1 INTRODUCTION

1.1 Project Background

1.1.1 A temporary Concrete Batching Plant ("CBP" or "the Proposed Development") is planned to be erected at part of Lot 153 in D.D. 77 ("the Site") zoned Industrial (Group D) ("I(D)") under the Approved Ping Che and Ta Kwu Ling Outline Zoning Plan ("OZP") No. S/NE-TKL/14.

1.1.2 A Planning Application (Application No.: A/NE-TKL/681) was submitted and approved with conditions under Section 16 of the *Town Planning Ordinance* ("TPO")on 10 June 2022. Thereafter, several changes were made to the General Building Plan ("GBP") compared with the layout submitted in the aforementioned Planning Application. Furthermore, total cementitious material silo capacity was also changed from no more than 450 tonnes to no more than 800 tonnes due to amendment to the definition of silo capacity in accordance with the *Air Pollution Control Ordinance* ("APCO"). Therefore, a planning application for the CBP with the latest layout plans shall be submitted under Section 16 of TPO.

1.1.3 According to Item K.5, Part I, Schedule 2 of the Environmental Impact Assessment Ordinance, "a cement works or concrete batching plant with a total silo capacity of more than 10 000 tonnes in which cement is handled and manufactured" is a Designated Project ("DP"). The total silo capacity of the proposed CBP will not be more than 800 tonnes, hence, it is not considered as DP.

1.1.4 EnviroSolutions & Consulting Ltd ("ESC") has been appointed to prepare this Environmental Assessment ("EA") Report to support the planning application for the Proposed Development.

1.2 Site Description

1.2.1 The site is currently used as a CBP, workshop and warehouse. The site surroundings in general are open storage, temporary structures and some village houses scattered around. **Figure 1-1** and **Figure 1-2** show the location and tentative layout of the Site.

1.3 Objective

1.3.1 The objectives of this EA Report are to:

- Assess the potential environmental impacts arising from the operation of the Proposed Development, in terms of air quality, noise, water quality and waste management.
- Propose measures for compliance with the List of Guidance Notes on Best Practicable Means (BPM) for Specified Processes for Cement Works (Concrete Batch Plant).
- Recommend further appropriate measures to mitigate any impacts if necessary.

Figure 1-1 Site Location and Environs

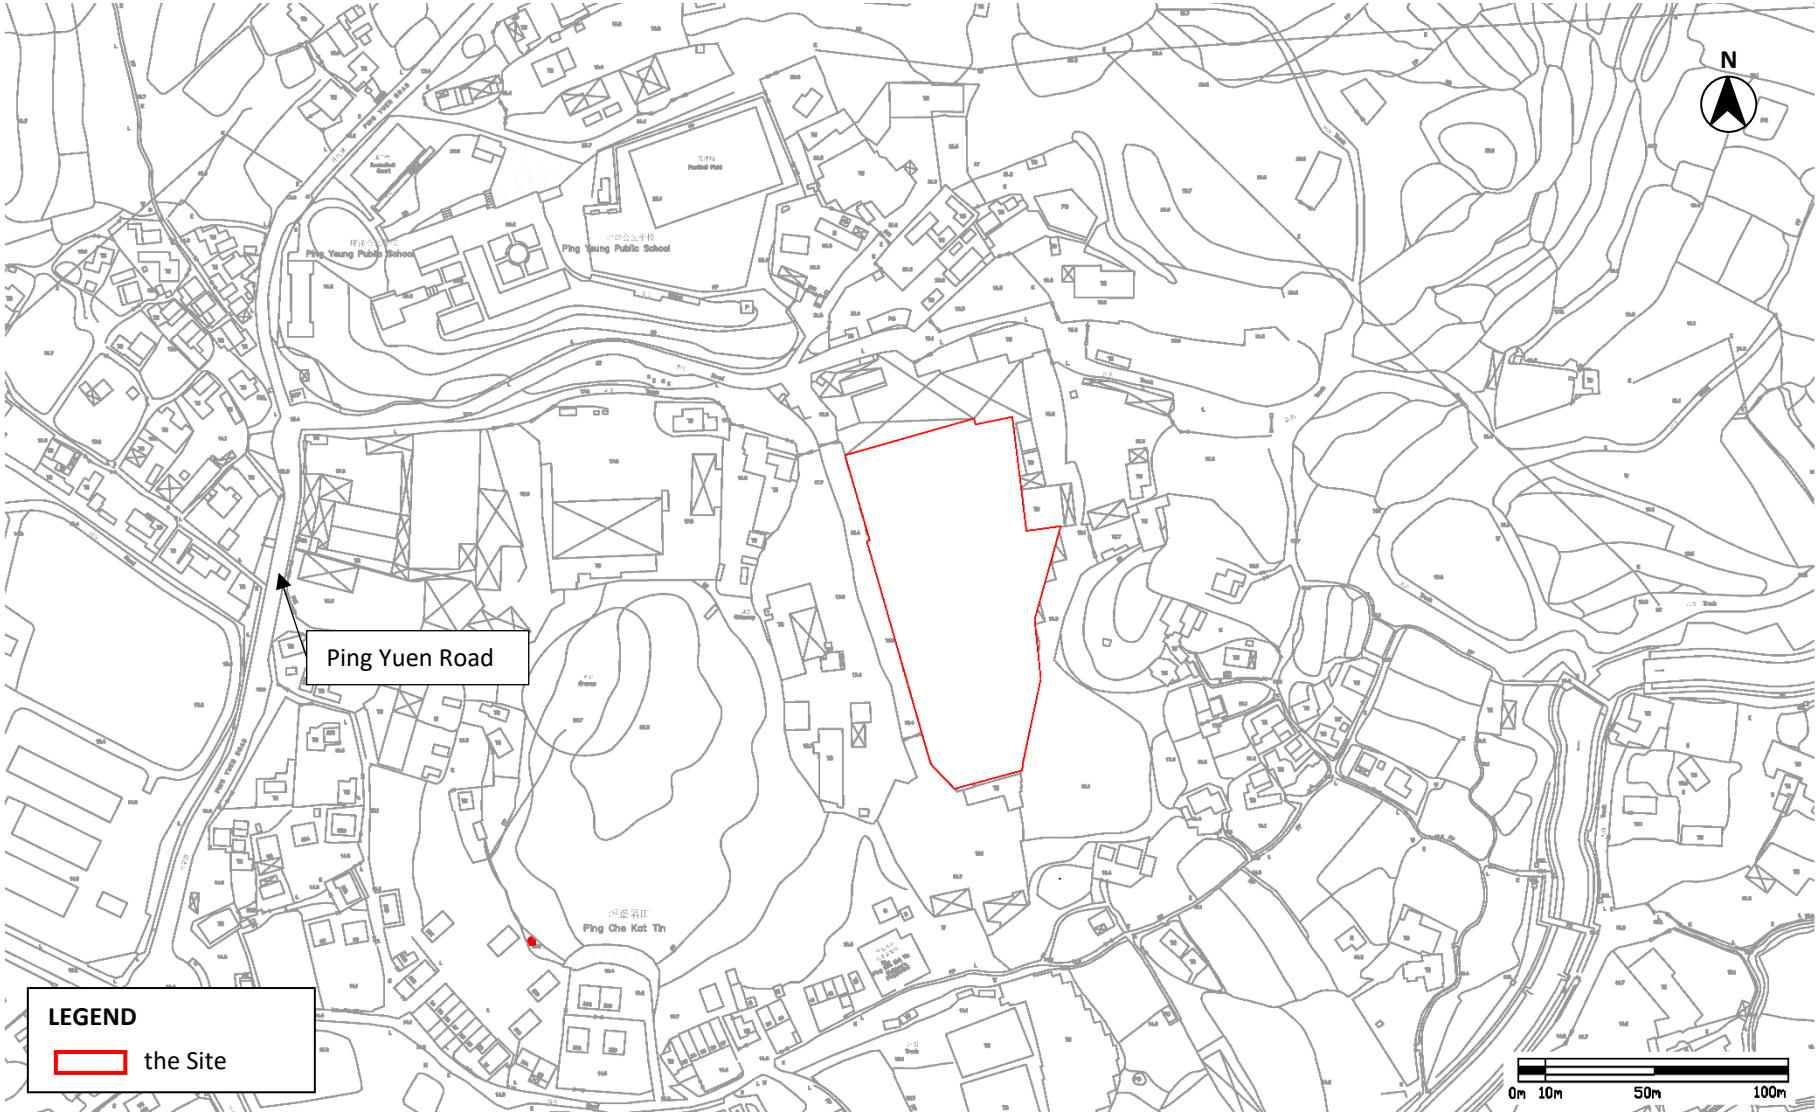

Figure 1-2 Site Layout Plan

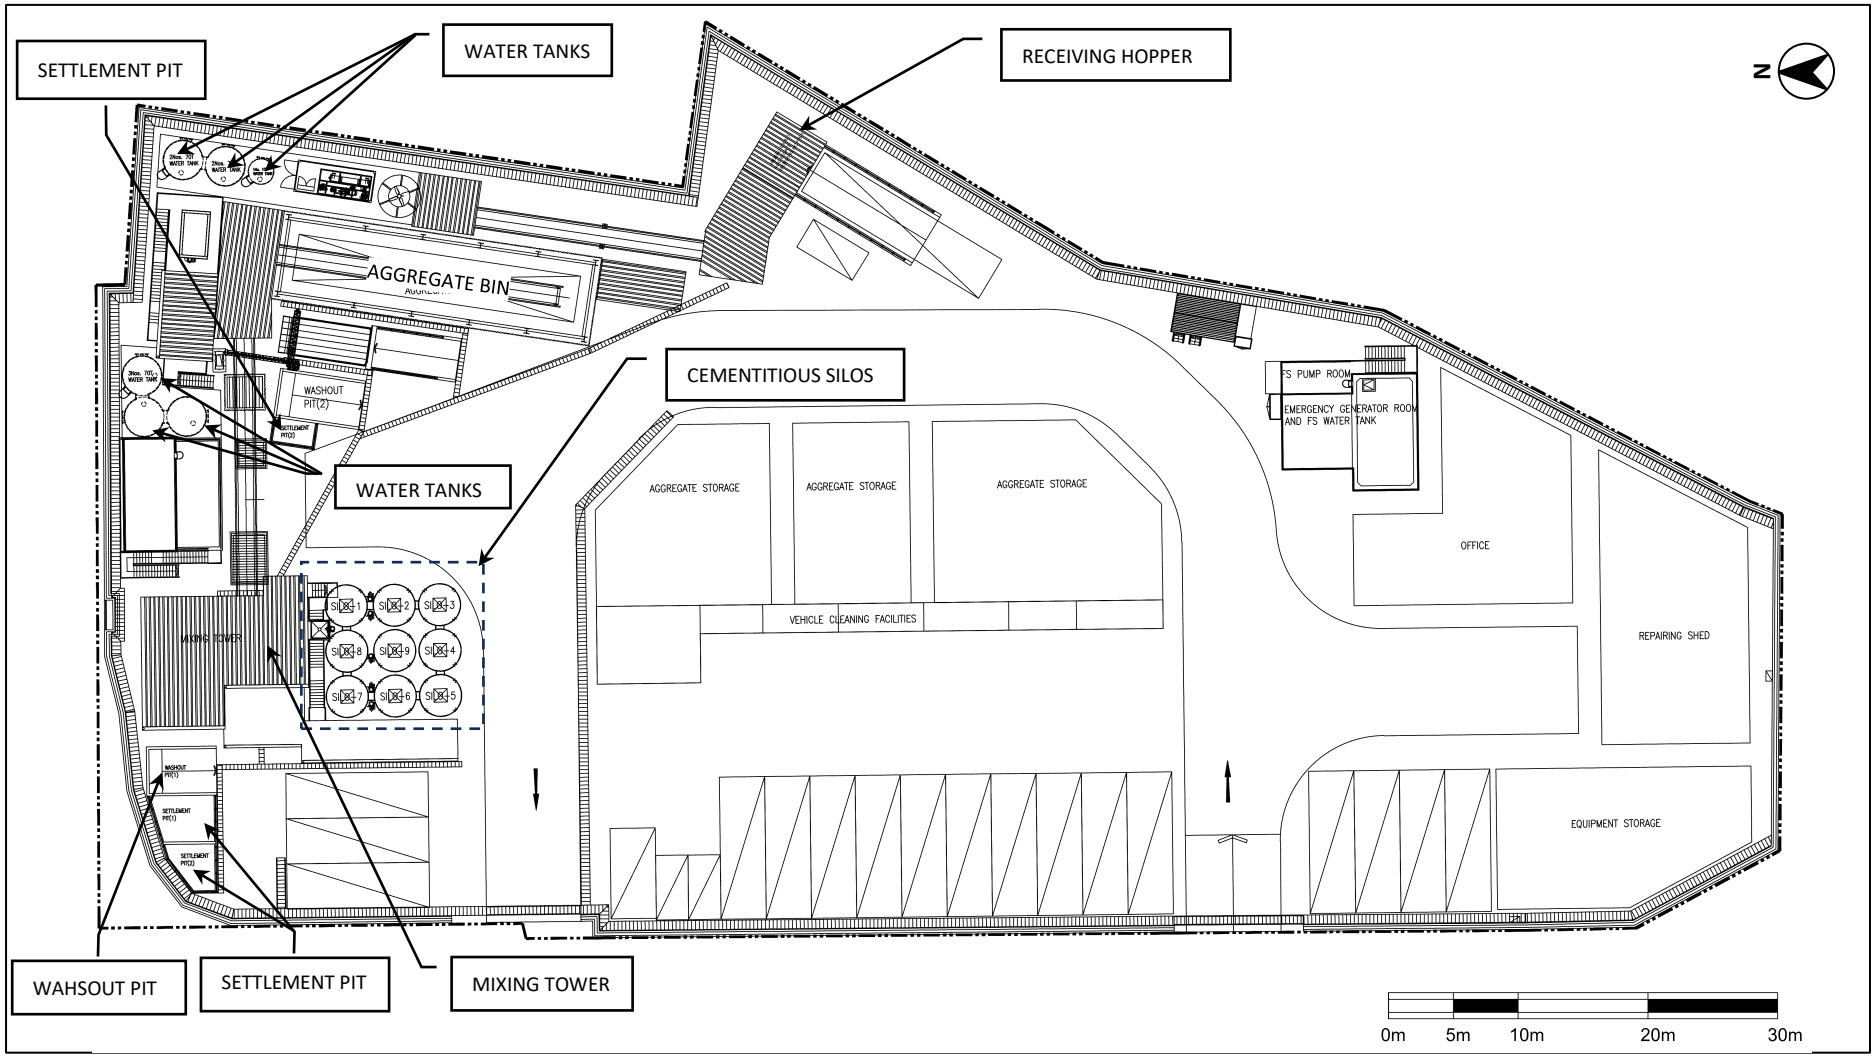

2 AIR QUALITY

2.1 Environmental Legislation and Standards

Air Quality Objectives

2.1.1 The prevailing Air Quality Objectives ("AQOs") established under the *Air Pollution Control Ordinance* ("APCO") (Cap. 311) are given in **Table 2-1**. The new AQOs will be implemented tentatively later 2025. In the case that the project is finalised after the implementation of the new AQOs as shown in **Table 2-2**, the project may need to adopt the new AQOs.

Table 2-1 Hong Kong Air Quality Objectives (Prevailing)

POLLUTANT	AVERAGING TIME	CONCENTRATION LIMIT [Note 1] ($\mu g/m^3$)	NUMBER OF EXCEEDANCES ALLOWED
Sulphur Dioxide (SO_2)	10-minute	500	3
	24-hour	50	3
Respirable Suspended Particulates ("RSP" or "PM_{10}") [Note 2]	24-hour	100	9
	Annual	50	Not applicable
Fine Suspended Particulates ("FSP" or "$PM_{2.5}$") [Note 3]	24-hour	50	35
	Annual	25	Not applicable
Nitrogen Oxide	1-hour	200	18
	Annual	40	Not applicable
Ozone	8-hour	160	9
Carbon Monoxide	1-hour	30,000	0
	8-hour	10,000	0
Lead	Annual	0.5	Not applicable

Notes:

1. All measurements of the concentration of gaseous air pollutants, i.e. SO_2, NO_2, O_3 and CO, are to be adjusted to a reference temperature of 293 Kelvin and a reference pressure of 101.325 kilopascal.
2. RSP means suspended particles in air with a nominal aerodynamic diameter of 10μm or less.
3. FSP means suspended particles in air with a nominal aerodynamic diameter of 2.5μm or less.

Table 2-2 Tentative Hong Kong Air Quality Objectives 2025

POLLUTANT	AVERAGING TIME	CONCENTRATION LIMIT [Note 1] ($\mu g/m^3$)	NUMBER OF EXCEEDANCES ALLOWED
Sulphur Dioxide (SO_2)	10-minute	500	3
	24-hour	40	3
Respirable Suspended Particulates ("RSP" or "PM_{10}") [Note 2]	24-hour	75	9
	Annual	30	Not applicable
Fine Suspended Particulates ("FSP" or "$PM_{2.5}$") [Note 3]	24-hour	37.5	18
	Annual	15	Not applicable
Nitrogen Oxide	1-hour	200	18
	24-hour	120	9
	Annual	40	Not applicable

POLLUTANT	AVERAGING TIME	CONCENTRATION LIMIT [Note 1] ($\mu g/m^3$)	NUMBER OF EXCEEDANCES ALLOWED
Ozone	8-hour	160	9
	Peak season	100	Not applicable
Carbon Monoxide	1-hour	30,000	0
	8-hour	10,000	0
	24-hour	4,000	0
Lead	Annual	0.5	Not applicable

Notes:

1. All measurements of the concentration of gaseous air pollutants, i.e. SO_2, NO_2, O_3 and CO, are to be adjusted to a reference temperature of 293 Kelvin and a reference pressure of 101.325 kilopascal.
2. RSP means suspended particles in air with a nominal aerodynamic diameter of 10μm or less.
3. FSP means suspended particles in air with a nominal aerodynamic diameter of 2.5μm or less.

2.1.2 In accordance with the *Guidance Note on Specified Process Licence Applications and Assessment of the Resulting Air Quality* published in October 2022, the air quality impact arising from SP can be considered to be trivial if the impact of the SP alone does not exceed the relevant Significant Impact Level ("SIL"). The impact can be considered trivial and no further air quality assessment is required.

Air Pollution Control (Construction Dust) Regulation

2.1.3 Enacted under Section 43 of the APCO, the *Air Pollution Control (Construction Dust) Regulation* defines notifiable and regulatory works to ensure effective dust abatement measures have been properly implemented to reduce dust emissions for a number of construction activities.

2.1.4 The Regulation requires that advance notice is given to EPD for any notifiable work[Ref.#1] and the contractor shall ensure that the notifiable and regulatory works are carried out in accordance with the Schedule of the Regulation, which also includes dust control and suppression measures.

Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation

2.1.5 This Regulation takes effect on June 2015 and required Non-road Mobile Machinery ("NRMM"), except those exempted, to comply with the prescribed emission standards. From 1 September 2015, all regulated machines sold or leased for use in Hong Kong must be approved or exempted with a proper label in a prescribed format issued by EPD. Starting from 1 December 2015, only approved or exempted NRMMs with a proper label are allowed to be used in specified activities and locations including construction sites, container terminals and back up facilities, restricted areas of the airport, designated waste disposal facilities and specified processes.

Air Pollution Control (Fuel Restriction) Regulation

2.1.6 The regulation imposes legal control on the type of fuels allowed for use and their sulphur contents in commercial and industrial processes. Gaseous fuel, conventional solid fuel with

[1] Notifiable works include site formation, reclamation, demolition of a building, work carried out in any part of a tunnel that is within 100m of any exit to the open air, construction of the foundation of a building, construction of the superstructure of a building and road construction work.

a sulphur content not exceeding 1% by weight or liquid fuel with a sulphur content not exceeding 0.005% by weight and a viscosity not more than 6 centistokes at 40°C, such as Ultra Low Sulphur Diesel ("ULSD") are permitted to be used in commercial and industrial processes.

Guidance Notes on Best Practicable Means ("BPM") for SPs

2.1.7 A number of GN have been published for SPs which "A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Cement Works (Concrete Batch Plant) BPM 3/2(16)" ("the BPM") dated February 2016 is relevant to the Proposed CBP. With reference to Annex 1 of the BPM, the emissions from non-fugitive fixed emission points of the Proposed CBP shall not exceed the concentration limited in **Table 2-3**.

Table 2-3 Concentration Limit for Cement works – Concrete Batching Plant

AIR POLLUTANT	CONCENTRATION LIMIT
Particulate matter	10 mg/m^3 (design standard) [Note 1]

Notes:

1. For the emission points of existing premises with a designed concentration limit of 50 mg/m^3, the licence holder shall, upon licence renewal, submit an improvement plan to meet the limit of 10 mg/m^3 (design standard). The concentration limit of 10 mg/m^3 (design standard) shall be met by 1 January 2018 for all plants.

Supporting Documents for SP License

2.1.8 The Proposed CBP will have total silo capacity exceeding 50 tonnes. Therefore, it is classified as cement works in respect of a Specified Process ("SP") requiring an application of a SP Licence under Section 14 of APCO.

2.2 Construction Phase Impact

2.2.1 Fugitive dust is the major impact that will be generated during construction activities, such as excavation, stockpiling, earth moving, transferring or handling of dusty materials.

2.2.2 There is no construction programme at this stage of the project but the duration of construction of the plant is estimated to be about six to nine months and assumed to be started in 2025.

2.2.3 Based on desktop review, there is an approved planning application for proposed temporary concrete batching plant at Lots 73 RP, 174, 175, 177, 178A, 178B and 178C in D.D. 77 and Adjoining Government Land (Application No.: A/NE-TKL/728) which is adjoining of the Site as shown in **Figure 2-1**. The adjoining CBP is planned to be operated fully in 2026. The commencement year of the Site will be 2025. There will be no concurrent construction works.

2.2.4 Referring to the environmental assessment of the planned CBP, no site formation work will be conducted and only erection of steel structures will be involved. All the structures of the adjoining CBP will be precast and mainly involve assembling works. The potential dust impact will be negligible.

2.2.5 As advised by the Applicant and site visit, the site is already formed, and repaving of the ground is not necessary. Therefore, construction works including site formation/excavation, removal of paving and use of construction plants such as dump trucks, excavators, etc. will be minimal. With the implementation of dust control measures stipulated in the *Air Pollution Control (Construction Dust) Regulation*, dust generation can be controlled and significant fugitive dust impact is therefore not anticipated. More detailed descriptions for control measures are provided below. Since the works area is limited for construction works, it is anticipated that less than 20 numbers of construction plant would be in operation during each construction activity.

2.2.6 About one dump truck per day is estimated for transportation of excavated material from site formation works. dump truck loaded with excavated material would be covered entirely before leaving the Project Site to ensure that dusty material would not leak from the dump truck according to the APCO requirement. In case temporary stockpiling of small amount of dusty material is required, the stockpile will be covered by tarpaulin sheets or placed in an area sheltered on the top and the three sides. The mitigation measures described in as below would also be implemented during the construction phase to minimise impacts on air quality on nearby ASRs.

2.2.7 Therefore, the cumulative construction dust impact is negligible.

Emission Control Measures

2.2.8 To avoid adverse air quality impact on the air sensitive uses nearby, good practice and control measures to be implemented during the construction phase are as follows:

- Provide hard paving on open area, regular watering to reduce dust emissions from exposed site surfaces and unpaved roads, particularly during dry weather.
- The working area of any excavation or earth moving operation shall be sprayed with water immediately before, during and immediately after the operation so as to maintain the entire surface wet.
- Frequent watering for particularly dusty areas and areas close to ASRs.
- Any stockpile of dusty materials shall be either covered entirely by impervious sheeting, placed in an area sheltered on the top and three sides, or sprayed with water so as to maintain the entire surface wet.
- Where possible, dusty materials shall be sprayed with water immediately prior to any loading, unloading or transfer operation so as to maintain the dusty materials wet.
- The working area for the uprooting of trees, shrubs, or vegetation or for the removal of boulders, poles, pillars or temporary or permanent structures shall be sprayed with water immediately before, during and immediately after the operation so as to maintain the entire surface wet.
- All demolished items (including trees, shrubs, vegetation, boulders, poles, pillars, structures, debris, rubbish and other items arising from the site clearance) that may dislodge dust particles shall be covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides within a day of demolition.
- Tarpaulin covering of all dusty vehicles loads transported to, from and between site locations.

- Vehicle washing facilities including a high-pressure water jet shall be provided at every discernible or designated vehicle exit point. The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point shall be paved with concrete, bituminous materials or hardcore.
- Provision of not less than 2.4m high hoarding from ground level along site boundary where adjoins a road, streets or other accessible to the public except for a site entrance or exit.
- Spray water on the surface of façade grinding work as far as practicable.
- Equip vacuum cleaner on grinder for façade grinding work as far as practicable.
- Main haul road shall be sprayed with water so as to maintain the entire surface wet. Imposition of speed controls for vehicles on site haul roads and confine haulage and delivery vehicles to designated roadways inside the site.
- A portion of any road leading only to a construction site that is within 30m of a discernible or designated vehicle entrance or exit shall be kept clear of dusty materials.
- Where possible, routing of vehicles and positioning of construction plant should be at the maximum possible distance from the ASRs.
- Every stock of more than 20 bags of cement or dry Pulverised Fuel Ash ("PFA") should be covered entirely by impervious sheeting or placed in an area sheltered on the top and three sides.
- Emission from Non-Road Mobile Machinery ("NRMM") is governed under the *Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation*, as mentioned in **paragraph 2.1.5.** Each NRMM to be used in construction site shall be obtained with valid label in a prescribed format issued by EPD. The Contractor should avoid the use of exempted NRMM and electric NRMMs shall be adopted as far as practicable. Power supply for the on-site machinery shall be provided as far as practicable.
- The *Air Pollution Control (Fuel Restriction) Regulations*, in particular not using restricted liquid fuel shall be fully complied with to minimise any aerial emissions.

2.2.9 In addition, the EPD's *Recommended Pollution Control Clause ("RPCC") for Construction Contract* in COP should be incorporated in the relevant works contract. The RPCC are generally good engineering practice to minimize inconvenience and environmental nuisance to nearby residents and other sensitive receivers. The general requirements are summarised below:

- The Contractor shall observe and comply with the APCO and is subsidiary regulations, particularly the Air Pollution Control (Open Burning) Regulation and Air Pollution Control (Construction Dust) Regulation and Air Pollution Control (Smoke) Regulation.
- The Contractor shall undertake at all times to prevent dust nuisance and smoke as a result of his activities.
- The Contractor shall ensure that there will be adequate water supply / storage for dust suppression.
- The Contractor shall devise, arrange methods of working and carrying out the works in such a manner as to minimise dust impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these methods are implemented.

- For better smoke control, the Contractor shall not use diesel hammer for percussive piling.
- Before commencement of any work, the Engineer may require the methods of working, plant, equipment and air pollution control system to be used on the site to be made available for inspection and approval to ensure that they are suitable for the project.

2.2.10 No site formation will be carried out for the proposed CBP. Besides, the components/ structures of the proposed CBP will be prefabricated. Considering limited construction scale and dust release, EM&A shall not be necessary.

2.3 Operation Phase Impact

Identification of Air Pollution Sources

2.3.1 The works and equipment of the proposed CBP for concrete production will be driven by the mains electricity supply. Therefore, particulate matters, i.e., Respirable Suspended Particulates ("RSP" or "PM_{10}") and Fine Suspended Particulates ("FSP" or "$PM_{2.5}$") will be the major air pollution concerns during the operation of the CBP. Particulate Matters ("PM") including RSP and FSP are the major pollutants that will be generated during the operating activities of the CBP including transferring and handling of dusty materials, fugitive dust emissions from vehicle movements and dust emissions from Dust Collectors ("DCs"), as well as vehicular emissions from open road networks within the 500m Study Area. On the other hand, Nitrogen Dioxide ("NO_2") will be emitted from tailpipe emissions during the vehicle travelling within the CBP and also from open road networks within 500m Study Area. The indicative Emission Points ("EPs") within the Site as listed in **Table 2-4** and illustrated in **Figure 2-2** will be the major sources of RSP, FSP and NO_2 during the operation of the CBP.

Table 2-4 Summary of Identified Emission Points within CBP during Operation

EMISSION POINTS	DESCRIPTION	POLLUTANT	TYPE	OPERATION HOURS
EP1-EP6	Dust Collectors (DCs) for silos	RSP, FSP	Ducted	07:00 to 23:00
EP7	Dust Collectors (DCs) for Mixer	RSP, FSP	Ducted	07:00 to 23:00
EP8-EP9	Dust Collectors (DCs) for enclosed hoppers	RSP, FSP	Ducted	07:00 to 23:00
EP10	Unloading of aggregate into aggregate receiving hopper	RSP, FSP	Fugitive	07:00 to 23:00
EP11-EP13	Paved Roads	RSP, FSP, NO_2	Fugitive	07:00 to 23:00
EP14-EP15	Paved Roads	RSP, FSP, NO_2	Fugitive	07:00 to 17:00
EP16	Aggregate Stockpile	RSP, FSP	Fugitive	07:00 to 17:00

Notes:

1. The operation hours in this table are indicative and the actual operation hours may be changed subject to the detailed design stage in the future.

2.3.2 Emission from adjoining CBP is also included in the cumulative impact assessment.

Emission Control Measures

2.3.3 Since no diesel generator is needed during the operation of the CBP, there will be no emissions associated with combustion of Ultra-Low Sulphur Diesel ("ULSD"). The major potential emission sources during concrete production rate are fugitive dust emissions generated from loading, unloading, handling, transferring and storing activities. The major potential emission sources during concrete production rate are fugitive dust emissions generated from loading, unloading, handling, transferring and storing activities.

2.3.4 The following mitigation measures summarised in **Table 2-5** will be implemented at each EP.

Table 2-5 Emission Control Measures for EPs

EP	DESCRIPTIONS	MITIGATION MEASURES
EP1-EP9 except EP7	Dust Collectors (DCs)	• Dust collectors shall be installed on silos and silos shall be equipped with high level alarms to warn of over-filling. Seating of pressure relief valves of all silos shall be checked at least once a week. Dust accumulated shall be properly handled. • During unloading of cementitious materials, fume from tankers to the relevant silos via the pneumatic system, dust-laden air will be vented to the dust collector, in order to abate the dust emissions and comply with the BPM3/2(16) limit.
EP7	DC	• The concrete batching process will be carried out inside an enclosed chamber provided with cladding. The process includes loading cementitious materials, aggregates, water/ice/ice water and admixtures to weigh hoppers and thereafter mixing inside the Mixing Tower. • Dust-laden air from the Mixing Tower shall be vented and filtered by the dust collector to reduce the dust emissions discharged to the atmosphere, and to comply with the BPM3/2(16) limit.
EP10	Unloading of aggregate into aggregate receiving hopper	• The receiving hopper shall be enclosed on top and 3 sides. In no case shall these hoppers be used for material storage. Water spraying device shall be operated during the unloading of aggregate/crushed fines/sand.
EP11-15	Paved Roads	• All haul roads within the Site shall be paved and adequately wetted. • Vehicle cleaning facilities should be provided at the exit of the Site to wash off any dust/mud on the vehicles, including the wheels, prior to leaving the Site.
EP16	Aggregate Stockpile	• The aggregate stockpile areas with aggregate of sizes of >5mm, 10mm and 20mm will be enclosed on 3-sides with rigid wall sufficiently higher than the top of the stockpile to prevent whipping. Water sprayings shall be provided regularly to suppress dust emissions. • Stockpile areas with aggregates of size ≤5mm shall be covered on top and enclosed on 3-sides. Flexible curtain shall be installed in the opening and water sprayings are provided regularly in the stockpile areas and also at the openings to suppress dust emissions.

Identification of Air Sensitive Receivers

2.3.5 Representatives Air Sensitive Receivers ("ASR") located in the vicinity of the Site have been identified. Some of the structures which were vacant/abandoned houses identified during the site visit are not considered as ASRs.

2.3.6 In total, 18 representative ASRs have been identified within the 500m Study Area from the boundary of the CBP. **Table 2-6** summarises the ASRs and **Figure 2-3** indicates their locations.

Table 2-6 Representative ASRs

ID	DESCRIPTION	STOREY	RECEPTOR HEIGHTS ABOVE GROUND LEVEL (mAG)	DISTANCE FROM THE CBP (m)	PATH GRID
ASR1	Warehouse Office	2	1.5, 4.5	22	(39,56)
ASR2	Warehouse Office	2	1.5, 4.5	11	(39,56)
ASR3	Warehouse Office	2	1.5, 4.5	41	(39,56)
ASR4	Warehouse Office	2	1.5, 4.5	63	(39,56)
ASR5	Warehouse Office	2	1.5, 4.5	47	(39,56)
ASR6	Warehouse Office	2	1.5, 4.5	44	(39,56)
ASR7	Warehouse Office	2	1.5, 4.5	38	(39,56)
ASR8	Ping Che Kat Tin Children Playground	1	1.5	57	(39,56)
ASR9	Adjoining CBP Site Office	1	7.5	34	(39,56)
ASR10	Warehouse Office	2	1.5, 4.5	55	(39,56)
ASR11	Ping Yeung Public School	1	1.5	78	(39,56)
ASR12	Village House, Ping Che 505	3	1.5, 4.5, 7.5	78	(39,56)
ASR13	Village House 1, unknown	3	1.5, 4.5, 7.5	51	(39,56)
ASR14	Village House 2, unknown	3	1.5, 4.5, 7.5	51	(39,56)
ASR15	Village House, Ping Che Kat Tin 40	3	1.5, 4.5, 7.5	102	(39,56)
ASR16	Village House, Ping Che Kat Tin 32D	3	1.5, 4.5, 7.5	142	(39,56)
ASR17	Village House, Ping Che Kat Tin 23E	3	1.5, 4.5, 7.5	187	(39,56)
ASR18	Village House, Ping Che Kat Tin 22B	3	1.5, 4.5, 7.5	227	(39,56)

2.3.7 According to paragraph 3.3.10 of Chapter 9 Environment of HKPSG, at least 100 m buffer distance from the dusty uses including CBP should be required for the nearby air-sensitive uses. Most of identified ASRs, the distances are less than 100m from the CBP. Therefore, an assessment of cumulative air quality impact from the operation of CBP is conducted and provided in **Section 2.4**.

2.4 Cumulative Air Quality Impact Assessment for Operation Phase

Background Air Quality

2.4.1 According to "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", PATH pollutant concentrations as from EPD's Smart Air Modelling Platform v2.1 ("SAMP") are used as background concentrations of the assessment.

2.4.2 The assessment area of 500m from the Plant covered PATH grid (39,56). Year 2025 as downloaded from PATH v3.0 is adopted as the assessment year for predicted cumulative impact comparing against the prevailing AQOs.

Air Dispersion Model

2.4.3 A Gaussian dispersion model AERMOD was used to estimate pollutant concentrations at ASRs. The model was originally developed by the United States Environmental Protection Agency ("USEPA") and is adopted for evaluating industrial chimney releases (point sources), area and volume sources as well as line sources (i.e. vehicle emission for open roads).

2.4.4 AERMET is a meteorological pre-processor developed by USEPA and is used for organising meteorological data into a format suitable for use by AERMOD. Site specific MET data has been downloaded from the SAMP. Details are shown in **Appendix B**.

2.4.5 The output from MET data consists of two parts; a file with extension ".sfc" is the surface air data; and a file with extension ".pfl" is the upper air data. Data including wind speed, wind direction and temperature in the surface air data from the output file in ".sfc" format were replaced by the original WRF data.

Vehicular Emissions from Open Roads

2.4.6 The predicted 24-hour traffic flow and vehicle compositions at the identified roads within the assessment area was provided by the traffic consultant for the assessment of the potential air quality impact from the open roads. Three years of traffic data, Year 2025 (the commencing year of the proposed CBP), Year 2030 (five years after the commencing year, 2025 as five years valid period of SP licence), and Year 2040 is provided by the Project Traffic Consultant.

2.4.7 NO_2, RSP and FSP are the key pollutants for vehicular emissions from open roads. Latest EMFAC-HK model as provided in the SAMP with "Zero Emission Vehicle Scenario" has been used to estimate the vehicular emission rates for NO, NO_2, RSP and FSP to include the consideration of Zero Emission Vehicle ("ZEV") assumptions. The detailed input parameters for the EMFAC-HK model input are summarised in **Appendix C**.

2.4.8 There is no bus terminus and heavy vehicle parking area within the 500m study area.

2.4.9 Sensitivity test of emission of the three years of traffic has been conducted summarised in **Appendix C**. Year 2025 is identified to have the highest emission and has been adopted in the assessment for conservative approach. For the estimation of long-term air quality impact of pollutants (annual average), the daily profile of averaged temperature and relative humidity data in each hour for each month (i.e., 24 hours data in each month and for 12 months) as derived from the EMFAC-HK model in the SAMP were adopted for the

model input. For short-term air quality impact of pollutants (hourly or daily average), the daily profile of minimum temperature and relative humidity data in each hour for each month were adopted.

Industrial Emissions

2.4.10 According to the approved EIA "North East New Territories New Development Area (EIA-213/2013)", there was one existing chimney identified within 500m Study Area. However, this chimney has already been removed based on desktop review and site visit on 23 October 2024. Hence, the emission from this chimney will not be included in the cumulative air quality impact assessment. There is no other industrial emission or major emission source identified within 500m and 4km respectively from the Site.

2.4.11 The emission rates of the Plant have been summarised in **Appendix A.**

Concurrent Project

2.4.12 There is a planned CBP located to the west of the Site under Planning Application No. A/NE-TKL/728. All the emission points including dust collectors for silos and mixer, paved roads and aggregate stockpiles have been considered in the assessment. The emission points and emission rates are referred to the environmental assessment which are summarised in **Appendix A**.

Particle Size Distribution

2.4.13 Particle size distributions are different for different types of emissions. Individual particle size distributions for each emission type have therefore been assumed as listed in **Table 2-7**, below, in order to better reflect actual emissions conditions.

2.4.14 No particle size distribution was adopted for EP1 to EP9 (i.e. those relating to loading of cementitious materials with DCs installed) due to either the emission not being particulate (e.g. fuel combustion, etc.) or the emission sources not being fugitive.

Table 2-7 Particle Size Distribution for Different Emission Types

TYPE OF EMISSION ACTIVITY	PARTICLE SIZE DISTRIBUTION			REFERENCE	APPLIED TO EMISSION SOURCES
Aggregate unloading	**Mean Particle Size (µm)**	**RSP %age**	**FSP %age**	Category 3 "Mechanically Generated Aggregate, Unprocessed Ores", Page B.2-13, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95)	EP10 and EP16
	1.25	15.1%	100%		
	3.75	42.0%			
	7.5	42.9%			
		100%	**100%**		
Area sources for truck movements such as Paved Road	**Mean Particle Size (µm)**	**RSP %age**	**FSP %age**	Table 13.2.1-1 and page 13.2.1-12 of Section 13.2.1.3 of AP-42, USEPA	EP11-15
	1.25	24.2%	100%		
	6.25	75.8%			
		100%	**100%**		

Ozone Limiting Method for Short-term Cumulative NO_2 Assessment

2.4.15 Ozone Limiting Method ("OLM") has been adopted for conversion of NO from vehicle-related source and NO_x from industrial emission sources to NO_2 based on the predicted O_3 level from PATH model as extracted from the SAMP for the short-term cumulative NO_2 assessment.

2.4.16 The initial NO_2/NO_x ratios for industrial emission has been assumed as 10% according to "*Technical support document (TSD) for NO_2-related AERMOD modifications*" as published by USEPA. The predicted initial NO concentrations from open roads and 90% of the predicted NOx concentrations from industrial emissions was firstly added together on an hour-to-hour basis and OLM was applied subsequently. The NO_2/NO_x conversion has been calculated based on the equation below:

$$[NO2]predicted = [NO2]veh + 0.1 \times [NOx]ind + Min\{([NO]veh + 0.9 \times [NOx]ind) or \left(\frac{46}{48} \times [O3]PATH\right)\}$$

Where,

[NO2]predicted = predicted NO2 concentration

[NO2]veh = predicted initial NO2 concentration from vehicular emissions

[NOx]ind = initial NOx concentration from industrial sources

[NO]veh = predicted initial NO concentration from vehicular emissions

Min = minimum of the two values in (brackets)

[O3]PATH = representative O3 PATH concentration

Jenkin Method for Long-term Cumulative NO_2 Assessment

2.4.17 Jenkin method has been adopted for the conversion of cumulative annual average NO_X to NO_2 by using the empirical relationship in observed annual mean of NO_X and NO_2 concentrations with reference to the "*Guidance on Choice of Models and Model Parameters*". The empirical relationship is derived from the annual mean observed data by relevant EPD's Air Quality Monitoring Stations ("AQMS") including North (the closest station), the nearest roadside station (Mong Kok) and derived by the SAMP. The resulting curve was adopted for the cumulative annual average NO_x to NO_2 conversion and the NO_x-to-NO_2 conversion equation using Jenkin method is presented in **Appendix C**

2.5 Assessment Results

2.5.1 The cumulative air quality impact due to vehicular emissions, the adjoining CBP, the Plant operation and background concentrations were evaluated and compared to the prevailing AQOs as described in **Section 2.1**. The results are summarised in **Table 2-8** and **Table 2-9**. Comparison of new parameters of proposed 2025 AQOs are presented in **Appendix D** for reference.

Prevailing AQOs					**200**	**40**

2.5.2 No exceedance of the pollutant concentrations of prevailing AQOs at representative ASRs is predicted.

2.5.3 Exceedances of tentative AQO-2025 of FSP at representative ASRs are predicted as shown in **Appendix D**. The FSP contribution from the Plant is predicted to be below the SILs for AQO-2025 as shown in **Appendix D**. It is considered the impact of the Plant is negligible which will not affect the attainment and maintenance of any relevant AQOs.

2.6 Conclusion

2.6.1 With the implementation of the recommended mitigation measures and good site practice, adverse air quality impact during the construction phase is not anticipated.

2.6.2 For the operation phase, with implementation of mitigation measures and predicted assessment results, the operation of the Proposed Development will not pose any unacceptable air quality impact.

2.6.3 Overall, no adverse air quality impacts are anticipated during the construction and operation phases of the Proposed Development.

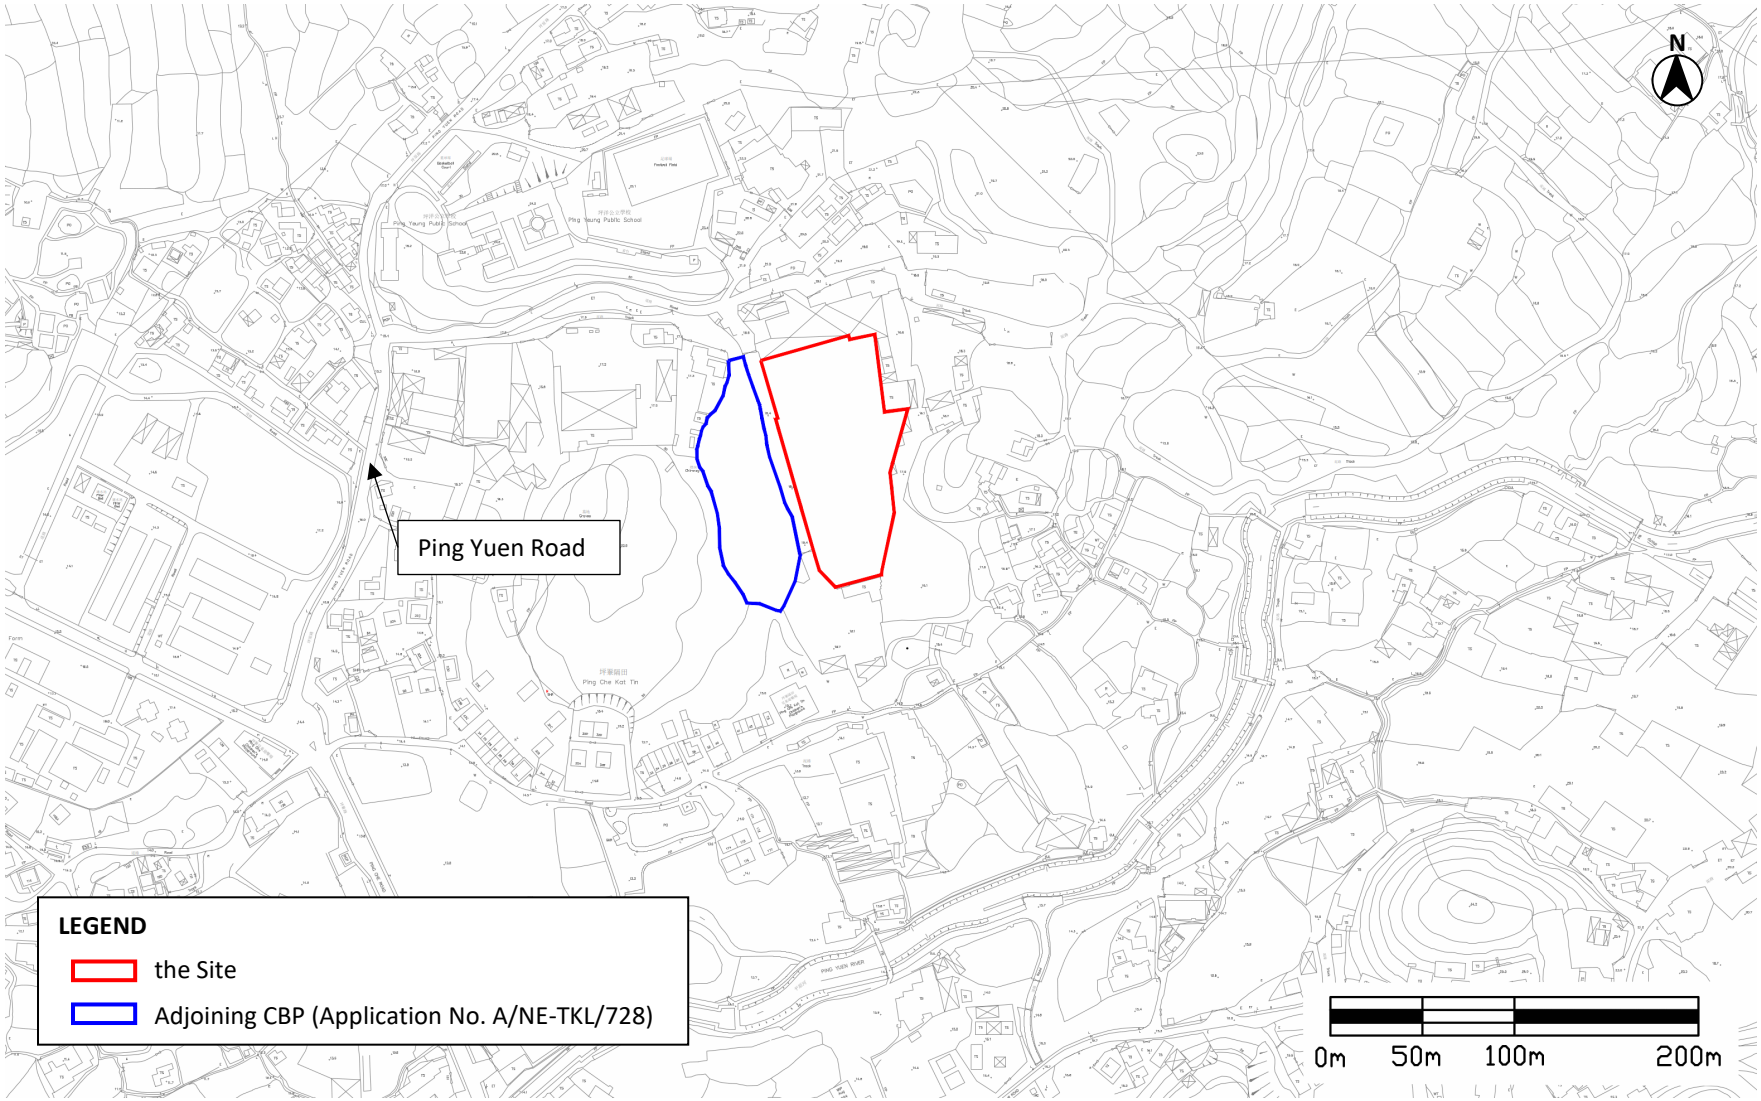

Figure 2-2 Locations of Emission Points of the Plant

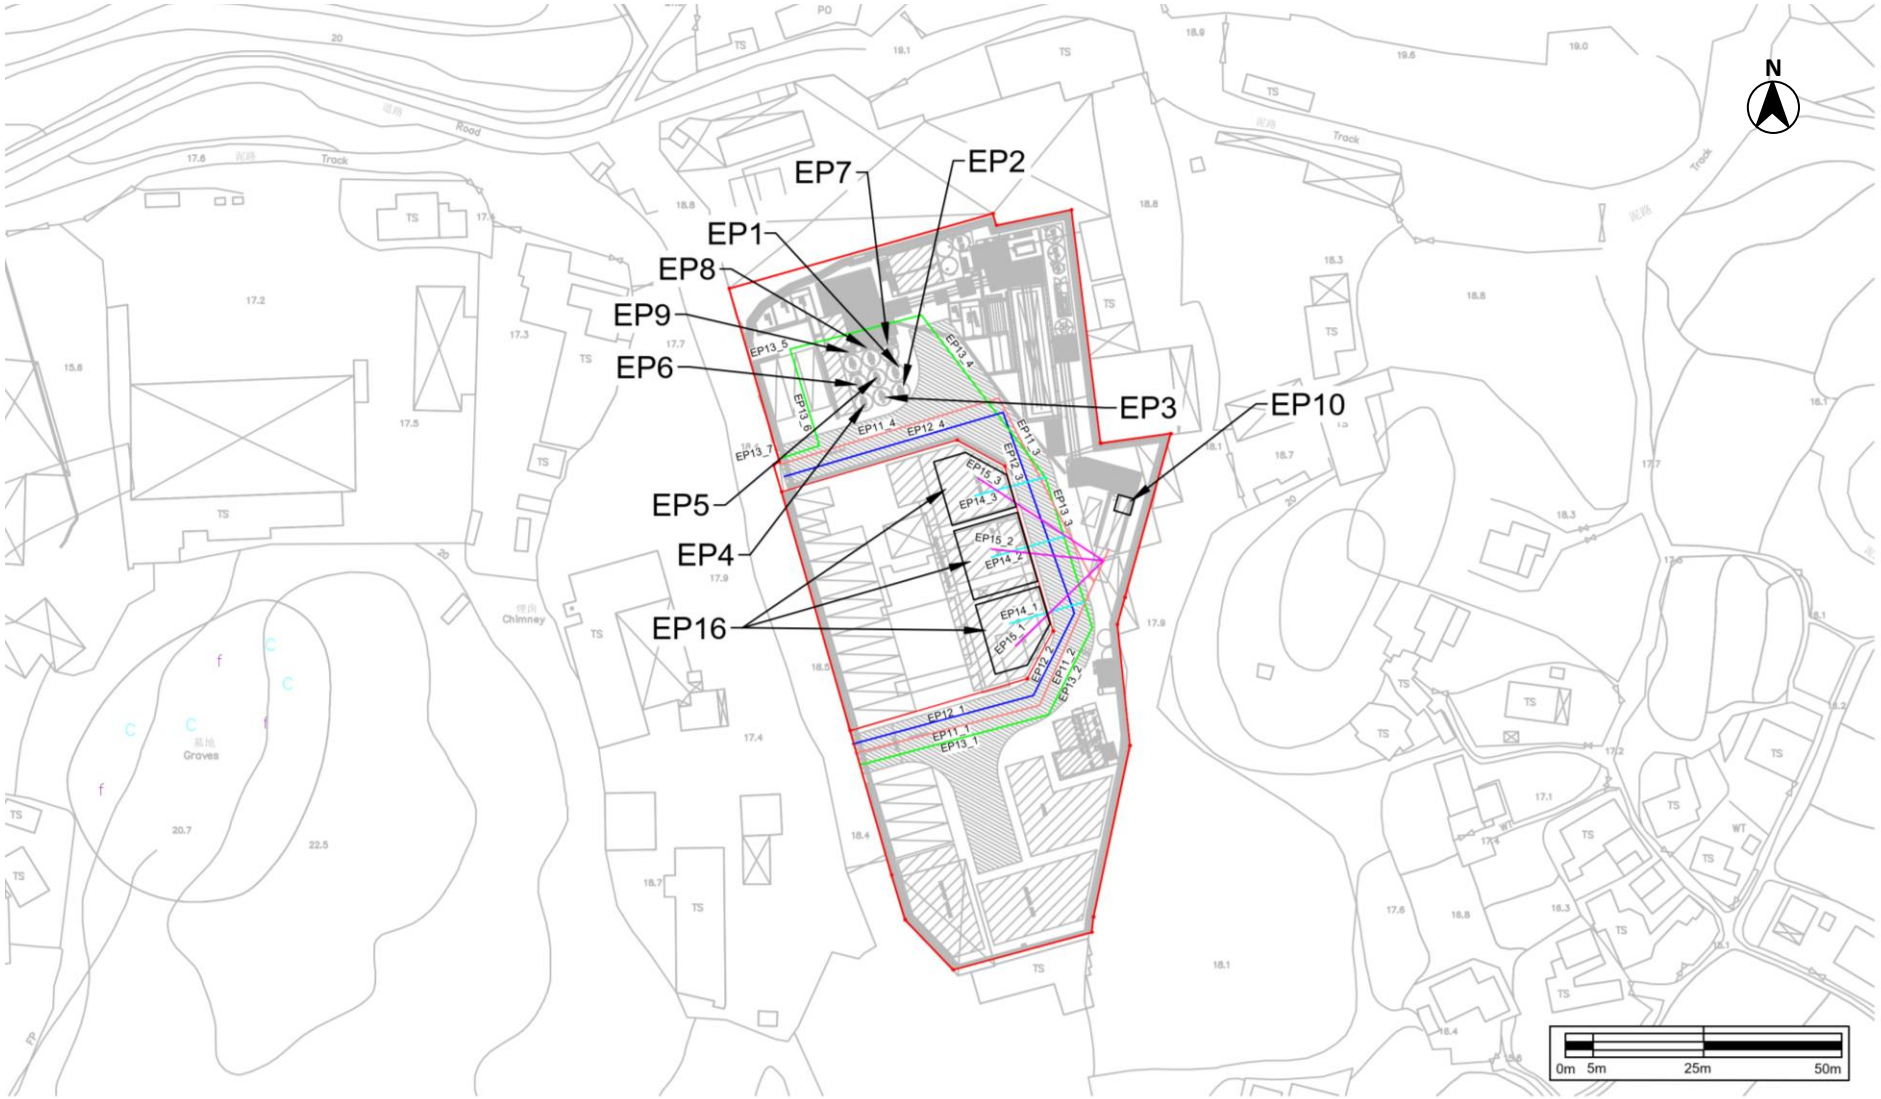

Figure 2-3 Locations of ASRs

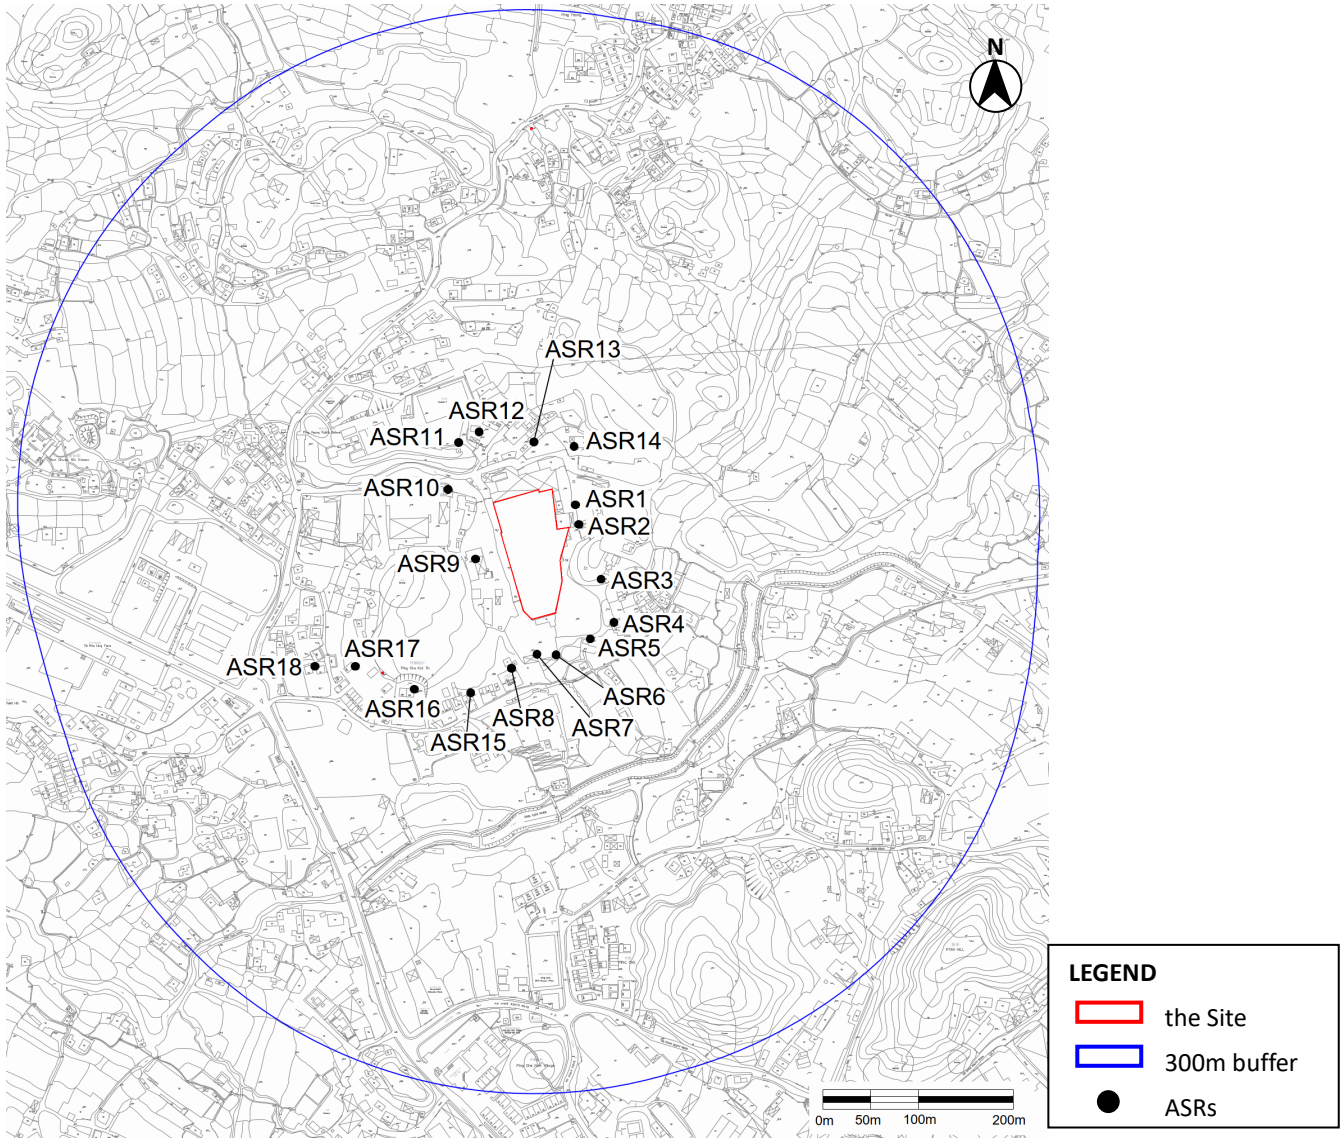

3 NOISE

3.1 Environmental Legislation and Standards

Noise Control Ordinance ("NCO", Cap. 400)

3.1.1 The principal legislation controlling environmental noise impact is the *Noise Control Ordinance* ("NCO"). The NCO enables regulations and Technical Memoranda ("TMs") to be enacted, which introduces detailed control criteria, measurement procedures and other technical matters. The TMs of NCO include:

- TM on Noise from Percussive Piling ("PP-TM")
- TM on Noise from Construction Work other than Percussive Piling ("GW-TM")
- TM for the Assessment of Noise from Places Other Than Domestic Premises, Public Places or Construction Sites ("IND-TM")
- TM on Noise from Construction Work in Designated Area ("DA-TM")

3.1.2 The Site does not fall within a Designated Area ("DA") in accordance with EPD's Plan No. EPD/AN/NT-02 for Tai Po, Fanling, Sheung Shui and Sha Tau Kok. Therefore, DA-TM is not applicable.

3.1.3 In addition, the following requirements are given under the NCO:

- Hand-held breakers having a mass of above 10kg and any air compressor capable of supplying compressed air at 500kPa or above must be fitted with Noise Emission Label issued under the *Noise Control (Hand Held Percussive Breakers) Regulation and Noise Control (Air Compressors) Regulation* of NCO.
- Construction Noise Permit ("CNP") must be applied by the Contractor from EPD for any percussive piling at any time other than restricted hours, or any other construction activities conducted within restricted hours (for all days 7pm to 7am the next day and at all times on Public Holidays or Sundays) as defined in NCO.

3.1.4 For noise arising from construction activities (other than percussive piling) during normal working hours (7am to 7pm from Monday to Saturday, not including general holidays), the noise criteria as shown in **Table 3-1** and control measures for construction noise impact during normal working hours can be referred to *Professional Persons Environmental Consultative Committee Practice Note PN 1/24 Minimizing Noise from Construction Activities* ("ProPECC PN1/24").

Table 3-1 Construction Noise Criteria for Non-Restricted Hours

NOISE SENSITIVE USE	$L_{eq\ (30min)}$ NOISE CRITERIA BETWEEN 0700 AND 1900 ON ANY DAY NOT BEING A SUNDAY OR GENERAL HOLIDAY
All domestic premises Temporary housing accommodation Hostels Convalescences homes Homes for the aged	75 dB(A)

NOISE SENSITIVE USE	$L_{eq\ (30min)}$ NOISE CRITERIA BETWEEN 0700 AND 1900 ON ANY DAY NOT BEING A SUNDAY OR GENERAL HOLIDAY
Places of public worship Courts of law Hospitals and medical clinics	70 dB(A)
Educational institutions (including kindergartens and nurseries)	70 dB(A) (or 65 dB(A) during examination)

3.1.5 For fixed plant noise during operation phase, the requirements of IND-TM shall be complied with. Table 2 of IND-TM stipulates the day, evening and night-time Acceptable Noise Levels ("ANLs") for Noise Sensitive Receivers ("NSRs") according to the corresponding Area Sensitive Rating ("ASR"), which is determined by Influencing Factors ("IFs") in accordance with the IND-TM. These are summarised in **Table 3-2**.

Table 3-2 Acceptable Noise Levels for Fixed Noise Source

TIME PERIOD	ANL, dB(A)		
	ASR "A"	ASR "B"	ASR "C"
Day (0700 to 1900 hours)	60	65	70
Evening (1900 to 2300 hours)			
Night (2300 to 0700 hours)	50	55	60

Hong Kong Planning Standards & Guidelines ("HKPSG")

3.1.6 The noise criteria for planned fixed source shall follow the requirements of Table 4.1 of Chapter 9 of HKPSG:

- 5 dB(A) below the appropriate ANLs shown in Table 2 of IND-TM, and
- The prevailing background noise levels

3.1.7 As recommended in Table 4.1 of Chapter 9 Environment of HKPSG, standards for road traffic noise in terms of $L_{10(1\text{-}hr)}$ for the following uses relying on opened windows for ventilation are shown in **Table 3-3**.

Table 3-3 HKPSG Standards for Road Traffic Noise Standards

USES	NOISE STANDARDS $L_{10(1\text{-}Hr)}$, dB(A)
All domestic premises including temporary housing accommodation	70
Hotels and hostels	70
Offices	70
Educational institutions including kindergartens, child care centres and all others where unaided voice communication is required	65
Places of public worship and courts of law	65
Hospitals, clinics, convalescences and residential care homes for the elderly, - diagnostic rooms, - wards	55

3.2 Review of Noise Impacts

Construction Phase

3.2.1 Sources of noise during construction and demolition will be arising from various construction and demolition activities, particularly with the use of Powered Mechanical Equipment ("PME"). The construction and demolition works will be carried out during non-restricted hours, i.e. daytime between 07:00 and 19:00 of any day not being Sunday or general holiday. As such, construction noise will be generated during non-restricted hours only.

3.2.2 Given the mitigation measures described in **paragraph 3.5.1** would be implemented as far as practicable, the noise generated from the construction of the Project is not anticipated to pose any unacceptable noise impacts on the NSRs nearby.

Operation Phase

Identification of Noise Sensitive Receivers

3.2.3 For the on-site operation noise (i.e. industrial noise), the first layer Noise Sensitive Receivers ("NSRs") within 300m from the site boundary were identified. All identified NSRs are existing NSRs and no planned NSR has been identified within the assessment area. NSRs located within 100m from the industrial zone are considered as ASR "C", and NSRs located between 100m and 250m from the industrial zone are considered as ASR "B". The representative NSRs are summarised in **Table 3-4** below and shown in **Figure 3-1**.

Table 3-4 Representative NSRs

NSR NO.	DESCRIPTION	NO. OF STOREYS	DISTANCE FROM THE SITE, m	ASR
IN1	Village House	2	63	C
IN2	Village House No. 507, Ping Che	3	52	C
IN3	Village House No. 505, Ping Che	3	77	C
IN4	Guadalupe Missioners No. 508, Ping Che	1	40	C
IN5	Village House	2	50	C
IN6	Village House No. 40, Ping Che	3	100	C
IN7	Village House No. 171, Ping Che	3	125	B

3.2.4 The ASR and ANLs adopted in this EA report are used for assessment purpose only, they should not bind the Noise Control Authority's decision in determining the noise criteria based on the legislation and practices being in force, and contemporary conditions/ situations of adjoining land uses.

Prevailing Background Noise

3.2.5 Background noise monitoring was previously conducted by Westwood Hong & Associates Ltd ("WHA") (Reference No. 22505-N2) for the Planning Application No. A/NE-TKL/728 which is the application for the adjoining CBP, as mentioned in **paragraph 2.4.12**. As the NSRs identified for this assessment are similar to those of the assessment done by WHA, the background noise levels from their assessment could be adopted for this assessment.

3.2.6 Locations BG1, BG2 and BG3 were selected to conduct the background noise monitoring throughout the entire proposed operation hours (i.e. 0700 to 2300) during the weekday under free-field condition. BG1 is located outside IN3. The major noise source affecting BG1 is due to the unnamed haul road which is considered to be comparable to that at IN1 to IN5. BG2 is located outside IN6and will represent the background noise at IN6 as they have similar environs and the major noise source id sue to the unnamed access road. BG3 is located outside IN7 and will represent the background noise at IN7 as they have similar environs and the major noise source is due to the unnamed access road. The location of the background noise monitoring locations is shown in **Figure 3-1**.

3.2.7 Sound level meter (i.e. manufacturer: Ono Sokki) was used for the noise measurement, before and after the noise measurement. Noise calibration was conducted by using Noise Calibrator Type 4231 (i.e. manufacturer: Brüel and Kjær) and the calibration levels difference was within 1.0dB(A).

Noise Criteria

3.2.8 As discussed in **paragraph 3.2.3**, the ASR of all identified NSRs is "C", except for IN7 which is considered ASR "B". The noise criteria for the planned fixed noise source were determined with reference to ANL-5 and the measured background noise level, as shown in **Table 3-5**.

Table 3-5 Noise Criteria of Noise from Fixed Sources of Identified Representative NSRs

NSR NO.	DESCRIPTION	TIME PERIOD	MEASURED BACKGROUND NOISE LEVEL $L_{90(1HOUR)}$, dB(A)	ANL - 5, dB(A)	NOISE CRITERIA, dB(A)
IN1	Village House	Day	66	65	65
		Evening	65	65	65
IN2	Village House No. 507, Ping Che	Day	66	65	65
		Evening	65	65	65
IN3	Village House No. 505, Ping Che	Day	66	65	65
		Evening	65	65	65
IN4	Guadalupe Missioners No. 508, Ping Che	Day	66	65	65
		Evening	65	65	65
IN5	Village House	Day	66	65	65
		Evening	65	65	65
IN6	Village House No. 40, Ping Che	Day	66	65	65
		Evening	65	65	65
IN7	Village House No. 171, Ping Che	Day	61	60	60
		Evening	60	60	60

Notes:

1. The background noise level was measured at free-field condition. Thus, a façade correction of +3 dB(A) was applied.

Potential Noise Impacts

3.2.9 The plant will be in operation between 0700 and 2300 per day. Based on the normal practice of CBP, unloading of aggregates/cement/PFA/GGBS/admixture will not be carried out at the same time with the process of concrete collection. An aggregate overhead bin will be provided for aggregate storage, which can store enough aggregates for concrete production during the evening. Therefore, no aggregate truck for delivery of aggregates, or use of loader for transporting aggregates from the aggregate storage area to the ground hopper, is required during the evening. As such, the major fixed noise sources listed below have been considered under two scenarios in daytime (i.e. 0700 – 1900) and one scenario in the evening (i.e. 1900 – 2300). The proposed noise sources are shown in **Figure 3-2**.

Day time Operation

Scenario 1 – Concrete collection:

- Concrete Mixer (electric) (1 no./30 mins; % on time: 100.0%)
- Conveyor / Screw Conveyors (3 nos./30 mins; % on time: 100.0%)
- Water / Admixture Pump (1 no./30 mins; % on time: 100.0%)
- Air Compressor (Stationary) (2 nos./30 mins; % on time: 100.0%)
- Filter Fan (Mixing unit) – Blower (1 no./30 mins; % on time: 100.0%)
- Water Cool Chiller (1 no./30 mins; % on time: 100.0%)
- Water Pump (Water Cool Chiller) (1 no./30 mins; % on time: 100.0%)
- Concrete Truck (Concrete Collection) (6 nos./30 mins; % on time: 16.7%)
- Loader (1 no./30 mins; % on time: 16.7%)
- Concrete Truck (12 nos./hour)

Scenario 2 – Unloading of aggregates/cement/PFA/GGBS/admixture:

- Concrete Mixer (electric) (1 no./30 mins; % on time: 100.0%)
- Conveyor / Screw Conveyors (3 nos./30 mins; % on time: 100.0%)
- Air Blower (mounted on unloading tank) (2 nos./30 mins; % on time: 100.0%)
- Water / Admixture Pump (1 no./30 mins; % on time: 100.0%)
- Air Compressor (Stationary) (2 nos./30 mins; % on time: 100.0%)
- Filter Fan (Mixing unit) – Blower (1 no./30 mins; % on time: 100.0%)
- Filter Fan (Silo) – Blower (2 nos./30 mins; % on time: 100.0%)
- Pump (mounted on unloading tank) (2 nos./30 mins; % on time: 100.0%)
- Water Cool Chiller (1 no./30 mins; % on time: 100.0%)
- Water Pump (Water Cool Chiller) (1 no./30 mins; % on time: 100.0%)
- Aggregate Truck (10 nos./hour)
- Cement/PFA/GGBS/Admixture Tanker (2 nos./hour)

Evening Operation

- Concrete Mixer (electric) (1 nos./30 mins; % on time: 100.0%)
- Conveyor / Screw Conveyors (3 nos./30 mins; % on time: 100.0%)
- Water / Admixture Pump (1 no./30 mins; % on time: 100.0%)
- Air Compressor (Stationary) (2 nos./30 mins; % on time: 100.0%)
- Filter Fan (Mixing unit) – Blower (1 nos./30 mins; % on time: 100.0%)
- Water Cool Chiller (1 no./30 mins; % on time: 100.0%)
- Water Pump (Water Cool Chiller) (1 no./30 mins; % on time: 100.0%)
- Concrete Truck (Concrete Collection) (2 nos./30 mins; % on time: 16.7%)
- Concrete Truck (4 nos./hour)

3.2.10 The lists of equipment, utilisation rate and number of items detailed in **Appendix E** have been confirmed by the Applicant and it is considered to be practicable for business-as-usual operation of CBP. Loader will be used only if emergency case to transport aggregate from storage area to hopper. Vehicle washing facility will be applied on site during operation, however, the operation time of this facility is rather short each time (i.e. approximately 1 minutes for each vehicle) and its function is not continuous. Aggregate will be stored in aggregate storage areas, which is served as an emergency use. No action will be taken on the aggregates storage except whenever there are insufficient aggregates provided for concrete production. As a result, insignificant noise will be generated due to the occasionally use of the aggregate storage. In conclusion, noise impacts that may be generated from aggregate storage, vehicle washing and parking are considered insignificant and negligible.

3.2.11 The existing CBP will cease operation once the Proposed Development commences operation. As such, there will not be any overlap in operation between the existing the new CBP. There will also be no overlap between construction of the new CBP and demolition of the existing CBP. Hence. Cumulative industrial noise impact during construction and operation phases of the new CBP is not required.

3.2.12 The number of concrete lorry mixers was assumed based on the normal operation practice limitation, that approximate 5 minutes were needed for filling up 1 concrete lorry mixer with newly produced concrete. Thus, the 6 concrete lorry mixers per mixer per 30 minutes per production line as the maximum allowed traffic flow were assumed based on the previous experiences of CBP operator under realistic condition. As mentioned in **Paragraph 3.2.9** above, the maximum of 12 concrete lorry mixers per mixer per hour for the maximum concrete production rate of 100m^3 per hour is practical in terms of business operation in the daytime which has been confirmed by the Applicant. Moreover, there will be no queuing of trucks due to the Proposed Development as reported in the Traffic Impact Assessment ("TIA") Report attached to the Planning Statement for this Planning Application.

3.3 Noise Impact from Industrial Noise

Assessment Methodology

3.3.1 Although the Proposed Development is an industrial use and the noise impact therefore references IND-TM, the characteristics of concrete batching, involving concrete lorry mixer and concrete mixer, are also similar to construction activities. Therefore, the noise impact is proposed to be estimated in accordance with the guidelines given in GW-TM. As such, all items of PME, except truck movement, have been considered at the proposed positions. While due to the long travelling distance of conveyor/ screw conveyor, as a conservative approach, the closest distance between conveyor/ screw conveyor and each NSRs has be adopted and assessed based on the following standard acoustic formula:

$$SPL = SWL - DC + FC$$

Where:

SPL – Sound Pressure Level at receiver, dB(A)

SWL – Sound Power Level of PME, dB(A)

DC – Distance Correction, dB(A) (DC = 20 × log10(D) + 8)

D – Horizontal distance between NSR and notional source, m

FC – Façade Correction of +3 dB(A)

3.3.2 Sound Power Levels ("SWLs") of PME are obtained from Table 3 of GW-TM and from Sound Power Levels of Other Commonly Used PME available on EPD's website. Reference is also made to the British Standard 5228 Code of Practice for Noise and Vibration Control on Construction and Open Site – Part 1: Noise amended in February 2014 (BS 5228-1:2009+A1:2014). The "Aggregates Truck" to be adopted during the operation stage is lorry, which will be used to transport raw materials to the Site. Its weight is between 5.5 tonne and 38 tonnes. Thus, the SWL of 105dB(A) with reference to EPD's "Sound power levels of other commonly used PME" has been adopted in the calculation.

3.3.3 A water cool chiller with compressor and water pump is proposed for the Proposed Development. As advised by the Applicant, the compressor will be installed inside the plant room. Considering the fixed noise impact from the enclosed compressor is minimal, it is excluded from the assessment. The SWL of the water cool chiller is calculated and shown in **Table 3-6**, which is referenced from the catalogue as shown in **Appendix E**.

Table 3-6 Sound Power Level of the Water Cool Chiller

ITEM	SPL, dB(A)	QUANTITY	MEASURED DISTANCE, m	SWL, dB(A)
Water Cool Chiller	80	1	3	97.5

Notes:

1. The SWL of the water cool chiller is calculated by formula: SWL = SPL × 20 × log10(D) + 8, where D is the measured distance i.e. 3m.
2. According to the catalogue, the measured SPL is between 70 dB(A) and 80 dB(A). For conservative approach, 80 dB(A) is adopted as the worst-case scenario for the assessment.

3.3.4 There will be no tonal noise/ impulsive noise occurring within the CBP and there will be no intermittent noise because of no piling, concrete breaking or similar process. As such, no corrections for tonality, impulsiveness and intermittency are considered to be required.

3.3.5 With regard to the screening effect, a 10 dB(A) reduction was adopted for NSRs without direct line-of-sight to the PME whereas a 5 dB(A) reduction was adopted for NSRs without direct line-of-sight only to the "noisy" part of the PME. For IN4, there is a more than 3m height solid wall and a proposed 4m noise barrier located between the mitigated PME and the receptor location. IN6 (i.e. at 14.5mPD) and IN7 (i.e. at ~14mPD) are located at a lower elevation than the Site (i.e. ~18.4mPD), and direct line-of-sight from IN6 and IN7 to the Site are blocked by a 4m proposed noise barrier and some existing buildings structures.

3.3.6 During the operation of the CBP, Cementitious Materials / Admixture tanker and aggregate truck will not enter the Site at the same time with concrete truck during the daytime, and no Cementitious Materials / Admixture tanker and aggregate truck will enter the Site during the evening time, i.e., 19:00 to 23:00.

Concurrent Project

3.3.7 As mentioned in **paragraph 2.4.12**, the adjoining CBP is a concurrent project. Hence, the cumulative noise impact from the adjoining CBP and the Proposed Development will be considered.

Assessment Results

3.3.8 The predicted cumulative noise impact results are summarised in **Table 3-7** and detailed in **Appendix E**. The assessment results of industrial noise ranged from 55 dB(A) to 65 dB(A) for both scenarios during daytime and from 55 dB(A) to 65 dB(A) for evening operation.

Table 3-7 Predicted Cumulative Fixed Noise Impact Level at Identified Representative NSRs During Operation Phase

NSR NO.	TIME PERIOD	SCENARIO	NOISE CRITERIA	PREDICTED NOISE LEVEL IN $L_{eq(30min)}$, dB(A)	EXCEEDANCE
IN1	Day	1	65	62	No
		2	65	59	No
	Evening	N/A	65	59	No
IN2	Day	1	65	64	No
		2	65	62	No
	Evening	N/A	65	62	No
IN3	Day	1	65	63	No
		2	65	62	No
	Evening	N/A	65	62	No
IN4	Day	1	65	62	No
		2	65	61	No
	Evening	N/A	65	61	No
IN5	Day	1	65	65	No
		2	65	65	No
	Evening	N/A	65	65	No

NSR NO.	TIME PERIOD	SCENARIO	NOISE CRITERIA	PREDICTED NOISE LEVEL IN $L_{eq(30min)}$, dB(A)	EXCEEDANCE
IN6	Day	1	65	58	No
		2	65	57	No
	Evening	N/A	65	57	No
IN7	Day	1	60	55	No
		2	60	55	No
	Evening	N/A	60	55	No

3.4 Noise Impact from Off-Site Traffic Noise

Assessment Methodology

3.4.1 The traffic noise impact assessment will be carried out in two scenarios, "Before" and "After" for AM peak and PM Peak, in order to compare the baseline noise level from traffic flow due to the Proposed Development. As the Proposed Development is expected to operate in 2025 for a period of 5 years, traffic data in Year 2030 has been adopted in the assessment as the worst-case scenario. Traffic forecasts provided by the Project Traffic Consultant were adopted to assess the off-site traffic noise impact. Detailed peak hour traffic forecasts for the assessment year of 2030 is provided in **Appendix F**.

Assessment Results

3.4.2 The HKPSG assessment criteria for domestic premises is 70 dB(A). Besides, contribution of less than 1.0 dB(A) is considered insignificant in accordance with the *Road Traffic Noise Impact Assessment under the Environmental Impact Assessment Ordinance* ("GN 12/2023"). The predicted road traffic noise levels and contribution are summarised in **Table 3-8**, **Table 3-9** and shown in **Appendix G**.

Table 3-8 Summary of Traffic Noise Contribution of the Plant in 2030 (AM Peak)

Rd_21	Ng Chow Road	55.0	55.0	No	0.0	< 1.0

3.4.3 The contribution of the Plant on Traffic Noise at AM peak and PM peak in 2030 is 0.0 dB(A). Results show that the additional traffic flow generated from the operation of the Proposed Development would not cause significant contribution (i.e. more than 1.0 dB(A)) to the traffic noise level at each road segment) and are acceptable in environmental view. As such, adverse traffic noise impact arising from the operation of the Proposed Development is not anticipated.

3.5 Mitigation Measures

Construction Phase

3.5.1 Construction should be carried out during non-restricted hours as far as practicable. The mitigation measures recommended in ProPECC PN 1/24 should be implemented where applicable. In addition, the following measures and on-site practices are recommended in order to minimise the potential construction noise impacts as far as practicable:

- The Contractor shall devise, arrange methods of working and carry out the Works in such a manner so as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these methods are implemented
- Quality Powered Mechanical Equipment (QPME)and quieter construction methods should be adopted as far as practicable
- Use of Non-percussive pile driving methods such as hydraulic press-in method, vibration or jacking method for installing or extracting sheet piles as far as practicable
- Use of Non-percussive equipment such as hydraulic crusher, sawing, coring machines etc. for demolition and concrete breaking work
- Close all hoods, cover panels and inspection hatches of powered mechanical plant such as generators, air compressors etc. during operation
- Provide noise dampening materials inside and outside refuse chutes during building construction
- Fit mufflers or silencers, and dampening layer with steel collars to hand-held pneumatic breakers
- Use of non-explosive chemical expansion agents instead of explosive chemicals or expansive compounds
- Use of prefabricated structure / sections to replace in-situ construction to reduce the amount of mechanical equipment used on site
- Use of self-compacting concrete (without the aid of a vibrator e.g. poker for compaction) for in-situ concreting
- Noisy equipment and noisy activities should be located as far away from the NSRs as far as practicable
- Provide an acoustic screen or enclosure shield the public or NSR from the noisy activities

3.5.2 If PME is required for any construction work during restricted hours, a CNP shall be applied for as specified in the NCO. The GW-TM can be referred to for the noise criteria and assessment procedures for obtaining a CNP.

3.5.3 In addition, the EPD's Recommended Pollution Control Clauses ("RPCC") for Construction Contracts should be incorporated in the relevant works contract. The RPCC are generally good engineering practices to minimize inconvenience and environmental nuisance to nearby residents and other sensitive receivers. The general requirements as summarised as follows:

- The Contractor shall observe and comply with the NCO and its subsidiary regulation.
- The Contractor shall ensure that all plant and equipment to be used on the Site are properly maintained in good operating condition and noisy construction activities shall be effectively sound-reduced by means of silencers, mufflers, acoustic linings and shields, acoustic sheds or screen or other means, to avoid disturbance to nearby noise sensitive receivers.
- For carrying out any construction work other than percussive piling during the time period from 0700 to 1900 hours on any day not being a general holiday (including Sundays), the Contractor shall comply with the following requirements.
  - The noise level measured at 1m from most affected external façade of the nearby noise sensitive receivers from the construction works alone during any 30-minute period shall not exceed an equivalent sound level ("Leq") of 75dB(A).
  - Should the limits stated in the above be exceeded, the construction shall stop and shall not recommence until appropriate measures acceptable to the Engineer that are necessary for compliance have been implemented.
  - The Contractor shall adopt, where necessary and practicable, the use of quieter construction equipment and/or methods when carrying out the construction works, including demolition works, foundation works, site formation works, road opening works during restricted hours.
- Before commencement of any work, the Engineer may require the methods of working, plant equipment and sound-reducing measures to be used on the Site to be made available for trial demonstration inspection and approval to ensure that they are suitable for the project.
- The Contractor shall devise, arrange methods of working and carry out the Works in such a manner so as to minimise noise impacts on the surrounding environment, and shall provide experienced personnel with suitable training to ensure that these methods are implemented.
- The Contractor shall, when necessary, apply for a construction noise permit in accordance with the Noise Control (General) Regulations prior to the commencement of the relevant part(s) of the works, display the permit as required and provide a copy to the Engineer.
- Measures that are to be taken to protect adjacent noise sensitive receivers, if necessary, shall include, but not be limited to, adequate noise barriers. The barriers shall be of substantial construction and designed to reduce transmission of noise. The location and details of the barriers shall be submitted to the Engineer for approval before works commence adjacent to NSRs.

3.5.4 With the implementation of the aforementioned mitigation measures, adverse construction noise impact is not anticipated.

Operation Phase

3.5.5 The design of the Proposed Development should ensure that the potential industrial noise impacts at the NSRs shall comply with the relevant criteria. Measures as summarised in **Table 3-10** will be considered in the plant design to avoid noisy activities during the operation of the CBP. As such, unacceptable industrial noise impact is not anticipated.

Table 3-10 Proposed Operation Phase Noise Mitigation Measures

NOISE SOURCE	PROPOSED MITIGATION MEASURES
Concrete mixer (electric)	Enclosure (minimum surface density of 10kg/m^2)
Conveyor / Screw Conveyors	Semi-enclosure (minimum surface density of 10kg/m^2)
Water / Admixture Pump	Semi-enclosure (minimum surface density of 10kg/m^2)
Pump (silo)	Semi-enclosure (minimum surface density of 10kg/m^2)
Filter Fan (mixing unit) - blower	Semi-enclosure (minimum surface density of 10kg/m^2)
Filter Fan (silo) - blower	Semi-enclosure (minimum surface density of 10kg/m^2)
Pump (mounted on unloading tank)	Semi-enclosure (minimum surface density of 10kg/m^2)
Truck (Concrete Collection)	Semi-enclosure (minimum surface density of 10kg/m^2), with acoustic curtain installed at the entrance/exit
On-site traffic	A proposed 4m barrier (minimum surface density of 10kg/m^2) at the site boundary (northern, eastern and southern boundary)

3.6 Conclusion

3.6.1 During the construction phase of the Proposed Development, with the implementation of the noise mitigation measures recommended in **paragraph 3.5.1**, no adverse noise impact is anticipated.

3.6.2 Fixed plant noise is the major potential noise source during the operational phase. Quantitative assessment for the fixed plant noise sources were conducted. The predicted noise level during operation ranges from 55 dB(A) to 65 dB(A) at both Scenarios 1 and 2 for daytime and from 55 dB(A) to 65 dB(A) during evening operation, which indicated that all the noise levels at NSRs would comply with the relevant noise criteria.

3.6.3 Traffic noise impact assessment has been carried out to identify the contribution arising from the additional traffic flow generated during the operation phase. Results show that the additional traffic flow would not cause significant contribution to the traffic noise level, it is acceptable in environmental view. No adverse traffic noise impact is anticipated.

3.6.4 Overall, therefore, there will be no adverse noise impact during the construction and operation phases of the Proposed Development.

Figure 3-1 Location of Representative NSRs and Background Noise Measurement for Industrial Noise

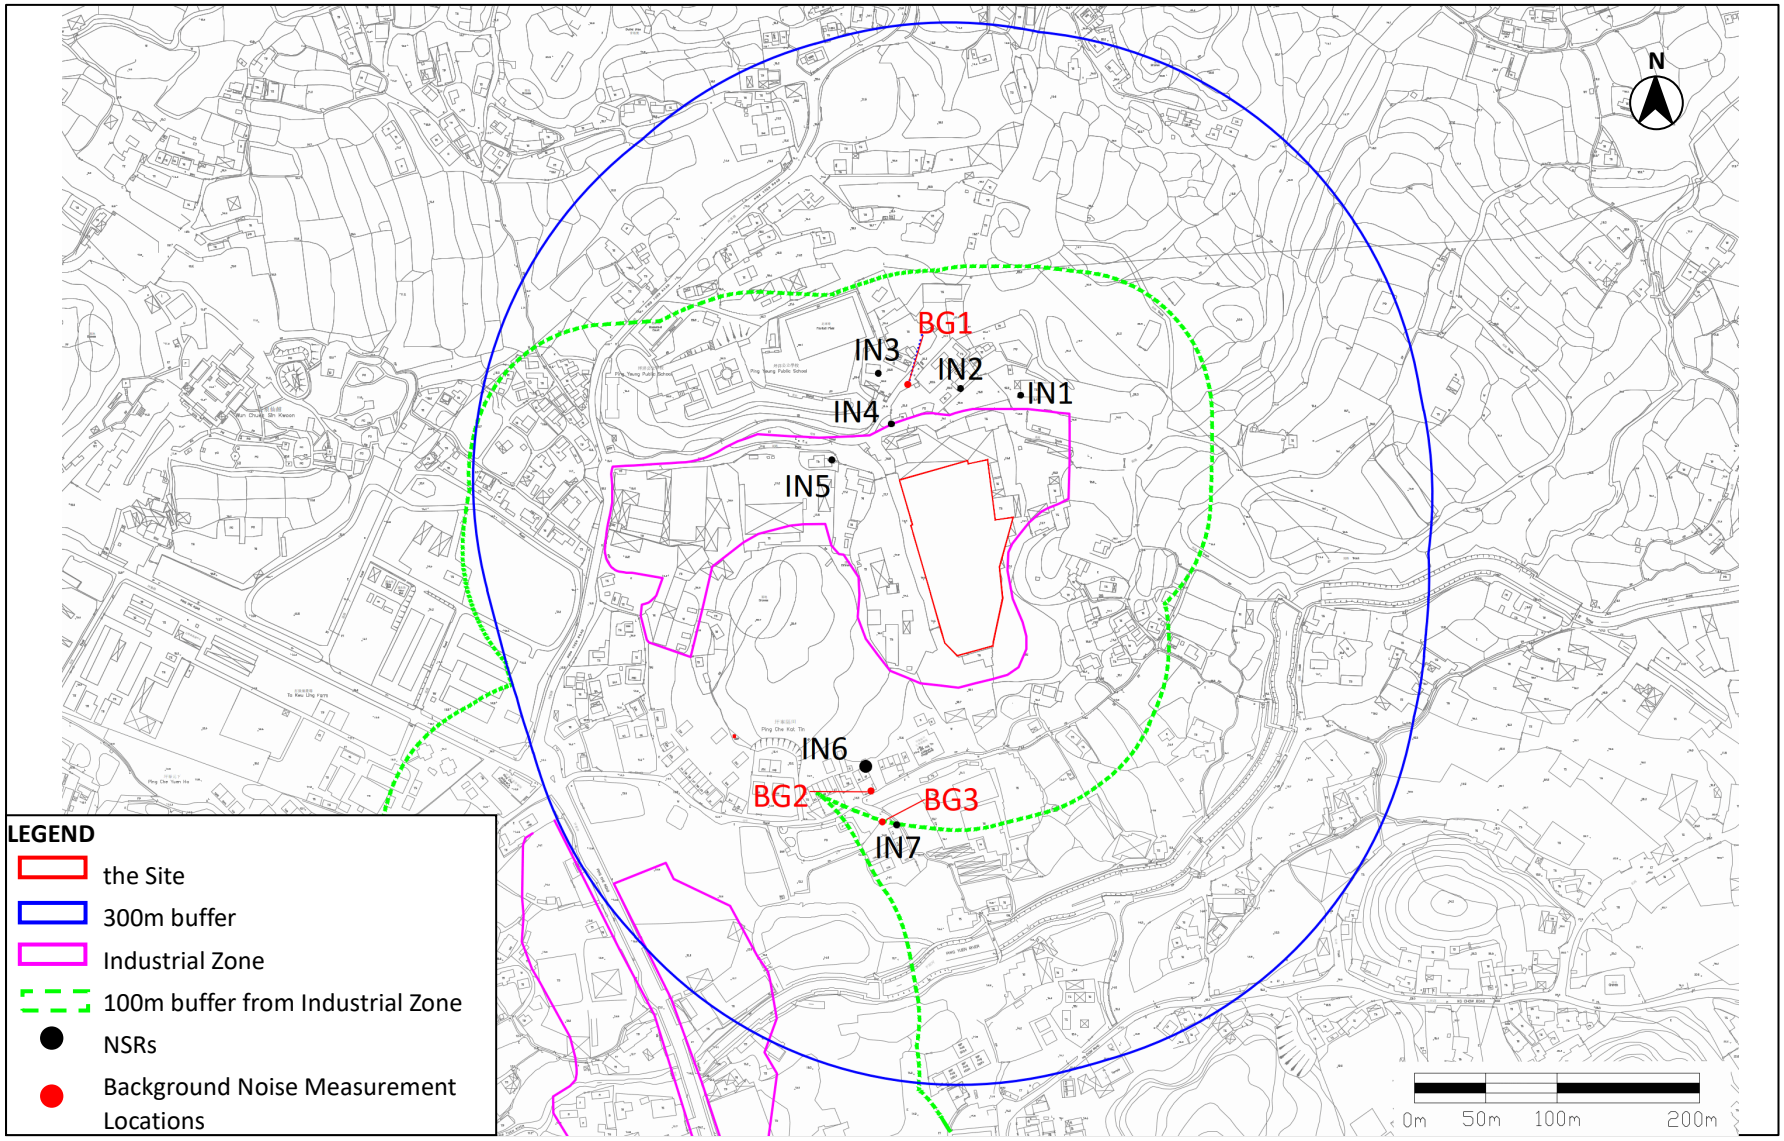

Figure 3-2 Locations of Proposed Noise Sources and Nose Barrier

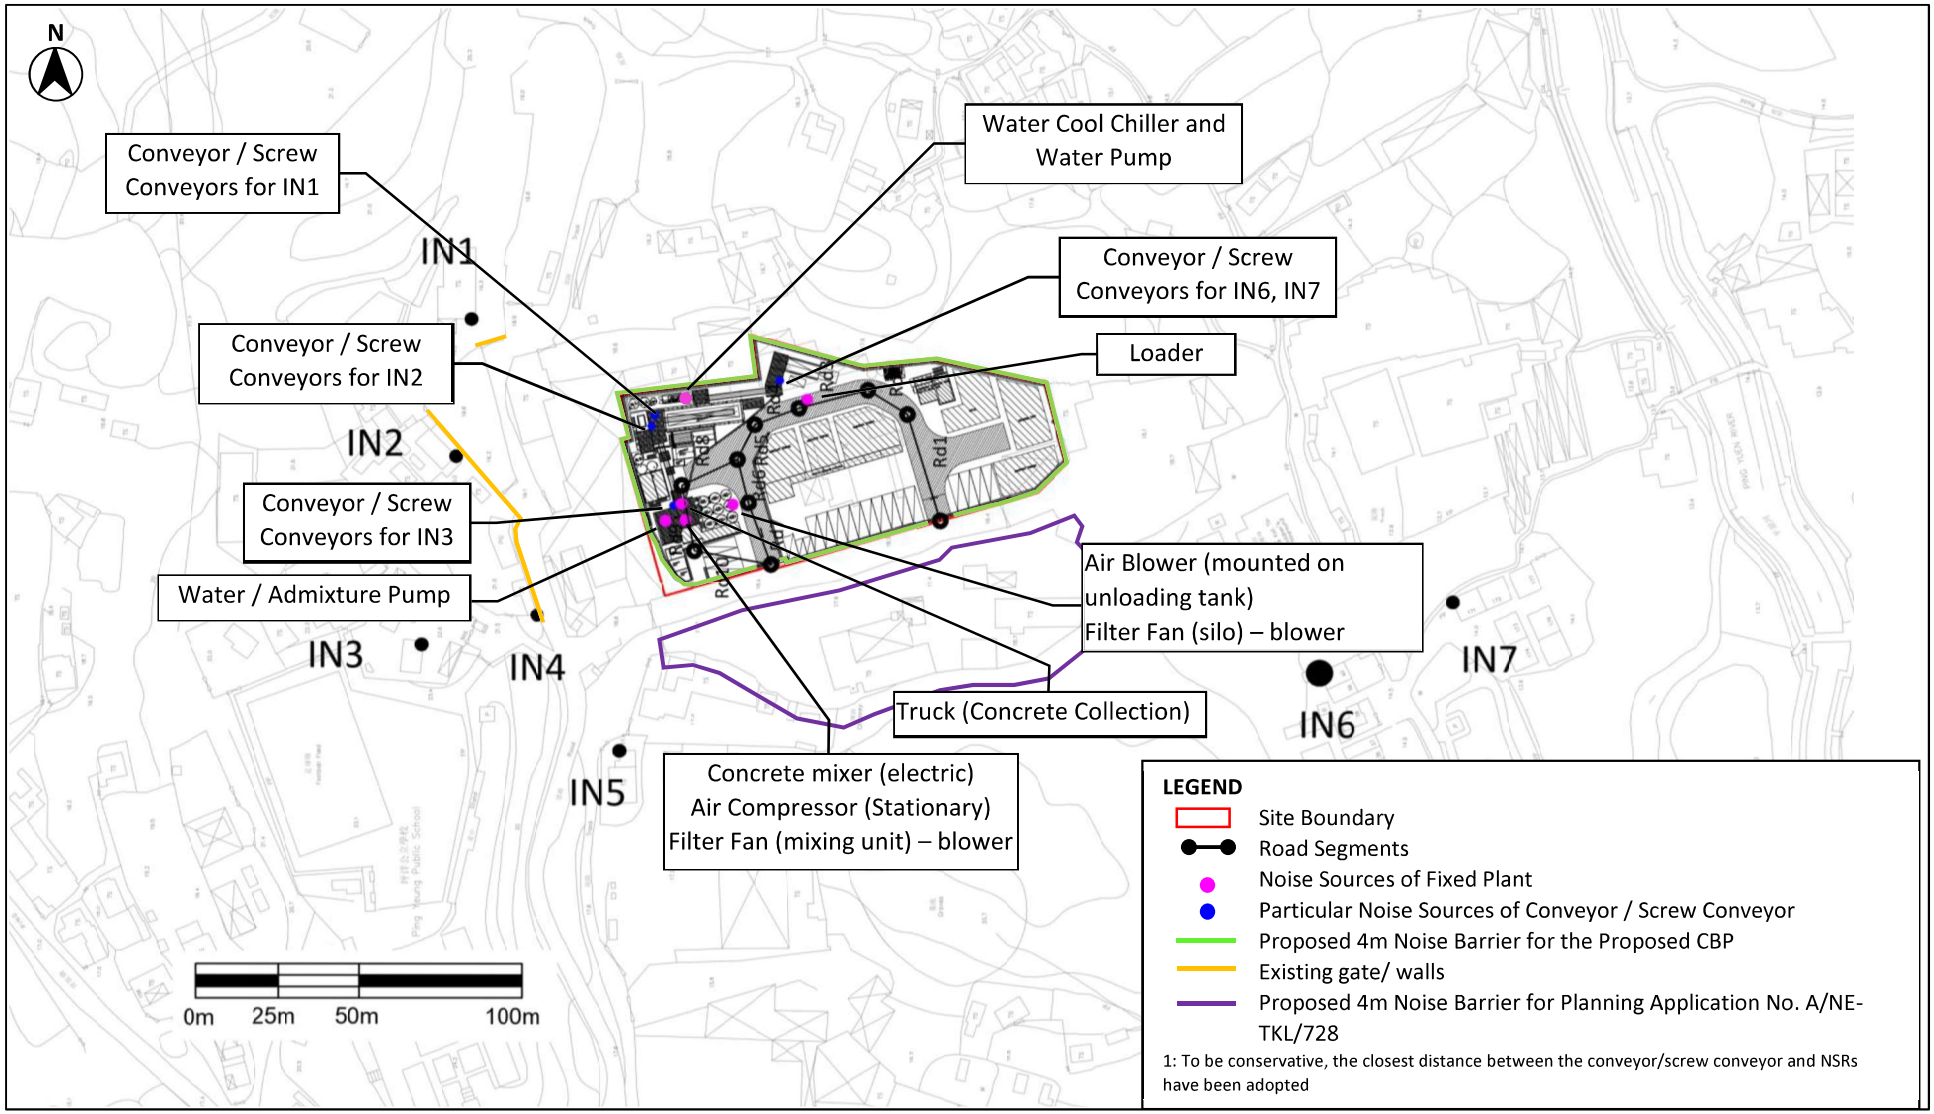


4 WATER QUALITY

4.1 Environmental Legislation and Standards

Water Pollution Control Ordinance (Cap. 358)

4.1.1 The *Technical Memorandum – Standards for Effluent Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters* ("WPCO-TM") is issued under Section 21 of the *Water Pollution Control Ordinance* ("WPCO"). All discharges into government sewerage systems, marine and inland waters are required to comply with the standards stipulated in the WPCO-TM. WPCO also provides the main statutory framework for the protection and control of water quality in Hong Kong, such as setting Water Quality Objectives ("WQOs") for each of the ten Water Control Zones (WCZs").

Construction Site Drainage, ProPECC PN2/24

4.1.2 With reference to *Professional Persons Environmental Consultative Committee ("ProPECC") Practice Note Construction Site Drainage* ("ProPECC PN2/24"), various guidelines for the handling and disposal of construction site discharges are included. The guidelines include the use of sediment traps, wheel washing facilities for vehicles leaving the Site, adequate maintenance of drainage systems to prevent flooding, overflow, sewage collection and treatment, and comprehensive waste management (collection, handling, transportation, and disposal) procedures.

Drainage Plan subject to Comment by the Environmental Protection Department, ProPECC PN1/23

4.1.3 With reference to *ProPECC Practice Note Drainage Plan subject to Comment by the Environmental Protection Department – Building (Standards of Sanitary Fitments, Plumbing, Drainage Works and Latrines) Regulations* ("ProPECC PN1/23"), various guidelines for the pollution control for discharge to storm drains and foul sewers, such as the use of grease trap for wastewater from the restaurant kitchen, the use of silt removal facilities for open surface channel led to stormwater drains, etc., are included. The guidelines also include the requirements for submission of drainage plans.

Protection of Natural Streams/Rivers from Adverse Impacts Arising from Construction Works, ETWB TCW No. 5/2005

4.1.4 Various procedures, guidelines and precautionary mitigation measures were circulated in *Protection of Natural Streams/Rivers from Adverse Impacts Arising from Construction Works* ("ETWB TCW No. 5/2005") to reinforce existing measures for protection of natural streams/rivers from construction works.

4.2 Identification of Water Control Zone ("WCZ") and Water Sensitive Receiver ("WSR")

4.2.1 The Site is situated in Deep Bay WCZ. With reference to Annex 14 of the *Technical Memorandum on Environmental Impact Assessment Process* ("EIAO-TM"), one watercourse to the south of the Site was identified as a potential WSR within 500m study area through desktop study and using topographic map of GeoInfo Map. The identified WSRs are

summarised in **Table 4-1** and shown in **Figure 4-1**. Potential water quality impacts during construction and operation phase are discussed below.

Table 4-1 Identified Water Sensitive Receivers

WSRs ID	DESCRIPTION	TYPE	STATUS (ACTIVE/INACTIVE)	DISTANCE FROM THE SITE, m
W1	Watercourse to the south of the Site	Natural watercourse	Active	180

4.3 Review of Water Quality Impacts

Construction Phase

4.3.1 Muddy runoff from the Site may be generated during construction phase, especially during the rainy season.

4.3.2 Wash water from vehicles and equipment; silt from any on-site stockpiles of soil, cement and grouting materials; and spillage of fuels, oil and lubricants from construction/reinstatement vehicles and plant may generate water quality impacts. If these pollution sources are not properly controlled, it would lead to increased amounts of suspended solids, grease and oil, pH, Biochemical Oxygen Demand ("BOD"), etc. in the drainage system.

4.3.3 There is also the issue of sewage generated by construction workers on-site.

4.3.4 The watercourse to the south of the Site is located downhill from the Proposed Development. However, wastewater from construction of the Proposed Development will be properly handled before discharge. Therefore, with implementation of the recommended mitigation measures and good practices listed below, adverse water quality impacts from the Indicative Development Scheme on the WSR are not anticipated.

Operation Phase

4.3.5 Water sprinklers and wheel washing facilities will be installed for dust suppression. The water sprinklers and wheel washing facilities will be a major source of surface runoff as the entire site will be paved. The plant management should avoid excessive wetting of the ground to minimise generation of surface runoff. All the surface runoff will be collected by the peripheral drainage system and diverted to sedimentation tank or silt removal prior to on-site reuse.

4.3.6 Another major source of sewage/wastewater during operation phase would be sewage and grey water from toilets used by on-site staff. A separate Sewerage Impact Assessment ("SIA") has concluded that there will be no adverse sewerage impact arising from the Proposed Development. Sewage holding tanks with sufficient capacity will be provided for temporary storage and following tanker-away for off-site disposal in a Sewage Treatment Facility or drains to nearby sewerage system at Manhole FMH1033261as recommended in the SIA.

4.3.7 A Drainage Proposal has been prepared. As mentioned in the Drainage Proposal, the stormwater runoff will be properly diverted to existing manhole STMH_T1 and then to the SMH1003271. Two 70 tonnes water tanks will be equipped on site to store the surplus runoff temporarily. In order to reduce pollution due to runoff, silt/sand traps should be

provided for the drainage systems of open areas in accordance with ProPECC PN1/23. In addition, Best Management Practices for stormwater discharge shall be incorporated to minimise stormwater pollution arising from the Proposed Development.

4.3.8 As mentioned in **paragraph 4.3.4,** the identified WSR is located at downhill from the Site. Nonetheless, with implementation of the recommended mitigation measures and good site practices in **Section 4.4**, adverse water quality impacts on the WSR from the operation of the Proposed Development are not anticipated.

4.4 Mitigation Measures

Construction Phase

4.4.1 During construction phase, adequate capacity and number of portable toilets with adequate frequency for offsite disposal to be supplied, maintained and emptied by a licensed collector should be provided for construction workers.

4.4.2 The construction contractor shall follow good site practice and be responsible for providing, implementing and maintaining the mitigation measures as specified in ProPECC PN 2/24 for construction site drainage. The key requirements are as follows:

- Surface run-off from construction sites should be discharged into storm drains via adequately designed sand/silt removal facilities such as sand traps, silt traps and sediment basins. Temporary construction drainage or earth bunds or sand bag barriers should be provided on site to properly direct storm water to such silt removal facilities. Perimeter channels at site boundaries should be provided where necessary to intercept storm run-off from outside the Site so that it will not wash across the Site. Catchpits and perimeter channels should be construction in advance of site formation works and earthworks.
- Silt removal facilities, channels and manholes should be maintained and the deposited silt and grit should be removed regularly, at the onset of and after each rainstorm to ensure that these facilities are functioning properly at all times.
- Construction works should be programmed to minimise soil excavation works in rainy reasons (generally from April to September). If soil excavation works could not be avoided in these months or at any time of year when rainstorms are likely, for the purpose of preventing soil erosion, temporarily exposed slope surfaces should be covered (e.g. by tarpaulin), and temporary access roads should be protected by crushed stone or gravel, as excavation proceeds. Intercepting channels should be provided (e.g. along the crest) to prevent storm runoff from washing across exposed soil surfaces. Arrangements should always be in place to ensure that adequate surface protection measures can be safely carried out well before the arrival of a rainstorm.
- Earthworks final surfaces should be well compacted and the subsequent permanent works or surface protection works should be carried out immediately after the final surfaces are formed to prevent erosion caused by rainstorms. Appropriate drainage like intercepting channels should be provided when necessary.
- Measures should be taken to minimise the ingress of rainwater into trenches. If excavation of trenches in wet seasons is necessary, they should be dug and backfilled in short sections. Rainwater pumped out from trenches should be discharged into storm drains via silt removal facilities.

- Open stockpiles of construction materials (e.g. aggregates, sand and fill material) on sites should be covered with tarpaulin or similar fabric during rainstorms. Measures should be taken to prevent the washing away of construction materials, soil, silt or debris into any drainage system.
- Manholes (including newly constructed ones) should always be adequately covered and temporarily sealed so as to prevent silt, construction materials or debris from getting into the drainage system, and to prevent storm run-off from getting into foul sewers. Discharge of surface run-off into foul sewers must always be prevented in order not to unduly overload the foul sewerage system.
- All vehicles and plant should be cleaned before they leave a construction site to ensure no earth, mud, debris and the like is deposited by them on roads. A wheel washing bay should be provided at every site exit if practicable and wash-water should have sand and silt settled out or removed before discharging into storm water drains. The section of construction road between the wheel washing bay and the public road should be paved to reduce vehicle tracking of soil and to prevent site run-off from entering public road drains.
- Discharge of surface run-off into foul sewers shall be avoided to prevent overloading of the foul sewerage system.
- Any chemical waste such as waste oil should be collected and stored at properly designed chemical waste storage area with reference to the requirements stipulated in the *Waste Disposal Ordinance*.
- Water used in ground boring and drilling during site investigation or rock/soil anchoring should be treated by passing it through a sedimentation tank and re-used on site as far as practicable. Surface runoff shall be discharged in storm drains via silt removal facility as a last resort.
- Construction plants should be sited as far as practicable from watercourses to avoid adverse impact on the surface water.
- Temporary storage area for equipment, chemicals, fuel and other materials should be located away from watercourses as far as practicable.
- Proper shoring shall be implemented in order to avoid soil or mud to flow into nearby watercourses.
- Any service shop and maintenance facilities should be located on hard standings within a bounded area with sumps and oil interceptors. Any vehicle maintenance work or equipment with the potential for leakage and spillage should only be done within areas equipped to control any discharges from leakage and spillage.

4.4.3 In addition, the EPD's RPCC for Construction Contract should be incorporated in the relevant works contract. The RPCC are generally good engineering practice to minimise inconvenience and environmental nuisance to nearby residents and other sensitive receivers. The general requirements are summarised below:

- The Contractor shall observe and comply with WPCO and its subsidiary regulation.
- The Contractor shall carry out the Works in such as manner as to minimise adverse impacts on the water quality during execution of the works. In particular the Contractor shall arrange his method of working to minimise the effects on the water quality within and outside the Site, on the transport routes and at the loading, dredging and dumping areas.

- The Contractor shall follow the practices, and be responsible for the design, construction, operation and maintenance of all the mitigation measures as specified in the ProPECC PN 2/24 "Construction Site Drainage" issued by the Director of Environmental Protection. The design of the mitigation measures shall be submitted by the Contractor to the Engineer for approval.
- The Contractor shall not discharge directly or indirectly or cause or permit or suffer to be discharged into any public sewer, stormwater drain, channel, stream-course or sea any trade effluent or foul or contaminated water or cooling or hot water without the prior written consent of the Engineer in consultation with the Director of Environmental Protection and Director of Water Supplies, who may as a condition of granting his consent require to the Contractor to provide, operate and maintain at the Contractor's own expense to the satisfaction of the Engineer suitable works for the treatment and disposal of such trade effluent or foul or contaminated or cooling or hot water. The design of such treatment works shall be submitted to the Engineer for approval not less than one month before commencement of the relevant works.
- If any office, site canteen or site toilet facilities is/are erected, foul water effluent shall be directed to a foul sewer or to a sewage treatment and disposal facilities either directly or indirectly by means of pumping or other means approved by the Engineer.

4.4.4 All site discharges should be treated as necessary in accordance with the terms and conditions of the Discharge License.

4.4.5 With the implementation of the mitigation measures and good site practices, no adverse water quality impact during construction phase is anticipated.

Operation Phase

4.4.6 Wheel washing facilities will be provided at the site entrance. All vehicles will be cleaned properly before leaving the Site. Wastewater generated from the wheel washing facilities will also be collected and diverted to sedimentation tank for silt removal before being reused on-site.

4.4.7 Wastewater generated from the surface runoff due to the use of water sprinkler and wheel washing facilities will be first diverted to a sump pit for collection. After that, the wastewater will be diverted to a sedimentation tank for sedimentation and the slurry generated will be dewatered to produce cement cake. The cement cake arising from the treatment process is inert materials and will be reused in the Public Fill Reception Facilities. The design of the sedimentation tank, including the capacity, treatment methodology, etc., will be provided to EPD for approval during detailed design stage in accordance with *ProPECC PN1/23*.

4.4.8 Hence, with provision of the aforementioned mitigation measures, no adverse water quality impact during operation phase of the Proposed Development is anticipated.

4.5 Conclusion

4.5.1 During construction phase, water quality impacts can be properly controlled with the implementation of good site practice, as stated in **paragraphs 4.4.2** to **4.4.5**. Adequate capacity and number of portable toilets will be provided for construction workers on-site. With the provision, implementation and maintenance of the recommended measures, no adverse water quality impacts from the Site during construction phase is anticipated.

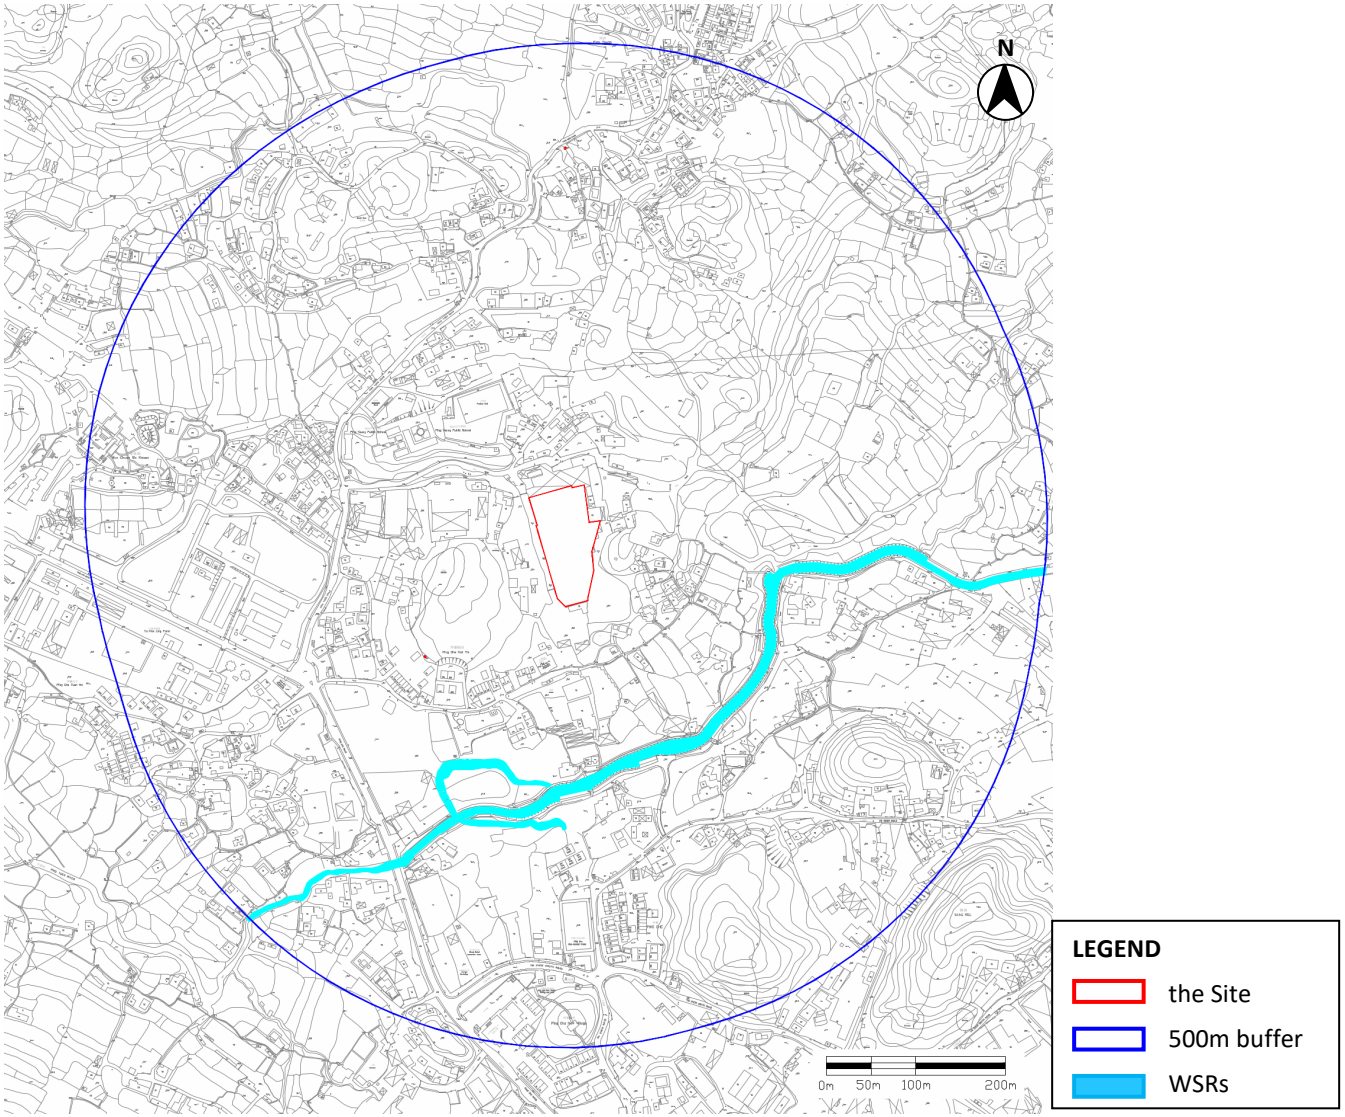
4.5.2 The contractor shall apply for a Discharge Licence from EPD under the WPCO. All site discharged shall be treated in accordance with the terms and conditions of the Discharge Licence.

4.5.3 During operation phase, no adverse water quality impact is anticipated from wastewater/sewage from employees. Toilets will be available for site staff. Sewage generated from toilets will be temporarily stored in sewage holding tanks and tankered away for off-site disposal at a Sewage Treatment Facility or drains to nearby sewerage system at Manhole FMH1033261 as recommended in the SIA. Besides, the wastewater generated from water sprinklers and wheel washing facilities will be collected and diverted to sedimentation tank for silt removal. The treated effluent will be reused onsite.

4.5.4 Moreover, with reference to the Drainage Proposal, no adverse water quality impact due to runoff is expected.

4.5.5 Overall, no adverse water quality impacts are anticipated during the construction or operation phase of the Proposed Development.

Figure 4-1 Representative WSRs within 500m Study Area of the Site



5 WASTE MANAGEMENT

5.1 Environmental Legislation and Standards

5.1.1 The key environmental legislation and standards applicable to waste management in Hong Kong are as follows:

- Waste Disposal Ordinance (Cap. 354) ("WDO")
- Waste Disposal (Chemical Waste) (General) Regulation (Cap. 354C)
- Waste Disposal (Charges for Disposal of Chemical Waste) Regulation (Cap. 354J)
- Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N)
- Land (Miscellaneous Provisions) Ordinance (Cap. 28)
- Public Health and Municipal Services Ordinance (Cap.132BK) – Public Cleansing and Prevention of Nuisances Regulation
- Environmental, Transport and Works Bureau ("ETWB") Technical Circular (Works) No. 19/2005, Environmental Management on Construction Sites
- ETWB Technical Circular (Works) No. 22/2003A, Additional Measures to improve Site Cleanliness and Control Mosquito Breeding on Construction Sites
- Development Bureau ("DevB") Technical Circular (Works) No. 6/2010, Trip Ticket System for Disposal of Construction & Demolition Materials
- Civil Engineering and Development Department ("CEDD") Technical Circulars (CEDD TC No. 11/2019), Management of Construction and Demolition Materials
- Building Department Practice Note for Authorised Persons, Registered Structural Engineers and Registered Geotechnical Engineers Waste Minimisation – Construction and Demolition Waste ("ADV-19")
- Building Department Practice Note for Authorised Persons, Registered Structural Engineers and Registered Geotechnical Engineers Waste Minimisation – Provision of Fitments and Fittings in New Buildings ("APP-114")
- Building Department Practice Note for Registered Contractors ("PNRC 17"), Control of Environmental Nuisance from Construction Sites
- CEDD Project Administration Handbook for Civil Engineering Works ("PAH")
- EPD Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes
- EPD Recommended Pollution Control Clauses ("RPCC") for Construction Contracts

5.2 Review of Waste Management Impacts

Construction Phase

5.2.1 The key potential waste sources during the construction phase are:

- Inert Construction and Demolition ("C&D") materials (e.g. waste concrete, surplus soil, waste asphalt etc.)
- Non-inert C&D Materials (e.g. wood and plastics)

- Chemical wastes (including asbestos) such as waste battery and waste lubricating oil from vehicles/plant maintenance
- General refuse generated by site workers

Inert C&D Materials

5.2.2 Inert C&D materials are those which do not decompose, such as debris, rubble, earth and concrete, and which are suitable for land reclamation and site formation.

5.2.3 There are two major phases during construction stage, one is construction of the new CBP, which is a metal structure constructed by welding, and the other is demolition of the existing CBP, which is a mobile plant consisting of containers, after the new CBP has commenced operation. Each major phase will include sub-Phases. The tentative sequence will include construction of the new CBP at the northern part of the Site, construction of office and equipment storage at the southern part of the Site, demolition of the existing CBP and construction of the aggregate storage area. The major source of inert C&D materials during construction will be demolition of the existing CBP, and construction of the Proposed Development. No site formation of the Site will be required for the Proposed Development.

5.2.4 The amount of inert C&D materials such as concrete waste, waste from blockwork generated depends on the size of the existing CBP during demolition. As no site formation works or removal of existing pavement is required, only minor excavation materials and waste concrete from removal of paving will be generated from the construction phase of the Proposed Development, and the associated building waste generated is considered as insignificant.

5.2.5 Inert C&D materials should be reused on-site as far as practicable and efforts should be made to optimise cut and fill requirements during the detailed design. Good site practice and mitigation measures should be implemented, as recommended in **Section 5.3**. The remaining materials should be sent to public fill reception facilities, ill Bank at Tuen Mun Area 38 and Fill Bank at Tseung Kwan O Area 137.

5.2.6 With the implementation of the recommended good site practice and mitigation measures, no adverse waste impact from the handling, transportation or disposal of inert C&D materials during construction of the Proposed Development is anticipated.

Non-Inert C&D Materials

5.2.7 Non-inert C&D materials (or C&D waste), are those which can decompose such as bamboo, timber, vegetation, packaging waste and other organic material, and which are therefore unsuitable for land reclamation.

5.2.8 The major source on non-inert C&D materials during construction stage will be building waste including non-inert C&D materials such as timber formwork, packaging waste generated by construction of the Proposed Development and demolition of the existing CBP. Such kinds of waste are expected to be minimal given the structure materials of existing CBP. Good site practice like on-site sorting should be carried out for non-inert C&D materials generated from the works. Recyclable materials, such as metal, paper product, timber and plastic, should be collected by local recyclers for recycling. All non-inert C&D materials should be recycled as far as possible and landfill disposal should be adopted as the last resort. The nearest disposal facility is North East New Territories Landfill (“NENT”)

Landfill. Disposal of C&D wastes of landfills would be agreed with relevant authorities. Considering the amount of non-inert waste other than metals will be relatively small, it is assumed that all these kinds of waste will be disposed of at landfill.

5.2.9 With the implementation of the recommended good site practice and mitigation measures, no adverse waste impact from the handling, transportation or disposal of non-inert C&D materials (or C&D waste) during construction of the Proposed Development is anticipated.

General Refuse

5.2.10 No hazardous materials or hazardous wastes are expected to be generated during the construction phase. Only limited amount of chemical waste which is expected to be less than 1 tonne of chemical waste including waste batteries, lubricating oil and waste paints may be generated given the small scale of the works. Other chemical wastes include waste lamp will be generated and the amount will be insignificant.

5.2.11 The Contractor shall register as a Chemical Waste Producer under the WDO. All chemical waste shall be stored at a properly designed chemical waste storage area located within the construction site in accordance with EPD's *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. A licensed collector shall be employed to handle and dispose of all chemical wastes, e.g. at the Chemical Waste Treatment Centre ("CWTC") at Tsing Yi, or other facility approved by EPD.

5.2.12 Given the above, no adverse waste impact from the handling, transportation or disposal of chemical waste during the construction of the Proposed Development is anticipated.

Chemical Waste

5.2.13 No hazardous materials or hazardous wastes are expected to be generated during the construction phase. Only limited amount of chemical waste which is expected to be less than 1 tonne of chemical waste including waste batteries, lubricating oil and waste paints may be generated throughout the entire construction phase given the small scale of the works. Other chemical wastes include waste lamp will be generated and the amount will be insignificant.

5.2.14 The Contractor shall register as a Chemical Waste Producer under the WDO. All chemical waste shall be stored at a properly designed chemical waste storage area located within the construction site in accordance with EPD's *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. A licensed collector shall be employed to handle and dispose of all chemical wastes, e.g. at the Chemical Waste Treatment Centre ("CWTC") at Tsing Yi, or other facility approved by EPD.

5.2.15 Given the above, no adverse waste impact from the handling, transportation or disposal of chemical waste during the construction of the Proposed Development is anticipated.

Operation Phase

5.2.16 During the operation phase, the major type of waste generated will be cementitious cake. Municipal Solid Waste ("MSW") from onsite staff and truck drivers as well as chemical waste from the maintenance of the plant equipment will be generated during operation phase.

5.2.17 Since MSW will be collected on a regular basis by registered waste collectors and will be disposed of at a landfill managed by EPD, no adverse waste impacts from handling, transportation or disposal are anticipated. Nevertheless, to minimize MSW generation mitigation measures proposed in **Section 5.3** should be implemented.

5.2.18 Only small quantity of chemical wastes will be expected to be generated from daily operation of the Proposed Development. A licensed collector shall be employed to handle and dispose of the chemical wastes, if any.

5.2.19 Cementitious cake, the major type of waste, will be also generated from the sedimentation tank for recycling the wastewater from runoff and wheel washing facilities. The cementitious cake is inert materials and will therefore be reused at Public Fill Reception Facilities.

5.2.20 With the implementation of the mitigation measures, there should be no adverse waste impact from the handling, transportation or disposal of domestic waste during the operation of the Proposed Development.

5.3 Mitigation Measures

Construction Phase

5.3.1 Waste management shall be controlled through contractual requirements as well as through statutory requirements.

5.3.2 A Waste Management Plan ("WMP") should be developed by the contractor and submitted to the Project Engineer/Architect for approval in accordance with ADV-19 before the commencement of any construction works. The objectives of the WMP will be to identify any potential environmental impacts from the generation of waste at the Site; to recommend appropriate waste handling, collection, sorting, disposal and recycling measures in accordance with requirements of the current regulations; and to categorise and permit segregation of C&D materials where practicable (i.e. inert material/non-inert material) for disposal considerations i.e. public fill/landfill.

5.3.3 The contractors should adopt good housekeeping practices with reference to the WMP such as waste segregation prior to disposal. Besides the provision of stockpiling and segregating areas at site, effective collection of site wastes is required to prevent waste materials being blown around by wind, flushed or leached into nearby waters, or creating odour nuisance pest and vermin problems. Waste storage areas should be well maintained and cleaned regularly.

5.3.4 A trip-ticket system should be established in accordance with DevB TC(W) No. 6/2010 and the *Waste Disposal (Charges for Disposal of Construction Waste) Regulation* to monitor the disposal of public fill and solid wastes at public filling facilities and landfills, and to control fly-tipping. A trip-ticket system should be included as one of the contractual requirements for the contractor to strictly implement. Dump trucks with mechanical cover shall be used to minimise windblown litter and dust during transportation of waste.

5.3.5 Whenever there are excess recyclable construction materials, including bricks, plastics and metals, reuse and recycling should be carried out as far as practicable to minimise the amount of waste disposal. Other inert materials such as concrete, asphalt, etc. should be

delivered to public fill. Non-inert and non-recyclable wastes should be disposed at designated landfill site.

5.3.6 General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the construction contractor to remove general refuse from the Site, separately from C&D materials. Preferably an enclosed and covered area should be provided to reduce the occurrence of "wind-blown" materials.

5.3.7 Food waste generated during construction and operation would be separated from other waste and recycled as far as practicable, in order to minimise unpleasant odour and potential environmental hygiene issues.

5.3.8 For chemical waste, the Contractor should follow the 'trip-ticket' system of which the arrangement of production, collection and disposal in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

5.3.9 The mitigation measures for construction phase are recommended based on the waste management hierarchy principles. Recommendations of good site practices, waste reduction measures as well as the waste transportation, storage and collection are described as follows:

Good Site Practice

5.3.10 Adverse impact from waste management implications is not expected, provided that good site practices are strictly implemented. The following good site practices are recommended throughout the construction phase:

- Nomination of an approved personnel, such as a site manager, to be responsible for the implementation of good site practices, arrangements for collection and effective disposal to an appropriate facility, of all wastes generated at the Site
- Training of site personnel in site cleanliness, appropriate waste management procedures and concepts of waste reduction, reuse and recycling
- Provision of sufficient waste disposal points and regular collection for disposal
- Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers
- Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors
- A Waste Management Plan (WMP) should be prepared by the contractor and submitted to the Engineer for approval

Waste Reduction Measures

5.3.11 Amount of waste generation can be significant reduced through good management and control. Waste reduction is best achieved at the planning and design phase, as well as by ensuring the implementation of good site practices. The following recommendations are proposed to achieve reduction:

- Segregate and store different types of waste in different containers, skip or stockpiles to enhance reuse or recycling of materials and their proper disposal

- Proper storage and site practices to minimise the potential for damage and contamination of construction materials
- plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste
- sort out demolition debris and excavated materials from demolition works to recover reusable/recyclable portions (i.e. soil, broken concrete, metal etc.)
- provide training to workers on the importance of appropriate waste management procedures, including waste reduction, reuse and recycling

5.3.12 In addition to the above measures, specific mitigation measures are recommended for the specific waste types so as to minimise environmental impacts during handling, transportation and disposal of waste.

Storage, Collection and Transportation of Waste

5.3.13 Storage of waste on site may induce adverse environmental implications if not properly managed. The following recommendation should be implemented to minimise the impacts:

- Waste such as soil should be handled and stored well to ensure secure containment
- Stockpiling area should be provided with covers and water spraying system to prevent materials from wind-blown or being washed away
- Different locations should be designated to stockpile each material to enhance reuse

5.3.14 The collection and transportation of waste from works area to respective disposal sites may also induce adverse environmental impacts if not properly managed. The following recommendation should be implemented to minimise the impacts:

- Remove waste in timely manner
- Employ trucks and vessels with cover or enclosed containers for waste transportation
- Obtain relevant waste disposal permits from the appropriate authorities; including Chemical Waste Permits / licenses under the Waste Disposal Ordinance (Cap 354), Water Pollution Control Ordinance (Cap 358), Public Dumping Licence under the Land (Miscellaneous Provisions) Ordinance (Cap 28), Effluent Discharge Licence under the Water Pollution Control Ordinance
- Disposal of waste should be done at licensed waste disposal facilities

5.3.15 In addition, the EPD's RPCC for Construction Contract should be incorporated in the relevant works contract. The RPCC are generally good engineering practice to minimise inconvenience and environmental nuisance to nearby residents and other sensitive receivers. The general requirements are as follows:

- The Contractor shall observe and comply with the WDO and its subsidiary.
- The Contractor shall submit to the Engineer for approval a waste management plan with appropriate mitigation measures including allocation of an area for waste segregation and shall ensure that the day-to-day site operations comply with the approved waste management plan.

- The Contractor shall minimise the generation of waste from his work. Avoidance and minimisation of waste generation can be achieved through changing or improving design and practices, careful planning and good site management.
- The Contractor shall ensure that different types of wastes are segregated on-site and stored in different containers, skips or stockpiles to facilitate reuse / recycling of waste and, as the last resort, disposal at different outlets as appropriate.
- The reuse and recycling of waste shall be practised as far as possible. The recycled materials shall include paper / cardboard, timber and metal etc.
- The Contractor shall ensure that C&D materials are sorted into public fill (inert portion) and non-inert C&D materials (non-inert portion). The public fill which comprises soil, rock, concrete, brick, cement plaster/mortar, inert building debris, aggregates and asphalt shall be reused such as earth filling, reclamation, site formation works, etc. as far as practicable, and delivered to public fill reception facility as the last resort. The non-inert C&D materials which comprises metal, timber, paper, glass, etc. shall be reused and recycled as far as practicable, and, as the last resort, disposal of at landfills.
- The Contractor shall record the amount of waste generated, recycled and disposed of (including the disposal sites).
- The Contractor shall use a trip ticket system for the delivery of C&D materials to any designated public filling facility and/or landfill.
- Training shall be provided for workers about the concepts of site cleanliness and appropriate waste management procedure, including waste reduction, reuse and recycling.
- The Contractor shall not permit sewage and untreated effluent containing sand, cement, silt or any other suspended or dissolved material to flow from the Site onto any adjoining land, or allow any solid waste including refuse which is not part of the final product from waste processing plants to be deposited anywhere within the Site and the adjoining land. He shall arrange removal of such matter from the Site in a proper manner to the satisfaction of the Engineer in consultation with the EPD.
- The Contractor shall observe and comply with the *Waste Disposal (Chemical Waste) (General) Regulation*.
- The Contractor shall apply for registration as chemical waste producer under the *Waste Disposal (Chemical Waste) (General) Regulation* when chemical waste is produced. All chemical waste shall be properly stored, labelled, packaged and collected in accordance with the Regulation.
- Fly-tipping or disposal of C&D materials at locations other than the designated locations shall be prohibited. In order to review the trip-ticket record as mentioned in **Paragraph 5.3.4** above, the following measures may be considered when necessary:
  - All dump trucks engaged on-site for delivery of inert and non-inert C&D material from the site to the designated disposal locations, including PFRFs, landfills etc., should be equipped with GPS or equivalent system for tracking and monitoring of their travel routings and parking locations by the Contractor to prohibit illegal dumping and landfilling of materials.
  - The data collected by GPS or equivalent system should be recorded properly for checking and analysis the travel routing and parking locations of dump truck engaged on-site.

Operation Phase

5.3.16 The operator shall encourage reuse and recycling of commercial wastes in line with government policy. The waste management hierarchy shall be adopted by the building management to manage commercial wastes in a suitable manner. The waste management hierarchy is a concept which shows the desirability of various waste management methods and comprises the following in order of preference:

- Avoidance
- Minimisation
- Recycling/reuse

5.3.17 MSW such as general refuse, food waste, food packaging, paper, can, plastic bottles, etc., which shall be collected and stored in appropriate waste receptacles with a secure lid to minimise the potential adverse impact due to wind blowing away garbage and to improve hygiene. Recyclable and non-recyclable waste shall be regularly collected by waste collectors and taken off-site for recycling or disposal, respectively.

5.3.18 For the cementitious cake, the Contractor should temporarily store the cementitious cake onsite in a waste hopper with impervious sheeting covering before transferred to Public Fill Reception Facilities for reuse.

5.3.19 For chemical waste, the Contractor should follow the 'trip-ticket' system of which the arrangement of production, collection and disposal in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

5.4 Conclusion

5.4.1 With the development of WMP and to implement the good site practices recommended therein, the waste generation during construction phase can be greatly reduced. Provided that good site practices as recommended in **Section 5.3** will be followed, there should be no adverse impacts related to the management, handling and transportation of waste during construction phase.

5.4.2 During the operation phase, the major type of waste generated will be general waste from onsite staff and truck drivers, and cementitious cake. General waste will be collected on a regular basis by registered waste collectors and will be disposed of at a landfill managed by EPD, while cementitious cake will be reused at Public Fill Reception Facilities. Hence, no adverse waste impacts from handling, transportation, or disposal are anticipated during operation phase.

5.4.3 With the implementation of the recommended mitigation measures, adverse waste management impact during the construction and operation phases of the Proposed Development is not anticipated.

6 LAND CONTAMINATION

6.1 Environmental Legislation and Standards

6.1.1 The following legislation, standards and guidelines were taken reference to for conducting the land contamination assessment:

- EPD Guidance Note for Contaminated Land Assessment and Remediation.
- EPD Practice Guide for Investigation and Remediation of Contaminated Land.
- Guidance Manual for Use of Risk-Based Remediation Goals for Contaminated Land Management.

6.2 Assessment Methodology

6.2.1 Land contamination assessment would be conducted according to EPD's Practice Guide. Before a complete land contamination assessment, a site appraisal is conducted to determine whether there is any potential for land contamination in the Site.

6.2.2 In the case that potential land contamination issues are identified, a complete land contamination assessment with the following steps should be undertaken:

1. Design a site investigation ("SI") strategy and prepare a Contamination Assessment Plan ("CAP") for EPD's approval
2. Upon EPD's approval of the CAP, conduct SI according to the approved CAP
3. Upon completion of SI, interpret the results and prepare a Contamination Assessment Report ("CAR") for EPD's approval
4. Plan and design remediation strategy and prepare a Remediation Assessment Plan ("RAP") for EPD's approval
5. Carry out remediation works according to the approved RAP
6. Prepare a Remediation Report ("RR") for EPD's endorsement

6.3 Site Appraisal

Review of Historical Use

6.3.1 Aerial photograph records provided in **Appendix H** show that the Site was used for agricultural uses in the 1973. In 1982, some structures are observed within the Site and it appears to be used as a warehouse for storage of goods. In 1990, the northern part of the Site should be converted into a concrete batching plant, while the southern part of the Site should still be used as a warehouse. In 2015, the northern part of the Site seems to have converted back into a warehouse. In 2023, the entire Site has been converted into a concrete batching plant. The historical land uses of the Project Site based on the aerial photographic records are summarised in **Table 6-1**.

Table 6-1 Historical Land Uses of the Project Site

PHOTO ID	HISTORICAL LAND USES
1973_07694	Agricultural use
1982_45733	Buildings observed, should be used as a warehouse
1990_A21833	Northern part of the Site converted to a concrete batching plant; southern part of the Site still used as a warehouse.
1995_CN11852	No major changes were observed
2004_CW58165	No major changes were observed
2015_CS61111	Northern part of the Site converted back into a warehouse.
2023_E213798C	Entire Site seems to have been converted into a concrete batching plant.

6.3.2 Based on the preliminary review on the historical aerial photographs, no existing and previous development with potential land contamination activities on the Site is identified. Hence, no land contamination issue is anticipated.

6.3.3 A Contamination Assessment Plan ("CAP") was conducted for to the approval condition – Condition (h) of Section 16 of Planning Application (Application No. A/NE-TKL/681). The CAP concluded that no land contamination was identified based on the site appraisal and historical record review and no intrusive site investigation was required. The CAP was approved with no comment on 18 April 2023.

6.4 Conclusion

6.4.1 No suspected land contaminated activities were found based on the historical aerial photographic records. As such, steps 1 to 6 of **paragraph 6.2.2** are not required. Hence, no adverse impact from the land contamination issue is anticipated and site investigation is considered not necessary.

7 CONCLUSION

7.1 General

7.1.1 The potential environmental impacts including air quality, noise, water quality, waste management implications and land contamination arising from the proposed Temporary CBP located in Ping Che have been reviewed and assessed for both construction and operation phases.

7.1.2 The findings of the impact assessments are summarised below.

7.2 Air Quality Impact

7.2.1 During construction phase, no unacceptable air quality impact is anticipated with providing the recommended control measures.

7.2.2 During operation phase, Respirable Suspended Particulates ("RSP" or "PM_{10}"), Fine Suspended Particulates ("FSP" or "$PM_{2.5}$") and Nitrogen Dioxide ("NO_2") will be the major air pollution concerns. A number of representative Air Sensitive Receivers ("ASRs") within 500m of the Site have been identified.

7.2.3 PATH pollutant concentrations as from EPD's Smart Air Modelling Platform ("SAMP") have been adopted as background concentrations of the assessment.

7.2.4 The Applicant has confirmed that no generator will be used for concrete production within the Site. Furthermore, the engines of all trucks will be switched off when queuing/waiting within the Site and whilst loading/ unloading.

7.2.5 Emission control measures for the Emission Points ("EPs") have been recommended in Table 2-5. Key control measures listed below shall also be provided:

- The whole site shall be paved by concrete.
- Emission from cementitious material silos shall be treated by dust collectors and the enclosure of the mixing plant to minimise dust emissions.
- Conveyors and mixing plant shall be enclosed.
- Aggregate stockpile areas shall be covered with three sides and tops, and covered by impervious sheeting when aggregate is not in use.

7.2.6 For the assessment results predicted at the ASRs, the predicted 10th highest daily average RSP and annual average RSP ranged from 64.1µg/m^3 to 66.0µg/m^3 and from 23.6µg/m^3 to 25.8µg/m^3, respectively. The predicted 10th highest daily average RSP and annual average RSP concentrations are well within their corresponding prevailing AQOs of 100µg/m^3 and 50µg/m^3 respectively. For the predicted 36th highest daily average FSP and annual average FSP ranged from 32.3µg/m^3 to 33.2µg/m^3 and from 15.1µg/m^3 to 15.9µg/m^3 respectively. The predicted 36th highest daily average FSP and annual average FSP concentrations are well within their corresponding prevailing AQOs of 50µg/m^3 and 25µg/m^3 respectively. In addition, the predicted 19th highest hourly NO_2 and annual NO_2 ranged from 52.2µg/m^3 to 79.4µg/m^3 and from 9.9µg/m^3 to 12.3µg/m^3. The predicted 19th highest hourly average NO_2 and annual average NO_2 concentrations are well within their corresponding prevailing AQOs of 200µg/m^3 and 40µg/m^3 respectively.

7.2.7 Exceedances of tentative AQO-2025 of FSP at representative ASRs are predicted as shown in **Appendix D**. The FSP contribution from the Plant is predicted to be below the SILs for AQO-2025 as shown in **Appendix D**. It is considered the impact of the Plant is negligible which will not affect the attainment and maintenance of any relevant AQOs.

7.2.8 The air quality assessment has concluded that operation of the Reinstated CBP will not cause any unacceptable air quality impacts on ASRs. The operation details of the Proposed CBP will be refined when applying for the Specified Process ("SP") Licence. An Air Pollution Control Plan ("APCP") shall be prepared to support the SP Licence application in accordance with Sections 14, 14A and 15 of the APCO. The APCP shall demonstrate the requirements as stipulated in Section 15 of the APCP for obtaining the SP Licence.

7.3 Noise Impact

7.3.1 During construction phase, no unacceptable noise impact on NSRs is anticipated with provision, implementation and maintenance of the recommended noise control measures.

7.3.2 For industrial noise, a number of noise control measures as recommended in **paragraph 3.5.5** will be required.

7.3.3 For the noise impact arising from off-site traffic, no unacceptable noise impact on the NSRs due to the Proposed Development is anticipated.

7.3.4 With the provision of the noise control measures, operation of the Proposed CBP will not cause any unacceptable noise impacts on the NSRs.

7.4 Water Quality Impact

7.4.1 During the construction and demolition phase, no extensive land formation works will be required while minor excavation works will be carried out. Since all the structures of the proposed CBP will be precast, and only minor excavation works will be required within the Site, adverse water quality impacts arising from these construction works is not anticipated. With the provision, implementation and maintenance of the mitigation measures recommended in **Section 4.4**, no adverse water quality impact due to the construction and demolition phases of the Proposed Development is anticipated.

7.4.2 For the sewage generated by the on-site staff and truck drivers, sewage generated from toilets will be temporarily stored in sewage holding tanks and tankered away for off-site disposal at a Sewage Treatment Facility or drains to nearby sewerage system. All process wastewater from wheel washing facilities will be passed through a filter press to produce reusable water and a "clay cakes" residue. All the process wastewater generated within the CBP will be reused within the CBP and there will be no discharge of process wastewater off-site.

7.4.3 Stormwater drains will be provided within the site to collect uncontaminated rainwater during storm events. This will be collected and discharged as clean water. The stormwater drains will be designed to ensure that stormwater does not mix with process water collected elsewhere. The stormwater drains will also be well maintained and kept clear of any litter or cement residues at all times to ensure that any water discharged via these drains is uncontaminated.

7.4.4 It is concluded that operation of the Proposed CBP will not cause any unacceptable water quality impact.

7.5 Waste Management Implication

7.5.1 The waste management assessment has concluded that construction and operation of the proposed CBP will not cause any unacceptable waste management impact.

7.6 Land Contamination

7.6.1 Based on the preliminary review on the historical aerial photographs, no existing and previous development with potential land contamination activities on the Site is identified. Hence, no land contamination issue is anticipated

7.6.2 A Contamination Assessment Plan ("CAP") was conducted for to the approval condition – Condition (h) of Section 16 of Planning Application (Application No. A/NE-TKL/681). The CAP concluded that no land contamination was identified based on the site appraisal and historical record review and no intrusive site investigation was required. The CAP was approved with no comment on 18 April 2023.

7.6.3 During operation phase, no adverse land contamination issue is anticipated with the implementation of the recommended measures.

7.7 Overall Conclusion

7.7.1 The mitigation measures recommended to be implemented for different environmental aspects are summarised below:

Table 7-1 Emission Control Measures for EPs

ENVIRONMENTAL ASPECTS	PROPOSED MITIGATION MEASURES
Air Quality	During Construction Phase: • Whole CBP Site: Follow the *"Air Pollution Control (Construction Dust) Regulation"* to ensure effective dust abatement measures have been properly implemented to reduce dust emissions for the relevant construction activities. • Whole CBP Site: Any notifiable work defined under the above regulation shall give advance notice to EPD, the contractor shall ensure that the notifiable and regulatory works are carried out with the Schedule of the Regulation. Dust control and suppression measures shall be provided in the Schedule. During Operation Phase: • Whole CBP Site: The whole site shall be paved by concrete. • Cement/PFA/GGBS/Silica Fume Silos: Dust collectors shall be installed at the silos and silos shall be equipped with high level alarms to warn of over filling. Seating of pressure relief valves of all silos shall be checked at least once a week. Dust accumulated shall be properly handled. • During unloading of cement/PFA/GGBS/silica fume from tankers to the relevant silos via the pneumatic system, dust-laden air will be vented to the dust collector, in order to abate the dust emissions and comply with the BPM3/2(16) limit. • Receiving hoppers: During unloading of materials, the receiving hoppers shall be enclosed on three sides up to 3m above the unloading point. In no

ENVIRONMENTAL ASPECTS	PROPOSED MITIGATION MEASURES
	case shall these hoppers be used for material storage. Water spraying device shall be operated during the unloading of aggregate/crushed fines/sand. • Concrete Mixer: The enclosure of the mixing plant to minimise dust emissions. • Conveyors: Fully enclosed. • Mixer trucks: Closure device shall be provided for preventing spillage of concrete. • Access roads: Shall be paved and adequately wetted. • Site Exit: Shall be provided with wheel washing facilities.
Noise	During Construction Phase: • Whole CBP Site: Quality PME and quiet construction method should be adopted if possible. • Whole CBP Site: The Contractor shall devise and execute working methods to minimise the noise impacts on the surrounding sensitive uses, and provide experienced personnel with suitable training to ensure that those methods are implemented. • Whole CBP Site: Noisy equipment and noisy activities should be located as far away from the NSRs as is practical. • PME: PME should be kept to a minimum and the parallel use of noisy equipment/ machinery should be avoided. • PME: Use noise barriers or enclosure for the PME if appropriate. • PME: Implement good house-keeping and provide regular maintenance to the PME. • Spot check resultant noise levels at nearby NSRs. During Operation Phase: • Concrete Mixer (concrete collecting activities): The semi-enclosure for the concrete mixing plant shall be with acoustic panels with an overall Noise Reduction (NR) of at least 10 dB(A). • Conveyor: The entire conveyor except the opening for aggregates unloading shall be provided with a noise enclosure with an overall NR of at least 10 dB(A). • Air compressor, water/ admixture pump, filter fan (mixing unit) and filter fan (silo): These equipment should be located inside the semi-enclosed concrete mixing plant and openings of the enclosure (minimum surface density of 10kg/m^2) shall be properly sealed to minimise noise leakage. • Site Boundary: The proposed 4m barrier (minimum surface density of 10kg/m^2) at the site boundary to screen the vehicle movement noise.
Water Quality	During Demolition and Construction Phases: • The demolition and construction contractors shall follow good site practice and be responsible for the design construction, operation and maintenance of all the mitigation measures a specified in ProPECC PN 1/94 for construction site drainage. • Follow the good engineering practice as specified in EPD's RPCC for Construction Contract in COP should be incorporated in the relevant works contract. • Portable toilets should be provided for construction workers. These will be supplied, maintained and emptied (at a sewage treatment facility) by a specialist contractor. During Operation Phase: • Wastewater generated from sprinklers and wheel washing facilities will be collected and diverted to the sedimentation tank for silt removal

ENVIRONMENTAL ASPECTS	PROPOSED MITIGATION MEASURES
	• Sewage generated during the operation phase will be stored in a temporary sewage storage tank connected to container toilets for offsite disposal. • A contingency plan should be prepared by the Applicant to state the details of action in case of emergency, such as tank leakage and overflow ▪ In case of emergency, site staff shall check the impact on the hydraulic condition and performance of the wastewater treatment facilities. ▪ In case of power failure, plant staff should provide emergency generators or alternative power supply to the wastewater treatment facilities. ▪ In case of fire outbreak, plant staff should check and isolate the power supply to the equipment on fire and fight the fire under safe condition. If the fire cannot be controlled, plant staff should dial 999 or the local Fire Station. ▪ In case of wastewater overflow or pipe leakage, site staff should arrange diversion of park of the influent to standby tanks. ▪ silt/sand traps should be provided for the drainage systems to trap debris/oil before discharge
Waste Management	During Construction Phase: • The opportunities for on-site reuse of inert C&D materials will be considered. • The surplus inert C&D material will be disposed of at Fill Bank at Tuen Mun Area 38 and Tseung Kwan O Area 137. • About 800 tonnes non-inert C&D Materials i.e. metal wastes will be recycled by recycler. • For the non-inert C&D waste other than metal (e.g., timber, packaging, etc.), the opportunities for on-site reuse of non-inert C&D materials will be considered. For the worst-case scenario, about 2 tonnes of such kinds of non-inert C&D waste will be disposed of at landfill. • About 2.7 tonnes General Refuse will be recycled by recyclers. • About 1.5 tonnes General Refuse will be disposed of at NWNTRTS. • Less than 1 tonnes of chemical wastes including waste batteries, lubricating oil and waste paint will be collected by licenced chemical waste collector and treated in the CWTC. During Operation Phase: • About 3.2 tonnes of industrial waste will be recycled by recyclers per year, while about 8.4 tonnes will be disposed of at NWNTRTS per year. • All cementitious cake generated will be reused at Public Fill Reception Facilities. • Less than 1 tonnes of chemical wastes including waste batteries and lubricating oil, etc., will be collected by the licensed chemical waste collector and treated in the CWTC per year.

7.7.2 Overall, it is concluded that the proposed CBP will not result in any unacceptable environmental impacts during the construction, demolition and/or operation phases for providing, implementing and maintain the recommended mitigation measures, as well as adopting good site practices.

Appendix A Emission Calculation and Summary of Emission Rates

Appendix A-1 The Plant Emissions

S16 Application for Concrete Batching Plant (CBP) at Ping Che, N.T.
Emissions from Dust Collectors (DCs)
Method: USEPA AP-42 Table 11.12-1 of Section 11.12 Version 6/06

1. EP1 to EP6 Emissions from Dust Collectors for Cementitious Materials Silos

Maximum Maximum Cementitious Material Loading Rate per Silo	=	50	tonnes/hour	(Note 1)
Capacity of Dust Collector (Flow rate)	=	1,750	m^3/hour	
Control Efficiency (η%)	=	99.99	%	(Note 1)
Uncontrolled TSP Emission Factor of Cementitious Materials	=	1.57	kg/Mg	(Note 2)
Uncontrolled TSP Emission Rate of Cementitious Materials	=	78.5	kg/hour	
Maximum TSP Emission Rate of Each Silo	=	0.00785	kg/hour	
	=	7.85	g/hour	
	=	2.18E-03	g/s	
	=	**4.49**	**mg/m^3**	
Uncontrolled RSP Emission Factor of Cementitious Materials	=	0.65	kg/Mg	(Note 2)
Uncontrolled RSP Emission Rate of Cementitious Materials	=	32.50	kg/hour	
Maximum RSP Emission Rate of Each Silo	=	0.00325	kg/hour	
	=	3.25	g/hour	
	=	9.03E-04	g/s	
	=	**1.86**	**mg/m^3**	
Uncontrolled FSP Emission Factor of Cementitious Materials	=	0.2355	kg/Mg	(Note 3)
Uncontrolled FSP Emission Rate of Cementitious Materials	=	11.775	kg/hour	
Maximum FSP Emission Rate of Each Silo	=	0.0011775	kg/hour	
	=	1.1775	g/hour	
	=	3.27E-04	g/s	
	=	**0.67**	**mg/m^3**	

2. EP7 Emissions from Dust Collector for Concrete Mixer and Overhead Hopper

Total Concrete Production Rate	=	100	m3/hour	(Note 1)
	=	240	tonne/hour	(Note 4)
Maximum Aggregate + Sand Consumption Rate	=	200	tonne/hour	(Note 1)
		3.33	tonne/min	
Maximum Cement/PFA/GGBS/Silica Consumption Rate	=	55	tonne/hour	(Note 1)
		0.92	tonne/min	

Emissions for Cement/GGBS/PFA Overhead Hopper

Maximum Cementitious Materials Consumption Rate for each hopper	=	14	tonne/hour	(Note 1)
Uncontrolled TSP Emission Factor of Cementitious Materials Loading	=	1.57	kg/Mg	(Notes 2)
Uncontrolled RSP Emission Factor of Cementitious Materials Loading	=	0.65	kg/Mg	(Notes 2)
Uncontrolled FSP Emission Factor of Cementitious Materials Loading	=	0.2355	kg/Mg	(Notes 3)
Unmitigated TSP Emission Rate of Each Cement/GGBS/PFA Holding Hoppers	=	21.5875	kg/hour	
	=	0.006	kg/s	
Unmitigated RSP Emission Rate of Each Cement/GGBS/PFA Holding Hoppers	=	8.9375	kg/hour	
	=	0.002	kg/s	
Unmitigated FSP Emission Rate of Each Cement/GGBS/PFA Holding Hoppers	=	3.238125	kg/hour	
	=	0.001	kg/s	

Emissions from Concrete Mixer

Total Concrete Production Rate	=	100	m3/hour	(Note 1)
Density		2.4	tonne/m^3	(Note 4)
Total Concrete Production Rate	=	240	tonne/hour	
$E = k(0.0032)\left[\frac{U^a}{M^b}\right] + c$				(Note 5)
k, Particue size multiplier (TSP)	=	5.900		(Note 6)
k, Particue size multiplier (RSP)	=	1.920		(Note 6)
k, Particue size multiplier (FSP)	=	0.380		(Note 6)
U, wind speed	=	0.020	m/s	(Note 7)
	=	0.045	miles/h	
M, Minimum moisture (% by weight) of aggregate	=	1.770	%	(Note 8)
a (TSP)	=	0.600		(Note 6)
a (RSP & FSP)	=	0.400		(Note 6)
b (TSP & RSP & FSP)	=	1.300		(Note 6)
c (TSP)	=	0.120		(Note 6)
c (RSP)	=	0.040		(Note 6)
c (FSP)	=	0.000		(Note 6)

Uncontrolled TSP Emission Factor of Mixer Loading	=	0.060696666	kg/Mg	
Unmitigated TSP Emission Rate of Mixer Loading	=	4.05E-03	kg/s	
Uncontrolled RSP Emission Factor of Mixer Loading	=	0.024220213	kg/Mg	
Unmitigated RSP Emission Rate of Mixer Loading	=	1.61E-03	kg/s	
Uncontrolled FSP Emission Factor of Mixer Loading	=	8.3525E-05	kg/Mg	
Unmitigated FSP Emission Rate of Mixer Loading	=	5.57E-06	kg/s	

Total Emissions from 5m^3 Concrete Mixer and Cement/GGBS/PFA Overhead Hoppers

Capacity of Dust Collector (Flow rate)	=	2250	m^3/hour	(Note 1)
	=	0.6250	m^3/s	
Control Efficiency (η%)	=	99.99	%	(Note 1)
Mitigated TSP Emission Rate of Dust Collector	=	1.00E-06	kg/s	
		0.001	g/s	
		1.6	mg/m^3	
Mitigated RSP Emission Rate of Dust Collector	=	4.10E-07	kg/s	
		4.10E-04	g/s	
		0.7	mg/m^3	
Mitigated FSP Emission Rate of Dust Collector	=	9.05E-08	kg/s	
		9.05E-05	g/s	
		0.1	mg/m^3	

3. EP8 Emissions from Dust Collector of Overhead Hoppers

No. of Hoppers Connected to Dust Collector	=	2		
Capacity of Dust Collector (Flow rate)	=	2250	m^3/hour	(Note 1)
	=	0.6250	m^3/s	
Control Efficiency (η%)	=	99.99	%	(Note 1)
Mitigated TSP Emission Rate of Dust Collector	=	1.20E-06	kg/s	
		0.001	g/s	
		1.9	mg/m^3	
Mitigated RSP Emission Rate of Dust Collector	=	4.97E-07	kg/s	
		4.97E-04	g/s	
		0.8	mg/m^3	
Mitigated FSP Emission Rate of Dust Collector	=	1.80E-07	kg/s	
		1.80E-04	g/s	
		0.3	mg/m^3	

4. EP9 Emissions from Dust Collector of Overhead Hoppers

No. of Hopper Connected to Dust Collector	=	1		
Capacity of Dust Collector (Flow rate)	=	2250	m^3/hour	(Note 1)
	=	0.6250	m^3/s	
Control Efficiency (η%)	=	99.99	%	(Note 1)
Mitigated TSP Emission Rate of Dust Collector	=	6.00E-07	kg/s	
		0.001	g/s	
		1.0	mg/m^3	
Mitigated RSP Emission Rate of Dust Collector	=	2.48E-07	kg/s	
		2.48E-04	g/s	
		0.4	mg/m^3	
Mitigated FSP Emission Rate of Dust Collector	=	8.99E-08	kg/s	
		8.99E-05	g/s	
		0.1	mg/m^3	

Note:

1. The information is advised/provided by applicant.
2. Refer to USEPA AP-42 Table 11.12-1 of Section 11.12 version 6/06.
3. TSP/RSP ratio refer to USEPA AP-42 Appendix B.2 B.2-13
4. Normal density of concrete (https://civiltoday.com/civil-engineering-materials/concrete/361-density-of-concrete)
5. Refer to USEPA AP-42 Equation 11.12-1 of Section 11.12 version 6/06.
6. Refer to USEPA AP-42 Table 11.12-4 of Section 11.12 version 6/06.
7. Assume as min wind speed of PATH grid
8. Refer to USEPA AP-42 Note b of Table 11.12-4 of Section 11.12 version 6/06.

S16 Application for Concrete Batching Plant (CBP) at Ping Che, N.T.
Emissions from Aggregate Ground Receiving Hopper EP5
Method: USEPA AP-42, Section 11.12-1 of Section 11.12 version 6/06

1. Emissions from EP10 Aggregate Ground Receiving Hopper

Maximum aggregate loading rate	=	30000	kg/hr	[Note 1]
	=	30	tonnes/hr	
Maximum crushed fine loading rate	=	70,000	kg/hr	[Note 1]
	=	70	tonnes/hr	
Uncontrolled TSP Emission Factor (Aggregate)	=	0.0035	kg/Mg	[Note 2]
Uncontrolled RSP Emission Factor (Aggregate)	=	0.0017	kg/Mg	[Note 2]
Uncontrolled TSP Emission Factor (Sand/Stone Fine)	=	0.0011	kg/Mg	[Note 2]
Uncontrolled RSP Emission Factor (Sand/Stone Fine)	=	0.00051	kg/Mg	[Note 2]
Unmitigated Total TSP Emission Rate from Ground Aggregate Receiving Hopper	=	0.182	kg/hr	
Unmitigated Total RSP Emission Rate from rom Ground Aggregate Receiving Hopper	=	0.08670	kg/hr	
Unmitigated Total FSP Emission Rate from Ground Aggregate Receiving Hopper	=	0.02730	kg/hr	[Note 4]

Mitigation Measures : With three side enclosure + water spraying

Receiving Area	=	9.0	m^2	
Control Efficiency	=	95	%	[Note 3]
Mitigated TSP Emission Rate	=	0.0091	kg/hr	
	=	0.002528	g/s	
	=	**2.81E-04**	$g/m^2/s$	
Mitigated RSP Emission Rate	=	0.004335	kg/hr	
	=	0.001204	g/s	
	=	**1.34E-04**	$g/m^2/s$	
Mitigated FSP Emission Rate	=	0.00137	kg/hr	
	=	0.000379	g/s	
	=	**4.21E-05**	$g/m^2/s$	

Note
1. The loading rates are advised by the Applicant.
2. Refer to USEPA AP-42 Table 11.12-1 of Section 11.12 version 6/06.
3. Assume 95% dust removal efficiency with mitigatin measures of three sides enclosed and water spraying with reference to the Approved EIA report “Road Works at West Kowloon” in 2009, it was assumed 95% dust removal efficiency could be achieved for unloading aggregates to receiving hopper with enclosures on three sides in addition to a top cover and equipped with water spraying system.
4. TSP/RSP ratio refer to USEPA AP-42 Appendix B.2 B.2-13

Note:

1. The vehicle numbers within the site is advised by the applicant.
2. Particle size multiplier is referred to Table 13.2.1-1, Section 13.2.1 of USEPA AP 42 (ver 1/11) for RSP (PM10). and FSP (PM2.5)
3. Road surface silt loading is referred to Table 13.2.1-3 of USEPA AP 42 (ver 1/11) for concrete batching.

Calculation of Dust Removal Efficiency with different Watering Interval Time

The Removal efficiency is estimated based on Equation 3-2 of USEPA's "Control of Open Fugitive Dust Sources" (EPA-45/3-88-008)

	C	=100-(0.8*p*d*t)/i
Where	C	average control efficiency, in present
	p	potential average hourly daytime evaporation rate, in mm/h
	d	average hourly daytime traffic rate in vehicles per hour
	i	application intensity in liter/sqm
	t	time between application in h

According to "The Year's Weather - 2017" issued by Hong Kong Observatory,

the total evaporation recorded in H		1227.3 mm	
p	0.31407	mm/h	(0.0065*annual evaporation in inches)
d	54	per hours	Peak hourly traffic as estimated by Engineer at an active construction site
i	3.4	L/m2	Minimum Application intensity and that requirement would be stated in the tender document

Times of Watering per day (24hrs)	Average control efficiency (%)
6	84.0
8	88.0
12	92.0
24	96.0

1. Percentage of dust mitigation efficiency is calculated with reference to Cowherd et al., "Control of Open Fugitive Dust Sources, EPA-450/3-88-008, U.S. Environmental Protection Agency, Research Triangle Park, NC.",
assuming potential average hourly daytime evaporation rate = 0.31407 mm/hour (as obtained from Hong Kong Observatory).

S16 Application for Concrete Batching Plant (CBP) at Ping Che, N.T.
Emissions from Transfer Points in Stockpiling Areas (Emergency use only)
Method: USEPA AP-42, Section 13.2.4.3

EP16_1 - EP16_3 Emissions from Aggregate Storage

TSP, RSP and FSP Emission Factor, E = k (0.0016) $(U/2.2)^{1.3}$ / $(M/2)^{1.4}$

	or	**1.55E-05**	g/s	
	=	**1.23E-07**	$g/m^2/s$	

Note:

1. Refer to USEPA AP-42 Page 13.2.4.4 of Section 13.2.4 version 11/06.
2. The average wind speed of PATH grid of the Site is located
3. The material loading rates are advised by the Applicant.
4. As advised by applicant, the operation hours of the loading and unloading activites in these Aggregate Storage will only last for 10 hours a day.
5. As there is a water spraying system in each transfer point, hence the moisture content for coal of 4.8% is chosen which is commonly adopted in other approved SPL applications and in other approved EIA studies. Also, the moisture content of the aggregates will be kept high as mitigation measures such as watering will be provided, therefore 4.8% of moisture content is considered appropriate.
6. Assume 95% dust removal efficiency with mitigatin measures of three sides enclosed and water spraying with reference to the Approved EIA report "Road Works at West Kowloon" in 2009, it was assumed 95% dust removal efficiency could be achieved for unloading aggregates to receiving hopper with enclosures on three sides in addition to a top cover and equipped with water spraying system.

SICOMA

质量合格证

☐DMC20　　☐DMC40　　☐DMC48

☐DMC30（矩形）　　☐DMC30（正方形）

☐DMC80（矩形）　　☐DMC118（矩形）

出厂编号：

出厂年月：

SICOMA 系列产品在制作过程中经过严格检验、调试，符合产品技术要求，质量合格，准予出厂。

产品检验专用章　　检验员：

检验日期：

SICOMA 除尘机
安装使用手册

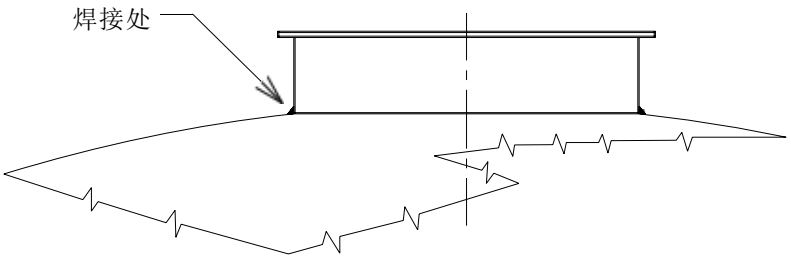
5. 检查

安装使用除尘机前， 请参阅本手册及相关资料， 并检查除尘机是否有因运输等过程造成损坏（产品出厂前已调试包装完好）。

2. 安装

2.1 机械安装

2.1.1 将除尘机底座(见除尘机结构图)直接焊接于筒仓顶部的预留方孔上便可（确保尘机安装与地面垂直）。焊接完后检查， 确保焊缝处无气孔、焊穿及假焊等缺陷（如下图）；



2.1.2 将除尘机机身部分平稳地放在底座上， 对好螺栓连接孔用螺丝锁紧； 将除尘机上、下部分的地线接好，用螺丝锁紧。

2.2 气路安装

2.2.1 在除尘机的进气口插入Φ12 mm 耐压 10Bar 的胶管，要求提供压力为 4～7 Bar 的压缩空气的独力气源；

2.2.2 除尘机工作气源前端加装过滤器及调压阀；

注意：除尘机工作时，供气不能中断。

2.3 电源安装(见 12.除尘机接线图)

2.3.1 电路安装必须由专业电工完成；

2.3.2 提供 380V 电源接至风扇端马达上，注意马达旋转方向（仅适合配马达的型号，

2.3.3 提供 220V 电源接至电子控制箱内。

注意：除尘机工作时，供电不能中断。

3. 组成

除尘机由马达及风扇系统、喷气系统、机身、底座、尘袋及密封胶条组成

(详见：除尘机结构图)。

4.使用与保养

4.1 除尘机在使用前，必须先确认供气系统及供电系统是否正常；

4.2 除尘机在工作中，须常检查供气是否中止、 供电是否中断、电子控制板是否有故障（从除尘机内是否发出周期性短促喷气响声即可判断）；

20M² 机喷气周期一般为：35S

30M² 机喷气周期一般为：35S

40M² 机喷气周期一般为：30S

48M² 机喷气周期一般为：30S

80M² 机喷气周期一般为：25S

118M² 机喷气周期一般为：25S

4.3 停止使用除尘机时，必须继续供气、供电 5 分钟让电子控制板继续自动控制高压气流冲洗尘袋的积尘以维持其高效用及寿命；

4.4 如较长时间不使用除尘机（数周），也应适当定期供气、供电， 用高压气流冲洗尘袋， 同时检查除尘机有否故障；

4.5 每月需打开除尘机观察窗以目视检查尘袋及壳体内积尘情况；

4.6 **尘袋的检查**

4.6.1 尘袋破损：工作时漏尘出现造成空气污染现象；

4.6.2 尘袋堵塞：非负载状态单纯除尘 5 分钟后，从观察窗目视，尘袋有明显积尘，积块未脱落；

4.7 **尘袋更换**

4.7.1 松开锁扣，掀起上顶盖；

4.7.2 取出尘袋；

4.7.3 重新装回新尘袋

4.7.4 扣紧上顶盖；

注意：尘袋更换周期视实际情况而定，正常情况下每半年更换一次。

4.8 **排水**

4.8.1 定期排水：每半个月排水一次。

5. 维护

5.1 所有的维护工作应在停机并释放压力后进行；

5.2 维修除尘机时应在起动装置上设一标示牌，其上注明“**警告：正在检修，严禁合闸** ”，同时还应将除尘机电源断开，以避免因疏忽而造成的意外。

6. 除尘机性能参数表

SICOMA 尘机性能列表						
型号	除尘面积 (㎡)	除尘量 (㎥/h)	除尘率 (%)	电机功率 (Kw)	储气容积 (L)	压缩空气 (Bar)
DMC20	20	2000	99.99	3	30	4~7
DMC30（正方形）	30	3000	99.99	4	34	4~7
DMC30（矩形）	30	3000	99.99		34	4~7
DMC40	40	4000	99.99	4	34	4~7
DMC48	48	4800	99.99	5.5	38	4~7
DMC80	80	8000	99.99	7.5	45	4~7
DMC118	118	11800	99.99	11	68	4~7

本产品不断改良， 规格如有改进， 不作事前通知。

7. 优点

7.1 优质高效、耗电量低、维修率低、使用寿命长；

7.2 标准模式；

7.3 快速除尘；

8. 结构特征

8.1 带有储气筒，由脉冲电磁阀控制自动冲洗尘袋；

8.2 电动、气动终端控制的喷气管；

8.3 控制抽尘袋尘的多频电子控制板；

8.4 自动喷气周期可调节；

8.5 基座同尘袋之间的接地装置。

9. 除尘机常见故障及排除方法

故障	原因	排除方法
除尘机不工作	1、无输入电源	接 AC220V 电源到控制板
	2、电源线松动	接好电源线
	3、抽风机没开（只适合带抽风机型）	启动抽风机
	4、工作气压较小	调气压到 4~7Bar
	5、控制板变压器烧毁	更换控制板
注水泥时有灰尘漏出	1、尘袋破损	更换尘袋
	2、尘袋积尘严重	将尘袋取出清理，然后用 4 Bar 气压吹干
	3、安装部位漏出	调整安装部位，锁紧螺丝
	4、焊接底座有气孔	补焊

Remark:

[1] As advised by the applicant, the number of aggregate truck varies from time to time during the operating hours of the plant, in tandem with actual concrete production and delivery of various materials to the site, with a view to ensuring smooth plant operation.

[2] As advised by the applicant, the operation hours of ice trucks are different from others as ice is not an essential ingredient of concrete and is only needed if the concrete is subject to temperature control at the request of customer. Hence, the traffic flow of ice truck was forecasted to reflect the estimated ice demand.

Job Title: Proposed Concrete Batching Plant at D.D.77 in Ping Che
Job No.: 22505

Summary Table of Emission Rates

Table A5.2, Summary Table of Emission Rates from the Adjoining CBP:-

No.	EP ID	Descriptions	Source Type	Fugitive / Non-fugitive	X (m)	Y (m)	X-Width	Y-Length	Ground mPD	Height (mAG)	Angle	Exhaust Gas Flowrate (m^3/hr)	Diameter (m)	Exit Temperature (K)	Exit Velocity (m/s)	Emission Limit (mg/m^3)	RSP			FSP			Operation hour
																	Emission Rates (g/s)	Emission Rates (kg/hr)	Emission Rates (g/m^2/s)	Emission Rates (g/s)	Emission Rates (kg/hr)	Emission Rates (g/m^2/s)

Appendix C EMFAC-HK Model Input

Methodology and Assumptions for Calculation of Vehicular Emission Source

Model Year

Three years of traffic data were provided by the traffic consultant. The 24-hourly vehicle flows for the modelling are shown in **Appendix G-1**.

- 2025 (the commencing year of the proposed CBP)
- 2030 (5 years after the commencement year)
- 2040 (15 years after commencement year)

Model

EMFAC-HK as built in EPD's Smart Air Modelling Platform ("SAMP") was used to estimate the composite emission factors. "Zero Emission Vehicle" ("ZEV") Scenario was selected in SAMP.

Vehicle Speed

Vehicle speed on each road link at each hour was provided by the traffic consultant as summarized in **Appendix C-1**. All the vehicle classes on the same road link were assumed to have the same travelling speed.

Trips

Start emissions of vehicles were assumed for all the assessed road links for conservative approach.

Composite Emission Factors

The composite emission factors for the assessed roads as estimated through the SAMP are shown in **Appendix C-2**. Based on the PATH meteorological data of temperature and relative humidity for the relevant grids of the assessed roads, three types of composite emission factors were estimated, annual hour minimum, monthly hour minimum and monthly hour average.

For long-term air quality impact, monthly hour average composite emission factors were adopted. For short-term air quality, monthly hour minimum composite emission factors were used.

Sensitive Test of Emissions

Table below summarises the annual emissions in tonnes per year for the 3 years traffic.

Pollutant	Year 2025		Year 2030		Year 2040	
	Monthly Hour Min	Monthly Hour Average	Monthly Hour Min	Monthly Hour Average	Monthly Hour Min	Monthly Hour Average
NO_2	0.44	0.39	0.41	0.36	0.32	0.29
NO	2.65	2.33	1.87	1.65	0.98	0.86
NOx	-	2.72	-	2.01	-	1.15
FSP	0.08	0.08	0.06	0.06	0.03	0.03
RSP	0.08	0.08	0.07	0.07	0.03	0.03

Jenkin Method

Jenkin method was adopted for the conversion of cumulative NOx to NO_2 by using the functional form of annual mean of NO_2-to-NOx with reference to the Review of Methods for NO to NO_2 Conversion in plumes at short range for the long-term cumulative NO_2 assessment. The mentioned functional form is presented as equation below.

$$[NO_2] = \frac{\left([\mathrm{NOx}] + [\mathrm{OX}] + \frac{\mathrm{J}}{\mathrm{k}}\right) - \sqrt{([NOx] + [OX] + \frac{J}{k})^2 - 4[NOx][OX]}}{2}$$

Where $[NO_2]$ is the NO_2 concentration

[NOx] is the NOx concentration

[OX] is the sum of NO_2 concentration and O3 concentration (i.e. [OX] = [NO_2] + [O_3])

J is the photolysis rate of NO_2

k is the rate constant for reaction between NO and O_3

The derivation of cumulative annual average NOx to NO_2 conversion equation using Jenkin Method for this assessment by SAMP are shown in **Appendix C-3**.
