2025年 5月 7日
此文件在_____收到。城市規劃委員會
只會在收到所有必要的資料及文件後才正式確認收到
申請的日期。

This document is received on 2025 -05- 07
The Town Planning Board will formally acknowledge
the date of receipt of the application only upon receipt
of all the required information and documents.

Form No. S16-I
表格第 S16-I 號

APPLICATION FOR PERMISSION UNDER SECTION 16 OF THE TOWN PLANNING ORDINANCE (CAP. 131)

根據《城市規劃條例》(第131章)第16條遞交的許可申請

Applicable to proposals not involving or not only involving:
適用於建議不涉及或不祇涉及:

(i) Construction of "New Territories Exempted House(s)";
興建「新界豁免管制屋宇」;

(ii) Temporary use/development of land and/or building not exceeding 3 years in rural areas or Regulated Areas; and
位於鄉郊地區或受規管地區土地上及/或建築物內進行為期不超過三年的臨時用途/發展;及

(iii) Renewal of permission for temporary use or development in rural areas or Regulated Areas
位於鄉郊地區或受規管地區的臨時用途或發展的許可續期

Applicant who would like to publish the notice of application in local newspapers to meet one of the Town Planning Board's requirements of taking reasonable steps to obtain consent of or give notification to the current land owner, please refer to the following link regarding publishing the notice in the designated newspapers: https://www.tpb.gov.hk/en/plan_application/apply.html

申請人如欲在本地報章刊登申請通知,以採取城市規劃委員會就取得現行土地擁有人的同意或通知現行土地擁有人所指定的其中一項合理步驟,請瀏覽以下網址有關在指定的報章刊登通知:
https://www.tpb.gov.hk/tc/plan_application/apply.html

General Note and Annotation for the Form
填寫表格的一般指引及註解

\# "Current land owner" means any person whose name is registered in the Land Registry as that of an owner of the land to which the application relates, as at 6 weeks before the application is made
「現行土地擁有人」指在提出申請前六星期,其姓名或名稱已在土地註冊處註冊為該申請所關乎的土地的擁有人的人

& Please attach documentary proof 請夾附證明文件

^ Please insert number where appropriate 請在適當地方註明編號

Please fill "NA" for inapplicable item 請在不適用的項目填寫「不適用」

Please use separate sheets if the space provided is insufficient 如所提供的空間不足,請另頁說明

Please insert a「✔」at the appropriate box 請在適當的方格內上加上「✔」號

2500939 2.5.2025 By Hand

For Official Use Only 請勿填寫此欄	Application No. 申請編號	A/TY/150
	Date Received 收到日期	2025 -05- 07

1. The completed form and supporting documents (if any) should be sent to the Secretary, Town Planning Board (the Board), 15/F, North Point Government Offices, 333 Java Road, North Point, Hong Kong.
申請人須把填妥的申請表格及其他支持申請的文件 (倘有)，送交香港北角渣華道 333 號北角政府合署 15 樓城市規劃委員會(下稱「委員會」)秘書收。

2. Please read the "Guidance Notes" carefully before you fill in this form. The document can be downloaded from the Board's website at http://www.tpb.gov.hk/. It can also be obtained from the Secretariat of the Board at 15/F, North Point Government Offices, 333 Java Road, North Point, Hong Kong (Tel: 2231 4810 or 2231 4835), and the Planning Enquiry Counters of the Planning Department (Hotline: 2231 5000) (17/F, North Point Government Offices, 333 Java Road, North Point, Hong Kong and 14/F, Sha Tin Government Offices, 1 Sheung Wo Che Road, Sha Tin, New Territories).
請先細閱《申請須知》的資料單張，然後填寫此表格。該份文件可從委員會的網頁下載 (網址：http://www.tpb.gov.hk/)，亦可向委員會秘書處 (香港北角渣華道 333 號北角政府合署 15 樓 – 電話：2231 4810 或 2231 4835)及規劃署的規劃資料查詢處(熱線：2231 5000) (香港北角渣華道 333 號北角政府合署 17 樓及新界沙田上禾輋路 1 號沙田政府合署 14 樓)索取。

3. This form can be downloaded from the Board's website, and obtained from the Secretariat of the Board and the Planning Enquiry Counters of the Planning Department. The form should be typed or completed in block letters. The processing of the application may be refused if the required information or the required copies are incomplete.
此表格可從委員會的網頁下載，亦可向委員會秘書處及規劃署的規劃資料查詢處索取。申請人須以打印方式或以正楷填寫表格。如果申請人所提交的資料或文件副本不齊全，委員會可拒絕處理有關申請。

1. Name of Applicant 申請人姓名/名稱

(☐ Mr. 先生 / ☐ Mrs. 夫人 / ☐ Miss 小姐 / ☐ Ms. 女士 / ☑ Company 公司 / ☐ Organisation 機構)

Supreme Enterprises Limited

2. Name of Authorised Agent (if applicable) 獲授權代理人姓名/名稱（如適用）

(☐ Mr. 先生 / ☐ Mrs. 夫人 / ☐ Miss 小姐 / ☐ Ms. 女士 / ☑ Company 公司 / ☐ Organisation 機構)

R-riches Planning Limited

3. Application Site 申請地點

(a) Full address / location / demarcation district and lot number (if applicable) 詳細地址／地點／丈量約份及地段號碼（如適用）	Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories
(b) Site area and/or gross floor area involved 涉及的地盤面積及／或總樓面面積	☑Site area 地盤面積 4,335 sq.m 平方米 ☑About 約 ☑Gross floor area 總樓面面積 1,463 sq.m 平方米 ☑About 約
(c) Area of Government land included (if any) 所包括的政府土地面積（倘有）	1,057 sq.m 平方米 ☑About 約

(d)	Name and number of the related statutory plan(s) 有關法定圖則的名稱及編號	Approved Tsing Yi OZP No.: S/TY/32
(e)	Land use zone(s) involved 涉及的土地用途地帶	"Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, area shown as 'Road' and area not covered by statutory plan
(f)	Current use(s) 現時用途	Vacant (If there are any Government, institution or community facilities, please illustrate on plan and specify the use and gross floor area) (如有任何政府、機構或社區設施，請在圖則上顯示，並註明用途及總樓面面積)

4. "Current Land Owner" of Application Site 申請地點的「現行土地擁有人」

The applicant 申請人 –

☑ is the sole "current land owner"#& (please proceed to Part 6 and attach documentary proof of ownership).
是唯一的「現行土地擁有人」#& (請繼續填寫第 6 部分，並夾附業權證明文件)。

☐ is one of the "current land owners"#& (please attach documentary proof of ownership).
是其中一名「現行土地擁有人」#& (請夾附業權證明文件)。

☐ is not a "current land owner"#.
並不是「現行土地擁有人」#。

☐ The application site is entirely on Government land (please proceed to Part 6).
申請地點完全位於政府土地上（請繼續填寫第 6 部分）。

5. Statement on Owner's Consent/Notification
就土地擁有人的同意/通知土地擁有人的陳述

(a) According to the record(s) of the Land Registry as at ..... (DD/MM/YYYY), this application involves a total of ..... "current land owner(s)"#.
根據土地註冊處截至 ..... 年 ..... 月 ..... 日的記錄，這宗申請共牽涉 ..... 名「現行土地擁有人」#。

(b) The applicant 申請人 –

☐ has obtained consent(s) of ..... "current land owner(s)"#.
已取得 ..... 名「現行土地擁有人」#的同意。

Details of consent of "current land owner(s)"# obtained 取得「現行土地擁有人」#同意的詳情		
No. of 'Current Land Owner(s)' 「現行土地擁有人」數目	Lot number/address of premises as shown in the record of the Land Registry where consent(s) has/have been obtained 根據土地註冊處記錄已獲得同意的地段號碼／處所地址	Date of consent obtained (DD/MM/YYYY) 取得同意的日期 (日/月/年)

(Please use separate sheets if the space of any box above is insufficient. 如上列任何方格的空間不足，請另頁說明)

☐ has notified ..... "current land owner(s)"#
已通知 ..... 名「現行土地擁有人」#。

Details of the "current land owner(s)" # notified 已獲通知「現行土地擁有人」#的詳細資料		
No. of 'Current Land Owner(s)' 「現行土地擁有人」數目	Lot number/address of premises as shown in the record of the Land Registry where notification(s) has/have been given 根據土地註冊處記錄已發出通知的地段號碼／處所地址	Date of notification given (DD/MM/YYYY) 通知日期(日/月/年)

(Please use separate sheets if the space of any box above is insufficient. 如上列任何方格的空間不足，請另頁說明)

☐ has taken reasonable steps to obtain consent of or give notification to owner(s):
已採取合理步驟以取得土地擁有人的同意或向該人發給通知。詳情如下：

Reasonable Steps to Obtain Consent of Owner(s) 取得土地擁有人的同意所採取的合理步驟

☐ sent request for consent to the "current land owner(s)" on _____ (DD/MM/YYYY)#&
於_____(日/月/年)向每一名「現行土地擁有人」#郵遞要求同意書&

Reasonable Steps to Give Notification to Owner(s) 向土地擁有人發出通知所採取的合理步驟

☐ published notices in local newspapers on _____ (DD/MM/YYYY)&
於_____(日/月/年)在指定報章就申請刊登一次通知&

☐ posted notice in a prominent position on or near application site/premises on _____ (DD/MM/YYYY)&
於_____(日/月/年)在申請地點／申請處所或附近的顯明位置貼出關於該申請的通知&

☐ sent notice to relevant owners' corporation(s)/owners' committee(s)/mutual aid committee(s)/management office(s) or rural committee on _____ (DD/MM/YYYY)&
於_____(日/月/年)把通知寄往相關的業主立案法團/業主委員會/互助委員會或管理處，或有關的鄉事委員會&

Others 其他

☐ others (please specify)
其他（請指明）

_____

_____

_____

_____

Note: May insert more than one「✔」.
Information should be provided on the basis of each and every lot (if applicable) and premises (if any) in respect of the application.
註: 可在多於一個方格內加上「✔」號
申請人須就申請涉及的每一地段（倘適用）及處所（倘有）分別提供資料

6. Type(s) of Application 申請類別

☐ Type (i) 第(i)類 Change of use within existing building or part thereof 更改現有建築物或其部分內的用途

☐ Type (ii) 第(ii)類 Diversion of stream / excavation of land / filling of land / filling of pond as required under Notes of Statutory Plan(s) 根據法定圖則《註釋》內所要求的河道改道／挖土／填土／填塘工程

☐ Type (iii) 第(iii)類 Public utility installation / Utility installation for private project 公用事業設施裝置/私人發展計劃的公用設施裝置

☐ Type (iv) 第(iv)類 Minor relaxation of stated development restriction(s) as provided under Notes of Statutory Plan(s) 略為放寬於法定圖則《註釋》內列明的發展限制

☑ Type (v) 第(v)類 Use / development other than (i) to (iii) above 上述的(i)至(iii)項以外的用途／發展

Note 1: May insert more than one「✓」.
註 1： 可在多於一個方格內加上「✓」號
Note 2: For Development involving columbarium use, please complete the table in the Appendix.
註 2： 如發展涉及靈灰安置所用途，請填妥於附件的表格。

(i) For Type (i) application 供第(i)類申請

(a) Total floor area involved 涉及的總樓面面積	sq.m 平方米		
(b) Proposed use(s)/development 擬議用途/發展	(If there are any Government, institution or community facilities, please illustrate on plan and specify the use and gross floor area) (如有任何政府、機構或社區設施，請在圖則上顯示，並註明用途及總樓面面積)		
(c) Number of storeys involved 涉及層數		Number of units involved 涉及單位數目	
(d) Proposed floor area 擬議樓面面積	Domestic part 住用部分 ..... sq.m 平方米 ☐About 約		
	Non-domestic part 非住用部分..... sq.m 平方米 ☐About 約		
	Total 總計 ..... sq.m 平方米 ☐About 約		

(e) Proposed uses of different floors (if applicable) 不同樓層的擬議用途(如適用) (Please use separate sheets if the space provided is insufficient) (如所提供的空間不足，請另頁說明)	Floor(s) 樓層	Current use(s) 現時用途	Proposed use(s) 擬議用途

(ii) For Type (ii) application 供第(ii)類申請	
(a) Operation involved 涉及工程	☐ Diversion of stream 河道改道 ☐ Filling of pond 填塘 Area of filling 填塘面積 ..... sq.m 平方米 ☐About 約 Depth of filling 填塘深度 ..... m 米 ☐About 約 ☐ Filling of land 填土 Area of filling 填土面積 ..... sq.m 平方米 ☐About 約 Depth of filling 填土厚度 ..... m 米 ☐About 約 ☐ Excavation of land 挖土 Area of excavation 挖土面積 ..... sq.m 平方米 ☐About 約 Depth of excavation 挖土深度 ..... m 米 ☐About 約 (Please indicate on site plan the boundary of concerned land/pond(s), and particulars of stream diversion, the extent of filling of land/pond(s) and/or excavation of land) (請用圖則顯示有關土地／池塘界線，以及河道改道、填塘、填土及／或挖土的細節及/或範圍))
(b) Intended use/development 有意進行的用途／發展	

(iii) For Type (iii) application 供第(iii)類申請	
(a) Nature and scale 性質及規模	☐ Public utility installation 公用事業設施裝置 ☐ Utility installation for private project 私人發展計劃的公用設施裝置 Please specify the type and number of utility to be provided as well as the dimensions of each building/structure, where appropriate 請註明有關裝置的性質及數量，包括每座建築物/構築物(倘有)的長度、高度和闊度

Name/type of installation 裝置名稱／種類	Number of provision 數量	Dimension of each installation /building/structure (m) (LxWxH) 每個裝置／建築物／構築物的尺寸 (米) (長 x 闊 x 高)

(Please illustrate on plan the layout of the installation 請用圖則顯示裝置的布局)

(iv) For Type (iv) application 供第(iv)類申請

(a) Please specify the proposed minor relaxation of stated development restriction(s) and **also fill in the proposed use/development and development particulars in part (v) below** –
請列明擬議略為放寬的發展限制**並填妥於第(v)部分的擬議用途/發展及發展細節** –

☐	Plot ratio restriction 地積比率限制	From 由 ..... to 至 .....
☐	Gross floor area restriction 總樓面面積限制	From 由 .....sq. m 平方米 to 至 .....sq. m 平方米
☐	Site coverage restriction 上蓋面積限制	From 由 .....% to 至 ..... %
☐	Building height restriction 建築物高度限制	From 由 .....m 米 to 至 ..... m 米 From 由 ..... mPD 米 (主水平基準上) to 至 .....mPD 米 (主水平基準上) From 由 ..... storeys 層 to 至 ..... storeys 層
☐	Non-building area restriction 非建築用地限制	From 由 .....m to 至 ..... m
☐	Others (please specify) 其他（請註明）	.....

(v) For Type (v) application 供第(v)類申請

(a) Proposed use(s)/development 擬議用途/發展	Proposed Temporary Concrete Batching Plant for a Period of 5 Years (Please illustrate the details of the proposal on a layout plan 請用平面圖說明建議詳情)

(b) Development Schedule 發展細節表

Proposed gross floor area (GFA) 擬議總樓面面積	1,463 sq.m 平方米	☑About 約
Proposed plot ratio 擬議地積比率	0.45	☑About 約
Proposed site coverage 擬議上蓋面積	23 %	☑About 約
Proposed no. of blocks 擬議座數	N/A	
Proposed no. of storeys of each block 每座建築物的擬議層數	N/A storeys 層 ☐ include 包括 ..... storeys of basements 層地庫 ☐ exclude 不包括 ..... storeys of basements 層地庫	
Proposed building height of each block 每座建築物的擬議高度	..... mPD 米(主水平基準上) not more than 31 m 米	☐About 約 ☐About 約

☐ Domestic part 住用部分

GFA 總樓面面積 ..... sq. m 平方米 ☐About 約

number of Units 單位數目 .....

average unit size 單位平均面積 .....sq. m 平方米 ☐About 約

estimated number of residents 估計住客數目 .....

☑ Non-domestic part 非住用部分 — GFA 總樓面面積

☐ eating place 食肆 ..... sq. m 平方米 ☐About 約

☐ hotel 酒店 ..... sq. m 平方米 ☐About 約
(please specify the number of rooms 請註明房間數目) .....

☐ office 辦公室 ..... sq. m 平方米 ☐About 約

☐ shop and services 商店及服務行業 ..... sq. m 平方米 ☐About 約

☐ Government, institution or community facilities 政府、機構或社區設施
(please specify the use(s) and concerned land area(s)/GFA(s) 請註明用途及有關的地面面積／總樓面面積)
.....
.....
.....

☑ other(s) 其他
(please specify the use(s) and concerned land area(s)/GFA(s) 請註明用途及有關的地面面積／總樓面面積)
Concrete batching plant: 1,463 sq.m (about) with ancillary facilities
.....

☐ Open space 休憩用地 (please specify land area(s) 請註明地面面積)

☐ private open space 私人休憩用地 ..... sq. m 平方米 ☐ Not less than 不少於

☐ public open space 公眾休憩用地 ..... sq. m 平方米 ☐ Not less than 不少於

(c) Use(s) of different floors (if applicable) 各樓層的用途 (如適用)

[Block number] [座數]	[Floor(s)] [層數]	[Proposed use(s)] [擬議用途]
Please refer to the planning statement and plans.		

(d) Proposed use(s) of uncovered area (if any) 露天地方（倘有）的擬議用途

Vehicle parking, waiting and loading spaces and circulation area
.....
.....
.....
.....

7. Anticipated Completion Time of the Development Proposal 擬議發展計劃的預計完成時間

Anticipated completion time (in month and year) of the development proposal (by phase (if any)) (e.g. June 2023)
擬議發展計劃預期完成的年份及月份 (分期 (倘有)) (例：2023 年 6 月)
(Separate anticipated completion times (in month and year) should be provided for the proposed public open space and Government, institution or community facilities (if any))
(申請人須就擬議的公眾休憩用地及政府、機構或社區設施 (倘有) 提供個別擬議完成的年份及月份)

Early 2026

8. Vehicular Access Arrangement of the Development Proposal 擬議發展計劃的行車通道安排

Any vehicular access to the site/subject building? 是否有車路通往地盤／有關建築物？	Yes 是	☑ There is an existing access. (please indicate the street name, where appropriate) 有一條現有車路。(請註明車路名稱(如適用)) Accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road. ☐ There is a proposed access. (please illustrate on plan and specify the width) 有一條擬議車路。（請在圖則顯示，並註明車路的闊度）
	No 否	☐
Any provision of parking space for the proposed use(s)? 是否有為擬議用途提供停車位？	Yes 是	☑ (Please specify type(s) and number(s) and illustrate on plan) 請註明種類及數目並於圖則上顯示) Private Car Parking Spaces 私家車車位: 2 Motorcycle Parking Spaces 電單車車位: 2 Light Goods Vehicle Parking Spaces 輕型貨車泊車位: N/A Medium Goods Vehicle Parking Spaces 中型貨車泊車位: N/A Heavy Goods Vehicle Parking Spaces 重型貨車泊車位: N/A Others (Please Specify) 其他 (請列明):
	No 否	☐
Any provision of loading/unloading space for the proposed use(s)? 是否有為擬議用途提供上落客貨車位？	Yes 是	☑ (Please specify type(s) and number(s) and illustrate on plan) 請註明種類及數目並於圖則上顯示) Taxi Spaces 的士車位: N/A Coach Spaces 旅遊巴車位: N/A Light Goods Vehicle Spaces 輕型貨車車位: N/A Medium Goods Vehicle Spaces 中型貨車車位: N/A Heavy Goods Vehicle Spaces 重型貨車車位: 3 (loading space) Others (Please Specify) 其他 (請列明): HGV Waiting Spaces: 12
	No 否	☐

9. Impacts of Development Proposal 擬議發展計劃的影響

If necessary, please use separate sheets to indicate the proposed measures to minimise possible adverse impacts or give justifications/reasons for not providing such measures.
如需要的話，請另頁註明可盡量減少可能出現不良影響的措施，否則請提供理據/理由。

Does the development proposal involve alteration of existing building? 擬議發展計劃是否包括現有建築物的改動?	Yes 是	☐ Please provide details 請提供詳情 ....
	No 否	☑
Does the development proposal involve the operation on the right? 擬議發展是否涉及右列的工程? (Note: where Type (ii) application is the subject of application, please skip this section. 註：如申請涉及第(ii)類申請，請跳至下一條問題。)	Yes 是	☐ (Please indicate on site plan the boundary of concerned land/pond(s), and particulars of stream diversion, the extent of filling of land/pond(s) and/or excavation of land) (請用地盤平面圖顯示有關土地／池塘界線，以及河道改道、填塘、填土及／或挖土的細節及/或範圍) ☐ Diversion of stream 河道改道 ☐ Filling of pond 填塘 Area of filling 填塘面積 ..... sq.m 平方米 ☐About 約 Depth of filling 填塘深度 ..... m 米 ☐About 約 ☐ Filling of land 填土 Area of filling 填土面積 ..... sq.m 平方米 ☐About 約 Depth of filling 填土厚度 ..... m 米 ☐About 約 ☐ Excavation of land 挖土 Area of excavation 挖土面積..... sq.m 平方米 ☐About 約 Depth of excavation 挖土深度 .....m 米 ☐About 約
	No 否	☑

Would the development proposal cause any adverse impacts? 擬議發展計劃會否造成不良影響？	On environment 對環境	Yes 會 ☐	No 不會 ☑
	On traffic 對交通	Yes 會 ☐	No 不會 ☑
	On water supply 對供水	Yes 會 ☐	No 不會 ☑
	On drainage 對排水	Yes 會 ☐	No 不會 ☑
	On slopes 對斜坡	Yes 會 ☐	No 不會 ☑
	Affected by slopes 受斜坡影響	Yes 會 ☐	No 不會 ☑
	Landscape Impact 構成景觀影響	Yes 會 ☐	No 不會 ☑
	Tree Felling 砍伐樹木	Yes 會 ☐	No 不會 ☑
	Visual Impact 構成視覺影響	Yes 會 ☐	No 不會 ☑
	Others (Please Specify) 其他 (請列明)	Yes 會 ☐	No 不會 ☑
	_____		
	_____		
	Please state measure(s) to minimise the impact(s). For tree felling, please state the number, diameter at breast height and species of the affected trees (if possible) 請註明盡量減少影響的措施。如涉及砍伐樹木，請說明受影響樹木的數目、及胸高度的樹幹直徑及品種(倘可)		

10. Justifications 理由

The applicant is invited to provide justifications in support of the application. Use separate sheets if necessary.
現請申請人提供申請理由及支持其申請的資料。如有需要，請另頁說明。

Please refer to the planning statement.

11. Declaration 聲明

I hereby declare that the particulars given in this application are correct and true to the best of my knowledge and belief.
本人謹此聲明，本人就這宗申請提交的資料，據本人所知及所信，均屬真實無誤。

I hereby grant a permission to the Board to copy all the materials submitted in this application and/or to upload such materials to the Board's website for browsing and downloading by the public free-of-charge at the Board's discretion. 本人現准許委員會酌情將本人就此申請所提交的所有資料複製及/或上載至委員會網站，供公眾免費瀏覽或下載。

Signature 簽署 ..... ☐ Applicant 申請人 / ☑ Authorised Agent 獲授權代理人

Matthew NG — Name in Block Letters 姓名（請以正楷填寫）

Director (Planning and Development) — Position (if applicable) 職位 （如適用）

Professional Qualification(s) 專業資格
☑ Member 會員 / ☐ Fellow of 資深會員
☑ HKIP 香港規劃師學會 / ☐ HKIA 香港建築師學會 /
☐ HKIS 香港測量師學會 / ☐ HKIE 香港工程師學會 /
☐ HKILA 香港園境師學會/ ☐ HKIUD 香港城市設計學會
☑ RPP 註冊專業規劃師(No. 411)
Others 其他 ..... MRTPI, MPIA, MCIP-I, CMILT

on behalf of 代表 R-riches Planning Limited

☑ Company 公司 / ☐ Organisation Name and Chop (if applicable) 機構名稱及蓋章（如適用）

Date 日期 02/05/2025 (DD/MM/YYYY 日/月/年)

Remark 備註

The materials submitted in this application and the Board's decision on the application would be disclosed to the public. Such materials would also be uploaded to the Board's website for browsing and free downloading by the public where the Board considers appropriate.
委員會會向公眾披露申請人所遞交的申請資料和委員會對申請所作的決定。在委員會認為合適的情況下，有關申請資料亦會上載至委員會網頁供公眾免費瀏覽及下載。

Warning 警告

Any person who knowingly or wilfully makes any statement or furnish any information in connection with this application, which is false in any material particular, shall be liable to an offence under the Crimes Ordinance.
任何人在明知或故意的情況下，就這宗申請提出在任何要項上是虛假的陳述或資料，即屬違反《刑事罪行條例》。

Statement on Personal Data 個人資料的聲明

1. The personal data submitted to the Board in this application will be used by the Secretary of the Board and Government departments for the following purposes:
委員會就這宗申請所收到的個人資料會交給委員會秘書及政府部門，以根據《城市規劃條例》及相關的城市規劃委員會規劃指引的規定作以下用途：
   (a) the processing of this application which includes making available the name of the applicant for public inspection when making available this application for public inspection; and
處理這宗申請，包括公布這宗申請供公眾查閱，同時公布申請人的姓名供公眾查閱；以及
   (b) facilitating communication between the applicant and the Secretary of the Board/Government departments.
方便申請人與委員會秘書及政府部門之間進行聯絡。

2. The personal data provided by the applicant in this application may also be disclosed to other persons for the purposes mentioned in paragraph 1 above.
申請人就這宗申請提供的個人資料，或亦會向其他人士披露，以作上述第 1 段提及的用途。

3. An applicant has a right of access and correction with respect to his/her personal data as provided under the Personal Data (Privacy) Ordinance (Cap. 486). Request for personal data access and correction should be addressed to the Secretary of the Board at 15/F, North Point Government Offices, 333 Java Road, North Point, Hong Kong.
根據《個人資料(私隱)條例》(第 486 章)的規定，申請人有權查閱及更正其個人資料。如欲查閱及更正個人資料，應向委員會秘書提出有關要求，其地址為香港北角渣華道 333 號北角政府合署 15 樓。

For Developments involving Columbarium Use, please also complete the following:
如發展涉及靈灰安置所用途，請另外填妥以下資料:

Ash interment capacity 骨灰安放容量@

Maximum number of sets of ashes that may be interred in the niches
在龕位內最多可安放骨灰的數量 _____

Maximum number of sets of ashes that may be interred other than in niches
在非龕位的範圍內最多可安放骨灰的數量 _____

Total number of niches 龕位總數 _____

Total number of single niches
單人龕位總數 _____

Number of single niches (sold and occupied)
單人龕位數目 (已售並佔用) _____

Number of single niches (sold but unoccupied)
單人龕位數目 (已售但未佔用) _____

Number of single niches (residual for sale)
單人龕位數目 (待售) _____

Total number of double niches
雙人龕位總數 _____

Number of double niches (sold and fully occupied)
雙人龕位數目 (已售並全部佔用) _____

Number of double niches (sold and partially occupied)
雙人龕位數目 (已售並部分佔用) _____

Number of double niches (sold but unoccupied)
雙人龕位數目 (已售但未佔用) _____

Number of double niches (residual for sale)
雙人龕位數目 (待售) _____

Total no. of niches other than single or double niches (please specify type)
除單人及雙人龕位外的其他龕位總數 (請列明類別)

_____

Number. of niches (sold and fully occupied)
龕位數目 (已售並全部佔用) _____

Number of niches (sold and partially occupied)
龕位數目 (已售並部分佔用) _____

Number of niches (sold but unoccupied)
龕位數目 (已售但未佔用) _____

Number of niches (residual for sale)
龕位數目 (待售) _____

Proposed operating hours 擬議營運時間 _____

_____

@ Ash interment capacity in relation to a columbarium means –
就靈灰安置所而言，骨灰安放容量指：
- the maximum number of containers of ashes that may be interred in each niche in the columbarium;
每個龕位內可安放的骨灰容器的最高數目;
- the maximum number of sets of ashes that may be interred other than in niches in any area in the columbarium; and
在該靈灰安置所並非龕位的範圍內，總共最多可安放多少份骨灰；以及
- the total number of sets of ashes that may be interred in the columbarium.
在該骨灰安置所內，總共最多可安放多少份骨灰。

Gist of Application 申請摘要

(Please provide details in both English and Chinese as far as possible. This part will be circulated to relevant consultees, uploaded to the Town Planning Board's Website for browsing and free downloading by the public and available at the Planning Enquiry Counters of the Planning Department for general information.)
(請盡量以英文及中文填寫。此部分將會發送予相關諮詢人士、上載至城市規劃委員會網頁供公眾免費瀏覽及下載及於規劃署規劃資料查詢處供一般參閱。)

Application No. 申請編號	(For Official Use Only) (請勿填寫此欄)

EXECUTIVE SUMMARY

- The applicant seeks planning permission from the Town Planning Board (the Board) under Section (S.) 16 of the Town Planning Ordinance (Cap. 131) to use *Tsing Yi Town Lots 14 and 15 and adjoining Government Land (GL) Tam Kon Shan Road, Tsing Yi, New Territories* (the Site) for '**Proposed Temporary Concrete Batching Plant (CBP) for a Period of 5 Years**' (the proposed development).

- The Site partly falls within an area zoned "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" ("OU(BMIU)"), area shown as 'Road' on the Approved Tsing Yi Outline Zoning Plan (OZP) No.: S/TY/32, and partly falls within area not covered by any statutory plan.

- The Site occupies an area of 4,335 m^2 (about), including 1,057 m^2 (about) of GL. A CBP with ancillary supporting facilities (with total gross floor area (GFA) of 1,463 m^2 (about) and building height of not exceeding 31 m) is proposed at the Site. The remaining area is reserved for vehicle parking, waiting and loading spaces and circulation area.

- The Site is accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road. The normal operation hours of the proposed CBP are 07:00 to 21:00 daily.

- Justifications for the proposed development are as follows:
  - *the proposed development meets the increasing demand of local ready-mixed concrete to support the development of various New Development Areas (NDAs);*
  - *the proposed development supports public housing developments and other public/private development and redevelopment projects;*
  - *the Site is highly accessible to various development areas via existing highway network;*
  - *the proposed development advances sustainable development through low-carbon strategies and innovative products;*
  - *the proposed development is not incompatible with surrounding land uses;*
  - *no significant adverse impact is anticipated from the proposed development; and*
  - *the proposed development is only on a temporary basis, approval of the application will not frustrate the long-term planning intention of the "OU(BMIU)" zone.*

- Details of development parameters are as follows:

Site Area	4,335 m^2 (about), including GL of 1,057 m^2 (about)
Covered Area	738 m^2 (about)
Uncovered Area	3,597 m^2 (about)
Plot Ratio (PR)	0.45 (about)
Site Coverage (SC)	23% (about)
Total GFA - *Domestic GFA* - *Non-Domestic GFA*	1,463 m^2 (about) *Not applicable* *1,463 m^2 (about)*
Building Height	Not exceeding 31 m

**Only area of the private lots (i.e. about 3,278 m^2) was adopted for the calculation of PR and SC*

行政摘要（*內文如與英文版本有任何差異，應以英文版本為準*）

- 申請人現根據《城市規劃條例》（第 131 章）第 16 條，向城市規劃委員會提交有關*新界青衣担桿山路青衣市地段第 14 號及第 15 號和毗連政府土地*（申請場地）的規劃申請，於上述地點作「**擬議臨時混凝土配料廠（為期 5 年）**」（擬議發展）。

- 申請地點所在的部分地區在《青衣分區計劃大綱核准圖編號 S/TY/32》上劃為「其他指定用途」註明「船廠及依靠海運之工業用途」地帶及顯示為「道路」，而部分地區則位於該規劃大綱圖涵蓋之範圍以外。

- 申請地盤面積為 4,335 平方米（約），包括 1,057 平方米（約）的政府土地。申請地點將設有混凝土配料廠及其他附屬設施，總樓面面積為 1,463 平方米（約），構築物高度不多於 31 米。申請地點的其餘地方將預留作車輛停泊、等候和上落貨位及流轉空間。

- 申請地點可從青衣北岸公路經担桿山路前往。擬議發展的作業時間為每日上午七時至下午九時。

- 擬議發展的申請理據如下：
  - *擬議發展可提升本地預拌混凝土的供應，以支持各新發展區的發展；*
  - *擬議發展支持公營房屋發展及其他公共／私人發展和重建項目；*
  - *申請場地與各發展區之間可透過快速公路網絡高效連接；*
  - *擬議發展可透過低碳及創新生產模式推進永續發展；*
  - *擬議發展與周邊地方的用途並非不協調；*
  - *擬議發展不會對周邊地區帶來重大負面影響；及*
  - *擬議發展只屬臨時性質，批出規劃許可不會影響「其他指定用途」註明「船廠及依靠海運之工業用途」地帶的長遠規劃意向。*

- 擬議發展的詳情發展參數如下：

申請場地面積：	4,335 平方米（約）， 包括 1,057 平方米（約）的政府土地
上蓋總面積：	738 平方米（約）
露天地方面積：	3,597 平方米（約）
地積比率：	0.45（約）
上蓋覆蓋率：	23%（約）
總樓面面積 *住用總樓面面積：* *非住用總樓面面積：*	1,463 平方米（約） *不適用* *1,463 平方米（約）*
構築物高度：	不多於 31 米

＊ 就地積比率及上蓋覆蓋率而言，有關計算只採納私人地段之土地面積(約 3,278 平方米)

1. INTRODUCTION

Background

1.1 **R-riches Planning Limited** has been commissioned by **Supreme Enterprises Limited** (the applicant) to make submission on their behalf to the Board under S.16 of the Ordinance in respect to *Tsing Yi Town Lots 14 and 15 and adjoining GL, Tam Kon Shan Road, Tsing Yi, New Territories* (**Plans 1** to **3**).

1.2 The applicant would like to use the Site for '**Proposed Temporary Concrete Batching Plant for a Period of 5 Years**'. The Site partly falls within an area zoned "OU(BMIU)" and an area shown as 'Road' on the Approved Tsing Yi OZP No.: S/TY/32, and partly falls outside the OZP planning scheme boundary (**Plan 2**). According to the Notes of the OZP, the applied use is a Column 2 use within the "OU(BMIU)" zone, which requires planning permission from the Board.

1.3 In support of the proposal, a set of indicative development plans and drawings are provided with the planning statement (**Plans 1** to **6**). Assessments and proposals (i.e. Barging Operation Plan, Traffic Impact Assessment (TIA), Environmental Assessment (EA), Drainage Impact Assessment (DIA) and Sewerage Impact Assessment (SIA) reports to mitigate potential adverse impacts are submitted for the consideration of relevant Government Bureaux/Departments and members of the Board (**Plans 1** to **6** and **Appendices I** to **VI**).

2. JUSTIFICATIONS

To meet the increasing demand of local ready-mixed concrete in order to support the development of various NDAs and Government developments

2.1 Ready-mixed concrete has always been one of the most commonly-used raw materials for construction projects in Hong Kong. With the planned development in San Tin Technopole (STT) and the continued developments in the Hung Shui Kiu and Ha Tsuen (HSK/HT) NDA, Kwu Tung North and Fanling North (KTN/FLN) NDA, Yuen Long South Development Area and Tung Chung New Town Extension (TCNTE) (East), it is foreseeable that the amount of construction works and the demand for ready-mixed concrete arising from planned development projects shall remain high. The proposed development is therefore expected to meet the ever-growing demand of local ready-mixed concrete induced by various infrastructural projects and residential developments in Hong Kong.

To support public housing developments and other public/private development/ redevelopment projects

2.2 With reference to the 2024 Policy Address, the supply of developable land from Government-led projects will reach about 3,000 ha in the next decade. The Government affirms that the total public housing supply units in the next 5 years will reach 189,000, which is about 80% more than the start of the current-term Government. Moreover, various public/private redevelopment projects in the urban area are being planned or already under implementation. It is envisaged that the demand for concrete supply will surge in both public and private development sectors. In view of this, the proposed development would play an important role in delivering steady housing supply in Hong Kong.

High accessibility to various development areas

2.3 In order to cope with various development projects across the New Territories, particularly in various NDAs and TCNTE(East), there is a substantive need to identify an appropriate site for setting up a CBP with convenient access to these areas. Having considered a number of factors, including land use compatibility, concrete demand locations, environmental/traffic impacts and accessibility for transportation of raw materials/products, the identified site of the current application is considered suitable to maintain a reliable supply of concrete in support of various development projects.

2.4 The Site is at a strategic location where there are convenient road networks connecting the Lantau Link and Stonecutter Bridge (via Route 8), as well as Ting Kau Bridge and Tai Lam Tunnel (via Route 3), which provides an expressway connection to most part of the territory. Besides, being located on marine frontage, the raw materials for concrete production can be delivered to the Site by sea, which help

reduce the potential burden on road traffic. As such, the proposed development ensures a steady and sustainable concrete supply and reduces cross-region logistics.

To advance sustainable development through low-carbon strategies and innovative products

2.5 A newly-designed and constructed CBP at the Site is capable of implementing low-carbon and innovative products and manufacturing processes. Relevant measures include but not limited to the exploration of the usage of electric mixers and new technologies for dust prevention and sound insulation. These initiatives could enhance the environmental, social and governance (ESG) performance and promote technological development of the construction materials industry.

Approval of the application would not frustrate the long-term planning intention of the "OU(BMIU)" zone

2.6 The Site partly falls within an area zoned "OU(BMIU)" and area shown as 'Road' on the Approved Tsing Yi OZP No.: S/TY/32, and the applied use is a Column 2 use within the "OU(BMIU)" zone. Hence, the proposed development is generally in line with the planning intention of the "OU(BMIU)" zone. The approval of the current application on a temporary basis of 5 years would not frustrate the long-term planning intention of the "OU(BMIU)" zone and would better utilise deserted land.

2.7 Several planning applications (Nos. A/TY/62, 91, 108 & 130) for the same applied use within the same "OU(BMIU)" zone have previously been approved by the Metro Planning Committee (MPC)/the Board on review. Hence, the approval of the current application would not set an undesirable precedent for the "OU(BMIU)" zone.

Enhance marine safety on the mooring and delivery of raw materials arrangement

2.8 The Site was the subject of a pervious S.16 planning application (No. A/TY/134) for the same applied use for a temporary basis of 5 years submitted by the same applicant. However, the application was rejected by the Metro Planning Committee and the Board on 16/3/2018 and 26/10/2018 respectively mainly on the ground that the applicant failed to demonstrate that the barging operation by using slipway for the proposed concrete batching plant will not have adverse impact on marine safety and the shipyards nearby.

2.9 Comparison table showing the development details of the previous application and the current application are shown at **Table 1** below and **Appendix I**:

Table 1 – Development parameters of the previous and current applications

Development Parameters	Previous Application No. A/TY/134	Current Application
Site Area	4,266 m^2 (about), Incl. 988 m^2 of GL (about)	4,335 m^2 (about), Incl. 1,057 m^2 of GL (about)
Covered Area	780 m^2 (about)	738 m^2 (about)
Plot Ratio	0.24 (about)	0.45 (about)*
Site Coverage	18.3% (about)	23% (about)*
Gross Floor Area - ***Domestic*** - ***Non-Domestic***	1,026 m^2 (about) *N/A* *1,026 m^2 (about)*	1,463 m^2 (about) *N/A* *1,463 m^2 (about)*
Building Height	25 m	Not exceeding 31 m
Mooring Arrangement	Using the existing slipway to pull the barge onto the cradle	Mooring and anchoring

**Only area of the private lots (i.e. about 3,278 m^2) was adopted for the calculation of PR and SC*

2.10 When comparing with the previous S.16 planning application (No. A/TY/134), the current application involves of similar site area and covered area, while the GFA and building height are slightly increased to meet the operational need and enhance the overall efficiency of the proposed development.

2.11 Since the Site has direct marine frontage, raw materials for concrete production will be delivered by marine traffic. The current application will adopt a dual approach for unloading of raw materials, i.e. mooring ropes plus anchoring to ensure vessel for delivering raw materials would remain stable and correctly align during the unloading of cement and aggregate operations. This arrangement provides lateral and longitudinal balance, minimizing the barge's movement due to tidal currents or wave action. The mooring ropes ensure a firm connection to the shore infrastructure, while the anchors contribute additional stability, keeping the barge properly aligned for efficient cement pumping operations. The technical details and 3D diagrams illustrating the mooring and unloading of aggregate and cement arrangement are provided at the Barging Operation Plan (**Appendix II**).

2.12 Therefore, the delivery of raw materials arrangement proposed under the current application has overcome the marine safety concern of the previous application and that has proven to be safe, feasible, and practicable. This ensures that the proposed development will not have adverse impact on nearby shipyards and marine traffic.

Furthermore, the CBP operators are dedicated to maintaining the highest safety standards, treating safety and health as essential components of their operations, and minimising potential hazards to the greatest extent possible.

Not incompatible with surrounding land uses

2.13 The Site situates in a relatively remote area, which is far away from residential developments and other sensitive uses. The surrounding area of the Site is considered to be predominately industrial-oriented, with a wide range of industrial activities including boatyards, ship-repairing yards, recycling centre, workshops, metalware shops, CBPs, cement silos, cement plants, material storage, berthing of industrial barges etc. The proposed development is considered not incompatible with surrounding land uses.

No adverse impacts to the surrounding area

2.14 The Site is located at the Tsing Yi North Coast, which is away from sensitive receivers. Geographically, the vegetated slope to the south of the Site and Tsing Yi Northeast Park to the east of the Site well-serve as buffers to ease off any potential environmental impacts and disturbances to the nearest residential areas i.e. Cheung Wang Estate and Cheung On Estate, which are both about 450 m from the Site.

2.15 No adverse environmental impacts will be anticipated. Technical assessments on environmental, traffic, marine, infrastructural and site drainage/sewerage impacts have been conducted by the applicant to ascertain the technical feasibility of the proposed development. Upon obtaining the planning permission from the Board, the applicant will make effort in complying with approval conditions in relation to various aspects as required by relevant Government departments, so as to minimise any potential adverse impacts that would have arisen from the proposed development.

3. SITE CONTEXT

Site Location

3.1 The Site abuts Tam Kon Shan Road. It is approximately 1.7 km west of Tsing Yi MTR Station; approximately 24 km south of San Tin Technopole; approximately 26 km southwest of HSK/HT NDA; approximately 32 km south of KTN/ FLN NDA; and approximately 21 km east of TCNTE(East).

Accessibility

3.2 The Site is accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road (**Plan 1**).

Existing Site Condition

3.3 The Site is currently fenced, partly vacant and occupied by vacant structures. There is a pre-existing jetty to support the operation of the Site (**Plans 1**, **3** and **4**).

Surrounding Area

3.4 The Site is predominantly for industrial use and is mainly surrounded by some industrial-related activities, boatyards, metalware shops, cement silos and CBPs (**Plans 1**, **3** and **4**).

3.5 To its immediate north is the sea frontage of Rambler Channel.

3.6 To its east and west along Tam Kon Shan Road are mainly boatyards. To its further east are public vehicle parks, a recycling centre and Tsing Yi Northeast Park.

3.7 To the western end of Tam Kon Shan Road is the site of an approved proposed temporary CBP (Nos. A/TY/108 and 130). To its further west is an existing cement loading and storage area and 2 CBPs within the "OU(Cement Plant)" zone.

3.8 To the south across Tam Kon Shan Road is currently occupied by a temporary vehicle park and the site of an approved application for Portable Emission Measurement System Laboratory (No. A/TY/125).

3.9 The nearest residential development i.e. Cheung On Estate (about 450 m to the east of the Site) is separated from the Site by Tsing Yi Northeast Park.

4. PLANNING CONTEXT

Zoning of the Site

4.1 The Site partly falls within an area zoned "OU(BMIU)" (51%; about 2,213 m^2) and an area shown as 'Road' (1%; about 29 m^2) on the Approved Tsing Yi OZP No.: S/TY/32, and partly falls outside the OZP planning scheme boundary (48%; about 2,093 m^2) (**Plan 2**). According to the Notes of the OZP, the applied use is a Column 2 use within the "OU(BMIU)" zone, which requires planning permission from the Board.

Planning Intention

4.2 The planning intention of the "OU(BMIU)" zone is *intended for boatyard and marine-oriented industrial uses.*

Previous Applications

4.3 The Site was subject of 2 previous applications for '*CBP*' use (Nos. A/TY/127 and 134) in 2015 and 2018 respectively. Both applications were rejected by the MPC/the Board on review on traffic management and marine safety grounds.

4.4 In support of the current application, the applicant has provided relevant impact assessments to prove the feasibility of the proposed CBP (**Appendices III** to **VII**).

Similar Applications

4.5 There are 4 similar applications (Nos. A/TY/62, 91, 108 & 130) for the same applied use within the same "OU(BMIU)" zone, which were approved by MPC/the Board on review between 2001 and 2016 each on a temporary basis for a period of 5 years.

Land Status of the Site

4.6 The applicant is the current land owner of the private lots portion of the Site. The Site consists of 2 private lots with private land area of 3,278 m^2 (about) of New Grant Lot i.e. Tsing Yi Town Lots 14 and 15. Apart from the above private lots, the Site also consists of 1,057 m^2 of GL (**Plan 3**). The ownership details are shown at **Table 2** below:

Table 2 – Land Ownership of the Private Lots of the Site

Private Lots Nos.		**Ownership**
1	Tsing Yi Town Lot 14	Supreme Enterprises Limited (the applicant)
2	Tsing Yi Town Lot 15	

4.7 A portion of the GL of the Site (about 988 m^2) has been let under Short Term Tenancy

(STT) No. 538 K&T for open storage use since 1983. The applicant will apply to the Lands Department (LandsD) for a temporary waiver in respect of Tsing Yi Town Lots 14 and 15, and a modification of STT No. 538 K&T with the addition of vehicular access via the GL as a non-exclusive right of way to the tenancy area. No structure is proposed for domestic use.

5. DEVELOPMENT PROPOSAL

Development Details

5.1 The Site consists of an area of 4,335 m^2 (about), including GL of 1,057 m^2 (about). Details of development parameters are shown at **Table 3** below.

Table 3 - Development Parameters

Site Area	4,335 m^2 (about), including GL of 1,057 m^2 (about)
Covered Area	738 m^2 (about)
Uncovered Area	3,597 m^2 (about)
Plot Ratio (PR)	0.45 (about)
Site Coverage (SC)	23% (about)
Total GFA - *Domestic GFA* - *Non-Domestic GFA*	1,463 m^2 (about) *Not applicable* *1,463 m^2 (about)*
Building Height	Not exceeding 31 m

Operation Mode

5.2 The proposed CBP consists of 3 production lines, each with a design production capacity of about 100 m^3/hr. The operation hours of the proposed development are from 07:00 to 21:00 daily, including public holiday. The maximum design concrete production is approximately 4,200 m^3 per day. The proposed CBP comprises aggregate storage and cementitious materials soils with total capacity of 5,200 tonnes (about) and other ancillary supporting facilities with total GFA of 1,463 m^2 (about), and a maximum building height of not exceeding 31 m (about) (**Plans 5** and **6**). The operation details of the proposed development are shown at **Appendix I** and **Table 4** below:

Table 4 – Operation Details of the Proposed Development

Operation Parameters	Details
Hourly Processing Capacity	300 m^3/hour
Total Aggregate Storage Capacity	3,000 tonnes
Total Cementitious Materials Silos Capacity	2,200 tonnes
Operation Period	14 hours, 07:00 to 21:00

5.3 Given there is direct marine frontage at the Site, raw materials for concrete production will be delivered by marine traffic, whilst concrete products will be delivered by heavy goods vehicle (HGV). The details of the unloading of raw materials activities are

illustrated at the Barging Operation Plan (**Appendix II**).

5.4 It is estimated that the Site would accommodate about 15 on-site staff. The main source of visitors will be drivers who deliver concrete products from the Site. Outside visitor is not anticipated.

No Adverse Traffic Impact

5.5 The Site is accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road (**Plan 1**). A 7.3 m-wide (about) ingress/egress is proposed at the southern part of the Site. A total of 19 parking, waiting and loading spaces will be provided (**Plan 5**). Details of the provision are shown at **Table 5** below:

Table 5 - Provision of Parking, Waiting and Loading Spaces

Type of Parking Spaces	**No. of Space**
Parking Spaces for Private Cars - *2.5 m (W) x 5 m (L)*	2
Parking Spaces for Motorcycles - *1 m (W) x 2.4 m (L)*	2
Type of Waiting Spaces	
Waiting Spaces for HGVs - *11 m (W) x 3.5 m (L)*	12
Type of Loading Spaces	
Loading Spaces for HGVs - *11 m (W) x 3.5 m (L)*	3

5.6 A TIA has been conducted to assess the potential traffic impacts induced by the proposed CBP on nearby road networks during construction and operational stages (**Appendix III**). The assessment result has indicated that all key junctions and road links perform satisfactorily during peak hours in the assessment year of 2029. The TIA has concluded that no adverse traffic impact arising from the proposed CBP is anticipated.

No Adverse Marine Safety Impact

5.7 Raw materials for concrete production will be delivered to the Site from the marine frontage to the north of the Site via self-propelled barges from Mainland China. It is expected that there would be a maximum of 3 round trips per day, including 1 for cement delivery and 2 for aggregates delivery. Maintenance dredging would be carried out to restore adequate water depth at the barging point.

5.8 The Barging Operation Plan has concluded that the marine logistics operations for the proposed CBP are designed to ensure safe and efficient functionality (**Appendix II**). The BOP has incorporated robust marine traffic arrangements, impact assessments,

and implementation of mitigation measures. The survey data has also indicated that the induced marine traffic impact is negligible. Provided that the proposed measures outlined in the BOP be implemented effectively, any marine risk poses by the operation of the proposed CBP can be mitigated to an acceptable level. As such, no adverse marine safety impact from the proposed CBP is envisaged.

No Adverse Environmental Impact

5.9 An EA covering assessments on air quality, noise, water quality, waste management and land contamination has been conducted to assess the potential environmental impacts induced by the proposed CBP during construction and operational stages (**Appendix IV**). With the proper implementation of mitigation and control measures, the assessment result has indicated that no adverse environmental impact from the proposed CBP is anticipated.

No Adverse Drainage Impact

5.10 A DIA report has been conducted to review the drainage arrangements for the proposed concrete batching plant (**Appendix V**). The potential increase in surface runoff generated by the proposed concrete batching plant is estimated to be minimal. A series of perimeter surface drains with catchpits are proposed to collect the cumulative runoff, which will finally connect to the proposed discharge point at Government stormwater manhole No. SWD4023664 to the south of the Site via a stormwater drainage pipe. The results of the DIA report have concluded that no adverse drainage impact is envisaged.

No Adverse Sewerage Impact

5.11 A SIA report has been conducted to review the sewerage arrangements for the proposed CBP (**Appendix VI**). The capacity of the sewerage system has been evaluated while the sewage from the Site would be discharged to the Government foul water manholes Nos. FMH4052191 and FMH4019395 to the south of the Site via the proposed underground drainpipes. The results of the SIA report have concluded that no adverse sewerage impact will be incurred by the proposed CBP.

Fire Safety Aspect

5.12 Upon obtaining relevant planning permission from the Board, the applicant will submit a fire service installations (FSI) proposal for the consideration of the Director of Fire Services to enhance fire safety of the Site.

5.13 Upon receiving the temporary waiver from LandsD as mentioned in Section 4.7 above and relevant approval from the Building Authority, the applicant will implement the accepted FSI proposal at the Site.

6. CONCLUSION

6.1 The current application serves to seek planning permission to operate a CBP in Tam Kon Shan Road, Tsing Yi on a temporary basis for a period of 5 years. The proposed development meets the increasing demand for ready-mixed concrete and supports public/private development and redevelopment projects in the territory. The Site is also easily accessible to various development areas where the reliable supply of concrete can be guaranteed and cross-district traffic for concrete delivery can be reduced. Having considered a number of factors, including land use compatibility, concrete demand locations, marine safety, environmental and traffic impacts and accessibility for transportation of raw materials and concrete products, the Site is considered suitable for the proposed development. The special nature of the application in support of the development in Hong Kong should be considered on its individual merit.

6.2 Being mostly located within an area zoned "OU(BMIU) on the OZP, the proposed development is generally in line with the planning intention of the "OU(BMIU) zone, which is intended primarily for boatyard and marine-oriented industrial uses. Hence, approval of the application on a temporary basis would not frustrate the long-term planning intention of the "OU(BMIU)" zone.

6.3 Moreover, similar approvals for the same applied use have been approved by the MPC/the Board on review within the same "OU(BMIU)" zone on the OZP. Approval of the current application would not set an undesirable precedent within the "OU(BMIU)" zone. Comparing the current application to the previously rejected S.16 planning application (No. A/TY/134), the overall operation and the unloading of raw materials arrangement by marine traffic have overcome the marine safety concern of the previous application, demonstrating that it is safe, feasible, and feasible.

6.4 The proposed development is situated in an area predominated by industrial-related activities, boatyards, ship repairing yards, metalware shops and CBPs, and is closely connected to various development areas via nearby road networks. The proposed development is considered not incompatible with the surrounding areas. Furthermore, the proposed development will not create significant nuisance to the surrounding areas. Technical assessments have been conducted and the results have demonstrated that adverse marine safety, traffic, environmental, drainage and sewerage impacts arising from the proposed development are not anticipated.

6.5 In view of the above, the Board is hereby respectfully recommended to approve the subject application for '**Proposed Temporary Concrete Batching Plant for a Period of 5 Years**'.

1 Introduction

1.1 Background

The Applicant seeks approval under Section 16 of the Town Planning Ordinance (Cap. 131) to establish a Temporary Concrete Batching Plant (CBP) for a period of 5 years at Tsing Yi Town Lot Nos. 14 and 15 and adjoining Government Land (GL) along Tam Kon Shan Road, Tsing Yi, New Territories (the Site). The application site occupied an area of 4,335 m. sq, including 1,057 m. sq (about) of G.L., and partially falls within an area zoned “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) under the Approved Tsing Yi Outline Zoning Plan (OZP) No. S/TY/32 and partly outside the OZP boundary.

The CBP aims to address the increasing demand for ready-mixed concrete driven by infrastructure projects and residential developments in Hong Kong, particularly in the New Development Areas (NDAs) of the Northern Metropolis. The Site’s strategic location near established industrial activities and marine facilities ensures compatibility with surrounding land uses and supports the sustainable development of the construction industry.

AXON Consultancy Limited has been commissioned to prepare a Barging Operation Plan (BOP) to support the Section 16 application by ensuring safe, efficient, and environmentally compliant marine logistics for the proposed development.

1.2 Scope of Work

This Barging Operation Plan (BOP) outlines the operational framework for the proposed CBP, focusing on marine logistics and ensuring compliance with environmental, safety, and operational standards. Key components include:

- Marine Logistics Assessment: Evaluation of marine traffic patterns, metocean conditions, and potential impacts.
- Operational Planning: Development of frameworks for safe and efficient barge delivery, mooring, and unloading operations.
- Risk Mitigation Measures: Identification of risks and proposal of mitigation strategies to comply with safety and environmental standards.

- Emergency and Contingency Planning: Establishment of protocols for adverse weather conditions and emergency scenarios.

1.3 Objective

The primary objectives of this study are:

- To ensure the safe and efficient handling of CBP unloading and marine delivery operations while minimizing disruption to adjacent marine traffic and activities.
- To identify and address potential marine operational risks through comprehensive mitigation strategies.
- To demonstrate the Applicant's commitment to safety, environmental compliance, and responsible management of marine operations, ensuring the highest standards of operation.

2 Project Overview

2.1 Site Location and Characteristics

The proposed Temporary Concrete Batching Plant (CBP) is strategically located at Tsing Yi Town Lot (TYTL) Nos. 14 and 15, together with an adjoining parcel of Government Land held under Short Term Tenancy (STT), situated along Tam Kon Shan Road in the New Territories. The site occupies an area of approximately 4,335 square metres and benefits from direct marine frontage, offering a practical setting for barge-based material delivery and handling.

The red dotted line shown in the figure represents the boundary of the land currently leased by the applicant. To facilitate safe barge approach, berthing, and unloading of aggregates and cement, a proposed marine operation area has been identified in the waters beyond the land lot. This area is outlined in blue dotted line in Figure 2.1 and reflects the required space to accommodate the Pelican Aggregate Barge and the Cement Barge during routine delivery and unloading.

As land matters fall under the purview of the Development Bureau and the Lands Department (LandsD), the applicant is coordinating with its appointed lands consultant to review and follow up on any administrative arrangements necessary to support the proposed marine activity area. Ongoing engagement with relevant authorities will ensure alignment with lease conditions and prevailing statutory requirements.

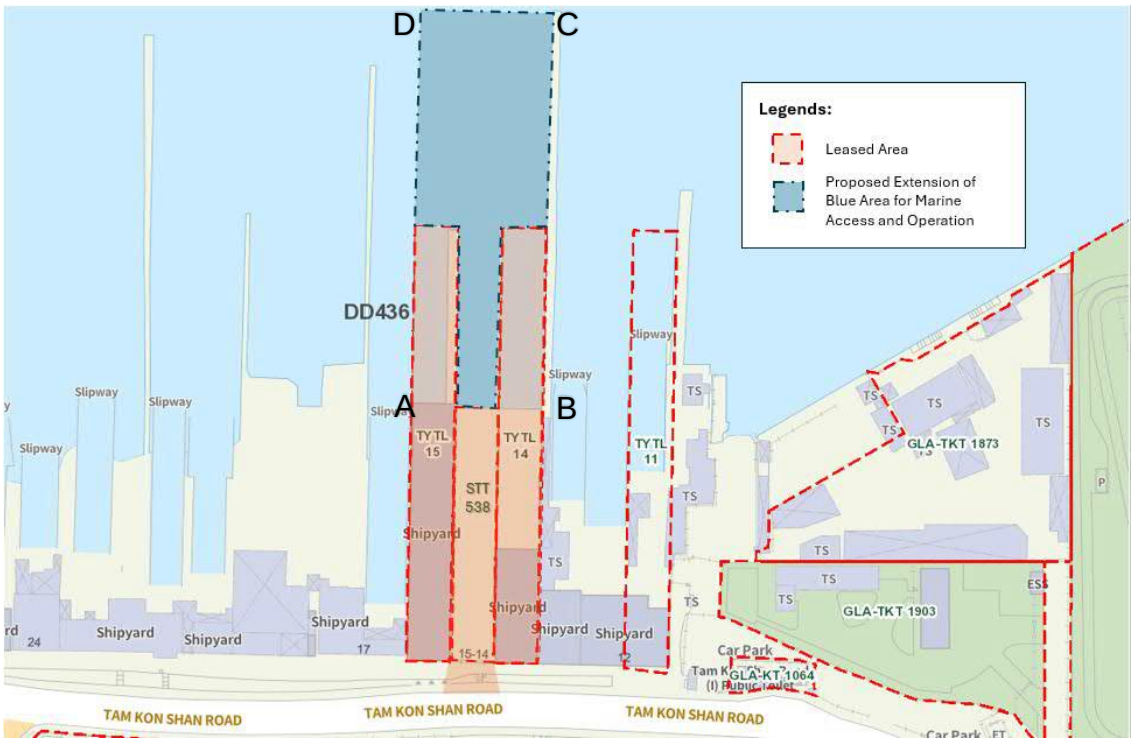
Figure 2.1 illustrates the site location, the extent of the existing lease area (covering TYTL No. 14, TYTL No. 15, and the STT area), as well as the proposed marine operation zone, which is defined within the polygon bounded by Points A, B, C, and D, as listed in **Table 2.1.**

.

Table 2.1 Operation Area

Point No.	Latitude	Longitude
A	22º 21.7077’	114º 5.7155’
B	22º 21.7069’	114º 5.7371’
C	22º 21.7604’	114º 5.7387’
D	22º 21.7619’	114º 5.7163’

Figure 2.1 Site Location and Proposed Operational Boundary



2.2 Description of the Proposed CBP

The proposed CBP will operate for five years, offering a sustainable and efficient solution to meet the demand for concrete in Hong Kong’s ongoing infrastructure development.

The construction phase of the proposed concrete batching plant is projected to require approximately 9 to 12 months. During this period, no marine deliveries of construction materials are anticipated.

Full-scale operations are scheduled to commence by Q1 2026, following the completion of construction and the necessary regulatory approvals.

The CBP will have three batching lines, each with a capacity of 100 m^3 per hour, allowing for a maximum daily output of 3,800 m^3 of concrete under normal operating conditions. The normal operating hours will be from 07:00 to 21:00.

Minimal night-time operations may be undertaken between 21:00 and 07:00, particularly for public interest or to accommodate specific project needs. During night operations, batching capacity will be limited to 100 m^3 per hour, ensuring reduced activity levels to minimize potential disruptions

The concrete batching process at the CBP will consist of the following stages:

- **Delivery of Raw Materials**: Aggregates and cement will be transported to the site using self-propelled barges, which are readily available in the market and suitable for the project's operational needs. Limited quantities of raw materials may also be delivered to the site by trucks.
- **Conveyance to the Plant:** Raw materials will be efficiently transferred from barges to the batching plant using pipelines or conveyor systems.
- **Weighing and Mixing**: The materials will undergo precise weighing and controlled mixing to produce high-quality concrete in compliance with industry standards.
- **Distribution:** Batched concrete will be loaded onto mixer trucks for delivery to construction sites.

The site's strategic location ensures direct marine accessibility, enabling delivery operations while reducing cross-district road traffic and its associated environmental impacts.

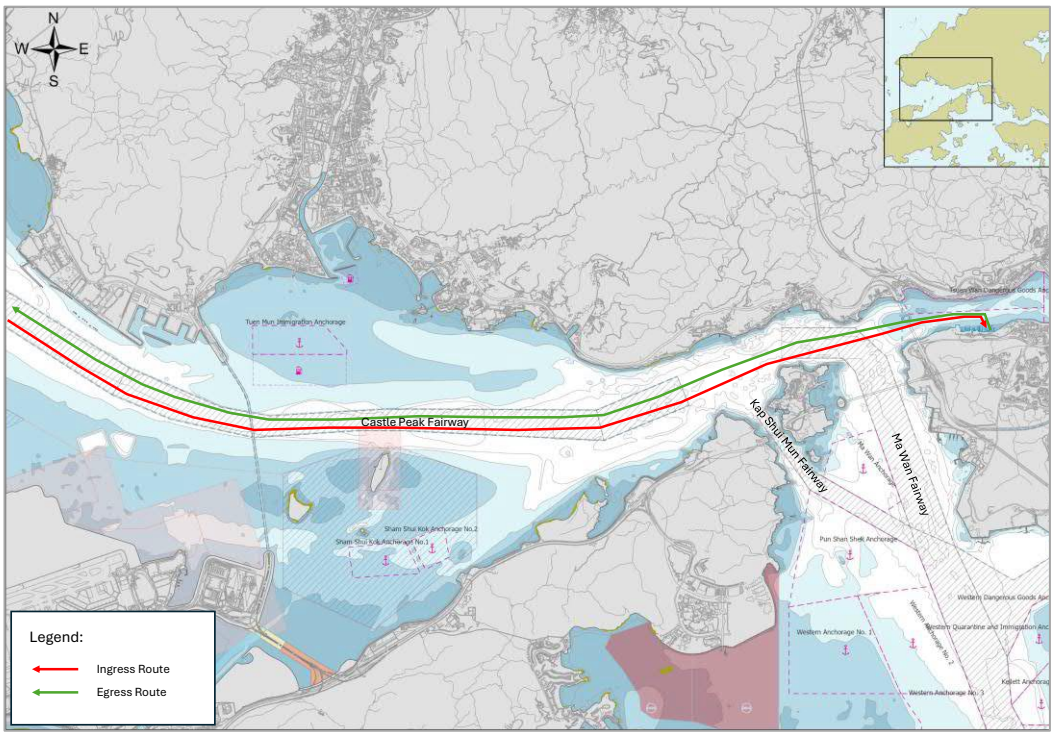
3 Delivery and Routing

3.1 Barge Delivery Route

The raw materials required for concrete batching, including aggregates and cement, will be transported using self-propelled rivertrade vessels. These vessels will follow established marine routes within Hong Kong waters to ensure safe and efficient transit.

The delivery routes, utilizing Castle Peak Fairway and Ma Wan Fairway, have been carefully selected to comply with Hong Kong maritime safety regulations and minimize navigational risks. The proposed delivery routes are illustrated in Figure 3.1.

Figure 3.1 Proposed Delivery Routes



3.2 General Navigational Guideline

The route planning for the proposed barge operations adheres to the International Regulations for Preventing Collisions at Sea (COLREGs) and Hong Kong Marine Department regulations.

Key guidelines include:

- Navigating along the starboard side of the fairway to maintain orderly traffic flow.
- Following COLREGs for overtaking, including appropriate signaling and maintaining safe distances.
- Making fairway crossings at right angles to minimize disruption and collision risk.
- Prohibiting anchoring and fishing within designated fairway limits to avoid navigational hazards.
- Prioritizing larger vessels, with smaller vessels required to avoid impeding their passage.

3.3 Delivery Frequency

A maximum of 3 round-trip barge movements per day will be scheduled at North Tsing Yi to deliver both aggregates and cement via self-propelled barges from the mainland. This includes three inbound trips (*one for cement and two for aggregates using the Pelican Aggregate Barge*) and three corresponding outbound trips. The delivery frequency has been carefully planned to optimize operational efficiency while minimizing potential impacts. Adjustments to the schedule may be made as needed to accommodate project demands, weather conditions, or other operational factors, ensuring flexibility and consistency in the delivery process.

3.4 Deployed Vessels and Unloading Process

The delivery operations will utilize two existing self-propelled barges designed to meet project demands and adhere to environmental and safety standards. Their key specifications and unloading processes are summarized in Table 3.1.

Table 3.1 Typical Specification of Deployed Vessels

Vessel Type	Length Overall (LOA)	Beam	Draft (Fully Loaded)	Capacity per Trip	Special Features
Pelican Aggregate Barge	50 m	15.2 m	3.4 m	1,500 tonnes	Self-propelled
Cement Barge	52 m	10.5 m	2.4 m	800 tonnes	Self-propelled

Pelican Aggregate Barge: Featuring a 1500-ton class stone aggregate belt self-discharging design, this vessel utilizes a built-in conveyor system to transfer aggregates directly to the batching plant's hopper on the quay. Its fully enclosed structure minimizes dust emissions and ensures environmental compliance. Operating at an unloading rate of 400 tons per hour, the vessel can fully unload in just 4 hours. Additionally, the vessel measures 50 meters in length and 15.2 meters in width, has a full-load draft of 3.4 meters, and is equipped with a 22-meter-long belt, ensuring efficient and precise aggregate handling.

Cement Barge: Featuring a self-discharging pumping system with portable pipelines to transfer cement directly to the batching plant silos, this controlled system effectively prevents spillage while ensuring efficient operations. With an unloading rate of 200 tons per hour, the entire load is discharged in just 4 hours. The 800-ton cement ship measures 52 meters in length, 10.5 meters in width, and has a full-load draft of 2.4 meters.

3.5 Delivery of Product

The proposed concrete batching plant is designed to produce high-quality ready-mix concrete that is delivered exclusively by concrete mixing trucks. In this system, once the concrete is batched at the plant, it is loaded into mixer trucks and transported via the road network directly to the construction sites.

This truck-based delivery system eliminates the need for any marine or barge delivery, streamlining logistics and reducing potential risks associated with marine transport. The approach also offers greater scheduling flexibility and ensures that the concrete maintains its integrity from the batching plant to its final placement.

4 Dredging Requirements

4.1 Existing Situation

At the application site, sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe batching operations. To remedy this, maintenance dredging is necessary to remove the accumulated sediment and restore adequate water depth for vessel navigation.

4.2 Water Depth Requirement

According to the Table 3.1, to cater for the maximum draft of the pelican barge with a draft of 3.4m, a typical safe navigation requirement is to have an under-keel clearance of at least 10% of the draft. In this case, 10% of 3.4 m is approximately 0.34 m, so the minimum water depth required would be about 3.4 m + 0.34 m, roughly 3.74 m.

However, in practice, to accommodate tidal variations and provide a safety margin, a water depth of around 3.8 m (at Chart Datum) is generally maintained for operations involving a Pelican Aggregate Barge. This ensures that even under varying conditions, there is adequate clearance for safe navigation.

4.3 Extent of Dredging

The targeted dredging area is shown in Figure A1. Preliminary estimates suggest that approximately 3,000 – 5,000 square meters of the seabed would need to be dredged, subject to further detailed analysis.

Under the EIAO, a project qualifies as a designated project requiring a full Environmental Impact Assessment if the dredging volume exceeds 500,000 m^3. In this case, the proposed maintenance dredging operation involves less than 5,000 m^3, which is significantly below the threshold and thus considered insignificant. Consequently, it does not trigger the designated project requirements under the EIAO, although all other regulatory and administrative procedures must still be followed to ensure safe navigation and proper environmental management.

4.4 Dredging Administration

All administrative works related to the dredging operation will be carried out in strict compliance with the Project Administration Handbook for Civil Engineering Works, 2024 Edition. This means that every aspect, from the initial justification for dredging, sediment sampling and testing, through to the permit application and disposal procedures, will adhere to the detailed guidelines and requirements stipulated in Chapter 4 of the handbook. This ensures that all regulatory, environmental, and technical criteria are met during the dredging process.

For instance, the handbook outlines the proper procedures for submitting a Sediment Sampling and Testing Plan, preparing a Preliminary Sediment Quality Report (PSQR), and obtaining the necessary dumping permits under the Foreshore and Seabed (Reclamation) Ordinance. By following these established procedures, the project will maintain full accountability and control over the dredged materials, ensuring both safety and environmental compliance throughout the dredging and disposal phases.

Director of Environmental Protection (DEP) may waive the sediment sampling and testing requirements in specific circumstances to expedite critical dredging operations. This waiver applies in cases of emergency dredging when immediate action is needed to avert safety risks or environmental hazards, and for small-scale maintenance dredging projects involving volumes of less than 5,000 m^3 in situ. In such cases, the project proponent must submit any previously obtained data or historical information regarding the sediment quality in the vicinity, allowing DEP to assess the situation and determine the most appropriate handling arrangements without necessitating a full sampling and testing program.

4.5 Conclusion

The client will proceed with a maintenance dredge to restore the necessary water depth for safe navigation. The client is committed to following the administrative procedures outlined in the Project Administration Handbook for Civil Engineering Works, 2024 Edition, including the proper application for a dredging permit and compliance with all regulatory requirements for sediment disposal.

5 Mooring Stability

5.1 Introduction

Mooring stability is critical for both the Pelican Aggregate Barge and the Cement Barge to ensure safe and efficient delivery operations.

For the aggregate barge, stable mooring guarantees that the vessel remains securely in position during loading and unloading, preventing spillage and collisions while accommodating tidal fluctuations and currents.

Similarly, the cement barge requires a stable mooring arrangement to maintain precise alignment with the discharge point, thereby avoiding disruptions during cement transfer and ensuring that operations proceed without unintended material loss.

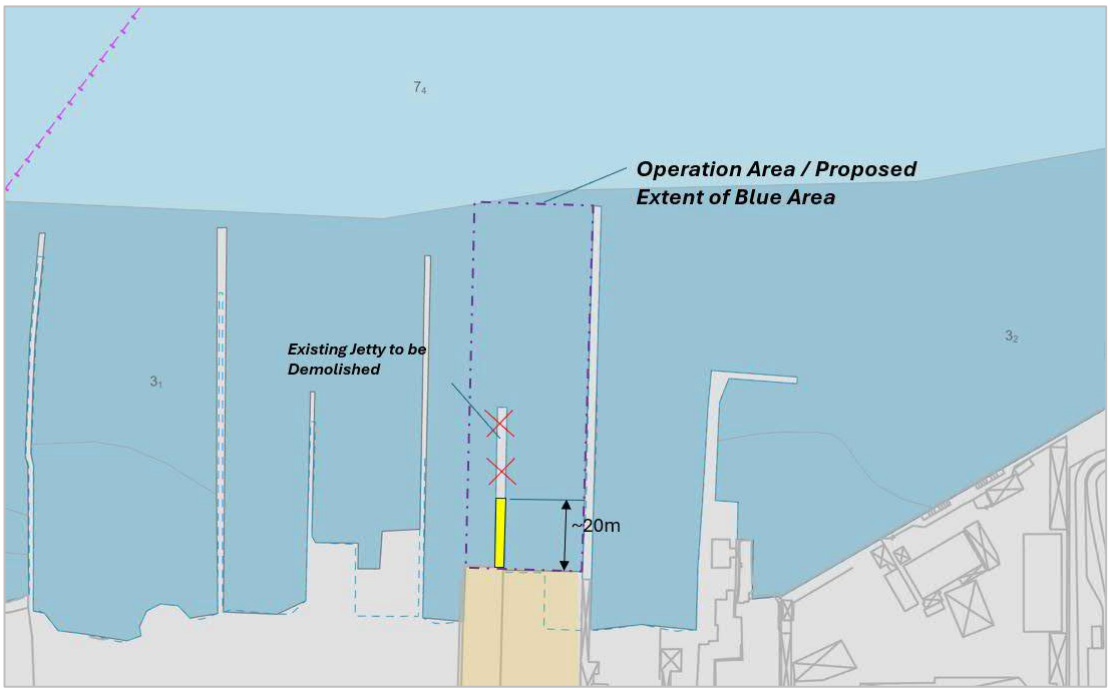
In both cases, effective mooring stability not only supports operational safety and efficiency but also minimizes environmental risks and interference with adjacent marine traffic.

5.2 Safety and Stability Improvement

The safety platform is part of the overall improvement measures (Figure 5.1). With this approach, and in combination with the planned dredging operations, vessels will be able to approach closer to the quay.

This proximity allows for a better arrangement of the new fenders, bollards, and anchoring systems, thereby enhancing the mooring facilities and ensuring increased stability for both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations.

Figure 5.1 Proposed Improvement of Safety Platform

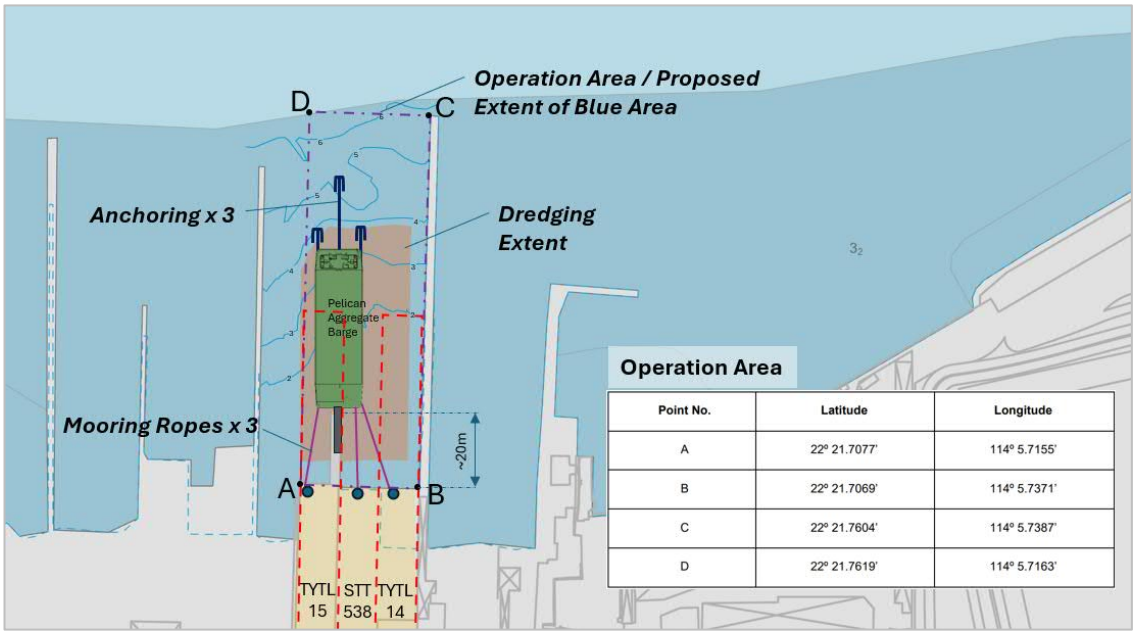


5.3 Mooring Arrangements

Pelican Aggregate Barge

As shown in Figure 5.2, the Pelican Aggregate Barge will positioned approximately 20 meters off the quay, secured by an anchor and two mooring ropes at the bow and three anchor lines at stern. This dual approach, mooring ropes plus anchoring, ensures the vessel remains stable and correctly aligned during aggregate loading and unloading. The anchors provide lateral and longitudinal restraint against tidal currents, while the mooring ropes maintain a firm connection to the quay. Combined, these measures minimize vessel movement and protect both the barge and the safety platform infrastructure throughout operations.

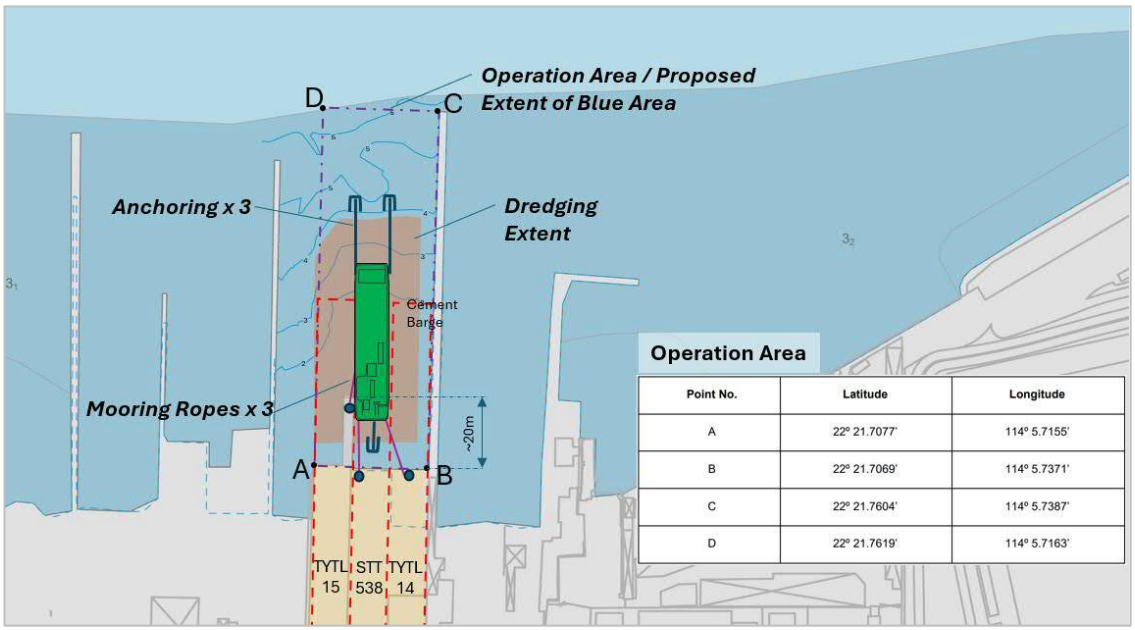
Figure 5.2 Mooring Arrangement of Pelican Aggregate Barge



Cement Barge

As shown in Figure 5.3, the Cement Barge will be stationed approximately 15 meters from the quay, with at least 5 meters of the safety platform stabilizing its starboard side. It is secured by three mooring ropes attached to both the safety platform and the quay, plus a single bow anchor and two stern anchors. This arrangement provides lateral and longitudinal balance, minimizing the barge's movement due to tidal currents or wave action. The mooring ropes ensure a firm connection to the shore infrastructure, while the forward and stern anchors contribute additional stability, keeping the barge properly aligned for efficient cement pumping operations.

Figure 5.3 Mooring Arrangement of Cement Barge

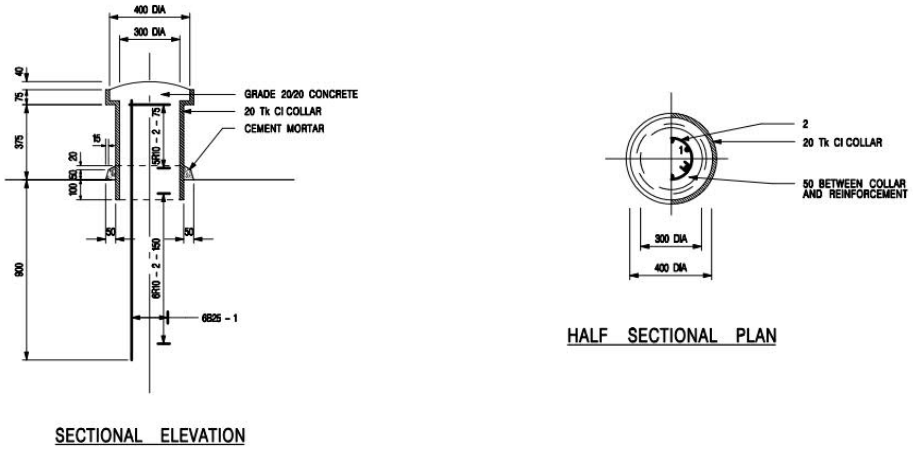


5.4 Mooring Facilities

New fenders and mooring bollards (*typical design as shown in* Figure 5.4) will be installed on the quay and safety platform to provide robust mooring facilities. These installations are essential for securing both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations, ensuring that the vessels remain stable and correctly aligned.

By enhancing the mooring infrastructure, the risk of vessel movement due to tidal fluctuations or currents is significantly reduced, thereby protecting both the marine equipment and the quay/safety platform structures while facilitating safe and efficient marine operations.

Figure 5.4 Typical Arrangements of Mooring Bollard



Source: CEDD Standard Drawing No. C3015B

5.5 Anchoring

In addition to installing new fenders and bollards on the quay and safety platform to secure the vessels, anchoring will also be employed as an extra measure to enhance stability. This anchoring system will work in tandem with the improved mooring infrastructure to firmly secure both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations.

By providing additional resistance against tidal fluctuations and adverse weather conditions, anchoring helps to prevent unwanted vessel movement, ensuring safe alignment and reducing the risk of operational hazards such as spillage or collision.

5.6 Conclusion

In conclusion, the enhanced mooring system, comprising new fenders, bollards, anchoring, and updated rope arrangements, combined with maintenance dredging, offers significant benefits. The maintenance dredging will restore adequate water depth, allowing vessels to approach the quay more closely and securely. This proximity facilitates improved mooring arrangements that stabilize both the Pelican Aggregate Barge and the Cement Barge, ensuring precise alignment and safe loading/unloading operations. Together, these measures not only boost operational efficiency and safety but also help to protect both the vessels and the surrounding infrastructure from the effects of tidal currents and environmental disturbances.

6 Unloading

6.1 General

The unloading operations at the site are designed to support the temporary concrete batching plant's efficient and safe delivery of materials. The Pelican Aggregate Barge and the Cement Barge unload aggregate and cement respectively via specialized transfer mechanisms at the safety platform. This process is optimized to ensure rapid material transfer, maintain environmental compliance, and minimize disruption to surrounding marine traffic, thereby supporting seamless construction operations.

6.2 Pelican Aggregate Barge Unloading

The Pelican Aggregate Barge is equipped with a built-in conveyor belt system that transfers aggregates directly from the barge to the safety platform and onward to the batching plant, ensuring a continuous and controlled material flow.

The enclosed design of the hopper and conveyor system provides environmental containment during the unloading process. This setup minimizes the release of dust and prevents debris or runoff from entering the surrounding waters. The enclosure also serves to reduce noise and vibration levels, supporting compliance with environmental standards and minimizing disruption to the nearby community and marine users.

The typical arrangement of aggregate unloading operations, including anchoring positions and equipment layout, is shown in **Figure 6.2.**

6.3 Cement Barge Unloading

On the other hand, the Cement Barge employs a self-discharging pumping system with pipelines that extend to the batching plant silos, allowing for smooth and precise cement delivery.

The cement barge employs a hot plug system to connect its self-discharging pumping system to the receiving pump line of the concrete batching plant. This hot plug mechanism facilitates a rapid, secure, and leak-free connection, allowing for continuous cement flow with minimal downtime.

Designed to handle high pressures and the corrosive nature of cement slurry, the hot plug ensures that the connection is both durable and reliable, reducing the risk of spillage and environmental contamination. By streamlining the transfer process, it enhances operational efficiency and maintains safety standards during cement delivery.

The concrete batching plant is equipped with an advanced suction system that enables cement to be pumped directly from the cement barge into the plant without needing to activate the vessel's onboard pump. This design not only streamlines the cement transfer process by using a dedicated suction line at the plant but also significantly improves air quality. By avoiding the operation of the vessel pump, which typically generates exhaust emissions and noise, the system reduces airborne pollutants and minimizes environmental disruption, thereby contributing to a cleaner and safer working environment.

The proposed mooring and cement transfer setup is illustrated in **Figure 6.3**

Figure 6.1 Illustration of Aggregate Unloading from Pelican Barge

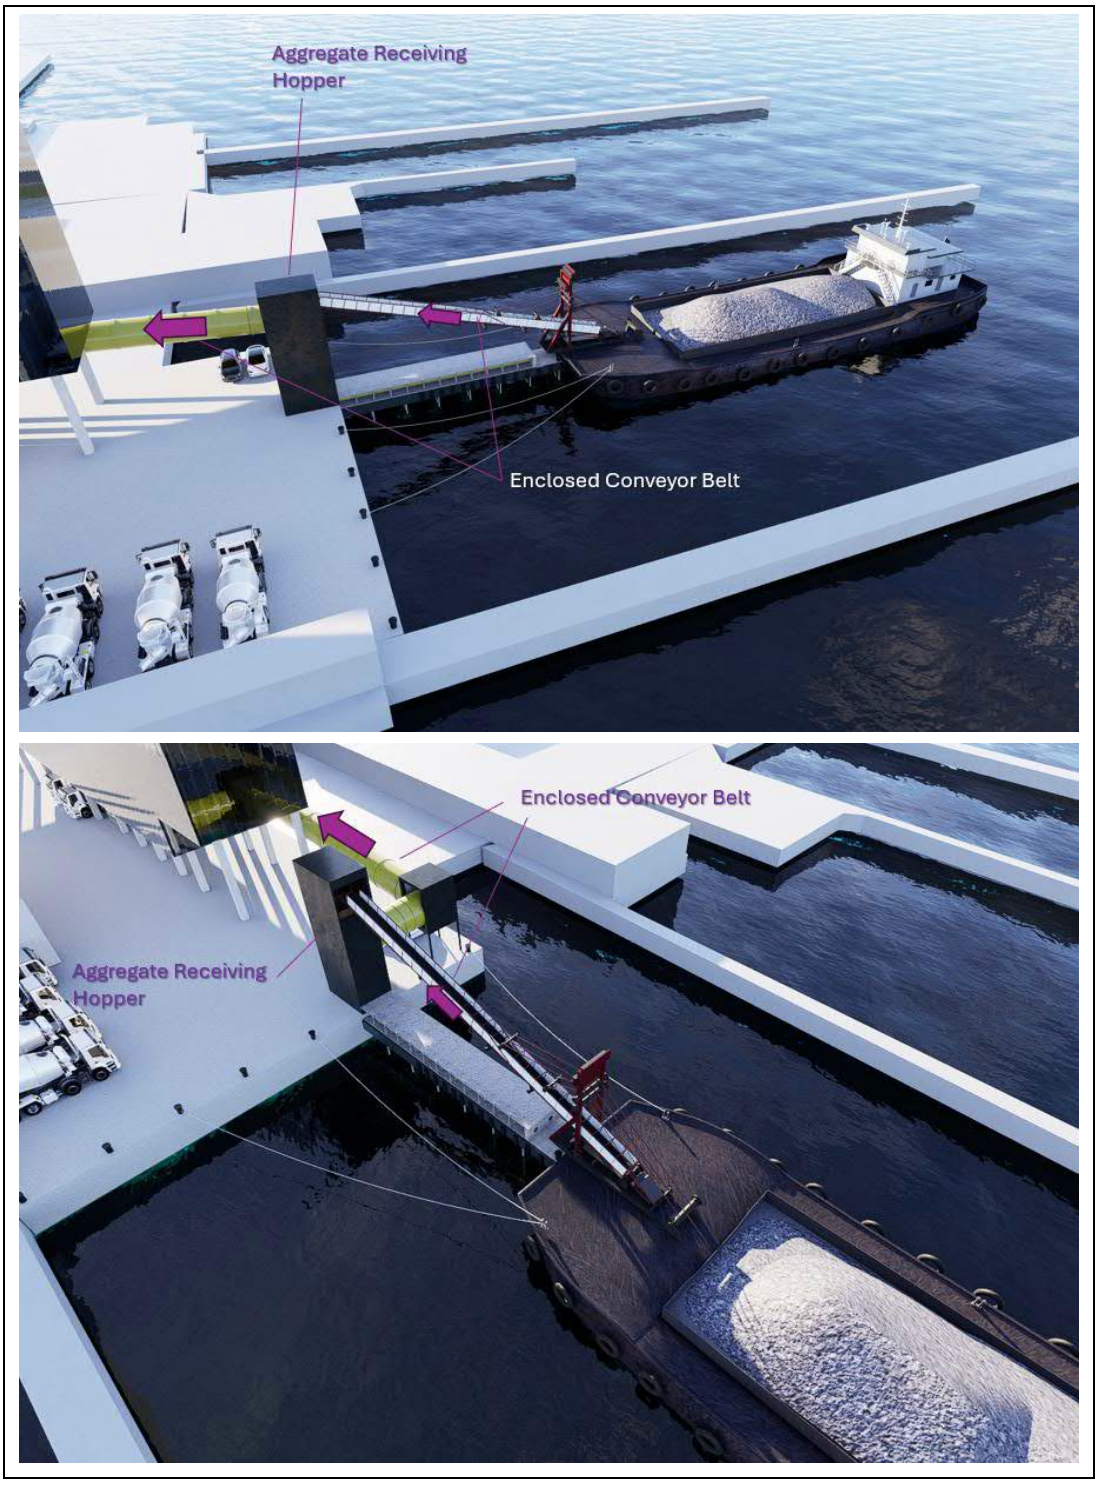


Figure 6.2 Illustration of Cement Unloading Using Pump System

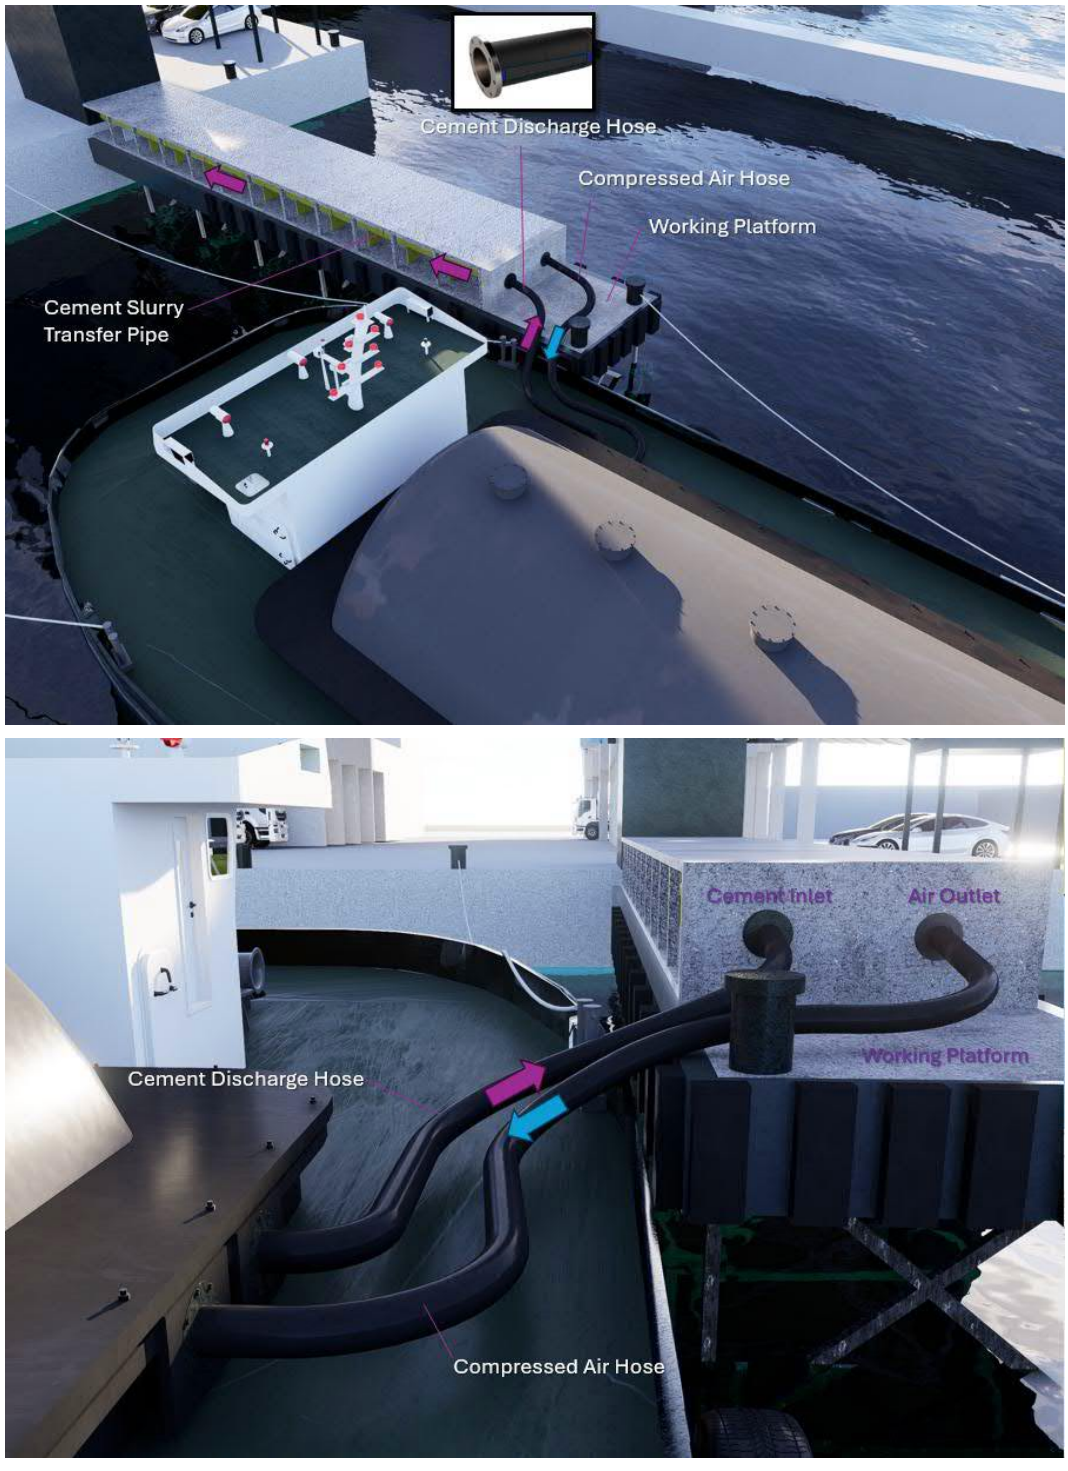

6.4 Approach and Departure

The barges, being self-propelled, autonomously navigate to their designated positions without requiring tug assistance, which ensures precise alignment and efficient manoeuvrability. The approach and departure routes have been carefully planned, illustrated in Figure 6.3 and Figure 6.4, to facilitate safe navigation.

Figure 6.3 Example of Arrival and Departure Path of Pelican Aggregate Barge

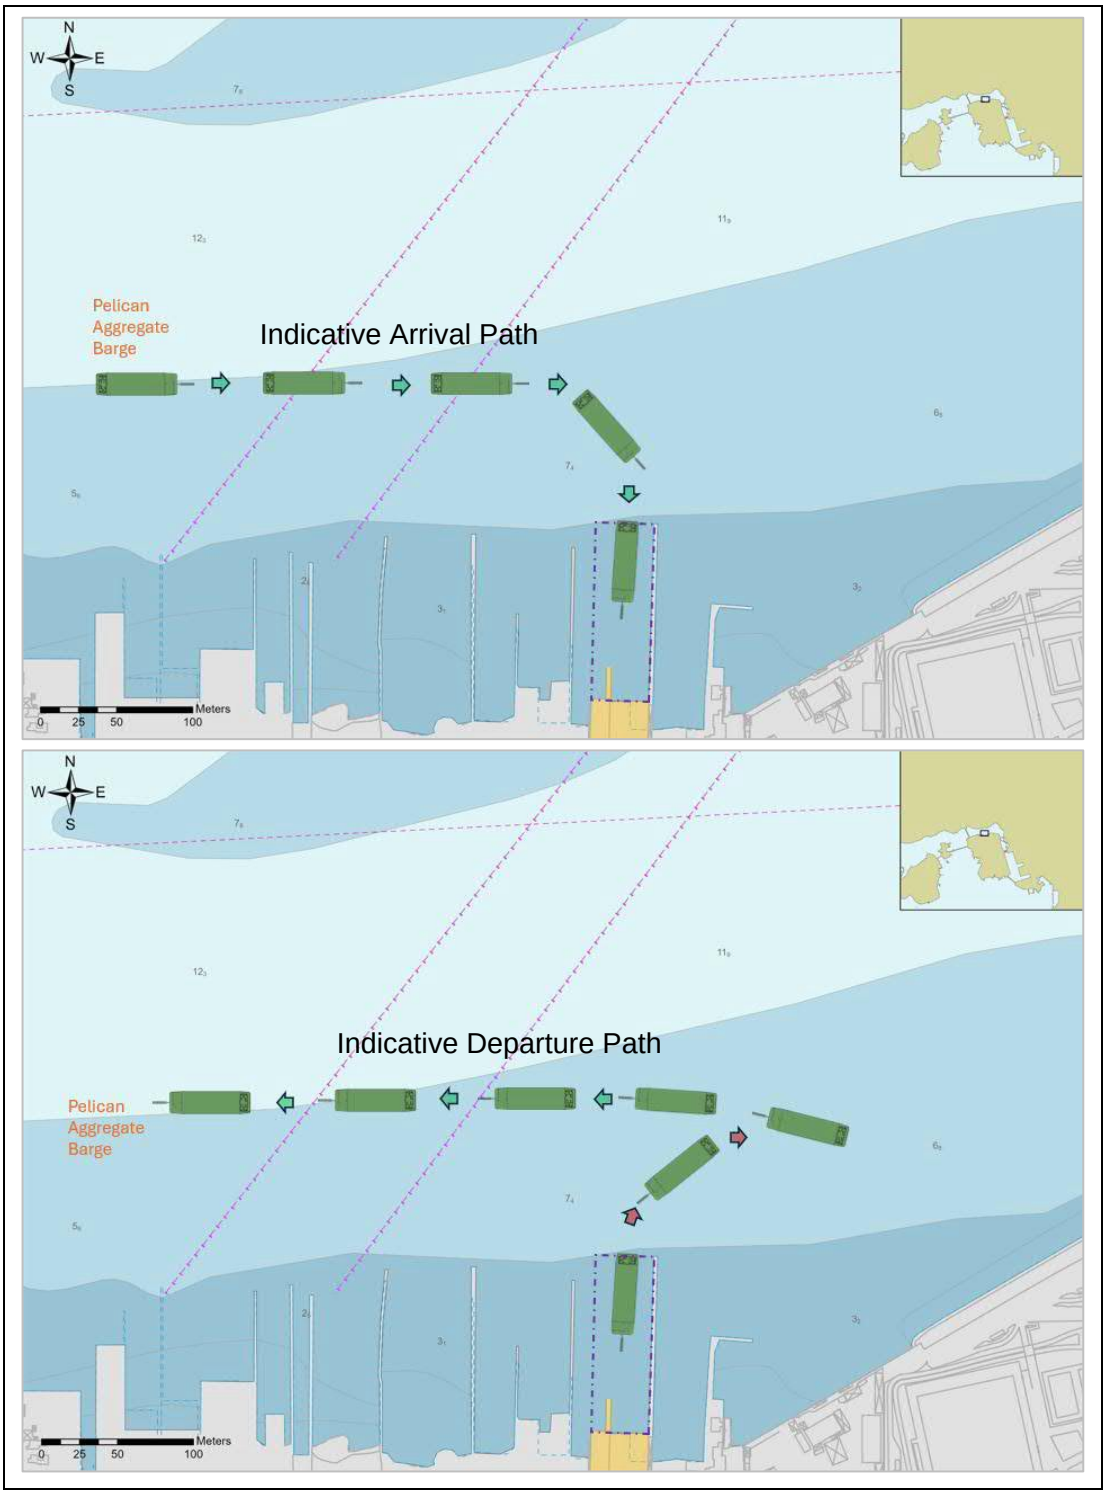

Figure 6.4 Example of Arrival and Departure Path of Cement Barge

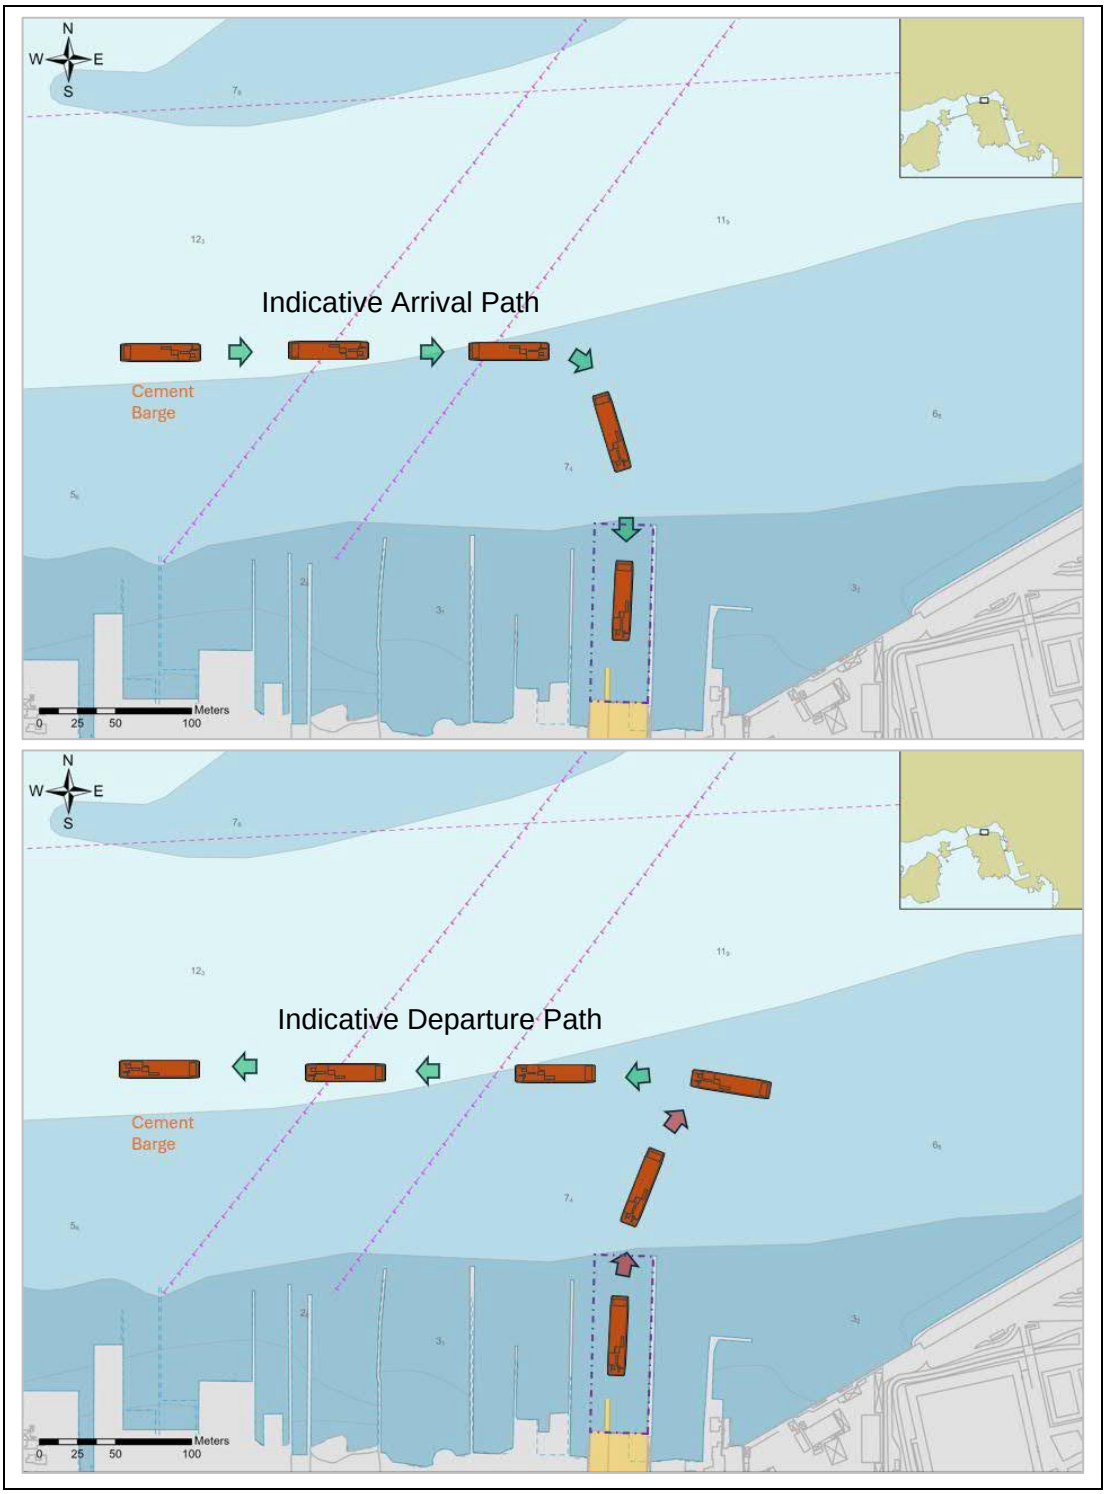


7 Marine Logistic Assessment

This section evaluates the feasibility and potential impacts of the proposed barging operations at the Cement Barging Plant (CBP). The assessment encompasses existing marine facilities, metocean conditions, and marine traffic patterns to ensure the operations are conducted safely and efficiently while minimizing any potential impacts on the surrounding marine environment.

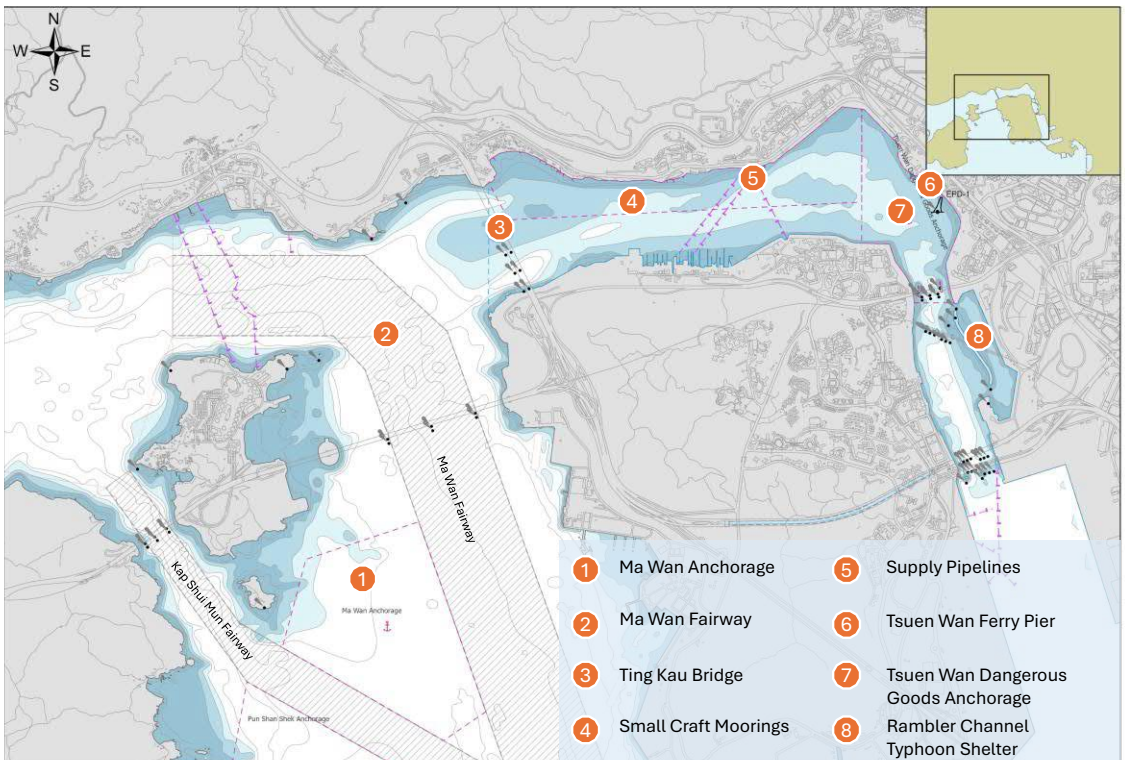
7.1 The Existing Marine Facilities

The vicinity of the project site features key marine facilities that influence navigational activities in the area. These facilities, as shown in Figure 7.1, include:

- **Ma Wan Anchorage:** The Ma Wan Anchorage is a designated area in the waters surrounding Ma Wan Island, primarily used for the safe mooring of vessels. This anchorage is part of the broader marine traffic management system in Hong Kong, which includes various fairways and traffic separation schemes designed to enhance navigational safety in busy maritime areas.
- **Man Wan Fairway:** The Ma Wan Fairway is a crucial maritime route that facilitates navigation between various channels in Hong Kong's busy waters. It connects to several other channels, including the Kap Shui Mun Channel and Tsing Yi Channel.
- **Ting Kau Bridge**: This bridge spans from the northwest of Tsing Yi Island to Tuen Mun Road. It has an air draft restriction of 53 meters above sea level, which must be considered for vessel navigation. feet in length, and a 100-meter-long repair berth for alongside repair services.
- **Small Craft Moorings**: Located north of Tsing Yi Island, these moorings consist of pairs of bow and stern buoys within the waterspace. Mooring requires a request to the Marine Department, and dues are applied.
- **Supply Pipeline**: Three submarine water supply pipelines are identified north and east of the proposed sites.
- **Tsuen Wan Ferry Pier**: Situated south of Tsuen Wan, adjacent to the MTR Tsuen Wan West Station, it provides ferry services connecting to Park Island Ferry Pier at Ma Wan.

- **Tsuen Wan Dangerous Goods Anchorage:** Located northeast of Tsing Yi Island, this anchorage has depths around 10 to 10.4 meters, with a shoal patch at the southeast corner. It primarily serves to provide adequate waterspace for mooring dangerous goods vessels.
- **Rambler Channel Typhoon Shelter**: Located near Kwai Chung in Rambler Channel, it provides 14 hectares of sheltered waterspace for vessels up to 50 meters in length.

Figure 7.1 Existing Marine Facilities near the Application Area



The Site is well-positioned within an area predominantly utilized for industrial purposes, including barge operations, shipyards, and cement storage, ensuring compatibility with existing marine activities.

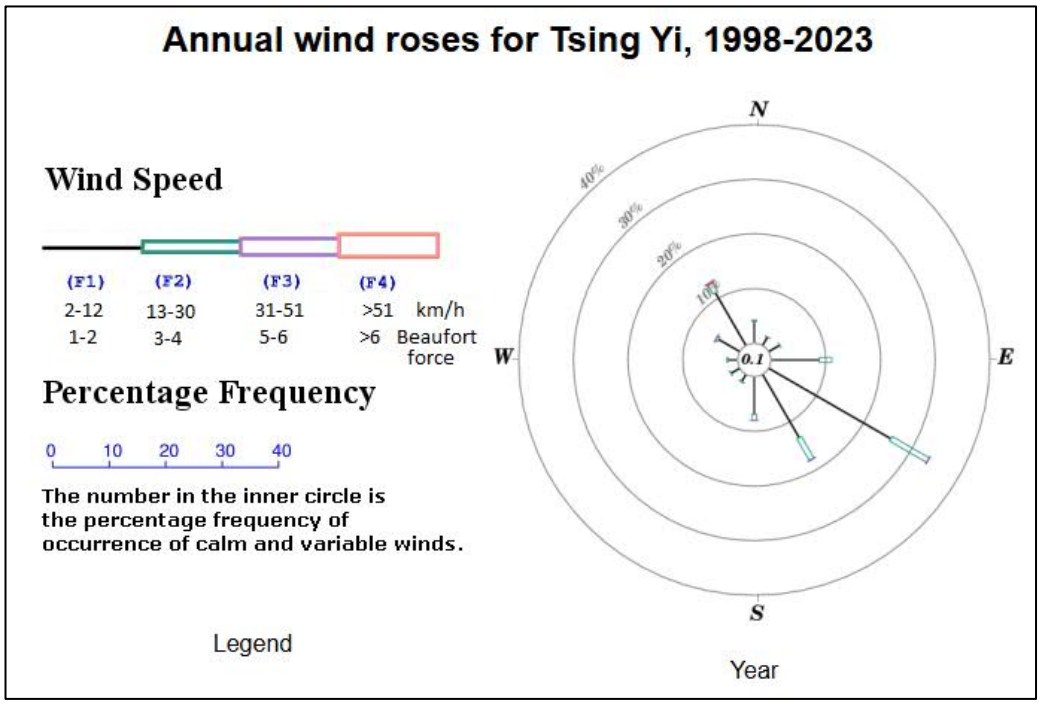
7.2 Metocean Environment

The metocean environment has been analysed to evaluate conditions that could affect marine operations, including wind, tidal levels, and currents.

Wind Environment

The wind environment at the study site was analyzed using historical wind data (1998–2023) from the Tsing Yi wind station, located at Shell Oil Depot on western Tsing Yi. The prevailing winds predominantly originate from the southeast, with typical wind speeds in the range of Beaufort Scale 1–4 (up to 16 knots) as illustrated in Figure 7.2.

Figure 7.2 Annual Wind Rose for Tsing Yi, 1998-2023



Source: Hong Kong Observatory

Due to the site's sheltered position north of Tsing Yi, wind effects are expected to be lighter, reducing potential operational disruptions. However, operations remain subject to temporary constraints under Typhoon Signals.

Tidal Levels

Tides in Hong Kong are mixed and mainly semi-diurnal. On most of the days in a month, there are two high tides and two low tides. Large tidal range occurs twice a month during spring tides when the moon is new or full. On days around neap tides when the moon is in its first or last quarter, however, tidal ranges become small and sometimes only one high and one low tide are observed. In general, the two high tides which occur each day are unequal in height with the higher high tide occurring mostly overnight in winter and during the day in summer.

Tidal data at Ma Wan has been chosen to demonstrate the typical tidal patterns, as they are the closest tidal stations to the Study Area. Tidal details are shown in Table 7.1.

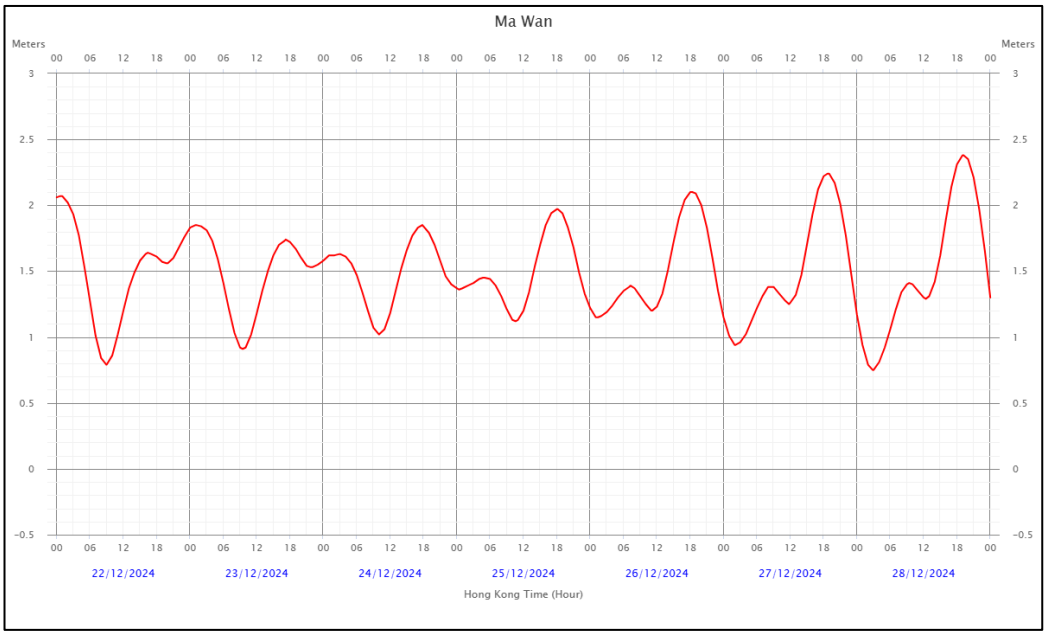
Table 7.1 Tidal Levels at Ma Wan

Location	Level (m) above Chart Datum		
	Mean Sea Level (mCD)	Mean Higher High Water Level (mCD)	Mean Lower Low Water Level (mCD)
Ma Wan	1.48	2.24	0.67

Source: Hydrographic Office Charts for Local Vessels 2018

For the berthing of barges, the actual tidal levels would significantly affect the water depth. In the light of this, the predicted tides for Ma Wan provided by the Hong Kong Observatory are used. A sample of the predicted tides is shown in Figure 7.3

Figure 7.3 Sample of Predicted Tides for Ma Wan



Source: Hong Kong Observatory

The Site's water depth of at least 5 meters (Chart Datum) is sufficient to support the draft requirements of the proposed delivery barges, maintaining safe under-keel clearance during standard tidal conditions.

Current

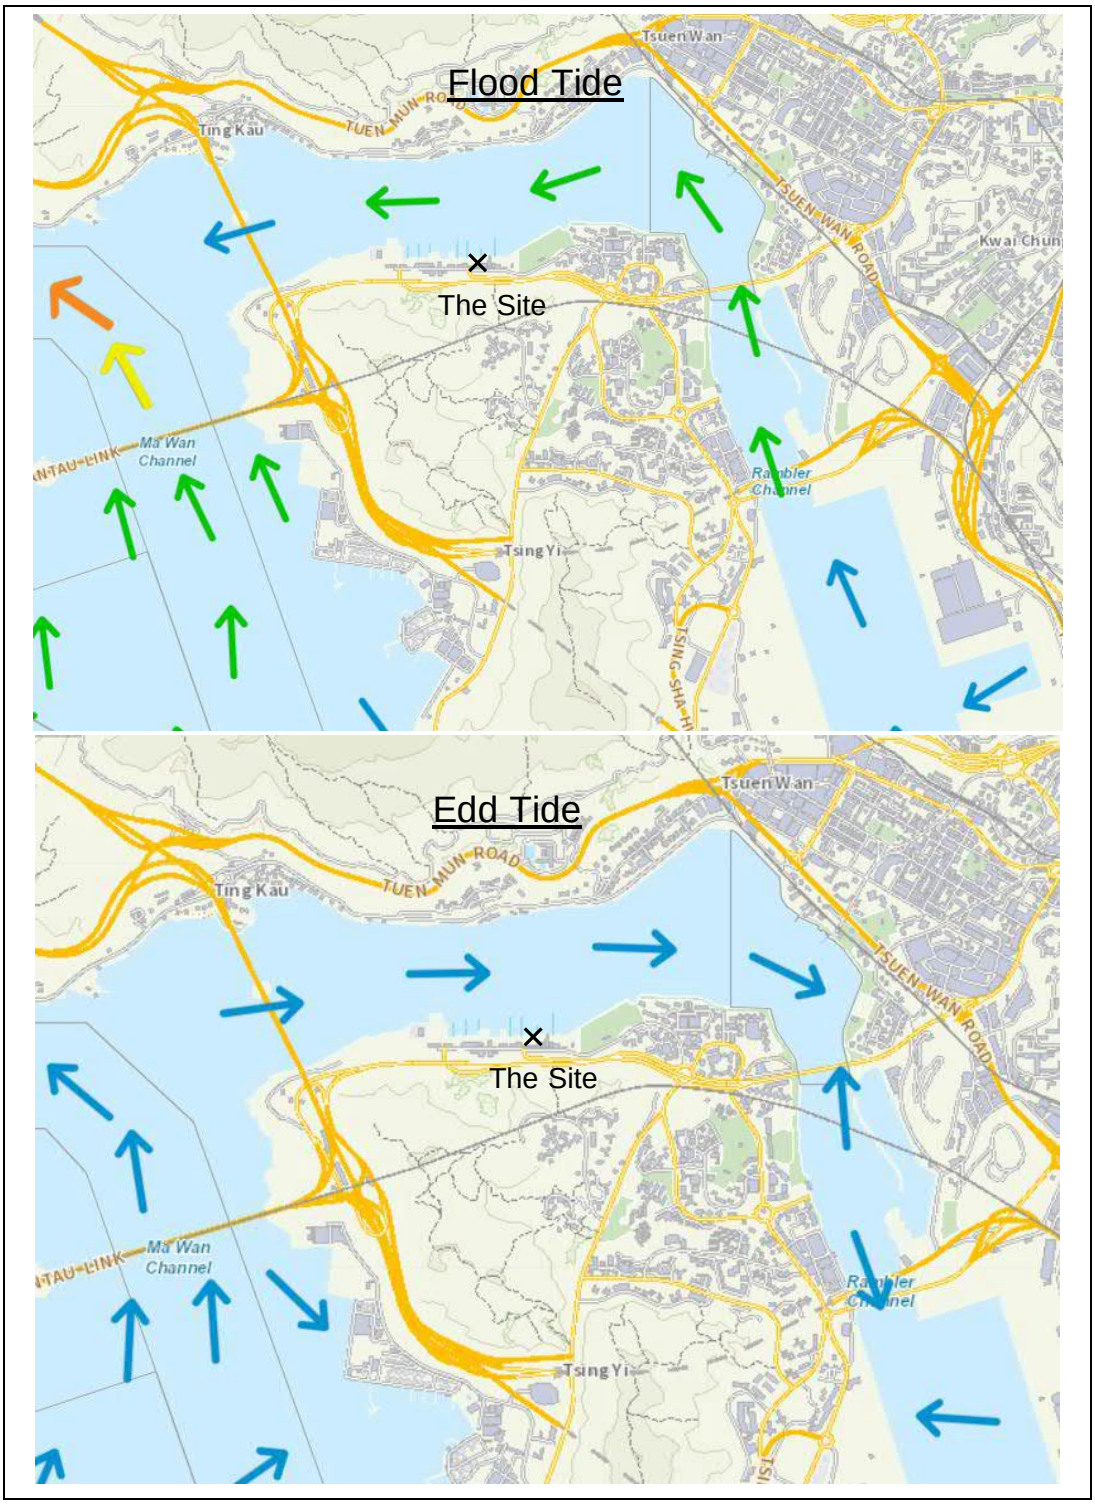
The currents along the project site have been thoroughly analysed using one year of comprehensive data (January 1, 2024, to December 31, 2024) from the Hong Kong Tidal Stream Prediction system (Hong Kong Hydrographic Office). This reliable dataset provides valuable insights into the typical tidal patterns at the site.

The tidal currents at the project site have been analysed using one year of comprehensive data (January 1, 2024, to December 31, 2024) from the Hong Kong Tidal Stream Prediction system (Hong Kong Hydrographic Office). This dataset provides reliable insights into the tidal patterns and flow characteristics in the region.

As illustrated in Figure 7.4, the analysed data point is located in the main tidal stream, where flood tides flow toward the west and ebb tides flow toward the east. Over the one-year period, the tidal current speed in this main stream averaged 0.45 knots, with a maximum recorded speed of 1.68 knots. While these values reflect relatively calm tidal conditions in the main stream, the project site, marked with an "X" on the map, is situated in a sheltered area away from the direct influence of stronger currents.

This sheltered position provides natural protection and calm conditions conducive to barge operations.

Figure 7.4 Illustration of Edd Tide and Flood Tide

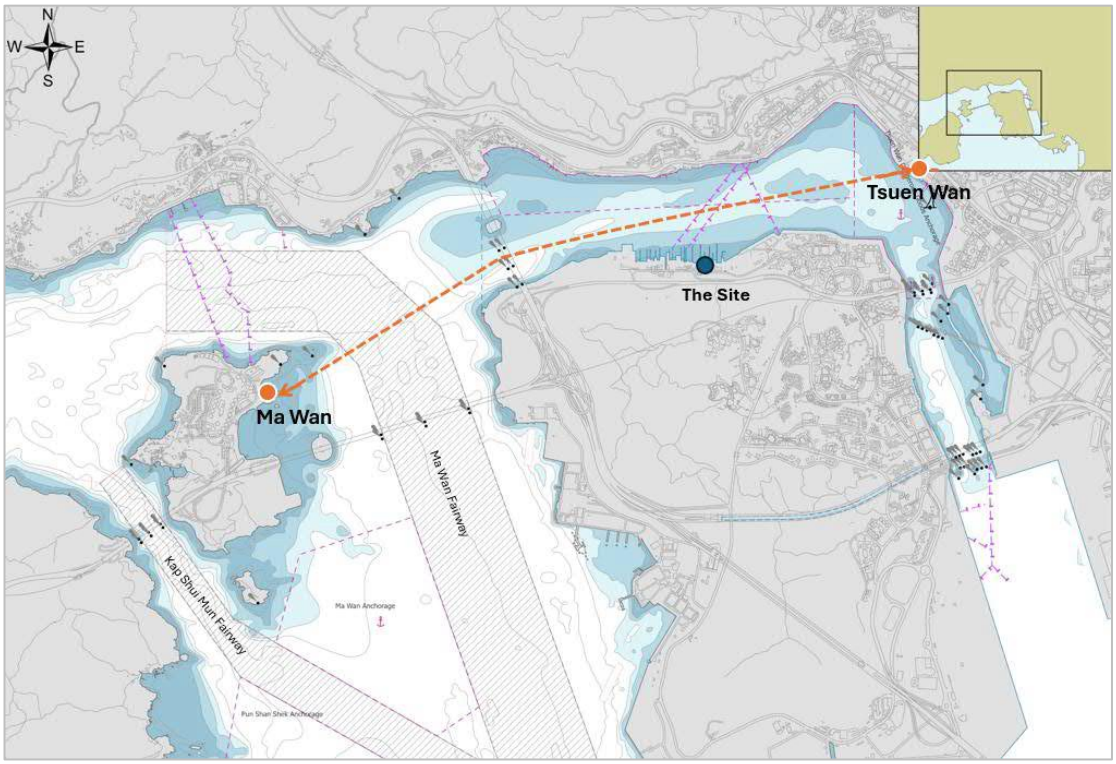


7.3 Local Marine Traffic Environment

Park Island Ferry Services

The ferry services between Ma Wan and Tsuen Wan are operated by Park Island Transport Company Limited. These services serve as transport connection for passengers traveling between the two locations. The ferry route is illustrated in Figure 7.5, showing the indicative vessel movement directions. Operating daily with a total of six trips, the service provides consistent accessibility for residents and visitors.

Figure 7.5 Traffic Gate and Vessels Movement Direction



The service schedule for the ferry operations is detailed in Table 7.2, summarizing the daily departure times.

Table 7.2 Ferry Services Schedule

Route	Scheduled Departure Times (Daily Mon-Sun)
From Ma Wan	10:15, 13:15, 16:15
From Tsuen Wan Pier	10:35, 13:35, 16:35

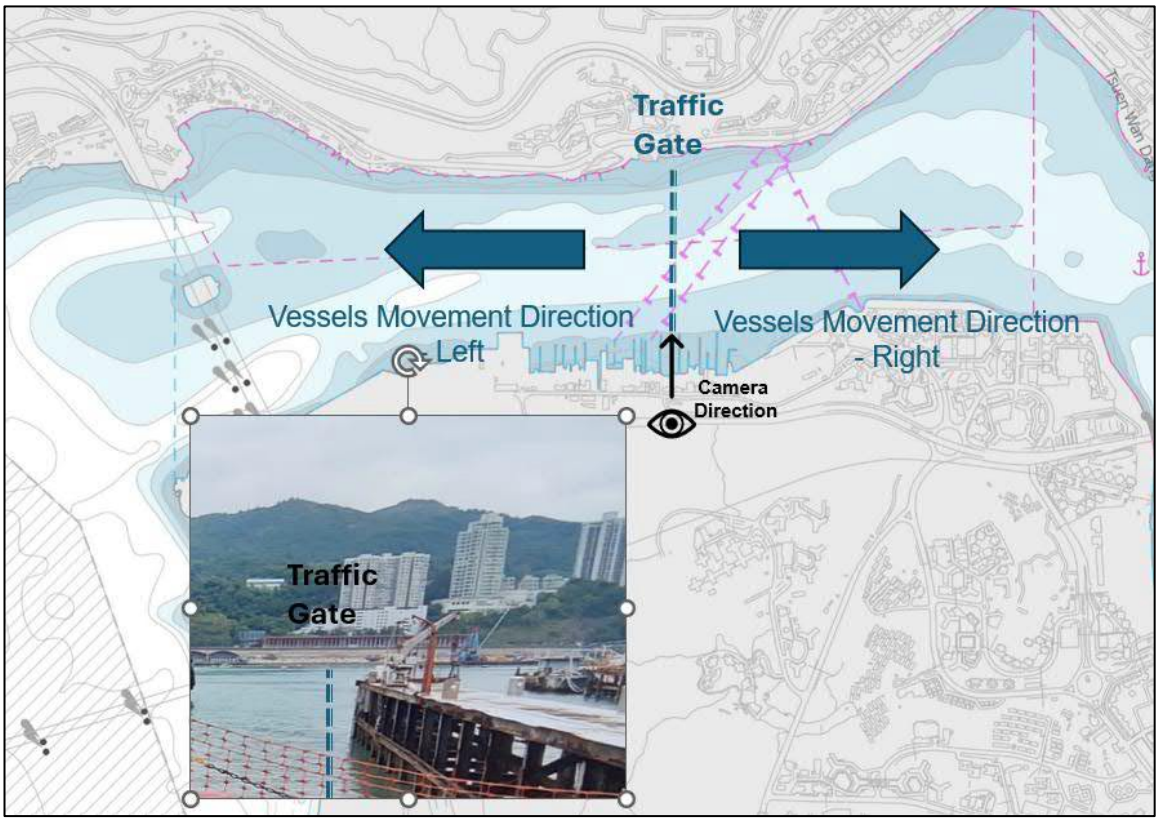
7.4 Daylight Visual Survey Study Methodology

To collect the latest marine traffic pattern in the area, a daylight visual survey was carried out for 30 consecutive calendar days (from November 2024 to December 2024) during daylight hours (0700-1900). Vessel counting was carried out on 12 selected days within the period.

The study area was defined by one imaginary line (Traffic Gates) as shown in Figure 7.5**.** All vessels passing through the traffic gates would be recorded by a video camera set up at the Site.

The cameras recorded the types, the numbers and the movements of the vessels transiting within the study area 24-hour daily. The data were collected to analyse the vessels activities and assess the traffic impact generated by the CBP.

Figure 7.6 Traffic Gate and Vessels Movement Direction



Vessel Type in Survey

The data collection for this study will be based on the classification of vessels to analyse marine traffic within the study area. The vessel types are classified as follows:

- OG-C (Ocean Going - Cargo): Large cargo vessels, including container ships, bulk carriers, and tankers, designed for international trade. These vessels typically exceed 100 meters in length.
- RT (River Trade): Medium-sized vessels, such as container ships, bulk carriers, and tankers, operating in regional and coastal waters. These vessels, with a length overall of 20 to 100 meters.
- T&T (Tug & Tow): Tugboats engaged in towing operations, often paired with barges. The combined length of the tug and tow ranges between 110 and 140 meters, primarily used for cargo transport and ship maneuvering.
- OG-P (Ocean Going - Passenger): Passenger vessels, including cruise ships and large ferries, operating on international routes.
- FF (Fast Ferry/High-Speed Craft): High-speed ferries operating at speeds of at least 20 knots, commonly used for passenger transportation between Hong Kong and neighboring regions.
- LF (Local Ferry): Domestic ferries providing short-distance passenger transport within Hong Kong waters. These vessels typically have a length of up to 22 meters.
- FL (Fast Launch): Small, fast-response government-operated vessels such as patrol boats, fire service speedboats, and pilot boats. These craft, up to 14 meters in length, are used for emergency response and navigation assistance.
- TB (Tugboat): Independent tugboats that assist larger vessels with berthing, docking, and maneuvering in confined waters such as ports and harbors.
- DG (Local Dangerous Goods): Vessels specifically designed to transport hazardous materials, including chemicals and fuel, within local waters. These vessels adhere to strict safety regulations.
- PV (Pleasure Vessel): Recreational vessels, such as yachts, cruisers, and sampans. This category may also include smaller fishing boats used for leisure activities.
- UC (Unclassified): Vessels not fitting into any specific category due to unique designs or operational roles. These may include research vessels or specialized service craft.

Average Daily Pattern of Traffic Gate

Data collected from 7:00 to 19:00 during 12 selected days reveals that an average of 226 vessels was observed daily, as shown in Table 7.3**.** The analysis indicates that the dominant vessel types within the study area are pleasure vessels and tugboats, followed by dangerous goods vessels and river trade vessels.

Given the prominence of these vessel types, it is essential for crews operating in the vicinity of the CBP (Concrete Batching Plant) to exercise caution. Awareness of the traffic patterns can help minimize encounter risks and maintain operational safety.

As part of the planned CBP operations, the barge delivery schedule includes six barge movements per day: one inbound and one outbound trip for cement, and two inbound and two outbound trips for aggregates via the Pelican Aggregate Barge

When compared to the existing daily marine traffic of 226 vessels, the additional barge movements represent a minor increase.

Table 7.3 Hourly Average Vessel Movement

Hourly Average Vessel Movement for Selected 12 Days Both Directions (Westbound and Eastbound)														
Hour			All	Cargo			Passenger				Others			
				OG-C	RT	T&T	OG-P	FF	LF	FL	TB	DG	PV	UC
7:00	-	8:00	24.9		0.4	0.5		3.6	2.3	11.5	2.1	2.1	2.5	
8:00	-	9:00	22.8		0.9	0.7		2.1	1.7	9.7	0.8	1.8	5.3	
9:00	-	10:00	14.2		1.4	0.3		0.3	1.0	3.5		2.3	5.5	
10:00	-	11:00	18.8		1.4	0.3		2.0		3.5	0.6	2.3	8.7	
11:00	-	12:00	16.9		1.8	0.8				3.7	1.6	3.2	5.9	
12:00	-	13:00	20.9		2.4	0.5				3.2	1.2	3.9	9.3	0.5
13:00	-	14:00	17.7		3.5	0.3		2.0		2.3	0.5	2.8	6.1	0.2

16:00	-	17:00	17.3		0.8	0.2		2.0		3.0	0.8	1.3	9.3	
17:00	-	18:00	21.5		0.7	0.2		1.9		6.8	1.3	1.1	9.6	
18:00	-	19:00	23.1		0.7			2.4		13.0	0.6	0.6	5.8	
Total			226		17	4		16	5	68	10	23	81	1

7.5 Minimal Potential Impacts

The marine logistics assessment confirms that the proposed CBP operations will have a minimal impact on the existing marine environment. The additional barge operations, limited to 3 round-trips per day (one inbound and one outbound for cement, and two inbound and two outbound for aggregates via the Pelican Aggregate Barge), represent less than 2% of the typical daily vessel movements in the nearby waterway, constituting a negligible increase in traffic. The site's strategic location, with direct access to established fairways and existing mooring facilities, ensures that delivery operations will not disrupt primary navigational routes or interfere with nearby industrial activities.

Metocean conditions at the Site, including moderate tidal currents (average speed of 0.45 knots) and sufficient water depth (minimum of 5 meters Chart Datum), provide a stable and predictable environment for barge operations. These factors significantly reduce risks associated with manoeuvring and mooring. Additionally, the sheltered location along the northern coast of Tsing Yi minimizes the influence of strong winds, ensuring safe and reliable operations even during peak tidal movements.

8 Implementation and Mitigation Measures

This chapter outlines the comprehensive organizational structure, communication protocols, operational requirements, safety practices, and emergency response measures that govern the operations of the Cement Barging Plant (CBP). These measures aim to ensure safe, efficient, and environmentally compliant operations while mitigating risks associated with marine logistics and plant activities.

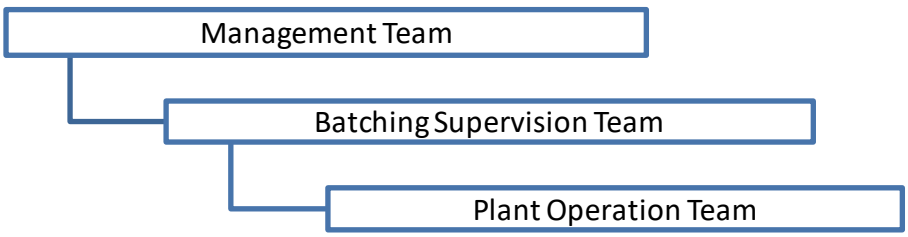
8.1 Organization

The CBP has established a well-trained and experienced team responsible for overseeing daily operations. The team ensures tasks are implemented as planned, takes immediate corrective actions when necessary, and maintains high safety standards.

Organization Chart

The CBP management team is organized to ensure that all precautionary and mitigation measures are effectively implemented. The organizational structure is shown in Figure 8.1 Organization Chart.

Figure 8.1 Organization Chart



Roles and Responsibility

- **Management Team:** Oversees overall CBP operations, coordinates deliveries with suppliers, and ensures compliance with regulations and operational protocols.
- **Batching Supervision Team:** Serves as the primary contact for vessel crews, monitors weather conditions, arranges berthing schedules, and manages unloading operations.

- **Plant Operations Team:** Executes instructions from the Batching Supervisor, liaises with vessel crews, maintains unloading facilities, and ensures smooth and safe unloading operations

8.2 Communications

Effective communication protocols are critical for safe and efficient CBP operations, ensuring seamless coordination among internal teams, vessel crews, and external stakeholders.

Table 8.1 Communications System in CBP

System	Function and Notes
Walkie-talkies	For internal communication among site staff
Mobile Phones	To facilitate contact with key personnel, including supervision and operations teams.
Email	To arrange deliveries, record notifications, and manage operational documentation.
VHF Radio	For direct communication between CBP operators and vessel crews.

Internal Communication

A structured pre-notification system ensures only one barge operates at the designated area at any given time:

- **72 Hours Pre-Notification**: The Batching Team sends delivery requests to the Management Team for coordination with suppliers.
- **12 Hours Prior Notification**: Vessel crews inform the Batching Supervisor of arrival details and seek approval.
- **Operational Updates**: The Batching Supervisor communicates arrangements to the Operations Team for preparation.

External Communication

- **Adjacent Users:** CBP coordinates with neighboring facilities to avoid scheduling conflicts and ensure only one vessel operates at the site simultaneously.

- **Marine Department (Vessel Traffic Service):** Vessel crews report transit information to the Vessel Traffic Service (VTS) using designated VHF channels during their approach and departure.

8.3 Implementation Requirement

Vessel Requirements

All vessels deployed for CBP operations must comply with the Merchant Shipping (Local Vessels) Ordinance (Cap. 548) and meet the following standards:

- Be maintained in a seaworthy condition and equipped with operational propulsion and mooring systems.
- Employ competent, qualified crews.
- Be equipped with Automatic Identification Systems (AIS) and multi-channel VHF radios.

Terminal Requirements

The terminal must maintain all equipment in accordance with Hong Kong regulations and operate it using qualified personnel. Regular certifications and maintenance checks are required to ensure compliance and operational safety.

Safety Equipment

Each vessel shall be equipped with the safety devices which include but not limit to the follows:

- **Personal Protective Equipment (PPE):** Gloves, masks, non-slip shoes, eye/ear protection.
- **First Aid Kits:** Up to required standards and readily accessible.
- **Firefighting Equipment**: Portable fire extinguishers and related equipment.
- **Lifesaving Appliance**s: Life jackets, lifebuoys, and emergency lights.
- **Safety Notice Boards**: Displaying key safety information.

8.4 Safety & Mitigation Measures

Operational Safety Objective

The operator of the proposed CBP is committed carrying out the marine delivery works in a manner that causes minimum harm to our employees and other marine users. This will be achieved through the establishment of clear objectives and the implementation of an effective safety management system which include:

- Prevent accidents and comply with relevant legislation.
- Maintain the highest safety standards and provide ongoing employee training.
- Conduct regular audits of the safety management system.

Training

The adequate safety training for levels of personnel including the skippers, marine crew onboard and crew on CBP, and the profession training for the utilisation of marine plants or system, shall be provided regularly to ensure their understanding and compliance of marine safety issues.

- **Induction Training**: The Plant Supervisor shall provide the site-specific induction training course to the employees including the CBP background, health & safety policy, employees' duties, Hong Kong government legislation &regulations, permit to work, foreseeable hazards, emergency preparedness, personal protective equipment, case studies, etc. The Plant Supervisor shall provide refresher training courses to its employees in every six months.
- **Skipper Training**: Before CBP implementation, the vessel crew from the supplier shall carry out the trial-run training to ensure the marine traffic and relevant safety issues are compiled by all the skippers, which shall be recorded as the housekeeping rules for monitoring and review. The skippers shall be well trained by traveling via the designated routes.

Weather Monitoring

To enhance navigation safety, real-time metocean (tidal, sea level) data and weather forecast from the Hong Kong Observatory and the Marine Department will regularly be reviewed.

The predictions will provide detailed and up-to-date Hong Kong and Guangdong weather forecast for the waters, which provides a sound basis for day-to-day planning and operations. The forecasts include the information of:

- Wave conditions and General weather outlook
- Rainfall
- Significant swell heights
- Wind conditions
- Gust and average speeds
- Wave conditions
- Miscellaneous data on relative humidity, and sea temperature

8.5 Adverse Weather Arrangement

The special arrangement shall be well prepared and implemented in response to typhoon or adverse weather occurrence accordingly, ensuring the safe CBP operation and the vessel and its crew can be evacuated in a safe and efficient manner.

Roles and Responsibilities under Adverse Weather

Batching Supervision Team:

- Closely monitor the weather forecast of Hong Kong and Guangdong;
- Announce the response plan accordingly;
- Monitor the response actions in CBP and ensure the safety of both personnel, equipment and facilities.

Plant Operation Team:

- Post tropical cyclone warning status for information;
- Liaise with Vessel Operation Team of Supplier to prepare specific tropical cyclone response plan and implement accordingly;
- Examine and secure the facilities on site;
- Ensure staff who works outdoor put on PPEs.

Vessel Operation Team of Supplier:

- Liaise with Plant Operation Team;
- Implement the specific tropical cyclone response plan;
- Ensure staff who works outdoor put on PPEs.

- Moor vessels at safe locations.

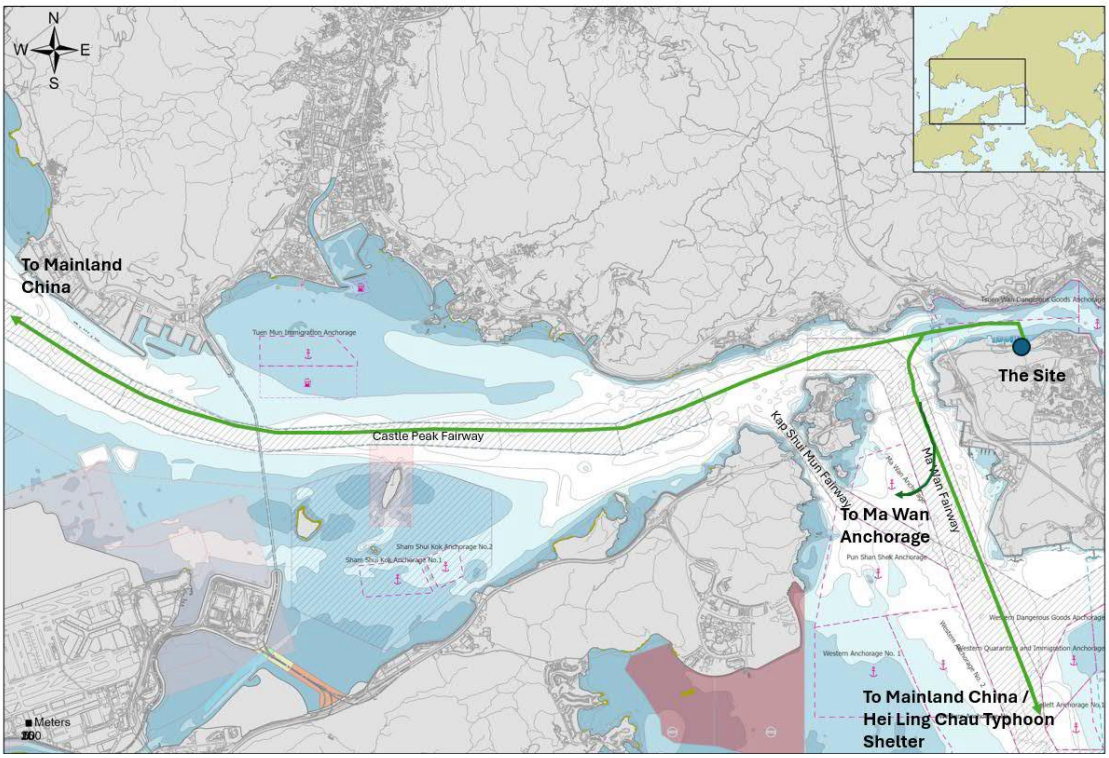
Adverse Weather Procedures

The aggregate delivery to CBP shall only be allowed when weather and sea state will not adversely affect the safe transit and will not create the risk of spillage or loss of materials from the vessels during voyage. The following procedures have been regulated for the CBP barge operation in response to adverse weather conditions:

Typhoon:

- **When Tropical Cyclone Signal No. 1 (TS1)** is Hoisted: The operations will be maintained, but the further typhoon development will be closely monitored by Plant Operators. The Batching Supervisor shall decide whether the material delivery would be arranged based on the weather information from HKO and Guangdong weather forecast.
- **When Tropical Cyclone Signal No. 3 (TS3)** or above is Hoisted: All agents, suppliers, and vessel crews will be notified immediately. Aggregate deliveries will be suspended, and on-site batching may only proceed under favorable weather conditions (e.g., no rainfall, strong winds, or adverse sea conditions) in strict compliance with the BOP protocols, including real-time weather monitoring and readiness to halt operations if conditions deteriorate. Vessels will evacuate work areas to seek safe shelter in Mainland, following Marine Department recommendations for river trade vessels. If Typhoon Signal No. 8 is forecasted and evacuation to Mainland is not possible, vessels will proceed to Hei Ling Chau Typhoon Shelter or alternative anchorages such as Ma Wan Anchorage. A standby tugboat will be deployed, if required, to accelerate the evacuation of barges and ensure the safety of operations.
- **Before TS 3** is issued, if in the case of the delivery barge is approaching HK during adverse weather condition, the vessel shall steer back to Mainland China and not stay in HK water.
- **When TS 3** is lowered and the weather condition is improved, the Plant Operators will consider whether to resume the operation based on the remaining time after TS3 lowering, the time taken to operation resume, etc.
- The applicant shall ensure that all delivery vessels strictly follow the adverse weather procedures set out in this plan. Any unauthorized anchoring or failure to evacuate will be considered non-compliant.
- The evacuation route for typhoon or contingency is depicted in Figure 8.2.

Figure 8.2 Evacuation Routes for Typhoon or Contingency



Rainstorm:

- When a red rainstorm signal is issued, the loading & unloading activities shall be ceased, the crew members should attend bilges and the on-site facilities will be examined and secured properly.
- When a black rainstorm signal is issued, the outdoor activities would be suspended and all crew member shall stay indoor in a safe place.

Low Visibility:

- All operations must cease when visibility is less than 1.5 nautical miles. The Marine Department's Vessel Traffic Centre (VTC) will broadcast visibility reports on VHF channels 12, 14, and 67 when visibility drops below 2 nautical miles. Operators must monitor these channels continuously.
- Barging operators must strictly comply with the "International Regulations for Preventing Collisions at Sea, 1972" (COLREGs), with emphasis on:
    - Rule 5: Maintain a proper lookout.

- Rule 6: Navigate at a safe speed.
- Rule 7: Assess the risk of collision.
- Rule 8: Take timely actions to avoid collisions.
- Rule 19: Use AIS, sound signals, and extreme caution in restricted visibility.

- Operators must reduce speed, maintain clear communication using AIS and sound signals, and coordinate with nearby vessels.
- In the event of an accident, this should be reported immediately to the Vessel Traffic Centre, either on V.H.F. (channel 12, 14 or 67) or by telephone (no. 2233 7801 or 2233 7302).

8.6 Emergency Responses

Once the emergency occurs, the person-in-charge onboard shall contact the Plant Operators. The responsible person shall report the occurrence forthwith to Fire Service Department (FSD) or MD orally about the accident time/position.

The emergency response shall be in accordance with the requirements of Merchant Shipping (Local Vessels) Ordinance Cap 548. The responses for key emergency scenarios are introduced as follows:

Fire on CBP

- Any staff member will activate the warning alarm and report to FSD immediately;
- All persons to evacuate the plant and building and assemble on at the emergency assembly area;
- Notify the fire warden if people are missing at a possible location;
- Report any anomalies to the fire warden and they will arrange search;
- On advice of fire warden, tenants and general public should then return to building or leave premises;
- Assist in securing the site and determine extent of damage, prepare the relevant clean-up plan and strategy to make good afterwards.

Collision

If collision occurs, Coxswain should:

- Cut engine power and inform all crew members on board;

- Inform Operations about vessel's position and time of accident and keep proper log of major events;
- Inform the crew members and keep them calm;
- Send crew member to inspect for damages and check for any oil leakage;
- Check for any injuries onboard and perform first-aid treatment as appropriate;
- If slightly taking on water occurs, send crew members to clear water by using emergency water pump;
- If more than one cabins taking on water and risk of sinking occurs, abandon ship signal has to be sent out by blowing 7 short follow 1 long blast on the whistle. Instruct crew members to prepare all LSA on board, and assist the personnel to put on life jackets for leaving the ship;
- Attract vessels in the vicinity for emergency assistance by blowing 3 short 3 long and follow by 3 short blasts on the whistle and hoist international distress signal;
- If there is no immediate danger of own vessel, assist the other vessel and record the information including vessel name, coxswain name, damage & condition of vessel;
- When abandon ship signals have been sent out, all crew members have to follow the emergency procedure.

Fire onboard

If fire occurs, Coxswain should:

- Stop the barge at a safe place or away from other vessels if circumstance permits;
- Activate fire alarm and instruct crew members to fire fight;
- Inform Operations and Marine Department for assistance;
- Stop engine, cut off power, shut fire damper, start fire pump & fire extinguishers and use all appropriate means on board to fight fire;
- Broadcast to keep the crew calm and if threatened, relocate to a safe area;
- When serious fire occurs, inform the crew to put on life jackets and stand-by for further instruction to leave ship;
- When fire is out of control, abandon ship action has to be taken. Instruct crew members to prepare all LSA on board, and put on life jackets for leaving the ship;
- When crew members have received abandon ship signal, cease fire fighting and immediately report to assigned stations to prepare for abandon ship.

Grounding

If grounding occurs, Coxswain should:

- Stop engine and inform all crew members on board;
- Inform Operations about vessel's position and time of accident and keep proper log of major events;
- Inform the crew and keep them calm;
- Send crew member to inspect damage and check for any oil leakage;
- Take sounding around and check status of seabed;
- Check any injury on board and perform first-aid treatment as appropriate;
- If slightly taking on water is found, prevent further leakage and use water pump as appropriate;
- Prevent the barge from drifting to shore;
- If taking on water is causing the barge to one side, abandon ship action should be taken. Instruct crew members to prepare and put on the LSA /life jackets for leaving the ship;
- Attract vessels in the vicinity for assistance by blowing 3 short and follow by 1 long blast on the whistle and hoist 'V" flag;
- Attract vessels in the vicinity for emergency assistance by blowing 3 short 3 long and follow by 3 short blasts on the whistle and hoist international distress signal;
- Aground signal: Day — by hoisting 3 black balls or shapes vertically on the main mast together with the anchor black ball; Night — by hoisting 2 red lights in a vertical line on the main mast together with the anchor light;
- Take precaution of tidal change;
- When abandon ship signals have been sent out, all crew members have to follow the emergency procedure and report to their assigned boat stations.

Man Overboard

If man overboard occurs, Coxswain should:

- Stop both main engines; blow 3 long blasts on the whistle to indicate man overboard;
- Deploy lifebuoy with buoy light to indicate the overboard position, and the crew member shall keep pointing at the location;
- Operate engines and turn towards the person overboard;

- Proceed back to the position with caution and give a lee side to the person overboard. Keep the person overboard well clear from the propeller;
- Keep clear of surrounding traffic, and take precaution to pick up the person overboard;
- Report to the Plant Operation Team of CBP and Marine Department.

Oil Leakage

If oil leakage occurs, Coxswain should:

- Cease filing, take precaution to avoid oil split overboard;
- Arrange crew members for assistance;
- Empty tank by transferring fuel to other oil tanks;
- If oil split overboard, inform the Plant Operation Team of CBP and Marine Department.

Engine Malfunction

If engine malfunction occurs, Coxswain should:

- Slow down or stop engine;
- Clear of traffic or prevent from obstructing fairway;
- Hoist up engine trouble signal;
- Drop anchor as appropriate;
- Inform Plant Operation Team and Marine Department;
- Check with Engineer whether the engine can be repaired by crewmember and time required;
- Inform the crew and keep them calm;
- If the engine cannot be repaired by crewmembers on board, inform the Plant Operation Team to arrange towage as soon as possible.

8.7 Conclusion

The implementation and mitigation measures outlined in this chapter demonstrate a comprehensive approach to ensuring the safe, efficient, and environmentally responsible operation of the Temporary Concrete Batching Plant. By establishing clear roles and responsibilities, robust communication protocols, and stringent operational and safety standards, the proposed operations mitigate risks to marine traffic, personnel, and the environment. Proactive weather monitoring, detailed emergency response plans, and adherence to international and local regulations further ensure operational resilience under normal and adverse conditions..

9 Summary and Conclusion

9.1 Introduction

The applicant proposes to develop a Temporary Concrete Batching Plant (CBP) at the approved Tsing Yi Outline Zoning Plan No. S/TY/32 for a duration of five years. To support the application, AXON Consultancy Limited has prepared this Barging Operation Plan (BOP), which outlines the marine logistics arrangements, evaluates potential traffic impacts, and proposes mitigation measures to ensure the proposed CBP operates in a safe, efficient, and environmentally sustainable manner.

9.2 Summary

The marine logistics operations for the proposed Concrete Batching Plant (CBP) are designed to ensure safe and efficient functionality. Aggregates and cement will be delivered via self-propelled barges from the mainland, with a maximum of 3 round trips per day— three inbound trips (one for cement delivery and two for aggregates via the Pelican Aggregate Barge) and three corresponding outbound trips.

Maintenance dredging is required to restore adequate water depth at the barging point, where sedimentation has reduced the nearshore depth below safe levels for batching operations; an estimated 4,000 m² of dredging is needed— a minor volume compared to larger project thresholds.

Mooring stability is enhanced through the installation of new fenders, bollards, and a robust anchoring system, which secure both the Pelican Aggregate Barge and the Cement Barge, ensuring precise vessel alignment and safe operations despite tidal fluctuations and currents.

Unloading operations are efficiently executed at the safety platform, with the aggregate barge using an integrated conveyor system to transfer material directly to the batching plant, and the cement barge employing a self-discharging pumping system, complemented by the plant's advanced suction technology, to deliver cement while improving air quality by reducing exhaust emissions. Marine Traffic Review

A review of nearby marine facilities and the Metocean environment affecting CBP operations concluded that potential impacts are minimal. The site benefits from moderate tidal currents averaging 0.45 knots and a minimum water depth of 5 meters (Chart Datum), providing a stable and predictable environment for barge operations. Additionally, the sheltered location along the northern coast of Tsing Yi reduces the impact of strong winds, ensuring safe and reliable operations even during peak tidal conditions.

A daylight visual survey conducted in November–December 2024 (07:00–19:00) collected detailed data on vessel traffic in the area. Over 12 selected survey days, an average of 226 vessel movements were recorded daily, with the most common vessel types being pleasure vessels and tugboats, followed by dangerous goods vessels and river trade vessels. The planned barge operations, limited to six trips per day, account for less than 2% of the typical daily vessel movements, representing a negligible increase in marine traffic.

A comprehensive set of risk control measures has been established in this BOP, ensuring full compliance with safety and operational requirements. Clear roles and responsibilities have been assigned, and communication protocols have been implemented to ensure efficient internal operations and minimize conflicts with adjacent users or stakeholders.

Implementation requirements for vessel deployment, terminal infrastructure, safety equipment, and weather monitoring have been clearly defined to guide precautionary actions. Special arrangements for adverse weather conditions, including typhoons, rainstorms, and low visibility, have been prepared to ensure operational continuity and safety. Emergency response protocols for various scenarios have also been established, providing clear guidance for all responsible personnel.

The CBP operators are committed to maintaining the highest safety standards, treating safety and health as integral aspects of their performance, and mitigating potential hazards to the minimum feasible level.

9.3 Conclusion

The proposed CBP, supported by this barging operation plan, incorporates robust marine traffic arrangements, impact assessments, and implementation of mitigation measures. Although vessel movements associated with the CBP will interact with existing traffic conditions in the vicinity, survey data indicates that the induced marine traffic impact is negligible. Furthermore, any marine risks posed by these operations can be mitigated to an acceptable level, provided the proposed measures outlined in this BOP are implemented effectively.

Appendix III

Traffic Impact Assessment

Traffic Impact Assessment for Section 16 Planning Application of Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Tsing Yi Town Lots Nos. 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

1 Introduction

1.1 Background

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

In the Approved Tsing Yi Outline Zoning Plan No. S/TY/32 (referred to as the "OZP"), the Application Site is zoned as "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses". According to the Schedule of Uses outlined in the OZP, the intended use of a Concrete Batching Plant falls under Column 2 uses. Consequently, obtaining planning permission from TPB is necessary for the proposed temporary concrete batching plant under Section 16 of the Town Planning Ordinance.

AXON Engineering & Consulting Limited was commissioned to carry out a Traffic Impact Assessment (TIA) report in support of the Section 16 planning application to facilitate the proposal for the proposed development.

1.2 Objectives

The objectives of the traffic impact study are as follows:

- to estimate the potential traffic generation/attraction due to the proposed development; and
- to assess the future traffic situation in the surrounding network; and
- to appraise the potential traffic impacts of the development; and
- to evaluate the internal transport facilities of the development; and
- to consider road improvement proposals, if required.

1.3 Structure of Report

Chapter 1 – Introduction, which covers the study's background, objectives, and report structure.

After this introductory chapter, there are the following chapters:

Chapter 2 – The Proposed Development, which describes the site location and development schedules;

Chapter 3 – Existing Traffic Situation, which presents the existing local road network within the vicinity of the proposed development, the details of the traffic count survey and the traffic assessment of the existing traffic conditions;

Chapter 4 – Future Traffic Situation, which presents the design year future traffic flows under reference and design scenarios based on the assumed annual growth rate considered the planned adjacent developments;

Chapter 5 – Transport Provisions, which presents the traffic arrangements and provisions of internal transport facilities for the proposed development;

Chapter 6 – Traffic Management Plan, which outlines procedures for coordinating truck movements via GPS tracking and walkie-talkie communication to prevent congestion;

Chapter 7 – Contingency Plan, which Specifies measures to manage silo malfunctions by rerouting excess trucks to a temporary waiting area;

Chapter 8 – Non-Conformance, Incident Investigation and Auditing Mechanism, which describes processes for managing deviations, investigating incidents, and conducting audits for continuous improvement; and

Chapter 9 – Summary and Conclusion, which summarizes the key findings and conclusions regarding traffic impacts and management measures.

2 The Proposed Development

2.1 The Application Site

The Application Site has an approximate area of 4,266 m^2 and is bounded by TYTL 14, TYTL 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi. It is bordered by Tam Kon Shan Road on the south. The site is situated to the west of Green Kwai Tsing and Tsing Yi Northeast Park. The site location is shown in **Figure 2.1**.

2.2 The Proposed Development

The proposed development involves constructing a Temporary Concrete Batching Plant for a period of five years. The site's strategic location along the coast enables the marine transportation of concrete ingredients, significantly reducing the potential traffic impact on the surrounding road network. Furthermore, the daily operations of the concrete batching plant requires certain raw materials, which will be transported overland to the proposed development for concrete manufacturing. Specifically, these materials include admixtures and pulverised fuel ashes. The delivery trucks carrying these raw materials will be scheduled to arrive at the plant during designated time intervals, particularly during off-peak hours, in order to mitigate any adverse traffic effects on the adjacent road networks.

The operational parameters and activities for the development are summarized in **Table 2.1** below:

Table 2.1 Development Operation Parameter and Activities

Design Parameter	Quantity of Proposed Development Parameter
Lot No.	TYTL 14, TYTL 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi
Application Area	About 4,335 m^2
Gross Floor Area	About 1,419.2 m^2
Zoning	"Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses"
Completion Year	2026
Activities	**Delivery Mode**
Ingredient Delivery	Barge + Truck
Final Product Delivery	Truck

3 Existing Traffic Situation

3.1 Existing Road Network

The major road networks in the vicinity of the Application Site are listed as follows:

Tsing Yi North Coastal Road, is a dual-two carriageway oriented in the east-west direction. This road connects Tsing Ma Control Area and Tsing Tsuen Road as a primary linkage, providing a major passageway for the commute of the motorists between Lantau Island, New Territories Northwest and Kowloon.

Tam Kon Shan Road, is a single-two carriageway oriented in an east-west direction. This road facilitates connections to the Tsing Yi North Coastal Road at both its termini and its midpoint. Additionally, Tam Kon Shan Road links to other local roads in Tsing Yi via the Tam Kon Shan Interchange.

3.2 Vehicular Ingress/Egress Arrangement

The proposed development benefits from well-established vehicular ingress and egress routes:

Ingress Route

Motorists traveling from New Territories, Kowloon, or Hong Kong Island primarily use the Tsing Yi North Coastal Road to access the site. The designated route includes a ramp to Tam Kon Shan Road, leading to the final approach via Tam Kon Shan Road.

Motorists traveling from Lantau Island typically utilize the Tsing Yi North Coastal Road to reach the site. The prescribed route involves making an u-turn at the Tam Kon Shan Interchange, followed by a ramp that connects to Tam Kon Shan Road, ultimately leading to the final approach via Tam Kon Shan Road.

Egress Route

Vehicles leaving the site follow the reverse route via Tam Kon Shan Road, merging onto the Tsing Yi North Coastal Road through the designated ramp, and then proceeding to their respective destinations in the New Territories, Kowloon, or Hong Kong Island.

Vehicles departing from the site utilize the reverse route along Tam Kon Shan Road, merging onto the Tsing Yi North Coastal Road via the designated ramp. They then execute a U-turn at the Tam Kon Shan Interchange before continuing to their respective destinations in the Lantau Island.

The detailed ingress/egress arrangement is illustrated in **Figure 3.1**.

3.3 Traffic Count Surveys

To appraise the existing traffic conditions, classified turning movement count surveys have been carried out at the key junctions of the surrounding road network, as shown in **Figure 3.2**, on a normal school day in October 2024 from 08:00 to 19:00.

The traffic counts were recorded in a 15-minute interval, and to be converted into passenger car unit (pcu) values. The highest consecutive 15-minute hourly traffic volume was adopted as the peak hour traffic flow.

The morning, noon and evening peak hours of the road network on school days have been identified as 08:15 to 09:15, 12:15 to 13:15 and 17:30 to 18:30 respectively. The observed traffic flows of the key junctions are presented in **Figure 3.3**.

3.4 Existing Junction Assessment

Junction capacity assessment

Junction capacity assessments have been conducted at major junctions along the vehicular ingress/egress route, following the guidelines set out in the Transport Planning and Design Manual ("TPDM") Volumes 2. The results of these assessments are summarized in **Table 3.1**, while the detailed junction calculation sheets can be found in **Appendix A**.

The performance of a priority junction or roundabout is indicated by its Design Flow / Capacity Ratio ("DFC"). A DFC value of 0.85 or below is considered within an acceptable level without causing undue delay to motorists passing through the concerned junctions.

Table 3.1 Existing Junction Performance

Jun No.	Junction Location	Type / Capacity Index *	AM Peak	Noon Peak	PM Peak
Jn A	Tam Kon Shan Road / Tsing Yi North Coastal Road Slip Road (West)	Roundabout/ DFC	0.24	0.23	0.12
Jn B	Tam Kon Shan Road/ Tsing Yi North Coastal Road Slip Road (East)	Priority/ DFC	0.35	0.34	0.22
Jn C	Tam Kon Shan Interchange	Roundabout/ DFC	0.64	0.66	0.70

*Notes: * DFC - Design Flow / Capacity Ratio*

As depicted in **Table 3.1**, all key junctions currently operate below their maximum capacities during the identified peak.

Link capacity assessment

Link Capacity Assessments are carried out at the key road links in accordance with Transport Planning and Design Manual ("TPDM") Volume 2. The results of the link capacity assessment are summarised in **Table 3.2.**

The performance of a link of carriageway is indicated by its Peak Hourly Flows/Design Flow Ratio (P/Df). A P/Df value of 0.85 or below is considered within an acceptable level without causing undue delay to motorists passing through the concerned link section.

Table 3.2 Existing Link Performance

Link No.	Section of Carriageway	Design Flow (pcus/hr)	Observed Scenario Peak Hourly Flows			Peak Hourly Flows/ Design Flow Ratio (P/Df)		
			AM Peak	Noon Peak	PM Peak	AM Peak	Noon Peak	PM Peak
L1	Tam Kon Shan Road eastbound (btwn. Jn A and Jn B)	810 (a)	325	303	178	0.40	0.37	0.22
L2	Tam Kon Shan Road westbound (btwn. Jn A and Jn B)	810 (a)	120	95	36	0.15	0.12	0.04
L3	Tsing Yi North Coastal Road Slip Road southbound	1,720 (b)	250	242	160	0.15	0.14	0.09
L4	Tsing Yi North Coastal Road Slip Road northbound	1,720 (b)	260	256	136	0.15	0.15	0.08
L5	Tsing Yi North Coastal Road Flyover eastbound	2,520 (c)	398	590	686	0.16	0.23	0.27
L6	Tsing Yi North Coastal Road Flyover westbound	2,520 (c)	701	603	658	0.28	0.24	0.26

Notes: (a) The design flow of Tam Kon Shan Road = 400 veh/hour/direction (capacity for local road) x 0.9 reduction factor of heavy vehicle x 2.25 pcu factor = 810 pcus/hour.
(b) The design flow of Tam Kon Shan Road = 850 veh/hour/direction (capacity for 2 lane district distributor) x 0.9 reduction factor of heavy vehicle x 2.25 pcu factor = 1,720 pcus/hour.
(c) The Design Flow of Tam Kon Shan Road = 2,000 veh/hour/direction (capacity for 4 lane district distributor) x 0.9 reduction factor of heavy vehicle x 1.4 pcu factor = 2,520 pcus/hour.

As depicted in **Table 3.2**, all key links currently operate below their maximum capacities during the identified peak.

3.5 Public Transport

As depicted in **Figure 3.4**, there are no public transport service stops within the desirable walking distance of 400 meters from the proposed development. However, GMB Route 88A provides service along Tam Kon Shan Road for the proposed development from 06:30 to 09:00 in morning period on normal week days.

4 Future Traffic Situation

4.1 Design Year Road Network

The design year will be determined as either three years following the completion year of 2026 or five years after the application year of 2024, depending on which period is longer. Both calculations yield a design year of 2029. Therefore, the year 2029 has been chosen as the design year for this study.

For the Design Year 2029, the Growth Factor Method is employed to forecast traffic. This method utilizes the historical data from Annual Traffic Census Data (ATC) and demographic trends from the "2021 – based Territorial Population and Employment Data Matrix" ("TPEDM") to predict future traffic volumes. The higher growth factor from these sources is chosen for a conservative traffic estimate.

A review of upcoming road and junction improvement projects reveals few expected changes to the current road network. The current and expected road network developments reinforce the suitability of using the Growth Factor Method. This approach effectively leverages existing traffic trends to project future traffic patterns, ensuring a robust and realistic forecast for the Design Year 2029.

4.2 Development Traffic Generation

The peak hour traffic trip generation and attraction are estimated based on the design production capacity of the proposed concrete batching plant and the information provided by the Applicant. There are typically 1 to 2 trucks daily for the delivery of pulverised fuel ash (PFA) and admixture. However, as these deliveries occur outside of peak hours, they are not included in the peak hour trip generation flows. The development trips are detailed in **Table 4.1**.

Table 4.1 Development Traffic Generation

Use	Generation			Attraction		
	AM Peak	Noon Peak	PM Peak	AM Peak	Noon Peak	PM Peak
Private Car Trips (pcus/ hour) [(a)]	2	2	2	2	2	2
Concrete Mixer Truck Trips (pcus/ hour) [(b)]	121	121	121	121	121	121
Total(pcus/ hour)	123	123	123	123	123	123

(a) Information provided by the Applicant.

(b) The no. of concrete mixer truck generated/attracted by plant = design production capacity / capacity of a concrete mixer truck x 2.8 pcu factor = (300 m^3 per hour / 7m^3) x 2.8 pcu = 121 pcus per hour.

As shown in **Table 4.1**, the proposed development would generate 123 pcus and attract 123 pcus in all AM, Noon and PM peak hours. The development traffic has been distributed and assigned to the existing road network.

4.3 Regional Traffic Growth

To estimate traffic flows for the design year 2029, it is proposed to adjust the existing traffic flows to reflect anticipated natural traffic growth.

Annual Traffic Census (ATC)

Reference has been made to the 2018 to 2023 Annual Traffic Census Reports, published by the Transport Department. The traffic data recorded at counting stations adjacent to the Application Site are shown in **Table 4.2**.

Table 4.2 Annual Traffic Census Data

No.	Link	From	To	Road Type*	2018	2019	2020	2021	2022	2023	Growth Rate p.a.
6108	Tsing Yi N Coastal Rd	Tam Kon Shan INT W End	Slip Rds to & from Tam Kon Shan Rd	PD	23,440	22,720	19,410	18,860	21,030	22,970	-0.40%
6221	Tsing Yi N Coastal Rd FO	Tsing Tsuen Rd	Tam Kon Shan INT W End	DD	14,400	14,270	14,330	13,750	13,480	14,820	+0.58%
Total					37,840	36,990	33,740	32,610	34,510	37,790	**-0.03%**

*Note: * PD= Primary Distributor & DD = district Distributor*

Table 4.2 presents traffic flow data spanning six years. The data indicates variable annual growth rates across different road links, with one link experiencing a decline and another link showing an increase in traffic volume. When considering all the links collectively, the compounded annual growth rate averages out to a decrease of **-0.03%**.

Projected Population Data

According to the report "2021 – based Territorial Population and Employment Data Matrix" ("TPEDM") published by the Planning Department, the population and employment growth data from year 2021 to 2031 in Kwai Tsing Planning Data District are presented in **Table 4.3**.

Table 4.3 2021-Based TPEDM Data

Planning Data District	Population		Employment		Population & Employment		Avg. Annual Growth
	2021	2031	2021	2031	2021	2031	
Kwai Tsing	495,800	483,050	226,350	227,800	722,150	710,850	**-0.16%**

The data indicate the growth in population and employment in Kwai Tsing District at an annual rate of **-0.16%** from 2021 to 2031.

Since the growth rates derived from both historical traffic data and future planning data are less than +1.00%, an annual growth rate of **+1.00%** has been adopted for conservative forecasting purposes. This growth factor will be applied to the traffic flows observed in 2024.

4.4 Major Planned/ Committed Developments

The forecast includes major planning applications or committed developments near the site, detailed in **Table 4.4** while the traffic generations/attractions of the those planned developments are depicted in **Table 4.5**.

Table 4.4 Major Planning Applications/ Committed Developments

Location	Type of Development	Development Parameters	Completion Year/ *Operation Year*	*Remarks (Source of Information)*

Notes: (b_1) The traffic generation/attraction is anticipated by the trip rates (mean limit) for subsidised housing public rental of average flat size 40m^2 listed in Table 1 of Annex C in T.P.D.M. Vol.1.
(b_2) The traffic generation/attraction is anticipated by the trip rates (mean limit) for retail land use listed in Table 2 of Annex C in T.P.D.M. Vol.1.
(b_3) The traffic generation/attraction of social welfare facilities and kindergartens is made refence to the approved Traffic Impact Assessment for Proposed Public Housing Development Sites 1 & 2 in Sheung Shui Areas 4 and 30.

(b_4) The traffic generation/attraction is anticipated by the trip rates for General Out-patient Clinic listed in the approved Traffic Impact Assessment Report for Proposed Tai Wai Government Complex Co-located with Public Housing Development at Tsuen Nam Road, Tai Wai.
(c_1) The traffic generation/attraction is anticipated by the trip rates (mean limit) for subsidised housing public rental of average flat size 40m^2 listed in Table 1 of Annex C in T.P.D.M. Vol.1.
(d) The generation/attraction is referred to the Traffic Impact Assessment of Planning Application No. Y/TY/2.
(e) The traffic generation/attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/143.
(f) The traffic generation /attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/144.
(g) The traffic generation /attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/145.
(h) The traffic generation /attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/146.
(j) The traffic generation /attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/148.
(k) The traffic generation /attraction is referred to the Traffic Impact Assessment of Approved Planning Application No. A/TY/149.
(l) An assumption of constriction generation/attraction rate (1 construction vehicle per 10 minutes with 2.5 pcu factor for each construction vehicle)

4.5 Reference and Design Flows

The growth factor will be applied to the traffic flows of 2024 Observed Peak Hours, to estimate the 2029 Reference Flows and 2029 Design Flows. The reference and design flows for year 2029 are calculated from the following formulae:

2029 Reference Flows	=	2024 Observed Flows x $(1+1.00\%)^5$ + Planned/ Committed Development Traffic
2029 Design Flows	=	2029 Reference Flows + Proposed Development Traffic

Figure 4.1 shows the 2029 Reference Peak Hours Flows in the. By adding the development traffic, **Figure 4.2** shows the 2029 Design Peak Hours Traffic.

4.6 Future Assessment

Junction capacity assessment

Junction capacity assessments were carried out for the major junctions in the local road network for both the Reference and Design scenarios. The results are summarised and presented in **Table 4.6** with detailed calculation sheets attached in **Appendix A**.

Table 4.6 Future Junction Performance

Jun No.	Junction Location	Type / Capacity Index *	Reference Scenario			Design Scenario		
			AM Peak	Noon Peak	PM Peak	AM Peak	Noon Peak	PM Peak
Jn A	Tam Kon Shan Road / Tsing Yi North Coastal Road Slip Road (West)	Roundabout/ DFC	0.26	0.25	0.13	0.38	0.37	0.24
Jn B	Tam Kon Shan Road/ Tsing Yi North Coastal Road Slip Road (East)	Priority/ DFC	0.39	0.38	0.25	0.41	0.40	0.26
Jn C	Tam Kon Shan Interchange	Roundabout/ DFC	0.74	0.75	0.78	0.74	0.76	0.78

*Notes: * DFC - Design Flow / Capacity Ratio*

As shown in **Table 4.6**, the capacities of all key junctions are expected to perform satisfactorily during peak periods in both Reference and Design Scenarios.

Link capacity assessment

Link capacity assessments were carried out for the major road link in the local road network for both the Reference and Design scenarios. The results are summarised and presented in **Table 4.7** and **Table 4.8** respectively.

Table 4.7 Future Link Performance (Reference Scenario)

Link No.	Section of Carriageway	Design Flow (pcus/hr)	Reference Scenario Peak Hourly Flow			Peak Hourly Flows/ Design Flow Ratio (P/Df)		
			AM Peak	Noon Peak	PM Peak	AM Peak	Noon Peak	PM Peak
L1	Tam Kon Shan Road eastbound	810 [(a)]	354	332	201	0.44	0.41	0.25
L2	Tam Kon Shan Road westbound	810 [(a)]	127	100	38	0.16	0.12	0.05
L3	Tsing Yi North Coastal Road Slip Road southbound	1,720 [(b)]	275	268	182	0.16	0.16	0.11

L6	Tsing Yi North Coastal Road Flyover westbound	2,520 (c)	873	755	823	0.35	0.30	0.33

Notes: (a) The design flow of Tam Kon Shan Road = 400 veh/hour/direction (capacity for local road) x 0.9 reduction factor of heavy vehicle x 2.25 pcu factor = 810 pcus/hour.
(b) The design flow of Tam Kon Shan Road = 850 veh/hour/direction (capacity for 2 lane district distributor) x 0.9 reduction factor of heavy vehicle x 2.25 pcu factor = 1,720 pcus/hour.
(c) The Design Flow of Tam Kon Shan Road = 2,000 veh/hour/direction (capacity for 4 lane distributor) x 0.9 reduction factor of heavy vehicle x 1.4 pcu factor = 2,520 pcus/hour.

As depicted in **Table 4.7** and **Table 4.8**, the capacities of all key links are expected to perform satisfactorily during peak periods in both Reference and Design Scenarios.

5 Transport Provision

5.1 Vehicular Access Arrangement

The proposed approximately 7.3m wide vehicular access will be located at Tam Kon Shan Road, as depicted in **Figure 5.1**. A pair of “No Left Turn” traffic sign will be erected at the access to guide concrete truck drivers to follow the egress route depicted in **Figure 3.1**.

5.2 Internal Transport Provisions

Under the Hong Kong Planning Standards and Guidelines (HKPSG), there are no specific standards for car parking and loading/unloading provisions for concrete batching plants. Therefore, the internal transport facilities have been carefully designed based on the operational requirements of the proposed development to ensure seamless and efficient site operations.

The internal transport provisions include designated parking spaces, loading/unloading bays, and waiting spaces, which serve the following critical purposes:

- Facilitating efficient vehicle manoeuvring within the site,
- Preventing congestion and queuing on public roads, and
- Ensuring vehicles are parked and unloaded in an organized manner.

The proposed internal transport provision is summarized in **Table 5.1**.

Table 5.1 Internal Transport Provisions

Type	Dimension	Proposed Provision
Private Car Parking Space	2.5m (W) x 5.0m (L) x 2.4m (H)	2*
Motorcycle Parking Space	1.0m (W) x 2.4m (L) x 2.4m (H)	2
Heavy Goods Vehicle Loading/Unloading Bay	3.5m (W) x 11.0m (L) x 4.7m (H)	3
Heavy Goods Vehicle Waiting Space	3.5m (W) x 11.0m (L) x 4.7m (H)	12

Note: The number of private car parking spaces is projected in accordance with the closest category, "Industrial Use," as outlined in HKPSG CH8. Referring to the Gross Floor Area (GFA) of 1,419.2m^2 mentioned in table 2.1 and the guidelines of HKPSG, it is determined that the number of private car parking should be established at a rate of one parking space for every 1,000 to 1,200 m² of GFA, necessitating the provision of two parking spaces.

The design includes 12 dedicated waiting spaces for heavy goods vehicles (HGVs), such as concrete mixer trucks, ensuring that vehicles can park within the site while awaiting their turn for loading or unloading operations. This provision is critical in maintaining traffic flow along the surrounding public roads, as it eliminates the risk of vehicles queuing or waiting on Tam Kon Shan Road or other access routes.

In addition, the internal layout has been optimized to accommodate the simultaneous presence of multiple vehicles, including those arriving, waiting, loading/unloading, and departing. This ensures that:

- Vehicles can manoeuvre efficiently without delays or bottlenecks.
- By confining all vehicle activities within the site, the design minimizes the likelihood of adverse impacts on public roads, including congestion or safety hazards.

A comprehensive queuing analysis has been conducted to evaluate the loading/unloading bays' functionality. The results, presented in **Appendix B**, confirm that the probability of queuing on public roads is negligible **(less than 0.003%)**. It indicates a **confidence level exceeding 99.9%** that there will be no traffic queuing on public roads. Consequently, the proposed internal transport provisions are deemed adequate for the proposed development.

Furthermore, a swept path analysis has been performed to ensure that there is sufficient space for vehicles entering and leaving the application site. The typical manoeuvrability of vehicles is shown in **Figures SP-01 to SP-06 (Appendix C)**.

6 Traffic Management Plan

6.1 Introduction

The Traffic Management Plan is designed to establish a coordinated framework that ensures safe, efficient, and orderly movement of vehicles, pedestrians, and equipment associated with the operation of the concrete batching plant. Its primary purpose is to minimize potential conflicts and disruptions by outlining clear procedures for vehicle ingress and egress, scheduling deliveries during off-peak hours, and implementing effective signage and control measures. This plan also assigns roles and responsibilities to staff and contractors, incorporates regular monitoring and auditing mechanisms, and ensures compliance with relevant local traffic and safety regulations, ultimately safeguarding both site operations and the surrounding community.

6.2 Operation Procedure

This procedure provides a structured framework for managing concrete truck operations within the batching plant, ensuring both efficiency and safety. The aim is to minimize congestion and potential hazards while maintaining consistent communication between drivers and site management. By following this procedure, all stakeholders can be assured that each truck operation is executed methodically and in compliance with the established traffic management and safety protocols. The procedure is listed below:

Arrival

Upon arrival at the plant, a concrete truck follows a designated access route and enters the site through a controlled entry point.

Assign to Waiting Space

Once on site, the truck is directed—via radio communication with plant management with assistance of the site manager—to a dedicated waiting space where it parks until its scheduled turn for loading.

Waiting

During this period, the driver maintains communication with the control centre to confirm the upcoming operation. When ready, the truck leaves the waiting area and proceeds to the loading zone adjacent to the silo.

Loading

Here, the truck aligns at the loading bay where concrete is dispensed from the silo into its mixer under controlled conditions, ensuring the proper flow and mix consistency.

Slump Test

Immediately following the loading, the truck is guided to a slump test station where a sample of the freshly loaded concrete is taken to assess its workability and quality.

Cleaning

Once the slump test confirms that the concrete meets the required specifications, the truck moves on to a designated cleaning area where any residual concrete is removed from the mixer.

Leaving

Finally, after these steps are completed, the truck exits the site via a predetermined egress route, ensuring the overall traffic flow remains smooth and safe.

6.3 Realtime Positioning

To ensure a smooth and efficient operation that prevents site overcrowding, continuous communication with truck drivers is maintained throughout their journey.

From the moment a truck departs for the site, its real-time location is monitored via GPS, and drivers are contacted via walkie talkie at key stages of their route. Initially, drivers receive instructions regarding the designated route and estimated arrival times.

As the truck proceeds, plant management uses the GPS data to proactively issue updates or adjustments, such as advising the driver to maintain a steady pace, slow down, or hold at a predetermined waiting area even before the truck is close to the site.

This ongoing dialogue allows management to coordinate arrivals, prevent congestion, and ensure that each truck proceeds to the loading zone at an optimal time.

Once the truck is near the loading area, further instructions guide the driver through the remaining steps—from entering the loading bay to completing the slump test and cleaning operations—until the truck finally exits the site.

This comprehensive, continuous communication strategy ensures that drivers are informed and responsive at all critical stages of the operation, thereby maintaining orderly flow and enhancing safety.

6.4 Small Fleet Size

At any given time, the concrete truck fleet operating at the plant is maintained at fewer than 20 vehicles. In conjunction with this modest fleet size, the facility is designed with 15 dedicated waiting spaces and loading bays. This configuration provides ample capacity, ensuring that trucks can be processed efficiently without forming queues.

Continuous GPS monitoring and proactive communication via walkie talkies enable the control centre to coordinate truck movements precisely, so that each truck is directed into an available space well in advance.

As a result, the likelihood of trucks queuing is nearly eliminated, supporting smooth, uninterrupted operations at the batching plant.

6.5 Junction Restriction Measures

To mitigate potential traffic impacts and ensure the safe and efficient movement of vehicles in Tsing Yi Town, specific access restrictions have been implemented for concrete mixer trucks associated with the proposed development. These measures are designed not only to reduce congestion during peak hours but also to enforce strict adherence to designated ingress/egress routes, as illustrated in **Figure 3.1**. In addition, certain junctions in Tsing Yi have been permanently restricted for concrete mixer truck passage, as detailed in **Table 6.1 and Figure 6.1**, with exceptions granted only under contingency or other circumstances evaluated by the Government Departments.

Enforcement measures have been integrated into the Traffic Management Plan, utilizing advanced GPS tracking to continuously monitor truck movements in real time. Further details on these enforcement protocols—including violation detection, automatic alerts, and the imposition of fines and penalty clauses—will be elaborated in **Chapter 8**.

Table 6.1 Restriction at Tsing Yi Junctions

Junction No.	Junction	AM Peak Period & PM Peak Period Restriction (07:30 – 09:30 & 16:30 – 18:30)	Full Time Restriction
C	Tam Kong Shan Interchange	X	
D	Tsing Yi Road West / Ching Hong Road Junction		X
E	Tsing Yi Interchange		X

Junction No.	Junction	AM Peak Period & PM Peak Period Restriction (07:30 – 09:30 & 16:30 – 18:30)	Full Time Restriction
F	Tsing Yi Road / Tsing Yi Hong Wan Road/ Tsing Sha Highway Roundabout		X
G	Tsing Yi Heung Sze Wui Road/ Fung Shue Wo Road / Tsing King Road Roundabout		X
H	Cheung Wan Street/ Tsing Yi Heung Sze Wui Road Junction		X

6.6 Conclusion

In summary, the integrated system of continuous GPS monitoring and proactive communication ensures that the operations remain smooth and efficient. With a fleet size of fewer than 20 trucks and 15 dedicated waiting spaces and loading bays, there is ample capacity to prevent any queuing, resulting in a well-coordinated, congestion-free process at the batching plant.

7 Contingency Plan for Silo Malfunction

7.1 Introduction

This contingency plan is designed to minimize disruption and ensure safety by diverting only the excessive trucks to the temporary waiting area, thereby maintaining a controlled and efficient flow of operations during a silo malfunction.

7.2 Trigger and Activation

If one or more of the three silo legs malfunction—disrupting the normal loading process and leading to an accumulation of concrete trucks—the control center will immediately activate the contingency plan. Monitoring systems will detect the malfunction, prompting plant management to notify maintenance personnel and relevant stakeholders via walkie talkie.

7.3 Temporary Reassignment of Excessive Trucks

In response to the malfunction, the control center will assess the current truck flow. Rather than redirecting every truck, only the excessive trucks—those arriving beyond the available capacity of the main loading area—will be directed to the temporary waiting area at the loading/unloading zone on Sai Tso Wan Road (Marshaling area of another Golik's concrete batching plant in Hongkong United Dockyard site). This approach ensures that trucks already in process or within the capacity limits continue operating normally, while only the surplus vehicles are diverted to prevent congestion.

7.4 Safety and Traffic Management Measures

Traffic Rerouting: On-site personnel will supply truck drivers with a detailed map to guide any excess vehicles safely to the temporary holding area, ensuring a smooth transition without affecting the main area's operations.

Continuous Monitoring: The control center will use real-time GPS tracking to monitor truck positions, ensuring that the temporary waiting area remains within its capacity limits and that no safety hazards develop from idling vehicles.

Communication Protocol: Drivers of the excessive trucks will receive timely updates via walkie talkie, informing them about the expected waiting times and subsequent instructions for re-entry into the main loading area once normal operations resume.

7.5 Maintenance and Repair Response

Immediate Inspection: Maintenance teams will promptly assess the malfunctioning silo legs to determine the extent of the issue.

Prioritization of Repairs: Urgent repairs will be initiated, with interim measures—such as manual or alternative loading processes—being considered if feasible.

Risk Assessment: A detailed risk assessment will be conducted to ensure that temporary operations in the waiting area do not introduce additional hazards.

7.6 Evaluation of Consequences and Mitigation Measures

Operational Delays: The primary impact is a reduction in concrete output, potentially delaying production and delivery schedules.

- *Mitigation:* The temporary waiting area is used to control truck flow, and proactive communication with clients will outline revised timelines.

Safety Risks: Accumulation of excessive trucks may increase the risk of collisions or on-site congestion.

- *Mitigation:* Strict traffic control measures, clear signage, and additional safety personnel in the temporary waiting area will help mitigate these risks.

Driver Inconvenience: Extended waiting periods for the excessive trucks might lead to driver fatigue and operational inefficiencies.

- *Mitigation:* Consistent communication will manage driver expectations, and periodic updates regarding repair progress will reduce uncertainty.

7.7 Recovery and Resumption of Normal Operations

After repairs restore the silo legs to full functionality, the maintenance team will verify that the system is stable. The control center will then gradually redirect the excessive trucks from the temporary waiting area back to the main loading area, carefully monitoring truck flow to avoid further congestion. A post-incident review will follow to refine the contingency procedures and address any shortcomings.

8 Chapter 8 – Non-Conformance, Incident Investigation and Auditing Mechanism

8.1 Introduction

This chapter outlines the procedures for managing non-conformance, investigating incidents, and auditing operations to ensure continuous compliance with the Traffic Management and Contingency Plans. By establishing a clear framework for monitoring deviations, analyzing incidents, and implementing corrective actions, the plant can maintain high standards of safety and operational efficiency.

8.2 Non-Conformance Management

Any deviation from established procedures – including lapses in communication, failure to adhere to scheduled truck movements, or unauthorized transit through restricted junctions, or issues in redirecting excessive trucks to the temporary holding area – will be treated as a non-conformance. When a non-conformance is identified, it must be immediately documented using a standardized report form. The report will detail the nature of the deviation, the time and location of occurrence, and any potential safety or operational impacts. The control center will review these reports and assign corrective actions, ensuring that any recurring issues are addressed through updates to procedures or additional training for on-site personnel.

Enforcement Measures: In addition to corrective actions, specific enforcement measures will be applied to any significant non-conformance or traffic violation to strengthen compliance and deter future violations. These measures include:

- **Fines for Non-Compliance:** Individuals who violate the Traffic Management Plan's restrictions (for example, by taking unauthorized routes or operating during prohibited hours) will be subject to monetary fines. The fines will be commensurate with the severity of the offense and are intended to immediately penalize non-compliance.
- **Penalty Clauses in Contracts:** Contractual agreements with drivers and transport contractors will incorporate penalty clauses triggered by repeated or serious violations. If an individual or entity is found in violation of the traffic restrictions, this record will be considered during contract renewal. Consequences can range from financial penalties at the time of renewal to suspension or non-renewal of contracts for persistent offenders.

All enforcement actions are documented alongside the non-conformance reports. This dual approach of corrective action and penalty ensures a strong deterrent effect against violating the proposed traffic restrictions. Compliance with the Traffic Management Plan will be closely monitored in real time (using GPS tracking data and communication logs), so that any breach can be swiftly identified. Upon detecting a violation, the control center or designated safety officer will promptly enforce the appropriate measure, issuing the fine or initiating contract penalty procedures, and record the outcome. This clear enforcement mechanism leaves no ambiguity about the consequences of non-compliance and encourages all personnel and contractors to adhere strictly to the traffic rules in place.

8.3 Incident Investigation

In the event of an incident, such as a near-miss, collision, or any safety-related event, the investigation process will be initiated without delay. The investigation procedure includes:

- **Immediate Response:** Secure the area and provide assistance, if necessary, while ensuring that all safety measures are in place to prevent further incidents.
- **Data Collection:** Gather information via GPS tracking records, walkie talkie communication logs, on-site surveillance (if available), and witness statements from drivers and personnel.
- **Root Cause Analysis:** Utilize structured methodologies (e.g., the “5 Whys” or fishbone diagrams) to determine underlying causes, whether they are process-related, human error, or equipment malfunction.
- **Corrective Action Implementation:** Develop and execute a plan to address the identified issues. The corrective action plan is then reviewed for effectiveness during subsequent operations.
- **Reporting:** Document the investigation findings and share lessons learned with all stakeholders to enhance future safety and operational performance. If the investigation reveals that a violation of traffic restrictions or other non-compliance contributed to the incident, the report will also note any enforcement actions (such as fines or contract penalties) imposed on the responsible parties. This ensures that incidents caused by non-compliance are met with appropriate disciplinary measures in addition to corrective steps.

8.4 Auditing Mechanism

To ensure ongoing compliance and continuous improvement, regular audits of the traffic management system and contingency measures will be conducted. These audits include:

- **Scheduled Audits:** Periodic reviews (monthly or quarterly) performed by a designated safety officer to verify adherence to procedures, check the condition of monitoring equipment (GPS, communication systems), and review non-conformance and incident reports.
- **Random Inspections:** Unannounced spot-checks during operations to ensure that procedures are being followed in real time.
- **Audit Reporting:** Each audit will generate a report summarizing observations, identifying areas of concern, and recommending improvements. The findings will be discussed in regular safety meetings, and corrective measures will be tracked until resolved.
- **Feedback Loop:** Audit outcomes, incident investigations, and non-conformance reports will be integrated into the training and operational review processes to promote a culture of continuous improvement and accountability.
- **Enforcement Review:** As part of each audit, records of traffic violations and the corresponding enforcement measures (fines issued or contract penalties applied) will be examined. The audit will verify that these measures are being applied consistently and fairly. It will also assess their effectiveness in deterring non-compliance, with auditors recommending any adjustments to the enforcement approach if current measures are found lacking.

Through this auditing mechanism, not only is procedural compliance checked, but the efficacy of the enforcement program itself is regularly evaluated. This ensures that the monitoring and penalty system remains robust and credible over time.

8.5 Conclusion

By implementing this comprehensive Non-Conformance, Incident Investigation, and Auditing Mechanism, the plant ensures that any deviations or safety incidents are promptly addressed, corrected, and learned from, while future violations are actively discouraged. The inclusion of fines for non-compliance and penalty clauses in contracts provides tangible consequences for breaking traffic rules, creating a strong deterrent effect across all levels of operation. Overall, this mechanism supports the overall objective of maintaining a safe, efficient, and compliant operational environment, thereby reinforcing the reliability of both the Traffic Management Plan and the Contingency Plan.

9 Summary and Conclusions

9.1 Summary

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

In the Approved Tsing Yi Outline Zoning Plan No. S/TY/32 (referred to as the "OZP"), the Applicant Site is zoned as "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses". According to the Schedule of Uses outlined in the OZP, the intended use of a Concrete Batching Plant fall under Column 2 uses. Consequently, obtaining planning permission from TPB is necessary for the proposed temporary concrete batching plant under Section 16 of the Town Planning Ordinance.

To appraise the existing traffic conditions, classified turning movement count surveys have been carried out at the key junctions of the surrounding road network on a normal school day in October 2024 from 08:00 to 19:00. The morning, noon and evening peak hours of the road network on weekday have been identified as 08:15 to 09:15, 12:15 to 13:15 and 17:30 to 18:30 respectively.

Year 2029 is used as the design year of the traffic impact assessment. After the comparison between the historical data and the future planning data, for conservative purposes, an annual growth rate of +1.00% is adopted. This growth factor has been applied to the observed traffic flows in 2024 to determine the 2029 anticipated traffic flows.

The capacities of all the key junctions are expected to be performing satisfactorily during the peak periods for both the Reference and Design Scenarios.

A comprehensive analysis of the loading and unloading bays demonstrated that the proposed facilities are sufficient to accommodate site operations without creating external traffic impacts. The probability of vehicles queuing on public roads was calculated to be negligible (<0.003%).

A swept path analysis has been performed to ensure that there is sufficient manoeuvring space for vehicles entering and leaving the application site.

The Traffic Management Plan ensures smooth, safe vehicle movement at the batching plant using continuous GPS tracking and proactive walkie talkie communication. With a fleet of fewer than 20 trucks and 15 dedicated waiting/loading spaces, only excess trucks are diverted to a temporary holding area, preventing congestion and maintaining efficient operations.

The contingency plan provides clear procedures during silo malfunctions by rerouting trucks beyond the main loading area's capacity to a designated holding area at Sai Tso Wan Road. Immediate notifications established safety protocols, and ongoing driver communication further enhance resilience, ensuring safe, uninterrupted operations during unexpected disruptions and reliability.

A comprehensive framework for managing non-conformances, investigating incidents, and auditing operations has been established. Deviations are documented and resolved via data collection and root cause analysis. Scheduled and random audits ensure continuous improvement. Enforcement measures, including fines and contract penalties, deter violations and ensure strict adherence to traffic restrictions.

9.2 Conclusions

The findings of the traffic impact assessment confirm that the road network in the vicinity of the proposed development has sufficient capacity to accommodate the additional traffic generated, ensuring smooth traffic flow and no adverse impacts. The proposed development is therefore acceptable from a traffic perspective, with its design incorporating adequate measures to support efficient site operations while minimizing impacts on the surrounding road network.

LOADING/UNLOADING BAY ASSESSMENT (3 BAYS & 12 WAITING SPACES)

Traffic Impact Assessment for Section 16 Planning Application of Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Tsing Yi Town Lots Nos. 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

Arrival Rate Estimate

Max. Trip Attraction Rate	=	**43**	veh/hr
Peak 15 Minutes Arrival Rate	=	10.75	veh/15mins
Peak Arrival Rate (A)	=	0.72	veh/min
Total Concrete Loading Time (say)	=	**360**	s
Average Servicing Rate (S)	=	60s / 360 x 3	veh/min
	=	0.50	veh/min

The probability that there are n units in the concrete loading system

P(n) = p^n x P(0) = p^n x (1-p)

$$P(n) = \frac{1}{\sum_{n=0}^{N-1}(\frac{p^n}{n!}) + \frac{p^N}{N!(1-\frac{p}{N})}} \quad \text{for } n = 0$$

$$P(n) = \frac{p^n}{n!}P(0) \qquad \text{for } 0 < n \leq N$$

$$P(n) = \frac{p^n}{N^{n-N}N!}P(0) \qquad \text{for } n > N$$

where n = number of units in the system

p = A/S = 1.43333

P(n) = probability of the system being at state n

Probability of an idle bay

P(0) = 1 / [(1 + p + p^2 / 2) + p^3 / (6 - 2p)]

= 1 / [(1 + 1.43333 + 1.43333^2 /2) + 1.43333^3 / (6 - 2 x 1.43333)]

= 22.725%

Probability of 1 bay is in use

P(1) = 1.43333^1 (0.22725) / 1! = 32.573%

Probability of 2 bays are in use

P(2) = 1.43333^2 (0.22725) / 2! = 23.344%

Probability of 3 bays are in use

P(3) = 1.43333^3 (0.22725) / 3! = 11.153%

Probability of 3 bays are in use and 1 waiting space are occupied

P(4) = 1.43333^4 (0.22725) / 3! (3^1) = 5.329%

Probability of 3 bays are in use and 2 waiting spaces are occupied

P(5) = 1.43333^5 (0.22725) / 3! (3^2) = 2.546%

Probability of 3 bays are in use and 3 waiting spaces are occupied

P(6) = 1.43333^6 (0.22725) / 3! (3^3) = 1.216%

Probability of 3 bays are in use and 4 waiting spaces are occupied

P(7) = 1.43333^7 (0.22725) / 3! (3^4) = 0.581%

Probability of 3 bays are in use and 5 waiting spaces are occupied

P(8) = 1.43333^8 (0.22725) / 3! (3^5) = 0.278%

Probability of 3 bays are in use and 6 waiting spaces are occupied

P(9) = 1.43333^9 (0.22725) / 3! (3^6) = 0.133%

Probability of 3 bays are in use and 7 waiting spaces are occupied

P(10) = 1.43333^{10} (0.22725) / 3! (3^7) = 0.063%

Probability of 3 bays are in use and 8 waiting spaces are occupied

P(11) = 1.43333^{11} (0.22725) / 3! (3^8) = 0.030%

Probability of 3 bays are in use and 9 waiting spaces are occupied

P(12) = 1.43333^{12} (0.22725) / 3! (3^9) = 0.014%

Probability of 3 bays are in use and 10 waiting spaces are occupied

P(13) = 1.43333^{13} (0.22725) / 3! (3^{10}) = 0.007%

Probability of 3 bays are in use and 11 waiting spaces are occupied

P(14) = 1.43333^{14} (0.22725) / 3! (3^{11}) = 0.003%

Probability of 3 bays are in use and 12 waiting spaces are occupied

P(15) = 1.43333^{15} (0.22725) / 3! (3^{12}) = 0.002%

Probability of 15 or less trucks in the system

= P(0) + P(1) + P(2) + P(3) + P(4) + P(5) + P(6) + P(7) + P(8) + P(9) + P(10) + P(11) + P(12) + P(13) + P(14) + P(15)

= 0.22725 + 0.32573 + 0.23344 + 0.11153 + 0.05329 + 0.02546 + 0.01216 + 0.00581 + 0.00278 + 0.00133 + 0.00063 + 0.0003 + 0.00014 + 0.00007 + 0.00003 + 0.00002

= 99.997%

Probability of more than 15 trucks in the system

= 1 - 0.99997

= 0.00003

The chances that traffic will queue up is less than **0.003%**

1 INTRODUCTION

1.1 Background

1.1.1 The Applicant would like to seek permission from the Town Planning Board (the Board) to operate a temporary concrete batching plant (CBP) for a period of 5 years at Tsing Yi Town Lot Nos. 14&15 and adjoining Government Land (GL), Tam Kon Shan Road, Tsing Yi, New Territories (the Site). The total site area is approximately 4,335 sq. meters, including approximately 1,057 sq. meters of GL. A CBP with ancillary supporting facilities (with total gross floor area (GFA) of about 1419.2 sq. meters and building height of not exceeding 31 meters) is proposed at the Site. The Site is accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road.

1.1.2 AECOM has been commissioned to provide an Environmental Assessment (EA) to supplement the abovementioned planning application. This EA presents a study of the potential environmental impacts, including air quality, noise, water quality, land contamination and waste management, in order to confirm the environmental suitability of the Proposed Plant at the Site.

1.2 Existing Land Use

1.2.1 The Site partly falls within an area zoned “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) and area shown as “Road” on the Approved Tsing Yi Outline Zoning Plan (OZP) No.: S/TY/32, and partly falls outside the OZP planning scheme boundary. A planning permission for a temporary concrete batching plant is required from the Board for the use of CBP is a Column 2 use within the OU(BMIU) zone. The Site is located on Tam Kon Shan Road on Tsing Yi Island. Surrounding developments comprise industrial buildings and dockyards. The location of the Site is illustrated in **Figure 1.1**.

1.3 Potential Environmental Issues

1.3.1 The Site is currently fenced, partially vacant and occupied by vacant structure. Pre-existing jetty is available to support the operation of the CBP. Environmental impacts during construction and operation are of concern.

1.3.2 Concrete batching process is a dusty operation which poses potential dust nuisance to the nearby sensitive receivers. The Proposed Plant has been classified as specified process (SP) under the Air Pollution Control Ordinance (APCO) and is required to operate under a valid SP License. The dust impact due to the operation of the Proposed Plant will be evaluated to ensure the compliance with Air Quality Objectives (AQOs).

1.3.3 The existing major noise sources in the vicinity of the study area are traffic noise from Tam Kon Shan Road and Tsing Yi North Coastal Road, and fixed plant noise / industrial noise from the dockyard. In view of the existing environmental condition, cumulative fixed plant noise impact from nearby existing industrial buildings and the Proposed Plant would be expected. However, no noise sensitive receiver has been identified within 300m from the Subject Site. The noise impact is to be addressed qualitatively.

1.3.4 Other environmental issues including water quality, waste management and land contamination are considered minor. Their corresponding impacts are to be evaluated qualitatively.

1.3.5 In this EA, five key environmental issues associated with the operation of the Proposed Plant are identified and addressed in the following sections:

Section 3: Air Quality

Section 4: Noise

Section 5: Water Quality

Section 6: Waste Management

Section 7: Land Contamination

Section 8: Conclusion

2 DESCRIPTION OF PROPOSED CONCRETE BATCHING PLANT

2.1 Configurations of the Proposed Plant

2.1.1 The proposed CBP comprises silo and compartment with total capacity of approximately 2,200 tonnes for storage of cementitious materials for concrete production, which is classified as Specified Process (SP) in accordance with the Air Pollution Control (Specified Processes) Regulations. The design layout of the plant is shown in **Appendix 2.1**.

2.1.2 The CBP is planned to consist of 3 production line, with a total hourly processing capacity of 300m^3/hr. The production of concrete requires raw material including aggregates (mixed with sand), cementitious materials (cement, Pulverized Fuel Ash (PFA), Ground Granulated Blast-Furnace Slag (GGBS), Condensed Silica Fume (CSF)), admixtures and water. The concrete batching process mainly involves handling of raw material from delivery to storage, then respective weigh hoppers, concrete batch mixers and finally loading of mixed concrete onto concrete mixer trucks for delivery.

2.1.3 The CBP will be equipped with aggregate overhead bins with total capacity of 3000 tonnes, 6 sets of 350-tonne cementitious materials silos, 2 set of 50-tonne CSF silo, 3 wet concrete mixers, 2 aggregate receiving hoppers (one for barge and one for truck in case of emergency), 18 weigh hoppers (6 weigh hoppers for each mixer, including 1 for aggregate, 3 for cementitious materials, 1 for water/ice and 1 for admixture, in total 3 mixer), water tanks and admixture tanks. Aggregate and cement will be delivered to the plant by barge. The aggregate and cementitious materials within the plant will be transferred via enclosed conveyors and sealed pipeline respectively. The operation details of the proposed CBP are summarized in **Table 2.1**.

2.1.4 The operation details of the proposed CBP is summarized in **Table 2.1**. The normal operation period will be 07:00 to 21:00.

Table 2.1 Operation Details of Proposed CBP

Operation Parameter	Details
Hourly Processing Capacity	300 m^3/hr
Total Aggregate Storage Capacity	3000 Tonnes
Total Cementitious Materials Silos Capacity	2200 Tonnes
Mode of Operation	Batch
Proposed Plant Operation Period	14 hours between 07:00 to 21:00
Total No. of potential emission points related to the CBP operation	19

2.2 The Schematic Flow of Operation Process

2.2.1 The schematic flow diagram showing various components of the Proposed Plant is presented in **Appendix 2.2**.

Aggregate Handling

2.2.2 Aggregates will be delivered to the plant by barge. The compartments of the aggregate barge will be covered during transportation and unloading process to avoid any dust emission. During the unloading of aggregates, the compartment will remain covered as far as safety issue is concerned. Water spraying by sprinklers will be provided at the barge during the unloading process to keep the aggregate adequately wetted. When the unloading is complete, the empty barge will leave the barging location with the top cover remaining closed. Should the barge be required to park at the barging location overnight (between 21:00 to 07:00 next day), the stockpile on barge will be fully covered by top cover to prevent any dust pickup by gust.

2.2.3 The aggregates will be unloaded to the aggregate receiving hopper on the jetty (EP01) and then transferred via enclosed conveyors to overhead bins for concrete production. The aggregate receiving hopper will be covered in 3-side cladded and roof and installed with water

sprinkler to reduce dust emission during material unloading. The enclosed conveyors will be arranged such that there is minimal gap at the transfer points between conveyors so as to minimize free fall as far as practicable. Also, all transfer points along the conveyor pathway will be housed inside either fully cladded conveyor transfer tower or fully cladded structure housing the aggregate overhead bins. All transfer of aggregates will therefore be conducted in enclosed condition. No exhaust is required and no dust emission is anticipated.

2.2.4 The aggregates in overhead bins will be transferred to the respective aggregate weigh hopper through guiding chute with flexible seal. Aggregates will be weighed and then discharged through guiding chutes to the concrete mixer under a fully enclosed environment, i.e. the aggregate weigh hoppers will be covered on 4 sides such that the aggregate transfer process is fully enclosed. No exhaust is required and no dust emission is anticipated. The guiding chutes will be arranged such that there will be minimal gap to the mixer so as to minimize free fall as far as practicable.

2.2.5 Another ground aggregate receiving hopper (EP02) will receive aggregates delivered by aggregate tipper truck on haul road (EP17), which will be backup use in case of emergency.

Cementitious Materials Handling

2.2.6 Cement will be delivered by barge while cementitious materials such as PFA, GGBS and silica fume will be delivered by tanker trucks (around 7 trucks a day). The materials will be pumped to the overhead silos or the ground storage silos via pneumatically sealed cement pipes. The transfer process will thus be carried out in totally enclosed condition.

2.2.7 Each of the cementitious silo will be installed with a dust collector (EP09 – EP16). Before connecting the pumping pipe, the dust collector on the silo will be switched on and remain switched on during the whole transfer process. The cementitious materials will then be pumped to the silo via fully enclosed piping. All silos will be equipped with a pressure relief valve. The seating of the valve will be checked and valve will be reseated if necessary before each delivery of cementitious materials. Audible high level alarms will be installed in all silos to warn and prevent overfilling. The high level alarms will be interlocked with filling pipelines and the material filling line will be closed in time to prevent any overfilling, but in any case within 1 minute or less after the high level alarm has been triggered.

2.2.8 Cementitious materials from the silos will be transferred to respective weigh hoppers by a screw conveyor which will be pneumatically sealed such that fugitive dust emission will not be anticipated. All weigh hoppers will be housed inside the fully enclosed mixer tower and treated collectively by dust collector. The dust collectors will prevent escape of fugitive dust due to the transfer process to the atmosphere. The weighed cementitious materials in the respective weigh hoppers will then be discharged to the concrete mixer by gravity through pneumatically sealed piping.

Water, ice and Admixtures Handling

2.2.9 Water and ice will be weighed in the ice/water hopper and then added to the concrete mixer, while admixtures will be weighed by another weigh hopper. Water and admixtures will be transferred by pneumatically sealed pipe.

Concrete Mixing

2.2.10 The concrete mixers will be located in the mixing tower. The aggregates, cementitious materials, water and admixtures will be mixed in one of the concrete mixers (3 mixers in total) in a fully wetted and enclosed condition.

2.2.11 Each of the wet mixers will be installed with a dust collector (EP03 – EP05) with fabric filtering system. The dust collector of the mixer will be switched on prior to the transfer of any material to the mixer and will stay switched on whenever there is material inside it. Dust-laden air from the concrete mixer will be filtered through bag filters of dust collector, which will prevent escape of fugitive dust due to the material transfer and the wet mixing process.

2.2.12 The mixed and fully wetted concrete will be discharged into a concrete mixer truck directly by gravity via wet concrete guiding chute. No dust emission will be anticipated. Furthermore, the concrete unloading area will be enclosed on 2 sides with the roof by cladded structure.

Transportation of Raw Material and Product Concrete

2.2.13 All the haul roads within the Site (EP18 & EP19) will be paved and provided with water spraying by sprinklers in 1-hour intervals to maintain a wet surface. The speed limit for all the vehicles travelling in the abovementioned CBP area and on haul roads is 8 km/hr.

2.2.14 Water for ground washing will be collected by surface channel, where the water will be pumped to wastewater tanks for reuse in truck washing or recycled for concrete production.

2.2.15 The concrete mixer truck will go to the slump stand quality check point, where the quality inspection will take place. All vehicles leaving the CBP will be cleaned to wash off any dust/mud deposited on the wheels and vehicle body such that leaving no dust to the public road.

2.2.16 Concrete waste will be collected by the concrete reclaimer, where the cement slurry water will be separated from the aggregates. The separated aggregates will be wet in nature, i.e. no dust emission is expected.

2.2.17 The cement slurry water will pass through the filter press, where cement particles will be captured. The clear water will be recycled for concrete production. The solid waste (sludge cake collected by the filter press and aggregates collected by the concrete reclaimer) will be disposed of by waste disposal trucks

3 AIR QUALITY

3.1 Introduction

3.1.1 In this section, the potential air quality impact due to the construction and operation of the Proposed Plant is assessed quantitatively and evaluated against the Air Quality Objectives. The air quality within 500m away from the Subject Site boundary are discussed and sensitive receivers in this area are identified.

3.1.2 Air quality impact assessment is conducted based on the latest design of the Proposed Plant with the aid of an air quality dispersion model and a regional air quality model. The predicted cumulative air quality impacts are concluded at the identified sensitive receivers and in a spatial manner with the aid of contour plots at different altitude. Appropriate mitigation measures are proposed to minimize the potential air quality impact on the ambient air.

3.2 Environmental Legislation and Guidelines

Air Quality Objectives

3.2.1 The Air Pollution Control Ordinance (APCO) provides the statutory authority for controlling air pollutants from a variety of sources. In APCO, the Air Quality Objectives (AQOs) are stipulated as the air quality that should be achieved and maintained under the maximum allowable concentration for typical pollutants. Respirable Suspended Particulates (RSP) and Fine Suspended Particulates (FSP) are the dominant pollutants for concrete batching plant. Furthermore, AQOs have been reviewed and revised criteria has been enforced on 11 April 2025. The latest AQOs of relevant air pollutants are listed in below **Table 3.1**.

Table 3.1 Hong Kong Air Quality Objective Relevant to the Assessment

Pollutant	Time Average	Concentration Limit (µg/m^3) under current AQO [(1)(2)]
RSP [(4)]	24-hour	75 (9) [(3)]
	Annual	30
FSP [(5)]	24-hour	37.5 (18) [(3)]
	Annual	15
NO_2	1-hour	200 (18) [(3)]
	24-hour	120 (9) [(3)]
	Annual	40
SO_2	10-min	500 (3) [(3)]
	24-hour	40 (3) [(3)]

Note:
(1) All measurements of the concentration of gaseous air pollutants, i.e., sulphur dioxide, nitrogen dioxide, ozone and carbon monoxide, are to be adjusted to a reference temperature of 293 K and a reference pressure of 101.325 kPa.
(2) The annual average concentration is calculated as the arithmetic mean.
(3) The number in the bracket represents the number of exceedances allowed per year.
(4) Suspended particulates in air with a nominal aerodynamic diameter of 10 µm or smaller.
(5) Fine suspended particulates in air with a nominal aerodynamic diameter of 2.5 µm or smaller.

3.2.2 "A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Cement Works (Concrete Batching Plant) BPM 3/2 (16)" (BPM) by EPD requires that the particulates emission concentration limit of 10 mg/m^3 (expressed at reference condition, 0°C, 101.325 kPa) should be satisfied by 1 January 2018.

3.3 Description of the Environment

Background Air Quality

3.3.1 The modelling approach involves the use of an integrated modelling system called Pollutant in the Atmosphere and their Transport in Hong Kong (PATHv3.0) which is developed and maintained by EPD to provide background pollutant concentration in assessing the total impact in the study area (*Guidelines on Assessing the 'TOTAL' Air Quality Impacts*). The dataset of Year 2028 in PATHv3.0 is selected for the assessment while Year 2028 has the highest vehicular emission in the study area as discussed in **Section 3.5.11**. The background concentrations of RSP and FSP in the study area are extracted from PATHv3.0 and presented in **Table 3.2**.

Table 3.2 Background Air Quality Extracted from PATH (Yr 2028)

Pollutant	Averaging Time	AQO	Data Summary	PATH v3.0 Grid in Year 2028			
				32,38	32,37	33,38	33,37
RSP	24-hour	75 (9)	10th	53.88	56.08	54.82	56.48

Air Sensitive Receivers

3.3.2 The CBP locates in the vicinity of Tam Kon Road at Tsing Yi Island. A site survey has been conducted on 12 December 2024 to identify the representative air sensitive receivers (ASRs) which are likely to be affected most by the operation of the CBP for assessment within 500m study area of the Subject Site (the study boundary) with reference to the Outline Zoning Plans (OZPs), OZP Plan No. S/TY/32 – Tsing Yi. While there are schools and residential buildings located in the southern part of the study boundary, they are located uphill and are shielded from the Project Site by the hills with no direct line of sight with the Project, and hence no direct impact is expected. Thus, ASRs in the southern part of the study boundary are not included in the assessment. The details of the identified ASRs are summarized in below **Table 3.3** and their locations in the study boundary are shown in **Figure 3.1**.

Table 3.3 Representative Air Sensitive Receivers

ASR	Coordinates		Description	Land Use	Horizontal Distance from the Project (m)	Assessment Height Above Ground (mAG)
	X	Y				
A01	827535.0	824705.4	DB Maintenance Centre	Shipyard	325	1.5, 5, 10
A02	827685.7	824668.4	Cheun Kee Seafood Restaurant	Eating Place	175	1.5, 5, 10, 15
A03	827844.6	824667.7	Wing Cheong Shipyard	Shipyard	15	1.5, 5, 10, 15

ASR	Coordinates		Description	Land Use	Horizontal Distance from the Project (m)	Assessment Height Above Ground (mAG)
	X	Y				
A04	827816.5	824667.6	Kwong Tat Loong Shipyard (Brothers) Limited	Shipyard	45	1.5, 5, 10, 15
A05	827920.5	824664.4	Leung Wan Kee Shipyard Limited	Shipyard	25	1.5, 5, 10, 15
A06	828018.6	824669.4	Green@Kwai Tsing	G/IC	120	1.5, 5
A07	828179.5	824706.5	Tsing Yi Northeast Park Office	Recreational	280	1.5, 5, 10, 15
A08	828289.1	824690.7	Queen's College Old Boys' Association S econdary School	Educational	390	1.5, 5, 10, 15, 20, 30
A09	828358.2	824749.3	Cheung On Estate Block 1 On Hoi House	Residential	460	1.5, 5, 10, 15, 20, 30, 40, 50, 60, 70, 80, 90, 100, 110
A14	827791.2	824635.1	Environmental Protection Department Portable Emission Measurement System (PEMS) Laboratory	G/IC	75	1.5, 5

3.3.3 The assessment heights of the representative ASRs range from 1.5 meters above ground to up to its maximum physical heights, e.g. up to 15mAG at A02 and 110 mAG at A09.

3.4 Identification of Environmental Impact

Construction Phase

3.4.1 The development would mainly involve demolition of structures and the erection of equipment for the concrete batching plant. The erection of equipment for the three ancillary plants would involve minor construction activities such as minor excavation for foundation works and plant fabrication works. Potential construction dust would arise from these construction activities. Most of material to be handled would be the demolished debris which is around 1,100 tonnes. Spoil from the foundation works would be around 100 tonnes. The number of construction trucks or mechanical equipment is not known at this stage and they are subject to the future contractor. Nevertheless, dust mitigation measures stipulated in Air Pollution Control (Construction Dust) Regulation are proven effective measures in construction work sites and will be implemented to minimize the potential dust impact. Therefore, the potential construction dust impact is assessed qualitatively.

3.4.2 On-site use of diesel-powered engines is also the potential source for air pollutants, such as NO_2, SO_2, CO and smoke. The emissions from the NRMM are regulated under the *Air Pollution Control (Non-Road Mobile Machinery) (Emission) Regulation*. Fuel with sulphur content not exceeding 0.001% by weight will be used to minimise SO_2 emission in accordance with the *Air Pollution Control (Fuel Restriction) (Amendment) Regulation 2024*. In addition, the use of NRMMs with exempted label under the *Air Pollution Control (NRMM) Regulation* will be avoided as far as practicable. The equipment would also be properly maintained to minimise any emissions. Furthermore, the use of NRMMs is to be explored. On-site power supply will be provided and the use of diesel generators and machinery will be avoided during the construction stage, as far as practicable. In view of the minor impact by NRMMs, particulates from construction activities would be the major air pollutant during construction phase.

Odour from Dredging

3.4.3 Dredging would be required in the seafront fronting the proposed site to provide sufficient depth of water for vessels. The dredging scale proposed under the Project is small. The total volume of dredged sediments generated from the dredging operation would be approximately 4,000 m^3 and the dredging work would be conducted by one dredger (of about 8 m^3 capacity) at

a dredging rate of no more than 500 m^3 per day. The dredged material would be well covered on-site with tarpaulin and would be removed off-site as soon as possible within 24 hours. In view of the transient nature of the dredging work and small dredging scale, odour nuisance would not be expected during dredging and transportation of the dredged sediment with the adoption of the good site practice as mentioned in **Section** Error! Reference source not found..

Operation Phase

3.4.4 The Proposed Plant uses electricity as the power supply for its operation, thus no gaseous pollutants by fuel combustion is anticipated. Based on the design and operation of the Proposed Plant, the activities considered as major potential dust emission sources are identified as follows in accordance with the specification given in *Compilation of Air Pollutant Emission Factors (AP-42), 5th Edition* issued by U.S. Environmental Protection Agency.

(a) Aggregate handling at the seafront and inside the CBP;
(b) Loading of raw material to the storage silos;
(c) Loading of raw material to weigh hoppers;
(d) Loading of weighed raw material to mixers; and
(e) Vehicle movements on paved haul roads.

3.4.5 Best Practicable Means of air quality control measures suggested in BPM will be implemented in the design of the Proposed Plant and equipment. According to the characteristics of the emission points, different control measures to minimize air pollution will be adopted. Dust collectors, enclosures and water sprayers will be adopted to control the likely particulate emission due to the transport and handling of aggregates and cementitious materials.

3.4.6 Description of the emission points and the corresponding control measures are tabulated in **Table 3.4**.

Table 3.4 Dust Emission Points Due to Operation of CBP and Corresponding Control Measures

Emission Point Description	Control Measures
Delivery of aggregate by barge	• The compartments of the aggregate barge will be covered during transportation and unloading process to avoid any dust emission. • During the unloading of aggregates, the compartment will remain covered as far as safety issue is concerned. • Water spraying by sprinklers will be provided at the barge during the unloading process to keep the aggregate adequately wetted. • Stockpile on barge will be fully covered by top cover when parking at the barging location overnight.
Unloading of aggregates from barge to aggregate receiving hopper (EP01) and transfer of aggregate from aggregate barge receiving hopper to aggregate overhead bin	• The aggregate receiving hoppers will be covered in 3-side cladded and roof. • Water spraying by sprinkler will be provided inside the enclosure during unloading process such that dust will be suppressed and the aggregate is maintained adequately wetted. • The aggregates will be unloaded to the aggregate receiving hoppers and then transferred via enclosed conveyors to overhead bins for production. • The enclosed conveyors will be arranged such that there is minimal gap at the transfer points between conveyors so as to minimize free fall as far as practicable. • All transfer points along the conveyor pathway will be housed inside either fully cladded conveyor transfer tower or fully cladded structure housing the

Emission Point Description	Control Measures
	aggregate overhead bins. All transfer of aggregates will therefore be conducted in enclosed condition. No exhaust is required and no dust emission is anticipated.
Transfer of aggregate from aggregate overhead bin to aggregate weigh hoppers	• The aggregates in overhead bins will be transferred to the respective aggregate weigh hopper through guiding chute with flexible seal. • Aggregates will be weighed and then discharged through guiding chutes to the concrete mixer under a fully enclosed environment, i.e. the aggregate weigh hoppers will be covered on 4 sides such that the aggregate transfer process is fully enclosed. No exhaust is required and no dust emission is anticipated. • The guiding chutes will be arranged such that there is minimal gap to the mixer so as to minimize free fall as far as practicable.
Transfer of cementitious materials from cementitious materials tankers to silos (EP09-EP16)	• Cement will be delivered by barge while cementitious materials will be delivered to the plant by tanker trucks. • The materials will be pumped to the overhead silos or the ground storage silos via pneumatically sealed cement pipes. The transfer process will thus be carried out in totally enclosed condition. • Each cementitious material silo will be fitted with a dust collector incorporating a fabric filtering system. • Before connecting the pumping pipe at the cementitious materials tanker, the dust collector on the silo will be switched on and remain switched on during the whole transfer process. • The cementitious materials will be pumped to the silo via fully enclosed piping. All silos will be equipped with a pressure relief valve and the valve will be checked and reseated if necessary before each delivery of cementitious materials. • Audible high level alarms will be installed in all silos to warn and prevent overfilling. The high level alarms will be interlocked with filling pipelines and the material filling line will be closed in time to prevent any overfilling, but in case within 1 minute or less after the high level alarm has been triggered. • Dust-laden air in the silos will be filtered by fabric bags and vented through the dust collectors. The dust collectors can maintain a dust emission rate of less than 10 milligrams per cubic meter of air.
Weighing and batching of cementitious materials (EP06-EP08)	• Cementitious materials will be transferred from the silos to weigh hoppers by screw conveyor which is pneumatically sealed such that fugitive dust emission is not anticipated. • All weigh hoppers will be housed inside the fully enclosed mixer tower and treated collectively by dust collectors (EP06-EP08) with capability of treating ultra-fine particle. The dust collectors will prevent escape of fugitive dust due to the transfer process to the atmosphere.

Emission Point Description	Control Measures
	• The weighed cementitious materials will be discharged to concrete mixers through pneumatically sealed piping.
Mixing of raw material in the concrete mixer (EP03-EP05)	• The aggregate, cementitious materials, water and admixture will be mixed in one of the concrete mixers (3 mixers in total) under fully wetted and enclosed conditions. • Each of the wet mixer will be installed with a dust collector with fabric filtering system. The dust collector of the mixers will be switched on prior to the transfer of any material to the mixer and will stay switched on whenever there is material inside them. • Dust-laden air from the concrete mixer will be filtered through bag filters of dust collector, which prevents escape of fugitive dust due to the material transfer and the wet mixing process. The dust collector can maintain a dust emission rate of less than 10 milligrams per cubic meter of air.
Discharge of concrete to concrete mixer trucks	• The mixed and fully wetted concrete will be discharged into the concrete mixer truck directly by gravity. No dust emission is anticipated. • The concrete unloading area will be enclosed on 2 sides and roof by cladded structure.
Vehicle movement on paved haul road (EP18-EP19)	• All the haul roads within the Site will be paved and provided with water spraying by sprinkler in 1-hour intervals to maintain a wet surface. • Speed limit for all trucks travelling in the Site will be set as 8km/hr. • Vehicle movement will mainly involve concrete mixer trucks. Cement tanker for PFA/GGBS/Silica Fume is expected to be less than a truck per hour. • All vehicles leaving the CBP will be cleaned by vehicle washing facility to wash off any dust/mud deposited on the wheels and vehicle body such that leaving no dust to the public road.

Other Emission Sources

3.4.7 Vehicular emission from open road is also a significant contributor to ambient particulates concentration. Major road infrastructures namely Cheung Tsing Highway, Lantau Link and North West Tsing Yi Interchange are within the 500m study area of the Site. There is no PTIs/bus terminus, nor any bus depots within 500 m from the project site boundary. Coach parking is identified at Tsing Yi Northeast Park Car Park and HGV on-street parking site (for 8PM to 7AM) is identified outside Tsing Yi Northeast Park Car Park. Regarding roads inside the proposed CBP, there is no parking assumed in the operation design. Concrete trucks are to undergo several procedures at the Project Site, e.g. drum cleaning, loading of concrete product, quality check, and truck washing before leaving the site. Cement / cementitious material tankers are to unload the raw material to silos with on-board pump. Both kinds of trucks require the power supply to perform these operations, i.e. engine stop is not anticipated. The air quality impact due to these open-road emission is considered in the cumulative air quality assessment, as well as the local roads connecting to the Site.

3.4.8 The proposed uses of the CBP would induce marine traffic during operation. Marine emission is expected and would pose potential air quality impact on the existing and proposed ASRs. Apart from the induced marine traffic, there are also existing marine routes within the 500m study boundary of the Project, namely the route between Park Island Pier and Tsuen Wan Ferry Pier. All these existing marine traffic also contributes to cumulative air quality impact. The marine traffic inputs are provided by Marine Consultants and the marine emissions have been considered in the quantitative assessment.

Odour from Maintenance Dredging

3.4.9 Maintenance dredging would be carried out to maintain sufficient water depth for vessels once every year subject to the depth of sediment accumulated affecting operation of the vessels. The volume of sediment to be dredged during maintenance dredging would be less than 500m^3. The volume of sediment would require one grab dredger only and the dredging period would be completed in a few days. In view of the limited dredging volume and short duration, odour impact from the maintenance dredging is considered negligible with the adoption of the good site practice as mentioned in **Section** Error! Reference source not found..

3.5 Assessment Methodology

Emission Inventory of Project

3.5.1 Dust generating activities and corresponding air quality control measures are identified in **Table 3.4**. Emission rates by source are estimated in accordance with the USEPA *Compilation of Air Pollution Emission Factors (AP-42), 5th Edition* and summarized in **Table 3.5**. Detailed calculations of emission rates are presented in **Appendix 3.2**. The spatial distribution of effective dust emission sources is illustrated in the appendix as well. The diurnal profile of each emission source is also presented in **Appendix 3.2**.

Table 3.5 Emission Rates for the CBP

Emission Source	RSP Emission Rate	FSP Emission Rate	Remarks
Unloading of aggregates to Aggregate Receiving Hopper (EP01)	6.437×10^{-4} g/s	1.508×10^{-4} g/s	• Max. aggregate handling capacity: 610 Mg/hr • 65% and 40% of dust suppression by water sprays for particle size of 2.5 - 6μm and 0 - 2.5μm respectively • Reference to Table B.2.3, Appendix B.2, USEPA AP-42
Exhaust from Dust Collector for Mixers (EP03 – EP05)	1.523×10^{-3} g/s	6.924×10^{-4} g/s	• Max. emission concentration from exhaust = 2.29 mg/m^3 • Exhaust rate of Dust Collector: 7864 m^3/hr
Exhaust from Dust Collector for Weigh Hopper (EP06 – EP08)	2.564×10^{-3} g/s	7.541×10^{-4} g/s	• Max. emission concentration from exhaust = 3.08mg/m^3 • Exhaust rate of Dust Collector: 6000 m^3/hr

Emission Source	RSP Emission Rate	FSP Emission Rate	Remarks
Exhaust from Dust Collector for Cement Silo (350T) (EP09, EP11, EP13)	6.120×10^{-3} g/s	2.782×10^{-3} g/s	• Max. emission concentration from exhaust = 5.79mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Exhaust from Dust Collector for PFA Silo (350T) (EP12)	1.163×10^{-2} g/s	5.286×10^{-3} g/s	• Max. emission concentration from exhaust = 7.01mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Exhaust from Dust Collector for GBBS Silo (350T) (EP10, EP14)	1.163×10^{-2} g/s	5.286×10^{-3} g/s	• Max. emission concentration from exhaust = 7.01mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Exhaust from Dust Collector for Silica Fume Silo (50T) (EP15 – EP16)	5.815×10^{-3} g/s	2.643×10^{-3} g/s	• Max. emission concentration from exhaust = 3.51mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Paved haul roads inside project site and access to CBP (EP18 – EP19)	5.283×10^{-5} g/s·m at maximum, subject to number and average weight of vehicles travelling per hour	1.278×10^{-5} g/s·m at maximum, subject to number and average weight of vehicles travelling per hour	• 91.7% of dust suppression by watering every hour (calculated from *Equation (5-4) of USEPA's Control of Open Fugitive Dust Sources (EPA-450/3-98-008), as detailed in Appendix 3.2*).

Note:
(1) EP18 – EP19 is denoted as HR01 – HR03 in the model.
(2) Max. aggregate handling capacity, exhaust rate of dust collector, and max. emission concentration from exhaust are provided by design engineer.

Diurnal Profile

3.5.2 In this assessment, a diurnal profile is derived based on expected on-site raw material delivery and concrete production schedule to consider the diurnal variations in the emission rates in the Project. The diurnal profile of each emission source is presented in **Appendix 3.2**.

3.5.3 As there will only one barging point in the design, the delivery of aggregates and cement will not overlap. Aggregates will be delivered by barge and unloaded into the ground aggregate receiving hopper (EP01), which is assumed to be 100% active during 07:00 – 11:00 and 15:00 – 19:00. Cement will be delivered by barge and pumped to the cement silos (EP09, EP11 and EP13), which are expected to be 100% active during 11:00 – 15:00.

3.5.4 Other cement supplement materials will be delivered by tankers during 07:00 – 19:00. In every hour, it is expected that only one tanker truck will deliver either PFA or GGBS and complete unloading into their respective silos in one hour. Hence, dust collectors on PFA Silo (EP12) and GGBS Silos (EP10 and EP14) are assumed to be active 100% at alternate hours during 07:00–19:00. Furthermore, it is expected that there will only be one delivery of silica fume by tanker

truck every day, which will take one hour for unloading. To account for different possible scenarios, where the silica fume tanker truck arrives with either PFA/GGBS tanker in either morning or evening, 100% activity for dust collector on silica fume silo (EP15 and EP16) is assumed for 07:00 – 09:00 and 17:00 – 19:00.

3.5.5 For concrete production, concrete production rate of 100% is assumed during 07:00 – 19:00. The profile is adopted for the emissions associated with the concrete production, i.e. the dust collectors on mixers (EP03 – EP05), the dust collectors on weigh hoppers (EP06 – EP08) and the haul roads used for transporting the concretes (HR01 – HR03).

Vehicular Emission from Open Roads

3.5.6 EMFAC-HK v4.3 was adopted to estimate the vehicular emission factors in NO_X, RSP and FSP in various travelling speeds and ambient conditions with reference to WRF meteorological data extracted from PATHv3.0. For short-term cumulative impacts, an approach of using daily profile of lowest temperature and relative humidity data in each hour for each month was adopted. For long-term cumulative impacts, an approach of using daily profile of averaged temperature and relative humidity data in each hour for each month was adopted.

3.5.7 The traffic data for each road in 500m study area comprises 24-hour traffic flow with vehicle percentage, travelling speed in 18 vehicle classes. Roads located in the southern part of the study boundary are located uphill and are shielded from the Project Site by the hills with no direct line of sight with the Project, and hence no direct impact by these roads is expected. Thus, these roads are not included in the vehicular emissions calculations. The agreement on the adopted traffic data have been sought from Transport Department (TD). With reference to the traffic data, hourly emission factor of each open road is determined by summation of emission by each vehicle class which is product of traffic flow and emission factor at specific speed and ambient condition. The hourly emissions factors of RSP and FSP are further divided by the hourly flow to obtain a composite emission rate in g/s-m^2, ready for input to the dispersion model. The Smart Air Modelling Platform (SAMP v2.1) with ZEV scenario is used for the calculation of composite vehicular emission factor and emission rates. The detailed calculation of vehicular emission source was presented in **Appendix 3.4**.

3.5.8 Start emission refers to the air pollutants generated due to the ignition of the vehicle engines which is released at vehicle tailpipes. Start emission generally occurs on the local road where there is potential trip, while no start emission along district distributor or expressway is anticipated. For the assessment purpose, broad-brush approach is adopted, which assumes start emission at all local roads irrelevant to the actual location of engine start. Start emission is not assumed on district distributor and primary distributor. Also, all vehicle classes were assumed to have potential trip on local road, including minibus and franchised bus which usually starts its engine at its termini throughout its service route. Most of the HGVs along the local roads in the assessment area are the working vehicles travelling to/from the Project, which includes concrete mixer trucks and cement tankers. These working vehicles are not supposed to park along these roads, i.e. no engine start is expected, except on haul roads inside the proposed CBP (HR1-3). As discussed in **Section 3.4.6**, there is no PTIs/bus terminus, nor any bus depots within 500 m from the project site boundary. Coach parking is identified at Tsing Yi Northeast Park Car Park and HGV on-street parking site (for 8PM to 7AM) is identified outside Tsing Yi Northeast Park Car Park.

3.5.9 Owing to the infrequent access to Tsing Yi Northeast Park Car Park, start emission of associated coaches are considered under Road 9, 10 and 11 by broad-brush approach. Vehicle classes that can park inside Tsing Yi Northeast Park Car Park (including PC, TAXI, LGV3, LGV4, LGV6, PLB, PV4, PV5, NFB6, NFB7, NFB8 and MC) were assumed to have potential start on Road 9,10 and 11. Frequency of start emission of a vehicle type on a road is estimated by its forecasted VKT, Trips/VKT ratio extracted from EMFAC-HK v4.3 and minor-road-to-all-road ratio (3.62%) extracted from 2023 Annual Traffic Census published by the Transport Department. SAMP v2.1 has accounted for the start emission when calculating the composite vehicular emission factor. The open road sources considered with start emission are illustrated in **Appendix 3.4**.

3.5.10 The HGV on-street parking site (for 8PM to 7AM) outside Tsing Yi Northeast Park Car Park is assessed with precise approach. Data for the HGV on-street parking site was estimated by traffic forecast or by design. As the allowed hours for the on-street parking site for the HGVs is 8PM to 7AM, assuming all parked HGVs are leaving at 7AM, the soak time is assumed to be duration of parking (i.e. 8PM to 7AM of the following day). Number of HGVs parked overnight is estimated from the length of the parking site (i.e. 10 HGVs)**.** The start emissions calculation was conducted according to the "Technical Note on the Calculation of Start Emissions in Air Quality Impact Assessment". Start emission factors of vehicle types at various soak times are extracted from EMFAC-HK v4.3. Start emission factors of concerned vehicles at various soak times were extracted from EMFAC-HK v4.3. An approach of using the lowest temperature and relative humidity data in the year among all PATH grids covering the assessment area (i.e. 11ºC and 16%) was adopted. The detailed calculation of start emission is also presented in **Appendix 3.6.**

Determination of Assessment Year for Vehicular Emission

3.5.11 The operation of the Project is proposed to commission in 2026 and last for 5 years. The vehicular emission burden in Year 2026, 2028 and 2030 are thus assessed. Year 2028 is selected as assessment year because vehicular emission burden is the highest in Year 2028, as shown in **Table 3.6**. The traffic forecasts have been submitted to Transport Department (TD) for endorsement. The traffic data including 24-hr traffic flow with vehicle percentage, trips, daily vehicle-kilometer-travelled (VKT), speed fraction in 18 types of vehicle for the assessment year are presented in **Appendix 3.4**. Vehicular emission rate is calculated with zero emission vehicle scenario from SAMPv2.1. The detailed calculation of vehicular emission source is presented in **Appendix 3.4.**

Table 3.6 Vehicular Emission Burden in the Study Area

Year	Vehicular Emission Burden (tonne per year)	
	RSP	FSP
2026	0.2513	0.2310
2027	0.3008	0.2766
2028	**0.3012**	**0.2769**
2029	0.2637	0.2425
2030	0.2190	0.2014

Remark:
Bolded figure denotes the highest value among modelled years.

Marine Emission

3.5.12 The operation of the Project would induce marine traffic. Marine emission is expected and would pose potential air quality impact on the proposed ASRs. Apart from the induced marine traffic, there is also existing marine traffic and a scheduled ferry route within the 500m study boundary of the Project, namely the scheduled route between Park Island Pier and Tsuen Wan Ferry Pier. All these existing marine traffic also contributes to cumulative air quality impact. Major air pollutants associated with marine emissions include NO_X, SO_2 and particulates. Given that the project would induce only 3 vessels trips a day in the daily operation, the associated NO_X and SO_2 emissions are expected to be minimum. Therefore, only particulates emission by vessels is considered in the cumulative dust impact.

3.5.13 The existing marine traffic was assessed with visual survey and the future marine traffic was projected with growth factors by Marine Consultant. The agreement on the adopted marine traffic data have been sought from Marine Department (MD). The marine traffic data of Year 2026, 2028 and 2030 are presented in **Appendix 3.5**. Given that the marine traffic within the study boundary attains the highest in Year 2030, the marine traffic data of Year 2030 is adopted for the assessment.

3.5.14 With reference to the Study on Marine Vessels Emission Inventory (MVEIS) by HKUST, the marine emission is estimated in activity-based approach. The emission factors were derived

in units of works (gram per kilowatt-hour), dependent on fractional load of the equipment during different vessel activity modes. The calculation can be summarized as below:

Emission = P x FL x T x EF

where *P* is the installed power of equipment;
FL is fractional load of equipment in a specific mode;
T is operation time-in-mode; and
EF is fractional load emission factor of equipment.

3.5.15 Typical power equipment installed on marine vessels are Main Engine (ME) for propulsion, Auxiliary Engine (AE) for electricity and Auxiliary Boiler (AB) for fuel pre-heating and pumping. Subject to the vessel types, different combinations of engines are equipped on a vessel. For example, all 3 kinds of engines are equipped on fully cellular container vessel, no ME for barge, and no AB for pleasure vessel.

3.5.16 The vessel types identified by the Marine Consultant are matched with equivalent vessel types considered in MVEIS. Typical engine power rating, engine type, fuel type of each vessel type are adopted from MVEIS. Moreover, when there are multiple sub-groups for the same vessel type in MVEIS, typically the one with the largest gross registered tonnage (GRT), deadweight tonnage (DWT) or passenger carrying capacity (PAX) is adopted as a conservative approach. The detailed assumptions are presented in **Appendix 3.5**. The vessel types considered in the assessment include:

- Fully Cellular Container Vessel (category RTV)
- Dry Bulk Carrier (category RTV)
- Semi-container Vessel (category RTV)
- Fast Launch (category FL)
- Tug (category TT)
- Local Ferry (category LF)
- Pleasure Vessel (category SC)
- Tug Boat (category SC)

3.5.17 Typical engine load factor by vessel type and by operation mode refers to MVEIS. Engine load factor of marine source was then determined according to its vessel type and its operation mode, which is defined according to the vessel speed with reference to MVEIS and shown in **Table 3.7**.

Table 3.7 Operation Mode of Marine Vessels

Operation Mode	Vessel Speed
Cruise / Fairway Cruise	Over 12 knots
Slow Cruise	8 to 12 knots
Maneuvering	1 to below 8 knots
Hotelling	Below 1 knot

3.5.18 The time-in-mode is estimated by the distance and vessel speed travelled in the corresponding mode.

3.5.19 Emission factors of RSP and FSP by vessel type and by operation mode refers to MVEIS and IMO Fourth Greenhouse Gas Study 2020. According to the *Air Pollution Control (Marine Light Diesel) Regulation*, the sulphur content of locally supplied marine light diesel is capped at 0.05%, so fuel with sulphur content of 0.05% is assumed to be used by local vessels such as Small Crafts (SCs), Tug Boats (TTs), Fast Launch (FLs) and Local Ferries (LFs). On the other hand, *Air Pollution Control (Fuel for Vessels) Regulation* stipulates the use of fuel with sulphur content of 0.5% for all vessels within Hong Kong waters. As such, fuel with sulphur content of 0.5% is assumed to be used by River Trade Vessels (RTV) and Ocean-going Vessels (OGVs) for modelling purpose as a conservative approach. Together with the parameters discussed above, emission of a marine source is estimated with the equation discussed above.

3.5.20 The stack parameters exit temperature and release height are determined by desktop review and site surveys whenever possible, and the other stack parameters (exit velocity and stack diameter) refer to previous studies concerning nearby waters such as the approved EIA Report of Lei Yue Mun Waterfront Enhancement Project (AEIAR-219/2018) and Route 11 (Section between Yuen Long and North Lantau) (AEIAR-255/2023). The emission inventory is summarized in **Appendix 3.5**.

Dispersion Modelling and Modelling Approach for the Proposed Plant

3.5.21 According to *Guidelines on Assessing the 'TOTAL' Air Quality Impacts* by EPD, an integrated modelling system PATHv3.0 which is developed and maintained by EPD will be applied to provide background pollutant concentrations in assessing the total impact in the study area. In addition, Weather Research and Forecast (WRF) meteorological data should be adopted for modelling.

3.5.22 American Meteorological Society (AMS) and U.S. Environmental Protection Agency (EPA) Regulatory Model (AERMOD), the HKEPD approved air dispersion model, has been employed to predict the air quality impacts at the representative ASRs due to the Project. Daily and annual averages of RSP and FSP concentrations are predicted at each identified ASRs at various assessment height, ranging from 1.5 metres to 110 metres above ground.

3.5.23 Hourly meteorological conditions including wind data, temperature, relative humidity, pressure, cloud cover and mixing height of Year 2019 are extracted from the WRF meteorological data adopted in the PATHv3.0 system. The dataset by WRF should be intact and consistent among parameters. In order to avoid any missing hours misidentified by AERMOD and its associated components, the WRF met data is handled manually to set wind direction between 0° – 0.1° to be 360°. The height of the input data is assumed to be 9 metres above ground for the first layer of the WRF data as input.

3.5.24 The wind speed and mixing heights in the WRF data will be further adjusted before meteorological pre-processing by AERMET. The minimum wind speed is capped at 0.5 metre per second. The mixing height is capped between 119 metres and 2009 metres according to the observation in Year 2019 by HKO. After pre-processed by AERMET, the mixing height is verified once again and adjusted to the capped range if necessary.

3.5.25 Surface characteristic parameters such as albedo, Bowen ratio and surface roughness are required in the AERMET. The parameters are determined according to land use classified for the surrounding and the latest AERMOD Implementation Guide. The details of estimation is presented in **Appendix 3.3**. Elevated terrain in AERMOD is adopted for this assessment.

3.5.26 Further, dry deposition is applied in the model run. Particle size distribution is assigned for particles with aerodynamic diameters smaller than 10 μm to each type of source in the AERMOD in order to account for the particle deposition. The sources are divided into three types, (i) general concrete batching processes (further classified into 3 different processes as described in **Table 3.8**), (ii) aggregate handling and storage piles, and (iii) fugitive emission from paved roads. The particle size distributions for each type of source are summarized in **Table 3.8 – Table 3.10**.

Table 3.8 Particle Size Distribution of General Concrete Batching Process [(d) (e)]

Process	RSP to TSP Ratio [(a)]	FSP to RSP Ratio [(b)]
Cement unloading to elevated storage silo (Controlled)	34%	45%
Cement supplement unloading to elevated storage silo (Controlled)	53%	45%
Weigh Hopper Loading (Uncontrolled)	50%	29%
Mixer loading (central mix) (Controlled)	30%	45%

Average Particle Diameter (μm)	Normalized Fraction for RSP (b)(c)
0.5	12%
1.5	21%
2.25	12%
2.75	5%
3.5	11%
4.5	8%
5.5	6%
8	26%

Note:
(a) Derived from Table 11.12-1 Emission Factors for Concrete Batching, Chapter 11.12 Concrete Batching, AP-42, USEPA (Version 01/12)
(b) Derived from Category 3 "Mechanically Generated Aggregate, Unprocessed Ores", Page B.2-13, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95)
(c) Control efficiency of fabric filter on different size of particle refers to Table B.2-3 Typical Collection Efficiencies of Various Particulate Control Device, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95)
(d) The cumulative percentage of all particle sizes maintains 100% in air dispersion model by applying percentage in 6 decimal places.
(e) Details of derivation of the figures are shown in Appendix 3.2

Table 3.9 Particle Size Distribution of Aggregate Handling and Storage Piles

Average Particle Diameter (μm)	Aerodynamic Particle Size Multiplier (k)(a)	Normalized Fraction(b)
1.25	0.053	15%
3.75	0.2	42%
7.5	0.35	43%

Note:

(b) Derived from dividing the respective aerodynamic particle size multiplier by that of RSP (i.e. 0.35)

Table 3.10 Particle Size Distribution of Fugitive Emission from Paved Roads

Average Particle Diameter (μm)	Particle Size Multiplier (g/VKT)(a)	Normalized Fraction(b)
1.25	0.15	24%
6.25	0.62	76%

Note:
(a) Reference from Table 13.2.1-1, Section 13.2.1.3 , AP-42 Fifth Version, USEPA
(b) Derived from dividing the respective particle size multiplier by that of RSP (i.e. 0.62)

Dispersion Modelling and Modelling Approach for Open Road

3.5.27 According to *Technical Note for Modelling Vehicular Emission Using AERMOD* by EPD, AERMOD is also used to assess the vehicular emission from open road.

3.5.28 The mixing zone of a road source needs to be defined in the AERMOD. The top of plume is defined as 1.7 times of the average height of vehicle fleet on the road. The average height of vehicle fleet is determined for each road and is weighted by the total daily traffic flow of each vehicle class. The suggested average vehicle height of each vehicle class refers to the same technical note.

Dispersion Modelling and Modelling Approach for Marine Emission

3.5.29 AERMOD was applied to assess the marine emission in the nearby waters. Marine emission is line source in nature because of the mobile vessels along the route. However, the emission also resembles point source for its high exhaust temperature, exhaust velocity and higher release height. In consideration of these similarities, the marine emission along a route was modelled by numerous of point sources along the route with an interval of 50m and its emission strength is equally allocated to these point sources.

3.5.30 High speed vessels, fishing vessels, pleasure vessels, government vessels (mostly patrol boats) and others (mostly tugboats) generally equip with horizontal stack based on site surveys. These vessels are therefore modelled as point source with horizontal release in AERMOD.

Cumulative Impact of Criteria Air Pollutants

3.5.31 Cumulative AQO pollutant concentration at ASR was derived by the sum of contributions by various sources, and background contribution from PATHv3.0 on hour-by-hour basis. Averaging results, namely 10-min, hourly, daily, and annual, were derived from the cumulative hour-by-hour results in accordance with *Title 40, Code of Federal Regulations, US Environmental Protection Agency (USEPA 40 CFR) Part 51 "Revision to the Guideline on Air Quality Models, January 2017*". For annual average, the sum of all valid hourly concentrations was divided by the number of valid hours during the year. For daily average, cumulative results at each ASR amongst 365 days were ranked by highest concentration and compared with the maximum allowable concentration to determine the number of exceedance throughout a year. The air quality impact on ASRs was then evaluated by number of exceedance per annum against the criteria of EIAO-TM and AQOs.

3.5.32 Ozone Limiting Method (OLM) has been adopted for the conversion of short-term NO_X to NO_2 based on the ozone background concentration from PATHv3.0. Regarding vehicular emission, NO_2 and NO were predicted separately in AERMOD. Following the principle of OLM, the total predicted vehicular NO_2 is estimated as below:

$$[NO_2]_{vehicular} = [NO_2]_{predicted} + MIN \{[NO]_{predicted}, \text{ or } (46/48) \times [O_3]_{PATH}\}$$

where

$[NO_2]_{vehicular}$	is the total predicted vehicular NO_2 concentration
$[NO_2]_{predicted}$	is the predicted NO_2 concentration
$[NO]_{predicted}$	is the predicted NO concentration
MIN	means the minimum of the two values within the bracket
$[O_3]_{PATH}$	is the representative O_3 PATH concentration (from other contributions)
(46/48)	is the molecular weight of NO_2 divided by the molecular weight of O_3

3.5.33 With reference to the *Guidance on Choice of Models and Model Parameters*, Jenkin method was adopted for the conversion of cumulative annual average NO_X to NO_2 by using the empirical relationship in observed annual mean of NO_X and NO_2 concentrations. The empirical relationship is derived from the annual mean observed data by relevant EPD's air quality monitoring stations (AQMS) including Tsuen Wan (the closest station), Tap Mun (background station with no vehicular emission), and Mong Kok roadside station (station dominated by vehicular emission). The resulting curve is adopted for the cumulative annual average NO_x to NO_2 conversion. Detailed derivation of NO_X-to-NO_2 conversion equation using Jenkin method is presented in **Appendix 3.7**.

3.5.34 According to "*Guidelines on the Estimation of 10-min average SO_2 Concentration for Air Quality Assessment in Hong Kong*", SO_2 concentration in 10-min average due to the stack emissions was estimated by applying stability-dependent multiplicative factor to 1-hour average model prediction by AERMOD.

3.6 Prediction and Evaluation of Impact

Cumulative Air Quality Impact

3.6.1 The 10th highest cumulative daily averages of RSP and 19th highest cumulative daily averages of FSP concentrations, as well their cumulative annual averages, at each representative ASR are presented in **Table 3.11** – **Table 3.14**, while the 10-min and daily averages of SO_2 concentrations, and hourly, daily and annual averages NO_2 concentrations at each representative ASR are presented in **Table 3.11** – **Table 3.14.** The prediction shows that the concentrations of the pollutant of concern would comply with the relevant AQOs at each representative ASR.

3.6.2 According to the predictions at discrete receptors in **Table 3.11** – **Table 3.14**, the worst predicted levels of cumulative daily RSP impact appear at 1.5m and 10m above ground, while

those of cumulative annual RSP impact appear at 1.5m and 5m above ground for all representative ASRs. The worst predicted levels of cumulative daily FSP impact appear at 1.5m and 5m above ground, while those of cumulative annual FSP impact occur at 1.5m above ground. Contour plots of cumulative daily average of RSP concentrations at 1.5m and 10m above ground, and cumulative annual average of RSP concentrations at 1.5m and 5m above ground, cumulative daily average of FSP concentrations at 1.5m and 5m above ground and cumulative annual average of FSP concentrations at 1.5m above ground are presented in **Figure 3.2** – **Figure 3.8** respectively.

3.6.3 According to the predictions at discrete receptors in **Table 3.11** – **Table 3.14**, the worst predicted levels of cumulative 10-min and daily averages of SO_2 impact and those of cumulative hourly, daily and annual averages of NO_2 impact appear at 1.5m above ground for all representative ASRs. Contour plots of cumulative 10-min and daily averages of SO_2 concentrations, and cumulative hourly, daily and annual averages of NO_2 concentrations at 1.5m above ground are presented in **Figure 3.9** – **Figure 3.13** respectively.

3.6.4 Exceedance in annual RSP and FSP was generally predicted within the Subject Site and adjacent dockyard areas where slipways and temporary structures are located. It is confirmed that no air sensitive uses are located within the exceedance area.

3.6.5 In short, the predictions at discrete locations and spatial predictions within the study area showed that no adverse air quality impact on the nearby ASRs would be anticipated during the operation of the Proposed Plant.

3.7 Mitigation Measures

Plant Operation

3.7.1 It should be noted that the mitigation measures applied in the calculations are based on the proposed configuration of the Project. Details of mitigation measures that will be implemented in the plant have been presented in **Table 3.4**.

3.7.2 Despite the air control technologies and control measures proposed, good operation and maintenance practices is vital in achieving the goals of air pollution control measures and ensuring the environmental performance of the Plant. Standard operation and maintenance procedures will be set up and followed by all the operation staff to keep all the air pollution control equipment in good operating condition. Adequate training will be given to the personnel for inspection and maintenance of all the air pollution control equipment.

3.7.3 The plant operator shall maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, products, wastes or by-products should be carried out in an acceptable manner so as to minimize dust emission impact on the surrounding environment.

3.7.4 All sprinkler system used for dust suppression shall be maintained in good condition during operation. The flow rate and operating pressure of the spraying liquid/solution shall be sufficient to suppress dust emission from the corresponding sources. The sprinkler system shall be able to cover the areas of emission points concerned.

3.7.5 Air pollution control equipment, including fabric filters with 99.9% dust removal efficiency, silo overfilling alarms and filling link interlock shall be maintained in good operation condition and put into use whenever the relevant plant served by the air control equipment is in operation.

3.7.6 In order to guarantee the control efficiency of the dust collectors implemented, the performance of dust collectors will be monitored by fitting a pressure gauge to indicate the adequate pressure drop across the filter throughout the operation.

3.7.7 The emission rate or concentrations at all identified emission sources shall also be monitored upon commissioning and during the operation of the Project. The sampling methods for the emission sources and the monitoring programme shall be agreed with the EPD prior to the operation of the proposed CBP.

3.7.8 The dust extraction and collection system shall be routinely inspected at least once per month. This system shall be maintained in good condition during production. Collected dust will be returned to process stream or disposed of without generating any fugitive dust.

3.7.9 The maintenance, repair, or general cleaning of the plant facilities and vehicle within the site boundary shall be carried out in such a manner that the air emission is minimized.

3.7.10 The plant operator shall take all practical measures to minimize air emissions which may be caused by handling the muddy waste generated from the plant operation. No accumulation and dumping of such waste are allowed in open area.

3.7.11 Malfunction or breakdown of equipment leading to abnormal emission shall be dealt with promptly. In any case, the abnormal emission due to equipment failure shall be stopped as soon as possible. Sufficient numbers of spare parts for air pollution control equipment shall be kept in stock to allow rapid repair of the equipment. Each fabric filter shall be inspected at least once per month.

3.7.12 Should any office or control room of the Project be located within any predicted exceedance zones discussed above, it is recommended that centralized air conditioning and air filtering system with recommended dust removal efficiency of at least 90% shall be installed to minimize the air quality impacts and achieve AQO compliance at these uses in the plant.

3.7.13 Together with proper operation and maintenance practices discussed above, the proposed measures should ensure that there will be no adverse air quality impacts on any nearby ASRs, as predicted by the air quality impact assessment. As a Specified Process defined under the APCO, a licence from EPD will be applied where the detailed design of plant and air quality control proposals will be formulated to ensure full compliance with relevant requirements under the APCO during operation.

Odour from Sediments from Dredging and Maintenance Dredging

3.7.14 Potential odour impact arising from the dredging activities during both construction and operation phase are not anticipated. Nevertheless, the following precautionary measures are proposed to minimize the potential impacts:

- Loading of the dredged sediment to the barge should be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.
- Any dredged sediment should be stored in enclosed tanks or properly covered as far as practicable to minimise its exposed area during its temporary storage and should be placed as far away from the identified ASRs as practically possible.
- Dredging rate should be controlled carefully.
- The dredged sediment is suggested to be delivered off-site for disposal every day as possible to avoid the dredged sediment for storage at the barge overnight.
- Dredged sediment placed on marine vessel for disposal should also be properly covered during transportation.
- The dredging activities are conducted during non-summer season.

With the implementation of these measures, the potential odour nuisance could be minimized and adverse odour impact at nearby ASRs is not expected.

4 NOISE

4.1 Introduction

4.1.1 The construction and operation of the concrete batching plant may induce potential noise impacts to surrounding noise sensitive receivers. Representative Noise Sensitive Receivers (NSRs) in the vicinity of the study area are identified. The potential noise impacts on these NSRs arising from the Proposed Plant are assessed and appropriate mitigation measures are proposed to alleviate the potential noise impacts where necessary.

4.2 Description of Environment

4.2.1 The Subject Site is located at Tsing Yi Town Lot Nos. 14& 15 at Tam Kon Shan Road in the northern Tsing Yi . It is located on marine frontage in the north and surrounded by areas of dockyards and marine-oriented industries in the east and west. Green@Kwai Tsing, site office and Tsing Yi Northeast Park are in the further east. Tam Kon Shan Road and Tsing Yi North Coastal Road is in the south of the Subject Site. The existing noise climate of the study area is dominated by the fixed plant noise from the existing dockyards and road traffic noise from the highways and local roads in the vicinity.

Noise Sensitive Receivers

4.2.2 In accordance with Annex 13 of the EIAO-TM, all domestic premises, including temporary housing accommodation, educational institution, hospital, medical clinic, home for the aged, convalescent homes, places of public worship, libraries, courts of law, performing arts centres, auditoria, amphitheatres and hostels shall be considered to be as NSRs. Representative NSRs are to be identified within the study boundary, which is 300 m from the Site.

4.2.3 Referring to the Tsing Yi Outline Zoning Plan No. S/TY/32, the land uses within 300m of the subject site are “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) and green belts, and there are no residential uses or educational institutes. After carrying out detailed desktop review and site survey, no noise sensitive receiver (NSR) is identified within the 300m of the subject site. The nearest NSR identified is The Met. Azure, which is located approximately 350m from the proposed CBP on top of the hill.

4.3 Environmental Legislation and Guidelines

Construction Noise

4.3.1 The Noise Control Ordinance (NCO) provides the statutory framework for noise control of construction work other than percussive piling, using Powered Mechanical Equipment (PME) between the hours of 1900 and 0700 hours or at any time on a general holiday (i.e. restricted hours). Noise control on construction activities taking place at other times is subject to the Noise assessment criteria for Daytime Construction Activities as stated in Professional Persons Environmental Consultative Committee (ProPECC) Practice Notes PN2/93 Noise from Construction Activities - Non-statutory. The noise assessment criteria are 75 dB(A) for domestic dwelling, 70 dB(A) for schools during normal teaching period and 65 dB(A) for schools during examination period.

Operation Fixed Plant Noise

4.3.2 Industrial fixed plant noise impacts were assessed in accordance with the criteria and methodology given in the Technical Memoranda made under the NCO, and Hong Kong Planning Standard and Guidelines (HKPSG).

4.3.3 The HKPSG states that all fixed noise sources should be so located and designed that when assessed in accordance with the Technical Memorandum for the Assessment of Noise from Places other than Domestic Premises, Public Places or Construction Sites (IND-TM), the level

of the intruding noise at the facade of the nearest sensitive use should be at least 5 dB(A) below the appropriate ANL shown in Table 2 of the IND-TM or, in the case of the background being 5 dB(A) lower than the ANL, the predicted noise level should not exceed the background.

4.3.4 Determination of the ANL depends on the area sensitivity rating (ASR), which is based on the characterization of the area within which they are located such as rural, village, low-density residential, or urban. Within these areas, the presence of "influencing factors" (such as the presence of industrial activities or major roads) can further affect the ASR and therefore the acceptable noise level. The ASR is determined from **Table 4.1** below.

Table 4.1 Area Sensitivity Ratings (ASRs)

Type of Area Containing NSR	Degree to which NSR is affected by IF		
	Not Affected	Indirectly Affected	Directly Affected
Rural Area	A	B	B
Low density residential area consisting of low-rise or isolated high-rise developments	A	B	C
Urban Area	B	C	C
Area other than those above	B	B	C

4.3.5 The ANLs for all ASRs are provided in **Table 4.2**.

Table 4.2 Acceptable Noise Levels for Fixed Noise Sources

Time Period	Acceptable Noise Level, dB(A)		
	ASR A	ASR B	ASR C
Daytime and Evening (0700 to 2300 hours)	60	65	70
Night (2300 to 0700 hours)	50	55	60

4.3.6 The surrounding area of the Project site is of industrial uses, which is not rural area, low density residential area, nor urban area. Therefore, the type of use of the area is considered as “area other than those above”. The area is directly affected by influencing factors, such as nearby industries and traffic noise from local roads and highways. With reference to **Table 4.1** above, ASR of “C” has been assumed for the NSR in the vicinity of the proposed Project site.

4.3.7 In any event, the ASR assumed in this report is for indicative assessment only. It should be noted that the fixed noise sources are controlled under Section 13 of the NCO. At the time of investigation, the Noise Control Authority shall determine noise impact from concerned fixed noise sources on the basis of prevailing legislation and practices being in force and taking account of contemporary conditions/situations of adjoining land uses. Nothing in this report shall bind the Noise Control Authority in the context of law enforcement against all the fixed noise sources being assessed.

4.3.8 The HKPSG recommends that the level of the intruding noise at the façade of the nearest sensitive use should be at least 5 dB(A) below the appropriate ANL or, in the case of background noise being 5 dB(A) lower than the ANL, the predicted noise level arising from the operation of the Proposed Plant at the façade of the nearest sensitive use should not exceed the background noise level.

4.4 Identification and Evaluation of Impact

Construction Phase

4.4.1 During the construction phase, the use of PME for the construction works of the proposed development would likely be the source of noise impact and would have the potential noise impact on the NSR located in the vicinity of the Subject Site.

4.4.2 In view of the nature of the development, the major construction activities would include minor excavation for foundation works and plant fabrication works. Potential noise impacts generated from the use of PME such as excavators, generators, air compressors, cranes, lorries, and pneumatic breakers for these construction activities would be expected.

4.4.3 In order to alleviate the potential construction noise impacts on the nearby NSRs, the following mitigation measures are suggested:

- Scheduling of work to avoid simultaneous operation of noisy equipment and erecting, as early as possible, any new structures which will have the effect of screening noise sources
- Noisy equipment should be located as far as possible from the NSR
- Implementation of good site practices to limit noise emissions at source
- Use of quieter PME
- Use of quieter alternative construction method
- Use of noise barriers/enclosure

4.4.4 With the implementation of the noise mitigation measures, it is anticipated that there would be no unacceptable construction noise impacts.

Operation Phase

4.4.5 In general, the CBP will operate from 07:00 to 21:00. The production rate and number of on-site vehicles are listed in **Table 4.3**.

Table 4.3 Production Rate and Number of On-site Vehicles during Normal Day

Activities / On-site Vehicles	07:00 – 21:00
Concrete Production Rate	100%
Concrete mixer truck per hour	43
PFA/GGBS/Silica Fume tanker per hour	2
Aggregates tipper truck per hour	0

4.4.6 However, no NSR has been identified within the study area and the nearest NSR, The Met, Azure, is 350m away on top of the hill. Given that sufficient separation distance from the NSR, more than 300m, the operational noise impact would become negligible. No adverse noise impact would be expected due to the operation of the propose CBP.

4.4.7 No further mitigation measures would therefore be required for the Proposed Plant.

5 WATER QUALITY

5.1 Introduction

5.1.1 The potential water quality impacts associated with the construction and operation of the proposed concrete batching plant are assessed in this section. Where necessary, mitigation measures are proposed to ensure that all residual impacts are in compliance with the relevant environmental legislation, standards and guidelines.

5.2 Environmental Legislation and Guidelines

5.2.1 The Water Pollution Control Ordinance (Cap.358) provides the major statutory framework for the protection and control of water quality in Hong Kong. According to the Ordinance and its subsidiary legislation, Hong Kong waters are divided into ten Water Control Zones (WCZ). Corresponding statements of Water Quality Objectives (WQO) are stipulated for different water regimes (marine waters, inland waters, bathing beaches subzones, secondary contact recreation subzones and fish culture subzones) in the WCZ based on their beneficial uses. The proposed concrete batching plant site is located within the Western Buffer Water Control Zone.

Technical Memorandum

5.2.2 Besides setting the WQOs, the WPCO controls effluent discharging into the WCZs through a licensing system. A Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters was issued under the WPCO which gives guidance on the permissible effluent discharges based on the type of receiving waters (foul sewers, storm water drains, inland and coastal waters). The limits control the physical, chemical and microbial quality of effluents. The discharge standard will vary with the use of downstream water. Any new effluent discharge would be required to comply with the terms and conditions of a discharge licence, issued by EPD, under the WPCO.

Practice Notes

5.2.3 A Practice Note (PN) for Professional Persons was issued by the EPD to provide environmental guidelines for handling and disposal of construction site discharges. The PN 2/24 “Construction Site Drainage” provides good practice guidelines for dealing with various types of discharge from a construction site. Practices outlined in the PN should be followed as far as possible during construction to minimize the water quality impact due to construction site drainage.

5.3 Identification and Evaluation of Impact

Construction Phase

Dredging Works

5.3.1 The recent sounding survey showed that sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe barging operations. To restore the nearshore water depth, a dredging works during construction is thus proposed to remove the accumulated sediment at the nearshore of the Site and restore adequate water depth for safe vessel navigation. The proposed dredging works is required to be carried out once during the construction phase of the Project. The extent of the dredging is illustrated in **Figure 6.1.** Approximately 4,000 m^3 of dredged sediment is involved based on the preliminary design and subject to further detailed analysis and the dredging is estimated to last 10 days based on the preliminary design. The dredging would cause potential water quality impacts on the water column.

5.3.2 Mitigation measures including deployment of silt curtain will be implemented during the dredging works. A silt curtain deployment plan should be submitted to EPD prior to the commencement of the dredging works, under which detailed silt curtain arrangement should be

proposed. The dredging works should be carried out in dry season to further minimize the potential water quality impact. With reference to *Recommended Pollution Control Clauses for Construction Contracts* (RPCC), all equipment shall be designed and maintained to minimize the risk of silt and other contaminants being released into the water column or deposited in locations other than designated location. All vessels shall be monitored to ensure that no dumping outside the approved location nor loss of material during transportation takes place. Loading of barges and hoppers shall be controlled to prevent splashing of dredged material to the surrounding water, and vessels shall not be filled to a level which will cause overflowing of material or polluted water during loading or transportation. With the implementation of these measures, no adverse water quality impact due to the dredging is anticipated.

Land-based Works

5.3.3 Based on the engineering design, land-based works would be involved during the construction. Potential sources of water quality impact associated with the construction phase of the proposed concrete batching plant have been identified and include:

- excavation and foundation works;
- construction site runoff and drainage;
- general construction activities; and
- sewage effluent produced by on-site workforce.

Construction Site Runoff and Drainage

5.3.4 Runoff from the construction works areas during earthworks may contain increased loads of suspended solids and contaminants. Potential sources of pollution from site drainage include:

- runoff and erosion from exposed soil surfaces, earth working areas and stockpiles;
- bentonite slurries from foundation works.
- wash water from dust suppression sprays; and
- fuel and lubricants from maintenance of construction vehicles and mechanical equipment.

5.3.5 Mitigation measures should be implemented to control construction site runoff and drainage from the works areas, and to prevent runoff and drainage water with high levels of suspended solids from entering the nearby waters or local storm water drainage system. Water pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities. With the implementation of adequate construction site drainage and provision of sediment removal facilities, it is anticipated that unacceptable water quality impacts would not arise.

General Construction Activities

5.3.6 On-site construction activities may cause water pollution from the following:

- uncontrolled discharge of debris and rubbish such as packaging, construction materials and refuse; and
- spillage of liquids stored on-site, such as oil, diesel and solvents etc., are likely to result in water quality impacts if they enter the nearby waters or local storm water drainage system.

5.3.7 Good construction and site management practices should be observed to ensure that litter, fuels and solvents do not enter the nearby watercourses or storm water drains.

Sewage Effluents

5.3.8 Domestic sewage would be generated from the workforce during the construction phase. However, this temporary sewage can be adequately treated by interim sewage treatment facilities, such as portable chemical toilets, which can be installed within the construction site. It is unlikely that sewage generated from the site would have a significant water quality impact,

provided that sewage is not discharged directly to the nearby waters or drainage channels, and chemical toilets are used and properly maintained.

5.3.9 Given the nature of the proposed development, the duration of the construction activities will be relatively short and only minimal excavation is required for foundation works. With the above recommended mitigation measures, it is anticipated the water quality impact will be insignificant during the construction phase.

5.3.10 However, no water sensitive receiver has been identified within 500m from the project site. No adverse water quality impact would be expected due to the construction of the Project. No further mitigation measures would therefore be required.

Operation Phase

5.3.11 During operation phase, the main sources of wastewater would be mixer truck cleaning activities, the wheel washing facility, general site cleaning, water spraying for dust suppression and lorries cleaning before exiting the plant. On-site wastewater recycling system will be provided to collect wastewater for recycling and reuse. 3 recycle water tanks with total capacity of 55,000L will be provided for storage of recycled wastewater from the on-site wastewater recycling system to minimize any potential discharge of wastewater. All transfer of aggregates will be conducted in enclosed condition and no potential water quality impact is expected during unloading of aggregates.

5.3.12 The plant has been designed to contain all production wastewater as well as surface runoff within the plant. Surface channel will be laid within the plant to collect any production wastewater and runoff. The ground will also be formed with gradient such that all surface runoff flows toward the middle of the Site and collected by the surface channel. The site arrangement and layout of surface channels are presented in **Appendix 5.1**. With the implementation of such site arrangement, no water will be discharged from the plant.

5.3.13 Wastewater generated from mixer truck cleaning activities will be collected at container and passed through the reclaimer to separate aggregates and slurry, after which the slurry water will be directed into the wastewater tanks. The slurry water will then pass through a filter press to capture cement particle. The clear water will be collected in the clear water tank where the water will be pumped to the water tank for recycling. The reclaimed water will be reuse for site cleaning, truck washing and/or concrete production. Details of the wastewater treatment is presented in **Appendix. 5.2**.

Stormwater Runoff

5.3.14 Surface runoff from the Site will be retained within the site and collected via the surface channels for recycling as discussed in **Section 5.3.12** and no water will be discharged from the plant. No adverse drainage impact to the existing drainage system would be expected.

Sewage Effluents by Work Force

5.3.15 Domestic sewage will be expected from the workforce during the operation phase. Around 15 staffs will be required for the routine operation of the Proposed Plant. The sewage generated is expected to be small in quantity. Purposedly-built toilets will be provided on-site. With the connection to public sewerage, the domestic sewage will be collected and discharged via the public sewerage network.

5.3.16 However, no water sensitive receiver has been identified within 500m from the project site and the closest WSR is illustrated in **Figure 5.1**.No adverse water quality impact would be expected due to the operation of the Project. No further mitigation measures would therefore be required. A Sewage Impact Assessment (SIA) will be carried out and submitted to the satisfaction of SIG.

Maintenance Dredging

5.3.17 Maintenance dredging would be required during operation subject to the siltation rate. Should a maintenance dredging be required, it is expected to be carried out in two days. And the sediment volume to be removed under each maintenance dredging event is expected to be less than 500 m^3 in total. Deployment of silt curtain and relevant mitigation measures will be deployed during the maintenance dredging as mentioned in **Section 5.3.2.** No adverse water quality impact due to the maintenance dredging is anticipated.

6 WASTE MANAGEMENT

6.1 Introduction

6.1.1 This section includes the discussion of the following issues in relation to waste management:

- identifies the type of wastes that would be generated during construction and operation of the proposed concrete batching plant;
- assesses the potential environmental impacts that are associated with the handling and disposal of these wastes; and
- mitigation measures and good site practice, including waste handling, storage and disposal, were recommended with reference to the applicable legislation and guidelines.

6.2 Environmental Legislation and Guidelines

6.2.1 The criteria and guidelines for assessing waste management implications are set out in Annex 7 and Annex 15 of the EIAO-TM, respectively.

6.2.2 The following legislation relates to the handling, treatment and disposal of wastes in the Hong Kong SAR and has been used in assessing potential environmental impacts:

- Waste Disposal Ordinance (Cap. 354)
- Waste Disposal (Chemical Waste) (General) Regulation (Cap. 354C)
- Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N)
- Land (Miscellaneous Provisions) Ordinance (Cap. 28)
- Public Health and Municipal Services Ordinance (Cap. 132) - Public Cleansing and Prevention of Nuisances Regulation
- Dumping at Sea Ordinance (Cap. 466)

Waste Management

6.2.3 The Waste Disposal Ordinance (WDO) prohibits the unauthorised disposal of wastes. Construction waste is defined as any substance, matter or thing that is generated from construction work and abandoned, whether or not it has been processed or stockpiled before being abandoned, but does not include any sludge, screenings or matter removed in or generated from any desludging, desilting or dredging works. Under the WDO, wastes can be disposed of only at designated waste disposal facilities.

6.2.4 Under the WDO, the Chemical Waste (General) Regulation provides regulations for chemical waste control, and administers the possession, storage, collection, transport and disposal of chemical wastes. The Environmental Protection Department (EPD) has also issued guideline documents, the “Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes”, “A Guide to the Chemical Waste Control Scheme”, and “A Guide to the Registration of Chemical Waste Producers”, which detail how the Contractor should comply with the regulations on chemical wastes.

6.2.5 The Public Cleansing and Prevention of Nuisances Regulation provides control on illegal tipping of wastes on unauthorised (unlicensed) sites.

Construction and Demolition (C&D) Material

6.2.6 The current policy related to the disposal of C&D material is documented in the Works Branch Technical Circular No. 2/93, ‘Public Dumps’. Construction and demolition materials that are wholly inert, namely public fill, should not be disposed of to landfill, but taken to public filling areas, which usually form part of reclamation schemes. The Land (Miscellaneous Provisions) Ordinance requires that dumping licences be obtained by individuals or companies who deliver public fill to public filling areas. The Civil Engineering & Development Department (CEDD) issues the licences under delegated powers from the Director of Lands.

6.2.7 Under the Waste Disposal (Charges for Disposal of Construction Waste) Regulation, enacted in January 2006, construction waste delivered to a landfill for disposal must not contain more than 50% by weight of inert material. Construction waste delivered to a sorting facility for disposal must contain more than 50% by weight of inert material, and construction waste delivered to a public fill reception facility for disposal must consist entirely of inert material.

6.2.8 Measures have been introduced under Practice Note for Authorized Persons and Registered Structural Engineers No. 243 (PNAP ADV-19) on Construction and Demolition Waste, to enhance the management of construction and demolition material, and to minimize its generation at source. A Waste Management Plan (WMP) shall be prepared by the contractor and agreed by the engineer. The WMP may cover the types of waste and their estimated quantities, measures for reducing waste generation, on-site material reuse, quantities of waste requiring off-site disposal, disposal outlet, monitoring and auditing programme, implementation of the trip-ticket system, etc.

Chemical Waste

6.2.9 Under the Waste Disposal (Chemical Waste) (General) Regulation, all producers of chemical waste must register with EPD and treat their wastes, either utilising on-site plant licensed by EPD, or arranging for a licensed collector to transport the wastes to a licensed facility. The regulation also prescribes the storage facilities to be provided on site, including labelling and warning signs, and requires the preparation of written procedures and training to deal with emergencies such as spillages, leakages or accidents arising from the storage of chemical wastes.

Dredged Sediment

6.2.10 The Dumping at Sea Ordinance (DASO) came into operation in April 1995 and empowers the Director of Environmental Protection (DEP) to control the disposal and incineration of substances and particles at sea for the protection of the marine environment. Under the Ordinance, a dumping permit from the DEP is required for the disposal of regulated substances within and outside the waters of Hong Kong. The permit contains terms and conditions which include the following specifications, but not limited to:

- Type and quantity of substances permitted to be dumped;
- Location of the disposal grounds;
- Requirement of equipment for monitoring the disposal operations; and
- Environmental monitoring requirements.

6.2.11 Marine disposal of any dredged/excavated sediment is subject to control under DASO. Dredged/excavated sediment destined for marine disposal is classified based on its contaminant levels with reference to the Administrative Guidance – Management Framework for Disposal of Dredged/Excavated Sediment. The Administrative Guidance stipulated a set of sediment quality criteria or Chemical Exceedance Levels (CEL) for contaminants including metals, metalloid and organic pollutants.

6.2.12 The Administrative Guidance - Management Framework for Disposal of Dredged/Excavated Sediment sets out the procedure for seeking approval to and the management framework for marine disposal of dredged/excavated sediment. It outlines the requirements to be followed in assessing and classifying the sediment and explains the marine disposal arrangement for the classified material. The sediment quality criteria for the classification of sediment were referred as the Lower Chemical Exceedance Level (LCEL) and Upper Chemical Exceedance Level (UCEL). The LCEL and UCEL are presented in Appendix A of the Administrative Guidance. Subject to the results of the chemical screening, biological screening may be required to determine the disposal requirement of the sediment. There are three types of disposal options for dredged / excavated sediments stipulated in the Administrative Guidance as listed below.

- Type 1 – Open Sea Disposal;
- Type 2 – Confined Marine Disposal; and
- Type 3 – Special Treatment/Disposal.

6.3 Prediction and Evaluation of Impacts

Construction Phase

6.3.1 Based on the engineering design, only land-based works would be involved during the construction, i.e. no marine work is expected. The construction activities to be carried out for the Proposed Plant would generate a variety of wastes that can be divided into distinct categories based on their composition and ultimate method of disposal. The identified waste types include:

- construction and demolition (C&D) materials from the excavation and construction works;
- general refuse from the workforce;
- chemical waste from any maintenance of construction plant and equipment; and
- dredged sediment from maintenance dredging.

Construction and Demolition (C&D) Materials

6.3.2 C&D materials contain a mixture of inert and non-inert materials. The inert portion, such as soil, rock, concrete, brick and asphalt etc., is known as "public fill" and the non-inert portion, including metal, timber, paper, glass and general garbage is known as "C&D waste". C&D materials comprise unwanted materials generated during construction, including rejected structures and materials, materials which have been over-ordered and materials which have been used and discarded. Examples of C&D materials may include:

- wood from formwork and falsework (non-inert portion);
- material and equipment wrapping (non-inert portion);
- unusable/surplus concrete/grouting mixes (inert portion); and
- damaged/ surplus construction materials (inert portion such as bricks).

6.3.3 For the whole civil construction period, approximate 1,250 tonnes of C&D material will be generated, where there are around 950 tonnes from the demolition of existing buildings and around 300 tonnes from construction works. Demolished debris would comprise inert materials including reinforced concrete waste (700t), soil and gravel (100t), and other miscellaneous inert material (60t, e.g. glass, tiles), and non-inert materials including waste steel (60t) and timber (30t). Excavated soil (around 300t) from foundation works is expected to be the major inert C&D materials during construction. The Contractor is responsible for transfer of C&D materials to public fill reception facilities or landfills, depending on the type of material and the percentage of inert material. The public fill inert portion should be reused on site or disposed delivered to public fill reception facilities for beneficial uses. The non-inert portion of the C&D materials should be reused or recycled, and disposal of at designated landfills as the last resort. Waste steel in the C&D material will be delivered to recycler to minimize disposal quantity to landfill, among which around 20 tonnes of steel can be recycled.

6.3.4 C&D materials should be sorted on-site and be separated as public fill (inert portion) and C&D waste (non-inert portion). Due to the inert nature of most of the C&D materials generated, disposal would be unlikely to raise environmental concerns. The quantity of non-inert C&D materials is considered to be small and is not envisaged to have any adverse impact on the capacity of landfills.

Chemical Wastes

6.3.5 The Waste Disposal (Chemical Waste) (General) Regulation defines chemical waste as any substance being scrap material or unwanted substances specified in its Schedule 1 and provides a complete list of such substances. However, substances likely to be generated by construction activities would mainly arise from the maintenance of equipment. These may include, but not be limited to, the following:

- scrap batteries or spent acid/alkali;
- used engine oils, hydraulic fluids and waste fuel;
- spent mineral oils/cleaning fluids from mechanical machinery; and

- spent solvents/solutions, some of which may be halogenated, from equipment cleaning activities.

6.3.6 The amount of chemical waste generated from the construction activities depends on the Contractor's on-site maintenance requirements and the amount of plant utilised. However, it is anticipated that the quantity of chemical waste would be minimal, e.g. a few hundred litres, due to the short-term construction of the Proposed Plant.

6.3.7 To mitigate any potential chemical waste impact to the environment, chemical wastes should be handled according to the *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. Spent chemicals should be collected by a licensed collector for disposal at the CWTC or other licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

6.3.8 Provided that the handling, storage and disposal of chemical wastes are in accordance with these requirements, adverse environmental impacts would be negligible.

General Refuse

6.3.9 Throughout construction, the workforce would generate general refuse comprising food scraps, waste paper, empty containers, etc. Release of general refuse into the roadside gully/surface channel should not be permitted as introduction of these wastes is likely to have detrimental effects on water quality in the area. Rapid and effective collection of site wastes would be required to prevent waste materials being blown around by wind, flushed or leached into the aquatic environment, and odour nuisance. The work sites may also attract pests and vermin if the waste storage area is not well maintained and cleaned regularly. Disposal of refuse at sites other than approved waste transfer or disposal facilities can also result in similar impacts.

6.3.10 General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D materials. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. Assuming a generation rate of 0.65 kg per worker per day and around 30 workers deployed for the construction works, approximately 20 kg of general refuse will be generated by the workforce per day, i.e. approximately 4,800 kg of total amount of general refuse in 12-month construction period. The collected general refuse will be recycled at recycling facilities and/or disposed of at designated landfill such as NENT or WENT.

6.3.11 With the implementation of the recommended waste management practices at the site, adverse environmental impacts arising from the storage, handling and transportation of refuse would not be expected.

Dredged Sediment

6.3.12 Maintenance dredging is required to remove the accumulated sediment at the nearshore of the Site in order to restore adequate water depth for safe vessel navigation. The proposed dredging works is required to be carried out once during the construction phase of the Project. The proposed dredging area is shown in **Figure 6.1**. Based on preliminary estimation and subject to further detailed analysis, the estimated volume of dredged sediment arising from the proposed maintenance dredging operation is expected to be approximately 4,000 m^3.

6.3.13 EPD conducts routine monitoring of the bottom sediment quality at 60 stations across the territory of Hong Kong waters. Among these 60 stations, the monitoring station Rambler Channel (VS10) is the closest to the Site. Location of VS10 is shown in **Figure 6.2**.

6.3.14 The sediment quality data at VS10 from 2019 to 2023, as extracted from the latest available EPD's Annual Marine Water Quality Report in 2023, is summarised in **Table 6.1**. As shown in **Table 6.1**, nickel, arsenic and all organic-polyaromatic hydrocarbons (PAHs) were below the LCEL in accordance with the Administrative Guidance. For cadmium, chromium, mercury, lead and total polychlorinated biphenyls (PCBs), the highest levels measured were equal to or above

the corresponding LCEL but below the UCEL. For copper, both the arithmetic mean value and highest level measured had exceeded the UCEL. For silver and zinc, the arithmetic mean value had exceeded the corresponding LCEL but below the UCEL and the highest levels measured were above the corresponding UCEL.

Table 6.1 Summary of Sediment Quality Data at EPD Monitoring Station VS10 (Year 2019 to 2023)[1]

Contaminants	Lower Chemical Exceedance Level (LCEL)	Upper Chemical Exceedance Level (UCEL)	Arithmetic Mean Concentration (Data in Brackets Indicate Ranges)
Metals (mg/kg dry wt.)			
Cadmium (Cd)	0.8	4	0.4 (0.2 – 0.8)
Chromium (Cr)	80	160	67 (28 - 120)
Copper (Cu)	65	110	**140** (48 - **250**)
Mercury (Hg)	0.3	1	0.22 (0.10 - 0.37)
Nickel (Ni)	40	40	29 (13 - 37)
Lead (Pb)	75	110	56 (37 - 79)
Silver (Ag)	1	2	1.6 (0.5 – **3.2**)
Zinc (Zn)	200	270	220 (99 - **330**)
Metalloid (mg/kg dry wt.)			
Arsenic (As)	20	42	11.6 (6.8 - 16.0)
Organic-PAHs (µg/kg dry wt.)			
Low Molecular Weight PAHs[2]	550	3160	120 (90 - 200)
High Molecular Weight PAHs[3]	1700	9600	370 (120 - 910)
Organic-non-PAHs (µg/kg dry wt.)			
Total PCBs[4]	23	180	20 (18 - 33)
Organometallics (µg TBT/L in interstitial water)			
Tributyltin	0.15	0.15	N/A[5]

Notes:
(1) Data extracted from EPD's Marine Water Quality in Hong Kong in 2023.
(2) Low molecular weight polyaromatic hydrocarbons (PAHs) include 6 congeners of molecular weight below 200, namely: Acenaphthene, Acenaphthylene, Anthracene, Fluorene, Naphthalene and Phenanthrene.
(3) High molecular weight polyaromatic hydrocarbons (PAHs) include 10 congeners of molecular weight above 200, namely: Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene and Indeno(1,2,3-cd)pyrene.
(4) Total PCBs results are derived from the summation of 18 congeners. If the concentration of a congener is below report limit (RL), the result will be taken as 0.5xRL in the calculation.
(5) Sediment data is not available.

6.3.15 As the Site is flat and ready for construction of the Proposed Plant, only minimum backfilling works would be required under the Project and thus the reuse of dredged sediment on site as backfilling materials is unlikely. In view of the above, the dredged sediment would be disposed of at the designated marine disposal areas according to the Administrative Guidance. The disposal options for the dredged sediment should follow the procedures in the Administrative Guidance. Subject to agreement with Marine Fill Committee (MFC) of CEDD, the marine disposal sites for Type 1 – Open Sea Disposal are typically South Cheung Chau and East of Ninepin. For Type 2 – Confined Marine Disposal, the marine disposal sites are typically East Sha Chau. For Type 3 – Special Treatment/Disposal, the project proponent should identify and agree with DEP the most appropriate treatment and/or disposal arrangement. Seabed dredging should be minimised and the dredged marine sediment should be disposed of in a manner which minimizes the loss of pollutants into solution or by re-suspension. Mitigation measures will also be proposed in order to alleviate the adverse environmental impacts, including potential odour / dust emissions and water quality impacts, brought by dredged marine sediment. Given the recommended mitigation measures are implemented, adverse environmental impacts arising from dredged marine sediment will be minimal.

Operation Phase

6.3.16 The major portion of solid waste arising from the Proposed Plant will be waste concrete, slurry, chemical wastes for maintenance of on-site plants and general refuse from site workers.

6.3.17 Waste concrete and slurry from washing will be diverted to the reclaimer to separate aggregates and slurry, after which the slurry will be directed into the wastewater tanks and the aggregate will be reused for production. The slurry water will then pass through a filter press to capture cement particle. The clear water will be collected in the clear water tank where the water will be pumped to the water tank for recycling. The solid waste including dried sludge cake collected by filter press and waste concrete / aggregates unfit for recycling will be disposed of at designated landfill such as NENT or WENT by waste disposal trucks. Estimated quantities for the solid waste is about 20 tonnes per day.

6.3.18 The Proposed Plant will be registered as a chemical waste producer prior to commencement of operation if chemical waste is expected to be generated. Estimated quantities for chemical waste is expected to be 1L per day. A licensed chemical waste collector will be engaged for proper disposal of the chemical waste at the CWTC or other licensed facility. Records of “Trip Ticket” will be maintained in the site office.

6.3.19 General refuse should be collected by on-site enclosed rubbish bins and collected by the waste collector on a daily basis or every two days, in order to minimize odour, pest and litter impact. Based on a generation rate of 1.02 kg[1] per worker per day and around 15 workers deployed at the plant, approximately 15.3 kg of general refuse will be generated daily during the operational phase. The general refuse collected by reputable waste collector will be recycled at recycling facilities and/or disposed of at designated landfill such as NENT or WENT.

6.3.20 Provided that the environmental control measures are properly implemented, no adverse environmental impact would be anticipated with respect to solid waste management. Formwork should avoid using standard wooden panels, instead alternative materials with high potential for reuse should be considered, such as steel formwork or plastic facing.

[1] Per capita generation rate of waste = Per capita disposal rate / (1 - recovery rate). With reference to the Monitoring of Solid Waste in Hong Kong 2023, the per capita disposal rate and recovery rate of commercial and industrial (C&I) waste in 2023 is 0.55 kg/person/day and 46% respectively.

6.4 Mitigation Measures

Construction Phase

Construction and Demolition Materials

6.4.1 Careful design and planning together with good site management help reducing over-ordering and generation of C&D material such as concrete, mortar and cement grouts.

6.4.2 The inert C&D materials with suitable characteristics / size should be reused on-site as far as practicable. When disposing C&D material at public filling reception facility for beneficial reuse, the material should only consist of soil, rock, concrete, brick, cement plaster / mortar, inert building debris, aggregates and asphalt. The material should be free from household refuse, plastic, metals, industrial and chemical waste, animal and vegetable matter, and other material considered unsuitable by the Filling Supervisor. Prior to disposal of non-inert C&D materials, such as wood, steel, and other metals should be separated for reuse and/or recycling where practicable so as to minimize the quantity of waste to be disposed of at landfill.

6.4.3 Suitable areas should be setup within the site for sorting and providing temporary stockpiling of C&D materials. The following measures should be undertaken to abate the potential environmental impacts or nuisance:

- Surface of stockpiled soil should be regularly wetted with water especially during dry season;
- Disturbance of stockpiled should be minimized;
- Stockpiled soil should be properly covered with tarpaulin especially during predicted heavy storms; and
- Stockpiled areas should be enclosed where space is available.

6.4.4 A trip-ticket system should be implemented to monitor the delivery of C&D materials to the designated public fill reception facility and landfill, and to avoid any fly-tipping. A recording system should be set up to keep track of the amount of waste generated, recycled and disposed, including the disposal sites. Warning signs should be put up to remind the designated disposal sites. CCTV should also be installed at the vehicular entrance and exit of the site to monitor handling of C&D materials disposal. To prohibit illegal dumping and landfilling of C&D materials, the dump trucks engaged on site should be equipped with GPS or equivalent automatic system for real time tracking and monitoring of their travel routings, parking locations and disposal activities. The dump trucks employed should be covered or with the use of enclosed containers to minimize windblown litter and dust during waste transportation.

Chemical Waste

6.4.5 For those processes which generated chemical waste, it may be possible to find alternative to eliminate the use of chemicals, to reduce the quantities generated or to select a chemical type with less impact on environmental, health and safety as far as possible.

6.4.6 Should any chemical waste be produced at the construction site, the Contractor will be required to register with the EPD as chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemicals Wastes*. Chemical waste should be stored in appropriate containers and collected by a licensed chemical waste contractor. Chemical waste (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while chemical waste that cannot be recycled should be disposed of at either the CWTC, or another licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

General Refuse

6.4.7 General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D materials on a daily basis to minimize odour, pest

and litter impacts. The collected general refuse would be disposed of at designated landill. Clearly labelled recycling bins should be provided on site in order to encourage segregation and recycling of aluminium and plastic wastes, and wastepaper in order to reduce general refuse production.

6.4.8 The contractor should carry out an education programme for workers in avoiding, reducing, reusing and recycling of material generation. Posters and leaflets advising on the usre of the bins should also be provided onsite as reminders. The recycle waste materials should then be collected by reliable waste recycling agents on a daily basis.

Dredged Sediment

6.4.9 The sediment should be dredged, handled, transported and disposed of in a manner that would minimise adverse environmental impacts.

6.4.10 For off-site disposal, the basic requirements and procedures specified under the Administrative Guidance shall be followed. Marine Fill Committee (MFC) of CEDD is managing the disposal facilities in Hong Kong for the dredged / excavated sediment, while EPD is the authority of issuing marine dumping permit under DASO.

6.4.11 For the purpose of site allocation and application of marine dumping permit, Sediment Sampling and Testing Plan (SSTP) shall be submitted to EPD for agreement under DASO. Site investigation works, based on the SSTP, shall be carried out in order to confirm the disposal arrangements of the dredged sediment. A Sediment Quality Report (SQR), reporting the chemical and biological screening results and the estimated quantities of sediment under different disposal options, shall then be submitted to EPD for agreement under DASO. The dredged sediments would be disposed of according to its determined disposal options and the Administrative Guidance. Previously obtained data or known history of the sediment in the vicinity should be submitted to DEP for consideration of the most appropriate arrangements for handling these materials.

6.4.12 To ensure disposal space is allocated for the Project, the project proponent should be responsible for obtaining agreement from MFC on the allocation of the disposal site. The contractor(s), on the other hand, should be responsible for the application of the marine dumping permit under DASO from EPD for the sediment disposal.

6.4.13 In order to minimise the potential odour / dust emissions during dredging and transportation of the sediment, the sediments shall be wetted during dredging / material handling and shall be properly covered when placed on trucks or barges. Loading of the dredged sediments to the barge shall be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.

6.4.14 If applicable, the barge transporting the sediments to the designated disposal sites shall be equipped with tight fitting seals to prevent leakage and shall not be filled to a level that would cause overflow of materials or laden water during loading or transportation. In addition, monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP.

Operation Phase

Solid Waste from Concrete Production

6.4.15 Waste concrete /aggregates will be reclaimed by reclaimer for recycling in production as detailed in **Section 6.3.17**. The solid waste including dried sludge cake collected by filter press and waste concrete / aggregates unfit for recycling will be disposed of at designated landfill by waste disposal trucks. The dump trucks employed should be covered or with the use of enclosed containers to minimize windblown litter and dust during waste transportation. A trip-ticket system should also be implemented to monitor the delivery of C&D materials to the designated landfill and to avoid any fly-tipping.

Chemical Waste

6.4.16 For those processes which generated chemical waste, it may be possible to find alternative to eliminate the use of chemicals, to reduce the quantities generated or to select a chemical type with less impact on environmental, health and safety as far as possible.

6.4.17 Should any chemical waste be produced at the construction site, the Contractor will be required to register with the EPD as chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemicals Wastes*. Chemical waste should be stored in appropriate containers and collected by a licensed chemical waste contractor. Chemical waste (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while chemical waste that cannot be recycled should be disposed of at either the CWTC, or another licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

General Refuse

6.4.18 General refuse should be stored in enclosed bins or compaction units. A reputable waste collector should be employed by the contractor to remove general refuse from the site on a daily basis to minimize odour, pest and litter impacts. The collected general refuse would be disposed of at designated landill. Clearly labelled recycling bins should be provided on site in order to encourage segregation and recycling of aluminium and plastic wastes, and wastepaper in order to reduce general refuse production.

6.4.19 The contractor should carry out an education programme for workers in avoiding, reducing, reusing and recycling of material generation. Posters and leaflets advising on the usre of the bins should also be provided onsite as reminders. The recycle waste materials should then be collected by reliable waste recycling agents on a daily basis.

7 LAND CONTAMINATION

7.1 Introduction

7.1.1 This section presents the assessment of potential land contamination implication associated with the proposed development under the Project.

7.2 Environmental Standards and Guidelines

7.2.1 The relevant environmental guidelines and standards for the assessment of land contamination impacts include the following:

- Guidance Note for Contaminated Land Assessment and Remediation (Guidance Note) (EPD, April 2023)

  The Guidance Note sets out the requirements for proper assessment and management of potentially contaminated sites such as oil installations (e.g. oil depots, petrol filling stations), gas works, power plants, shipyards/boatyards, chemical manufacturing/processing plants, steel mills/metal workshops, car repairing/dismantling workshops and scrap yards. In addition, this Guidance Note provides guidelines on how site assessments should be conducted and analysed and suggests practical remedial measures that can be adopted for the remediation of contaminated sites.

- Practice Guide for Investigation and Remediation of Contaminated Land (Practice Guide) (EPD, April 2023)

  This guide outlines typical investigation methods and remediation strategies for the range of potential contaminants typically encountered in Hong Kong.

- Guidance Manual for Use of Risk-based Remediation Goals for Contaminated Land Management (Guidance Manual) (EPD, April 2023)

  The Guidance Manual introduces the risk-based approach in land contamination assessment and present instructions for comparison of soil and groundwater data to the Risk-Based Remediation Goals (RBRGs) for 54 chemicals of concern (COCs) commonly found in Hong Kong. The RBRGs were derived to suit Hong Kong conditions by following the international practice of adopting a risk-based methodology for contaminated land assessment and remediation and were designed to protect the health of people who could potentially be exposed to land impacted by chemicals under four broad post restoration land use categories. The RBRGs also serve as the remediation targets if remediation is necessary.

7.3 Assessment Methodology

7.3.1 A site appraisal was conducted to identify any current / historical potentially contaminating land uses within the Site. The site appraisal, including site walkover and desktop review, was carried out with reference to the Guidance Note, Guidance Manual and Practice Guide.

7.3.2 The site walkover was conducted within the Site to identify any existing contaminative land uses and contamination sources (or 'hotspots'). For the desktop review, the following information was reviewed:

- Available records of dangerous goods, chemical wastes, chemical spillage/leakage and fire incidents from Environmental Protection Department (EPD) and Fire Services Department (FSD);
- Bonding Engineering & Construction Co. Ltd, *Ground Investigation Report for Proposed Concrete Batching Plant in Lot 14 & 15 Tam Kon Shan Road, Tsing Yi,* June 2014;
- Hong Kong Geological Survey Map (Series HGM20) – Sheet No. 6 (1:20,000); and
- Selected aerial photographs and topographic maps held by the Lands Department.

7.3.3 If potentially contaminated land use(s) were identified within the Site, the potential land contamination impacts to the Project would be evaluated and the appropriate mitigation measures would be recommended.

7.4 Description of Environment

7.4.1 The Site is located at Tsing Yi Town Lot Nos. 14 & 15 and adjoining Government Land, Tam Kon Shan Road, Tsing Yi. The total site area is approximately 4,335 m^2. The Site is bounded by the sea to the north, Tam Kon Shan Road to the south, dockyards and industrial uses at the east and west. The site location plan is shown in **Figure 1.1**.

7.5 Identification of Potential Land Contamination Impact

Review of Historical Land Use

7.5.1 A review of the aerial photographs covering the Site has been undertaken. The aim of this review is to evaluate potential land contamination associated with historical land uses at the Site. A summary of the historical land uses is presented in **Table 7.1** and reviewed aerial photographs are shown in **Appendix 7.1**.

Table 7.1 Summary of Historical Land Uses

Year (Photo Reference No.)	Drawing No. in Appendix 7.1	Site Description
1963 (#1963-6348)	AP1	The Site was occupied by open water.
1973 (#04179)	AP2	The eastern and western portions of the Site were reclaimed. No other significant land uses changes were observed.
1983 (#47316)	AP3	The Site was further reclaimed and a shipyard, open storage and slipway were observed. No other significant land uses changes were observed.
1993 (#A36015)	AP4	A jetty was observed in the northwest of the Site. No other significant land uses changes were observed.
2003 (#CW53780)	AP5	The shipyard was abandoned. No other significant land uses changes were observed.
2013 (#CS45547)	AP6	The western portion of the Site was converted into private parking area. No other significant land uses changes were observed.
2023 (#E193635C)	AP7	The open storage was cleared and slipway was demolished. No other significant land uses changes were observed.

Source: *Survey and Mapping Office, Lands Department*

7.5.2 Based on the review of aerial photographs, the Site had been used as a shipyard, open storage, car parking, jetty and slipway. Shipyard and open storage are considered as a potentially contaminating land uses which may have potential land contamination implications to the Project.

Site Walkover

7.5.3 Site walkover was conducted on 12 December 2024 to investigate any land contamination issues associated with the current land uses and activities within the Site that may have potential land contamination implications to the Project. Questionnaire was conducted within available site representatives and the site walkover checklist is attached in **Appendix 7.2**. Findings of the site walkover, including the photographic records and site layout plan, are shown in **Figure 7.1**.

7.5.4 The Site is currently comprised of two buildings (the western building (approximately 939 m^2) and the eastern building (approximately 414 m^2)), an open area in the eastern portion (approximately 515 m^2), an access road in the central portion (approximately 985 m^2), a jetty in the northwest and the sea in the northeastern and northwestern portions of the Site.

7.5.5 Based on the site walkover, except for the northeastern and northwestern portions of the Site which are covered by the sea, the Site is generally concrete paved and largely vacant with private parking areas observed in the western building and the open area in the eastern portion of the Site. As reported by the site staff, the Site is an abandoned shipyard with ship building, repair and maintenance activities previously carried out in the western building and ship parts manufacturing previously carried out in the eastern building, while the central portion of the Site had been used as an access road. Ship repair and maintenance activities were also reportedly carried out in a small portion of the open area adjacent to the north of the eastern building (approximately 91 m^2). The shipyard was reportedly in operation between 1976 and 1994 and has been used as a private parking site since 2013.

7.5.6 Based on the site walkover and as reported by the site staff, there is a disused dangerous goods (DG) store located in the western building previously used for the storage of oxy-acetylene cylinders, and has been used as a storeroom for the storage of office / household appliances and equipment since operation of the shipyard was ceased (refer to Photo 0322 in **Figure 7.1**). As the disused DG store was used for the storage of gas only, potential land contamination issue associated with the disused DG store is not anticipated.

7.5.7 In addition, small quantities of chemicals including engine oil, hydraulic oil, turpentine and paint were observed within the eastern building and outside the disused DG store / storeroom of the Site above a covered box / wooden plank on concrete paved floor or directly on the concrete paved floor (refer to Photos 8518 and 8534 in **Figure 7.1**). According to the site staff, these chemicals are temporarily stored on-site and are used off-site only. No chemical spillage, oil stains or stressed vegetation were observed in the vicinity of the chemical storage areas. Given the chemicals stored were temporary and are reportedly used off-site only, and that no signs of land contamination were observed in the vicinity of the chemical storage areas, potential land contamination issue associated with the chemical storages is not anticipated.

7.5.8 Based on the above, no current potentially contaminating land uses / activities were identified at the Site.

Acquisition of Information from Government Departments

7.5.9 The Environmental Protection Department (EPD) and Fire Services Department (FSD) have been contacted for (i) records on any release of chemicals and chemical waste, (ii) records of dangerous goods (DG), (iii) records of Chemical Waste Producer(s) (CWP(s)) and (iv) records of reported fire incidents within the Site. EPD and FSD's replies on the request have been received and attached in **Appendix 7.3**. The Information is summarised below.

Environmental Protection Department

7.5.10 Based on the reply given by EPD on 20 December 2024, there were no chemical spillage / leakage records within the Site. Further to EPD's reply, a review of the available CWP records at EPD Southorn Office was undertaken on 7 January 2025. According to the records reviewed, there is 1 valid CWP record identified within the Site. The details of the CWP record are summarised in **Table 7.2** below. Location of the CWP is shown in **Figure 7.1**.

Table 7.2 Summary of Chemical Waste Producer within the Site

CWP ID	Status	Company Name	Address	Business Nature
1	Valid	Supercraft (HK) Ltd	T.Y.T.L. 14 & 15, Tsing Yi, N.T.	Boat building and repairing

7.5.11 The CWP record is likely to be associated with the operation of the former shipyard. There could be potential land contamination issues associated with former boat building and repairing activities carried out at the Site.

Fire Services Department

7.5.12 Based on the reply given by FSD on 16 January 2025, there were no records of DG license, fire incident or incident of spillage / leakage of DG found within the Site.

Site Geology

7.5.13 According to the 1:20,000 Geological Map Sheet 6 (Yuen Long), the Site is underlain by Fill. According to the available ground investigation (GI) records, the Site is located on reclaimed ground having a stratum of Fill with thickness of about 1.50m to 6.50m. Underlying the Fill is a relatively thin layer of Marine Deposit with thickness of about 3.00m to 4.50m and/or Alluvium with thickness of about 0.45m to 3.50m. Completely to highly decomposed Granodiorite ranged from 2.06m to 7.50m thickness was encountered beneath the Alluvium. The bedrock encountered was moderately to slightly decomposed Granodiorite, with reduced levels ranged from -1.65 mPD to -11.42 mPD.

7.5.14 Referring to the available groundwater monitoring records, shallow groundwater table was identified, which is generally from 1.8m to 2.5m below ground level.

Summary of Site Appraisal

7.5.15 Based on the site appraisal, the Site was formerly used as a shipyard (from 1976 to 1994) and open storage (from 1983 to 2023). The possible contaminating activities may include storage, handling and use of fuels and solvents (e.g. for thinning paints, cleaning and degreasing metal parts of equipment) for ship building, repair and maintenance activities, transfer and disposal of scrap metal, metal shaving dust and paint chips during manufacturing of ship parts. Locations of the concerned areas are shown in **Figure 7.2**. Details of the site appraisal are summarised in **Table 7.3**. Intrusive site investigation (SI) works is recommended to confirm any land contamination in the Site.

Future Land Use

7.5.16 Land contamination assessment on the potentially contaminated sites would need to be evaluated against the RBRGs and if there were presence of non-aqueous phase liquid (NAPL), soil saturation (C_{sat}) / solubility limits, as stipulated in Table 2.1 and Table 2.2 of the Guidance Manual.

7.5.17 The RBRGs were developed based on a risk assessment approach to suit the local environmental conditions and community needs in Hong Kong. Decisions on contaminated soil and groundwater remediation are based on the nature and extent of the potential risks that are posed to human receptors as a result of exposure to chemicals in the soil and/or groundwater. RBRGs were developed for four different land use scenarios as below reflecting the typical physical settings in Hong Kong under which people could be exposed to contaminated soil and groundwater:

- Urban Residential
- Rural Residential

- Industrial
- Public Park

7.5.18 As the future land use of the Site would be a concrete batching plant, the RBRGs for Industrial land use scenario are considered appropriate for the assessment. The proposed RBRGs land use scenario recommended for the Site is summarised in **Table 7.3**. Relevant RBRG levels, C_{sat} and solubility limits are shown in **Appendix 7.4**.

Table 7.3 Summary of Site Appraisal

Location (Affected Land Lot No.)[1]	Current Land Use	Site Observation / Current Potentially Contaminating Activities / Information from EPD and FSD	Past Potentially Contaminating Land Uses / Activities	Approx. Site Area (m^2)	Potential COCs[2]	Future Land Uses	RBRGs Land Use Scenario
The Site (TYTL Nos. 14 & 15 and STT538)	Private parking site	The Site is comprised of two buildings (the western building and the eastern building), an open area in the eastern portion, an access road in the central portion, a jetty in the northwest and the sea in the northeastern and northwestern portions of the Site. The Site is generally concrete paved and largely vacant with private parking areas in the western building and the open area in the eastern portion of the Site. There is a disused DG store located in the western building previously used for the storage of oxy-acetylene cylinders and has been used as a storeroom for the storage of office / household appliances and equipment since operation of the shipyard was ceased. In addition, small quantities of chemicals including engine oil, hydraulic oil, turpentine and paint were observed within the eastern building and outside the disused DG store / storeroom of the Site above a covered box / wooden plank on concrete paved floor or directly on the concrete paved floor. According to the site staff, these chemicals are stored on-site temporarily and are used off-site only. No chemical spillage, oil stains or stressed vegetation were observed in the vicinity of the chemical storage areas. Given the disused DG store was used for the storage of gas only, the chemicals observed were stored temporarily and are reportedly used off-site only, and that no signs of land contamination were observed in the vicinity of the chemical storage areas, potential	Shipyard (from year 1976 to year 1994) and open storage (from year 1983 to year 2023). The possible contaminating activities may include storage, handling and use of fuels and solvents (e.g. for thinning paints, cleaning and degreasing metal parts of equipment) for ship building, repair and maintenance activities, transfer and disposal of scrap metal, metal shaving dust and paint chips during manufacturing of ship parts.	4,335 m^2 Western Building: 939 m^2 Eastern Building: 414 m^2 Former Maintenance Area: 91 m^2 Former Open Storage: 985 m^2	• Metals (Full List) • Free cyanide • VOCs (Full List) • SVOCs (Full List) • PCRs • TBTO • Dioxins • Furans	Concrete batching plant	Industrial

Location (Affected Land Lot No.)[1]	Current Land Use	Site Observation / Current Potentially Contaminating Activities / Information from EPD and FSD	Past Potentially Contaminating Land Uses / Activities	Approx. Site Area (m^2)	Potential COCs[2]	Future Land Uses	RBRGs Land Use Scenario
		land contamination issue associated with the chemical storages is not anticipated. Based on the above, no current potentially contaminating land uses / activities were identified at the Site. Based on information from the EPD and FSD, there were no records of chemical spillage / DG / fire incident for the Site. However, there is 1 valid registered CWP associated with boat building and repairing at the Site.					

Note:
1. Refer to **Figure 7.1** for the site location.
2. The potential chemicals of concern (COCs) were determined based on findings of the site appraisal and the Practice Guide and took into account current and historical land uses.
   - Full list refers to the parameters as shown in Table 2.1 – Risk-Based Remediation Goals (RBRGs) for Soil & Soil Saturation Limit and Table 2.2 – RBRGs for Groundwater and Solubility Limit under Metals, Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and Petroleum Carbon Ranges (PCRs) in the Guidance Manual for Use of Risk-Based Remediation Goals for Contaminated Land Management.
   - TBTO: Tributyltin oxide

7.6 Prediction and Evaluation of Potential Land Contamination Impact

7.6.1 Based on findings of the site appraisal, the Site was formerly used as a shipyard and open storage which may have potential land contamination implications to the Project.

7.6.2 As observed during the site walkover and according to information provided by the site staff, only limited and small-scale ship building, repair and maintenance activities were previously carried out at the eastern and western portions of the Site (total area of approximately 1,444 m^2) and the Site was concrete paved. The former open storage in the central portion of the Site was also of small-scale (approximately 985 m^2) and was concrete paved. In addition, based on information from the site staff, EPD and FSD, there were no records of chemical spillage / fire incident at the Site. Extensive contamination due to the operation of the former shipyard and open storage is not envisaged.

7.6.3 Land contamination assessment including intrusive site investigation (SI) works and, if required, remediation works are recommended to be carried out at a later stage of the Project prior to commencement of construction works and should follow EPD's Guidance Manual, Guidance Note and Practice Guide. Any soil/groundwater contamination would be identified and properly treated prior to the commencement of construction works under the Project. The potential Chemicals of Concern (COCs) may include metals, volatile organic chemicals (VOCs), semi-volatile organic chemicals (SVOCs), petroleum carbon ranges (PCRs), free cyanide, tributyltin oxide (TBTO), dioxins and furans and there are commercially available technologies that could tackle these COCs.

7.6.4 Given the above, land contamination impacts are considered not insurmountable to the Project if the recommended further works as outlined in **Section 7.7** were followed and contaminated soil and groundwater (if any) were properly treated using appropriate remediation methods and according to EPD's agreed Remediation Action Plan (RAP).

7.7 Recommended Further Works

7.7.1 A detailed land contamination assessment, including site appraisal (desktop review and site walkover) and SI works, shall be carried out in next stage of the Project prior to commencement of construction works to confirm the presence of land contamination within the Site. The detailed land contamination assessment will be carried out according to EPD's Guidance Manual, Guidance Note and Practice Guide.

7.7.2 In order to determine the extent and nature of any potentially contaminated areas, a Contamination Assessment Plan (CAP), detailing findings of the site appraisal and requirements for SI works would need to be submitted to EPD for endorsement. The SI works would need to be carried out according to the endorsed CAP. Following to the completion of the SI works, a Contamination Assessment Report (CAR) would be submitted to EPD for approval to document the findings of the SI works and the estimated extent of any contamination. If soil or groundwater contamination were identified, a Remediation Action Plan (RAP), discussing the appropriate remedial methods for the identified soil / groundwater contamination, would also be submitted to EPD for approval.

7.7.3 Remediation works (if necessary) would need be carried out according to the approved RAP. Upon completion of remediation work, a Remediation Report (RR) should be prepared and submitted to EPD to demonstrate that the decontamination work is adequate and is carried out in accordance with the approved CAR and RAP. No construction works, other than decontamination work, should be carried out before the approval of RR by EPD.

8 CONCLUSION

8.1 General

8.1.1 In order to confirm the acceptability of the Subject Site in respect of environmental aspects, an Environmental Assessment was carried out to examine the impacts associated with the proposed development during construction and operation phases. Potential environmental impacts including air quality, noise, water quality, waste management and land contamination issues associated with construction and operation of the proposed concrete batching plant have been assessed. It is concluded that no adverse environmental impacts on the Subject Site would be anticipated. The key findings of this assessment are summarized in the following sections.

8.2 Air Quality

8.2.1 Minor construction air quality impact would be arisen from the construction activities during the erection of the proposed plant. With the implementation of adequate air quality control measures, no adverse construction air quality impact shall be anticipated.

8.2.2 The design of the Plant and its operation plan has incorporated air pollution control technologies and control measures to abate the air quality impact generated by the production of wet concrete. Together with proper operation and maintenance practices, the air quality impact due to the operation of the Proposed Plant shall be at acceptable level and has been confirmed by the model predictions. Cumulative air quality impact arising from the Proposed Plant, and vehicular emission and marine emission within 500m assessment area have been evaluated. The prediction results indicated that the cumulative NO_2, SO_2, RSP and FSP concentrations at all existing ASRs would comply with AQOs. No adverse air quality impact due to the Proposed Plant would be anticipated.

8.3 Noise

8.3.1 With the implementation of adequate construction noise mitigation measures, it is anticipated that there would be no unacceptable noise impact on nearby NSR during the construction phase.

8.3.2 There is no existing and planned sensitive use in the vicinity. No adverse impact would therefore be anticipated. No further mitigation measure is required.

8.4 Water Quality

8.4.1 Provided that proper site management practices are followed to prevent construction site runoff and drainage water with high SS from entering nearby nullah and downstream sensitive receivers during construction phase, no adverse water quality impact is anticipated.

8.4.2 No adverse water quality impact would be expected as no wastewater will be discharged from the plant during operation. All production wastewater will be recycled. Domestic sewage from workforce will be collected and discharged via the public sewerage network.

8.5 Waste Management

8.5.1 Provided that the identified waste arisings of the construction works are handled, transported and disposed of using approved methods and that the recommended good site practices are adhered to, adverse environmental impacts are not anticipated.

8.5.2 Provided that the environmental control measures are properly implemented, no adverse environmental impact would be anticipated with respect to solid waste management.

8.6 Land Contamination

8.6.1 Based on findings of the site appraisal, the Site was formerly used as a shipyard and open storage which may have potential land contamination implications to the Project. Further works including site appraisal, submission of CAP, intrusive SI works and, if required, remediation works were recommended to be carried out at next stage of the Project prior to commencement of the construction works and would need to follow EPD's Guidance Manual, Guidance Note and Practice Guide. With the implementation of the recommended further works for the Project, any soil/groundwater contamination would be identified and properly treated prior to the construction works. No insurmountable land contamination impacts to the Project are therefore anticipated.

Remarks

- The number of trips and the average weight of vehicles are estimated from the activities of all concerned vehicles travelled on the road.

Type of Vehicles	No. of Trips per Hour	Full load Weight (US ton)	Unladen Weight (US ton)
Mixer Truck	43	41.9	16.5
Cementitious materials (PFA/GGBS/Silica Fume) Truck	2	43.0	15.4

Appendix 3.2 Calculations of Emission Rates

Calculation of Dust Suppression Efficiency from Watering

Dust suppression efficiency is assumed to be 91.7%.
Assumptions are stated as below. With reference to the Equation (5-4) of USEPA's Control of Open Fugitive Dust Sources (EPA-450/3-98-008), dust suppression efficiency can be estimated by:

$$C = 100 - \frac{0.8 \cdot p \cdot d \cdot t}{i}$$

where
C = average control effiency, in percent
p = potential average hourly daytime evaporation rate, in mm/hr
d = average hourly daytime traffic rate, in vehicles per hour
i = application intensity, in L/m^2
t = time between applications, in hour

The following assumptions are made for assessment purpose:

Assumption 1
Potential average hourly daytime evaporation rate p can be estimated by 0.0049 * e, where e is the mean annual average evaporation rate (inches).
From past measurement data in Hong Kong's Observatory, evaporation recorded at King's Park between 1992 - 2020 is 1204.1 mm[1]. Therefore p = 0.0049 * (1204.1 mm) = 0.0049 * (47.40551 inches) = 0.2323.

Assumption 2
For HR01, estimate average hourly daytime traffic rate in vehicles per hour = 90[2] (d=90)
For HR02-HR03, estimate average hourly daytime traffic rate in vehicles per hour = 45[2] (d=45)

Assumption 3
For HR01, assume watering application intensity as 2.02 L/m^2 [2] (i=2.02)
For HR02-HR03, assume watering application intensity as 1.01 L/m^2 [2] (i=1.01)

Assumption 4
Assume watering frequency as once every hour. [2] (t=1)

With the above assumptions, dust suppression efficiency is calculated as below:
For HR01: C = 100 - 0.8*0.2323*90*1/2.02 = **91.7%**
For HR02-HR03: C = 100 - 0.8*0.2323*45*1/1.01 = **91.7%**

Notes:
[1] The evaporation recorded at King's Park between 1992 - 2020 is taken from https://www.hko.gov.hk/en/cis/normal/1991_2020/normals.htm

* Non-PlanD Land Utilization categories

Remarks

1. Surface roughness length is based on an inverse-distance weighted geometric mean for an upwind distance of 1km relative to the concerned site.
2. Reference to AERMOD Implementation Guide, the determination of the Bowen ratio should be based on a simple unweighted geometric mean (i.e., no direction or distance dependency) for a representative domain, with a default domain defined by a 10km by 10km region centered on the measurement site.
3. Reference to AERMOD Implementation Guide, the determination of the albedo should be based on a simple unweighted arithmetic mean (i.e., no direction or distance dependency) for the same representative domain as defined for Bowen ratio, with a default domain defined by a 10km by 10km region centered on the measurement site.

Subject: RE: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

Thank you for your prompt response. Please be advised that the methodology for the traffic forecast remains consistent with that adopted in the Traffic Impact Assessment for the aforementioned project.

Should you require any further information, please let us know.

Yours sincerely,
[redacted]

Subject: Re: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

Please note that Environmental Assessment is not under our purview. We are not in a position to provide comments on the traffic figures tailor-made for the environmental assessment purposes.

Notwithstanding the above, we have no objection in principle to the methodology for traffic forecast provided that it is the same as that adopted in the traffic impact assessment for the captioned project.

Regards,
[redacted]

Subject: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

We are the traffic consultant for the Proposed CBP Development at Tam Kon Shan Road, Tsing Yi. As noted in our environmental consultant's correspondence with the Environmental Protection Department (EPD), an Environmental Assessment (EA) has been submitted, in which traffic data has been adopted as part of the Air Quality Impact Assessment.

In this regard, please find attached the proposed methodology for forecasting traffic data, which is solely for use in the Air Quality Impact Assessment, for your review and consideration. Grateful if you could advise whether you have any in-principle objection to the methodology.

Thank you for your time and cooperation.

Yours sincerely,

[redacted]

APPENDIX 3.5

Calculation of Marine Emissions

Appendix 3.5 Calculation of Marine Emissions

Description of Marine Routes

Marine Traffic

Route 1 is located to the north of the CBP, and the vessels that travel on it are mainly river trade vessels, tug and tows, local ferries, fast launches, small crafts and ocean-going vessels.
The information about Route 1 are obtained by site surveys conducted by Marine Consultant.
Route 1 is the only travelling route for marine vessels within the assessment area based on the site survey.

The bypassing marine traffic consists of the following vessel types:
- River trade vessels: Fully Cellular Container Vessel (RTV01), Dry Bulk Carrier (RTV03)
- Fast launches (FL01)
- Tug and tows (TT01)
- Local ferries (LF01)
- Small crafts: Pleasure Vessel (SC01)
- Ocean-going vessels: Gas Carrier/Tanker (OGV06), Chemical Carrier/Tanker (OGV07), Oil Tanker (OGV08)

The marine traffic induced by the Project consists of the following vessel types:
- River trade vessels: Dry Bulk Carrier (RTV03M, RTV03H, for transporting aggregates), Chemical Carrier/Tanker (RTV07M, RTV07H, for transporting cement)

OGV	Oil Tanker	Oil Tanker	-	586	43.15%
Subtotal	**-**	**-**	**-**	**1358**	**100.00%**

Remark

1. Marine traffic consultant has not further breakdown the marine traffic data of OGV into various vessel types. Therefore, vessel types catalogized by the Marine Department is adopted to breakdown the marine traffic data (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_2_y_a2.pdf).
2. According to data from marine consultants, tugs and cross boundary ferry are classified as an independent vessel type and are consequently excluded from calculation of marine emission of RTV.
3. Classification of vessel type refers to Table 3-2 and Table 4-1 of MVEIS, Fast Launch is classifed as "Others (GRT >= 1000)" as a conservative estimation .
4. The vessel class refer to Cap. 548D MERCHANT SHIPPING (LOCAL VESSELS) (CERTIFICATION AND LICENSING) REGULATION – SCHEDULE 1 Class and Type of Local Vessel (https://www.elegislation.gov.hk/hk/cap548D!en@2014-03-03T00:00:00).
5. Number of vessels / arrivals refers to statistics published by Marine Department.
- For RTV and OGV, the number of arrivals refers to Table 3 in Port of Hong Kong Statistical Tables 2023 (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_ast_2023.pdf).
- For Small Crafts (SC), the number of licensed vessels in refer to Table 24 in Port of Hong Kong Statistical Tables 2023 (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_ast_2023.pdf).

Remark

1. The hourly traffic volume of a vessel type is obtained by the following formula:
hourly traffic volume = traffic data x proportion of arrivals

2. The hourly traffic volume for each vessel ID is used as their hourly profile in air dispersion modelling.

3. Maneuvering is assumed for RTV03 during 7:00-8:00, 11:00-12:00, 15:00-16:00 and 19:00-20:00, and for RTV07 during 11:00-12:00 and 15:00-16:00.

4. Hotelling is assumed for RTV03 during 7:00-13:00 and 15:00-19:00, and for RTV07 during 11:00-15:00.

Appendix 3.5 Calculation of Marine Emissions

Remarks

1. Marine traffic consultant has not further breakdown the marine traffic data of OGV into various vessel types. Therefore, vessel types catalogized by the Marine Department is adopted to breakdown the marine traffic data (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_2_y_a2.pdf).
2. According to data from marine consultants, tugs and cross boundary ferry are classified as an independent vessel type and are consequently excluded from calculation of marine emission of RTV.
3. Classification of vessel type refers to Table 3-2 and Table 4-1 of MVEIS, Fast Launch is classifed as "Others (GRT >= 1000)" as a conservative estimation .
4. The vessel class refer to Cap. 548D MERCHANT SHIPPING (LOCAL VESSELS) (CERTIFICATION AND LICENSING) REGULATION – SCHEDULE 1 Class and Type of Local Vessel (https://www.elegislation.gov.hk/hk/cap548D!en@2014-03-03T00:00:00).
5. The main engine type of RTV, Tug, FL and SC refers to S4.2.6 of MVEIS.
6. The main engine type of OGV and LF refers to Table 3-17 of MVEIS. SSD, MSD, HSD and ST denote slow speed diesel, medium speed diesel, high speed diesel and steam turbine engine, respectively.
7. According to the Air Pollution Control (Marine Light Diesel) Regulation, the sulphur content of locally supplied marine light diesel is capped at 0.05%. Locally supplied marine light diesel oil are assumed to be used for refueling RTVs, Tugs, FLs and SCs in Hong Kong. Marine gas oil with 0.05% sulphur content is assumed to be used for refueling LFs.
8. All vessels are required to use compliant fuels (sulphur content <= 0.5%) under the Air Pollution Control (Fuel for Vessels) Regulations. Therefore, it is assumed that all OGVs use fuel with sulphur content not exceeding 0.5%.
9. The GRT sub-group refers to Table 4-5; the highest GRT for each vessel type is adopted as a conservative approach.
10. DWT / PAX Sub-Group refers to Table 3-18 of MVEIS; the highest DWT/PAX is adopted as a conservative approach.
11. Vessel calls are the number of vessel arrivals in Hong Kong in a year and refer to Section 1.4.5-1.4.8 and Table 3-17 of MVEIS.
12. Proportion of main engine type for OGV refers to Table 3-17 of MVEIS. Proportion of engine types for local ferry is based on the number of operators for a certain route code. Proportions of engine types for other vessel categories are set as 100%.
13. The average engine power makes references to MVEIS:
- main engine power of RTV (Table 4-5)
- auxiliary engine power of RTV (Table 4-6)
- main engine power of Tug (Table 3-15)
- auxiliary engine power of Tug (Table 3-20)
- main engine power of Fast Launch (Table 4-5)
- auxiliary engine power of Fast Launch (Table 4-6)
- main engine power of Pleasure Vessel (Table 3-15)
- auxiliary engine power of Pleasure Vessel (Table 3-20)
- main engine power of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-5)
- auxiliary engine power of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-6)
- main engine power of OGV FCCV (Table 3-16)
- auxiliary engine power of OGV FCCV (Table 3-22)
- main engine power of OGV other vessel types (Table 3-15)
- auxiliary engine power of OGV other vessel types (Table 3-20)
- auxiliary boiler power of OGV (Table 3-23)
- main engine power of Local Ferry (Table 3-15)
- auxiliary engine power of Local Ferry (Table 3-20)

With reference to Table 3-23 of MVEIS, there is no boiler for Fishing/Fish Processing Vessel of OGV.

14. The Baseline Specific Fuel Consumption (BSFC) makes reference to MVEIS and IMO Fourth Greenhouse Gas Study 2020:
- BSFC of RTV, Tug, Fast Launch and Small Vessels (Table 4-16, MVEIS)
- BSFC of OGV (Table 19, IMO Fourth Greenhouse Gas Study 2020)
  · SFC_BASE for ships built in Years 1984-2000 is adopted as a balance assumption.
  · According to Page 71 of IMO Fourth Greenhouse Gas Study, it is assumed that the Auxiliary Engine Specific Fuel Consumption Specific Fuel Consumption = Baseline Specific Fuel Consumption of Auxiliary Engines.
  · According to Page 71 of IMO Fourth Greenhouse Gas Study, it is assumed that the Auxiliary Boiler Specific Fuel Consumption Specific Fuel Consumption = Baseline Specific Fuel Consumption of Auxiliary Boilers.
- BSFC of main engine of Local Ferry (Table 3-27, MVEIS)
- BSFC of auxiliary engine of Local Ferry (Table 4-16, MVEIS)

15. The NOx emission factor refers to MVEIS and IMO Fourth Greenhouse Gas Study 2020:
- NOx emission of RTV, Tug and Fast Launch (Table 4-16, MVEIS)
- NOx emission of main engine of Pleasure Vessel (Table 4-16, MVEIS)
- NOx emission of auxiliary engine of Pleasure Vessel (Table 3-28, MVEIS)
- NOx emission of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-16, MVEIS)
- NOx emission factor of OGV (Table 49, Annex M, IMO Fourth Greenhouse Gas Study 2020)
- NOx emission factor of main engine of Local Ferry (Table 3-27, MVEIS)
- NOx emission factor of auxiliary engine of Local Ferry (Table 3-28, MVEIS)

16. The SO_2 emission factor is calculated based on the formula stated in Paragraph 4.2.31 of MVEIS:
SO_2 EF = BSFC x 2 x 0.97753 x Fuel Sulphur Fraction

17. The RSP emission factor is calculated based on the formula stated in Paragraph 4.2.31 of MVEIS:
PM_{10} EF = 0.23 + BSFC x 7 x 0.02247 x (Fuel Sulphur Fraction - 0.0024)

18. - According to the Forth IMO Greenhouse Gas Study, the RSP to FSP conversion factor used for OGV is 0.92.
- According to According to Paragraph 4.2.32 of MVEIS, the RSP to FSP conversion factor used for other vessel types is 0.97.

Appendix 3.5 Calculation of Marine Emissions

Emission Factors by Engine Category by Vessel

Vessel Category	Vessel Type	Route	Route Code	Engine Category	Operation Mode	Load Factor	NOx Emission Factors (g/hr) [1]	SO_2 Emission Factors (g/hr) [1]	RSP Emission Factors (g/hr) [1]	FSP Emission Factor (g/hr) [1]

Remarks

1. The load factor makes reference to the *Load_factor* sheet. Whenever a load factor is not available, it is assumed to be 0.02 for main engine and 1 otherwise for calculation purpose.
1. The calculations of the emission factor of each engine type refer to the following equation: Emission Factor of an Engine Type (g/hr) = Engine Power (kW) * Emission Factor (g/kWh) * Engine Load Factor.

Appendix 3.5 Calculation of Marine Emissions

Composite Emission Factors by Vessel

Vessel Category	Vessel Type	Route Code	Operation Mode	Composite NOx Emission Factors (g/hr) [1]	Composite SO2 Emission Factors (g/hr) [1]	Composite RSP Emission Factors (g/hr) [1]	Composite FSP Emission Factor (g/hr) [1]

Notes

[1] The release height of the vessels are determined by desktop review or on-site observations.

[2] The exhaust temperature refer to the journal article: Dong, Thi Minh Hao & Xuan Phuong Nguyen. (2019). Exhaust Gas Recovery from Marine Diesel Engine in Order to Reduce the Toxic Emission and Save Energy: A Mini Review. Journal of Mechanical Engineering Research & Developments, 42(5):143-147. https://doi.org/10.26480/jmerd.05.2019.143.147. Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature of documented in this article was adopted as a conservative approach.

[3] According to desktop review, most of the local ferries and and fast launches are equipped with the water jet propulsion system. As conservative approach, it is assumed the water jet propulsion system is installed in all local ferries and fast launches, and their exhaust temperature refer to the engine specification of VETUS exhaust system (https://webshop.vetus.com/en/products/exhaust-systems). Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature documented was adopted as a conservative approach.

[4] Acoording to 'Examination Guidebook on Pleasure Vessel Operator Grade 2 Certificate of Competency' (May 2021) issued by the Hong Kong Marine Department, wet exhaust system would be installed in some pleasure vessels. As a conservative assessment, it it assumed that all pleasure vessels are equiped with water jet proplusion system and their exhaust temperature refer to the engine specification of VETUS exhaust system (https://webshop.vetus.com/en/products/exhaust-systems). Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature documented was adopted as a conservative approach.

[5] The stack parameters, except release height and exit temperature, refer to approved EIA - "Route 11 (Section between Yuen Long and North Lantau)" (EIA-297/2023).

[6] The stack parameters, except release height and exit temperature, refer to approved EIA - "Widening of Tsuen Wan Road and the associated junction improvement works" (EIA-296/2023).

Appendix 3.5 Calculation of Marine Emissions

Total Emission Rate of the Marine Emission

Route #
1

Total Emission Rate

Vessel ID	Vessel Category	Vessel Type	Route Code [1]	Average Speed (Knot) [2]	Operation Mode	Distance (nautical miles) [3]	Time-in-mode (hr)	NOx Emission Rate (g/s-vessel) [4]	SO_2 Emission Rate (g/s-vessel) [4]	RSP Emission Rate (g/s-vessel) [4]	FSP Emission Rate (g/s-vessel) [4]

Remark

1. Despite the actual routes, all general marine vessels are considered travelling in the water at the nearest and safe distance from the project site / nearby shipyards.
2. The average speed is calculated from the speed distribution for each vessel on each route.
3. The distance is measured for each route.
4. The calculations of emission factors refer to the following equation: Emission Factor (g/s-vessel) = Composite Emission Factor (g/hr) * Time-in-mode (hr) / 3600.

Subject: Re: Marine Traffic Forecast Methodology for Air Quality Impact Assessment
Attachments: 31048-R04-01.pdf

Dear [redacted],

Thank you for your email regarding the methodology for forecasting marine traffic data for the Air Quality Impact Assessment.

As the Air Quality Impact Assessment falls under the purview of the EPD, please consult directly with them regarding this matter.

Regarding the Marine Traffic Visual Survey on Part 3, I have no comments on its content.

For Part 6 - Major Planned/Other Committed Developments, I noticed that you mentioned the Kau Yi Chau Artificial Islands (KYCAI) Project. If you require details or the commencement timeline of this project, I suggest reaching out directly to CEDD for clarification.

Thank you.

Subject: Marine Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted],

We are the marine consultant for the Proposed CBP Development at Tam Kon Shan Road, Tsing YiAs noted in our environmental consultant's correspondence with the Environmental Protection Department (EPD), an Environmental Assessment (EA) has been submitted, in which marine traffic data has been adopted as part of the Air Quality Impact Assessment.

In this regard, please find attached the proposed methodology for forecasting marine traffic data, which is solely for use in the Air Quality Impact Assessment, for your review and consideration. Grateful if you could advise whether you have any in-principle objection to the methodology.

Thank you for your time and cooperation.

Yours sincerely,

[redacted]

Remarks

[1] NO/NO2 ratio, at the respective running speed, was calculated based on emisison factors extracted from EMFAC-HK.
[2] Due to the lack of information, NOx cold idling emission factor was referenced to the corresponding hot idling emission factor.
[3] Due to the lack of information, PM cold idling emission factor was referenced to the corresponding hot idling emission factor.
[4] Reference made to Table 36 of VEADV.
[5] Reference made to Table 37 of VEADV.
[6] Reference made to the approved Liantang / Heung Yuen Wai Boundary Control Point and Associated Works EIA Report.
[7] All TSP (PM) emissions were assumed for RSP and FSP as a conservative approach.
[8] Reference made to Table 33 of VEADV.
[9] Reference made to Table 34 of VEADV.
[10] PM cold and hot idling emission factors are assumed to be 0 as the running and starting emission factors from EMFAC-HK are also 0.
[11] Due to the lack of information and similarity in taxi and PC, hot idling emission factors were referenced to corresponding hot idling emission factor of PC (petrol).
[12] NOx idling emission factor was referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by EPD whenever available; otherwise the highest emission factor in the same vehicle class was adopted as a conservative approach.
[13] Reference made to Table 42 of VEADV.
[14] Reference made to Table 43 of VEADV.
[15] Reference made to Table 39 of VEADV.
[16] Reference made to Table 40 of VEADV.
[17] Reference made to Table 45 of VEADV.
[18] Reference made to Table 46 of VEADV.
[19] Reference made to Table 27 of VEADV.
[20] NOx cold idling emission factor was referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by EPD whenever possible; otherwise it was referenced to the corresponding hot idling emission factor.

Remark

[1] Number of starts were derived based on on-site observations at the PTIs and operators' published schedules, while sitting time was obtained based on on-site observations at PTIs.

Remark

1. $R = E_r * f * d_t * p$

where

R: running emission at a specific speed for a vehicle type with a fuel type in an hour,

E_r: running emission factor for the vehicle type at the specific speed, obtained from the *EMFACEmf* tab,

f: total traffic frequency of the vehicle type in the hour, obtained from the *Frequency* table,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $S_{total} = \sum_i(E_{s,i} * f_i) * p$

where

S_{total}: total start emission for a vehicle type with a fuel type in an hour,

$E_{s,i}$: start emission factor of the vehicle type with sitting time i min, obtained from the *EMFACEmf* tab,

f_i: traffic frequency of the vehicle type with sitting time i min in the hour, obtained from the *Traffic Flow* table of the vehicle type,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

NO Idling Emission within PTI/Parking Site (Terminating Vehicle) (g)

Remark

1. $I_t = E_c * T_t * f_c * p + E_h * T_t * f_h * p$

where

I_t: idling emission within PTI of a vehicle type with a fuel type in an hour (terminating vehicle),

E_c: cold idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

E_h: hot idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: idling time of the terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_c: total traffic frequency of the vehicle type with the fuel type for cold idling emission, obtained from the *Traffic Flow* table of the vehicle type,

f_h: total traffic frequency of the vehicle type with the fuel type for hot idling emission, obtained from the *Traffic Flow* table of the vehicle type.

2. According to *Calculation of Start Emissios in Air Quality Impact Assessment*, the soak time for cold idling is longer than or equal to 240 min for petrol/LPG vehicles or 60 min for diesel SCR vehicles.

Appendix 3.6 Calculation of Start Emissions

Chun Wang Street Carpark

Remark

1. $I_a = I_t * T_a / T_t$

where

I_a: idling emission for the purpose of start emission adjustment of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in an hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

T_a: max. idling time for adjusting start emission of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: ilding time for the terminating vehicle, obtained from the *Vehicle Parameters* table.

NO Adjusted Start Emission within PTI/Parking Site (g)

Remark

1. S_{aw}

= 0, if $S_{total} - I_a < 0$

or

= $(S_{total} - I_a) * d_t / (d_t + d_s)$, otherwise

where

S_{aw}: adjusted start emission within PTI,

S_{total}: total start emission, obtained from the *Total Start Emission (g)* table above,

I_a: idling emission for the purpose of start emission adjustment, obtained from the *Idling emission for the purpose of start emission adjustment (g)* table above,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

d_s: average spread distance outside PTI, obtained from the *Vehicle Parameters* table.

NO Adjusted Start Emission outside PTI/Parking Site (g)

Remark

1. S_{ao}

= 0, if $S_{total} - I_a < 0$

or

= $(S_{total} - I_a) * d_s / (d_t + d_s)$, otherwise

where

S_{ao}: adjusted start emission outside PTI,

S_{total}: total start emission, obtained from the *Total Start Emission (g)* table above,

I_a: idling emission for the purpose of start emission adjustment, obtained from the *Idling emission for the purpose of start emission adjustment (g)* table above,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

d_s: average spread distance outside PTI, obtained from the *Vehicle Parameters* table.

Remark

1. $I_n = E_h * T_n * f_n * p$

where

I_n: idling emission within PTI of a vehicle type with a fuel type in an hour (non-terminating vehicle),

E_h: hot idling emission factor of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_n: idling time of the non-terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_n: traffic frequency of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Bypass* column of the *Traffic Flow* table of the vehicle type.

NO Idling Emission within PTI/Parking Site (g)

Remark

1. $I = I_t + I_n$

where

I: idling emission within PTI of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in the hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

I_n: idling emission within PTI of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Idling Emission within PTI (Non-terminating Vehicle) (g)* table above.

NO Total Emission within PTI/Parking Site (Running + Adjusted Start + Idling) (g)

Remark

1. $W = R + S_{aw} + I$

where

W: total emission within PTI of a vehicle type with a fuel type in an hour,

R: running emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Running Emission within PTI (g)* table above,

S_{aw}: adjusted start emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Adjusted Start Emission within PTI (g)* table above,

I: idling emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Idling Emission within PTI (g)* table above.

Appendix 3.6 Calculation of Start Emissions

Remark

1. $R = E_r * f * d_t * p$

where

R: running emission at a specific speed for a vehicle type with a fuel type in an hour,

E_r: running emission factor for the vehicle type at the specific speed, obtained from the *EMFACEmf* tab,

f: total traffic frequency of the vehicle type in the hour, obtained from the *Frequency* table,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $S_{total} = \sum_i(E_{s,i} * f_i) * p$

where

S_{total}: total start emission for a vehicle type with a fuel type in an hour,

$E_{s,i}$: start emission factor of the vehicle type with sitting time i min, obtained from the *EMFACEmf* tab,

f_i: traffic frequency of the vehicle type with sitting time i min in the hour, obtained from the *Traffic Flow* table of the vehicle type,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $I_t = E_c * T_t * f_c * p + E_h * T_t * f_h * p$

where

I_t: idling emission within PTI of a vehicle type with a fuel type in an hour (terminating vehicle),

E_c: cold idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

E_h: hot idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: idling time of the terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_c: total traffic frequency of the vehicle type with the fuel type for cold idling emission, obtained from the *Traffic Flow* table of the vehicle type,

f_h: total traffic frequency of the vehicle type with the fuel type for hot idling emission, obtained from the *Traffic Flow* table of the vehicle type.

2. According to *Calculation of Start Emissios in Air Quality Impact Assessment*, the soak time for cold idling is longer than or equal to 240 min for petrol/LPG vehicles or 60 min for diesel SCR vehicles.

Appendix 3.6 Calculation of Start Emissions

Chun Wang Street Carpark

Remark

1. $I_a = I_t * T_a / T_t$

where

I_a: idling emission for the purpose of start emission adjustment of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in an hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

T_a: max. idling time for adjusting start emission of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: ilding time for the terminating vehicle, obtained from the *Vehicle Parameters* table.

NO_2 Adjusted Start Emission within PTI/Parking Site (g)

Remark

1. S_{aw}

= 0, if $S_{total} - I_a < 0$

or

= $(S_{total} - I_a) * d_t / (d_t + d_s)$, otherwise

where

S_{aw}: adjusted start emission within PTI,

S_{total}: total start emission, obtained from the *Total Start Emission (g)* table above,

I_a: idling emission for the purpose of start emission adjustment, obtained from the *Idling emission for the purpose of start emission adjustment (g)* table above,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

d_s: average spread distance outside PTI, obtained from the *Vehicle Parameters* table.

NO_2 Adjusted Start Emission outside PTI/Parking Site (g)

Remark

1. S_{ao}

= 0, if $S_{total} - I_a < 0$

or

= $(S_{total} - I_a) * d_s / (d_t + d_s)$, otherwise

where

S_{ao}: adjusted start emission outside PTI,

S_{total}: total start emission, obtained from the *Total Start Emission (g)* table above,

I_a: idling emission for the purpose of start emission adjustment, obtained from the *Idling emission for the purpose of start emission adjustment (g)* table above,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

d_s: average spread distance outside PTI, obtained from the *Vehicle Parameters* table.

Appendix 3.6 Calculation of Start Emissions

Remark

1. $I_n = E_h * T_n * f_n * p$

where

I_n: idling emission within PTI of a vehicle type with a fuel type in an hour (non-terminating vehicle),

E_h: hot idling emission factor of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_n: idling time of the non-terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_n: traffic frequency of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Bypass* column of the *Traffic Flow* table of the vehicle type.

Remark

1. $I = I_t + I_n$

where

I: idling emission within PTI of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in the hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

I_n: idling emission within PTI of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Idling Emission within PTI (Non-terminating Vehicle) (g)* table above.

Remark

1. $W = R + S_{aw} + I$

where

W: total emission within PTI of a vehicle type with a fuel type in an hour,

R: running emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Running Emission within PTI (g)* table above,

S_{aw}: adjusted start emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Adjusted Start Emission within PTI (g)* table above,

I: idling emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Idling Emission within PTI (g)* table above.

Remark

1. $R = E_r * f * d_t * p$

where

R: running emission at a specific speed for a vehicle type with a fuel type in an hour,

E_r: running emission factor for the vehicle type at the specific speed, obtained from the *EMFACEmf* tab,

f: total traffic frequency of the vehicle type in the hour, obtained from the *Frequency* table,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $S_{total} = \sum_i(E_{s,i} * f_i) * p$

where

S_{total}: total start emission for a vehicle type with a fuel type in an hour,

$E_{s,i}$: start emission factor of the vehicle type with sitting time i min, obtained from the *EMFACEmf* tab,

f_i: traffic frequency of the vehicle type with sitting time i min in the hour, obtained from the *Traffic Flow* table of the vehicle type,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $I_t = E_c * T_t * f_c * p + E_h * T_t * f_h * p$

where

I_t: idling emission within PTI of a vehicle type with a fuel type in an hour (terminating vehicle),

E_c: cold idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

E_h: hot idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: idling time of the terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_c: total traffic frequency of the vehicle type with the fuel type for cold idling emission, obtained from the *Traffic Flow* table of the vehicle type,

f_h: total traffic frequency of the vehicle type with the fuel type for hot idling emission, obtained from the *Traffic Flow* table of the vehicle type.

2. According to *Calculation of Start Emissios in Air Quality Impact Assessment* , the soak time for cold idling is longer than or equal to 240 min for petrol/LPG vehicles or 60 min for diesel SCR vehicles.

Appendix 3.6 Calculation of Start Emissions

Remark

1. $I_a = I_t * T_a / T_t$

where

I_a: idling emission for the purpose of start emission adjustment of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in an hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

T_a: max. idling time for adjusting start emission of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: ilding time for the terminating vehicle, obtained from the *Vehicle Parameters* table.

RSP Adjusted Start Emission within PTI/Parking Site (g)

Remark

1. S_{ao}

= 0, if $S_{total} - I_a < 0$

or

= $(S_{total} - I_a) * d_s / (d_t + d_s)$, otherwise

where

S_{ao}: adjusted start emission outside PTI,

S_{total}: total start emission, obtained from the *Total Start Emission (g)* table above,

I_a: idling emission for the purpose of start emission adjustment, obtained from the *Idling emission for the purpose of start emission adjustment (g)* table above,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

d_s: average spread distance outside PTI, obtained from the *Vehicle Parameters* table.

Remark

1. $I_n = E_h * T_n * f_n * p$

where

I_n: idling emission within PTI of a vehicle type with a fuel type in an hour (non-terminating vehicle),

E_h: hot idling emission factor of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_n: idling time of the non-terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_n: traffic frequency of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Bypass* column of the *Traffic Flow* table of the vehicle type.

Remark

1. $I = I_t + I_n$

where

I: idling emission within PTI of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in the hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

I_n: idling emission within PTI of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Idling Emission within PTI (Non-terminating Vehicle) (g)* table above.

RSP Total Emission within PTI/Parking Site (Running + Adjusted Start + Idling) (g)

Remark

1. $W = R + S_{aw} + I$

where

W: total emission within PTI of a vehicle type with a fuel type in an hour,

R: running emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Running Emission within PTI (g)* table above,

S_{aw}: adjusted start emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Adjusted Start Emission within PTI (g)* table above,

I: idling emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Idling Emission within PTI (g)* table above.

Remark

1. $R = E_r * f * d_t * p$

where

R: running emission at a specific speed for a vehicle type with a fuel type in an hour,

E_r: running emission factor for the vehicle type at the specific speed, obtained from the *EMFACEmf* tab,

f: total traffic frequency of the vehicle type in the hour, obtained from the *Frequency* table,

d_t: average travelling distance within PTI, obtained from the *Site Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $S_{total} = \sum_i(E_{s,i} * f_i) * p$

where

S_{total}: total start emission for a vehicle type with a fuel type in an hour,

$E_{s,i}$: start emission factor of the vehicle type with sitting time i min, obtained from the *EMFACEmf* tab,

f_i: traffic frequency of the vehicle type with sitting time i min in the hour, obtained from the *Traffic Flow* table of the vehicle type,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table.

Remark

1. $I_t = E_c * T_t * f_c * p + E_h * T_t * f_h * p$

where

I_t: idling emission within PTI of a vehicle type with a fuel type in an hour (terminating vehicle),

E_c: cold idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

E_h: hot idling emission rate of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_t: idling time of the terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_c: total traffic frequency of the vehicle type with the fuel type for cold idling emission, obtained from the *Traffic Flow* table of the vehicle type,

f_h: total traffic frequency of the vehicle type with the fuel type for hot idling emission, obtained from the *Traffic Flow* table of the vehicle type.

2. According to *Calculation of Start Emissios in Air Quality Impact Assessment*, the soak time for cold idling is longer than or equal to 240 min for petrol/LPG vehicles or 60 min for diesel SCR vehicles.

Appendix 3.6 Calculation of Start Emissions

Chun Wang Street Carpark

Remark
1. $I_a = I_t * T_a / T_t$
where
I_a: idling emission for the purpose of start emission adjustment of a vehicle type with a fuel type in an hour,
I_t: idling emission within PTI of the vehicle type with the fuel type in an hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,
T_a: max. idling time for adjusting start emission of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,
T_t: ilding time for the terminating vehicle, obtained from the *Vehicle Parameters* table.

FSP Adjusted Start Emission within PTI/Parking Site (g)
