. SOIL STRENGTH (CONSISTENCY)

Designation	Undrained Shear Strength kN/m^2	Field Test
Very soft	0 to 20	Very easily squeezed through fingers.
Soft	20 to 40	Easily penetrated by thumb. Easily moulded with fingers.
Firm	40 to 75	Difficult to penetrate by thumb. Moulded only by heavy pressure.
Stiff	75 to 150	Marked only by thumb. Cannot be moulded.
Very Stiff or Hard	> 150	Marked only by thumb or knife.

In cases of difficulty in assessing soil strength any two of the above terms can be used as follows, soft to firm, firm to stiff, etc.

B. BEDDING (IF PRESENT)

Bedding	Spacing
Very thickly bedded	> 2 m
Thickly bedded	600 mm - 2 m
Medium bedded	200 mm - 600 mm
Thinly bedded	60 mm - 200 mm
Very thinly bedded	20 mm - 60 mm
Extremely thinly bedded	6 mm - 20 mm
Intensely bedded	< 6 mm

Terms such as fissured or dessicated may be more appropriate than the terms presented above.

C. COLOUR

1.	2.	3.
Light	Pinkish	Pink
Dark	Reddish	Red
Mottled	Yellowish	Yellow
	Brownish	Brown
	Olive	Olive
	Greenish	Green
	Bluish	
		White
	Greyish	Grey
		Black

D. SECONDARY CONSTITUENTS

Should other constituents be in the samples the soil name should be qualified to give an indication of the proportions of the other constituents.

% of sand, silt or gravel	Term	Soil Name
Less than 5	-	CLAY/SILT
5 - 15	slightly (sandy	
	(gravelly	CLAY/SILT
15 - 35	(sandy	
	(gravelly	CLAY/SILT
35 - 65	very (sandy	
	(gravelly	CLAY/SILT
Greater than 65	Sample to be described as non-cohesive	

E. SOIL NAME

Must be presented in CAPITAL letters.

F. OTHER QUALIFYING REMARKS

Here any additional relevant information may be added e.g. CLAY with occasional cobbles, CLAY with slight organic odour, CLAY with traces of decomposed vegetation.

Examples

i) Firm closely fissured yellowish brown very sandy CLAY
ii) Stiff very thinly bedded grey silty CLAY with occasional shell fragments

SOIL DESCRIPTION

NON-COHESIVE SOILS

Relative density
Colour
Secondary constituents
Grain size
Soil name (in capitals)
Other qualifying remarks

A. RELATIVE DENSITY

Terms	'N' Value (for superficial soils)*	'N' Value (for residual soils)**
Very loose	0 - 4	0 - 3
Loose	4 - 10	3 - 6
Medium dense	10 - 30	7 - 50
Dense	30 - 50	51 - 250
Very dense	Over 50	Over 250

B. COLOUR

1.	2.	3.
Light	Pinkish	Pink
Dark	Reddish	Red
Mottled	Yellowish	Yellow
	Brownish	Brown
	Olive	Olive
	Greenish	Green
	Bluish	
		White
	Greyish	Grey
		Black

C. SECONDARY CONSTITUENTS

For SANDS and/or GRAVELS with the presence of clay or silt the following is adopted :

% of clay or silt	Term	Soil Name
Under 5	slightly clayey slightly silty	SAND or GRAVEL
5 to 15	clayey silty	SAND or GRAVEL
15 to 35	very clayey very silty	SAND or GRAVEL

Greater than 35% clay or silt sample to be described as cohesive.

For SAND and GRAVEL mixtures the following is adopted :

Term	Composition
Slightly sandy GRAVEL	up to 5% sand
Sandy GRAVEL	5% to 20% sand
Very sandy GRAVEL	over 20% sand
GRAVEL/SAND	about equal proportions of gravel and sand
Very gravelly SAND	over 20% gravel
Gravelly SAND	20 to 5% gravel
Slightly gravelly SAND	up to 5% gravel

D. GRAIN SIZE

Soil Grade	Particle Size	Field Identification
Clay	< 2 μm	Not visible with X 10 hand lens. Does not dilate on shaking. Adheres to the fingers when dry.
Silt	2 μm to 60 μm	Particles > 10 μm visible with a X10 hand lens. Dilates on shaking. Does not adhere when dry. Feels gritty on smooth surfaces.
Sand fine	60 μm to 200 μm	Particles > 60 μm visible to the naked eye. Fine sand feels gritty to the fingers.
medium	200 μm to 600 μm	
coarse	600 μm to 2 mm	
Gravel fine	2 to 6 mm	Visual identification
medium	6 to 20 mm	
coarse	20 to 60 mm	
Cobbles	60 to 200 mm	Visual identification
Boulders	> 200 mm	

E. SOIL NAME

Must be presented in CAPITAL letters.

F. OTHER QUALIFYING REMARKS

As for cohesive deposits additional significant information such as the presence of cobbles and boulders, organic matter or made ground material may be added.

Examples

a) Loose brown silty slightly gravelly fine and medium SAND with a little fine gravel.

b) Very dense red-brown sandy fine to coarse GRAVEL with occasional cobbles and boulders.

Ref. A. : Relative Density : * After Terzaghi & Peck. ** After Geotechnical Manual for Slopes, G.E.O., H.K. Govt.

ROCK DESCRIPTION

For the preparation of borehole logs the rock description may report the following information as appropriate in the order indicated :

Strength
Colour
Grain Size
State of decomposition (weathering)
Rock name
Discontinuities
Other qualifying remarks

A. STRENGTH

Term	Compressive Strength (MN/m^2)	Field Test
Very weak	< 1.25	Easily broken by hand
Weak	1.25 - 5	Broken by heavy hand pressure
Moderately weak	5 - 12.5	Broken by light tap with hammer
Moderately strong	12.5 - 50	Reasonable blow required to break
Strong	50 - 100	Broken only by heavy blows
Very strong	100 - 200	Chips/fragments when hit
Extremely strong	> 200	'Rings' when hit with hammer

B. COLOUR

1.	2.	3.
Light	Pinkish	Pink
Dark	Reddish	Red
Mottled	Yellowish	Yellow
	Brownish	Brown
	Olive	Olive
	Greenish	Green
	Bluish	
		White
	Greyish	Grey
		Black

C. GRAIN SIZE

Term	Size of Component particles	Equivalent soil grade
Very Fine grained	2 microns (not visible with X10 hand lens)	Clay
Fine grained	2 microns to 60 microns (grains larger than 10 microns visible using X10 hand lens)	Silt
Medium grained	60 microns to 2 mm (just visible to naked eyes)	Sand size
Coarse grained	2 mm - 60 mm	Gravel size
Very coarse grained	> 60 mm	Boulders & cobbles

D. STATE OF DECOMPOSITION (WEATHERING)

Grade	Degree of Decomposition	Diagnostic features in samples and cores
VI	Residual Soil	Rock is completely changed to a soil in which the original rock fabric is totally destroyed. The soil is normally bright red or yellow, less than 2 metres thick, can be excavated by hand and is susceptible to surface erosion.
V	Completely decomposed/ weathered	Rock is completely decomposed by weathering in situ but the rock texture is still recognisable. The rock in this state will disintegrate into gravel, sand, silt/clay particles with hand pressure or with the addition of water. Usually requires sophisticated coring techniques to effect recovery.
IV	Highly decomposed/ weathered	Rock is discoloured, discontinuities may be open and have discoloured surfaces, discontinuities may be altered. NX size cores can be broken by hand. Core recovered by very careful drilling but is often lost.
III	Moderately decomposed/ weathered	Rock considerably weathered throughout but possessing strength such that NX cores cannot be broken by hand.
II	Slightly decomposed/weathered	Rock slightly discoloured particularly adjacent to discontinuities.
I	Fresh rock	No discernable weathering/decomposition.

(Note that Grades IV to VI are usually described in accordance with the appropriate soils description)

E. ROCK MASS

APPENDIX A

ROCK DESCRIPTION

F. DISCONTINUITIES

Term	Spacing
Very widely spaced	> 2 m
Widely spaced	2 m to 600 mm
Medium/moderately spaced	600 mm to 200 mm
Closely spaced	200 mm to 60 mm
Very closely spaced	60 mm to 20 mm
Extremely closely spaced	< 20 mm

G. OTHER QUALIFYING REMARKS

At the end of the description comments can be made on the nature of joints and discontinuities, mineralisation and other factors that may be of engineering or descriptive importance.

Examples i) Strong dark grey medium grained slightly decomposed GNEISS. Widely spaced iron stained discontinuities.

ii) Moderately weak yellowish brown coarse grained micaceous SANDSTONE.

iii) Extremely strong dark greyish green medium grained fresh DOLERITE. Medium spaced open discontinuities.

H. TOTAL CORE RECOVERY, SOLID CORE RECOVERY, ROCK QUALITY DESIGNATION AND FRACTURE INDEX

TOTAL CORE RECOVERY (T.C.R.) – Defined as summed Length of all pieces of recovered core expressed as a percentage of Length drilled. When the core is highly fragmented the Length of such core is estimated by assembling the fragments and estimating the Length of core that the fragments appear to represent.

SOLID CORE RECOVERY (S.C.R.) – Defined as the Length of material which is recovered as solid core pieces at full diameter expressed as a percentage of the Length of core run.

ROCK QUALITY DESIGNATION. (R.Q.D.) – Defined as the Length of solid core recovered in Lengths greater than 100 mm expressed as a percentage of the length of core run. Measurements are made along the core axis and core pieces must possess a full diameter to be included in the R.Q.D. value.

FRACTURE INDEX (F.I.) – Defined as the number of fractures per metre run, measured over any arbitrary length which is generally taken as the core run. However, if there is a marked change in fracture frequency during a run the fracture index should be calculated for each part of the run separately.

Where core is too highly fractured for fractureindex to be measured the term N.I. meaning NOT INTACT is inserted.

NOTE : Artificial fractures caused by core handling or by the drilling process are ignored when measuring the above values.
