Appendix 3.3	Proposed Sewerage Layout Plan from Site Formation and Infrastructure Works at Area 48, Fanling under CEDD Contract No. CV/2022/08
Appendix 3.4	Extracted from Engineering Feasibility Study Report for Proposed Public Housing Development at Area 48, Fanling (PHD48)

## 1. INTRODUCTION

### 1.1 Project Background

- 1.1.1 The Application Site currently falls within the "Government, Institution or Community" ("G/IC") zone, according to the Approved Fanling / Sheung Shui Outline Zoning Plan ("Approved OZP") No. S/FSS/28. The Applicant proposed to rezone from "G/IC" to "Other Specified Uses (Innovation and Technology)" ("OU(I&T)") zone, given the unique nature of the EV and low-altitude aerial vehicles industries with R&D and business needs.
- 1.1.2 Ramboll Hong Kong Limited is commissioned by the Applicant to conduct this Drainage and Sewerage Impact Assessment (DSIA) based on the Proposed Development.

### 1.2 Application Site and its Environs

- 1.2.1 The Application Site is approximately 5,480m<sup>2</sup>. The Application Site comprising various lots in D.D.51 is located in the south of Fanling, which is bounded by Tai Wo Service Road West from northeast to northwest of the Application Site. To the immediate east is a Planned Public Housing Development at Fanling Area 48. Wo Hop Shek Village is located from south to southwest of the Application Site.
- 1.2.2 A feasibility study has been conducted for the above-mentioned Planned Public Housing Development (PHD48) for the OZP amendment (RNTPC Paper No. 1/16). And the Section 16 Planning Application (Application No.: A/FSS/295) for PHD48 has been submitted and approved by Town Planning Board (TPB) in 2024. The findings from the relevant technical assessments have been referenced to where appropriate.
- 1.2.3 The location of the Application Site and its surrounding environs are shown in **Figure 1.1**.

### 1.3 Proposed Development

- 1.3.1 R&D and I&T facilities on EV, green energy and low-altitude aerial vehicle, related business uses, and ancillary/supporting business and training facilities are proposed at the Application Site.
- 1.3.2 There is an 7-storey podium building, comprising 6 storeys for R&D and innovations & technology related uses (including research laboratory, pre-delivery inspection, training space/testing centre, battery charging/swapping station, EV showrooms, workbay, main office, storage/warehouse, utility and workshop) and 1 storey of ancillary and supporting business and training facilities (i.e. conference, seminars, training course, and administration & accounting office). There will be one 12 storeys residential institution (talent accommodation) and one 6 storeys staff quarters.
- 1.3.3 There are altogether 138 units provided. It is estimated that there would be maximum of 414 residents. R&D and innovations & technology related uses are planned.
- 1.3.4 The tentative completion year is 2031.
- 1.3.5 The MLP of the Proposed Development is included in **Appendix 1.1**.

## 2. DRAINAGE IMPACT ASSESSMENT

### 2.1 Appraisal of Drainage Impact

- 2.1.1 The Application Site currently is paved with a partially green area and occupied by warehouses and open area. The Application Site is served by existing public drainage system. There is a Ø900mm drainage pipe (SWD1010692) at immediate northwest across Wo Hing Road to receive the runoff discharged from the Application Site and then connected to the existing 3 x 3.8m x 2.55m of box culvert (SBP1001912).
- 2.1.2 The estimated surface runoff under the existing and future conditions of the Application Site is shown in **Appendix 2.1**. 20% greenery coverage would be provided for the Proposed Development. It is expected that the peak 1 in 50-year runoff from the Application Site would be decreased from 0.31m<sup>3</sup>/s to approximately 0.29m<sup>3</sup>/s. In other words, there will be a reduction of surface runoff when compared with the existing condition due to increased greenery. The surface runoff generated from the Application Site will be collected and discharged to the aforementioned drainage pipe so that there is no change of flow regime.
- 2.1.3 According to the preliminary drainage impact assessment of the Approved Section 16 Planning Application for PHD48, a slope drains will be proposed to receive the surface runoff from uphill catchment. Therefore, it is anticipated that there is no surface runoff from uphill catchment will be flow into the Application Site.
- 2.1.4 As the total paved area and in turn the surface runoff is expected to decrease after development, it is anticipated that there is no adverse impact on the existing drainage pipe receiving runoff from the site.
- 2.1.5 It is expected that the Proposed Development (with reduced surface runoff and same flow regime) would not result in worsened drainage impact.

### 3. SEWERAGE IMPACT ASSESSMENT

#### 3.1 Scope of Work

- 3.1.1 The aim of this Sewerage Impact Assessment (SIA) is to assess whether the capacity of the existing sewerage network serving the Application Site is sufficient to cope with the sewage flow from the proposed development. Geoinfo Map was obtained for the purposes of this SIA.

#### 3.2 Assessment Criteria and Methodology

- 3.2.1 Environmental Protection Department's (EPD's) Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning, Version 1 (GESF) has been referred to for the purposes of estimating the quantity of the sewage generated from the proposed development and the existing catchment area. Sewage flow parameters and peaking factors in this document have been adopted for this SIA.
- 3.2.2 Based on the building types in the area, the following unit flow factors are used in the SIA calculation:
- Residents: 0.27 m<sup>3</sup>/person/day (R2)
  - Residents: 0.37 m<sup>3</sup>/person/day (R4)
  - Office employee: 0.08 m<sup>3</sup>/day (J12 Public Administration)
  - Workshop employee: 0.63 m<sup>3</sup>/day (J1 North District)
  - EV Showroom employee: 0.28 m<sup>3</sup>/day (J4 Wholesale & Retail)
  - Warehouse employee: 0.18 m<sup>3</sup>/day (J3 Transport, Storage & Communication)
- 3.2.3 Catchment Inflow Factor ( $P_{CIF}$ ) of North District (1.00) has been applied in the assessment.

#### 3.3 Existing and Future Sewerage System

##### Existing Sewerage System

- 3.3.1 According to the Geoinfo Map, there is an existing Ø250mm sewer and then connected to the existing Ø600mm sewer along Wo Hing Road as shown in **Figure 3.1**.

##### Proposed Sewerage System

- 3.3.2 Under Advance Site Formation and Engineering Infrastructure Works at Kwu Tung North and Fanling North New Development Area, *Contract No. ND/2019/05* and Site Formation and Infrastructure Works for Public Housing Development at Area 48, Fanling, *Contract No. CV/2022/08*, there will be proposed sewerage works in the vicinity of the Application Site.
- 3.3.3 Based on the information of *Contract No. ND/2019/05*, a new Ø450mm sewer and Ø600mm sewer will be constructed along Tai Wo Service Road West, and the existing Ø600mm sewer will be demolished. Moreover, a new Ø450mm sewer will be constructed running forward northwest under *Contract No. CV/2022/08*. The proposed sewerage layout plans for *Contract No. ND/2019/05* and *Contract No. CV/2022/08* are shown in **Appendix 3.2** and **Appendix 3.3** respectively. The completion year for the proposed sewerage system is 2026.
- 3.3.4 According to the preliminary sewerage impact assessment of the Approved Section 16 Planning Application for PHD48, the proposed sewerage works for PHD48 will not be connected to the existing Ø600mm sewer along Tai Wo Service Road West and Wo Hing Road. The wastewater generated from PHD48 will be discharged into the new Ø450mm sewer proposed under *Contract No. ND/2019/05*. The proposed sewerage system plan is extracted in **Appendix 3.4**.

### 3.4 Wastewater Generated by the Proposed Development

- 3.4.1 Wastewater arising from the Proposed Development will primarily be contributed by residents and staffs.
- 3.4.2 Detailed calculation for the Proposed Development is given in **Table 3.1** below and **Appendix 3.1**.

**Table 3.1 Estimated Peak Flow**

Development Parameters	Proposed Development				
	Residential	Office	Workshop	EV Showroom	Warehouse/Storage/Utility
Assumed Area (m <sup>2</sup> )	-	3417	7535	4191	277
Number of Population	414	68	371	92	69
Design Flow (m <sup>3</sup> /person/day)	0.27 <sup>(1)</sup>	0.08 <sup>(2)</sup>	0.63 <sup>(3)</sup>	0.28 <sup>(4)</sup>	0.18 <sup>(5)</sup>
<b>Flow Rate (m<sup>3</sup>/day)</b>	<b>111.8</b>	<b>5.4</b>	<b>233.9</b>	<b>25.8</b>	<b>12.5</b>
<b>Total Flow Rate with P<sub>CHF</sub> (m<sup>3</sup>/day)</b>	<b>389.3</b>				
<b>Peak Flow (L/s)</b>	<b>27.0</b>				

(1) Refer to Table T-1 of GESF – R2

(2) Refer to Table T-2 of GESF – J12 Public Administration

(3) Refer to Table T-3 of GESF – J1 Manufacturing + North District

(4) Refer to Table T-2 of GESF – J4 Wholesale & Retail

(5) Refer to Table T-2 of GESF – J3 Transport, Storage & Communication

### 3.5 Discussion

- 3.5.1 The potential sewerage impact due to the Proposed Development has been quantitatively addressed. Sewage generation rate from the Proposed Development is estimated to be 389.3 m<sup>3</sup>/day (i.e. peak flow 27.0 litre/sec).
- 3.5.2 The wastewater from Proposed Development will be discharged to the existing manhole S1 (FMH1004311) via a proposed Ø200mm sewer.
- 3.5.3 According to Table 4a of **Appendix 3.1**, regarding the sewage generation rate from the Proposed Development and surrounding areas (**Figure 3.2**), the existing sewerage system has adequate capacity to cater the cumulative flow in future.
- 3.5.4 However, as the invert levels of the existing sewer S1-S2 (FMH1004311 to FSH1002349) are too high, modification work of the existing sewer S1-S2 would be proposed. The proposed modification work is summarized in **Table 3.2** below.

**Table 3.2 Proposed Modification Work**

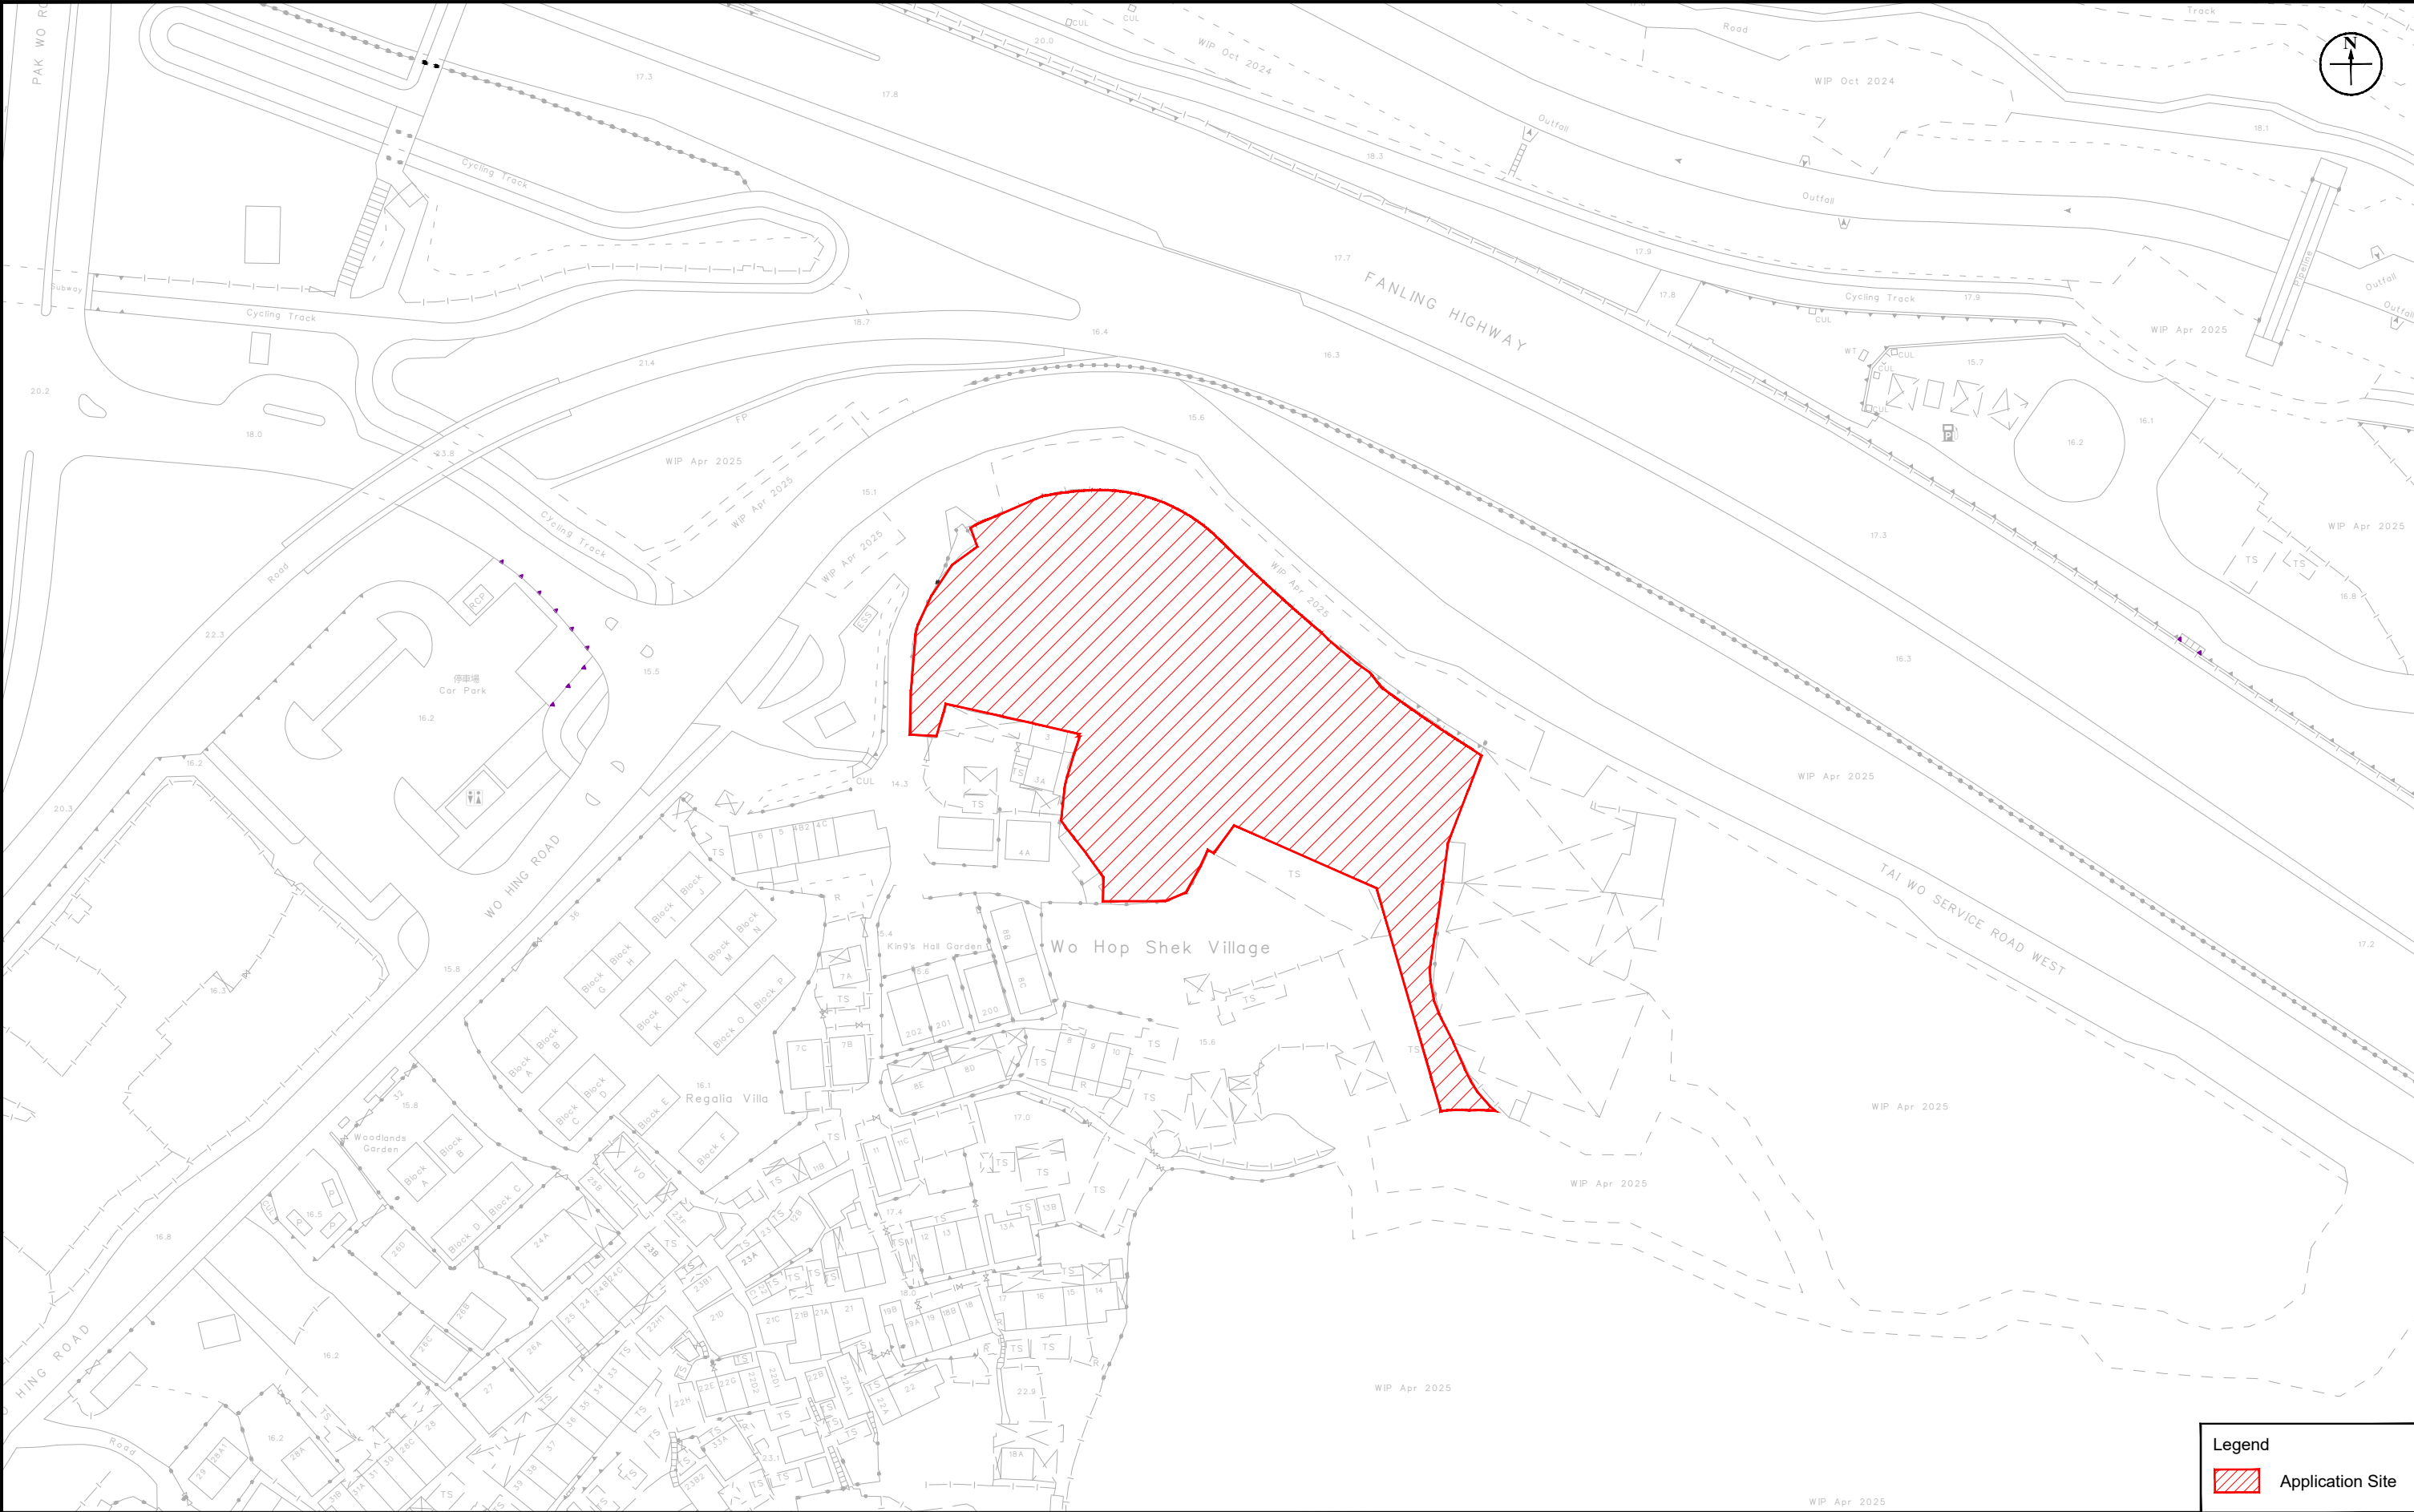

Segment	Length (m)	Original			After Modification Work		
		Size(Ø) (mm)	Upstream Invert Level (mPD)	Downstream Invert Level (mPD)	Size (Ø) (mm)	Upstream Invert Level (mPD)	Downstream Invert Level (mPD)
S1-S2	11.4	250	14.549	13.535	200	13.600	13.375

- 3.5.5 With the proposed modification work, the sewerage system would have adequate capacity to cater the sewerage generated from the proposed development. Therefore, the sewerage generated from the Proposed Development would not have adverse impact on the existing sewerage system.

## **4. OVERALL CONCLUSION**

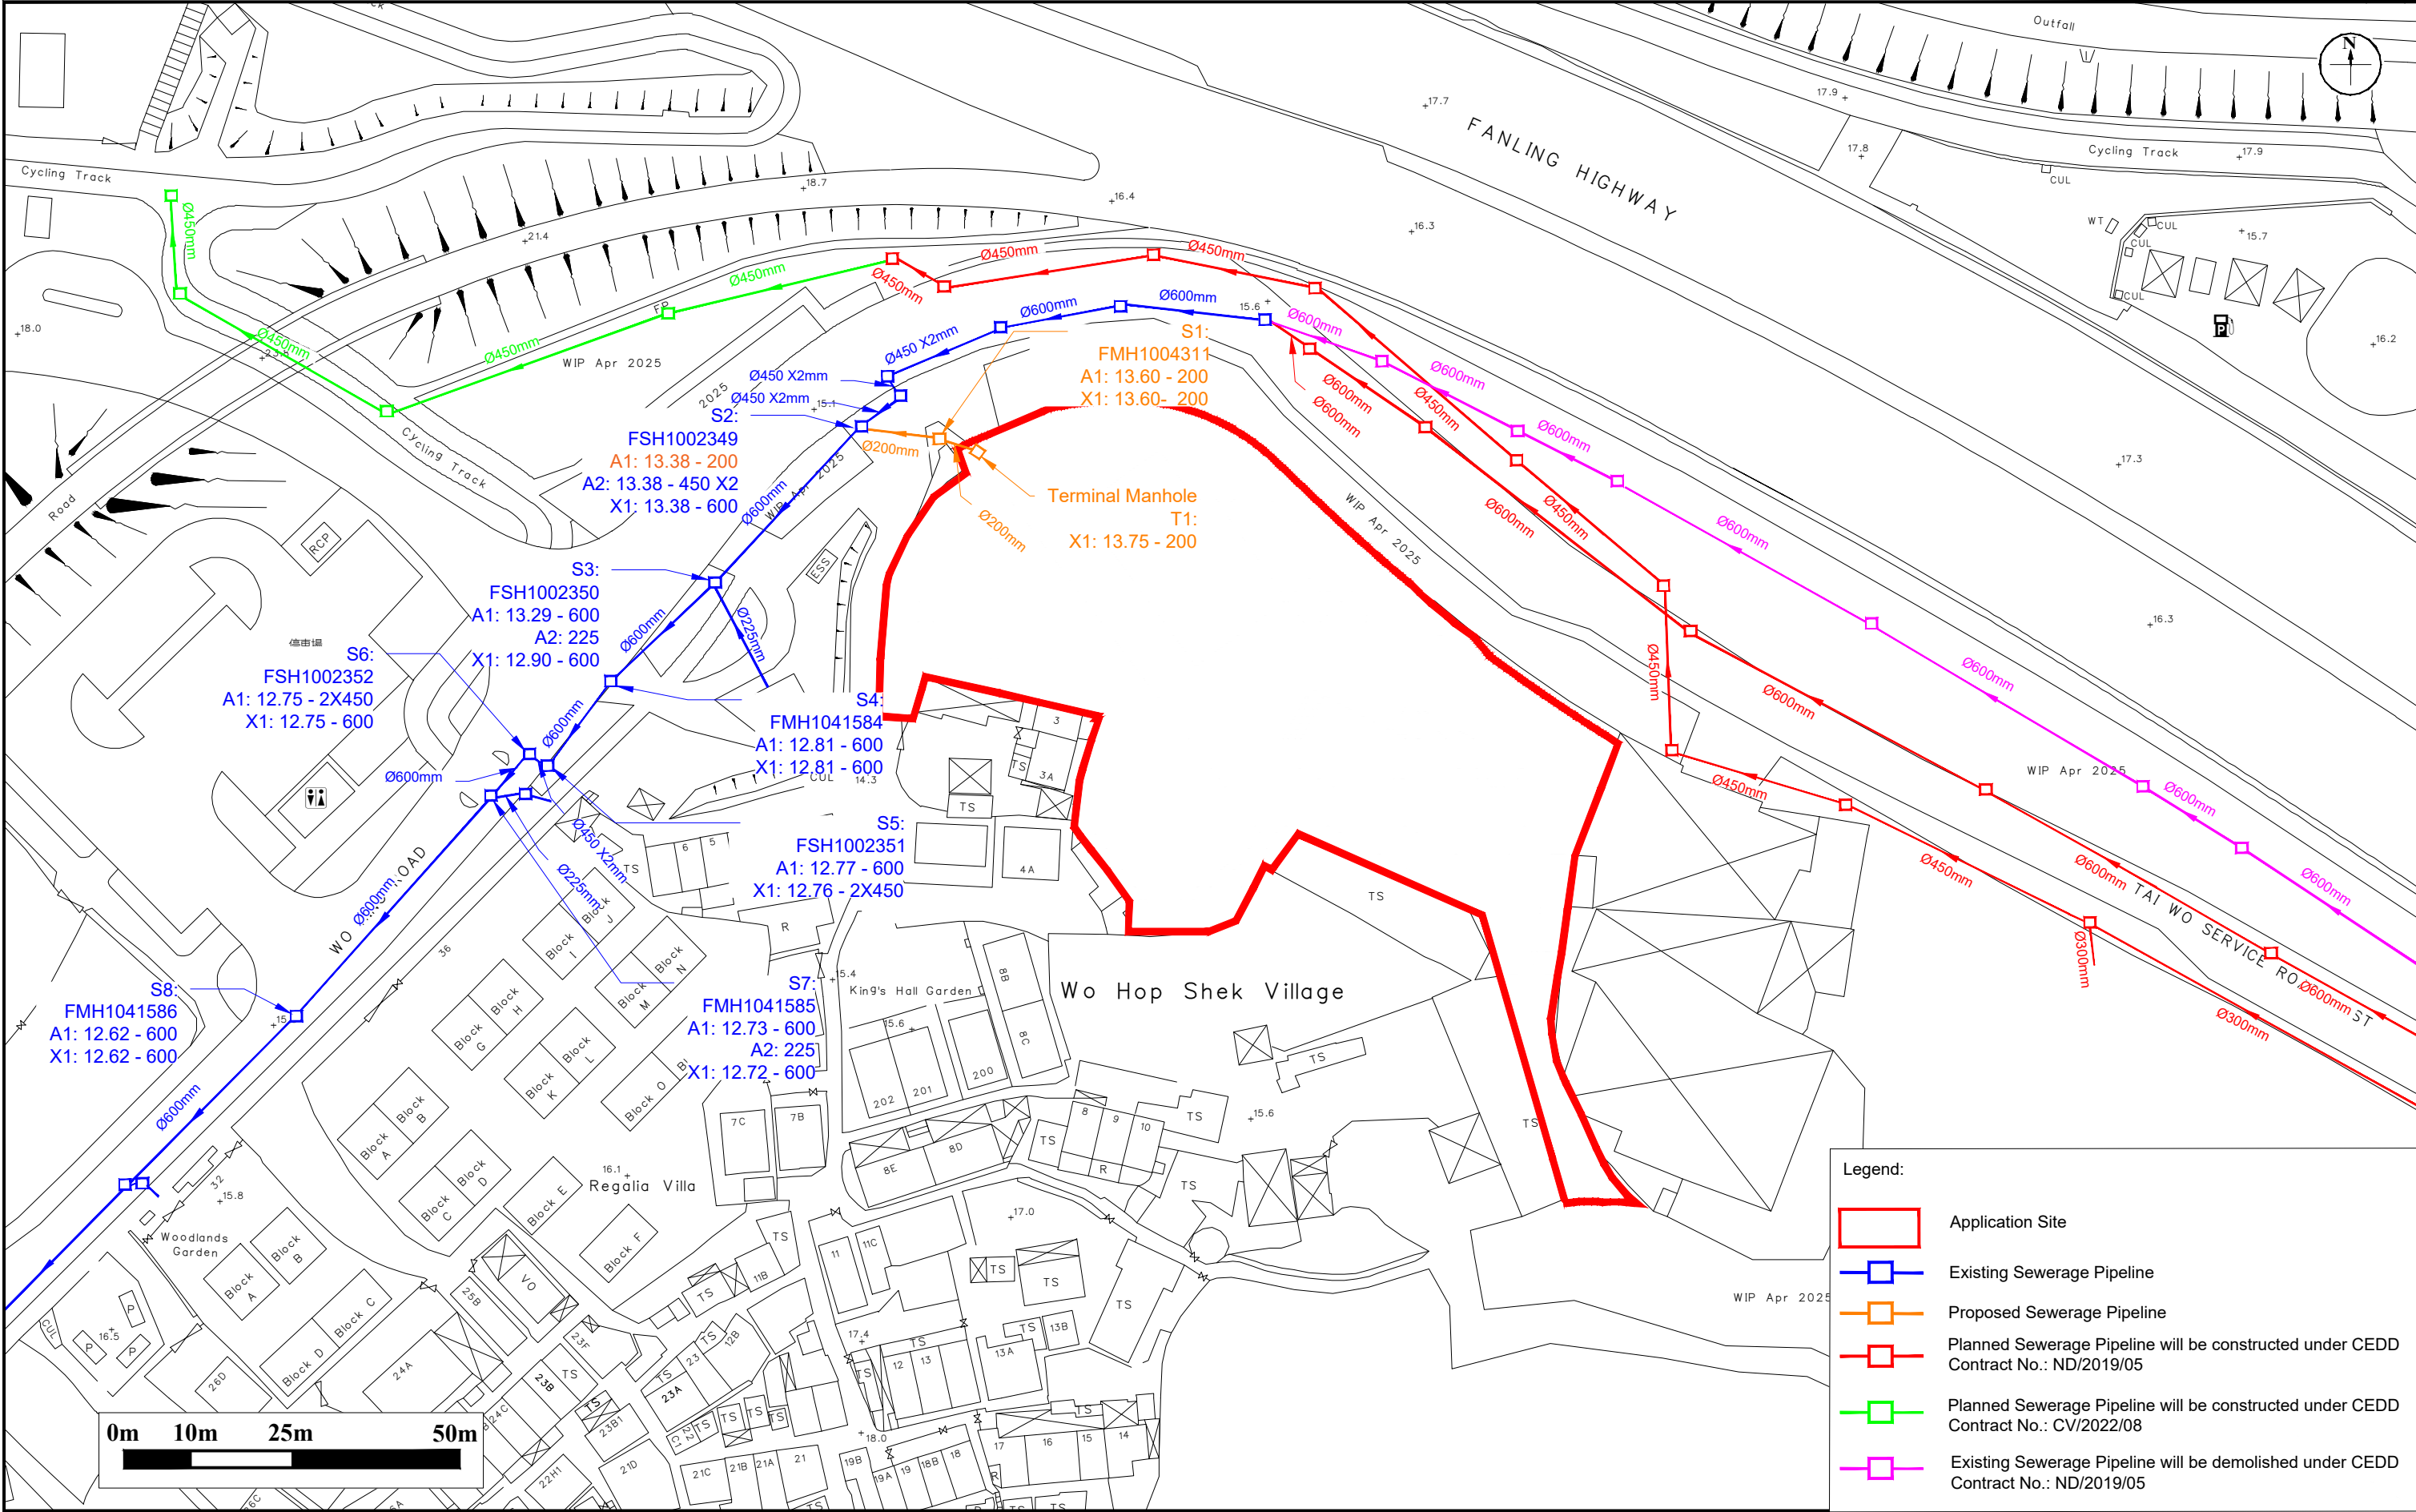

- 4.1.1 The EV Mobility City with Ancillary Staff Quarters and Talent Accommodation is proposed at the Various Lots in D.D. 51, Fanling. The potential drainage and sewerage impact have been qualitatively or quantitatively addressed.
- 4.1.2 The Application Site is currently served by public drainage system. The Proposed Development would result in reduced surface runoff and follow the same flow regime as per existing condition. It would not result in worsened drainage impact.
- 4.1.3 Based on the sewerage impact assessment results, it is found that the existing sewerage system has adequate capacity to cater the cumulative flow in future.
- 4.1.4 However, as the invert levels of the existing sewer S1-S2 (FMH1004311 to FSH1002349) are too high, modification work of the existing sewer S1-S2 would be proposed.
- 4.1.5 With the proposed modification work in place, it is anticipated that the Proposed Development will not result any adverse impact on the existing sewerage system.

## **Appendix 2.1     Detailed Drainage Impact Assessment Calculations**

Proposed EV Mobility City with Ancillary Staff Quarters and Talent Accommodation at Various Lots in D.D. 51 and Adjoining Government Land, Fanling  
Table 1 - Proposed Catchment Areas and Run-off (1 in 50 year)

Notes:

Site Area                      5,480                      m<sup>2</sup>

Catchments are small, so Rational Method is appropriate

1 in 50 year (according to Table 3 of DSD Manual)

a=                      505.5  
b=                      3.29  
c=                      0.355

$$Q_p = 0.278 \ C \ i \ A$$

where    Q<sub>p</sub>    =    peak runoff in m<sup>3</sup>/s  
          C    =    runoff coefficient (dimensionless)  
          i    =    rainfall intensity in mm/hr  
          A    =    catchment area in km<sup>2</sup>

Surface Characteristics	Runoff coefficient, C*
Asphalt	0.70 - 0.95
Concrete	0.80 - 0.95
Brick	0.70 - 0.85
Grassland (heavy soil**)	
Flat	0.13 - 0.25
Steep	0.25 - 0.35
Grassland (sandy soil)	
Flat	0.05 - 0.15
Steep	0.15 - 0.20

	Catchment	Discharge Manhole	Paved	Unpaved	Run-off at	Area	Levels (mPD)		Fall	Overland, L	Fall, H	Overland t <sub>c</sub>	t <sub>0</sub>	Total t <sub>f</sub>	Total t <sub>c</sub>	Intensity	Weighted Runoff Coefficient <sup>1</sup>	Run-off	Run-off <sup>2</sup>	Run-off <sup>3</sup>
						(m <sup>2</sup> )	Upstream	Downstream	(m)	(m)	(m/100m)	(min)	(min)	(min)	(min)	(mm/h)		(m <sup>3</sup> /s)	(m <sup>3</sup> /s)	(m <sup>3</sup> /s)
Existing	Application Site																			
	S1	T1	87%	13%	T1	5,480								5.00	5.00	239	0.85	0.31	0.34	0.36
Future	Application Site																			
	S1	T1	80%	20%	T1	5,480								5.00	5.00	239	0.80	0.29	0.32	0.34

Remarks:

- 1. Runoff coefficient of 0.95 for Paved area and 0.20 for Unpaved area
- 2. Runoff includes rainfall increase due to Climate Change 11.1% in the mid 21st Century
- 3. Runoff includes rainfall increase due to Climate Change 16% in the end of 21st Century

### **Appendix 3.1 Detailed Sewerage Impact Assessment Calculation**

**Table 1 Calculation for Sewage Generation Rate of the Proposed Development at the Application Site**

**Catchment S (Proposed Development)**

**1. Residential**

Total number of residents	=	414 people
Design flow	=	0.27 m <sup>3</sup> /person/day -- (refer to Table T-1 of GESF - R2)
Sewage Generation rate	=	<b>111.8 m<sup>3</sup>/day</b>

**2. Office**

Assumed Area	=	3417 m <sup>2</sup>
Assumed floor area per employee	=	50.5 m <sup>2</sup> per worker -- (refer to Table 8 of CIFSUS - Financial, Insurance, Real Estate & Bussiness Services)
Total number of employees	=	68 employees
Design flow for commercial activities	=	0.08 m <sup>3</sup> /employee/day -- (refer to Table T-2 of GESF - J12)
Sewage Generation rate	=	<b>5.4 m<sup>3</sup>/day</b>

**3. Workshop**

Assumed Area	=	7535 m <sup>2</sup>
Assumed floor area per employee	=	20.3 m <sup>2</sup> per worker -- (refer to Table 8 of CIFSUS -Manufacturing)
Total number of employees	=	371 employees
Design flow for commercial activities	=	0.63 m <sup>3</sup> /employee/day -- (refer to Table T-3 of GESF - J1 + North District)
Sewage Generation rate	=	<b>233.9 m<sup>3</sup>/day</b>

**4. EV Showroom**

Assumed Area	=	4191 m <sup>2</sup>
Assumer flooe area per employee	=	45.45 m <sup>2</sup> per employee -- (refer to Table 8 of CIFSUS -Wholesale Trade)
Total number of employee	=	92 employees
Design flow for transport employee	=	0.28 m <sup>3</sup> /employee/day -- (refer to Table T-2 of GESF - J4)
Sewage Generation rate	=	<b>25.8 m<sup>3</sup>/day</b>

**5. Warehouses / Storage / Utility**

Assumed Area	=	277 m <sup>2</sup>
Assumer flooe area per employee	=	4.00 m <sup>2</sup> per employee -- (refer to Table 8 of CIFSUS -Storage)
Total number of employee	=	69 employees
Design flow for transport employee	=	0.18 m <sup>3</sup> /employee/day -- (refer to Table T-2 of GESF - J3)
Sewage Generation rate	=	<b>12.5 m<sup>3</sup>/day</b>

**Total flow from proposed development**

Flow Rate (without Catchment Inflow Factor)	=	389.3 m <sup>3</sup> /day
Catchment Inflow Factor	=	1.00 Catchment Inflow Factor for North District in Table T-4 of GESF
Flow Rate (with Catchment Inflow Factor)	=	<b>389.3 m<sup>3</sup>/day</b>
Contributing Population	=	1442 People
Peaking Factor	=	6 Refer to Table T-5 of GESF for population 1,000-5,000 incl. stormwater allowance
Peak Flow	=	27.0 litre/sec

Table 2a Hydraulic Capacity of Existing Sewers

Table 2c Hydraulic Capacity of Proposed Sewers

Segment	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Invert Level 1	Invert Level 2	g	k <sub>s</sub>	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s <sup>2</sup>	m		m <sup>2</sup> /s	m/s	m <sup>2</sup>	m <sup>3</sup> /s	L/s
T1-S1	T1	FMH1004311	200	5.3	13.75	13.60	9.81	0.00030	0.028	0.000001	2.24	0.03	0.07	70

Remarks:

- (1) g=gravitational acceleration; k<sub>s</sub>=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity
- (2) Table 2a & 2b: The value of k<sub>s</sub> = 0.6mm is used for the calculation of slimed clayware sewer, poor condition (based on Table 5: Recommended roughness values in Sewerage Manual)
- (3) Table 2a & 2b: The value of k<sub>s</sub> = 3mm is used for the calculation of concrete sewer, poor condition (based on Table 5: Recommended roughness values in Sewerage Manual)
- (4) Table 2b & 2c The value of k<sub>s</sub> = 0.3mm is used for the calculation of slimed polyethylene for the proposed sewers, poor condition (based on Table 5: Recommended roughness values in Sewerage Manual)
- (5) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)
- (6) Equation used: 
$$V = -\sqrt{(8gDs)} \log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

**Table 3a Calculation for Sewage Generation Rate of the Existing Surrounding Building**

**Catchment A**

**Subunits 628/17-20**

Total number of Residents	=	1295 people ((2021 Population Census: Subunit 628/17-20)
Design flow for Residents	=	0.37 m <sup>3</sup> /residential/day -- (refer to Table T-1 of GESF - R4)
Sewage Generation rate	=	<b>479.2</b> m <sup>3</sup> /day

**Table 3b Calculation for Sewage Generation Rate of the Existing Surrounding Building**

**Catchment B (FWD1053666) (upstream)**

a. Assumed Pipe Capacity	=	100 %
b. Pipe Diameter	=	600 mm
c. Pipe Length	=	21.43 m
d. Invert Level 1	=	13.595 mPD
e. Invert Level 2	=	13.58 mPD
f. Invert Level Difference	=	0.02 m
g. Gravitational Acceleration	=	9.81 ms <sup>-2</sup>
h. Equivalent Sand Roughness	=	0.003 m
i. Gradient	=	0.0009
j. Kinematic Viscosity of Water	=	0.000001 m <sup>2</sup> /s
k. Mean Velocity	=	0.58 m/s
l. Cross Sectional Area of the Pipe	=	0.28 m <sup>2</sup>
m. Velocity of the Concerned Pipe	=	0.17 m <sup>3</sup> /s
n. Estimated Capacity	=	<b>165.0</b> litre/sec

**Sub-total**

Peak Flow	=	165.0 litre/sec
Peaking factor	=	4.00 Refer to Table T-5 of GESF for population 13,201 incl. stormwater allowa
Contributing Population	=	13201 people
Equivalent Flow Rate	=	<b>3564.2</b> m <sup>3</sup> /day

**Table 4a Comparison of the Hydraulic Capacity of Existing Sewers for Sewerage generated from the Proposed Development and Surrounding Catchment Areas**

Segment	Pipe Dia.
