Appendix B

Traffic Impact Assessment

Application for Amendment of Plan Under Section 12A of the Town Planning Ordinance (Cap. 131) for Proposed Innovation and Technology Hub at Various Lots in D.D. 82 and D.D. 86 and Adjoining Government Land, Man Kam To, New Territories

Traffic Impact Assessment Report

1st Submission | May 2026

Job number 287082-02

Arup Hong Kong Limited

1 INTRODUCTION

1.1 Background

1.1.1 The Application Site is located at Various Lots in D.D. 82 & D.D. 86 and Adjoining Government Land, Man Kam To, New Territories. It is currently zoned as mainly in Agriculture ("AGR"), and minor parts in Green Belt ("GB"), Government, Institution or Community ("G/IC") under the Approved Man Kam To (MKT) Outline Zoning Plan (OZP) No. S/NE-MKT/4 (the OZP). The location of Application Site is shown in **Figure 1.1**.

1.1.2 The Applicant proposes amendments to rezone the Application Site with a sizeable site area of about 125,863m^2 (Development site area of about 102,461m^2) into an Innovation and Technology Hub with Ancillary Facilities (the "Indicative Scheme"), subject to a non-domestic gross floor area (GFA) of 365,180m^2, which consists of R&D Centre with 268,780m^2 GFA and Data Centre with 86,400m^2 GFA to nurture the development of I&T industry, as well as a Commercial Centre with 9,276m^2 to support the daily needs of the working and living population. A kindergarten of 724m^2 will be provided on the ground floor of Ancillary Dormitories. In addition, there will be a domestic GFA of 138,450m^2, which consists of 5 nos. of Private Residential Blocks providing a total of 1,618 units together with a 2,982m^2 Clubhouse, and Ancillary Dormitories with 63,900m^2 which provide 1,392 units for the working population of R&D Centre.

1.1.3 Arup Hong Kong Limited (Arup) was commissioned to carry out a Traffic Impact Assessment (TIA) report in support of the Section 12A planning application for the proposed amendment of plan.

1.2 Objectives of this Report

1.2.1 The objective of the Study is to evaluate the potential traffic impact associated with the Proposed Innovation and Technology Hub at the Application Site.

1.3 Scope of Study

1.3.1 The tasks for this TIA study are outlined as follows:

- Carry out traffic surveys at critical junctions to appreciate current traffic condition;
- Update the inventory regarding traffic circulation patterns, traffic conditions, as well as the constraints of the existing road network in the vicinity;
- Investigate the public transport in the vicinity;
- Recommend the proposed internal transport facilities provisions;
- Set up the reference scenario should there be no Indicative Scheme at the site location, i.e. reference scenario with the existing situation;
- Assess the volume of traffic likely to be generated by the Indicative Scheme;
- Compare and evaluate the likely traffic impact, if any, associated with the Indicative Scheme; and

- Assess future traffic condition, taking into account any future traffic growth, as well as the traffic generated by the Indicative Scheme and other planned/committed development, if any, to be built in the vicinity.

1.4 Structure of the Report

1.4.1 The structure of this TIA report is as follows:

Chapter	Title	Aims
1	Introduction	Provide project background and scope of the Study
2	Existing Traffic Condition	Review and appreciate the existing traffic condition
3	The Subject Development	Provide information of the Indicative Scheme
4	Traffic Impact Assessment	Illustrate the results of Traffic Impact Assessment
5	Conclusion	Summarize the findings of this Study

2 EXISTING TRAFFIC CONDITION

2.1 Site Characteristics

2.1.1 The Application Site is located in Zone with major part in Agriculture ("AGR"), and minor parts in Green Belt ("GB"), Government, Institution or Community ("G/IC") at Various Lots in D.D.82 & D.D.86, Man Kam To, New Territories.

2.1.2 The site boundary is surrounding existing Ta Ku Ling Ling Ying Public School and is bounded by existing Chow Tin Tsuen to the east and Lin Ma Hang Road to the north. **Figure 1.1** shows the location and the environs of the Application Site.

2.2 Existing Road Network

2.2.1 Some major roads in the vicinity of the Application Site are listed as follows:

- Lin Ma Hang Road is a rural road connecting Man Kam To Road at western end and Shun Hing Street in Sha Tau Kok at eastern end. It is in single-two carriageway configuration for the section between Man Kam To Road and Tsung Yuen Ha, and in form of a single-track access road with passing bays for the remaining section.
- Man Kam To Road is a rural road in single-three carriageway configuration which consists of two lanes in Northbound and one lane in Southbound. It connects Jockey Club Road at southern end and Boundary (Man Kam To Control Point) at northern end.
- Ping Che Road is a district distributor in single-two carriageway configuration which connects Sha Tau Kok Road at southern end and Lin Ma Hang Road at northern end.
- Heung Yuen Wai Highway is a Rural Trunk Road in dual two-lane carriageway configuration connecting the Fanling Highway and the Heung Yuen Wai Boundary Control Point (Heung Yuen Wai BCP).

2.3 Existing Road Improvement Works Under Construction

2.3.1 Road works under construction currently in the vicinity of the Application Site are identified as follows:

- Advance Site Formation and Engineering Infrastructure Works at Kwu Tung North (KTN) and Fanling North (FLN) New Development Area (NDA) – under CEDD project number 7747CL

  The construction works include (a) construction of Fanling Bypass Eastern Section, (b) construction of Lung Yeuk Tau Interchange connecting Fanling Bypass Eastern Section with existing Sha Tau Kok Road – Lung Yeuk Tau, and (c) construction of local roads for First Phase Development within the KTN and FLN NDA. The construction works are anticipated to be completed in 2026.

  (https://www.cedd.gov.hk/eng/our-projects/major-projects/index-id-36.html)

- Remaining Phase of Site Formation and Engineering Infrastructure Works at Kwu Tung North and Fanling North New Development Area - Detailed Design and Site Investigation – under CEDD project number 7828CL

  The construction works include (a) widening of Fanling Highway (Tsung Pak Long to Tai Tau Leng Roundabout Portion), (b) construction of Po Shek Wu Road Flyover connected to Fanling Highway westbound, (c) road improvements at Tai Tau Leng Roundabout and Po Shek Wu Road, (d) construction of Fanling Bypass Western Section, (e) construction of Man Kam To Road Roundabout connecting Fanling Bypass Western Section with existing Man Kam To Road, and (f) construction of local roads for Remaining Phase Development within the KTN and FLN NDA. The construction works are anticipated to be completed in 2031.
  (https://www.cedd.gov.hk/eng/our-projects/major-projects/index-id-87.html)

2.3.2 The corresponding Gazette Plans are attached in **Appendix A**.

2.4 Existing Traffic Performance

2.4.1 To appreciate the existing traffic conditions, comprehensive classified traffic counts were conducted at the following identified key junctions and road links in the vicinity of the Application Site. Locations of these surveyed junctions and road links are listed below and shown in **Figure 2.1** to **Figure 2.4**.

Identified Key Junctions:

J1	- Lin Ma Hang Road / Man Kam To Road	(Priority)
J2	- Lin Ma Hang Road / Ping Che Road	(Priority)
J3	- Lin Ma Hang Road / Heung Yuen Wai Highway Slip Road	(Roundabout)
J4	- Lin Ma Hang Road / Heung Yuen Wai Highway Slip Road	(Priority)
J5	- Sha Tau Kok Road / Ping Che Road	(Roundabout)
J6	- Sha Tau Kok Road / Lau Shui Heung Road	(Roundabout)
J7	- Sha Tau Kok Road / Lung Ma Road	(Roundabout)
J8	- Sha Tau Kok Road / Sui Wan Road	(Signalised)
J9	- Man Kam To Road / Kong Nga Po Road	(Priority)
J10	- Jockey Club Road / Po Wan Road	(Signalised)
J11	- Jockey Club Road / Tin Ping Road	(Signalised)
J12	- Po Shek Wu Road / Jockey Club Road	(Roundabout)
J13	- Po Shek Wu Road / Po Wan Road	(Signalised)
J14	- Po Shek Wu Road / Choi Yuen Road	(Signalised)
J15	- Lin Ma Hnag Road / Proposed Access Road	(Signalised)
J16	- Sha Tau Kok Road / Fanling Bypass	(Roundabout)

J17 - Man Kam To Road / Fanling Bypass (Roundabout)

J18 - Man Kam To Road / Road L4 (Signalised)

J19 - Sha Tau Kok Road / Luen On Street (Signalised)

J20 - Sha Tau Kok Road / Fan Leng Lau Road (Signalised)

J21 - Sha Tau Kok Road / Jockey Club Road (Roundabout)

J22 - Sha Tau Kok Road / San Wan Road (Roundabout)

J23 - San Wan Road / Fanling Station Road (Signalised)

J24 - Jockey Club Road / So Kwun Po Road (Signalised)

J25 - Jockey Club Road / Lung Sum Avenue (Signalised)

Identified Key Road Links:

L1 - Lin Ma Hang Road (near Man Kam To Road junction)

L2 - Lin Ma Hang Road (near Ping Che Road junction)

L3 - Lung Shan Tunnel (Fanling Highway – Sha Tau Kok Road)

L4 - Fanling Highway (at the south of Lung Shan Tunnel)

L5 - Sha Tau Kok Road (Sui Wan Road – Ma Sik Road)

L6 - Jockey Club Road (Tin Ping Road – Po Shek Wu Road)

L7 - Po Shek Wu Road (Po Wan Road – Choi Yuen Road)

L8 - Fanling Highway (at the west of Po Shek Wu Road Interchange)

L9 - Proposed Access Road

2.4.2 The counts were undertaken on typical weekdays during the periods 07:00-10:00 and 17:00-20:00 in March 2026.

2.4.3 The AM and PM peak hours were found to be 07:45-08:45 and 17:15-18:15 respectively. The observed traffic flows during these peak hours are presented in **Figure 2.5** to **Figure 2.7**.

2.4.4 Junction capacity analysis was carried out at the identified key junctions in the vicinity of the Application Site. Results of the capacity assessment are shown in **Table 2.4.1** below.

Table 2.4.1 Year 2026 Key Junction Performance

Junction		Type	2026 Existing Performance (1)	
			AM	PM
J1	Lin Ma Hang Road / Man Kam To Road	Priority	0.43	0.39
J2	Lin Ma Hang Road / Ping Che Road	Priority	0.39	0.38
J3	Lin Ma Hang Road / Heung Yuen Wai Highway Slip Road	Roundabout	0.22	0.22
J4	Lin Ma Hang Road / Heung Yuen Wai Highway Slip Road	Priority	0.21	0.15
J5	Sha Tau Kok Road / Ping Che Road	Roundabout	0.39	0.41
J6	Sha Tau Kok Road / Lau Shui Heung Road	Roundabout	0.33	0.36
J7	Sha Tau Kok Road / Lung Ma Road	Roundabout	0.39	0.43
J8	Sha Tau Kok Road / Sui Wan Road	Signalised	59%	56%
J9	Man Kam To Road / Kong Nga Po Road	Priority	0.34	0.33
J10	Jockey Club Road / Po Wan Road	Signalised	49%	57%
J11	Jockey Club Road / Tin Ping Road	Signalised	58%	74%
J12	Po Shek Wu Road / Jockey Club Road	Roundabout	0.44	0.43
J13	Po Shek Wu Road / Po Wan Road	Signalised	54%	55%
J14	Po Shek Wu Road / Choi Yuen Road	Signalised	35%	35%
J15	Lin Ma Hnag Road / Proposed Access Road	Signalised	N.A.	
J16	Sha Tau Kok Road / Fanling Bypass	Roundabout		
J17	Man Kam To Road / Fanling Bypass	Roundabout		
J18	Man Kam To Road / Road L4	Signalised		
J19	Sha Tau Kok Road / Luen On Street	Signalised	66%	80%
J20	Sha Tau Kok Road / Fan Leng Lau Road	Signalised	29%	32%
J21	Sha Tau Kok Road / Jockey Club Road	Roundabout	0.56	0.56
J22	Sha Tau Kok Road / San Wan Road	Roundabout	0.41	0.38
J23	San Wan Road / Fanling Station Road	Signalised	16%	18%
J24	Jockey Club Road / So Kwun Po Road	Signalised	55%	43%
J25	Jockey Club Road / Lung Sum Avenue	Signalised	51%	41%

Notes:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions and "Design Flow Capacity" (DFC) ratio for roundabouts and priority junctions.

2.4.5 Results of the analysis indicate that the identified key junctions in the vicinity of the Application Site are currently operating with ample capacity during both AM and PM peak hours in Year 2026.

2.4.6 The road link capacity assessment has also been carried out to examine the volume to capacity (V/C) ratio of the assessed road links. Results of the road link assessment are shown in **Table 2.4.2** below.

Table 2.4.2 Year 2026 Key Link Performance

Link		Type (1)	Configuration	Direction	Capacity	2026 Existing Performance (2)			
						AM		PM	
						Flow	V/C	Flow	V/C
L1	Lin Ma Hang Road (near Man Kam To Road junction)	RR	6.75m wide Single two-lane carriageway	Two-way	1,160	612	0.53	588	0.51
L2	Lin Ma Hang Road (near Ping Che Road junction)	RR	3.5m wide single-track access road with passing bays	Two-way	600	550	0.92	517	0.87
L3	Lung Shan Tunnel (Fanling Highway – Sha Tau Kok Road)	RT	Dual two-lane carriageway	NB	3,000	1,052	0.36	911	0.31
				SB	3,000	878	0.3	779	0.26
L4	Fanling Highway (at the south of Lung Shan Tunnel)	EX	Dual four-lane carriageway	NB	8,200	6,524	0.8	5,898	0.72
				SB	8,200	6,226	0.76	5,593	0.69
L5	Sha Tau Kok Road (Lung Ma Road – Sui Wan Road)	RR	Dual two-lane carriageway	NB	2,800	1,187	0.43	1,393	0.5
				SB	2,800	1,395	0.5	1,266	0.46
L6	Jockey Club Road (Tin Ping Road – Po Shek Wu Road)	PD	Dual two-lane carriageway	NB	2,800	1,163	0.42	1,050	0.38
				SB	2,800	1,249	0.45	1,205	0.44
L7	Po Shek Wu Road (Po Wan Road – Choi Yuen Road)	PD	Dual two-lane carriageway	NB	2,800	1,348	0.49	1,434	0.52
				SB	2,800	1,604	0.58	1,637	0.59
L8	Fanling Highway (at the west of Po Shek Wu Road Interchange)	EX	Dual three-lane carriageway	EB	6,100	5,272	0.87	5,089	0.84
				WB	6,100	5,353	0.88	4,639	0.77
L9	Proposed Access Road	-	10.5m wide Single two-lane carriageway	Two-way	1,800	N.A.			

Notes:
(1) Abbreviation: EX – Expressway; PD – Primary Distributor; RR – Rural Road; RT – Rural Trunk Road
(2) A V/C ratio below 1.0 is considered acceptable. A V/C ratio above 1.0 indicates the onset of mild congestion and a V/C ratio between 1.0 and 1.2 would indicate a manageable degree of congestion. A V/C ratio above 1.2 indicates the onset of more serious congestion.

2.4.7 Results of the analysis indicate that the identified key road links in the vicinity of the Application Site are currently operating with ample capacity during both AM and PM peak hours in Year 2026.

2.5 Existing Public Transport Facilities

2.5.1 Currently, the Application Site is only directly served by GMB Route 59K and 59S operating along Lin Ma Hang Road, which is the major feeder service between Sheung Shui Station and Lin Ma Hang / Heung Yuen Wai BCP, serving the residents of private residential developments in the vicinity and the border-crossing passengers.

2.5.2 Existing public transport facilities in the vicinity of the Application Site are illustrated in **Figure 2.8** and summarised in **Table 2.5.1** below.

Table 2.5.1 Existing public transport facilities in the vicinity of the Application Site

Route No.	Origin / Destination	Operation Hour	Peak Hour Headway (mins)
Green Minibus Services			
59K	Main Route: Sheung Shui Station – Lin Ma Hang	From Sheung Shui Station 05:45 am - 09:30 pm From Lin Ma Hang 06:15 am - 10:00 pm	15 - 30
	Supplementary Route: Sheung Shui Station – Heung Yuen Wai	From Sheung Shui Station 05:45 am - 08:45 pm From Heung Yuen Wai 06:15 am - 09:15 pm	30
59S	Sheung Shui Station – Heung Yuen Wai BCP	From Sheung Shui Station 06:30 am - 09:00 pm From Heung Yuen Wai BCP 07:15 am – 10:30 pm	3 - 8

2.5.3 In summary, the Application Site is only served by limited existing public transport services.

2.5.4 To improve the accessibility of the Application Site, it is proposed to provide public transport feeder services and long-haul services with sufficient transport facilities in appropriate locations for the Indicative Scheme in order to minimise the impact to the existing public transport services. Details are further discussed in **Section 4.8**.

3 THE INDICATIVE SCHEME

3.1 Development Schedule

3.1.1 The Applicant intends to redevelop the site into Innovation and Technology Hub together with residential, commercial and I&T use.

3.1.2 The Indicative Scheme is envisaged to be completed by Year 2032.

3.1.3 The proposed development schedule of Indicative Scheme is summarized in **Table 3.1.1**, and the master layout plan, preliminary layout plans for basement levels and section plans are presented in **Figure 3.1** to **Figure 3.5** respectively.

Table 3.1.1 Development Schedule

Development Site Area (m^2)	Type		GFA (m^2)	Flat Mix		
				No. of Blocks	Flat Size	No. of Flats
102,461	Non-Domestic	Office (R&D Centre)	268,780	-		
		Data Centre	86,400			
		Commercial Centre	9,276			
		6-classroom Kindergarten	724			
	Domestic	Private Housing	74,550	5	~26m^2	387
					~33m^2	714
					~43m^2	302
					~77m^2	215
		Ancillary Dormitories	63,900	3	~26m^2	336
					~33m^2	660
					~43m^2	222
					~77m^2	174
		Club House	2,982 (2)	-		

Notes:
(1) Club House is proposed to be exempted from GFA calculation.

3.2 Proposed Self-containment Arrangement

3.2.1 Ancillary Dormitories would be provided for application by employees of the I&T Hub (including R&D Centres and Data Centres) to achieve the Self-containment Arrangement. Flats with size < 40m^2 will be assigned as one-person units while flats with size > 40m^2 will be assigned as family units.

3.2.2 The walking distance and time between AD 1 and R&D 1 is anticipated to be the longest among the Ancillary Dormitories group and Office Developments group, with walking distance of approx. 500m and time of approx. 7 minutes respectively, which is considered a walkable condition and hence appropriate for self-containment assumption.

3.2.3 With the intention to develop an international I&T Hub, the proposed development has been designed comprehensively with R&D Centres, Data Centres, Ancillary Dormitories to be resided by IT talents and their families, and Private Residential Towers. The Ancillary Dormitories, which are purpose-built for staff working at the I&H hub, is an integral part of the I&T Hub essential to the operational needs and its overall competitiveness by attracting talent people locally and abroad.

3.2.4 Within the proposed I&T Hub, in addition to job opportunities, there are a Commercial Centre with retail shops and eating places, as well as a kindergarten, fulfilling the daily needs of the employees and their families without the need to travel outside. Sufficient open space (not less than $1m^2$ per tenants of Ancillary Dormitories and residents of the private residential towers) and landscaping areas, including the 10m-wide riverside promenade, have also been provided within the I&T Hub for the enjoyment at all times. These supporting facilities will form a self-contained community where employees living in the Ancillary Dormitories will live, work, and commute within the I&T Hub.

3.2.5 With the self-containment arrangement, it is anticipated that the employees living in Dormitories will commute within the Application Site during weekday peak period. The associated parking demand as well as external trip generation and attraction would be low. Therefore, low-end parking provision rate and lower limit trip rate are adopted for one-person units, to avoid over-provision of parking spaces and over-estimation of external trips.

3.2.6 Taking into consideration of family members of the employees living in family units, high-end parking provision rate and mean trip rate are adopted for family units for conservative assessment approach.

3.3 Proposed Vehicular and Pedestrian Access Arrangement

3.3.1 The Application Site is located at the south of Lin Ma Hang Road near Ping Yuen River. Currently, there is no vehicular access and footpath connecting between the Application Site and the external road network.

Proposed Vehicular Access Road and Footpath

3.3.2 In order to provide vehicular and pedestrian access to the Application Site, the existing access road of River Ganges Pumping Station and its Substation is proposed to be widened and extended. A new standard single two-lane carriageway in width of minimum 10.5m with 2.5m-wide footpath on both sides is proposed connecting the Application Site and Lin Ma Hang Road ("Access Road"), with access point relocation of River Ganges Pumping Station and its Substation.

Proposed Signalized Junction of Lin Ma Hang Road / Access Road

3.3.3 In addition, signalized junction of Lin Ma Hang Road / Access Road is proposed to cater for the anticipated traffic demand arising from the Indicative Scheme.

3.3.4 Access Road will be further widened at junction approaches for providing additional traffic lanes to ensure the sufficient junction capacity. Despite the local road widening of Access Road, the vehicular accesses of River Ganges Pumping Station and its Substation will be maintained.

3.3.5 It is proposed to modify the road markings of Lin Ma Hang Road westbound carriageway to provide two traffic lanes at junction. Moreover, to ensure the junction operational performance, further widening of Lin Ma Hang Road eastbound carriageway (* without beyond the Frontier Closed Area Boundary) under the current road works by HyD PWP Item 863TH is also proposed. The slope structure in the middle of Lin Ma Hang Road carriageway between River Ganges Pumping Station and Ping Yuen River constructed under the same road works is proposed to be rearranged to facilitate the right-turn movements from the

Access Road to Lin Ma Hang Road Eastbound and right-turn movement from Lin Ma Hang Road Eastbound to the Access Road.

3.3.6 The proposed junction layout and swept path analysis are illustrated in **Figure 3.6** to **Figure 3.9**. The major ingress and egress routes for vehicular traffic approaching and leaving the Application Site are illustrated in **Figure 3.10** and **Figure 3.11** respectively.

3.4 Internal Transport Facilities Provision

3.4.1 The internal transport facilities provision for the Indicative Scheme will be provided in accordance with the high-end requirements of Hong Kong Planning Standards and Guidelines (HKPSG) and TD's Departmental Circular No. 6/2012 – Standards for Goods Vehicle Parking and Loading/Unloading for Data Centres (TD Circular No. 6/2012).

3.4.2 The internal transport facilities provision for the Indicative Scheme are summarized in **Table 3.4.1** to **Table 3.4.6**.

Table 3.4.1 HKPSG Required Internal Transport Provision for the Proposed Office Development (R&D Centre)

Type of Development	Facilities	HKPSG Requirement	HKPSG Required Provision		Proposed Provision
			Low-end	High-end	
Office (R & D Centre) Total GFA (m^2) 268,780	Private Car Parking	**Private Car (5m (L) × 2.5m (W) × 2.4m (H))**	**921 (incl. accessible car parking space)**	**1369 (incl. accessible car parking space)**	**1369**
		For the first 15000m^2 GFA: 1 car space per 150 – 200 m^2 GFA; Above 15000m^2 GFA: 1 car space per 200 – 300 m^2 GFA			
		Accessible Car Parking (5m (L) × 3.5m (W) × 2.4m (H))	6	6	
		6 spaces for total number of car parking spaces above 450			
	Motorcycle Parking	**Motorcycle (2.4m (L) × 1m (W) × 2.4m (H))**	**47**	**137**	**137**
		5 to 10% of the total provision for private cars with respect to each type of development should be provided			
	L/UL Bay	1 loading/unloading bay for goods vehicles for every 2000 – 3000 m^2, or part thereof, GFA	**90**	**135**	**LGV: 88 HGV: 47**
		TOTAL			
		LGV Loading/Unloading (7m (L) × 3.5m (W) × 3.6m (H))	**59**	**88**	
		HGV Loading/Unloading (11m (L) × 3.5m (W) × 4.7m (H))	**31**	**47**	
	Lay-by for Taxis and Private Cars	**Taxi/Private Car (5m (L) × 2.5m (W) × 2.4m (H))**	**14**	**14**	**14**
		For sites of at least 5000m^2 net site area, 1 picking up/setting down lay-by for taxis and private cars for every 20000m^2, or part thereof, GFA.			

Table 3.4.2 HKPSG / TD Circular No. 6/2012 Required Internal Transport Provision for the Proposed Data Centre

Type of Development	Facilities	HKPSG / TD Circular No. 6/2012 Requirement	HKPSG Required Provision		Proposed Provision
			Low-end	High-end	
Data Centre m^2 GFA 86,400	Private Car Parking (1)	**Private Car (5m (L) × 2.5m (W) × 2.4m (H))**	**116 (incl. accessible car parking space)**	**144 (incl. accessible car parking space)**	**144 (incl. accessible car parking space)**
		1 car space per 600 – 750 m^2 GFA			
		Accessible Car Parking (5m (L) × 3.5m (W) × 2.4m (H))	**2**	**2**	
		2 spaces for 51-150 total number of car parking spaces			
	Motorcycle Parking (1)	**Motorcycle (2.4m (L) × 1m (W) × 2.4m (H))**	**6**	**15**	**15**
		5 to 10% of the total provision for private cars with respect to each type of development should be provided			
	L/UL Bay (2)	For the first 20,000m^2 GFA: 1 no. per 3,400 – 3,800 m^2 GFA; Above 20,000m^2 GFA: 1 no. per 5500 – 6100m^2 GFA	**17**	**18**	**LGV: 12** **HGV: 6**
		TOTAL			
		Loading/Unloading bays are to be provided as such: 60% for loading / unloading and 40% for parking; 65% are for LGV and 35% are for HGV			
		LGV Loading/Unloading (7m (L) × 3.5m (W) × 3.6m (H))	**12**	**12**	
		For L/UL	**7**	**7**	
		For Parking	**5**	**5**	
		HGV Loading/Unloading (11m (L) × 3.5m (W) × 4.7m (H))	**5**	**6**	
		For L/UL	**3**	**4**	
		For Parking	**2**	**2**	
	Lay-by for Taxis and Private Cars	**Taxi/Private Car (5m (L) × 2.5m (W) × 2.4m (H))**	**-**	**-**	2 (3)
		-			

Notes:
(1) In accordance with HKPSG requirements.
(2) In accordance with TD's Circular No. 6/2012 – Standards for Goods Vehicle Parking and Loading/Unloading for Data Centres.
(3) There is no requirement of lay-by for taxis and private cars for Data Centre under HKPSG nor TD Circular No. 6/2012, lay-by provision is recommended to cater for operational need.

Table 3.4.3 HKPSG Required Internal Transport Provision for the Proposed Commercial Centre

Type of Development	Facilities	HKPSG Requirement	HKPSG Required Provision		Proposed Provision
			Low-end	High-end	
Commercial Centre m^2 GFA 9,276	Private Car Parking	**Private Car (5m (L) × 2.5m (W) × 2.4m (H))**	**31 (incl. accessible car parking space)**	**62 (incl. accessible car parking space)**	**62 (incl. accessible car parking space)**
		1 car space per 150 - 300 m^2 GFA			
		Accessible Car Parking (5m (L) × 3.5m (W) × 2.4m (H))	**1**	**2**	
		1 space for total number of car parking spaces below 50			
		2 spaces for 51-150 total number of car parking spaces

Notes:
(1) As referred to the self-containment arrangement in Section 3.2

3.4.3 The proposed total provision of internal transport facilities of the Indicative Scheme is summarized in **Table 3.4.7** below.

Table 3.4.7 Summary of Proposed Total Internal Transport Facilities Provision

Facilities (L × W H)	Development Use	Proposed Provision
Private Car Parking Space (5m × 2.5m × 2.4m)	Office (R&D Centre)	1,369
	Data Centre	144
	Commercial Centre	62
	Kindergarten	2
	Private Housing	383
	Ancillary Dormitories	258
	Total (incl. visitor parking space & accessible car parking space)	**2,218**
Accessible Car Parking Space (5m × 3.5m × 2.4m)	Office (R&D Centre)	6
	Data Centre	2
	Commercial Centre	2
	Kindergarten	1
	Private Housing	5
	Ancillary Dormitories	3
	Total	**19**
Motorcycle Parking Space (2.4m × 1m × 2.4m)	Office (R&D Centre)	137
	Data Centre	15
	Commercial Centre	7
	Private Housing	17
	Ancillary Dormitories	11
	Total	**187**
LGV Loading/Unloading Bay (7m × 3.5m × 3.6m)	Office (R&D Centre)	88
	Data Centre	12
	Commercial Centre	8
	Total	**108**
HGV Loading/Unloading Bay (11m × 3.5m × 4.7m)	Office (R&D Centre)	47
	Data Centre	6
	Commercial Centre	4
	Private Housing	5
	Ancillary Dormitories	3
	Total	**65**
Lay-by for Taxis and Private Cars (5m × 2.5m × 2.4m)	Office (R&D Centre)	14
	Data Centre	2
	Kindergarten	2
	Total	**18**
Lay-by for School Buses (12m × 3.5m × 3.8m)	Kindergarten	2
	Total	**2**

3.4.4 The proposed internal transport facilities for the Indicative Scheme will be self-contained within the respective site boundary, located on ground floor and basement parking floors of the Indicative Scheme.

Private Car Parking Space Provision

3.4.5 A total of 2,218 nos. private car parking spaces (including 19 nos. accessible car parking spaces) as per HKPSG high-end requirements (except one-person unit of Ancillary Dormitories which adopted HKPSG low-end requirements) will be provided in the basement levels, which will be accessed via the car-ramp system of basement of corresponding type of development.

Accessible Car Parking Provision

3.4.6 A total of 19 nos. accessible car parking spaces (part of the 2,218 private car parking spaces), as per HKPSG high-end requirements will be provided in the basement levels, which will be accessed via the car-ramp system of basement of corresponding type of development.

Motorcycle Parking Space Provision

3.4.7 A total of 187 nos. motorcycle parking spaces as per HKPSG high-end requirements will be provided in the basement levels, which will be accessed via the car-ramp system of basement of corresponding type of development.

Loading / Unloading Bay Provision

3.4.8 A total of 108 nos. loading/unloading bays for LGV and 65 nos. loading/unloading bays for HGV as per HKPSG high-end requirement and recommended provision will be provided in both the basement levels and ground floors of corresponding type of development.

Lay-by Provision for Taxis and Private Cars

3.4.9 A total of 18 nos. lay-bys for taxis/private cars as per HKPSG high-end requirement and recommended provision will be provided on ground floor of corresponding type of development.

Lay-by Provision for School Buses

3.4.10 A total of 2 nos. lay-bys for school buses as per HKPSG high-end requirement will be provided on ground floor of corresponding School.

4 TRAFFIC IMPACT ASSESSMENT

4.1 Trip Generation and Attraction of Indicative Scheme

Data Centre

4.1.1 To establish appropriate trip generation and attraction rates for Data Centre of the Indicative Scheme, trip generation survey has been conducted on typical weekdays at various existing data centre developments as summarised in **Table 4.1.1**.

Table 4.1.1 Peak Hour Trip Generation and Attraction at the Surveyed Data Centres

Development		AM Peak		PM Peak	
		Generation	Attraction	Generation	Attraction
NTT Hong Kong Financial Data Centre at 6 Chun Kwang St, Tseung Kwan O (70,000 m^2 GFA)	Observed Trips (pcu/hr)	34.1	27.7	17.95	8.1
	Trip Rate (pcu/hr/100 sqm GFA)	0.049	0.040	0.026	0.012
iTech Tower 1 at 28 Pak Tin Par Street, Tsuen Wan (17,652m^2 GFA)	Observed Trips (pcu/hr)	2.1	1	2	1
	Trip Rate (pcu/hr/100 sqm GFA)	0.012	0.006	0.011	0.006
iTech Tower 2 at 54-56 Ta Chuen Ping Street, Kwai Chung (9,125m^2 GFA)	Observed Trips (pcu/hr)	2.5	3.5	2	0
	Trip Rate (pcu/hr/100 sqm GFA)	0.027	0.038	0.022	0.000
NTT Hong Kong Tai Po Data Centre at 2 Dai Hei Street, Tai Po (19,700 m^2 GFA)	Observed Trips (pcu/hr)	9	6.1	7.1	13
	Trip Rate (pcu/hr/100 sqm GFA)	0.046	0.031	0.036	0.066

4.1.2 For conservative assessment, the highest of the rates above were adopted for applying to Data Centre of the Indicative Scheme, as shown in **Table 4.1.2** below.

Other types of Developments

4.1.3 The likely amount of traffic generation and attraction associated with the Indicative Scheme, except Data Centre, was calculated based on the mean values of 'Traffic Rates for Residential Development at 95% Confidence Level' and 'Traffic Rates for Non-residential Development at 95% Confidence Level' adopted in the TPDM Vol. 1 Table 1 and Table 2.

4.1.4 Public transport feeder service with ancillary transport facilities in appropriate locations, including terminating facilities and en-route bus stops, has been proposed to/from the railway stations and bus interchange as discussed in **Section 4.8**. It is anticipated that the feeder service is significant to enhance the convenience for residents/ employees using public transport services. The Indicative Scheme would be well-served by public transport services to cater for the effect of "remote site". It is hence considered that "Mean" value is appropriate to be adopted. The adopted rates are shown in **Table 4.1.2** below.

Table 4.1.2 Adopted Trip Generation and Attraction Rates of the Indicative Scheme

Sources	Component		AM Peak		PM Peak	
			Generation	Attraction	Generation	Attraction
In-house surveys	Data Centre (pcu/hr/100 sqm GFA)		0.049	0.040	0.036	0.066
TPDM Vol. 1	Housing	Lower Limit, Average Flat Size 40sqm (pcu/flat/hr)	0.0325	0.0213	0.0196	0.0263
		Mean, Average Flat Size 50sqm (pcu/flat/hr)	0.0622	0.0426	0.0297	0.0401
		Mean, Average Flat Size 60sqm (pcu/flat/hr)	0.0718	0.0425	0.0286	0.0370
		Mean, Average Flat Size 80sqm (pcu/flat/hr)	0.1058	0.0605	0.0426	0.0590
	Office, Mean (pcu/hr/100 sqm GFA)		0.1703	0.2452	0.1573	0.1175
	Retail, Mean (pcu/hr/100 sqm GFA)		0.2296	0.2434	0.3100	0.3563

4.1.5 The peak traffic arriving and leaving the kindergarten are generally observed and occurred before school start time (i.e. 8am) and school finish time (i.e. 5pm) which will not overlap with the daily commuting AM and PM peak hours. For conservative approach, nominal school-related traffic flows 10 pcu/hr have been considered and superimposed on the traffic forecast for the same daily commuting AM and PM peak hours for assessment purpose.

4.1.6 The associated traffic generation and attraction for the Indicative Scheme are summarised in **Table 4.1.3**.

Table 4.1.3 Traffic Generation and Attraction of the Indicative Scheme (pcu/hr)

Type of Development	AM Peak		PM Peak	
	Generation	Attraction	Generation	Attraction
Office (R&D Centre)	305	439	282	211
Data Centre	43	35	32	58
Commercial Centre	22	23	29	34
Kindergarten	10	10	10	10
Private Housing	124	73	50	65
Ancillary Dormitories (1)	65	42	34	46
Additional bus trips (2)	50	50	50	50
Total	**619**	**672**	**487**	**474**

Notes:
(1) As referred to the self-containment arrangement in Section 3.2
(2) Based on the existing bus enhancement proposal by double-decked bus as discussed in Section 4.9

4.1.7 As indicated in table above, the total trips would be around 1,291 pcu/hr and 961 pcu/hr (two-way) during the AM and PM peak periods respectively.

4.2 Two-Tier Transport Model

4.2.1 The Indicative Scheme is targeted for completion in Year 2032. In order to assess the traffic impact of the development-related traffic on the adjacent road network, Year 2035 (i.e., 3 years after completion) is adopted as the design year of the study.

4.2.2 In view of the large population intake and the significant forecasted traffic generation and attraction of the Indicative Scheme, two levels of transport models are adopted. The Strategic Transport Model (STM) is at the upper tier. At the lower tier, it contains the Local Area Traffic Model (LATM).

Strategic Transport Model Structure

4.2.3 The STM is a link-based transport model which produces transport demand forecasts at strategic and inter-district levels. It is mainly to estimate the transport demand of the district-to-district movements by different private and public transport modes with respect to the infrastructures of the whole territory.

4.2.4 The STM follows the conventional 4-step modelling approach, comprising trip generation, trip distribution, modal split and trip assignment. The model produces passenger and vehicular flows on the transport network system by time periods of the day. This model offers the advantage to reflect the traffic demand forecasts especially the mode choice with respect to the fundamental assumptions such as the socio-economic and infrastructures.

4.2.5 The strategic and inter-district vehicular demand from the STM forms the primary input to the LATM.

Local Area Traffic Model Structure

4.2.6 The LATM is a junction-based assignment model which stimulates the local area traffic demand at intra-district level. With the incorporation of local area junction characteristics, the LATM is capable of estimating the junction delay and traffic queuing for route choice in assigning the traffic demand in local areas.

4.2.7 The development of LATM adopts the same approach as TD's 2019-based Base District Traffic Model (BDTM) (2024 update). The BDTM covers models of validated year 2019, design years 2031, 2036, 2041 and 2046. Since there is no major road network change in the vicinity of the Application Site between Year 2031 and 2036, Design Year 2031 BDTM was adopted. The LATM is a peak hour trip assignment model which contains two components: (i) the "trip matrix" which specifies the number of AM peak/ PM peak hour trips from zone i to zone j; and (ii) the "network" which specifies the physical structure of the road links and junctions etc. upon which trips take place. Both the matrix and network are fed into a "route choice" model which allocates trips to "routes" through the network through the model assignment process.

4.2.8 There are three types of vehicles represented in the LATM. They are Private Vehicles (PV), Goods Vehicles (GV) and road-based public transport (PT) services. PV and GV are fed into the model in form of trip matrices, while PT vehicles are fixed route services and pre-loaded to the network.

4.2.9 The LATM matrices are developed from the cordoned matrices extracted from the STM, with the same LATM coverage of the model area. The compatibility between the STM and the LATM is ensured by the control of the external trip ends, which are essentially the link flows of major roads along the cordon. In other

words, the LATM is consistent with the STM in terms of the socio-economic, transport infrastructure and road network assumptions.

4.2.10 The LATM matrices are developed from the cordoned matrices extracted from the STM, with the same LATM coverage of the model area. The compatibility between the STM and the LATM is ensured by the control of the external trip ends, which are essentially the link flows of major roads along the cordon. In other words, the LATM is consistent with the STM in terms of the socio-economic, transport infrastructure and road network assumptions.

4.2.11 Evaluations of link and junction performance for the Traffic Impact Assessment will be conducted based on the traffic forecast result from LATM.

Model Validation

4.2.12 As the road network and traffic flow in 2019-based BDTM (2024 update) are only validated to base Year 2019, the LATM has been further validated to latest traffic condition based on the observed traffic flows during peak hours obtained from traffic count survey dated April 2026 on identified key junctions and road links as summarized in **Para. 2.4.1** with their locations indicated in **Figure 2.1** to **Figure 2.4**, taking into account the latest traffic aids, junction layouts and method of control in the study area. The validation criteria of base year 2026 LATM adopted in this study is consistent with TD's BDTM.

Traffic Growth beyond Year 2031

4.2.13 Considering that the LATM is only projected up to Year 2031, a conventional growth factor approach is adopted to further project the 2031 trip matrices to the Design Year 2035. Reference has been made to planning data from "Hong Kong Population Projection 2022 – 2046" published by Census and Statistics Department. The average annual growth rate from mid-year 2031 to mid-year 2036 is illustrated in **Table 4.2.1**.

Table 4.2.1 Average annual growth rate by "Hong Kong Population Projection 2022 – 2046"

Broad Area	2031	2036	Average Annual Growth from 2031 to 2036
Hong Kong Population	7,820,200	8,022,400	**0.52%**

4.2.14 From the table above, **+0.52% p.a.** was adopted to derive the vehicular traffic forecast for year 2031-2035.

4.3 Planned/ Committed Developments in North District

4.3.1 In addition to the development flow, the traffic generated and attracted by adjacent major planned/committed developments which would anticipatedly induce traffic implication on the identified key junctions/ road links have been taken into account for the traffic forecast.

4.3.2 Under the 2019-based BDTM (2024 update), the major planned / committed developments in the Vicinity of the Application Site are listed in **Table 4.3.1**.

Table 4.3.1 Planned / Committed Developments in the Vicinity of the Application Site incorporated in 2019-based BDTM (2024 update)

Type of Development		Ref. Index in BDTM
KTN/ FLN NDA – Private Housing	Kwu Tung North Area 24, Sheung Shui, F.S.S.T.L. 263 (A/KTN/97)	B23-R05

	Various Lots in D.D. 51 and Adjoining Government Land, Ma Sik Road, Fanling (A/FSS/294) (1)	2029
	Fanling Area 17 Sites B1 and B2	2030/31
Others	North District Hospital Extension	2028
	New Territories East Cultural Centre	2027/28
	Social Welfare Facility (Residential Care Home for the Elderly) and Flat (A/FSS/288)	2031
	Kong Nga Po Police Training Facilities	2026/27
	Wo Hop Shek Cemetery for Phases 2 and 3 Columbarium Development	2026
	Sandy Ridge Data Facility Cluster site	2029

Notes:
(1) Same site with Planned Development Ref. Index "D20-R01" incorporated in BDTM. Only additional trip generation/attraction due to the increased nos. of flats from this application are further included in the traffic forecast

4.4 Planned/ Committed Junction Improvement Schemes in North District

4.4.1 As North District is undergoing numerous planned large-scale developments, apart from the ongoing transports infrastructures works as aforementioned in **Chapter 2.3**, Junction Improvement Schemes have been planned and anticipated to be completed before the completion of the Indicative Scheme. Junction Improvement Schemes in the Vicinity of the Application Site which would anticipatedly induce traffic implication on the identified key junctions/ road links have been taken into account for the traffic forecast and summarised in **Table 4.4.1**.

Table 4.4.1 Planned/ Committed Junction Improvement Schemes in North District

Junction	Description	Proposed by Project	Status up to May 2026
Sha Tau Kok Road/ Sui Wan Road (J8)	- Banning of right-turn movements at Sha Tau Kok Road – Lung Yeuk Tau both northbound and southbound - Banning of both right-turn and straight-ahead movements at Sui Wan Road westbound - Banning of both left-turn and straight-ahead movements at Sui Wan Road eastbound - Modification of method of control	NENT NDA	TBC
Po Shek Wu Road/ Po Wan Road (J13)	- Lane arrangement of Po Shek Wu Road southbound to be revised for allowing straight-ahead traffic to use three traffic lanes - Lane arrangement of Po Wan Road eastbound to be revised for allowing right-turn traffic to use two traffic lanes	Kong Nga Po	Completed (1)
	- Land arrangement of Po Shek Wu Road northbound to be revised for allowing left-turn traffic to use two traffic lanes - Local widening of exit arm of Po Wan Road westbound from 1 to 2 lanes	Sheung Shui Areas 4 and 30	
Po Shek Wu Road/ Choi Yuen Road (J14)	- Local widening of entry arm of Po Shek Wu Road NB to allow straight-ahead traffic to use three traffic lanes	Kong Nga Po	Under construction
	- Po Shek Wu Road Interchange Improvement which provides a flyover to allow the right turning traffic from Po Shek Wu Road SB to Fanling Highway WB to bypass the existing Po Shek Wu Road Interchange - Entry arm of Po Shek Wu Road SB would be narrowed from 5 lanes to 4 lanes - Local widening of Choi Yuen Road eastbound from 3 to 4 lanes	KTN/ FLN NDA	
Sha Tau Kok Road / Luen On Street (J19)	- Lane arrangement of Sha Tau Kok Road southbound to be revised for allowing right turn traffic to use two traffic lanes	KTN/ FLN NDA	Under construction
Jockey Club Road/ So Kwun Po Road (J24)	- Lane arrangement of Jockey Club Road northbound to be revised for allowing left turn traffic to use two traffic lanes - Method-of-control to be revised for minimising/optimising the intergreen time - Lane arrangement of Ma Sik Road southbound to be revised for allowing three traffic lanes for vehicles to travel straight ahead - Local widening of So Kwun Po Road southbound from 2 to 3 lanes	KTN/ FLN NDA	Completed (1)
	- Local widening with one additional straight-ahead traffic lane on So Kwun Po Road northbound - Local widening of Ma Sik Road northbound from 2 to 3 lanes	Sheung Shui Areas 4 and 30	
Jockey Club Road/ Lung Sum Avenue (J25)	- Local widening with one additional straight-ahead traffic lane on Jockey Club Road eastbound - Local widening with one additional straight-ahead traffic lane on Lung Sum Avenue northbound	Kong Nga Po	Completed (1)

Notes:
(1) Associated traffic lane arrangements have been adopted in the junction capacity analysis for Year 2026 Existing Traffic Flow as summarised in Table 2.4.1

4.5 Hong Kong Major Transport Infrastructure Development Blueprint

4.5.1 The Government has promulgated the "Hong Kong Major Transport Infrastructure Development Blueprint" (The Blueprint) in December 2023 with a view to meeting the city's long-term transport and logistics needs up to 2046 and beyond. One of the proposals included in The Blueprint is the additional "Two Railways & One Major Road", which is related to North District and comprises the Northern Link Eastern Extension (NOLE), the Northeast New Territories Line (NENTL), and the Northern Metropolis Highway (New Territories North New Town Section).

4.5.2 NOLE will extend the Northern Link eastward from Kwu Tung Station to Ping Che and is planned connect to NENTL at its terminal. Based on the preliminary alignment illustrated in The Blueprint, NOLE will pass by the southern edge of the Applicate Site without encroaching its boundary. Hence, it is anticipated that the Indicative Scheme will not have interface issue with NOLE, subject to the finalised design of NOLE.

4.5.3 On the other hand, with the consideration that there is no information about the station location and the operation year of NOLE, the traffic and transport impact have been assessed with the assumption that NOLE is not yet available at the time of population intake of the Indicative Scheme for conservative approach.

4.6 Assessment Scenarios

4.6.1 To evaluate the traffic impact likely to be induced by the traffic associated with the Indicative Scheme, two scenarios are analysed and compared. **Scenario 1** is the Reference Scenario (without the Indicative Scheme) in Year 2035. **Scenario 2** is the Design Scenario (with the Indicative Scheme) in Year 2035.

Scenario 1
Year 2035 Reference Scenario
= Adjusted Year 2035 Two-Tier Transport Model traffic flows
Plus traffic generations of major planned/committed developments in the vicinity not incorporated in 2019-based BDTM (2024 update)

Scenario 2
Year 2035 Design Scenario
= Year 2035 Reference Scenario
Plus trip generation and attraction associated with the Indicative Scheme as indicated in **Table 4.1.3**

4.6.2 The forecasted traffic flows for the above two scenarios are presented in **Figure 4.1** to **Figure 4.6**.

4.7 Junction Capacity Assessment

4.7.1 Junction capacity assessment was carried out at the identified key junctions for Year 2035 Reference and Design Scenarios. Assessment results are summarized in **Table 4.7.1** below. The detailed junction calculation sheets are attached in **Appendix A**.

Table 4.7.1 Year 2035 Future Junction Performance

Junction		Type	2035 Performance (1)			
			Reference		Design	
			AM	PM	AM	PM
J1	Lin Ma Hang Road / Man Kam To Road	Priority	0.51	0.47	**0.92**	0.80

Notes:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions and "Design Flow Capacity" (DFC) ratio for roundabouts and priority junctions.
(2) With implementation of infrastructures/ junction improvement works as discussed in Section 2.3 / 4.4

4.7.2 The results revealed that all the key junctions would operate within capacity with the Indicative Scheme in Year 2035, except J1, J2, J13 and J23.

4.7.3 Considering that the junction capacity for junction J1 – Lin Ma Hang Road / Man Kam To Road would be operated near capacity during AM peak period under Year 2035 Design Scenario, J2 – Lin Ma Hang Road / Ping Che Road would be overloaded during both AM and PM peak period under Year 2035 Design Scenario, J13 – Po Shek Wu Road / Po Wan Road would be operated near capacity during AM peak period under Year 2035 Design Scenario, and J23 – San Wan Road / Fanling Station Road would be operated near capacity during both AM and PM peak period under both Year 2035 Reference and Design Scenario, improvement proposals have been explored to improve the performance of the junctions.

J1 - Lin Ma Hang Road / Man Kam To Road

4.7.4 Under the existing junction arrangement, Lin Ma Hang Road is currently operated as the minor arm of the priority junction with right and left turning traffic share the same single lane for queuing.

4.7.5 It is considered that right turning traffic has a longer average queuing time than left turning traffic to leave the minor arm as right turning traffic requires to wait for major stream traffic of Man Kam To Road both bounds while left turning traffic requires to wait for major arm traffic of Man Kam To Road southbound only. It may cause unnecessary delay for left turning traffic which is anticipated much more significant than right turning traffic upon the commissioning of the Indicative Scheme. As a result, it is proposed to provide a flare lane to allow right and left turning traffic queuing at separate lanes, as presented in **Figure 4.7** with corresponding swept path analysis presented in **Figure 4.8**.

J2 - Lin Ma Hang Road / Ping Che Road

4.7.6 Under the existing junction arrangement, Lin Ma Hang Road is currently operated as the minor arm of the priority junction.

4.7.7 Upon the commissioning of the Indicative Scheme, it is anticipated that traffic flow on Lin Ma Hang Road will become the major traffic movement of this junction. Therefore, it is proposed to modify the junction configuration by classifying Lin Ma Hang Road and Ping Che Road as the major arm and the minor arm of the junction respectively as presented in **Figure 4.9** to suit the future traffic pattern, with corresponding swept path analysis presented in **Figure 4.10**.

J13 - Po Shek Wu Road / Po Wan Road

4.7.8 Alternatively, local widening for exit arm of Po Shek Wu Road NB to allow straight-ahead traffic to use three lanes is proposed. With the consideration that left-turn traffic is much less significant than straight-ahead traffic, it is proposed to rearrange the lane movement to fit in the aforementioned local widening, such that nearside lane will be shared by left-turn traffic and straight-ahead traffic, while 2nd and 3rd lane will allow straight-ahead traffic only.

4.7.9 Furthermore, subsequent to the implementation of local widening of exit arm of Po Shek Wu Road SB, local widening of entry arm of Po Shek Wu Road SB is further proposed such that there would be three exclusive lanes for straight-ahead traffic and one exclusive lanes for left-turn traffic.

4.7.10 The proposed junction improvement scheme is presented in **Figure 4.11**.

J23 - San Wan Road / Fanling Station Road

4.7.11 Under the existing junction arrangement, the nearside lane from San Wan Road EB is exclusively for left-turn traffic. As the corresponding exit arm is only an access road to Cheung Wah Estate, the left-turn traffic flow volume is significantly low and such lane arrangement is not optimised. With the consideration that both straight-ahead traffic and right-turn traffic are the major traffic movement for San Wan Road EB, it is proposed to maintain the existing lane arrangement for right-turn traffic but share the nearside lane for straight-ahead traffic. Lane warning line road marking is further proposed to guide the straight-ahead movement to enhance the vehicular safety. The proposed junction improvement scheme is presented in **Figure 4.12**. corresponding swept path analysis at the junction is presented in **Figure 4.13**.

4.7.12 With the proposed junction improvement / modification, the junction J1, J2, J13 and J23 have been reassessed and the corresponding junction performance is summarized in **Table 4.7.2** below. The detailed junction calculation sheets for the proposed junction improvement schemes are attached in **Appendix B**.

Table 4.7.2 Year 2035 Future Junction Performance – With Junction Improvement

Junction		Type	2035 Design Performance (1)			
			Without Junction Improvement		With Junction Improvement	
			AM	AM	PM	PM
J1	Lin Ma Hang Road / Man Kam To Road	Priority	0.92	0.80	0.84	0.78
J2	Lin Ma Hang Road / Ping Che Road	Priority	1.24	1.01	0.83	0.70
J13	Po Shek Wu Road / Po Wan Road	Signalised	13%	17%	23%	23%
J23	San Wan Road / Fanling Station Road	Signalised	1%	3%	17%	18%

Notes:
(1) Figures shown represent "Reserve Capacity" (RC) in % for signalized junctions and "Design Flow Capacity" (DFC) ratio for priority junctions.

4.7.13 The above results revealed that under the Design Scenario in Year 2035, the DFC of J1 would be improved from 0.92 to 0.84 and 0.84 to 0.78 during AM peak and PM peak periods respectively, the DFC of J2 would be improved from 1.38 to 0.83 and 1.19 to 0.82 during AM peak and PM peak periods respectively, the RC of J13 would be improved from 13% to 23% and 23% to 23% during AM peak and PM peak periods respectively, and the RC of J23 would be improved from 1% to 17% and 3% to 18% during AM peak and PM peak periods respectively.

4.7.14 With the above improvement proposal, it is anticipated that the performance of junction J1, J2, J8, J13 and J23 would be enhanced, and all junctions would be operated within capacity with the Indicative Scheme in Year 2035.

4.8 Link Capacity Assessment

4.8.1 Key road links within the study area are identified and assessed in both Reference and Design scenarios in Design Year 2035. Assessment results are summarised in **Table 4.8.1** below.

Table 4.8.1 Year 2035 Future Link Performance

Link		Type (1)	Configuration	Direction	Capacity	Link Performance (2)							
						2035 Reference				2035 Design			
						AM		PM		AM		PM	
						Flow	V/C	Flow	V/C	Flow	V/C	Flow	V/C
L1	Lin Ma Hang Road (near Man Kam To Road junction)	RR	7.3m wide Single two-lane carriageway	Two-way	1,500	691	0.46	685	0.46	1,280	0.85	1,154	0.77
L2	Lin Ma Hang Road (near Ping Che Road junction)	RR	7.3m wide Single two-lane carriageway	Two-way	1,500	674	0.45	697	0.46	1,416	0.94	1,228	0.82
L3	Lung Shan Tunnel (Fanling Highway – Sha Tau Kok Road)	RT	Dual two-lane carriageway	NB	3,000	1,610	0.54	1,150	0.38	1,794	0.60	1,250	0.42
				SB	3,000	1,434	0.48	1,336	0.45	1,582	0.53	1,456	0.49
L4	Fanling Highway (at the south of Lung Shan Tunnel)	EX	Dual four-lane carriageway	NB	8,200	7,062	0.86	7,026	0.86	7,308	0.89	7,159	0.87
				SB	8,200	7,724	0.94	6,745	0.82	7,920	0.97	6,905	0.84

L5	Sha Tau Kok Road (Sui Wan Road – Fanling Bypas)	RR	Dual two-lane carriageway	NB	2,800	1,801	0.64	2,093	0.75	1,913	0.68	2,192	0.78
				SB	2,800	2,142	0.77	1,875	0.67	2,272	0.81	1,956	0.70
L6	Jockey Club Road (Tin Ping Road – Po Shek Wu Road)	PD	Dual two-lane carriageway	NB	2,800	1,251	0.45	1,076	0.38	1,533	0.55	1,304	0.47
				SB	2,800	1,469	0.52	1,441	0.51	1,731	0.62	1,652	0.59
L7	Po Shek Wu Road (Po Wan Road – Choi Yuen Road)	PD	Dual two-lane carriageway	NB	2,800	1,727	0.62	1,713	0.61	1,957	0.70	1,882	0.67
				SB	2,800	2,101	0.75	2,221	0.79	2,315	0.83	2,394	0.86
L8	Fanling Highway (at the west of Po Shek Wu Road Interchange) (3)	EX	Dual four-lane carriageway	EB	8,200	6,476	0.79	6,729	0.82	6,692	0.82	6,870	0.84
				WB	8,200	6,296	0.77	5,828	0.71	6,477	0.79	5,987	0.73
L9	Proposed Access Road	-	10.5m wide Single two-lane carriageway	Two-way	1,800	-	-	-	-	1,291	0.72	961	0.53

Notes:
(1) Abbreviation: EX – Expressway; PD – Primary Distributor; RR – Rural Road; RT – Rural Trunk Road
(2) A V/C ratio below 1.0 is considered acceptable. A V/C ratio above 1.0 indicates the onset of mild congestion and a V/C ratio between 1.0 and 1.2 would indicate a manageable degree of congestion. A V/C ratio above 1.2 indicates the onset of more serious congestion.
(3) With implementation of infrastructures/ junction improvement works as discussed in Section 2.3/ 4.4

4.8.2 The results revealed that all the key road links would operate within capacity with the Indicative Scheme in Year 2035.

4.9 Public Transport Assessment

4.9.1 The anticipated population of the Private Housing and family units of the ancillary dormitories of the Indicative Scheme is about 4,368 and 1,070 respectively, while the anticipated working population is 6,207. According to "Travel Characteristics Survey (TCS) 2022" published by Transport Department, the daily mechanised trip rate is 1.69 trips per person, while morning and evening peak hour accounted for about 12% and 14% of the daily trips respectively. For conservative approach, it is hence estimated that the Indicative Scheme would induce 1,287 resident passengers / hour (i.e. 5,438 × 1.69 × 0.14) and 1,469 worker passengers / hour (i.e. 6,207 × 1.69 × 0.14) during the peak period. For conservative approach, a factor of 1.2 is further applied on the peak hour passenger trips (i.e. 1,287 × 1.2 = 1,545 & 1,469 × 1.2 = 1,763) which deems sufficient to consider the unforeseen growth as well as the non-resident / non-worker users of the R&D Centre, Data Centre, Commercial Centre and kindergarten. The anticipated passenger trips in the peak hour are summarized in **Table 4.9.1**.

Table 4.9.1 Passenger Trips Generation/Attraction of the Indicative Scheme during Peak Period

Development Parameters	Residents	Workers
No. of private residential units & family units in dormitories (1)	2,014 flats	N.A.
Population	5,438 (2)	6,207
Peak Hour Passenger Trips	1,545 pax/hr	1,763 pax/hr

Notes:
(1) Assuming single flats in dormitories will not generate / attract trips to external road network during daily commuting peaks as discussed in Section 3.2
(2) Average domestic household size of 2.7 is assumed based on the 2021 Population Census in North District

4.9.2 The modal split for residents in North District extracted from Table B203 and C204 under District Council District "North" from 2021 Population Census published by Census and Statistics Department is summarised in **Table 4.9.2**.

Table 4.9.2 Main Mode of Transport to Place of Study and Work in North District

Mode of Transport	Place of Study (from B203)	Place of Work (from C204)	Total	
	Persons	Persons	Persons	%
MTR (Local line)	12,118	46,153	58,271	39.0%
Bus	8,238	22,781	31,019	21.0%
On foot only	12,822	11,285	24,107	16.0%
School bus	4,145	-	4,145	3.0%
Public light bus	3,541	7,802	11,343	8.0%
Private car/ Passenger van	3,400	7,887	11,287	7.5%
Company bus/ van	-	3,002	3,002	2.0%
MTR (Light Rail)	-	-	-	-
Taxi	214	711	925	0.5%
Residential coach service	489	580	1,069	0.5%
Ferry/ Vessel	-	18	18	0.0%
Others	888	3,212	4,100	2.5%
Total	**45,855**	**103,431**	**149,286**	**100%**

4.9.3 With the consideration of the locality of the Application Site, it is assumed that company bus/van, residential coach service, and ferry/vessel are not the available for the residents of the Indicative Scheme, and the associated passenger trips will be evenly distributed into MTR and bus.

4.9.4 On the other hand, in order to minimise the disturbance of the residents from private residential developments in the vicinity as well as the border crossing passengers using the existing GMB 59K and 59S services, it is assumed that public light bus is also not available for the residents of the Indicative Scheme, with the consideration that service enhancement of GMB is not efficient due to its low carrying capacity. The associated passenger trips will be distributed into bus. The adjusted modal split for the Indicative Scheme is summarized in **Table 4.9.3**.

Table 4.9.3 Adjusted Modal Split for Resident Passengers of the Indicative Scheme

Original Passenger Trip at North District	Adjusted Modal Split for resident passengers of the Indicative Scheme							
	MTR (Local line)	Bus	School bus	Taxi	Private car/ Passenger van	On foot only	Others	Total
MTR (Local line)	58,271							58,271
Franchised Bus		31,019						31,019
On foot only						24,107		24,107
School bus			4,145					4,145
Public light bus		11,343						11,343
Private car/ Passenger van					11,287			11,287
Company bus/ van	1,501	1,501						3,002
MTR (Light Rail)	-	-						-
Taxi				925				925
Residential coach service	535	534						1,069
Ferry/ Vessel	9	9						18
Others							4,100	4,100
Total	60,316	44,406	4,145	925	11,287	24,107	4,100	149,286
Proportion	**40.25%**	**30.25%**	**3.0%**	**0.5%**	**7.5%**	**16.0%**	**2.5%**	**100.0%**

4.9.5 With the consideration that school bus would not be available for worker passengers, the 3% school bus modal split would be evenly distributed into MTR and bus similar to the adjustment on modal split for residents. The associated passenger demand for resident passengers and worker passengers of the Indicative Scheme in peak hour is estimated in **Table 4.9.4**.

Table 4.9.4 Estimated Passenger Demand from Indicative Scheme in Peak Hour

	Residents			**Workers**		
Mode of Transport	**Proportion**	**Passenger Demand (pax/hr)**		**Proportion**	**Passenger Demand (pax/hr)**	
MTR (Local line)	**40.25%**	**622**	**1,089**	**41.75%**	**736**	**1,296**
Franchised Bus	**30.25%**	**467**		**31.75%**	**560**	
School bus	3.0%	46		-	-	
Taxi	0.5%	8		0.5%	9	
Private car/ Passenger van	7.5%	116		7.5%	132	
On foot only	16.0%	247		16.0%	282	
Others	2.5%	39		2.5%	44	
Total	**100%**	**1,545**		**100%**	**1,763**	

4.9.6 Although there is no existing franchised bus route operating along the section of Lin Ma Hang Road outside the Application Site, currently there are KMB 73K and KMB 79K operating along Man Kam To Road and Ping Che Road respectively, which are anticipated the major ingress and egress vehicular routes of the Application Site connecting MTR stations and major Bus-Bus Interchange (BBI) in Sheung Shui and Fanling. In order to avoid duplication of public transport services in terms of routings and to better utilise the existing bus resources, the Applicant proposes to extend the services of KMB 73K and KMB 79K to the Application Site instead of introducing new franchised bus routes.

4.9.7 The proposed routings of KMB 73K and KMB 79K are illustrated in **Figure 4.14** and **Figure 4.15** respectively. The proposed bus service extension would act as feeder services which not only cater for MTR passenger demand, but also cater for long-haul bus passenger demand from the Indicative Scheme, by interchanging with existing long-haul bus routes in Sheung Shui BBI and Fanling Station BBI.

4.9.8 The projected travel distance between the Application Site and the nearest Railway Station / BBI (i.e. Sheung Shui Station for KMB 73K and Fanling Station for KMB 79K) of KMB 73K and KMB 79K is approx. 8 km and 14 km respectively. Under the observed average speed of respective bus route as mentioned in **Table 4.9.13**, the projected journey time of KMB 73K is 30 mins, while that of KMB 79K is 62 mins respectively, which is nearly double. It is hence considered the passengers induced by the Indicative Scheme would prefer KMB 73K over KMB 79K. For assessment purpose, it is assumed the nos. of passengers of KMB 73K and KMB 79K would have a same ratio with their projected journey time, hence 2/3 of them taking KMB 73K (i.e. 1,089 × 2/3 = 726 for residents, 1,296 × 2/3 = 864 for workers) and remaining 1/3 (i.e. 1,089 – 726 = 363 for residents, 1,296 – 864 = 432 for workers) taking KMB 79K is derived such that nos. of passengers of KMB 73K would be double to that of KMB 79K.

4.9.9 To identify if there are spare capacity to cope with the passenger demand induced by the Indicative Scheme, current occupancy of KMB 73K and KMB 79K at identified critical bus stops during morning and evening peak periods are surveyed and summarised from **Table 4.9.5** to **Table 4.9.8**, including Sheung Shui Wai / Po Shek Wu Road Sheung Shui and Fung Kai No.1 Secondary School for KMB 73K, Kwan Tei and Fanling Station for KMB 79K.

Table 4.9.5 Observed Bus Occupancy of KMB 73K at Sheung Shui Wai / Po Shek Wu Road Sheung Shui

Hour	Sheung Shui Bound				Man Kam To Bound			
	No. of Bus Trips	Total Capacity*	Total Passengers	Occupancy	No. of Bus Trips	Total Capacity*	Total Passengers	Occupancy

Note:
* Assumed Bus Capacity is 120 passengers per vehicle as double-decked buses are usually employed for KMB 79K

4.9.10 It is considered that the usage of franchised buses is hugely related to planned population and employment within its catchment area. Reference was hence made to 2021-based Territorial Population and Employment Data Matrix (TPEDM) published by Planning Department for years from 2026 to 2031, and "Hong Kong Population Projections 2022 – 2046" for years from 2031 to 2035 which has been derived in **Table 4.2.1**. Nevertheless, **Table 4.9.9** summarizes the estimated and projected population and employment data in 2021, 2026 and 2031 of District Council District (DCD) "North".

Table 4.9.9 Annual Average Growth Rate of "North" District by TPEDM

	2021 Projection	2026 Projection	2031 Projection	Annual Growth Rate from 2021 to 2031
Population	309,650	352,000	435,550	/
Employment	84,150	104,050	144,850	
TOTAL	**393,800**	**456,050**	**580,400**	**3.95%**

4.9.11 **Table 4.9.9** indicates the annual growth of population and employment in North District is +3.95% p.a. for years from 2025 to 2031. For conservative assessment purpose, the annual growth factor of +3.95% p.a. for years from 2026 to 2031, and +0.52% p.a. for years from 2031 to 2035 would be applied to the observed highest nos. of franchised bus passengers to forecast the franchised bus passenger demand in Design Year 2035.

4.9.12 The passenger movement of residents and workers from the Indicative Scheme is anticipated having a mutually exclusive characteristic (i.e. during AM peak, the major passenger groups taking public transport to approach the Site would be working population from the proposed R&D Centre, Data Centre, Commercial Centre and Kindergarten living outside, while the major passenger groups taking public transport to leave the Site would be residential population from private housing development and the family members from ancillary dormitories, and vice versa during PM peak period). It is hence considered that the major passenger trips between residential population and working population would not overlap with each other in the perspective of travel direction (i.e. would not take the bus towards the same direction). As such, resident passenger trips would be distributed into KMB 73K (Sheung Shui bound) (i.e. 726 pax/hr) and KMB 79K (Sheung Shui bound) (i.e. 363 pax/hr) respectively while worker passenger trips would be distributed into KMB 73K (Man Kam To bound) (i.e. 864 pax/hr) and KMB 79K (Ta Kwu Ling bound) (i.e. 432 pax/hr) respectively during AM peak, and vice versa during PM peak.

4.9.13 The highest usage of Sheung Shui bound and Man Kam To/Ta Kwu Ling bound during AM peak and PM peak for KMB 73K and KMB 79K is highlighted in **Table 4.9.5** to **Table 4.9.8**. By adopting the growth rates of +3.95% p.a. for 2026 to 2031 and +0.52% p.a. for 2031 to 2035 into the observed highest nos. of passengers, the estimated passengers demand of KMB 73K and KMB 79K in Year 2035 were summarised in **Table 4.9.10.**

Table 4.9.10 Estimated Passenger Demand of KMB 73K and KMB 79K in Year 2035

Bus Route	Peak Period	Direction	2026 Observed Peak Franchised Bus Passenger Demand (pax/hr)	2035 Reference Peak Franchised Bus Passenger Demand (pax/hr)	Additional Public Transport demand by Indicative Scheme (pax/hr) *	2035 Design Peak Franchised Bus Passenger Demand (pax/hr)
KMB 73K	AM	Sheung Shui	131	162	726	888
		Man Kam To	217	269	864	1133
	PM	Sheung Shui	131	162	864	1026
		Man Kam To	120	149	726	875
KMB 79K	AM	Sheung Shui	275	341	363	704
		Ta Kwu Ling	118	146	432	578
	PM	Sheung Shui	125	155	432	587
		Ta Kwu Ling	205	254	363	617

Note:
* Distributed into specific bound as referred to Para. 4.9.12

4.9.14 Based on the above table, it is anticipated that there would be insufficient spare capacity for both KMB 73K and KMB 79K under their respective existing headway. Hence, it is proposed to enhance the service by employing double-decked bus instead of single-decked bus for KMB 73K and increasing the frequency for both KMB 73K and KMB 79K during morning and evening peak period with the corresponding occupancy as summarised in **Table 4.9.11**. The proposed fleet size associated with the bus enhancement proposal are summarised in **Table 4.9.12**.

Table 4.9.11 Proposed Bus Enhancement and Associated Occupancy in Year 2035

Bus Route	Peak Period	Direction	Existing Frequency during peak hour (mins)	Proposed Frequency during peak hour (mins)	Proposed No. of Bus Trips during peak hour (bus trips/hr)	Total Capacity* (pax/hr)	2035 Design Peak Franchised Bus Passenger Demand (pax/hr)	Occupancy
KMB 73K	AM	Sheung Shui	15 - 25	4 - 6	12	1,440	888	62%
		Man Kam To	10 - 25				1133	79%
	PM	Sheung Shui	20 - 25				1026	71%
		Man Kam To	20 - 25				875	61%
KMB 79K	AM	Sheung Shui	15 - 30	6 - 9	8	960	704	73%
		Ta Kwu Ling	30				578	60%
	PM	Sheung Shui	30				587	61%
		Ta Kwu Ling	25 - 30				617	64%

Note:
* Assumed Bus Capacity is 120 passengers per vehicle

Table 4.9.12 Proposed Fleet Size associated with the Bus Enhancement Proposal

Bus Route	(A) Proposed Average Frequency during peak hour (mins)	(B) Estimated One-way Traveling Distance under the Proposed Service Extension (km)	(C) Observed Average speed (km/h)	(D) (=(B)/(C)) Estimated One-way Journey Time (mins)	(E) (=(D)/(A) × 2) Proposed Fleet Size
KMB 73K	(4+6) / 2 = 5	8	16	30	12
KMB 79K	(6+9) / 2 = 7.5	18	13.5	80	22

4.9.15 With the proposed bus enhancement of KMB 73K and KMB 79K, it is anticipated that there would be sufficient spare capacities to accommodate the additional passenger demand induced by the Indicative Scheme during morning and evening peak period in year 2035. The associated bus trips have also been distributed into the road network and incorporated into the traffic forecast.

4.9.16 Besides, it is proposed to provide transport interchange with 1 no. bus drop-off bay, 4 nos. bus pick-up bays and 12 nos. stacking bays for the proposed existing bus service enhancement underneath the R&D Centre 2, together with taxi stand to accommodate 5 nos. NT taxi and 5 nos. urban taxi and in accordance with TPDM requirement. as illustrated in **Figure 4.16**.

4.9.17 Charging-enabling facilities for each bus bay (2.5m(L) × 1.5m(W) × 2.6m(H)) and 4 nos. taxi (2 nos. NT taxi & 2 no. urban taxi, 2.5m(L) × 1.5m(W)) in accordance with EPD requirement, as well as a 237.5m^2 (47.5m(L) × 5m(W)) integrated structure of staff ancillary facilities for bus operators and passenger facilities such as kiosks and toilets in accordance with TPDM requirement has also been incorporated in the proposed transport interchange.

4.9.18 Furthermore, two sets of en-route bus stops would be provided outside the Residential Area and Data Centre in order to enhance the efficiency of the proposed feeder services and long-haul services. It is hence anticipated that the accessibility of the Indicative Scheme is considered acceptable, and the Indicative Scheme would not impose adverse impact to existing PT services.

4.9.19 The swept path analysis of 12.8m long bus manoeuvring along the proposed signalized junction of Lin Ma Hang Road / Proposed Access Road is presented from **Figure 3.7** to **Figure 3.9**, while the swept path analysis of 12.8m long bus manoeuvring between the proposed transport interchange and the en-route bus stops is presented in **Figure 4.17.**

4.9.20 On the other hand, the swept path analysis of 12.8m long bus manoeuvring along each bus bay and stacking bay is presented from **Figure 4.18** to **Figure 4.23**, while the swept path analysis of 5m long taxi manoeuvring along the taxi stand is presented in **Figure 4.24**.

4.10 Railway Assessment

4.10.1 According to "Replies to initial questions raised by Legislative Council Members in examining the Estimates of Expenditure 2026-27" Reply Serial No. TLB187[1], the highest passenger loading of a railway line usually occurs during the morning peak hours, while the peak loading in the evening peak period is usually lower as the travelling pattern of passengers is relatively more dispersed. As such, when evaluating the most crowded scenario and the service demand for individual railway lines, the MTR Corporation Limited (MTRCL) will mainly base on the passenger loading during the morning peak hours.

4.10.2 According to the aforementioned Reply Serial No. TLB187, the record patronage of East Rail Line (EAL) on the critical link (Tai Wai to Kowloon Tong) during the busiest one hour in the morning, per direction, was 44,400 passengers in Year 2025.

[1] Source: Replies to initial questions raised by Legislative Council Members in examining the Estimates 2026-27, Transport and Logistics Bureau (https://www.legco.gov.hk/yr2026/english/fc/fc/w_q/tlb-e.pdf)

4.10.3 Similar to franchised buses, it is considered that the usage of EAL is hugely related to planned population and employment within its catchment area, hence the same growth factors (i.e. +3.95% p.a. for years from 2025 to 2031 and +0.52% p.a. for years from 2031 to 2035), as discussed in Section 4.9.10 and Section 4.9.11, would be applied to the Year 2025 recorded patronage to forecast railway demand in Design Year 2035 for conservative assessment purpose.

4.10.4 The forecasted morning peak hourly patronage for the EAL critical link in 2035 would be $44,400 \times (1+3.95\%)^{(2031-2025)} \times (1+0.52\%)^{(2035-2031)} = 57,209$ passengers.

4.10.5 According to the aforementioned Reply Serial No. TLB187, the existing carrying capacity of EAL during peak period is 62,500 passengers per hour per direction, which is based on 6 persons (standing) per square metre (ppsm). The capacity of trains is 2,845 at 6 ppsm and 2,061 at 4 ppsm, which indicates that the carrying capacity at 4 ppsm is 72.4% of that at 6 ppsm, i.e., $62,500 \times 72.4\% = 45,275$. For conservative approach, carrying capacity under 4 ppsm would be adopted. Provided that the forecast 2035 peak-hour demand (57,209 passengers) would exceed the existing carrying capacity at 4 ppsm (45,275 passengers), it is anticipated that the EAL would be overloaded already, regardless of the additional population intake from the Indicative Scheme. Hence, enhancement of train frequency would be required.

4.10.6 According to the same Reply Serial No. TLB187, when train frequency is maximised, the maximum hourly carrying capacity of EAL would increase to 82,500 at 6 ppsm, which is equivalent to $82,500 \times 72.4\% = 59,765$ for 4 ppsm. The corresponding usage during morning peak hour in 2035 would be $57,209 / 59,765 = 95\%$, which indicates that there would still be ample capacity of $1 – 95\% = 5\%$ under maximum train frequency operation.

4.10.7 As derived in **Table 4.9.4**, the anticipated additional EAL passenger generated by the Indicative Scheme would be 662 residents towards Admiralty bound per hour, which is equivalent to about 1.04% (662 / 59,765) of the maximum carrying capacity. With the identified ample capacity for EAL of 5% during morning peak hour, it can be concluded that the MTR passenger demand induced by the Indicative Scheme could be properly catered by EAL under maximum carrying capacity and thus no adverse railway impact would be induced by the Indicative Scheme. The actual frequency enhancement may not be necessary to reach the maximum carrying capacity, subjected to the future operational need.

5 CONCLUSION

5.1 Summary

5.1.1 The Application Site is located in Zone with major part in Agriculture ("AGR"), and minor parts in Green Belt ("GB"), Government, Institution or Community ("G/IC") at Various Lots in D.D.82 & D.D.86, Man Kam To, New Territories.

5.1.2 The Applicant proposes amendments to rezone the Application Site with a sizeable site area of about 125,863m^2 (Development site area of about 102,461m^2) into an Innovation and Technology Hub with Ancillary Facilities (the "Indicative Scheme"), subject to a non-domestic gross floor area (GFA) of 365,180m^2, which consists of R&D Centre with 268,780m^2 GFA and Data Centre with 86,400m^2 GFA to nurture the development of I&T industry, as well as a Commercial Centre with 9,276m^2 to support the daily needs of the working and living population. A kindergarten of 724m^2 will be provided on the ground floor of Ancillary Dormitories. In addition, there will be a domestic GFA of 138,450m^2, which consists of 5 nos. Private Residential Blocks providing a total of 1,618 units together with a 2,982m^2 Clubhouse, and Ancillary Dormitories with 63,900m^2 which provide 1,392 units for the working population of R&D Centre.

5.1.3 A Traffic Impact Assessment (TIA) study was carried out to evaluate the likely traffic impact associated with the Indicative Scheme, in support of the S12A planning application for proposed amendment of plan.

5.1.4 This TIA is to examine the impact of traffic induced by the Indicative Scheme on the existing and planned road networks, in particular with respect to the performances of the affected junctions in the vicinity; and present the findings on related traffic and transport issues. Any deficiency would be identified, and improvement proposal would be recommended as necessary to resolve any foreseeable problem from the deficiencies.

5.1.5 The proposed provision of internal transport facilities for the subject development is in full compliance with the HKPSG and TD Circular No. 6/2012 requirements, as well as with reference to project with similar use. The proposed internal transport facilities will be provided on ground floor and basement parking floors.

5.1.6 In order to assess the future traffic impacts associated with the Proposed Development in year 2035, two levels of transport models are adopted, with the Strategic Transport Model (STM) as the upper tier and the Local Area Traffic Model (LATM) as the lower tier. The STM is a link-based transport model which produces transport demand forecasts at strategic and inter-district levels, while the LATM is a junction-based assignment model which stimulates the local area traffic demand at intra-district level based on the latest available 2019-based Base District Traffic Model (BDTM) (2024 update). The LATM has been further validated to latest traffic condition based on the 2026 observed peak hour traffic on identified key junctions and road links, taking into account the latest traffic aids, junction layouts and method of control in the study area.

5.1.7 Traffic impact assessment scenarios were set up to evaluate the associated traffic impact likely to be induced by the Indicative Scheme. **Scenario 1** is the Reference Scenario (without the Indicative Scheme) in Year 2035. **Scenario 2** is the Design Scenario (with the Indicative Scheme) in 2035.

5.1.8 The junction assessment results revealed that all identified key junctions would operate within capacity with the Indicative Scheme in Year 2035, except J1 – Lin Ma Hang Road / Man Kam To Road, J2 – Lin Ma Hang Road/ Ping Che Road, J13 – Po Shek Wu Road/ Po Wan Road, and J23 – San Wan Road / Fanling Station Road.

5.1.9 With the proposed junction improvement at J1, J2, J13 and J23, it is anticipated that the implication to the road network with the Indicative Scheme would be minimal.

5.1.10 The road link assessment results revealed that all identified key road links assessed will be performing satisfactorily with spare capacity in both Reference and Design scenarios in Year 2035.

5.1.11 The Applicant proposes to enhance the existing bus services of KMB 73K and KMB 79K by employing double-decked bus instead of single-decked bus for KMB 73K and increasing the frequency for both KMB 73K and KMB 79K during morning and evening peak period, together with transport interchange with 1 no. bus drop-off bay, 4 nos. bus pick-up bays and 12 nos. stacking bays as well as 1 no. taxi stand underneath the R&D Centre 2, and two sets of en-route bus stops outside Residential Area and Data Centre in order to enhance the efficiency of the proposed existing bus service enhancement. It is hence anticipated that the accessibility of the Indicative Scheme is considered acceptable, and the Indicative Scheme would not impose adverse impact to existing PT services.

5.2 Conclusion

5.2.1 It could be concluded that the Indicative Scheme will not impose adverse traffic impact on the surrounding road network, and thus is feasible from the traffic engineering point of view.
