Remark

1. $I_n = E_h * T_n * f_n * p$

where

I_n: idling emission within PTI of a vehicle type with a fuel type in an hour (non-terminating vehicle),

E_h: hot idling emission factor of the vehicle type with the fuel type, obtained from the *Vehicle Parameters* table,

T_n: idling time of the non-terminating vehicle, obtained from the *Vehicle Parameters* table,

p: vehicle percentage of the fuel type, obtained from the *Vehicle Parameters* table,

f_n: traffic frequency of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Bypass* column of the *Traffic Flow* table of the vehicle type.

Remark

1. $I = I_t + I_n$

where

I: idling emission within PTI of a vehicle type with a fuel type in an hour,

I_t: idling emission within PTI of the vehicle type with the fuel type in the hour (terminating vehicle), obtained from the *Idling Emission within PTI (Terminating Vehicle) (g)* table above,

I_n: idling emission within PTI of the vehicle type with the fuel type in the hour (non-terminating vehicle), obtained from the *Idling Emission within PTI (Non-terminating Vehicle) (g)* table above.

FSP Total Emission within PTI/Parking Site (Running + Adjusted Start + Idling) (g)

Remark

1. $W = R + S_{aw} + I$

where

W: total emission within PTI of a vehicle type with a fuel type in an hour,

R: running emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Running Emission within PTI (g)* table above,

S_{aw}: adjusted start emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Adjusted Start Emission within PTI (g)* table above,

I: idling emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Idling Emission within PTI (g)* table above.

Appendix 3.6 Calculation of Start Emissions

Chun Wang Street Carpark

APPENDIX 3.7

Derivation of Cumulative Annual Average NOX-to-NO2 Conversion Equation using Jenkin Method

Appendix 3.7 Derivation of Cumulative Annual Average NOX-to-NO2 Conversion Equation using Jenkin Method

Jenkin Method for Long-term Cumulative NO_2 Assessment

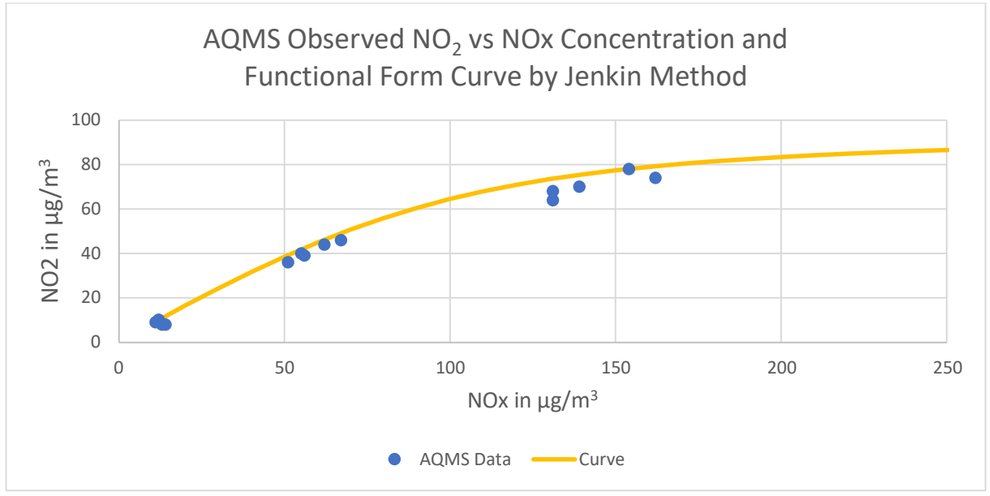
With reference to the *Review of Methods for NO to NO_2 Conversion in plumes at short ranges*[1], Jenkin method was adopted for the conversion of cumulative annual average NO_x to NO_2 by using the functional form of annual mean of NO_2-to-NOx. The mentioned functional form is referenced from Jenkin, 2004a[2] and is presented below:

$$[NO2] = \frac{\left([\mathrm{NOx}] + [\mathrm{OX}] + \frac{\mathrm{J}}{\mathrm{k}}\right) - \sqrt{([NOx] + [OX] + \frac{J}{k})^2 - 4[NOx][OX]}}{2}$$

where

$[NO_2]$	is the NO_2 concentration
$[NO_x]$	is the NOx concentration
[OX]	is the sum of NO_2 concentration and O_3 concentration (i.e. [OX] = $[NO_2]$ + $[O_3]$)
J	is the photolysis rate of NO_2
k	is the rate coefficient for reaction between NO and O_3

The above functional form was used to analyze the annual mean data obtained from the nearest EPD's air quality monitoring stations (AQMS) including Tuen Mun general station, Tap Mun general station and Roadside AQMS (i.e. Mong Kok roadside station). The recent five years annual mean data are extracted and presented in below table. Scattered plot for recent 5 years annual means NO_2 versus NO_x concentrations obtained from relevant AQMS was created. The functional form curve would fit the annual mean data when [OX] = 95.57 µg/m^3 and J/k = 17.114 µg/m^3. The value of [OX] and J/k are considered reasonable as they are within typical value range for Hong Kong. The resulting functional form curve was adopted for the cumulative annual average NO_x to NO_2 conversion. The curve is slightly higher than all the annual mean data obtained from AQMS, the calculated annual average NO_2 concentration using the obtained functional form curve based on the observed annual average NO_x obtained from AQMS are presented in below table, the calculated annual average NO_2 concentration are higher than the observed annual average NO_2 concentration, no underestimation of the annual average NO_2 concentration is expected.



For the long-term cumulative NO_2 assessment (i.e. predictions of annual average NO_2 concentration), cumulative annual average NO_x to NO_2 conversion equation for this assessment was calculated as follows:

$$[NO2]_c = \frac{([NOx]_c + 95.57 + 17.11) - \sqrt{([NOx]_c + 95.57 + 17.11)^2 - 4[NOx]_c \times 95.57}}{2}$$

where

$[NO_2]_c$	is the predicted cumulative NO_2 concentration
$[NO_x]_c$	is the predicted cumulative NO_x concentration

Site Walkover Checklist

DATE OF INSPECTION 12 December 2024

GENERAL SITE DETAILS

~~SITE OWNER~~/CLIENT [redacted]

PROPERTY ADDRESS Tsing Yi Town Lot Nos. 14 and 15 and adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

PERSON CONDUCTING THE QUESTIONNAIRE

NAME Mr. Alex Fan / Ms. Chloe Ng

POSITION Graduate / Senior Environmental Consultant, AECOM

AUTHORIZED OWNER/CLIENT REPRESENTATIVE (IF APPLICABLE)

NAME [redacted]

POSITION [redacted]

TELEPHONE [redacted]

SITE ACTIVITIES

Briefly describe activities carried out on site, including types of products/chemicals/materials handled. Obtain a flow schematic if possible.

Number of employees:	Full-time:	1
	Part-time:	N/A
	Temporary/Seasonal:	N/A
Maximum no. of people on site at any time:		50
Typical hours of operation:		8am – 5pm
Number of shifts:		N/A
Days per week:		6
Weeks per year:		52
Scheduled plant shut-down:		N/A

Detail the main sources of energy at the site:

Gas	~~Yes~~/No
Electricity	Yes/~~No~~
Coal	~~Yes~~/No
Oil	~~Yes~~/No
Other	~~Yes~~/No

SITE DESCRIPTION

This section is intended to gather information on site setting and environmental receptors on, adjacent or close to the site.

What is the total site area: Approx. 4,335 m^2

What area of the site is covered by buildings (%): 30 %

Please list all current and previous owners/occupiers if possible. Supreme Enterprises, Limited

---

Is a site plan available? If yes, please attach. Yes/~~No~~ Refer to Figure 7.1

Are there any other parties on site as tenants or sub-tenants? ~~Yes~~/No

If yes, identify those parties: N/A

Describe surrounding land use (residential, industrial, rural, etc.) and identify neighbouring facilities and types of industry.

North: Open water

South: Tam Kon Shan Road

East: Shipyard (Industrial)

West: Shipyard (Industrial)

Annex C1
Site Walkover Checklist

Describe the topography of the area (flat terrain, rolling hills, mountains, by a large body of water, vegetation, etc.).

Flat reclaimed land by the sea.

State the size and location of the nearest residential communities.

Cheung On Estate (approx. 450m east of the Site, area of about 7.9 ha)

Are there any sensitive habitats nearby, such as nature reserves, parks, wetlands or sites of special scientific interest?

No.

Questionnaire with Existing/Previous Site Owner or Occupier

	Yes/No	Notes
1. What are the main activities/operations at the above address?	--	Private parking site
2. How long have you been occupying the site?	--	48 years, since 1976
3. Were you the first occupant on site? (If yes, what was the usage of the site prior to occupancy.)	Yes	Open water
4. Prior to your occupancy, who occupied the site?	N/A	
5. What were the main activities/operations during their occupancy?	--	Shipyard from 1976 to 1994
6. Have there been any major changes in operations carried out at the site in the last 10 years?	No	
7. Have any polluting activities been carried out in the vicinity of the site in the past?	No	
8. To the best of your knowledge, has the site ever been used as a petrol filling station/car service garage?	No	
9. Are there any boreholes/wells or natural springs either on the site or in the surrounding area?	Yes	
10. Do you have any registered hazardous installations as defined under relevant ordinances? (If yes, please provide details.)	Yes	There is a disused Dangerous Goods (DG) store previously used for storing oxy-acetylene cylinders located in the western building of the Site.
11. Are any chemicals used in your daily operations? (If yes, please provide details.)	No	
• Where do you store these chemicals?	N/A	
12. Material inventory lists, including quantities and locations available? (If yes, how often are these inventories updated?)	No	
13. Has the facility produced a separate hazardous substance inventory?	No	
14. Have there ever been any incidents or accidents (e.g. spills, fires, injuries, etc.) involving any of these materials? (If yes, please provide details.)	No	

	Yes/No	Notes
15. How are materials received (e.g. rail, truck, etc.) and stored on site (e.g. drums, tanks, carboys, bags, silos, cisterns, vaults and cylinders)?	N/A	No materials are received and stored for use on-site.
16. Do you have any underground storage tanks? (If yes, please provide details.)	No	
• How many underground storage tanks do you have on site?	N/A	
• What are the tanks constructed of?	N/A	
• What are the contents of these tanks?	N/A	
• Are the pipelines above or below ground?	N/A	
• If the pipelines are below ground, has any leak and integrity testing been performed?	N/A	
• Have there been any spills associated with these tanks?	N/A	
17. Are there any disused underground storage tanks?	No	
18. Do you have regular check for any spillage and monitoring of chemicals handled? (If yes, please provide details.)	No	
19. How are the wastes disposed of?	--	Wastes are disposed to the nearby refuse collection point.
20. Have you ever received any notices of violation of environmental regulations or received public complaints? (If yes, please provide details.)	No	
21. Have any spills occurred on site? (If yes, please provide details.)	No	
• When did the spill occur?	N/A	
• What were the substances spilled?	N/A	
• What was the quantity of material spilled?	N/A	
• Did you notify the relevant departments of the spill?	N/A	
• What were the actions taken to clean up the spill?	N/A	
• What were the areas affected?	N/A	
22. Do you have any records of major renovation of your site or re-arrangement of underground utilities, pipe work/underground tanks (If yes, please provide details.)	No	
23. Have disused underground tanks been removed or otherwise secured (e.g. concrete, sand, etc.)?	No	
24. Are there any known contaminations on site? (If yes, please provide details.)	No	
25. Has the site ever been remediated? (If yes, please provide details.)	No	

Annex C1
Site Walkover Checklist

Observations

	Yes/No	Notes
1. Are chemical storage areas provided with secondary containment (i.e. bund walls and floors)?	No	The chemicals are stored on a covered box / wooden plank or directly above concrete paved ground.
2. What are the conditions of the bund walls and floors?	--	The covered box / wooden plank and concrete paved ground were observed to be intact.
3. Are any surface water drains located near to drum storage and unloading areas?	N/A	
4. Are any solid or liquid waste (other than wastewater) generated at the site? (If yes, please provide details.)	No	
5. Is there a storage site for the wastes?	No	
6. Is there an on-site landfill?	No	
7. Were any stressed vegetation noted on site during the site reconnaissance? (If yes, please indicate location and approximate size.)	No	
8. Were any stained surfaces noted on-site during the site reconnaissance? (If yes, please provide details.)	No	
9. Are there any potential off-site sources of contamination?	No	
10. Does the site have any equipment which might contain polychlorinated biphenyls (PCBs)?	No	
11. Are there any sumps, effluent pits, interceptors or lagoons on site?	No	
12. Any noticeable odours during site walkover?	No	
13. Are any of the following chemicals used on site: fuels, lubricating oils, hydraulic fluids, cleaning solvents, used chemical solutions, acids, anti-corrosive paints, thinners, coal, ash, oily tanks and bilge sludge, metal wastes, wood preservatives and polyurethane foam?	No

Dear Sir/Madam,

Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information of Chemical Waste Producer and Chemical Spillage Accident

AECOM Asia Co. Ltd. has been commissioned by Supreme Enterprise Limited as the Consultant to undertake land contamination assessment for the captioned project. The concerned site is indicated in the figure enclosed.

As part of the land contamination assessment and following the *Practice Guide for Investigation and Remediation of Contaminated Land* issued by EPD, we have to collect historical information regarding the past and present activities of the site. In order to facilitate our assessment, we would like to request for the following information regarding the captioned concerned site:

1. Current and past (as early as the records are available) registered Chemical Waste Producer(s) within the concerned site (preferably with the registration date, status (moved out or active), nature and quantity of the chemical waste); and
2. Reported accidents of spillage / leakage of chemicals within the concerned site.

Please feel free to contact our Ms. Chloe Ng at 3856 5662 / chloe.ng@aecom.com or Mr. Alex Fan at 3856 5244 / alex.fan@aecom.com should you have any queries.

Thank you very much for your kind assistance.

Yours faithfully,
AECOM Asia Co. Ltd.

Dear Ms. CHUNG,

Re. Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information of Chemical Waste Producer and Chemical Spillage Accident

I refer your above letter dated 12 December 2024 and the project layout plan. This Regional Office (West) has no record of reported cases of spillage/ leakage of chemicals at the application site as indicated in the project layout plan. You may need to check with other relevant parties/ government departments for such information as appropriate.

As for the records of Chemical Waste Producers (CWPs), you may contact Mr. K.H. LO at 2835 1357 for making an appointment to view the records of CWPs at the Territory Control Office.

Should you have any queries, please contact the undersigned.

Yours faithfully,

(Heidi H.Y. CHEUNG)

Dear Sir/Madam,

Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information about Dangerous Goods Store and Incidents Records

AECOM Asia Co. Ltd has been commissioned by Supreme Enterprise Limited as the Consultant to undertake land contamination assessment for the captioned project. The concerned site is indicated in the figure enclosed.

As a part of the land contamination assessment and following the *Practice Guide for Investigation and Remediation of Contaminated Land* issued by EPD, we have to collect historical information regarding the past and present activities of the site. In order to facilitate our assessment, we would like to request for the following information regarding the captioned concerned site:

1. Records of current and past (as early as the records are available) registration of Dangerous Goods storage (with type of dangerous goods, storage method, quantity, licence no., date of issue and storage location) within the concerned site;
2. Any records of reported accidents of spillage/leakage of dangerous goods stored within the concerned site; and
3. Any records of fire incidents within the concerned site.

Please feel free to contact our Ms. Chloe Ng at 3856 5662 / chloe.ng@aecom.com or Mr. Alex Fan at 3856 5244 / alex.fan@aecom.com should you have any queries.

Thank you very much for your kind assistance.

Dear Ms. CHUNG,

Land Contamination Assessment for
Tsing Yi Town Lots 14 and 15 and Adjoining
Government Land, Tam Kon Shan Road, Tsing Yi
Request for Information of Dangerous Goods & Incident Records

I refer to your letter of 12.12.2024 regarding the captioned request and reply below in response to your questions:-

Please be advised that neither records of dangerous goods license, fire incidents nor incidents of spillage / leakage of dangerous goods were found in connection with the given conditions of your request at the subject location.

If you have further questions, please feel free to contact the undersigned.

Yours sincerely,

(AU Ting-hin)
for Director of Fire Services

Notes:
(1) For Dioxins, the cleanup levels in USEPA Office of Solid Waste and Emergency Response (OSWER) Directive of 1998 have been adopted. The OSWER Directive value of 1 ppb for residential use has been applied to the scenarios of "Urban Residential", "Rural Residential", and "Public Parks", while the low end of the range of values for industrial, 5 ppb, has been applied to the scenario of "Industrial".
(2) Soil saturation limits for petroleum carbon ranges taken from the Canada-Wide Standards for Petroleum Hydrocarbons in Soil, CCME 2000.
(3) * indicates a 'ceiling limit' concentration.
(4) *** indicates that the C_{sat} value exceeds the 'ceiling limit' therefore the RBRG applies.

Table 2.2
Risk-Based Remediation Goals (RBRGs) for Groundwater and Solubility Limit

1 Introduction

1.1 Background

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

In the Approved Tsing Yi Outline Zoning Plan No. S/TY/32 (referred to as the "OZP"), the Application Site is zoned as "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses". According to the Schedule of Uses outlined in the OZP, the intended use of a Concrete Batching Plant falls under Column 2 uses. Consequently, obtaining planning permission from TPB is necessary for the proposed temporary concrete batching plant under Section 16 of the Town Planning Ordinance.

This submission intends to demonstrate the overall drainage design and provide basic information and is structured to follow the requirement of Stormwater Drainage Manual – Planning, Design and Management (2018 Edition) (SDM).

AXON Engineering & Consulting Limited (AXON) was commissioned to carry out a Drainage Impact Assessment (DIA) report for the proposed development.

1.2 Objectives

The objectives of the DIA are as follow:

- to assess the potential drainage impacts arising from the proposed development; and
- to recommend the necessary mitigation measures to alleviate the impacts, if necessary.

1.3 References

Reference is made to the following document:

1. Stormwater Drainage Manual (SDM) – 5th Edition issued by the Drainage Services Department (DSD)

2. Drainage Services Department Advice Note No. 1 – Application of the Drainage Impact Assessment Process to Private Section Project

3. Technical Note to prepare a Drainage Submission – Drainage Services Department (DSD)

2 Baseline Conditions and Review Methodology

2.1 Site Description

The Application Site is bounded by TYTL 14, TYTL 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi. It is bordered by Tam Kon Shan Road on the south and Tsing Yi Waterfront on the north. The site is situated to the west of Green Kwai Tsing and Tsing Yi Northeast Park. The site location is illustrated in **Figure 2.1**.

2.2 Site Conditions and Discharge Strategies

The Application Site encompasses an approximate application area of 4,335m^2 and a site area (paved land) of approximately 2,908m^2 in total. The site is surrounded by boundary walls along its eastern, western and southern site boundary, while there is no boundary wall constructed along the northern side to facilitate barge operations. Currently, the site is fully covered by the concrete surface. No site formation work will be conducted for the proposed development. Thus, there is no net difference in surface runoff due to this application.

The elevations within the paved area range from +4.05 mPD to +4.35 mPD. **Figure 2.2** shows the catchment areas and path flow of the site.

The stormwater fall on the roofs in catchments A, B and C will be collected through gutters and downpipes. In catchments D, the runoff is anticipated to primarily flow towards the northeast or the northwest, and will be collected via the proposed u-channel system.

It's important to note that many stormwater manholes from the Drainage Services Department are situated along Tam Kon Shan Road. The pipelines from both the eastbound and westbound directions divert the collected stormwater into northward through the stormwater manhole SWD4023664, which connects to the existing box culvert located beneath the site. Ultimately, the collected rainwater will be discharged into the sea.

The proposed underground pipe UP1 will establish a connection from the final catchpit, which includes a sand trap, government stormwater manhole SWD4023664, serving as the final discharge point for the planned stormwater drainage system.

2.3 Calculation Methodology for Runoff

Peak instantaneous runoff values before and after the development were calculated based on the Rational Method and with recommended physical parameters including runoff coefficient (C) and storm constants for different return periods referred to the SDM.

The Rational Method is adopted for hydraulic analysis and the peak runoff is calculated based on the following equation:

$$Q_p = 0.278\ C\ i\ A$$

where Q_p = Peak Runoff, m^3/s
C = Runoff Coefficient
i = Rainfall Intensity, mm/hr
A = Catchment Area, km^2

The paved areas of the site will account for 2,908 m². The runoff coefficient of 1.0 was assumed.

Based on the storm constants for 50-year return period recommended in the SDM, the appropriate rainfall intensities (i) were calculated as detailed in **Appendix A**.

2.4 Calculation Methodology for Channel Capacity Checking

The development site is smaller than one hectare in size. To manage stormwater runoff, it is recommended that U-channels be constructed on site. The U-channel system will collect the stormwater and divert it to the proposed u-channels and underground pipe. Eventually, the collected stormwater will be discharged to the government stormwater manhole.

A Manning's roughness coefficient value of 0.016 and 0.015 was used to calculate the capacities of concrete U-channels and concrete drainpipe respectively. This assumed the fair condition of concrete channels and concrete pipe.

Typical designs of the U-channel and Catchpit are shown in **Appendix B**.

Manning's Equation for calculating the channel and pipe capacities was adopted for this analysis:

$$V = \frac{R^{2/3} S^{1/2}}{n}$$

where V = mean velocity, m/s
S = slope of the total energy line
n = Manning's roughness coefficient
R = hydraulic radius, m

2.5 Summary of Assessment Assumptions

Below is a summary of the assumptions underlying the Drainage Impact Assessment:

- A 50-year return period was adopted;
- A runoff coefficient of 1.0 for the paved area was assumed; and
- Manning's roughness coefficient of 0.016 for U-channels was adopted; and
- Manning's roughness coefficient of 0.015 for underground concrete drain pipe was adopted.

3 Assessment Results

The estimated peak runoff of each catchment area is calculated based on 50 years return period and is summarised in **Table 3.1** below, runoffs and capacities of the proposed drainage system are summarised in **Table 3.2**. The proposed layout plan of the drainage system and detailed calculations are provided in **Figure 3.1** and **Appendix A**, respectively.

Table 3.1 Estimated Peak Runoffs of Each Catchment Area

Catchment ID	Catchment Area, m^2	Peak Runoff, m^3/s
A	534	0.0393
B	166	0.0136
C	87	0.0072
D	2,121	0.1417

Table 3.2 Estimated Runoffs and Capacities of the Channels & Pipe

Type	ID	Catchment Served	Actual Runoff, m^3/s	% of Capacity Flow	OK? (Y/N)
U-channel (375mm)	UC1	A + D (10%)	0.0532	44%	Y
U-channel (450mm)	UC2	A + D (65%)	0.1297	67%	Y
U-channel (525mm)	UC3	A + D (74%)	0.1422	48%	Y
U-channel (525mm)	UC4	A + B + D (74%)	0.1558	53%	Y
U-channel (525mm)	UC5	A + B + C + D (99%)	0.1977	67%	Y
U-channel (150mm)	UC6	D (1%)	0.0014	13%	Y
Underground Pipe (375mm)	UP1	A + D (10%)	0.0532	44%	Y

As depicted in **Table 3.2**, a drainage system, including u-channels and underground pipe, is designed to ensure that the collected stormwater runoff does not surpass 70% of its total capacity, effectively collecting the rainfall within the proposed development and discharging the runoff into government drainage system.

4 Summary and Conclusions

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

To prevent flooding in the Site and its surrounding areas, a drainage system is designed to ensure that the stormwater runoff does not surpass 70% of its total capacity, effectively collecting the rainfall within the proposed development and discharging the runoff into government drainage system.

The results of the assessment reveal that there would be no significant impact on the Site and the surroundings at the peak runoff under 50 years return period.

1 Introduction

1.1 Background

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

In the Approved Tsing Yi Outline Zoning Plan No. S/TY/32 (referred to as the "OZP"), the Application Site is zoned as "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses". According to the Schedule of Uses outlined in the OZP, the intended use of a Concrete Batching Plant falls under Column 2 uses. Consequently, obtaining planning permission from TPB is necessary for the proposed temporary concrete batching plant under Section 16 of the Town Planning Ordinance.

As there is a public sewer system currently available in the vicinity of the subject site, it is necessary to propose a sewerage connection between the proposed development and the public sewer.

AXON Engineering & Consulting Limited (AXON) was commissioned to carry out a Sewage Impact Assessment (SIA) report to review and recommend appropriate sewage treatment and disposal scheme.

1.2 Objectives

The objectives of the SIA are as follow:

- to estimate the sewage generation; and
- to examine the impact arising from the estimated sewage on the proposed sewerage connection and existing sewer system.

1.3 References

Reference is made to the following document:

1. Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning (GESFSIP) (Version 1.0), EPD; and

2. Technical Memorandum Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters (TM), EPD; and

3. Sewerage Manual – Key Planning Issues and Gravity Collection System (Sewerage Manual) (3rd edition), Drainage Services Department (DSD), May 2013.

2 Baseline Conditions and Review Methodology

2.1 Site Description

The Application Site has an approximate area of 4,335m^2 and is bounded by TYTL 14, TYTL 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi. The site location is shown in **Figure 2.1**.

2.2 Evaluation of Wastewaters Generation

The Concrete Batching Plant (CBP) is designed to include three production lines, achieving an overall processing capacity of 300 cubic meters per hour and 4,200 cubic meters per day. The concrete batching procedure primarily entails the management of raw materials from their delivery to storage, followed by the respective weigh hoppers, concrete batch mixers, and ultimately the loading of the mixed concrete onto mixer trucks for distribution.

The concrete batching and ground washing processes are designed to generate no effluent. As outlined in the environmental assessment of this Concrete Batching Plant, the project proponent will adopt a "Zero Discharge Strategy" for these operations: water used for ground washing will be collected and transferred to wastewater tanks for reuse in truck washing or recycled for concrete production. Additionally, concrete waste will be collected by a concrete reclaimer, which will separate the cement slurry water from the aggregates. The cement slurry water will subsequently be treated through a filter press to extract cement particles, enabling the clear water to be recycled for site cleaning, dust control or even concrete production.

The main types of wastewaters generated by the proposed development will be sewage from on-site staff and visitors (concrete mixer truck drivers). To estimate sewage generation, the following assumptions were made:

- The proposed development will have 15 on-site staff and 600 visitors per day, which is derived from dividing the daily concrete production (4,200 cubic meters) by capacity of concrete mixer trucks (7 cubic meters)
- For on-site staff, the combined UFF of 0.230m^3/person/day is used to calculate sewage generation for the on-site staff, based on the Commercial Employee and Commercial Activities J9 (Construction) in Table T-2 of GESFSIP.

- For visitor, the combined UFF of 0.0026m³/person/visit (= 200mL micturition + 1L flushing + 1.4L handwashing) is used to calculate sewage generation for the based on the (1) Human's micturition is assumed to be 200mL in accordance with P.3081 of Magill's Medical Guide, 6th edition; (2) Volume of flushing system as advised by the supplier; and (3) Volume of handwashing system in accordance with BEAM Plus New Buildings Version 1.2 in July 2012.

As calculated in **Appendix A**, the estimated Average Dry Weather Flow (ADWF) is 5.01m³/day and the Design Peak Flow is 0.0005m³/second, respectively.

2.3 Proposed Sewerage Connection and Calculation

It is essential to highlight that sufficient foul water manholes from the Drainage Services Department (DSD) are situated along Tam Kon Shan Road. A proposed sewerage connection, consisting of a 150mm underground pipe, aims to connect the public sewer to the manhole within the planned development, and a 225mm underground pipe functions for enhancing existing government pipes FMD4003000. Manning's Equation for calculating the pipe capacities was adopted for this analysis:

$$V = \frac{R^{2/3} S^{1/2}}{n}$$

where
V = mean velocity, m/s
S = slope of the total energy line
n = Manning's roughness coefficient
R = hydraulic radius, m

A Manning's roughness coefficient of 0.015 was utilized to determine the capacities of the new concrete drainpipe, reflecting the assumption of the concrete pipe being in fair condition.

The proposed layout plan for the sewerage connection, along with comprehensive calculations, can be found in **Figure 2.2** and **Appendix B**, respectively. Pipe DP1 establishes a direct link between the Manhole MH1 located on the Site and the Government Foul Water Manhole FMH4052191, whereas Pipe DP2 enhances two existing 150mm government pipes FMD4003000 by replacing them with a 225mm diameter pipe that offers greater hydraulic capacity and improved self-cleaning properties. A summary of pipe's capacity is outlined in **Table 2.1**.

Table 2.1 Capacities of the Pipes

Type	ID	Capacity, m^3/s	Design Peak Flow, m^3/s	% of Capacity Flow	OK? (Y/N)
Underground Pipe (150 mm)	DP1	0.0111	0.0005	4%	Y
Underground Pipe (225 mm)	DP2	0.0270	0.0005	2%	Y

As depicted in **Table 2.1**, the proposed sewerage connection is designed to ensure that the peak design flow does not its total capacity, effectively discharging the sewage produced by the proposed development.

2.4 Sensitivity Test

An evaluation of the drainage impact of the proposed development on the existing sewer system has been conducted through a sensitivity test for the public foul water drainpipe FWD4019926, which connects the government foul water manholes FMH4019395 and FMH4019396. The boundaries of assessment for sensitivity test are depicted in **Figure 2.3**, including the upstream catchments (nearby developments along Tam Kon Shan Road) and encompassing the public sewer network between FMH4019445 and FMH4019396.

In a conservative approach, the upstream flow resulting from the nearby development along Tam Kong Shan Road is assumed to equal the full bore capacity of the upstream public foul water drainpipe FWD4019925, which is $0.0197m^3/s$, as indicated in the calculations sheet found in **Appendix B**. The design peak flow for the sensitivity test is the total of this maximum capacity of pipe FWD4019925 and the design peak flow from the proposed development, amounting to $0.0202m^3/s$.

A Manning's roughness coefficient of 0.017 was applied to evaluate the capacities of the public clay drainpipe FWD4019926, which reflects the assumption that the common clay drainage tile is in poor condition. A summary of the sensitivity test results for drainpipe FWD4019926 is provided in **Table 2.2**, with detailed calculations available in **Appendix B**.

Table 2.2 Capacities of the Pipes (Sensitivity Test)

Type	ID	Capacity, m^3/s	Design Peak Flow, m^3/s	% of Capacity Flow	OK? (Y/N)
Underground Pipe (300 mm)	Government Drainpipe FWD4019926	0.0217	0.0202	93%	Y

As depicted in **Table 2.3**, the public foul water drainpipe FWD4019926 possesses adequate hydraulic capacity to accommodate both the foul water from the upstream catchment area and the wastewater generated by the proposed development. As a result, no adverse drainage impact will arise from the proposed development.

3 Summary and Conclusions

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi.

The estimated Design Peak Flow and Estimated Average Dry Weather Flow (ADWF) from the proposed development are estimated to be 0.0005m³/second and 5.01m³/day, respectively. The effluent is proposed to be discharged to the public sewer.

With the provision of proposed sewerage connection mentioned in **Section 2.3** and the sensitivity test analysis for the existing sewerage system discussed in **Section 2.4**, no adverse drainage impact will arise from the proposed development.

Dear Sir,

Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Area shown as 'Road' and Area not Covered by Statutory Plan, Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

(S.16 Planning Application No. A/TY/150)

We write to provide clarifications for the captioned application submitted to the Town Planning Board on 2.5.2025.

As per the request of the Planning Department, the plot ratio and site coverage of the proposed development shall be revised to **0.34** and **17%** respectively for the purpose of the planning application.

Should you require more information regarding the application, please contact our Mr. Christian CHIM at (852) 2339 0884 / christianchim@r-riches.com.hk or the undersigned at your convenience. Thank you for your kind attention.

Yours faithfully,

Response-to-Comment

Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Area shown as 'Road' and Area not Covered by Statutory Plan, Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

(Application No. A/TY/150)

(i) The applicant provides the following information in support of the application:

- with the planned development in San Tin Technopole and the continued developments in various NDAs, it is foreseeable that the amount of construction works and the demand for ready-mixed concrete arising from public and private planned development projects shall remain high; and

- the proposed development of a new concrete batching plant is therefore expected to meet the ever-growing demand of local ready-mixed concrete induced by various infrastructural projects and residential developments in Hong Kong.

(ii) A RtC table:

	Departmental Comments	Applicant's Responses
1. Comments of the Environmental Protection Department (EPD)		
(a)	Section 2.4 and Section 3: For the avoidance of doubt, please revise "drainage impact" to "sewerage impact" in Section 2.4 and Section 3.	Noted. The Sewage Impact Assessment report has been revised accordingly (**Annex 1**).
2. Comments of the Port Works Division, Civil Engineering Development Department (PWD, CEDD)		
(a)	PWD, CEDD wishes to remind the applicant that the structural integrity and stability of the existing marine structures/seawall must not be compromised during the construction or operation of the proposed works. Should any damage to these structures occur as a result of the works or related activities, the applicant will be fully responsible for repairing the damage at their own cost.	Noted. The applicant will keep monitoring the structural integrity and stability of the existing marine structures/seawall during the construction or operation of the proposed works. Should any damage to these structures occur as a result of the works or related activities, the applicant will be fully responsible for repairing the damage at our own cost.

Departmental Comments		Applicant's Responses
3. Comments of the Planning Department (PlanD)		
(a)	Table 1 and Table 3 of Supporting Planning Statement – The Consultant may wish to include the building height (BH) of the proposed temporary development in mPD for the sake of clarity.	The building height is at around 35.3 mPD (31 m plus 4.3 m) measured from Ground Floor i.e. 4.3 mPD.
4. Comments of the Water Supplies Department (WSD)		
(a)	Refer to the proposed site layout plan, it is noted that part of the existing public road may become part of the land lot serving as a private run in/out with additional ramp. This may affect our existing water mains (see WSD Mains Record Plan attached) and the associated operation and maintenance works.	The project team confirms that there is no intention to alter the current status or conditions of the existing public road. The existing access arrangement will be maintained in its current form as far as practicable. Detailed design will carefully take into account the locations of the existing water mains as shown in the WSD Mains Record Plan. Coordination with the WSD will be carried out as necessary during the design development stage to ensure protection of existing utilities and to facilitate future operation and maintenance activities.
(b)	The applicant should clarify that the proposed run-in-out will not become a private road.	The project team confirms that there is no intention to convert the existing public road, including the proposed run-in/out, into a private road. The current access arrangement will be maintained as far as practicable.
(c)	If the run-in-out will maintain a public road, as this part of walkway will become a carriageway, applicant shall confirm this section of road can complied with WSD's requirement on the minimum depth requirements as stipulated in our *'Manual of Mainlaying Practice'* as well as Highways Department (HyD)'s minimum depth for underground services. Hence the existing water mains can be protected.	During the detailed design stage, the project team will ensure compliance with the WSD's minimum depth requirements as stipulated in the *'Manual of Mainlaying Practice'*, as well as relevant HyD standards for underground services. The design will take into careful consideration the locations of existing water mains as shown in the WSD Mains Record Plan. The project team will coordinate with WSD as necessary throughout the design development process to ensure the protection of existing water mains and adherence to all applicable requirements.

Departmental Comments		Applicant's Responses
5. Comments of the Electrical and Mechanical Services Department (EMSD)		
(a)	In the interests of public safety and ensuring the continuity of electricity supply, the parties concerned with planning, designing, organising and supervising any activity near the underground cable or submarine cable under the mentioned document should approach the electricity supplier (i.e. CLP Power) for the requisition of cable plans to find out whether there is any underground cable and/or submarine cable within and/or in the vicinity of the concerned site. They should also be reminded to observe the *Electricity Supply Lines (Protection) Regulation* and the *"Code of Practice on Working near Electricity Supply Lines"* established under the Regulation when carrying out works in the vicinity of the electricity supply lines, and be reminded to enquire the electricity supplier for the required precautionary measures for work near submarines cable and to execute them during design and construction.	Noted. The applicant will enquire the electricity supplier to find out whether there is any underground cable and/or submarine cable within and/or in the vicinity of the Site well before carrying out works and execute required precautionary measures for work near submarines cables during design and construction.
6. Comments of the Fire Services Department (FSD)		
(a)	Detailed fire services requirements will be formulated upon receipt of formal submission of STT/STW, general building plans or referral of application via relevant licensing authority as appropriate. Furthermore, the EVA provision in the captioned work shall comply with the standard as stipulated in Section 6, Part D of the Code of Practice for Fire Safety in Buildings 2011, which is administered by the Buildings Department.	Noted.

Departmental Comments		Applicant's Responses
7. Comments of the Buildings Department (BD)		
(a)	It is noted that the temporary concrete batching plant is proposed in the captioned application. Before any new building works (including containers/open sheds as temporary buildings, demolition and load filling etc.) are to be carried out on application site, prior approval and consent of the Building Authority (BA) should be obtained, otherwise they are unauthorised building works (UBW) under the Buildings Ordinance (BO). An Authorised Person should be appointed as the coordinator for the proposed building works in accordance with the BO.	Noted.
(b)	The application site abuts a specified street (Tam Kon Shan Road) of not less than 4.5 m wide. Its permitted development intensity shall be determined under the First Schedule of the Building (Planning) Regulation (B(P)R) at the building plan submission stage;	
(c)	If the structure is erected on leased land without approval of the BA, they are UBW under the BO and should not be designated for any proposed use under the captioned application.	
(d)	For UBW erected on leased land, enforcement action may be taken by the BD to effect their removal in accordance with the prevailing enforcement policy against UBW as and when necessary. The granting of any planning approval should not be construed as an acceptance of any existing building works or UBW on the application site under the BO.	

Departmental Comments		Applicant's Responses
8. Comments of the Marine Department (MD)		
(a)	For the proposed dredging of the seabed to a depth of 3.8 metres, all statutory requirements must be followed.	Noted. All statutory requirements related to dredging works will be strictly followed in accordance with relevant government regulations and procedures.
(b)	The applicant should liaise with the Lands Department to arrange a "blue area" to allow sufficient space for safe berthing in future.	Noted. The applicant will liaise with the Lands Department to explore the designation of a "blue area" to ensure sufficient safe berthing space for the proposed operations.
(c)	The project proponent should be reminded that their barging operations must not impede the existing private mooring (PM) owners (PM Nos. 1322 and 1381) from using their moorings. Consent from the PM owners must be obtained for the barging operation.	The applicant is currently liaising with the respective buoy owners to obtain written confirmation of no objection to the proposed use of the adjacent waters for marine operations. Preliminary discussions have been conducted, during which the buoy owners expressed no objection in principle to the proposed arrangements. While formal consent is being arranged, no major concerns are anticipated, and the applicant will continue to coordinate closely to ensure alignment and avoid any future operational conflict.
(d)	The proposed project will introduce new marine traffic, including 50-meter-long cement carriers to the concerned waters. Given the relatively strong tidal currents, the restricted manoeuvring space, and the presence of various nearby private mooring buoys and piers accommodating different types of vessels with frequent maritime activities, Marine Traffic Impact Assessment (MTIA) shall be conduct to detail the marine operations in both construction and operational stage, access impact to existing marine traffic and finally to recommend mitigation measure to the risk. The current Barging Operation Plan for the construction-related activities or the number of vessels involved. Addressing these aspects will be critical to ensuring the safe and efficient management of marine traffic during the project's implementation.	MTIA will be prepared to account for site-specific conditions such as tidal currents, navigational constraints, and interactions with existing marine users. Additional time is required to undertake the necessary analysis and coordination with relevant stakeholders. It is therefore proposed that the MTIA be incorporated as an approval condition, so that the assessment can be conducted with sufficient technical depth and in accordance with relevant regulatory requirements and operational considerations.

<table>
<tr><th colspan="2">Departmental Comments</th><th>Applicant's Responses</th></tr>
<tr><td colspan="3">9. Comments of the Transport Department (TD)</td></tr>
<tr><td>(a)</td><td>Compared to the previously planning application (No. A/TY/134) which featured a similar GFA and site configurations, the concrete production rate has increased remarkably from 700 m^3 per day to 300 m^3 per hour. This represents a substantial escalation in traffic generation and attraction, which warrants thorough review.</td><td>As illustrated in the Table 4.1 in the Traffic Impact Assessment (TIA), the anticipated peak hourly development trips have already taken into account the effect of a heightened concrete production rate of 300 m^3 per hour.

Table 4.1 Development Traffic Generation
<table><tr><th rowspan="2">Use</th><th colspan="3">Generation</th><th colspan="3">Attraction</th></tr><tr><th>AM Peak</th><th>Noon Peak</th><th>PM Peak</th><th>AM Peak</th><th>Noon Peak</th><th>PM Peak</th></tr><tr><td>Private Car Trips (pcus/ hour) [a]</td><td>2</td><td>2</td><td>2</td><td>2</td><td>2</td><td>2</td></tr><tr><td>Concrete Mixer Truck Trips (pcus/ hour) [b]</td><td>121</td><td>121</td><td>121</td><td>121</td><td>121</td><td>121</td></tr><tr><td>Total(pcus/ hour)</td><td>123</td><td>123</td><td>123</td><td>123</td><td>123</td><td>123</td></tr></table>
(a) Information provided by the Applicant.

(b) The no. of concrete mixer truck generated/attracted by plant = design production capacity/capacity of a concrete mixer truck x 2.8 pcu factor = (300 m^3 per hour/7 m^3) x 2.8 pcu = 121 pcus per hour.

As depicted in Section 4.6 of the TIA, the findings of both the junction capacity assessment and the link capacity assessment indicate that the capacities of all key junctions and key links are expected to function adequately during peak periods in future traffic flows, including the trip generation and attraction associated with the development (Design Scenario).</td></tr>
<tr><td>(b)</td><td>With reference to Table 4.1 and Section 6.4 of the Traffic Impact Assessment (TIA), given the narrow site layout and the use of a hammerhead as turn-around facility, a queuing analysis is required to demonstrate that the proposed provision of 3 HGV loading/ unloading bay and 12 HGV waiting spaces can accommodate the peak traffic volumes without causing queuing onto adjacent public roads.</td><td>As shown in Section 5.2 in the TIA, the design includes 12 dedicated waiting spaces for heavy goods vehicles, such as concrete mixer trucks, ensuring that vehicles can park within the site while awaiting their turn for loading or unloading operations. This provision is critical in maintaining traffic flow along the surrounding public roads, as it eliminates the risk of vehicles queuing or waiting on Tam Kon Shan Road.

A comprehensive queuing analysis has been conducted to evaluate the loading/unloading bays' functionality. The results, presented in</td></tr>
</table>

		Appendix B in TIA, confirm that the probability of queuing on public roads is negligible (less than 0.003%). It indicates a confidence level exceeding 99.9% that there will be no traffic queuing on public roads. Consequently, the proposed internal transport provisions are deemed adequate for the proposed development. Moreover, as present in Section 6.2 in the TIA, a well-designed operation procedure is derived to ensure the smooth loading/unloading activities by maintaining consistent communication between drivers and site management.

(iii) The applicant provides the following information in response to the comments received during the public inspection period of the application:

1. Statutory aspect

- the application site (the Site) partly falls within an area zoned "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" ("OU(BMIU)") and an area shown as 'Road' on the Approved Tsing Yi Outline Zoning Plan (OZP) No. S/TY/32, and partly falls outside the OZP planning scheme boundary. According to the Notes of the OZP, the applied use is a Column 2 use within the "OU(BMIU)" zone, which may be permitted with or without conditions on application to the Town Planning Board under section 16 of the Town Planning Ordinance; and

- the planning intention of the "OU(BMIU)" zone is intended primarily for boatyard and **marine-oriented industrial uses**. The proposed development is considered in line with marine-oriented industrial uses and is not incompatible to the surrounding area, which is predominantly surrounded by industrial-related activities, boatyards, cement silos, and concrete batching plants;

2. Traffic safety aspect

- the **Traffic Impact Assessment** has proven that all key junctions and road links perform satisfactorily during peak hours in the assessment year of 2029. It has concluded that no adverse traffic impact arising from the proposed development is anticipated;

- no vehicle will be allowed to turn left while leaving the Site. All vehicles will be required to follow the designated route between Tsing Yi North Coastal Road and the section of Tam Kong Shan Road to the west of the Site. As such, the designated route will not pass through the section of Tam Kon Shan Road to the east of the Site. Given the remote distance (i.e. at least 200 m away from the nearest recreation facility and 500 m from the nearest residential building) and the lack of traffic interface, it is not anticipated that the traffic generated/attracted by the proposed development would impose any hazard to users of Tsing Yi Northeast Park and nearby residents; and

- the proposed development includes 12 dedicated waiting spaces for heavy goods vehicles, such as concrete mixer trucks, ensuring that vehicles can park within the Site while awaiting their turn for loading or unloading operations. This provision is critical in maintaining traffic flow along the surrounding public roads, as it helps eliminate the risk of vehicles queuing or waiting on Tam Kon Shan Road or other access routes. Hence, the concerns on illegal parking of concrete trucks of the proposed development along public road/on pedestrian path is not envisaged;

3. Environmental aspect

- in order to confirm the acceptability of the Site in respect of environmental aspects, an **Environmental Assessment** was carried out to examine the impacts associated with the proposed development during construction and operation phases. Potential environmental impacts including air quality, noise, water quality, waste management, and land contamination issues associated with construction and operation of the proposed development have been assessed. It has concluded that no adverse environmental impact on the Site would be anticipated;

- the estimated design peak flow and estimated average dry weather flow from the proposed development will be minimal. The effluent is proposed to be discharged to the public sewer. With the provision of proposed sewerage connection and the sensitivity test analysis for the existing sewerage system as discussed in the **Sewage Impact Assessment**, no adverse sewerage impact arising from the proposed development should be expected; and

- a drainage system has been designed to ensure that the stormwater runoff does not surpass 70% of its total capacity, effectively collecting the rainfall within the proposed development and discharging the runoff into government drainage system. The results of the **Drainage Impact Assessment** have revealed that there will be no significant drainage impact on the Site; and

4. Marine aspect

- although the Site was subject of a previous application rejected by the Metro Planning Committee in 2018 on the ground that the applicant could not demonstrate that the proposed barging operation will not have adverse impact on marine safety and the shipyards nearby, the applicant has provided a revised **Barging Operation Plan** in response to departmental concerns. Under the current proposal, vessels for delivering raw materials would remain stable and correctly align during the unloading of cement and aggregate operations;

- the operation of the proposed development will strictly comply with relevant statutory procedures, environmental legislation, and guidelines. No sewage effluents, aggregates, cement, and concrete product will be allowed to be disposed into the marine frontage;

- sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe batching operations. To remedy this, maintenance dredging is considered necessary to remove the accumulated sediment and restore adequate water depth for vessel navigation. To accommodate tidal variations and provide a safety margin, a water depth of around 3.8 m (at Chart Datum) will generally be maintained for operations involving a Pelican Aggregate Barge. It ensures that, even under varying conditions, there will be adequate clearance for safe navigation; and

- mitigation measures including deployment of silt curtain will be implemented during the maintenance dredging works. A silt curtain deployment plan should be submitted to the Environmental Protection Department prior to the commencement of the maintenance dredging works. The maintenance dredging works should be carried out in dry season to further minimise the potential water quality impact.

Annex 1

Revised Sewage Impact Assessment

Sewage Impact Assessment For Section 16 Planning Application of Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Tsing Yi Town Lots Nos. 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

1 Introduction

1.1 Background

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi (hereafter "the proposed development").

In the Approved Tsing Yi Outline Zoning Plan No. S/TY/32 (referred to as the "OZP"), the Application Site is zoned as "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses". According to the Schedule of Uses outlined in the OZP, the intended use of a Concrete Batching Plant falls under Column 2 uses. Consequently, obtaining planning permission from TPB is necessary for the proposed temporary concrete batching plant under Section 16 of the Town Planning Ordinance.

As there is a public sewer system currently available in the vicinity of the subject site, it is necessary to propose a sewerage connection between the proposed development and the public sewer.

AXON Engineering & Consulting Limited (AXON) was commissioned to carry out a Sewage Impact Assessment (SIA) report to review and recommend appropriate sewage treatment and disposal scheme.

1.2 Objectives

The objectives of the SIA are as follow:

- to estimate the sewage generation; and
- to examine the impact arising from the estimated sewage on the proposed sewerage connection and existing sewer system.

1.3 References

Reference is made to the following document:

1. Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning (GESFSIP) (Version 1.0), EPD; and

2. Technical Memorandum Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters (TM), EPD; and

3. Sewerage Manual – Key Planning Issues and Gravity Collection System (Sewerage Manual) (3rd edition), Drainage Services Department (DSD), May 2013.

2 Baseline Conditions and Review Methodology

2.1 Site Description

The Application Site has an approximate area of 4,335m^2 and is bounded by TYTL 14, TYTL 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi. The site location is shown in **Figure 2.1**.

2.2 Evaluation of Wastewaters Generation

The Concrete Batching Plant (CBP) is designed to include three production lines, achieving an overall processing capacity of 300 cubic meters per hour and 4,200 cubic meters per day. The concrete batching procedure primarily entails the management of raw materials from their delivery to storage, followed by the respective weigh hoppers, concrete batch mixers, and ultimately the loading of the mixed concrete onto mixer trucks for distribution.

The concrete batching and ground washing processes are designed to generate no effluent. As outlined in the environmental assessment of this Concrete Batching Plant, the project proponent will adopt a "Zero Discharge Strategy" for these operations: water used for ground washing will be collected and transferred to wastewater tanks for reuse in truck washing or recycled for concrete production. Additionally, concrete waste will be collected by a concrete reclaimer, which will separate the cement slurry water from the aggregates. The cement slurry water will subsequently be treated through a filter press to extract cement particles, enabling the clear water to be recycled for site cleaning, dust control or even concrete production.

The main types of wastewaters generated by the proposed development will be sewage from on-site staff and visitors (concrete mixer truck drivers). To estimate sewage generation, the following assumptions were made:

- The proposed development will have 15 on-site staff and 600 visitors per day, which is derived from dividing the daily concrete production (4,200 cubic meters) by capacity of concrete mixer trucks (7 cubic meters)
- For on-site staff, the combined UFF of 0.230m³/person/day is used to calculate sewage generation for the on-site staff, based on the Commercial Employee and Commercial Activities J9 (Construction) in Table T-2 of GESFSIP.

- For visitor, the combined UFF of 0.0026m^3/person/visit (= 200mL micturition + 1L flushing + 1.4L handwashing) is used to calculate sewage generation for the based on the (1) Human's micturition is assumed to be 200mL in accordance with P.3081 of Magill's Medical Guide, 6th edition; (2) Volume of flushing system as advised by the supplier; and (3) Volume of handwashing system in accordance with BEAM Plus New Buildings Version 1.2 in July 2012.

As calculated in **Appendix A**, the estimated Average Dry Weather Flow (ADWF) is 5.01m³/day and the Design Peak Flow is 0.0005m³/second, respectively.

2.3 Proposed Sewerage Connection and Calculation

It is essential to highlight that sufficient foul water manholes from the Drainage Services Department (DSD) are situated along Tam Kon Shan Road. A proposed sewerage connection, consisting of a 150mm underground pipe, aims to connect the public sewer to the manhole within the planned development, and a 225mm underground pipe functions for enhancing existing government pipes FMD4003000. Manning's Equation for calculating the pipe capacities was adopted for this analysis:

$$V = \frac{R^{2/3} S^{1/2}}{n}$$

where V = mean velocity, m/s
S = slope of the total energy line
n = Manning's roughness coefficient
R = hydraulic radius, m

A Manning's roughness coefficient of 0.015 was utilized to determine the capacities of the new concrete drainpipe, reflecting the assumption of the concrete pipe being in fair condition.

The proposed layout plan for the sewerage connection, along with comprehensive calculations, can be found in **Figure 2.2** and **Appendix B**, respectively. Pipe DP1 establishes a direct link between the Manhole MH1 located on the Site and the Government Foul Water Manhole FMH4052191, whereas Pipe DP2 enhances two existing 150mm government pipes FMD4003000 by replacing them with a 225mm diameter pipe that offers greater hydraulic capacity and improved self-cleaning properties. A summary of pipe's capacity is outlined in **Table 2.1**.

Table 2.1 Capacities of the Pipes

Type	ID	Capacity, m^3/s	Design Peak Flow, m^3/s	% of Capacity Flow	OK? (Y/N)
Underground Pipe (150 mm)	DP1	0.0111	0.0005	4%	Y
Underground Pipe (225 mm)	DP2	0.0270	0.0005	2%	Y

As depicted in **Table 2.1**, the proposed sewerage connection is designed to ensure that the peak design flow does not its total capacity, effectively discharging the sewage produced by the proposed development.

2.4 Sensitivity Test

An evaluation of the sewerage impact of the proposed development on the existing sewer system has been conducted through a sensitivity test for the public foul water drainpipe FWD4019926, which connects the government foul water manholes FMH4019395 and FMH4019396. The boundaries of assessment for sensitivity test are depicted in **Figure 2.3**, including the upstream catchments (nearby developments along Tam Kon Shan Road) and encompassing the public sewer network between FMH4019445 and FMH4019396.

In a conservative approach, the upstream flow resulting from the nearby development along Tam Kong Shan Road is assumed to equal the full bore capacity of the upstream public foul water drainpipe FWD4019925, which is $0.0197m^3/s$, as indicated in the calculations sheet found in **Appendix B**. The design peak flow for the sensitivity test is the total of this maximum capacity of pipe FWD4019925 and the design peak flow from the proposed development, amounting to $0.0202m^3/s$.

A Manning's roughness coefficient of 0.017 was applied to evaluate the capacities of the public clay drainpipe FWD4019926, which reflects the assumption that the common clay drainage tile is in poor condition. A summary of the sensitivity test results for drainpipe FWD4019926 is provided in **Table 2.2**, with detailed calculations available in **Appendix B**.

Table 2.2 Capacities of the Pipes (Sensitivity Test)

Type	ID	Capacity, m^3/s	Design Peak Flow, m^3/s	% of Capacity Flow	OK? (Y/N)
Underground Pipe (300 mm)	Government Drainpipe FWD4019926	0.0217	0.0202	93%	Y

As depicted in **Table 2.3**, the public foul water drainpipe FWD4019926 possesses adequate hydraulic capacity to accommodate both the foul water from the upstream catchment area and the wastewater generated by the proposed development. As a result, no adverse sewerage impact will arise from the proposed development.

3 Summary and Conclusions

The Applicant intends to seek Town Planning Board ("TPB") approval for a Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots (TYTL) 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi.

The estimated Design Peak Flow and Estimated Average Dry Weather Flow (ADWF) from the proposed development are estimated to be 0.0005m³/second and 5.01m³/day, respectively. The effluent is proposed to be discharged to the public sewer.

With the provision of proposed sewerage connection mentioned in **Section 2.3** and the sensitivity test analysis for the existing sewerage system discussed in **Section 2.4**, no adverse sewerage impact will arise from the proposed development.

Response-to-Comment

Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Area shown as 'Road' and Area not Covered by Statutory Plan, Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

(Application No. A/TY/150)

(i) A RtC table:

Departmental Comments		Applicant's Responses
1. Comments of the Hong Kong Police Force (HKPF)		
(a)	The location in right in the middle of Tam Kon Shan Road, any incident with traffic at the plant, it will cut off Tam Kon Shan Road, and may cause congestion of both east and west of the plant.	Tam Kon Shan Road is not expected to be blocked by plant operations. The internal layout of the application site (the Site) provides 12 dedicated waiting spaces for trucks and 3 loading/unloading bays, which allows vehicles to wait and operate entirely within the Site. Queuing analysis confirms that the chance of vehicles queuing onto the public road is negligible (<0.003%).
(b)	The location is very near the park and playground facilities, with many children. Large vehicles that close or driving past may be unsafe to the park and sport ground users.	To address safety concerns near the adjacent park and playground, specific traffic management and routing restrictions have been implemented as part of the Traffic Management Plan. Notably, "No Left Turn" signs will be installed at the plant's access on Tam Kon Shan Road to enforce a fixed routing pattern, avoiding vehicle turning movements that could bring cement trucks near the playground entrance. All trucks will follow designated ingress and egress routes as illustrated in the approved Traffic Impact Assessment, and there will be no direct vehicle access to the park area. To further enhance safety, trucks will be equipped with front and rear cameras, and real-time GPS tracking will be used to actively manage movement and prevent clustering near sensitive areas.
(c)	The PCU/hr is 123 at peak hours. Any hiccups with the operation will cause congestion, especially with such PCU, the traffic may build up easily.	Link and junction assessments in both existing and future design scenarios confirm that all surrounding roads and junctions will continue to operate below capacity thresholds. No significant congestion is anticipated.

(d)	The other concrete plant is at United Dockyard which HKPF believes is near Sai Tso Wan Road. This location is some distance away. Furthermore, what is the capacity of that location and operation procedures.	The United Dockyard plant is a separate facility operating under its own approvals. Its internal operations and capacity fall outside the scope of this application. That said, we have already taken into account traffic from this and other nearby facilities, as our junction surveys reflect actual traffic conditions observed on site during the survey period. As such, any associated impact has been inherently captured in the baseline traffic data and included in our assessment. We remain open to coordinating with relevant operators if needed to support overall traffic management in the area.
(e)	The manoeuvring of trunks is the plant is not simple and seems to requiring some time and several turns need to be made, this may cause vehicle to queue to get in or out.	The internal layout of the plant has been designed to accommodate truck turning movements with adequate space. Swept path analysis has been conducted to confirm that all vehicle types can enter and exit without reversing onto public roads. Vehicle movement will be managed to prevent queuing and ensure smooth internal circulation.
(f)	A common complaint against cement truck in the area is the overloading of cement and then dropping of the cement onto the road, thereby severely damaging the road. What are their preventive measures and remedies measure.	All cement trucks serving the proposed plant will be equipped with front and rear cameras to monitor driving behavior and ensure compliance with traffic and safety protocols. Operational procedures include proper loading control, enclosed mixer drums, and a designated cleaning area within the Site. These measures help prevent spillage and road contamination. Furthermore, the plant has established a non-conformance and auditing mechanism which ensures that any spillage or incidents are addressed immediately. Enforcement measures such as on-the-spot clean-up, fines, and contract penalties are in place to hold operators accountable and protect the public road network from damage.

(ii) Regarding HKPF's concern on the traffic impact, flow and safety, the applicant provides the following measures to alleviate relevant potential impacts that would have arisen from the proposed development:

- all concrete mixers will enter and exit via the ramp connecting Tsing Yi North Coastal Road and Tam Kon Shan Road, and will not use any internal roads of Cheung Fat Estate;

- "No Left Turn" and "No Right Turn" signs will be installed at the plant entrance to prevent project related trucks from diverting into Cheung Fat Estate;

- traffic assessments at the key junctions indicate design flow/capacity ratios below 0.78 during the PM peak, demonstrating that any additional delay to other road users will remain within acceptable limits; and

- pedestrian activity along Tam Kon Shan Road near the plant is very low, "Heavy Vehicles Turning" warning signs will be erected upstream of the entrance to alert other road users.

(iii) The applicant provides the following information in relation to the contingency plan for the off-site vehicle holding area:

- the off-site holding area provides 12 on-site waiting spaces;

- surplus vehicles which it is estimated not more than 5 vehicles will be directed to the holding area at Sai Tso Wan Road;

- all diverted trucks will remain under real-time GPS monitoring to ensure the off-site holding area does not exceed its capacity and to prevent roadside queuing; and

- drivers of diverted trucks will receive timely updates on expected wait times and clear instructions. They will be directed to an alternate production plant under the applicant and advised when to return once normal loading operations resume.

Dear Sir,

2nd Further Information

Proposed Temporary Concrete Batching Plant for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Area shown as 'Road' and Area not Covered by Statutory Plan, Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

(S.16 Planning Application No. A/TY/150)

We write to submit a revised Environmental Assessment report *(enclosed)* in response to the comments from the Environmental Protection Department on the captioned application. This is to supersede our previous submission of further information on 20.06.2025.

Should you require more information regarding the application, please contact our Mr. Danny NG at [redacted] or the undersigned at your convenience. Thank you for your kind attention.

Yours faithfully,

For and on behalf of
R-riches Planning Limited

Response to Comments

No.	Comment	Response
	Comments from Environmental Protection Department Received on 24 June 2025	
1.	1. The applicant to confirm the assumptions and conclusions of the revised Environmental Assessment (EA) remain unchanged.	Confirmed.
2.	2. Please remove the section number "3.3.2" before "Table 3.3".	The section number is removed.
3.	3. Table 3.2: The concentration data are incorrect. Please review whether the PATH grids should be in the order of "(32,38), (33,38), (33,37), (32,37)".	The tables are revised.
4.	4. Section 3.5.8: Please append the statement "Please refer to Appendix 3.4 for more detailed justifications" at the end of this section.	The section is revised.
5.	5. Section 3.5.11 and Table 3.7: Please provide the calculation files used to estimate emissions for the years 2026, 2029, and 2030.	The calculations files are attached.
6.	6. Section 3.5.13: Please follow up and provide MD's agreement on the marine traffic data once available.	MD's agreement will be provided once available.
7.	7. Section 3.6.1: Please revise "Table 3.12 – Table 3.20" in Line 6 to "Table 3.16 – Table 3.20".	The section is revised.
8.	8. Appendix 3.4, Pages 108 and 199: Please review whether the content on these two pages should be consistent and revise as necessary to ensure alignment.	The two pages are aligned.
9.	9. Appendix 3.6, Page 351: Please review whether the two tables contain duplicate content or include remark(s) to clarify the information presented in these tables. Additionally, remark [1] is missing and should be supplemented.	Remarks are supplemented.

1 INTRODUCTION

1.1 Background

1.1.1 The Applicant would like to seek permission from the Town Planning Board (the Board) to operate a temporary concrete batching plant (CBP) for a period of 5 years at Tsing Yi Town Lot Nos. 14&15 and adjoining Government Land (GL), Tam Kon Shan Road, Tsing Yi, New Territories (the Site). The total site area is approximately 4,335 sq. meters, including approximately 1,057 sq. meters of GL. A CBP with ancillary supporting facilities (with total gross floor area (GFA) of about 1419.2 sq. meters and building height of not exceeding 31 meters) is proposed at the Site. The Site is accessible from Tsing Yi North Coastal Road via Tam Kon Shan Road.

1.1.2 AECOM has been commissioned to provide an Environmental Assessment (EA) to supplement the abovementioned planning application. This EA presents a study of the potential environmental impacts, including air quality, noise, water quality, land contamination and waste management, in order to confirm the environmental suitability of the Proposed Plant at the Site.

1.2 Existing Land Use

1.2.1 The Site partly falls within an area zoned “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) and area shown as “Road” on the Approved Tsing Yi Outline Zoning Plan (OZP) No.: S/TY/32, and partly falls outside the OZP planning scheme boundary. A planning permission for a temporary concrete batching plant is required from the Board for the use of CBP is a Column 2 use within the OU(BMIU) zone. The Site is located on Tam Kon Shan Road on Tsing Yi Island. Surrounding developments comprise industrial buildings and dockyards. The location of the Site is illustrated in **Figure 1.1**.

1.3 Potential Environmental Issues

1.3.1 The Site is currently fenced, partially vacant and occupied by vacant structure. Pre-existing jetty is available to support the operation of the CBP. Environmental impacts during construction and operation are of concern.

1.3.2 Concrete batching process is a dusty operation which poses potential dust nuisance to the nearby sensitive receivers. The Proposed Plant has been classified as specified process (SP) under the Air Pollution Control Ordinance (APCO) and is required to operate under a valid SP License. The dust impact due to the operation of the Proposed Plant will be evaluated to ensure the compliance with Air Quality Objectives (AQOs).

1.3.3 The existing major noise sources in the vicinity of the study area are traffic noise from Tam Kon Shan Road and Tsing Yi North Coastal Road, and fixed plant noise / industrial noise from the dockyard. In view of the existing environmental condition, cumulative fixed plant noise impact from nearby existing industrial buildings and the Proposed Plant would be expected. However, no noise sensitive receiver has been identified within 300m from the Subject Site. The noise impact is to be addressed qualitatively.

1.3.4 Other environmental issues including water quality, waste management and land contamination are considered minor. Their corresponding impacts are to be evaluated qualitatively.

1.3.5 In this EA, five key environmental issues associated with the operation of the Proposed Plant are identified and addressed in the following sections:

Section 3: Air Quality

Section 4: Noise

Section 5: Water Quality

Section 6: Waste Management

Section 7: Land Contamination

Section 8: Conclusion

2 DESCRIPTION OF PROPOSED CONCRETE BATCHING PLANT

2.1 Configurations of the Proposed Plant

2.1.1 The proposed CBP comprises silo and compartment with total capacity of approximately 2,200 tonnes for storage of cementitious materials for concrete production, which is classified as Specified Process (SP) in accordance with the Air Pollution Control (Specified Processes) Regulations. The design layout of the plant is shown in **Appendix 2.1**.

2.1.2 The CBP is planned to consist of 3 production line, with a total hourly processing capacity of 300m^3/hr. The production of concrete requires raw material including aggregates (mixed with sand), cementitious materials (cement, Pulverized Fuel Ash (PFA), Ground Granulated Blast-Furnace Slag (GGBS), Condensed Silica Fume (CSF)), admixtures and water. The concrete batching process mainly involves handling of raw material from delivery to storage, then respective weigh hoppers, concrete batch mixers and finally loading of mixed concrete onto concrete mixer trucks for delivery.

2.1.3 The CBP will be equipped with aggregate overhead bins with total capacity of 3000 tonnes, 6 sets of 350-tonne cementitious materials silos, 2 set of 50-tonne CSF silo, 3 wet concrete mixers, 2 aggregate receiving hoppers (one for barge and one for truck in case of emergency), 18 weigh hoppers (6 weigh hoppers for each mixer, including 1 for aggregate, 3 for cementitious materials, 1 for water/ice and 1 for admixture, in total 3 mixer), water tanks and admixture tanks. Aggregate and cement will be delivered to the plant by barge. The aggregate and cementitious materials within the plant will be transferred via enclosed conveyors and sealed pipeline respectively. The operation details of the proposed CBP are summarized in **Table 2.1**.

2.1.4 The operation details of the proposed CBP is summarized in **Table 2.1**. The normal operation period will be 07:00 to 21:00.

Table 2.1 Operation Details of Proposed CBP

Operation Parameter	Details
Hourly Processing Capacity	300 m^3/hr
Total Aggregate Storage Capacity	3000 Tonnes
Total Cementitious Materials Silos Capacity	2200 Tonnes
Mode of Operation	Batch
Proposed Plant Operation Period	14 hours between 07:00 to 21:00
Total No. of potential emission points related to the CBP operation	19

2.2 The Schematic Flow of Operation Process

2.2.1 The schematic flow diagram showing various components of the Proposed Plant is presented in **Appendix 2.2**.

Aggregate Handling

2.2.2 Aggregates will be delivered to the plant by barge. The compartments of the aggregate barge will be covered during transportation and unloading process to avoid any dust emission. During the unloading of aggregates, the compartment will remain covered as far as safety issue is concerned. Water spraying by sprinklers will be provided at the barge during the unloading process to keep the aggregate adequately wetted. When the unloading is complete, the empty barge will leave the barging location with the top cover remaining closed. Should the barge be required to park at the barging location overnight (between 21:00 to 07:00 next day), the stockpile on barge will be fully covered by top cover to prevent any dust pickup by gust.

2.2.3 The aggregates will be unloaded to the aggregate receiving hopper on the jetty (EP01) and then transferred via enclosed conveyors to overhead bins for concrete production. The aggregate receiving hopper will be covered in 3-side cladded and roof and installed with water

sprinkler to reduce dust emission during material unloading. The enclosed conveyors will be arranged such that there is minimal gap at the transfer points between conveyors so as to minimize free fall as far as practicable. Also, all transfer points along the conveyor pathway will be housed inside either fully cladded conveyor transfer tower or fully cladded structure housing the aggregate overhead bins. All transfer of aggregates will therefore be conducted in enclosed condition. No exhaust is required and no dust emission is anticipated.

2.2.4 The aggregates in overhead bins will be transferred to the respective aggregate weigh hopper through guiding chute with flexible seal. Aggregates will be weighed and then discharged through guiding chutes to the concrete mixer under a fully enclosed environment, i.e. the aggregate weigh hoppers will be covered on 4 sides such that the aggregate transfer process is fully enclosed. No exhaust is required and no dust emission is anticipated. The guiding chutes will be arranged such that there will be minimal gap to the mixer so as to minimize free fall as far as practicable.

2.2.5 Another ground aggregate receiving hopper (EP02) will receive aggregates delivered by aggregate tipper truck on haul road (EP17), which will be backup use in case of emergency.

Cementitious Materials Handling

2.2.6 Cement will be delivered by barge while cementitious materials such as PFA, GGBS and silica fume will be delivered by tanker trucks (around 7 trucks a day). The materials will be pumped to the overhead silos or the ground storage silos via pneumatically sealed cement pipes. The transfer process will thus be carried out in totally enclosed condition.

2.2.7 Each of the cementitious silo will be installed with a dust collector (EP09 – EP16). Before connecting the pumping pipe, the dust collector on the silo will be switched on and remain switched on during the whole transfer process. The cementitious materials will then be pumped to the silo via fully enclosed piping. All silos will be equipped with a pressure relief valve. The seating of the valve will be checked and valve will be reseated if necessary before each delivery of cementitious materials. Audible high level alarms will be installed in all silos to warn and prevent overfilling. The high level alarms will be interlocked with filling pipelines and the material filling line will be closed in time to prevent any overfilling, but in any case within 1 minute or less after the high level alarm has been triggered.

2.2.8 Cementitious materials from the silos will be transferred to respective weigh hoppers by a screw conveyor which will be pneumatically sealed such that fugitive dust emission will not be anticipated. All weigh hoppers will be housed inside the fully enclosed mixer tower and treated collectively by dust collector. The dust collectors will prevent escape of fugitive dust due to the transfer process to the atmosphere. The weighed cementitious materials in the respective weigh hoppers will then be discharged to the concrete mixer by gravity through pneumatically sealed piping.

Water, ice and Admixtures Handling

2.2.9 Water and ice will be weighed in the ice/water hopper and then added to the concrete mixer, while admixtures will be weighed by another weigh hopper. Water and admixtures will be transferred by pneumatically sealed pipe.

Concrete Mixing

2.2.10 The concrete mixers will be located in the mixing tower. The aggregates, cementitious materials, water and admixtures will be mixed in one of the concrete mixers (3 mixers in total) in a fully wetted and enclosed condition.

2.2.11 Each of the wet mixers will be installed with a dust collector (EP03 – EP05) with fabric filtering system. The dust collector of the mixer will be switched on prior to the transfer of any material to the mixer and will stay switched on whenever there is material inside it. Dust-laden air from the concrete mixer will be filtered through bag filters of dust collector, which will prevent escape of fugitive dust due to the material transfer and the wet mixing process.

2.2.12 The mixed and fully wetted concrete will be discharged into a concrete mixer truck directly by gravity via wet concrete guiding chute. No dust emission will be anticipated. Furthermore, the concrete unloading area will be enclosed on 2 sides with the roof by cladded structure.

Transportation of Raw Material and Product Concrete

2.2.13 All the haul roads within the Site (EP18 & EP19) will be paved and provided with water spraying by sprinklers in 1-hour intervals to maintain a wet surface. The speed limit for all the vehicles travelling in the abovementioned CBP area and on haul roads is 8 km/hr.

2.2.14 Water for ground washing will be collected by surface channel, where the water will be pumped to wastewater tanks for reuse in truck washing or recycled for concrete production.

2.2.15 The concrete mixer truck will go to the slump stand quality check point, where the quality inspection will take place. All vehicles leaving the CBP will be cleaned to wash off any dust/mud deposited on the wheels and vehicle body such that leaving no dust to the public road.

2.2.16 Concrete waste will be collected by the concrete reclaimer, where the cement slurry water will be separated from the aggregates. The separated aggregates will be wet in nature, i.e. no dust emission is expected.

2.2.17 The cement slurry water will pass through the filter press, where cement particles will be captured. The clear water will be recycled for concrete production. The solid waste (sludge cake collected by the filter press and aggregates collected by the concrete reclaimer) will be disposed of by waste disposal trucks

3 AIR QUALITY

3.1 Introduction

3.1.1 In this section, the potential air quality impact due to the construction and operation of the Proposed Plant is assessed qualitatively and quantitatively respectively, and evaluated against the Air Quality Objectives. The air quality within 500m away from the Subject Site boundary are discussed and sensitive receivers in this area are identified.

3.1.2 Air quality impact assessment is conducted based on the latest design of the Proposed Plant with the aid of an air quality dispersion model and a regional air quality model. The predicted cumulative air quality impacts are concluded at the identified sensitive receivers and in a spatial manner with the aid of contour plots at different altitude. Appropriate mitigation measures are proposed to minimize the potential air quality impact on the ambient air.

3.2 Environmental Legislation and Guidelines

Air Quality Objectives

3.2.1 The Air Pollution Control Ordinance (APCO) provides the statutory authority for controlling air pollutants from a variety of sources. In APCO, the Air Quality Objectives (AQOs) are stipulated as the air quality that should be achieved and maintained under the maximum allowable concentration for typical pollutants. Respirable Suspended Particulates (RSP) and Fine Suspended Particulates (FSP) are the dominant pollutants for concrete batching plant. Furthermore, AQOs have been reviewed and revised criteria has been enforced on 11 April 2025. The latest AQOs of relevant air pollutants are listed in below **Table 3.1**.

Table 3.1 Hong Kong Air Quality Objective Relevant to the Assessment

Pollutant	Time Average	Concentration Limit (µg/m^3) under current AQO (1)(2)
RSP (4)	24-hour	75 (9) (3)
	Annual	30
FSP (5)	24-hour	37.5 (18) (3)
	Annual	15
NO_2	1-hour	200 (18) (3)
	24-hour	120 (9) (3)
	Annual	40
SO_2	10-min	500 (3) (3)
	24-hour	40 (3) (3)

Note:
(1) All measurements of the concentration of gaseous air pollutants, i.e., sulphur dioxide and nitrogen dioxide, are to be adjusted to a reference temperature of 293 K and a reference pressure of 101.325 kPa.
(2) The annual average concentration is calculated as the arithmetic mean.
(3) The number in the bracket represents the number of exceedances allowed per year.
(4) Suspended particulates in air with a nominal aerodynamic diameter of 10 µm or smaller.
(5) Fine suspended particulates in air with a nominal aerodynamic diameter of 2.5 µm or smaller.

3.2.2 "A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Cement Works (Concrete Batching Plant) BPM 3/2 (2025)" (BPM) by EPD sets out definition for cement works, which are works where cement is handled, argillaceous and calcareous materials are used in the production of cement clinker or clinker is ground, and for which the total bulk storage capacity exceeds 50 tonnes, the total installed capacity of concrete mixers exceeds 3 m^3 or the total hourly concrete production rate exceeds 20 m^3. It requires that the particulates emission concentration limit of 10 mg/m^3 (expressed at reference condition, 0°C, 101.325 kPa) should be satisfied. Furthermore, the premises covered by the BPM should include a ship or barge.

3.3 Description of the Environment

Background Air Quality

3.3.1 The modelling approach involves the use of an integrated modelling system called Pollutant in the Atmosphere and their Transport in Hong Kong (PATHv3.0) which is developed and maintained by EPD to provide background pollutant concentration in assessing the total impact in the study area (*Guidelines on Assessing the 'TOTAL' Air Quality Impacts*). As Year 2028 has the highest vehicular emission in the study area for RSP, FSP and SO_2, while Year 2027 has the highest vehicular emission in the study area for NO_2 as discussed in **Section 3.5.11,** the dataset of Year 2028 in PATHv3.0 is selected for the assessment for RSP, FSP and SO_2, while Year 2027 in PATHv3.0 is selected for the assessment for NO_2. The background concentrations of RSP, FSP, NO_2 and SO_2 in the study area are extracted from PATHv3.0 and presented in **Table 3.2** and **Table 3.3**.

Table 3.2 Background Air Quality Extracted from PATH (Yr 2028)

Pollutant	Averaging Time	AQO	Data Summary	PATH v3.0 Grid in Year 2028

Air Sensitive Receivers

3.3.2 The CBP locates in the vicinity of Tam Kon Road at Tsing Yi Island. A site survey has been conducted on 12 December 2024 to identify the representative air sensitive receivers (ASRs) which are likely to be affected most by the operation of the CBP for assessment within 500m study area of the Subject Site (the study boundary) with reference to the Outline Zoning Plans (OZPs), OZP Plan No. S/TY/32 – Tsing Yi. While there are schools and residential buildings located in the southern part of the study boundary, they are located uphill and are shielded from the Project Site by the hills with no direct line of sight with the Project, and hence no direct impact is expected. Thus, ASRs in the southern part of the study boundary are not included in the assessment. The details of the identified ASRs are summarized in below **Table 3.4** and their locations in the study boundary are shown in **Figure 3.1**.

Table 3.4 Representative Air Sensitive Receivers

ASR	Coordinates		Description	Land Use	Horizontal Distance from the Project (m)	Assessment Height Above Ground (mAG)
	X	Y				
A01	827535.0	824705.4	DB Maintenance Centre	Shipyard	325	1.5, 5, 10
A02	827685.7	824668.4	Cheun Kee Seafood Restaurant	Eating Place	175	1.5, 5, 10, 15
A03	827844.6	824667.7	Wing Cheong Shipyard	Shipyard	15	1.5, 5, 10, 15
A04	827816.5	824667.6	Kwong Tat Loong Shipyard (Brothers) Limited	Shipyard	45	1.5, 5, 10, 15
A05	827920.5	824664.4	Leung Wan Kee Shipyard Limited	Shipyard	25	1.5, 5, 10, 15
A06	828018.6	824669.4	Green@Kwai Tsing	G/IC	120	1.5, 5
A07	828179.5	824706.5	Tsing Yi Northeast Park Office	Recreational	280	1.5, 5, 10, 15
A08	828289.1	824690.7	Queen's College Old Boys' Association S econdary School	Educational	390	1.5, 5, 10, 15, 20, 30
A09	828358.2	824749.3	Cheung On Estate Block 1 On Hoi House	Residential	460	1.5, 5, 10, 15, 20, 30, 40, 50, 60, 70, 80, 90, 100, 110
A14	827791.2	824635.1	Environmental Protection Department Portable Emission Measurement System (PEMS) Laboratory	G/IC	75	1.5, 5

3.3.3 The assessment heights of the representative ASRs range from 1.5 meters above ground to up to its maximum physical heights, e.g. up to 15mAG at A02 and 110 mAG at A09.

3.4 Identification of Environmental Impact

Construction Phase

3.4.1 The development would mainly involve demolition of structures and the erection of equipment for the concrete batching plant. The erection of equipment for the three ancillary plants would involve minor construction activities such as minor excavation for foundation works and plant fabrication works. Potential construction dust would arise from these construction activities. Most of material to be handled would be the demolished debris which is around 1,100 tonnes. Spoil from the foundation works would be around 100 tonnes. The number of construction trucks or mechanical equipment is not known at this stage and they are subject to the future contractor. Nevertheless, dust mitigation measures stipulated in Air Pollution Control (Construction Dust) Regulation are proven effective measures in construction work sites and will be implemented to minimize the potential dust impact. Therefore, the potential construction dust impact is assessed qualitatively.

3.4.2 On-site use of diesel-powered engines is also the potential source for air pollutants, such as NO_2, SO_2, CO and smoke. The emissions from the NRMM are regulated under the *Air Pollution Control (Non-Road Mobile Machinery) (Emission) Regulation*. Fuel with sulphur content not exceeding 0.001% by weight will be used to minimise SO_2 emission in accordance with the *Air Pollution Control (Fuel Restriction) (Amendment) Regulation 2024*. In addition, the use of NRMMs with exempted label under the *Air Pollution Control (NRMM) Regulation* will be avoided as far as practicable. The equipment would also be properly maintained to minimise any emissions. Furthermore, the use of electric NRMMs is to be explored. On-site power supply will be provided and the use of diesel generators and machinery will be avoided during the construction stage, as far as practicable. In view of the minor impact by NRMMs, particulates from construction activities would be the major air pollutant during construction phase.

Odour from Dredging

3.4.3 Dredging would be required in the seafront fronting the proposed site to provide sufficient depth of water for vessels. The dredging scale proposed under the Project is small. The total volume of dredged sediments generated from the dredging operation would be approximately 4,000 m^3 and the dredging work would be conducted by one dredger (of about 8 m^3 capacity) at a dredging rate of no more than 500 m^3 per day. The dredged material would be well covered on-site with tarpaulin and would be removed off-site as soon as possible within 24 hours. In view of the transient nature of the dredging work and small dredging scale, odour nuisance would not be expected during dredging and transportation of the dredged sediment with the adoption of the good site practice as mentioned in **Section 3.7.14.**

Operation Phase

3.4.4 The Proposed Plant uses electricity as the power supply for its operation, thus no gaseous pollutants by fuel combustion is anticipated. Based on the design and operation of the Proposed Plant, the activities considered as major potential dust emission sources are identified as follows in accordance with the specification given in *Compilation of Air Pollutant Emission Factors (AP-42), 5th Edition* issued by U.S. Environmental Protection Agency.

(a) Aggregate handling at the seafront and inside the CBP;
(b) Loading of raw material to the storage silos;
(c) Loading of raw material to weigh hoppers;
(d) Loading of weighed raw material to mixers; and
(e) Vehicle movements on paved haul roads.

3.4.5 Best Practicable Means of air quality control measures suggested in BPM will be implemented in the design of the Proposed Plant and equipment. According to the characteristics of the emission points, different control measures to minimize air pollution will be adopted. Dust collectors, enclosures and water sprayers will be adopted to control the likely particulate emission due to the transport and handling of aggregates and cementitious materials.

3.4.6 Description of the emission points and the corresponding control measures are tabulated in **Table 3.5**.

Table 3.5 Dust Emission Points Due to Operation of CBP and Corresponding Control Measures

Emission Point Description	Control Measures
Delivery of aggregate by barge	• The compartments of the aggregate barge will be covered during transportation and unloading process to avoid any dust emission. • During the unloading of aggregates, the compartment will remain covered as far as safety issue is concerned. • Water spraying by sprinklers will be provided at the barge during the unloading process to keep the aggregate adequately wetted. • Stockpile on barge will be fully covered by top cover when parking at the barging location overnight.
Unloading of aggregates from barge to aggregate receiving hopper (EP01) and transfer of aggregate from aggregate barge receiving hopper to aggregate overhead bin	• The aggregate receiving hoppers will be covered in 3-side cladded and roof. • Water spraying by sprinkler will be provided inside the enclosure during unloading process such that dust will be suppressed and the aggregate is maintained adequately wetted. • The aggregates will be unloaded to the aggregate receiving hoppers and then transferred via enclosed conveyors to overhead bins for production. • The enclosed conveyors will be arranged such that there is minimal gap at the transfer points between conveyors so as to minimize free fall as far as practicable. • All transfer points along the conveyor pathway will be housed inside either fully cladded conveyor transfer tower or fully cladded structure housing the aggregate overhead bins. All transfer of aggregates will therefore be conducted in enclosed condition. No exhaust is required and no dust emission is anticipated.
Transfer of aggregate from aggregate overhead bin to aggregate weigh hoppers	• The aggregates in overhead bins will be transferred to the respective aggregate weigh hopper through guiding chute with flexible seal. • Aggregates will be weighed and then discharged through guiding chutes to the concrete mixer under a fully enclosed environment, i.e. the aggregate weigh hoppers will be covered on 4 sides such that the aggregate transfer process is fully enclosed. No exhaust is required and no dust emission is anticipated. • The guiding chutes will be arranged such that there is minimal gap to the mixer so as to minimize free fall as far as practicable.
Transfer of cementitious materials from cementitious materials tankers to silos (EP09-EP16)	• Cement will be delivered by barge while cementitious materials will be delivered to the plant by tanker trucks. • The materials will be pumped to the overhead silos or the ground storage silos via pneumatically sealed cement pipes. The transfer process will thus be carried out in totally enclosed condition. • Each cementitious material silo will be fitted with a dust collector incorporating a fabric filtering system.

Emission Point Description	Control Measures
	• Before connecting the pumping pipe at the cementitious materials tanker, the dust collector on the silo will be switched on and remain switched on during the whole transfer process. • The cementitious materials will be pumped to the silo via fully enclosed piping. All silos will be equipped with a pressure relief valve and the valve will be checked and reseated if necessary before each delivery of cementitious materials. • Audible high level alarms will be installed in all silos to warn and prevent overfilling. The high level alarms will be interlocked with filling pipelines and the material filling line will be closed in time to prevent any overfilling, but in case within 1 minute or less after the high level alarm has been triggered. • Dust-laden air in the silos will be filtered by fabric bags and vented through the dust collectors. The dust collectors can maintain a dust emission rate of less than 10 milligrams per cubic meter of air.
Weighing and batching of cementitious materials (EP06-EP08)	• Cementitious materials will be transferred from the silos to weigh hoppers by screw conveyor which is pneumatically sealed such that fugitive dust emission is not anticipated. • All weigh hoppers will be housed inside the fully enclosed mixer tower and treated collectively by dust collectors (EP06-EP08) with capability of treating ultra-fine particle. The dust collectors will prevent escape of fugitive dust due to the transfer process to the atmosphere. • The weighed cementitious materials will be discharged to concrete mixers through pneumatically sealed piping.
Mixing of raw material in the concrete mixer (EP03-EP05)	• The aggregate, cementitious materials, water and admixture will be mixed in one of the concrete mixers (3 mixers in total) under fully wetted and enclosed conditions. • Each of the wet mixer will be installed with a dust collector with fabric filtering system. The dust collector of the mixers will be switched on prior to the transfer of any material to the mixer and will stay switched on whenever there is material inside them. • Dust-laden air from the concrete mixer will be filtered through bag filters of dust collector, which prevents escape of fugitive dust due to the material transfer and the wet mixing process. The dust collector can maintain a dust emission rate of less than 10 milligrams per cubic meter of air.
Discharge of concrete to concrete mixer trucks	• The mixed and fully wetted concrete will be discharged into the concrete mixer truck directly by gravity. No dust emission is anticipated. • The concrete unloading area will be enclosed on 2 sides and roof by cladded structure.

Emission Point Description	Control Measures
Vehicle movement on paved haul road (EP18-EP19)	• All the haul roads within the Site will be paved and provided with water spraying by sprinkler in 1-hour intervals to maintain a wet surface. • Speed limit for all trucks travelling in the Site will be set as 8km/hr. • Vehicle movement will mainly involve concrete mixer trucks. Cement tanker for PFA/GGBS/Silica Fume is expected to be less than a truck per hour. • All vehicles leaving the CBP will be cleaned by vehicle washing facility to wash off any dust/mud deposited on the wheels and vehicle body such that leaving no dust to the public road.

Other Emission Sources

3.4.7 Vehicular emission from open road is also a significant contributor to ambient air pollutant concentration. Major road infrastructures namely Cheung Tsing Highway, Lantau Link and North West Tsing Yi Interchange are within the 500m study area of the Site. There is no PTIs/bus terminus, nor any bus depots within 500 m from the project site boundary. Coach parking is identified at Tsing Yi Northeast Park Car Park and HGV on-street parking site (for 8PM to 7AM) is identified outside Tsing Yi Northeast Park Car Park. Regarding roads inside the proposed CBP, there is no HGV parking assumed in the operation design. Concrete trucks are to undergo several procedures at the Project Site, e.g. drum cleaning, loading of concrete product, quality check, and truck washing before leaving the site. Cement / cementitious material tankers are to unload the raw material to silos with on-board pump. Both kinds of trucks require the power supply to perform these operations, i.e. engine stop is not anticipated. The air quality impact due to these open-road emission is considered in the cumulative air quality assessment, as well as the local roads connecting to the Site.

3.4.8 The proposed uses of the CBP would induce marine traffic during operation. Marine emission is expected and would pose potential air quality impact on the existing and proposed ASRs. Apart from the induced marine traffic, there are also existing marine routes within the 500m study boundary of the Project, including the route between Park Island Pier and Tsuen Wan Ferry Pier. All these existing marine traffic also contributes to cumulative air quality impact. The marine traffic inputs are provided by Marine Consultants and the marine emissions have been considered in the quantitative assessment.

Odour from Maintenance Dredging

3.4.9 Maintenance dredging would be carried out to maintain sufficient water depth for vessels once every year subject to the depth of sediment accumulated affecting operation of the vessels. The volume of sediment to be dredged during maintenance dredging would be less than 500m^3 in total. The volume of sediment would require one grab dredger only and the dredging period would be completed in a few days. In view of the limited dredging volume and short duration, odour impact from the maintenance dredging is considered negligible with the adoption of the good site practice as mentioned in **Section 3.7.14.**

3.5 Assessment Methodology

Emission Inventory of Project

3.5.1 Dust generating activities and corresponding air quality control measures are identified in **Table 3.5**. Emission rates by source are estimated in accordance with the USEPA *Compilation of Air Pollution Emission Factors (AP-42), 5th Edition* and summarized in **Table 3.6**. Detailed calculations of emission rates are presented in **Appendix 3.2**. The spatial distribution of effective dust emission sources is illustrated in the appendix as well. The diurnal profile of each emission source is also presented in **Appendix 3.2**.

Table 3.6 Emission Rates for the CBP

Emission Source	RSP Emission Rate	FSP Emission Rate	Remarks
Unloading of aggregates to Aggregate Receiving Hopper (EP01)	6.437×10^{-4} g/s	1.508×10^{-4} g/s	• Max. aggregate handling capacity: 610 Mg/hr • 65% and 40% of dust suppression by water sprays for particle size of 2.5 - 6μm and 0 - 2.5μm respectively • Reference to Table B.2.3, Appendix B.2, USEPA AP-42
Exhaust from Dust Collector for Mixers (EP03 – EP05)	1.523×10^{-3} g/s	6.924×10^{-4} g/s	• Max. emission concentration from exhaust = 2.29 mg/m^3 • Exhaust rate of Dust Collector: 7864 m^3/hr
Exhaust from Dust Collector for Weigh Hopper (EP06 – EP08)	2.564×10^{-3} g/s	7.541×10^{-4} g/s	• Max. emission concentration from exhaust = 3.08mg/m^3 • Exhaust rate of Dust Collector: 6000 m^3/hr
Exhaust from Dust Collector for Cement Silo (350T) (EP09, EP11, EP13)	6.120×10^{-3} g/s	2.782×10^{-3} g/s	• Max. emission concentration from exhaust = 5.79mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Exhaust from Dust Collector for PFA Silo (350T) (EP12)	1.163×10^{-2} g/s	5.286×10^{-3} g/s	• Max. emission concentration from exhaust = 7.01mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Exhaust from Dust Collector for GBBS Silo (350T) (EP10, EP14)	1.163×10^{-2} g/s	5.286×10^{-3} g/s	• Max. emission concentration from exhaust = 7.01mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr

Emission Source	RSP Emission Rate	FSP Emission Rate	Remarks
Exhaust from Dust Collector for Silica Fume Silo (50T) (EP15 – EP16)	5.815×10^{-3} g/s	2.643×10^{-3} g/s	• Max. emission concentration from exhaust = 3.51mg/m^3 • Exhaust rate of Dust Collector: 11196 m^3/hr
Paved haul roads inside project site and access to CBP (EP18 – EP19)	5.283×10^{-5} g/s·m at maximum, subject to number and average weight of vehicles travelling per hour	1.278×10^{-5} g/s·m at maximum, subject to number and average weight of vehicles travelling per hour	• 91.7% of dust suppression by watering every hour (calculated from *Equation (5-4) of USEPA's Control of Open Fugitive Dust Sources (EPA-450/3-98-008), as detailed in Appendix 3.2*).

Note:
(1) EP18 ─ EP19 is denoted as HR01 – HR03 in the model.
(2) Max. aggregate handling capacity, exhaust rate of dust collector, and max. emission concentration from exhaust are provided by design engineer.

Diurnal Profile

3.5.2 In this assessment, a diurnal profile is derived based on expected on-site raw material delivery and concrete production schedule to consider the diurnal variations in the emission rates in the Project. The diurnal profile of each emission source is presented in **Appendix 3.2**.

3.5.3 As there will only one barging point in the design, the delivery of aggregates and cement will not overlap. Aggregates will be delivered by barge and unloaded into the ground aggregate receiving hopper (EP01), which is assumed to be 100% active during 07:00 – 11:00 and 15:00 – 19:00. Cement will be delivered by barge and pumped to the cement silos (EP09, EP11 and EP13), which are expected to be 100% active during 11:00 – 15:00.

3.5.4 Other cement supplement materials will be delivered by tankers during 07:00 – 19:00. In every hour, it is expected that only one tanker truck will deliver either PFA or GGBS and complete unloading into their respective silos in one hour. Hence, dust collectors on PFA Silo (EP12) and GGBS Silos (EP10 and EP14) are assumed to be active 100% at alternate hours during 07:00–19:00. Furthermore, it is expected that there will only be one delivery of silica fume by tanker truck every day, which will take one hour for unloading. To account for different possible scenarios, where the silica fume tanker truck arrives with either PFA/GGBS tanker in either morning or evening, 100% activity for dust collector on silica fume silo (EP15 and EP16) is assumed for 07:00 – 09:00 and 17:00 – 19:00.

3.5.5 For concrete production, concrete production rate of 100% is assumed during 07:00 – 19:00. The profile is adopted for the emissions associated with the concrete production, i.e. the dust collectors on mixers (EP03 – EP05), the dust collectors on weigh hoppers (EP06 – EP08) and the haul roads used for transporting the concretes (HR01 – HR03).

Vehicular Emission from Open Roads

3.5.6 EMFAC-HK v4.3 was adopted to estimate the vehicular emission factors in NO_X, RSP and FSP in various travelling speeds and ambient conditions with reference to WRF meteorological data extracted from PATHv3.0. For short-term cumulative impacts, an approach of using daily profile of lowest temperature and relative humidity data in each hour for each month was adopted. For long-term cumulative impacts, an approach of using daily profile of averaged temperature and relative humidity data in each hour for each month was adopted.

3.5.7 The traffic data for each road in 500m study area comprises 24-hour traffic flow with vehicle percentage, travelling speed in 18 vehicle classes. Roads located in the southern part of the study boundary are located uphill and are shielded from the Project Site by the hills with no direct line of sight with the Project, and hence no direct impact by these roads is expected. Thus, these roads are not included in the vehicular emissions calculations. The agreement on the adopted traffic data by Transport Department (TD) is provided in **Appendix 3.4**. With reference to the traffic data, hourly emission factor of each open road is determined by summation of emission by each vehicle class which is product of traffic flow and emission factor at specific speed and ambient condition. The hourly emissions factors of RSP, FSP and NO_2 are further divided by the hourly flow to obtain a composite emission rate in g/s-m^2, ready for input to the dispersion model. The Smart Air Modelling Platform (SAMP v2.1) with ZEV scenario is used for the calculation of composite vehicular emission factor and emission rates. The detailed calculation of vehicular emission source was presented in **Appendix 3.4**.

3.5.8 Start emission refers to the air pollutants generated due to the ignition of the vehicle engines which is released at vehicle tailpipes. Start emission generally occurs on the local road where there is potential trip, while no start emission along district distributor or expressway is anticipated. For the assessment purpose, broad-brush approach is adopted, which assumes start emission at all local roads irrelevant to the actual location of engine start. Start emission is not assumed on district distributor and primary distributor. Also, all vehicle classes were assumed to have potential trip on local road, including minibus and franchised bus which usually starts its engine at its termini throughout its service route. After further review of the Study Area, most of the HGVs along the local roads in the assessment area are the working vehicles travelling to/from the Project, other industrial buildings and dockyards on Tam Kon Shan Road, which includes concrete mixer trucks and cement tankers. These working vehicles are not supposed to park along these roads. Please refer to Appendix 3.4 for more detailed justifications.

3.5.9 As discussed in **Section 3.4.6**, there is no PTIs/bus terminus, nor any bus depots within 500 m from the project site boundary. Coach parking is identified at Tsing Yi Northeast Park Car Park. Owing to the infrequent access to Tsing Yi Northeast Park Car Park, start emission of associated coaches are considered under Road 9, 10 and 11 by broad-brush approach. Vehicle classes that can park inside Tsing Yi Northeast Park Car Park (including PC, TAXI, LGV3, LGV4, LGV6, PLB, PV4, PV5, NFB6, NFB7, NFB8 and MC) were assumed to have potential start on Road 9,10 and 11. Frequency of start emission of a vehicle type on a road is estimated by its forecasted VKT, Trips/VKT ratio extracted from EMFAC-HK v4.3 and minor-road-to-all-road ratio (3.62%) extracted from 2023 Annual Traffic Census published by the Transport Department. SAMP v2.1 has accounted for the start emission when calculating the composite vehicular emission factor. The open road sources considered with start emission are illustrated in **Appendix 3.4**.

3.5.10 Also, the HGV on-street parking site (for 8PM to 7AM) outside Tsing Yi Northeast Park Car Park is identified and is assessed with precise approach. Data for the HGV on-street parking site was estimated by traffic forecast or by design. As the allowed hours for the on-street parking site for the HGVs is 8PM to 7AM, assuming all parked HGVs are leaving at 7AM, the soak time is assumed to be duration of parking (i.e. 8PM to 7AM of the following day). Maximum number of HGVs allowed to be parked overnight is determined by observation based on the length of the parking site (i.e. 10 HGVs). The start emissions calculation was conducted according to the “Technical Note on the Calculation of Start Emissions in Air Quality Impact Assessment”. Start emission factors of vehicle types at various soak times are extracted from EMFAC-HK v4.3. An approach of using the lowest temperature and relative humidity data in the year among all PATH grids covering the assessment area (i.e. 11ºC and 16%) was adopted. The detailed calculation of start emission is also presented in **Appendix 3.6.**

Determination of Assessment Year for Vehicular Emission

3.5.11 The operation of the Project is proposed to commission in 2026 and last for 5 years. The vehicular emission burden in each year during Year 2026to Year 2030 are thus assessed. Year 2028 is selected as assessment year for RSP and FSP because vehicular emission burden of RSP and FSP is the highest in Year 2028, while Year 2027 is selected as the assessment year for NOx as the vehicular emission burden of NOx is the highest in Year 2027, as shown in

Table 3.7. TD's endorsement of the traffic forecasts is provided in **Appendix 3.4**. The traffic data including 24-hr traffic flow with vehicle percentage, trips, daily vehicle-kilometer-travelled (VKT), speed fraction in 18 types of vehicle for the assessment year are presented in **Appendix 3.4**. Vehicular emission rate is calculated with zero emission vehicle scenario from SAMPv2.1. The detailed calculation of vehicular emission source is presented in **Appendix 3.4.**

Table 3.7 Vehicular Emission Burden in the Study Area

Year	Vehicular Emission Burden (tonne per year)		
	RSP	FSP	NOx
2026	0.2537	0.2332	7.6586
2027	0.3032	0.2787	**8.3571**
2028	**0.3036**	**0.2791**	7.8228
2029	0.2658	0.2444	6.6306
2030	0.2206	0.2029	5.4241

Remark:
Bolded figure denotes the highest value among modelled years.

Marine Emission

3.5.12 The operation of the Project would induce marine traffic. Marine emission is expected and would pose potential air quality impact on the proposed ASRs. Apart from the induced marine traffic, there is also existing marine traffic and a scheduled ferry route within the 500m study boundary of the Project, namely the scheduled route between Park Island Pier and Tsuen Wan Ferry Pier. All these existing marine traffic also contributes to cumulative air quality impact. Major air pollutants associated with marine emissions include NO_X, SO_2 and particulates.

3.5.13 The existing marine traffic was assessed with visual survey and the future marine traffic was projected with growth factors by Marine Consultant. The agreement on the adopted marine traffic data have been sought from Marine Department (MD). The marine traffic data of Year 2026, 2028 and 2030 are presented in **Appendix 3.5**. Given that the marine traffic within the study boundary attains the highest in Year 2030, the marine traffic data of Year 2030 is adopted for the assessment.

3.5.14 With reference to the Study on Marine Vessels Emission Inventory (MVEIS) by HKUST, the marine emission is estimated in activity-based approach. The emission factors were derived in units of works (gram per kilowatt-hour), dependent on fractional load of the equipment during different vessel activity modes. The calculation can be summarized as below:

$$Emission = P \times FL \times T \times EF$$

where P is the installed power of equipment;
FL is fractional load of equipment in a specific mode;
T is operation time-in-mode; and
EF is fractional load emission factor of equipment.

3.5.15 Typical power equipment installed on marine vessels are Main Engine (ME) for propulsion, Auxiliary Engine (AE) for electricity and Auxiliary Boiler (AB) for fuel pre-heating and pumping. Subject to the vessel types, different combinations of engines are equipped on a vessel. For example, all 3 kinds of engines are equipped on fully cellular container vessel, no ME for barge, and no AB for pleasure vessel.

3.5.16 The vessel types identified by the Marine Consultant are matched with equivalent vessel types considered in MVEIS. Typical engine power rating, engine type, fuel type of each vessel type are adopted from MVEIS. Moreover, when there are multiple sub-groups for the same vessel type in MVEIS, typically the one with the largest gross registered tonnage (GRT), deadweight tonnage (DWT) or passenger carrying capacity (PAX) is adopted as a conservative approach. The detailed assumptions are presented in **Appendix 3.5**. The vessel types considered in the assessment include:

- Fully Cellular Container Vessel (category RTV)
- Dry Bulk Carrier (category RTV)
- Semi-container Vessel (category RTV)
- Fast Launch (category FL)
- Tug (category TT)
- Local Ferry (category LF)
- Pleasure Vessel (category SC)
- Tug Boat (category SC)

3.5.17 Typical engine load factor by vessel type and by operation mode refers to MVEIS. Engine load factor of marine source was then determined according to its vessel type and its operation mode, which is defined according to the vessel speed with reference to MVEIS and shown in **Table 3.8**.

Table 3.8 Operation Mode of Marine Vessels

Operation Mode	Vessel Speed
Cruise / Fairway Cruise	Over 12 knots
Slow Cruise	8 to 12 knots
Maneuvering	1 to below 8 knots
Hotelling	Below 1 knot

3.5.18 The time-in-mode is estimated by the distance and vessel speed travelled in the corresponding mode.

3.5.19 Emission factors of RSP and FSP by vessel type and by operation mode refers to MVEIS and IMO Fourth Greenhouse Gas Study 2020. According to the *Air Pollution Control (Marine Light Diesel) Regulation*, the sulphur content of locally supplied marine light diesel is capped at 0.05%, so fuel with sulphur content of 0.05% is assumed to be used by local vessels such as Small Crafts (SCs), Tug Boats (TTs), Fast Launch (FLs) and Local Ferries (LFs). On the other hand, *Air Pollution Control (Fuel for Vessels) Regulation* stipulates the use of fuel with sulphur content of 0.5% for all vessels within Hong Kong waters. As such, fuel with sulphur content of 0.5% is assumed to be used by River Trade Vessels (RTV) and Ocean-going Vessels (OGVs) for modelling purpose as a conservative approach. Together with the parameters discussed above, emission of a marine source is estimated with the equation discussed above.

3.5.20 The stack parameters exit temperature and release height are determined by desktop review and site surveys whenever possible, and the other stack parameters (exit velocity and stack diameter) refer to previous studies concerning nearby waters such as the approved EIA Report of Lei Yue Mun Waterfront Enhancement Project (AEIAR-219/2018) and Route 11 (Section between Yuen Long and North Lantau) (AEIAR-255/2023). The emission inventory is summarized in **Appendix 3.5**.

Dispersion Modelling and Modelling Approach for the Proposed Plant

3.5.21 According to *Guidelines on Assessing the 'TOTAL' Air Quality Impacts* by EPD, an integrated modelling system PATHv3.0 which is developed and maintained by EPD will be applied to provide background pollutant concentrations in assessing the total impact in the study area. In addition, Weather Research and Forecast (WRF) meteorological data should be adopted for modelling.

3.5.22 American Meteorological Society (AMS) and U.S. Environmental Protection Agency (EPA) Regulatory Model (AERMOD), the HKEPD approved air dispersion model, has been employed to predict the air quality impacts at the representative ASRs due to the Project. Daily and annual averages of RSP and FSP concentrations are predicted at each identified ASRs at various assessment height, ranging from 1.5 metres to 110 metres above ground.

3.5.23 Hourly meteorological conditions including wind data, temperature, relative humidity, pressure, cloud cover and mixing height of Year 2019 are extracted from the WRF meteorological data adopted in the PATHv3.0 system. The dataset by WRF should be intact and consistent among

parameters. In order to avoid any missing hours misidentified by AERMOD and its associated components, the WRF met data is handled manually to set wind direction between 0° – 0.1° to be 360°. The height of the input data is assumed to be 9 metres above ground for the first layer of the WRF data as input.

3.5.24 The wind speed and mixing heights in the WRF data will be further adjusted before meteorological pre-processing by AERMET. The minimum wind speed is capped at 0.5 metre per second. The mixing height is capped between 119 metres and 2009 metres according to the observation in Year 2019 by HKO. After pre-processed by AERMET, the mixing height is verified once again and adjusted to the capped range if necessary.

3.5.25 Surface characteristic parameters such as albedo, Bowen ratio and surface roughness are required in the AERMET. The parameters are determined according to land use classified for the surrounding and the latest AERMOD Implementation Guide. The details of estimation is presented in **Appendix 3.3**. Elevated terrain in AERMOD is adopted for this assessment.

3.5.26 Further, dry deposition is applied in the model run. Particle size distribution is assigned for particles with aerodynamic diameters smaller than 10 μm to each type of source in the AERMOD in order to account for the particle deposition. The sources are divided into three types, (i) general concrete batching processes (further classified into 3 different processes as described in **Table 3.9**), (ii) aggregate handling and storage piles, and (iii) fugitive emission from paved roads. The particle size distributions for each type of source are summarized in **Table 3.9 – Table 3.11**.

Table 3.9 Particle Size Distribution of General Concrete Batching Process [(d) (e)]

Process	RSP to TSP Ratio [(a)]	FSP to RSP Ratio [(b)]
Cement unloading to elevated storage silo (Controlled)	34%	45%
Cement supplement unloading to elevated storage silo (Controlled)	53%	45%
Weigh Hopper Loading (Uncontrolled)	50%	29%
Mixer loading (central mix) (Controlled)	30%	45%

Average Particle Diameter (μm)	Normalized Fraction for RSP [(b)(c)]
0.5	12%
1.5	21%
2.25	12%
2.75	5%
3.5	11%
4.5	8%
5.5	6%
8	26%

Note:
(a) Derived from Table 11.12-1 Emission Factors for Concrete Batching, Chapter 11.12 Concrete Batching, AP-42, USEPA (Version 01/12)
(b) Derived from Category 3 “Mechanically Generated Aggregate, Unprocessed Ores”, Page B.2-13, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95)
(c) Control efficiency of fabric filter on different size of particle refers to Table B.2-3 Typical Collection Efficiencies of Various Particulate Control Device, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95)
(d) The cumulative percentage of all particle sizes maintains 100% in air dispersion model by applying percentage in 6 decimal places.
(e) Details of derivation of the figures are shown in Appendix 3.2

Table 3.10 Particle Size Distribution of Aggregate Handling and Storage Piles

Average Particle Diameter (μm)	Aerodynamic Particle Size Multiplier (k)[(a)]	Normalized Fraction[(b)]
1.25	0.053	15%
3.75	0.2	42%
7.5	0.35	43%

Note:

(b) Derived from dividing the respective aerodynamic particle size multiplier by that of RSP (i.e. 0.35)

Table 3.11 Particle Size Distribution of Fugitive Emission from Paved Roads

Average Particle Diameter (μm)	Particle Size Multiplier (g/VKT)[(a)]	Normalized Fraction[(b)]
1.25	0.15	24%
6.25	0.62	76%

Note:
(a) Reference from Table 13.2.1-1, Section 13.2.1.3 , AP-42 Fifth Version, USEPA
(b) Derived from dividing the respective particle size multiplier by that of RSP (i.e. 0.62)

Dispersion Modelling and Modelling Approach for Open Road

3.5.27 According to *Technical Note for Modelling Vehicular Emission Using AERMOD* by EPD, AERMOD is also used to assess the vehicular emission from open road.

3.5.28 The mixing zone of a road source needs to be defined in the AERMOD. The top of plume is defined as 1.7 times of the average height of vehicle fleet on the road. The average height of vehicle fleet is determined for each road and is weighted by the total daily traffic flow of each vehicle class. The suggested average vehicle height of each vehicle class refers to the same technical note.

Dispersion Modelling and Modelling Approach for Marine Emission

3.5.29 AERMOD was applied to assess the marine emission in the nearby waters. Marine emission is line source in nature because of the mobile vessels along the route. However, the emission also resembles point source for its high exhaust temperature, exhaust velocity and higher release height. In consideration of these similarities, the marine emission along a route was modelled by numerous of point sources along the route with an interval of 50m and its emission strength is equally allocated to these point sources.

3.5.30 High speed vessels, fishing vessels, pleasure vessels, government vessels (mostly patrol boats) and others (mostly tugboats) generally equip with horizontal stack based on site surveys. These vessels are therefore modelled as point source with horizontal release in AERMOD.

Cumulative Impact of Criteria Air Pollutants

3.5.31 Cumulative AQO pollutant concentration at ASR was derived by the sum of contributions by various sources, and background contribution from PATHv3.0 on hour-by-hour basis. Averaging results, namely 10-min, hourly, daily, and annual, were derived from the cumulative hour-by-hour results in accordance with *Title 40, Code of Federal Regulations, US Environmental Protection Agency (USEPA 40 CFR) Part 51 "Revision to the Guideline on Air Quality Models, January 2017*". For annual average, the sum of all valid hourly concentrations was divided by the number of valid hours during the year. For daily average, cumulative results at each ASR amongst 365 days were ranked by highest concentration and compared with the maximum allowable concentration to determine the number of exceedance throughout a year. The air quality impact on ASRs was then evaluated by number of exceedance per annum against the criteria of EIAO-TM and AQOs.

3.5.32 Ozone Limiting Method (OLM) has been adopted for the conversion of short-term NO_X to NO_2 based on the ozone background concentration from PATHv3.0. Regarding vehicular emission, NO_2 and NO were predicted separately in AERMOD. Following the principle of OLM, the total predicted vehicular NO_2 is estimated as below:

$$[NO_2]_{vehicular} = [NO_2]_{predicted} + MIN \{[NO]_{predicted}, \text{ or } (46/48) \times [O_3]_{PATH}\}$$

where

$[NO_2]_{vehicular}$	is the total predicted vehicular NO_2 concentration
$[NO_2]_{predicted}$	is the predicted NO_2 concentration
$[NO]_{predicted}$	is the predicted NO concentration
MIN	means the minimum of the two values within the bracket
$[O_3]_{PATH}$	is the representative O_3 PATH concentration (from other contributions)
(46/48)	is the molecular weight of NO_2 divided by the molecular weight of O_3

3.5.33 With reference to the *Guidance on Choice of Models and Model Parameters*, Jenkin method was adopted for the conversion of cumulative annual average NO_X to NO_2 by using the empirical relationship in observed annual mean of NO_X and NO_2 concentrations. The empirical relationship is derived from the annual mean observed data by relevant EPD's air quality monitoring stations (AQMS) including Tsuen Wan (the closest station), Tap Mun (background station with no vehicular emission), and Mong Kok roadside station (station dominated by vehicular emission). The resulting curve is adopted for the cumulative annual average NO_x to NO_2 conversion. Detailed derivation of NO_X-to-NO_2 conversion equation using Jenkin method is presented in **Appendix 3.7**.

3.5.34 According to "*Guidelines on the Estimation of 10-min average SO_2 Concentration for Air Quality Assessment in Hong Kong*", SO_2 concentration in 10-min average due to the stack emissions was estimated by applying stability-dependent multiplicative factor to 1-hour average model prediction by AERMOD.

3.6 Prediction and Evaluation of Impact

Cumulative Air Quality Impact

3.6.1 The 10th highest cumulative daily averages of RSP and 19th highest cumulative daily averages of FSP concentrations, as well their cumulative annual averages, at each representative ASR are presented in **Table 3.12** – **Table 3.15**, while the 4th highest cumulative 10-min and 4th highest cumulative daily averages of SO_2 concentrations, and 19th highest cumulative hourly, 10th highest daily and annual averages NO_2 concentrations at each representative ASR are presented in **Table 3.16** – **Table 3.20.** The prediction shows that the concentrations of the pollutant of concern would comply with the relevant AQOs at each representative ASR.

3.6.2 According to the predictions at discrete receptors in **Table 3.12** – **Table 3.15**, the worst predicted levels of cumulative daily RSP impact appear at 1.5m and 10m above ground, while those of cumulative annual RSP impact appear at 1.5m and 5m above ground for all representative ASRs. The worst predicted levels of cumulative daily FSP impact appear at 1.5m and 5m above ground, while those of cumulative annual FSP impact occur at 1.5m above ground. Contour plots of cumulative daily average of RSP concentrations at 1.5m and 10m above ground, and cumulative annual average of RSP concentrations at 1.5m and 5m above ground, cumulative daily average of FSP concentrations at 1.5m and 5m above ground and cumulative annual average of FSP concentrations at 1.5m above ground are presented in **Figure 3.2** – **Figure 3.8** respectively.

3.6.3 According to the predictions at discrete receptors in **Table 3.16** – **Table 3.17**, the worst predicted levels of cumulative 10-min and daily averages of SO_2 appear at 1.5m and 15m above ground for all representative ASRs. Contour plots of cumulative 10-min and daily averages of SO_2 concentrations at 1.5m and 15m above ground are presented in **Figure 3.9** – **Figure 3.12** respectively.

3.6.4 According to the predictions at discrete receptors in **Table 3.18** – **Table 3.20**, the worst predicted levels of cumulative hourly, daily and annual averages of NO_2 impact appear at 1.5m above ground for all representative ASRs, except the cumulative hourly average at A08 and daily average at A09, which occur at 5m and 10m respectively. Contour plots of cumulative hourly average of NO_2 concentrations at 1.5m and 5m above ground, daily average of NO_2 concentrations at 1.5m and 10m above ground, and annual averages of NO_2 concentrations at 1.5m above ground, are presented in **Figure 3.13**– **Figure 3.17** respectively.

3.6.5 Exceedance in annual RSP and FSP was generally predicted within the Subject Site and adjacent dockyard areas where slipways and temporary structures are located. It is confirmed that no air sensitive uses are located within the exceedance area.

3.6.6 In short, the predictions at discrete locations and spatial predictions within the study area showed that no adverse air quality impact on the nearby ASRs would be anticipated during the operation of the Proposed Plant.

3.7 Mitigation Measures

Plant Operation

3.7.1 It should be noted that the mitigation measures applied in the calculations are based on the proposed configuration of the Project. Details of mitigation measures that will be implemented in the plant have been presented in **Table 3.5**.

3.7.2 Despite the air control technologies and control measures proposed, good operation and maintenance practices is vital in achieving the goals of air pollution control measures and ensuring the environmental performance of the Plant. Standard operation and maintenance procedures will be set up and followed by all the operation staff to keep all the air pollution control equipment in good operating condition. Adequate training will be given to the personnel for inspection and maintenance of all the air pollution control equipment.

3.7.3 The plant operator shall maintain high standard of housekeeping to prevent emission of fugitive dust. Loading, unloading, handling and storage of raw materials, products, wastes or by-products should be carried out in an acceptable manner so as to minimize dust emission impact on the surrounding environment.

3.7.4 All sprinkler system used for dust suppression shall be maintained in good condition during operation. The flow rate and operating pressure of the spraying liquid/solution shall be sufficient to suppress dust emission from the corresponding sources. The sprinkler system shall be able to cover the areas of emission points concerned.

3.7.5 Air pollution control equipment, including fabric filters with 99.9% dust removal efficiency, silo overfilling alarms and filling link interlock shall be maintained in good operation condition and put into use whenever the relevant plant served by the air control equipment is in operation.

3.7.6 In order to guarantee the control efficiency of the dust collectors implemented, the performance of dust collectors will be monitored by fitting a pressure gauge to indicate the adequate pressure drop across the filter throughout the operation.

3.7.7 The emission rate or concentrations at all identified emission sources shall also be monitored upon commissioning and during the operation of the Project. The sampling methods for the emission sources and the monitoring programme shall be agreed with the EPD prior to the operation of the proposed CBP.

3.7.8 The dust extraction and collection system shall be routinely inspected at least once per month. This system shall be maintained in good condition during production. Collected dust will be returned to process stream or disposed of without generating any fugitive dust.

3.7.9 The maintenance, repair, or general cleaning of the plant facilities and vehicle within the site boundary shall be carried out in such a manner that the air emission is minimized.

3.7.10 The plant operator shall take all practical measures to minimize air emissions which may be caused by handling the muddy waste generated from the plant operation. No accumulation and dumping of such waste are allowed in open area.

3.7.11 Malfunction or breakdown of equipment leading to abnormal emission shall be dealt with promptly. In any case, the abnormal emission due to equipment failure shall be stopped as soon as possible. Sufficient numbers of spare parts for air pollution control equipment shall be kept in stock to allow rapid repair of the equipment. Each fabric filter shall be inspected at least once per month.

3.7.12 Should any office or control room of the Project be located within any predicted exceedance zones discussed above, it is recommended that centralized air conditioning and air filtering system with recommended dust removal efficiency of at least 90% shall be installed to minimize the air quality impacts and achieve AQO compliance at these uses in the plant.

3.7.13 Together with proper operation and maintenance practices discussed above, the proposed measures should ensure that there will be no adverse air quality impacts on any nearby ASRs, as predicted by the air quality impact assessment. As a Specified Process defined under the APCO, a licence from EPD will be applied where the detailed design of plant and air quality control proposals will be formulated to ensure full compliance with relevant requirements under the APCO during operation.

Odour from Sediments from Dredging and Maintenance Dredging

3.7.14 The dredging activities during both construction and operation phases might result in odour impacts. The following precautionary measures are proposed to minimize the potential impacts:

- Loading of the dredged sediment to the barge should be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.
- Any dredged sediment should be stored in enclosed tanks or properly covered as far as practicable to minimise its exposed area during its temporary storage and should be placed as far away from the identified ASRs as practically possible.
- Dredging rate should be controlled carefully.
- The dredged sediment is suggested to be delivered off-site for disposal every day as possible to avoid the dredged sediment for storage at the barge overnight.
- Dredged sediment placed on marine vessel for disposal should also be properly covered during transportation.
- The dredging activities are conducted during non-summer season.

With the implementation of these measures, the potential odour nuisance could be minimized and adverse odour impact at nearby ASRs is not expected.

4 NOISE

4.1 Introduction

4.1.1 The construction and operation of the concrete batching plant may induce potential noise impacts to surrounding noise sensitive receivers. Representative Noise Sensitive Receivers (NSRs) in the vicinity of the study area are identified. The potential noise impacts on these NSRs arising from the Proposed Plant are assessed and appropriate mitigation measures are proposed to alleviate the potential noise impacts where necessary.

4.2 Description of Environment

4.2.1 The Subject Site is located at Tsing Yi Town Lot Nos. 14& 15 at Tam Kon Shan Road in the northern Tsing Yi . It is located on marine frontage in the north and surrounded by areas of dockyards and marine-oriented industries in the east and west. Green@Kwai Tsing, site office and Tsing Yi Northeast Park are in the further east. Tam Kon Shan Road and Tsing Yi North Coastal Road is in the south of the Subject Site. The existing noise climate of the study area is dominated by the fixed plant noise from the existing dockyards and road traffic noise from the highways and local roads in the vicinity.

Noise Sensitive Receivers

4.2.2 In accordance with Annex 13 of the EIAO-TM, all domestic premises, including temporary housing accommodation, educational institution, hospital, medical clinic, home for the aged, convalescent homes, places of public worship, libraries, courts of law, performing arts centres, auditoria, amphitheatres and hostels shall be considered to be as NSRs. Representative NSRs are to be identified within the study boundary, which is 300 m from the Site.

4.2.3 Referring to the Tsing Yi Outline Zoning Plan No. S/TY/32, the land uses within 300m of the subject site are “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) and green belts, and there are no residential uses or educational institutes. After carrying out detailed desktop review and site survey, no noise sensitive receiver (NSR) is identified within the 300m of the subject site. The nearest NSR identified is The Met. Azure, which is located approximately 350m from the proposed CBP on top of the hill.

4.3 Environmental Legislation and Guidelines

Construction Noise

4.3.1 The Noise Control Ordinance (NCO) provides the statutory framework for noise control of construction work other than percussive piling, using Powered Mechanical Equipment (PME) between the hours of 1900 and 0700 hours or at any time on a general holiday (i.e. restricted hours). Noise control on construction activities taking place at other times is subject to the Noise assessment criteria for Daytime Construction Activities as stated in Professional Persons Environmental Consultative Committee (ProPECC) Practice Notes PN2/93 Noise from Construction Activities - Non-statutory. The noise assessment criteria are 75 dB(A) for domestic dwelling, 70 dB(A) for schools during normal teaching period and 65 dB(A) for schools during examination period.

Operation Fixed Plant Noise

4.3.2 Industrial fixed plant noise impacts were assessed in accordance with the criteria and methodology given in the Technical Memoranda made under the NCO, and Hong Kong Planning Standard and Guidelines (HKPSG).

4.3.3 The HKPSG states that all fixed noise sources should be so located and designed that when assessed in accordance with the Technical Memorandum for the Assessment of Noise from Places other than Domestic Premises, Public Places or Construction Sites (IND-TM), the level

of the intruding noise at the facade of the nearest sensitive use should be at least 5 dB(A) below the appropriate ANL shown in Table 2 of the IND-TM or, in the case of the background being 5 dB(A) lower than the ANL, the predicted noise level should not exceed the background.

4.3.4 Determination of the ANL depends on the area sensitivity rating (ASR), which is based on the characterization of the area within which they are located such as rural, village, low-density residential, or urban. Within these areas, the presence of "influencing factors" (such as the presence of industrial activities or major roads) can further affect the ASR and therefore the acceptable noise level. The ASR is determined from **Table 4.1** below.

Table 4.1 Area Sensitivity Ratings (ASRs)

Type of Area Containing NSR	Degree to which NSR is affected by IF		
	Not Affected	Indirectly Affected	Directly Affected
Rural Area	A	B	B
Low density residential area consisting of low-rise or isolated high-rise developments	A	B	C
Urban Area	B	C	C
Area other than those above	B	B	C

4.3.5 The ANLs for all ASRs are provided in **Table 4.2**.

Table 4.2 Acceptable Noise Levels for Fixed Noise Sources

Time Period	Acceptable Noise Level, dB(A)		
	ASR A	ASR B	ASR C
Daytime and Evening (0700 to 2300 hours)	60	65	70
Night (2300 to 0700 hours)	50	55	60

4.3.6 The surrounding area of the Project site is of industrial uses, which is not rural area, low density residential area, nor urban area. Therefore, the type of use of the area is considered as “area other than those above”. The area is directly affected by influencing factors, such as nearby industries and traffic noise from local roads and highways. With reference to **Table 4.1** above, ASR of “C” has been assumed for the NSR in the vicinity of the proposed Project site.

4.3.7 In any event, the ASR assumed in this report is for indicative assessment only. It should be noted that the fixed noise sources are controlled under Section 13 of the NCO. At the time of investigation, the Noise Control Authority shall determine noise impact from concerned fixed noise sources on the basis of prevailing legislation and practices being in force and taking account of contemporary conditions/situations of adjoining land uses. Nothing in this report shall bind the Noise Control Authority in the context of law enforcement against all the fixed noise sources being assessed.

4.3.8 The HKPSG recommends that the level of the intruding noise at the façade of the nearest sensitive use should be at least 5 dB(A) below the appropriate ANL or, in the case of background noise being 5 dB(A) lower than the ANL, the predicted noise level arising from the operation of the Proposed Plant at the façade of the nearest sensitive use should not exceed the background noise level.

4.4 Identification and Evaluation of Impact

Construction Phase

4.4.1 During the construction phase, the use of PME for the construction works of the proposed development would likely be the source of noise impact and would have the potential noise impact on the NSR located in the vicinity of the Subject Site.

4.4.2 In view of the nature of the development, the major construction activities would include minor excavation for foundation works and plant fabrication works. Potential noise impacts generated from the use of PME such as excavators, generators, air compressors, cranes, lorries, and pneumatic breakers for these construction activities would be expected.

4.4.3 In order to alleviate the potential construction noise impacts on the nearby NSRs, the following mitigation measures are suggested:

- Scheduling of work to avoid simultaneous operation of noisy equipment and erecting, as early as possible, any new structures which will have the effect of screening noise sources
- Noisy equipment should be located as far as possible from the NSR
- Implementation of good site practices to limit noise emissions at source
- Use of quieter PME
- Use of quieter alternative construction method
- Use of noise barriers/enclosure

4.4.4 With the implementation of the noise mitigation measures, it is anticipated that there would be no unacceptable construction noise impacts.

Operation Phase

4.4.5 In general, the CBP will operate from 07:00 to 21:00. The production rate and number of on-site vehicles are listed in **Table 4.3**.

Table 4.3 Production Rate and Number of On-site Vehicles during Normal Day

Activities / On-site Vehicles	07:00 – 21:00
Concrete Production Rate	100%
Concrete mixer truck per hour	43
PFA/GGBS/Silica Fume tanker per hour	2
Aggregates tipper truck per hour	0

4.4.6 However, no NSR has been identified within the study area and the nearest NSR, The Met, Azure, is 350m away on top of the hill. Given that sufficient separation distance from the NSR, more than 300m, the operational noise impact would become negligible. No adverse noise impact would be expected due to the operation of the propose CBP.

4.4.7 No further mitigation measures would therefore be required for the Proposed Plant.

5 WATER QUALITY

5.1 Introduction

5.1.1 The potential water quality impacts associated with the construction and operation of the proposed concrete batching plant are assessed in this section. Where necessary, mitigation measures are proposed to ensure that all residual impacts are in compliance with the relevant environmental legislation, standards and guidelines.

5.2 Environmental Legislation and Guidelines

5.2.1 The Water Pollution Control Ordinance (Cap.358) provides the major statutory framework for the protection and control of water quality in Hong Kong. According to the Ordinance and its subsidiary legislation, Hong Kong waters are divided into ten Water Control Zones (WCZ). Corresponding statements of Water Quality Objectives (WQO) are stipulated for different water regimes (marine waters, inland waters, bathing beaches subzones, secondary contact recreation subzones and fish culture subzones) in the WCZ based on their beneficial uses. The proposed concrete batching plant site is located within the Western Buffer Water Control Zone.

Technical Memorandum

5.2.2 Besides setting the WQOs, the WPCO controls effluent discharging into the WCZs through a licensing system. A Technical Memorandum on Standards for Effluents Discharged into Drainage and Sewerage Systems, Inland and Coastal Waters was issued under the WPCO which gives guidance on the permissible effluent discharges based on the type of receiving waters (foul sewers, storm water drains, inland and coastal waters). The limits control the physical, chemical and microbial quality of effluents. The discharge standard will vary with the use of downstream water. Any new effluent discharge would be required to comply with the terms and conditions of a discharge licence, issued by EPD, under the WPCO.

Practice Notes

5.2.3 A Practice Note (PN) for Professional Persons was issued by the EPD to provide environmental guidelines for handling and disposal of construction site discharges. The PN 2/24 “Construction Site Drainage” provides good practice guidelines for dealing with various types of discharge from a construction site. Practices outlined in the PN should be followed as far as possible during construction to minimize the water quality impact due to construction site drainage.

5.3 Identification and Evaluation of Impact

Construction Phase

Dredging Works

5.3.1 The recent sounding survey showed that sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe barging operations. To restore the nearshore water depth, a dredging works during construction is thus proposed to remove the accumulated sediment at the nearshore of the Site and restore adequate water depth for safe vessel navigation. The proposed dredging works is required to be carried out once during the construction phase of the Project. The extent of the dredging is illustrated in **Figure 6.1.** Approximately 4,000 m^3 of dredged sediment is involved based on the preliminary design and subject to further detailed analysis and the dredging is estimated to last 10 days based on the preliminary design. The dredging would cause potential water quality impacts on the water column.

5.3.2 Mitigation measures including deployment of silt curtain will be implemented during the dredging works. A silt curtain deployment plan should be submitted to EPD prior to the commencement of the dredging works, under which detailed silt curtain arrangement should be

proposed. The dredging works should be carried out in dry season to further minimize the potential water quality impact. With reference to *Recommended Pollution Control Clauses for Construction Contracts* (RPCC), all equipment shall be designed and maintained to minimize the risk of silt and other contaminants being released into the water column or deposited in locations other than designated location. All vessels shall be monitored to ensure that no dumping outside the approved location nor loss of material during transportation takes place. Loading of barges and hoppers shall be controlled to prevent splashing of dredged material to the surrounding water, and vessels shall not be filled to a level which will cause overflowing of material or polluted water during loading or transportation. With the implementation of these measures, no adverse water quality impact due to the dredging is anticipated. In case of any changes in the programme, the dredging works will be minimized during the wet season.

Land-based Works

5.3.3 Based on the engineering design, land-based works would be involved during the construction. Potential sources of water quality impact associated with the construction phase of the proposed concrete batching plant have been identified and include:

- excavation and foundation works;
- construction site runoff and drainage;
- general construction activities; and
- sewage effluent produced by on-site workforce.

Construction Site Runoff and Drainage

5.3.4 Runoff from the construction works areas during earthworks may contain increased loads of suspended solids and contaminants. Potential sources of pollution from site drainage include:

- runoff and erosion from exposed soil surfaces, earth working areas and stockpiles;
- bentonite slurries from foundation works.
- wash water from dust suppression sprays; and
- fuel and lubricants from maintenance of construction vehicles and mechanical equipment.

5.3.5 Mitigation measures should be implemented to control construction site runoff and drainage from the works areas, and to prevent runoff and drainage water with high levels of suspended solids from entering the nearby waters or local storm water drainage system. Water pumped out from trenches or foundation excavations should be discharged into storm drains via silt removal facilities. With the implementation of adequate construction site drainage and provision of sediment removal facilities, it is anticipated that unacceptable water quality impacts would not arise.

General Construction Activities

5.3.6 On-site construction activities may cause water pollution from the following:

- uncontrolled discharge of debris and rubbish such as packaging, construction materials and refuse; and
- spillage of liquids stored on-site, such as oil, diesel and solvents etc., are likely to result in water quality impacts if they enter the nearby waters or local storm water drainage system.

5.3.7 Good construction and site management practices should be observed to ensure that litter, fuels and solvents do not enter the nearby watercourses or storm water drains.

Sewage Effluents

5.3.8 Domestic sewage would be generated from the workforce during the construction phase. However, this temporary sewage can be adequately treated by interim sewage treatment facilities, such as portable chemical toilets, which can be installed within the construction site. It is unlikely that sewage generated from the site would have a significant water quality impact,

provided that sewage is not discharged directly to the nearby waters or drainage channels, and chemical toilets are used and properly maintained.

5.3.9 Given the nature of the proposed development, the duration of the construction activities will be relatively short and only minimal excavation is required for foundation works. With the above recommended mitigation measures, it is anticipated the water quality impact will be insignificant during the construction phase.

5.3.10 However, no water sensitive receiver has been identified within 500m from the project site. No adverse water quality impact would be expected due to the construction of the Project. No further mitigation measures would therefore be required.

Operation Phase

5.3.11 During operation phase, the main sources of wastewater would be mixer truck cleaning activities, the wheel washing facility, general site cleaning, water spraying for dust suppression and lorries cleaning before exiting the plant. On-site wastewater recycling system will be provided to collect wastewater for recycling and reuse. 3 recycle water tanks with total capacity of 55,000L will be provided for storage of recycled wastewater from the on-site wastewater recycling system to minimize any potential discharge of wastewater. All transfer of aggregates will be conducted in enclosed condition and no potential water quality impact is expected during unloading of aggregates.

5.3.12 The plant has been designed to contain all production wastewater as well as surface runoff within the plant. Surface channel will be laid within the plant to collect any production wastewater and runoff. The ground will also be formed with gradient such that all surface runoff flows toward the middle of the Site and collected by the surface channel. The site arrangement and layout of surface channels are presented in **Appendix 5.1**. With the implementation of such site arrangement, no water will be discharged from the plant.

5.3.13 Wastewater generated from mixer truck cleaning activities will be collected at container and passed through the reclaimer to separate aggregates and slurry, after which the slurry water will be directed into the wastewater tanks. The slurry water will then pass through a filter press to capture cement particle. The clear water will be collected in the clear water tank where the water will be pumped to the water tank for recycling. The reclaimed water will be reuse for site cleaning, truck washing and/or concrete production. Details of the wastewater treatment is presented in **Appendix. 5.2**.

Stormwater Runoff

5.3.14 Surface runoff from the Site will be retained within the site and collected via the surface channels for recycling as discussed in **Section 5.3.12** and no water will be discharged from the plant. No adverse drainage impact to the existing drainage system would be expected.

Sewage Effluents by Work Force and Visitors (concrete mixer truck drivers)

5.3.15 Domestic sewage will be expected from the workforce and visitors (concrete mixer truck drivers) during the operation phase. Around 15 staffs will be required for the routine operation of the Proposed Plant. The sewage generated from the workforce and visitors is expected to be small in quantity. Purposedly-built toilets will be provided on-site. With the connection to public sewerage, the domestic sewage will be collected and discharged via the public sewerage network.

5.3.16 However, no water sensitive receiver has been identified within 500m from the project site and the closest WSR is illustrated in **Figure 5.1**.No adverse water quality impact would be expected due to the operation of the Project. No further mitigation measures would therefore be required. A Sewerage Impact Assessment (SIA) will be carried out and submitted to the satisfaction of SIG.

Maintenance Dredging

5.3.17 Maintenance dredging would be required during operation subject to the siltation rate. Should a maintenance dredging be required, it is expected to be carried out in two days. And the sediment volume to be removed under each maintenance dredging event is expected to be less than 500 m^3 in total. Deployment of silt curtain and relevant mitigation measures will be deployed during the maintenance dredging as mentioned in **Section 5.3.2.** No adverse water quality impact due to the maintenance dredging is anticipated.

6 WASTE MANAGEMENT

6.1 Introduction

6.1.1 This section includes the discussion of the following issues in relation to waste management:

- identifies the type of wastes that would be generated during construction and operation of the proposed concrete batching plant;
- assesses the potential environmental impacts that are associated with the handling and disposal of these wastes; and
- mitigation measures and good site practice, including waste handling, storage and disposal, were recommended with reference to the applicable legislation and guidelines.

6.2 Environmental Legislation and Guidelines

6.2.1 The criteria and guidelines for assessing waste management implications are set out in Annex 7 and Annex 15 of the EIAO-TM, respectively.

6.2.2 The following legislation relates to the handling, treatment and disposal of wastes in the Hong Kong SAR and has been used in assessing potential environmental impacts:

- Waste Disposal Ordinance (Cap. 354)
- Waste Disposal (Chemical Waste) (General) Regulation (Cap. 354C)
- Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N)
- Land (Miscellaneous Provisions) Ordinance (Cap. 28)
- Public Health and Municipal Services Ordinance (Cap. 132) - Public Cleansing and Prevention of Nuisances Regulation
- Dumping at Sea Ordinance (Cap. 466)

Waste Management

6.2.3 The Waste Disposal Ordinance (WDO) prohibits the unauthorised disposal of wastes. Construction waste is defined as any substance, matter or thing that is generated from construction work and abandoned, whether or not it has been processed or stockpiled before being abandoned, but does not include any sludge, screenings or matter removed in or generated from any desludging, desilting or dredging works. Under the WDO, wastes can be disposed of only at designated waste disposal facilities.

6.2.4 Under the WDO, the Chemical Waste (General) Regulation provides regulations for chemical waste control, and administers the possession, storage, collection, transport and disposal of chemical wastes. The Environmental Protection Department (EPD) has also issued guideline documents, the “Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes”, “A Guide to the Chemical Waste Control Scheme”, and “A Guide to the Registration of Chemical Waste Producers”, which detail how the Contractor should comply with the regulations on chemical wastes.

6.2.5 The Public Cleansing and Prevention of Nuisances Regulation provides control on illegal tipping of wastes on unauthorised (unlicensed) sites.

Construction and Demolition (C&D) Material

6.2.6 The current policy related to the disposal of C&D material is documented in the Works Branch Technical Circular No. 2/93, ‘Public Dumps’. Construction and demolition materials that are wholly inert, namely public fill, should not be disposed of to landfill, but taken to public filling areas, which usually form part of reclamation schemes. The Land (Miscellaneous Provisions) Ordinance requires that dumping licences be obtained by individuals or companies who deliver public fill to public filling areas. The Civil Engineering & Development Department (CEDD) issues the licences under delegated powers from the Director of Lands.

6.2.7 Under the Waste Disposal (Charges for Disposal of Construction Waste) Regulation, enacted in January 2006, construction waste delivered to a landfill for disposal must not contain more than 50% by weight of inert material. Construction waste delivered to a sorting facility for disposal must contain more than 50% by weight of inert material, and construction waste delivered to a public fill reception facility for disposal must consist entirely of inert material.

6.2.8 Measures have been introduced under Practice Note for Authorized Persons and Registered Structural Engineers No. 243 (PNAP ADV-19) on Construction and Demolition Waste, to enhance the management of construction and demolition material, and to minimize its generation at source. A Waste Management Plan (WMP) shall be prepared by the contractor and agreed by the engineer. The WMP may cover the types of waste and their estimated quantities, measures for reducing waste generation, on-site material reuse, quantities of waste requiring off-site disposal, disposal outlet, monitoring and auditing programme, implementation of the trip-ticket system, etc.

Chemical Waste

6.2.9 Under the Waste Disposal (Chemical Waste) (General) Regulation, all producers of chemical waste must register with EPD and treat their wastes, either utilising on-site plant licensed by EPD, or arranging for a licensed collector to transport the wastes to a licensed facility. The regulation also prescribes the storage facilities to be provided on site, including labelling and warning signs, and requires the preparation of written procedures and training to deal with emergencies such as spillages, leakages or accidents arising from the storage of chemical wastes.

Dredged Sediment

6.2.10 The Dumping at Sea Ordinance (DASO) came into operation in April 1995 and empowers the Director of Environmental Protection (DEP) to control the disposal and incineration of substances and particles at sea for the protection of the marine environment. Under the Ordinance, a dumping permit from the DEP is required for the disposal of regulated substances within and outside the waters of Hong Kong. The permit contains terms and conditions which include the following specifications, but not limited to:

- Type and quantity of substances permitted to be dumped;
- Location of the disposal grounds;
- Requirement of equipment for monitoring the disposal operations; and
- Environmental monitoring requirements.

6.2.11 Marine disposal of any dredged/excavated sediment is subject to control under DASO. Dredged/excavated sediment destined for marine disposal is classified based on its contaminant levels with reference to the Administrative Guidance – Management Framework for Disposal of Dredged/Excavated Sediment. The Administrative Guidance stipulated a set of sediment quality criteria or Chemical Exceedance Levels (CEL) for contaminants including metals, metalloid and organic pollutants.

6.2.12 The Administrative Guidance - Management Framework for Disposal of Dredged/Excavated Sediment sets out the procedure for seeking approval to and the management framework for marine disposal of dredged/excavated sediment. It outlines the requirements to be followed in assessing and classifying the sediment and explains the marine disposal arrangement for the classified material. The sediment quality criteria for the classification of sediment were referred as the Lower Chemical Exceedance Level (LCEL) and Upper Chemical Exceedance Level (UCEL). The LCEL and UCEL are presented in Appendix A of the Administrative Guidance. Subject to the results of the chemical screening, biological screening may be required to determine the disposal requirement of the sediment. There are three types of disposal options for dredged / excavated sediments stipulated in the Administrative Guidance as listed below.

- Type 1 – Open Sea Disposal;
- Type 2 – Confined Marine Disposal; and
- Type 3 – Special Treatment/Disposal.

6.3 Prediction and Evaluation of Impacts

Construction Phase

6.3.1 Based on the engineering design, only land-based works would be involved during the construction, i.e. no marine work is expected. The construction activities to be carried out for the Proposed Plant would generate a variety of wastes that can be divided into distinct categories based on their composition and ultimate method of disposal. The identified waste types include:

- construction and demolition (C&D) materials from the excavation and construction works;
- general refuse from the workforce;
- chemical waste from any maintenance of construction plant and equipment; and
- dredged sediment from maintenance dredging.

Construction and Demolition (C&D) Materials

6.3.2 C&D materials contain a mixture of inert and non-inert materials. The inert portion, such as soil, rock, concrete, brick and asphalt etc., is known as “public fill” and the non-inert portion, including metal, timber, paper, glass and general garbage is known as “C&D waste”. C&D materials comprise unwanted materials generated during construction, including rejected structures and materials, materials which have been over-ordered and materials which have been used and discarded. Examples of C&D materials may include:

- wood from formwork and falsework (non-inert portion);
- material and equipment wrapping (non-inert portion);
- unusable/surplus concrete/grouting mixes (inert portion); and
- damaged/ surplus construction materials (inert portion such as bricks).

6.3.3 For the whole civil construction period, approximate 1,250 tonnes of C&D material will be generated, where there are around 950 tonnes from the demolition of existing buildings and around 300 tonnes from construction works. Demolished debris would comprise inert materials including reinforced concrete waste (700t), soil and gravel (100t), and other miscellaneous inert material (60t), and non-inert materials including waste steel (60t) and timber (30t). Excavated soil (around 300t) from foundation works is expected to be the major inert C&D materials during construction. The Contractor is responsible for transfer of C&D materials to public fill reception facilities or landfills, depending on the type of material and the percentage of inert material. The public fill inert portion should be reused on site or disposed delivered to public fill reception facilities for beneficial uses. The non-inert portion of the C&D materials should be reused or recycled, and disposal of at designated landfills as the last resort. Waste steel in the C&D material will be delivered to recycler to minimize disposal quantity to landfill, among which around 20 tonnes of steel can be recycled.

6.3.4 C&D materials should be sorted on-site and be separated as public fill (inert portion) and C&D waste (non-inert portion). Due to the inert nature of most of the C&D materials generated, disposal would be unlikely to raise environmental concerns. The quantity of non-inert C&D materials is considered to be small and is not envisaged to have any adverse impact on the capacity of landfills.

Chemical Wastes

6.3.5 The Waste Disposal (Chemical Waste) (General) Regulation defines chemical waste as any substance being scrap material or unwanted substances specified in its Schedule 1 and provides a complete list of such substances. However, substances likely to be generated by construction activities would mainly arise from the maintenance of equipment. These may include, but not be limited to, the following:

- scrap batteries or spent acid/alkali;
- used engine oils, hydraulic fluids and waste fuel;
- spent mineral oils/cleaning fluids from mechanical machinery; and
- spent solvents/solutions, some of which may be halogenated, from equipment cleaning activities.

6.3.6 The amount of chemical waste generated from the construction activities depends on the Contractor's on-site maintenance requirements and the amount of plant utilised. However, it is anticipated that the quantity of chemical waste would be minimal, e.g. a few hundred litres, due to the short-term construction of the Proposed Plant.

6.3.7 To mitigate any potential chemical waste impact to the environment, chemical wastes should be handled according to the *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes*. Spent chemicals should be collected by a licensed collector for disposal at the CWTC or other licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

6.3.8 Provided that the handling, storage and disposal of chemical wastes are in accordance with these requirements, adverse environmental impacts would be negligible.

General Refuse

6.3.9 Throughout construction, the workforce would generate general refuse comprising food scraps, waste paper, empty containers, etc. Release of general refuse into the roadside gully/surface channel should not be permitted as introduction of these wastes is likely to have detrimental effects on water quality in the area. Rapid and effective collection of site wastes would be required to prevent waste materials being blown around by wind, flushed or leached into the aquatic environment, and odour nuisance. The work sites may also attract pests and vermin if the waste storage area is not well maintained and cleaned regularly. Disposal of refuse at sites other than approved waste transfer or disposal facilities can also result in similar impacts.

6.3.10 General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D materials. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material. Assuming a generation rate of 0.65 kg per worker per day and around 30 workers deployed for the construction works, approximately 20 kg of general refuse will be generated by the workforce per day, i.e. approximately 4,800 kg of total amount of general refuse in 12-month construction period. The collected general refuse will be recycled at recycling facilities and/or disposed of at designated landfill such as NENT or WENT.

6.3.11 With the implementation of the recommended waste management practices at the site, adverse environmental impacts arising from the storage, handling and transportation of refuse would not be expected.

Dredged Sediment

6.3.12 Maintenance dredging is required to remove the accumulated sediment at the nearshore of the Site in order to restore adequate water depth for safe vessel navigation. The proposed dredging works is required to be carried out once during the construction phase of the Project. The proposed dredging area is shown in **Figure 6.1**. Based on preliminary estimation and subject to further detailed analysis, the estimated volume of dredged sediment arising from the proposed maintenance dredging operation is expected to be approximately 4,000 m^3.

6.3.13 EPD conducts routine monitoring of the bottom sediment quality at 60 stations across the territory of Hong Kong waters. Among these 60 stations, the monitoring station Rambler Channel (VS10) is the closest to the Site. Location of VS10 is shown in **Figure 6.2**.

6.3.14 The sediment quality data at VS10 from 2019 to 2023, as extracted from the latest available EPD's Annual Marine Water Quality Report in 2023, is summarised in **Table 6.1**. As shown in **Table 6.1**, nickel, arsenic and all organic-polyaromatic hydrocarbons (PAHs) were below the LCEL in accordance with the Administrative Guidance. For cadmium, chromium, mercury, lead and total polychlorinated biphenyls (PCBs), the highest levels measured were equal to or above the corresponding LCEL but below the UCEL. For copper, both the arithmetic mean value and highest level measured had exceeded the UCEL. For silver and zinc, the arithmetic mean value had exceeded the corresponding LCEL but below the UCEL and the highest levels measured were above the corresponding UCEL.

Table 6.1 Summary of Sediment Quality Data at EPD Monitoring Station VS10 (Year 2019 to 2023)[1]

Contaminants	Lower Chemical Exceedance Level (LCEL)	Upper Chemical Exceedance Level (UCEL)	Arithmetic Mean Concentration (Data in Brackets Indicate Ranges)
Metals (mg/kg dry wt.)			
Cadmium (Cd)	0.8	4	0.4 (0.2 – 0.8)
Chromium (Cr)	80	160	67 (28 - 120)
Copper (Cu)	65	110	**140** (48 - **250**)
Mercury (Hg)	0.3	1	0.22 (0.10 - 0.37)
Nickel (Ni)	40	40	29 (13 - 37)
Lead (Pb)	75	110	56 (37 - 79)
Silver (Ag)	1	2	1.6 (0.5 – **3.2**)
Zinc (Zn)	200	270	220 (99 - **330**)
Metalloid (mg/kg dry wt.)			
Arsenic (As)	20	42	11.6 (6.8 - 16.0)
Organic-PAHs (µg/kg dry wt.)			
Low Molecular Weight PAHs[2]	550	3160	120 (90 - 200)

Contaminants	Lower Chemical Exceedance Level (LCEL)	Upper Chemical Exceedance Level (UCEL)	Arithmetic Mean Concentration (Data in Brackets Indicate Ranges)
High Molecular Weight PAHs[3]	1700	9600	370 (120 - 910)
Organic-non-PAHs (µg/kg dry wt.)			
Total PCBs[4]	23	180	20 (18 - 33)
Organometallics (µg TBT/L in interstitial water)			
Tributyltin	0.15	0.15	N/A[5]

Notes:
(1) Data extracted from EPD's Marine Water Quality in Hong Kong in 2023.
(2) Low molecular weight polyaromatic hydrocarbons (PAHs) include 6 congeners of molecular weight below 200, namely: Acenaphthene, Acenaphthylene, Anthracene, Fluorene, Naphthalene and Phenanthrene.
(3) High molecular weight polyaromatic hydrocarbons (PAHs) include 10 congeners of molecular weight above 200, namely: Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene and Indeno(1,2,3-cd)pyrene.
(4) Total PCBs results are derived from the summation of 18 congeners. If the concentration of a congener is below report limit (RL), the result will be taken as 0.5xRL in the calculation.
(5) Sediment data is not available.

6.3.15 As the Site is flat and ready for construction of the Proposed Plant, only minimum backfilling works would be required under the Project and thus the reuse of dredged sediment on site as backfilling materials is unlikely. In view of the above, the dredged sediment would be disposed of at the designated marine disposal areas according to the Administrative Guidance. The disposal options for the dredged sediment should follow the procedures in the Administrative Guidance. Subject to agreement with Marine Fill Committee (MFC) of CEDD, the marine disposal sites for Type 1 – Open Sea Disposal are typically South Cheung Chau and East of Ninepin. For Type 2 – Confined Marine Disposal, the marine disposal sites are typically East Sha Chau. For Type 3 – Special Treatment/Disposal, the project proponent should identify and agree with DEP the most appropriate treatment and/or disposal arrangement. Seabed dredging should be minimised and the dredged marine sediment should be disposed of in a manner which minimizes the loss of pollutants into solution or by re-suspension. Mitigation measures will also be proposed in order to alleviate the adverse environmental impacts, including potential odour / dust emissions and water quality impacts, brought by dredged marine sediment. Given the recommended mitigation measures are implemented, adverse environmental impacts arising from dredged marine sediment will be minimal.

Operation Phase

Solid Waste

6.3.16 The major portion of solid waste arising from the Proposed Plant will be waste concrete, slurry, chemical wastes for maintenance of on-site plants and general refuse from site workers.

6.3.17 Waste concrete and slurry from washing will be diverted to the reclaimer to separate aggregates and slurry, after which the slurry will be directed into the wastewater tanks and the aggregate will be reused for production. The slurry water will then pass through a filter press to capture cement particle. The clear water will be collected in the clear water tank where the water will be pumped to the water tank for recycling. The solid waste including dried sludge cake collected by filter press and waste concrete / aggregates unfit for recycling will be disposed of at designated landfill such as NENT or WENT by waste disposal trucks. Estimated quantities for the solid waste is about 20 tonnes per day.

6.3.18 The Proposed Plant will be registered as a chemical waste producer prior to commencement of operation if chemical waste is expected to be generated. Estimated quantities for chemical waste is expected to be 1L per day. A licensed chemical waste collector will be engaged for proper disposal of the chemical waste at the CWTC or other licensed facility. Records of "Trip Ticket" will be maintained in the site office.

6.3.19 General refuse should be collected by on-site enclosed rubbish bins and collected by the waste collector on a daily basis or every two days, in order to minimize odour, pest and litter impact. Based on a generation rate of 1.02 kg[1] per worker per day and around 15 workers deployed at the plant, approximately 15.3 kg of general refuse will be generated daily during the operational phase. The general refuse collected by reputable waste collector will be recycled at recycling facilities and/or disposed of at designated landfill such as NENT or WENT.

6.3.20 Provided that the environmental control measures are properly implemented, no adverse environmental impact would be anticipated with respect to solid waste management. Formwork should avoid using standard wooden panels, instead alternative materials with high potential for reuse should be considered, such as steel formwork or plastic facing.

Dredged Sediment from Maintenance Dredging

6.3.21 Maintenance dredging would be required during operation subject to the siltation rate. Should a maintenance dredging be required, it is expected to be carried out in two days. And the sediment volume to be removed under each maintenance dredging event is expected to be less than 500 m^3 in total. Deployment of silt curtain and relevant mitigation measures will be deployed during the maintenance dredging as mentioned in **Section 5.3.2.** Seabed dredging should be minimised and the dredged marine sediment should be disposed of in a manner which minimizes the loss of pollutants into solution or by re-suspension. Mitigation measures will also be proposed in order to alleviate the adverse environmental impacts, including potential odour / dust emissions and water quality impacts, brought by dredged marine sediment. Given the recommended mitigation measures are implemented, adverse environmental impacts arising from dredged marine sediment will be minimal.

6.4 Mitigation Measures

Construction Phase

Construction and Demolition Materials

6.4.1 Careful design and planning together with good site management help reducing over-ordering and generation of C&D material such as concrete, mortar and cement grouts.

6.4.2 The inert C&D materials with suitable characteristics / size should be reused on-site as far as practicable. When disposing C&D material at public filling reception facility for beneficial reuse, the material should only consist of soil, rock, concrete, brick, cement plaster / mortar, inert building debris, aggregates and asphalt. The material should be free from household refuse, plastic, metals, industrial and chemical waste, animal and vegetable matter, and other material considered unsuitable by the Filling Supervisor. Prior to disposal of non-inert C&D materials, such as wood, steel, and other metals should be separated for reuse and/or recycling where practicable so as to minimize the quantity of waste to be disposed of at landfill.

6.4.3 Suitable areas should be setup within the site for sorting and providing temporary stockpiling of C&D materials. The following measures should be undertaken to abate the potential environmental impacts or nuisance:

- Surface of stockpiled soil should be regularly wetted with water especially during dry season;
- Disturbance of stockpiled should be minimized;
- Stockpiled soil should be properly covered with tarpaulin especially during predicted heavy storms; and
- Stockpiled areas should be enclosed where space is available.

[1] Per capita generation rate of waste = Per capita disposal rate / (1 - recovery rate). With reference to the Monitoring of Solid Waste in Hong Kong 2023, the per capita disposal rate and recovery rate of commercial and industrial (C&I) waste in 2023 is 0.55 kg/person/day and 46% respectively.

6.4.4 A trip-ticket system should be implemented to monitor the delivery of C&D materials to the designated public fill reception facility and landfill, and to avoid any fly-tipping. A recording system should be set up to keep track of the amount of waste generated, recycled and disposed, including the disposal sites. Warning signs should be put up to remind the designated disposal sites. CCTV should also be installed at the vehicular entrance and exit of the site to monitor handling of C&D materials disposal. To prohibit illegal dumping and landfilling of C&D materials, the dump trucks engaged on site should be equipped with GPS or equivalent automatic system for real time tracking and monitoring of their travel routings, parking locations and disposal activities. The dump trucks employed should be covered or with the use of enclosed containers to minimize windblown litter and dust during waste transportation.

Chemical Waste

6.4.5 For those processes which generated chemical waste, it may be possible to find alternative to eliminate the use of chemicals, to reduce the quantities generated or to select a chemical type with less impact on environmental, health and safety as far as possible.

6.4.6 Should any chemical waste be produced at the construction site, the Contractor will be required to register with the EPD as chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemicals Wastes*. Chemical waste should be stored in appropriate containers and collected by a licensed chemical waste contractor. Chemical waste (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while chemical waste that cannot be recycled should be disposed of at either the CWTC, or another licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

General Refuse

6.4.7 General refuse should be stored in enclosed bins or compaction units separate from C&D material. A reputable waste collector should be employed by the contractor to remove general refuse from the site, separately from C&D materials on a daily basis to minimize odour, pest and litter impacts. The collected general refuse would be disposed of at designated landfill. Clearly labelled recycling bins should be provided on site in order to encourage segregation and recycling of aluminium and plastic wastes, and wastepaper in order to reduce general refuse production.

6.4.8 The contractor should carry out an education programme for workers in avoiding, reducing, reusing and recycling of material generation. Posters and leaflets advising on the use of the bins should also be provided onsite as reminders. The recycle waste materials should then be collected by reliable waste recycling agents on a daily basis.

Dredged Sediment

6.4.9 The sediment should be dredged, handled, transported and disposed of in a manner that would minimise adverse environmental impacts.

6.4.10 For off-site disposal, the basic requirements and procedures specified under the Administrative Guidance shall be followed. Marine Fill Committee (MFC) of CEDD is managing the disposal facilities in Hong Kong for the dredged / excavated sediment, while EPD is the authority of issuing marine dumping permit under DASO.

6.4.11 For the purpose of site allocation and application of marine dumping permit, Sediment Sampling and Testing Plan (SSTP) shall be submitted to EPD for agreement under DASO. Site investigation works, based on the SSTP, shall be carried out in order to confirm the disposal arrangements of the dredged sediment. A Sediment Quality Report (SQR), reporting the chemical and biological screening results and the estimated quantities of sediment under different disposal options, shall then be submitted to EPD for agreement under DASO. The dredged sediments would be disposed of according to its determined disposal options and the Administrative Guidance. Previously obtained data or known history of the sediment in the

vicinity should be submitted to DEP for consideration of the most appropriate arrangements for handling these materials.

6.4.12 To ensure disposal space is allocated for the Project, the project proponent should be responsible for obtaining agreement from MFC on the allocation of the disposal site. The contractor(s), on the other hand, should be responsible for the application of the marine dumping permit under DASO from EPD for the sediment disposal.

6.4.13 In order to minimise the potential odour / dust emissions during dredging and transportation of the sediment, the sediments shall be wetted during dredging / material handling and shall be properly covered when placed on trucks or barges. Loading of the dredged sediments to the barge shall be controlled to avoid splashing and overflowing of the sediment slurry to the surrounding water.

6.4.14 If applicable, the barge transporting the sediments to the designated disposal sites shall be equipped with tight fitting seals to prevent leakage and shall not be filled to a level that would cause overflow of materials or laden water during loading or transportation. In addition, monitoring of the barge loading shall be conducted to ensure that loss of material does not take place during transportation. Transport barges or vessels shall be equipped with automatic self-monitoring devices as specified by the DEP.

Operation Phase

Solid Waste from Concrete Production

6.4.15 Waste concrete /aggregates will be reclaimed by reclaimer for recycling in production as detailed in **Section 6.3.17**. The solid waste including dried sludge cake collected by filter press and waste concrete / aggregates unfit for recycling will be disposed of at designated landfill by waste disposal trucks. The dump trucks employed should be covered or with the use of enclosed containers to minimize windblown litter and dust during waste transportation. A trip-ticket system should also be implemented to monitor the delivery of C&D materials to the designated landfill and to avoid any fly-tipping.

Chemical Waste

6.4.16 For those processes which generated chemical waste, it may be possible to find alternative to eliminate the use of chemicals, to reduce the quantities generated or to select a chemical type with less impact on environmental, health and safety as far as possible.

6.4.17 Should any chemical waste be produced at the construction site, the Contractor will be required to register with the EPD as chemical waste producer and to follow the guidelines stated in the *Code of Practice on the Packaging, Labelling and Storage of Chemicals Wastes*. Chemical waste should be stored in appropriate containers and collected by a licensed chemical waste contractor. Chemical waste (e.g. spent lubricant oil) should be recycled at an appropriate facility as far as possible, while chemical waste that cannot be recycled should be disposed of at either the CWTC, or another licensed facility, in accordance with the *Waste Disposal (Chemical Waste) (General) Regulation*.

General Refuse

6.4.18 General refuse should be stored in enclosed bins or compaction units. A reputable waste collector should be employed by the contractor to remove general refuse from the site on a daily basis to minimize odour, pest and litter impacts. The collected general refuse would be disposed of at designated landfill. Clearly labelled recycling bins should be provided on site in order to encourage segregation and recycling of aluminium and plastic wastes, and wastepaper in order to reduce general refuse production.

6.4.19 The contractor should carry out an education programme for workers in avoiding, reducing, reusing and recycling of material generation. Posters and leaflets advising on the use of the bins should also be provided onsite as reminders. The recycle waste materials should then be collected by reliable waste recycling agents on a daily basis.

Dredged Sediment from Maintenance Dredging

6.4.20 The sediment should be dredged, handled, transported and disposed of in a manner that would minimise adverse environmental impacts. The mitigation measures should follow the same as presented in **Section 6.4.10 – Section 6.4.14**.

7 LAND CONTAMINATION

7.1 Introduction

7.1.1 This section presents the assessment of potential land contamination implication associated with the proposed development under the Project.

7.2 Environmental Standards and Guidelines

7.2.1 The relevant environmental guidelines and standards for the assessment of land contamination impacts include the following:

- Guidance Note for Contaminated Land Assessment and Remediation (Guidance Note) (EPD, April 2023)

  The Guidance Note sets out the requirements for proper assessment and management of potentially contaminated sites such as oil installations (e.g. oil depots, petrol filling stations), gas works, power plants, shipyards/boatyards, chemical manufacturing/processing plants, steel mills/metal workshops, car repairing/dismantling workshops and scrap yards. In addition, this Guidance Note provides guidelines on how site assessments should be conducted and analysed and suggests practical remedial measures that can be adopted for the remediation of contaminated sites.

- Practice Guide for Investigation and Remediation of Contaminated Land (Practice Guide) (EPD, April 2023)

  This guide outlines typical investigation methods and remediation strategies for the range of potential contaminants typically encountered in Hong Kong.

- Guidance Manual for Use of Risk-based Remediation Goals for Contaminated Land Management (Guidance Manual) (EPD, April 2023)

  The Guidance Manual introduces the risk-based approach in land contamination assessment and present instructions for comparison of soil and groundwater data to the Risk-Based Remediation Goals (RBRGs) for 54 chemicals of concern (COCs) commonly found in Hong Kong. The RBRGs were derived to suit Hong Kong conditions by following the international practice of adopting a risk-based methodology for contaminated land assessment and remediation and were designed to protect the health of people who could potentially be exposed to land impacted by chemicals under four broad post restoration land use categories. The RBRGs also serve as the remediation targets if remediation is necessary.

7.3 Assessment Methodology

7.3.1 A site appraisal was conducted to identify any current / historical potentially contaminating land uses within the Site. The site appraisal, including site walkover and desktop review, was carried out with reference to the Guidance Note, Guidance Manual and Practice Guide.

7.3.2 The site walkover was conducted within the Site to identify any existing contaminative land uses and contamination sources (or 'hotspots'). For the desktop review, the following information was reviewed:

- Available records of dangerous goods, chemical wastes, chemical spillage/leakage and fire incidents from Environmental Protection Department (EPD) and Fire Services Department (FSD);
- Bonding Engineering & Construction Co. Ltd, *Ground Investigation Report for Proposed Concrete Batching Plant in Lot 14 & 15 Tam Kon Shan Road, Tsing Yi,* June 2014;
- Hong Kong Geological Survey Map (Series HGM20) – Sheet No. 6 (1:20,000); and
- Selected aerial photographs and topographic maps held by the Lands Department.

7.3.3 If potentially contaminated land use(s) were identified within the Site, the potential land contamination impacts to the Project would be evaluated and the appropriate mitigation measures would be recommended.

7.4 Description of Environment

7.4.1 The Site is located at Tsing Yi Town Lot Nos. 14 & 15 and adjoining Government Land, Tam Kon Shan Road, Tsing Yi. The total site area is approximately 4,335 m^2. The Site is bounded by the sea to the north, Tam Kon Shan Road to the south, dockyards and industrial uses at the east and west. The site location plan is shown in **Figure 1.1**.

7.5 Identification of Potential Land Contamination Impact

Review of Historical Land Use

7.5.1 A review of the aerial photographs covering the Site has been undertaken. The aim of this review is to evaluate potential land contamination associated with historical land uses at the Site. A summary of the historical land uses is presented in **Table 7.1** and reviewed aerial photographs are shown in **Appendix 7.1**.

Table 7.1 Summary of Historical Land Uses

Year (Photo Reference No.)	Drawing No. in Appendix 7.1	Site Description
1963 (#1963-6348)	AP1	The Site was occupied by open water.
1973 (#04179)	AP2	The eastern and western portions of the Site were reclaimed. No other significant land uses changes were observed.
1983 (#47316)	AP3	The Site was further reclaimed and a shipyard, open storage and slipway were observed. No other significant land uses changes were observed.
1993 (#A36015)	AP4	A jetty was observed in the northwest of the Site. No other significant land uses changes were observed.
2003 (#CW53780)	AP5	The shipyard was abandoned. No other significant land uses changes were observed.
2013 (#CS45547)	AP6	The western portion of the Site was converted into private parking area. No other significant land uses changes were observed.
2023 (#E193635C)	AP7	The open storage was cleared and slipway was demolished. No other significant land uses changes were observed.

Source: *Survey and Mapping Office, Lands Department*

7.5.2 Based on the review of aerial photographs, the Site had been used as a shipyard, open storage, car parking, jetty and slipway. Shipyard and open storage are considered as a potentially contaminating land uses which may have potential land contamination implications to the Project.

Site Walkover

7.5.3 Site walkover was conducted on 12 December 2024 to investigate any land contamination issues associated with the current land uses and activities within the Site that may have potential land contamination implications to the Project. Questionnaire was conducted within available site representatives and the site walkover checklist is attached in **Appendix 7.2**. Findings of the site walkover, including the photographic records and site layout plan, are shown in **Figure 7.1**.

7.5.4 The Site is currently comprised of two buildings (the western building (approximately 939 m^2) and the eastern building (approximately 414 m^2)), an open area in the eastern portion (approximately 515 m^2), an access road in the central portion (approximately 985 m^2), a jetty in the northwest and the sea in the northeastern and northwestern portions of the Site.

7.5.5 Based on the site walkover, except for the northeastern and northwestern portions of the Site which are covered by the sea, the Site is generally concrete paved and largely vacant with private parking areas observed in the western building and the open area in the eastern portion of the Site. As reported by the site staff, the Site is an abandoned shipyard with ship building, repair and maintenance activities previously carried out in the western building and ship parts manufacturing previously carried out in the eastern building, while the central portion of the Site had been used as an access road. Ship repair and maintenance activities were also reportedly carried out in a small portion of the open area adjacent to the north of the eastern building (approximately 91 m^2). The shipyard was reportedly in operation between 1976 and 1994 and has been used as a private parking site since 2013.

7.5.6 Based on the site walkover and as reported by the site staff, there is a disused dangerous goods (DG) store located in the western building previously used for the storage of oxy-acetylene cylinders, and has been used as a storeroom for the storage of office / household appliances and equipment since operation of the shipyard was ceased (refer to Photo 0322 in **Figure 7.1**). As the disused DG store was used for the storage of gas only, potential land contamination issue associated with the disused DG store is not anticipated.

7.5.7 In addition, small quantities of chemicals including engine oil, hydraulic oil, turpentine and paint were observed within the eastern building and outside the disused DG store / storeroom of the Site above a covered box / wooden plank on concrete paved floor or directly on the concrete paved floor (refer to Photos 8518 and 8534 in **Figure 7.1**). According to the site staff, these chemicals are temporarily stored on-site and are used off-site only. No chemical spillage, oil stains or stressed vegetation were observed in the vicinity of the chemical storage areas. Given the chemicals stored were temporary and are reportedly used off-site only, and that no signs of land contamination were observed in the vicinity of the chemical storage areas, potential land contamination issue associated with the chemical storages is not anticipated.

7.5.8 Based on the above, no current potentially contaminating land uses / activities were identified at the Site.

Acquisition of Information from Government Departments

7.5.9 The Environmental Protection Department (EPD) and Fire Services Department (FSD) have been contacted for (i) records on any release of chemicals and chemical waste, (ii) records of dangerous goods (DG), (iii) records of Chemical Waste Producer(s) (CWP(s)) and (iv) records of reported fire incidents within the Site. EPD and FSD's replies on the request have been received and attached in **Appendix 7.3**. The Information is summarised below.

Environmental Protection Department

7.5.10 Based on the reply given by EPD on 20 December 2024, there were no chemical spillage / leakage records within the Site. Further to EPD's reply, a review of the available CWP records at EPD Southorn Office was undertaken on 7 January 2025. According to the records reviewed, there is 1 valid CWP record identified within the Site. The details of the CWP record are summarised in **Table 7.2** below. Location of the CWP is shown in **Figure 7.1**.

Table 7.2 Summary of Chemical Waste Producer within the Site

CWP ID	Status	Company Name	Address	Business Nature
1	Valid	Supercraft (HK) Ltd	T.Y.T.L. 14 & 15, Tsing Yi, N.T.	Boat building and repairing

7.5.11 The CWP record is likely to be associated with the operation of the former shipyard. There could be potential land contamination issues associated with former boat building and repairing activities carried out at the Site.

Fire Services Department

7.5.12 Based on the reply given by FSD on 16 January 2025, there were no records of DG license, fire incident or incident of spillage / leakage of DG found within the Site.

Site Geology

7.5.13 According to the 1:20,000 Geological Map Sheet 6 (Yuen Long), the Site is underlain by Fill. According to the available ground investigation (GI) records, the Site is located on reclaimed ground having a stratum of Fill with thickness of about 1.50m to 6.50m. Underlying the Fill is a relatively thin layer of Marine Deposit with thickness of about 3.00m to 4.50m and/or Alluvium with thickness of about 0.45m to 3.50m. Completely to highly decomposed Granodiorite ranged from 2.06m to 7.50m thickness was encountered beneath the Alluvium. The bedrock encountered was moderately to slightly decomposed Granodiorite, with reduced levels ranged from -1.65 mPD to -11.42 mPD.

7.5.14 Referring to the available groundwater monitoring records, shallow groundwater table was identified, which is generally from 1.8m to 2.5m below ground level.

Summary of Site Appraisal

7.5.15 Based on the site appraisal, the Site was formerly used as a shipyard (from 1976 to 1994) and open storage (from 1983 to 2023). The possible contaminating activities may include storage, handling and use of fuels and solvents (e.g. for thinning paints, cleaning and degreasing metal parts of equipment) for ship building, repair and maintenance activities, transfer and disposal of scrap metal, metal shaving dust and paint chips during manufacturing of ship parts. Locations of the concerned areas are shown in **Figure 7.2**. Details of the site appraisal are summarised in **Table 7.3**. Intrusive site investigation (SI) works is recommended to confirm any land contamination in the Site.

Future Land Use

7.5.16 Land contamination assessment on the potentially contaminated sites would need to be evaluated against the RBRGs and if there were presence of non-aqueous phase liquid (NAPL), soil saturation (C_{sat}) / solubility limits, as stipulated in Table 2.1 and Table 2.2 of the Guidance Manual.

7.5.17 The RBRGs were developed based on a risk assessment approach to suit the local environmental conditions and community needs in Hong Kong. Decisions on contaminated soil and groundwater remediation are based on the nature and extent of the potential risks that are posed to human receptors as a result of exposure to chemicals in the soil and/or groundwater. RBRGs were developed for four different land use scenarios as below reflecting the typical physical settings in Hong Kong under which people could be exposed to contaminated soil and groundwater:

- Urban Residential
- Rural Residential
- Industrial
- Public Park

7.5.18 As the future land use of the Site would be a concrete batching plant, the RBRGs for Industrial land use scenario are considered appropriate for the assessment. The proposed RBRGs land use scenario recommended for the Site is summarised in **Table 7.3**. Relevant RBRG levels, C_{sat} and solubility limits are shown in **Appendix 7.4**.

Table 7.3 Summary of Site Appraisal

Location (Affected Land Lot No.)[1]	Current Land Use	Site Observation / Current Potentially Contaminating Activities / Information from EPD and FSD	Past Potentially Contaminating Land Uses / Activities	Approx. Site Area (m^2)	Potential COCs[2]	Future Land Uses	RBRGs Land Use Scenario
The Site (TYTL Nos. 14 & 15 and STT538)	Private parking site	The Site is comprised of two buildings (the western building and the eastern building), an open area in the eastern portion, an access road in the central portion, a jetty in the northwest and the sea in the northeastern and northwestern portions of the Site. The Site is generally concrete paved and largely vacant with private parking areas in the western building and the open area in the eastern portion of the Site. There is a disused DG store located in the western building previously used for the storage of oxy-acetylene cylinders and has been used as a storeroom for the storage of office / household appliances and equipment since operation of the shipyard was ceased. In addition, small quantities of chemicals including engine oil, hydraulic oil, turpentine and paint were observed within the eastern building and outside the disused DG store / storeroom of the Site above a covered box / wooden plank on concrete paved floor or directly on the concrete paved floor. According to the site staff, these chemicals are stored on-site temporarily and are used off-site only. No chemical spillage, oil stains or stressed vegetation were observed in the vicinity of the chemical storage areas. Given the disused DG store was used for the storage of gas only, the chemicals observed were stored temporarily and are reportedly used off-site only, and that no signs of land contamination were observed in the vicinity of the chemical storage areas, potential	Shipyard (from year 1976 to year 1994) and open storage (from year 1983 to year 2023). The possible contaminating activities may include storage, handling and use of fuels and solvents (e.g. for thinning paints, cleaning and degreasing metal parts of equipment) for ship building, repair and maintenance activities, transfer and disposal of scrap metal, metal shaving dust and paint chips during manufacturing of ship parts.	4,335 m^2 Western Building: 939 m^2 Eastern Building: 414 m^2 Former Maintenance Area: 91 m^2 Former Open Storage: 985 m^2	• Metals (Full List) • Free cyanide • VOCs (Full List) • SVOCs (Full List) • PCRs • TBTO • Dioxins • Furans	Concrete batching plant	Industrial

Location (Affected Land Lot No.)[1]	Current Land Use	Site Observation / Current Potentially Contaminating Activities / Information from EPD and FSD	Past Potentially Contaminating Land Uses / Activities	Approx. Site Area (m^2)	Potential COCs[2]	Future Land Uses	RBRGs Land Use Scenario
		land contamination issue associated with the chemical storages is not anticipated. Based on the above, no current potentially contaminating land uses / activities were identified at the Site. Based on information from the EPD and FSD, there were no records of chemical spillage / DG / fire incident for the Site. However, there is 1 valid registered CWP associated with boat building and repairing at the Site.					

Note:
1. Refer to **Figure 7.1** for the site location.
2. The potential chemicals of concern (COCs) were determined based on findings of the site appraisal and the Practice Guide and took into account current and historical land uses.
   - Full list refers to the parameters as shown in Table 2.1 – Risk-Based Remediation Goals (RBRGs) for Soil & Soil Saturation Limit and Table 2.2 – RBRGs for Groundwater and Solubility Limit under Metals, Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs) and Petroleum Carbon Ranges (PCRs) in the Guidance Manual for Use of Risk-Based Remediation Goals for Contaminated Land Management.
   - TBTO: Tributyltin oxide

7.6 Prediction and Evaluation of Potential Land Contamination Impact

7.6.1 Based on findings of the site appraisal, the Site was formerly used as a shipyard and open storage which may have potential land contamination implications to the Project.

7.6.2 As observed during the site walkover and according to information provided by the site staff, only limited and small-scale ship building, repair and maintenance activities were previously carried out at the eastern and western portions of the Site (total area of approximately 1,444 m^2) and the Site was concrete paved. The former open storage in the central portion of the Site was also of small-scale (approximately 985 m^2) and was concrete paved. In addition, based on information from the site staff, EPD and FSD, there were no records of chemical spillage / fire incident at the Site. Extensive contamination due to the operation of the former shipyard and open storage is not envisaged.

7.6.3 Land contamination assessment including intrusive site investigation (SI) works and, if required, remediation works are recommended to be carried out at a later stage of the Project prior to commencement of construction works and should follow EPD's Guidance Manual, Guidance Note and Practice Guide. Any soil/groundwater contamination would be identified and properly treated prior to the commencement of construction works under the Project. The potential Chemicals of Concern (COCs) may include metals, volatile organic chemicals (VOCs), semi-volatile organic chemicals (SVOCs), petroleum carbon ranges (PCRs), free cyanide, tributyltin oxide (TBTO), dioxins and furans and there are commercially available technologies that could tackle these COCs.

7.6.4 Given the above, land contamination impacts are considered not insurmountable to the Project if the recommended further works as outlined in **Section 7.7** were followed and contaminated soil and groundwater (if any) were properly treated using appropriate remediation methods and according to EPD's agreed Remediation Action Plan (RAP).

7.7 Recommended Further Works

7.7.1 A detailed land contamination assessment, including site appraisal (desktop review and site walkover) and SI works, shall be carried out in next stage of the Project prior to commencement of construction works to confirm the presence of land contamination within the Site. The detailed land contamination assessment will be carried out according to EPD's Guidance Manual, Guidance Note and Practice Guide.

7.7.2 In order to determine the extent and nature of any potentially contaminated areas, a Contamination Assessment Plan (CAP), detailing findings of the site appraisal and requirements for SI works would need to be submitted to EPD for endorsement. The SI works would need to be carried out according to the endorsed CAP. Following to the completion of the SI works, a Contamination Assessment Report (CAR) would be submitted to EPD for approval to document the findings of the SI works and the estimated extent of any contamination. If soil or groundwater contamination were identified, a Remediation Action Plan (RAP), discussing the appropriate remedial methods for the identified soil / groundwater contamination, would also be submitted to EPD for approval.

7.7.3 Remediation works (if necessary) would need be carried out according to the approved RAP. Upon completion of remediation work, a Remediation Report (RR) should be prepared and submitted to EPD to demonstrate that the decontamination work is adequate and is carried out in accordance with the approved CAR and RAP. No construction works, other than decontamination work, should be carried out before the approval of RR by EPD.

8 CONCLUSION

8.1 General

8.1.1 In order to confirm the acceptability of the Subject Site in respect of environmental aspects, an Environmental Assessment was carried out to examine the impacts associated with the proposed development during construction and operation phases. Potential environmental impacts including air quality, noise, water quality, waste management and land contamination issues associated with construction and operation of the proposed concrete batching plant have been assessed. It is concluded that no adverse environmental impacts on the Subject Site would be anticipated. The key findings of this assessment are summarized in the following sections.

8.2 Air Quality

8.2.1 Minor construction air quality impact would be arisen from the construction activities during the erection of the proposed plant. With the implementation of adequate air quality control measures, no adverse construction air quality impact shall be anticipated.

8.2.2 The design of the Plant and its operation plan has incorporated air pollution control technologies and control measures to abate the air quality impact generated by the production of wet concrete. Together with proper operation and maintenance practices, the air quality impact due to the operation of the Proposed Plant shall be at acceptable level and has been confirmed by the model predictions. Cumulative air quality impact arising from the Proposed Plant, and vehicular emission and marine emission within 500m assessment area have been evaluated. The prediction results indicated that the cumulative NO_2, SO_2, RSP and FSP concentrations at all existing ASRs would comply with AQOs. No adverse air quality impact due to the Proposed Plant would be anticipated.

8.3 Noise

8.3.1 With the implementation of adequate construction noise mitigation measures, it is anticipated that there would be no unacceptable noise impact on nearby NSR during the construction phase.

8.3.2 There is no existing and planned sensitive use in the vicinity. No adverse impact would therefore be anticipated. No further mitigation measure is required.

8.4 Water Quality

8.4.1 Provided that proper site management practices are followed to prevent construction site runoff and drainage water with high SS from entering nearby nullah and downstream sensitive receivers during construction phase, no adverse water quality impact is anticipated.

8.4.2 No adverse water quality impact would be expected as no wastewater will be discharged from the plant during operation. All production wastewater will be recycled. Domestic sewage from workforce and visitors (concrete mixer truck drivers) will be collected and discharged via the public sewerage network.

8.5 Waste Management

8.5.1 Provided that the identified waste arisings of the construction works are handled, transported and disposed of using approved methods and that the recommended good site practices are adhered to, adverse environmental impacts are not anticipated.

8.5.2 Provided that the environmental control measures are properly implemented, no adverse environmental impact would be anticipated with respect to solid waste management.

8.6 Land Contamination

8.6.1 Based on findings of the site appraisal, the Site was formerly used as a shipyard and open storage which may have potential land contamination implications to the Project. Further works including site appraisal, submission of CAP, intrusive SI works and, if required, remediation works were recommended to be carried out at next stage of the Project prior to commencement of the construction works and would need to follow EPD's Guidance Manual, Guidance Note and Practice Guide. With the implementation of the recommended further works for the Project, any soil/groundwater contamination would be identified and properly treated prior to the construction works. No insurmountable land contamination impacts to the Project are therefore anticipated.

Remarks

- The number of trips and the average weight of vehicles are estimated from the activities of all concerned vehicles travelled on the road.

Type of Vehicles	No. of Trips per Hour	Full load Weight (US ton)	Unladen Weight (US ton)
Mixer Truck	43	41.9	16.5
Cementitious materials (PFA/GGBS/Silica Fume) Truck	2	43.0	15.4

Appendix 3.2 Calculations of Emission Rates

Calculation of Dust Suppression Efficiency from Watering

Dust suppression efficiency is assumed to be 91.7%.
Assumptions are stated as below. With reference to the Equation (5-4) of USEPA's Control of Open Fugitive Dust Sources (EPA-450/3-98-008), dust suppression efficiency can be estimated by:

$$C = 100 - \frac{0.8 \cdot p \cdot d \cdot t}{i}$$

where
C = average control effiency, in percent
p = potential average hourly daytime evaporation rate, in mm/hr
d = average hourly daytime traffic rate, in vehicles per hour
i = application intensity, in L/m^2
t = time between applications, in hour

The following assumptions are made for assessment purpose:

Assumption 1
Potential average hourly daytime evaporation rate p can be estimated by 0.0049 * e, where e is the mean annual average evaporation rate (inches).
From past measurement data in Hong Kong's Observatory, evaporation recorded at King's Park between 1992 - 2020 is 1204.1 mm[1]. Therefore p = 0.0049 * (1204.1 mm) = 0.0049 * (47.40551 inches) = 0.2323.

Assumption 2
For HR01, estimate average hourly daytime traffic rate in vehicles per hour = 90[2] (d=90)
For HR02-HR03, estimate average hourly daytime traffic rate in vehicles per hour = 45[2] (d=45)

Assumption 3
For HR01, assume watering application intensity as 2.02 L/m^2 [2] (i=2.02)
For HR02-HR03, assume watering application intensity as 1.01 L/m^2 [2] (i=1.01)

Assumption 4
Assume watering frequency as once every hour. [2] (t=1)

With the above assumptions, dust suppression efficiency is calculated as below:
For HR01: C = 100 - 0.8*0.2323*90*1/2.02 = **91.7%**
For HR02-HR03: C = 100 - 0.8*0.2323*45*1/1.01 = **91.7%**

Notes:
[1] The evaporation recorded at King's Park between 1992 - 2020 is taken from https://www.hko.gov.hk/en/cis/normal/1991_2020/normals.htm

Appendix 3.2 Calculations of Emission Rates

Particle Size Distribution of Process

RSP-to-TSP Ratio of Concrete Batching Process (by Emission Factors)

Source	Uncontrolled Emission Factor (kg/Mg)		Controlled Emission Factor (kg/Mg)		Uncontrolled RSP-to-TSP Ratio	Controlled RSP-to-TSP Ratio
	TSP	RSP	TSP	RSP		
Cement unloading to elevated storage silo (pneumatic)	0.36	0.24	0.00050	0.00017	0.6667	**0.3400**
Cement supplement unloading to elevated storage silo (pneumatic)	1.57	0.65	0.0045	0.0024	0.4140	**0.5333**
Weigh hopper loading (Aggregate and Sand)	0.0026	0.0013	-	-	**0.5000**	-
Mixer loading (central mix)	0.286	0.078	0.0092	0.0028	0.2727	**0.3043**

Remark:

(a) Reference from Table 11.12-1 Emission Factors for Concrete Batching, Chapter 11.12 Concrete Batching, AP-42, USEPA (Version 01/12)

Particle Size Distribution of General Concrete Batching Process (Controlled by Fabric Filter)

Perentage of Particle Size Range

Particale Size Range [a]	Average Partical Size [a]	% before Removal [a]	Removal Efficiency % [b]	% after Removal	Normalised Fraction [c]	Normalised Fraction for PM10 [c, d]
≤ 1.0	0.50	4	99.0%	0.04	7%	12%
1.0 - 2.0	1.50	7	99.0%	0.07	12%	21%
2.0 - 2.5	2.25	4	99.0%	0.04	7%	12%
2.5 - 3.0	2.75	3	99.5%	0.015	3%	5%
3.0 - 4.0	3.50	7	99.5%	0.035	6%	11%
4.0 - 5.0	4.50	5	99.5%	0.025	4%	8%
5.0 - 6.0	5.50	4	99.5%	0.02	3%	6%
6.0 - 10	8.00	17	99.5%	0.085	15%	26%
10 - 30	20.00	49	99.5%	0.245	43%	-

Remark:

(a) Derived from Table B.2.2 "Description of Particle Size Categories" for Category 3 “Mechanically Generated Aggregate, Unprocessed Ores”, Page B.2-13 of Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95) (see below)

(b) Control efficiency of fabric filter on different size of particle refers to Table B.2-3 Typical Collection Efficiencies of Various Particulate Control Device, Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95) (see below)

(c) Normalised Fraction = % after normal of each particale size range / sum of % after removal of all particle size ranges

(d) Sum of normalizsed fraction maintains 100% in air dispersion model by applying percentage in 6 decimal places.

Cumulative Percentage of Particle Size

Particale Size [a]	Cumulative ratio before Removal [a]	Cumulative % after Removal [b]
≤ 1.0	4.000%	7%
≤ 2.0	11.000%	19%
≤ 2.5	15.000%	26%
≤ 3.0	18.000%	29%
≤ 4.0	25.000%	35%
≤ 5.0	30.000%	39%
≤ 6.0	34.000%	43%
≤ 10	51.000%	57%
≤ 30	100.000%	100%

Remarks

(a) Reference from Table B.2.2 "Description of Particle Size Categories" for Category 3 “Mechanically Generated Aggregate, Unprocessed Ores”, Page B.2-13 of Appendix B.2 Generalized Particle Size Distributions, AP-42, USEPA (Version 1/95) (see below)

(b) Deducted from Normalised Fraction of Table "Percentage of Particle Size Range"

FSP-to-RSP and FSP-to-TSP Ratios

FSP-to-RSP ratio (Uncontrolled)	**0.294**
FSP-to-RSP ratio (Controlled)	**0.455**
FSP-to-TSP ratio (Uncontrolled)	**0.150**

Remarks

(a) Deducted from Table "Cumulative Percentage of Particle Size Range"

0		Open Sea *	0.001	0.1	0.1

* Non-PlanD Land Utilization categories

Remarks

1. Surface roughness length is based on an inverse-distance weighted geometric mean for an upwind distance of 1km relative to the concerned site.
2. Reference to AERMOD Implementation Guide, the determination of the Bowen ratio should be based on a simple unweighted geometric mean (i.e., no direction or distance dependency) for a representative domain, with a default domain defined by a 10km by 10km region centered on the measurement site.
3. Reference to AERMOD Implementation Guide, the determination of the albedo should be based on a simple unweighted arithmetic mean (i.e., no direction or distance dependency) for the same representative domain as defined for Bowen ratio, with a default domain defined by a 10km by 10km region centered on the measurement site.

APPENDIX 3.4

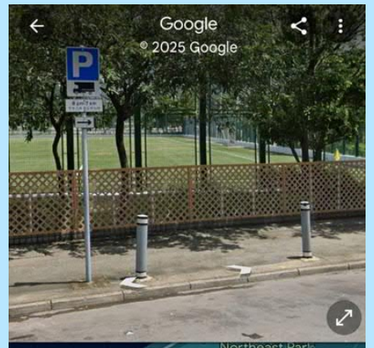
Calculation of Vehicular Emissions

Annex I

N

Remarks:
As stipulated in Transport Department's Road Users' Code "Where Not To Park", 'on a road with street lighting - that is a road where the street lights are spaced not more than 200 metres apart', parking is prohibited.

As measured and indicated below, the lamp posts are spaced not more than 200 metres apart on Tam Kon Shan Road, parking is prohibited on Tam Kon Shan Road, except the overnight parking of Goods Vehicle outside Tsing Yi Northeast Park permitted as per the parking sign.



Overnight parking of Goods Vehicles outside Tsing Yi Northeast Park

N	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Remarks:

Y:

The start profile 'Y' is adopted for Tam Kon Shan Road (Road 9, 10 and 11)
- As indicated on Annex I on Appendix 3.4, no parking is allowed on Tam Kon Shan Road.
- There are no bus stops on Tam Kon Shan Road and hence no engine start from FBSD, FBDD and NFB9 is expected
- Most of the HGVs along the local roads in the assessment area are the working vehicles travelling to/from the Project, other industrial buildings and dockyards on Tam Kon Shan Road, which includes concrete mixer trucks and cement tankers. These working vehicles are not supposed to park along these roads, i.e. no engine start is expected.
- To account for parking in Tsing Yi Northeast Park Car Park, vehicle classes that can park inside Tsing Yi Northeast Park Car Park (including PC, TAXI, LGV3, LGV4, LGV6, PLB, PV4, PV5, NFB6, NFB7, NFB8 and MC, i.e. start profile Y) were assumed to have potential start on Tam Kon Shan Road (Road 9,10 and 11)

To account for parking at HGV on-street parking site (for 8PM to 7AM) outside Tsing Yi Northeast Park Car Park:
- emission from HGV9 is modelled under precise approach as detailed in Appendix 3.6, for worst case scenario.

N: No start emission under broad-brush approach.

Remarks:

Y:

The start profile 'Y' is adopted for Tam Kon Shan Road (Road 9, 10 and 11)
- As indicated on Annex I on Appendix 3.4, no parking is allowed on Tam Kon Shan Road.
- There are no bus stops on Tam Kon Shan Road and hence no engine start from FBSD, FBDD and NFB9 is expected
- Most of the HGVs along the local roads in the assessment area are the working vehicles travelling to/from the Project, other industrial buildings and dockyards on Tam Kon Shan Road, which includes concrete mixer trucks and cement tankers. These working vehicles are not supposed to park along these roads, i.e. no engine start is expected.
- To account for parking in Tsing Yi Northeast Park Car Park, vehicle classes that can park inside Tsing Yi Northeast Park Car Park (including PC, TAXI, LGV3, LGV4, LGV6, PLB, PV4, PV5, NFB6, NFB7, NFB8 and MC, i.e.

N:

No start emission under broad-brush approach.

Appendix 3.4 Calculation of Vehicular Emisisons

Subject: RE: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

Thank you for your prompt response. Please be advised that the methodology for the traffic forecast remains consistent with that adopted in the Traffic Impact Assessment for the aforementioned project.

Should you require any further information, please let us know.

Yours sincerely,
[redacted]

Subject: Re: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

Please note that Environmental Assessment is not under our purview. We are not in a position to provide comments on the traffic figures tailor-made for the environmental assessment purposes.

Notwithstanding the above, we have no objection in principle to the methodology for traffic forecast provided that it is the same as that adopted in the traffic impact assessment for the captioned project.

Regards,
[redacted]

Subject: Traffic Forecast Methodology for Air Quality Impact Assessment

Dear [redacted]

We are the traffic consultant for the Proposed CBP Development at Tam Kon Shan Road, Tsing Yi. As noted in our environmental consultant's correspondence with the Environmental Protection Department (EPD), an Environmental Assessment (EA) has been submitted, in which traffic data has been adopted as part of the Air Quality Impact Assessment.

In this regard, please find attached the proposed methodology for forecasting traffic data, which is solely for use in the Air Quality Impact Assessment, for your review and consideration. Grateful if you could advise whether you have any in-principle objection to the methodology.

Thank you for your time and cooperation.

Yours sincerely,

[redacted]

APPENDIX 3.5

Calculation of Marine Emissions

Description of Marine Routes

Marine Traffic

Route 1 is located to the north of the CBP, and the vessels that travel on it are mainly river trade vessels, tug and tows, local ferries, fast launches, small crafts and ocean-going vessels.
The information about Route 1 are obtained by site surveys conducted by Marine Consultant.
Despite the actual routes, all general marine vessels are considered travelling in the water at the nearest and safe distance (i.e. Route 1) from the project site/nearby shipyards.

The bypassing marine traffic consists of the following vessel types:
- River trade vessels: Fully Cellular Container Vessel (RTV01), Dry Bulk Carrier (RTV03)
- Fast launches (FL01)
- Tug and tows (TT01)
- Local ferries (LF01)
- Small crafts: Pleasure Vessel (SC01)
- Ocean-going vessels: Gas Carrier/Tanker (OGV06), Chemical Carrier/Tanker (OGV07), Oil Tanker (OGV08)

The marine traffic induced by the Project consists of the following vessel types:
- River trade vessels: Dry Bulk Carrier (RTV03M, RTV03H, for transporting aggregates), Chemical Carrier/Tanker (RTV07M, RTV07H, for transporting cement)

Appendix 3.5 Calculation of Marine Emissions

Subtotal	**-**	**-**	**-**	**1358**	**100.00%**

Remark

1. Marine traffic consultant has not further breakdown the marine traffic data of OGV into various vessel types. Therefore, vessel types catalogized by the Marine Department is adopted to breakdown the marine traffic data (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_2_y_a2.pdf).
2. According to data from marine consultants, tugs and cross boundary ferry are classified as an independent vessel type and are consequently excluded from calculation of marine emission of RTV.
3. Classification of vessel type refers to Table 3-2 and Table 4-1 of MVEIS, Fast Launch is classifed as "Others (GRT >= 1000)" as a conservative estimation .
4. The vessel class refer to Cap. 548D MERCHANT SHIPPING (LOCAL VESSELS) (CERTIFICATION AND LICENSING) REGULATION – SCHEDULE 1 Class and Type of Local Vessel (https://www.elegislation.gov.hk/hk/cap548D!en@2014-03-03T00:00:00).
5. Number of vessels / arrivals refers to statistics published by Marine Department.
- For RTV and OGV, the number of arrivals refers to Table 3 in Port of Hong Kong Statistical Tables 2023 (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_ast_2023.pdf).
- For Small Crafts (SC), the number of licensed vessels in refer to Table 24 in Port of Hong Kong Statistical Tables 2023 (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_ast_2023.pdf).

Remark

1. The hourly traffic volume of a vessel type is obtained by the following formula:
hourly traffic volume = traffic data x proportion of arrivals

2. The hourly traffic volume for each vessel ID is used as their hourly profile in air dispersion modelling.

3. Maneuvering is assumed for RTV03 during 7:00-8:00, 11:00-12:00, 15:00-16:00 and 19:00-20:00, and for RTV07 during 11:00-12:00 and 15:00-16:00.

4. Hotelling is assumed for RTV03 during 7:00-13:00 and 15:00-19:00, and for RTV07 during 11:00-15:00.

Load Factor by Vessel

Vessel Category	Vessel Type	Engine Category	GRT/DWT/PAX Sub-group	Fairway Cruise	Slow Cruise	Maneuvering	Hotelling
RTV	Fully Cellular Container Vessel	Main Engine	GRT >= 1000	0.450	0.450	0.300	0.000

Remark

1. The load factors refers to MVEIS:

- Load factors of main engine of RTV (Table 4-7)
- Load factors of auxiliary engine of RTV (Table 4-10)
- Load factors of main engine of Fast Launch (Table 4-7)
- Load factors of auxiliary engine of Fast Launch (Table 4-10)
- Load factors of main engine of Tug (Table 4-7)
- Load factors of auxiliary engine of Tug (Table 4-10)
- Load factors of main engine of Local Ferry (Table 4-9)
- Load factors of main engine of Local Ferry (Table 4-10)
- Load factors of main engine of Pleasure Vessel of Small Crafts (Table 3-18)
- Load factors of auxiliary engine of Pleasure Vessel of Small Crafts (Table 3-21)
- Load factors of main engine of OGV (Table 3-18)
- Load factors of auxiliary engine of OGV (Table 3-21)

Remarks

1. Marine traffic consultant has not further breakdown the marine traffic data of OGV into various vessel types. Therefore, vessel types catalogized by the Marine Department is adopted to breakdown the marine traffic data (https://www.mardep.gov.hk/filemanager/en/share/fact/pdf/portstat_2_y_a2.pdf).
2. According to data from marine consultants, tugs and cross boundary ferry are classified as an independent vessel type and are consequently excluded from calculation of marine emission of RTV.
3. Classification of vessel type refers to Table 3-2 and Table 4-1 of MVEIS, Fast Launch is classifed as "Others (GRT >= 1000)" as a conservative estimation .
4. The vessel class refer to Cap. 548D MERCHANT SHIPPING (LOCAL VESSELS) (CERTIFICATION AND LICENSING) REGULATION – SCHEDULE 1 Class and Type of Local Vessel (https://www.elegislation.gov.hk/hk/cap548D!en@2014-03-03T00:00:00).
5. The main engine type of RTV, Tug, FL and SC refers to S4.2.6 of MVEIS.
6. The main engine type of OGV and LF refers to Table 3-17 of MVEIS. SSD, MSD, HSD and ST denote slow speed diesel, medium speed diesel, high speed diesel and steam turbine engine, respectively.
7. According to the Air Pollution Control (Marine Light Diesel) Regulation, the sulphur content of locally supplied marine light diesel is capped at 0.05%. Locally supplied marine light diesel oil are assumed to be used for refueling RTVs, Tugs, FLs and SCs in Hong Kong. Marine gas oil with 0.05% sulphur content is assumed to be used for refueling LFs.
8. All vessels are required to use compliant fuels (sulphur content <= 0.5%) under the Air Pollution Control (Fuel for Vessels) Regulations. Therefore, it is assumed that all OGVs use fuel with sulphur content not exceeding 0.5%.
9. The GRT sub-group refers to Table 4-5; the highest GRT for each vessel type is adopted as a conservative approach.
10. DWT / PAX Sub-Group refers to Table 3-18 of MVEIS; the highest DWT/PAX is adopted as a conservative approach.
11. Vessel calls are the number of vessel arrivals in Hong Kong in a year and refer to Section 1.4.5-1.4.8 and Table 3-17 of MVEIS.
12. Proportion of main engine type for OGV refers to Table 3-17 of MVEIS. Proportion of engine types for local ferry is based on the number of operators for a certain route code. Proportions of engine types for other vessel categories are set as 100%.
13. The average engine power makes references to MVEIS:
- main engine power of RTV (Table 4-5)
- auxiliary engine power of RTV (Table 4-6)
- main engine power of Tug (Table 3-15)
- auxiliary engine power of Tug (Table 3-20)
- main engine power of Fast Launch (Table 4-5)
- auxiliary engine power of Fast Launch (Table 4-6)
- main engine power of Pleasure Vessel (Table 3-15)
- auxiliary engine power of Pleasure Vessel (Table 3-20)
- main engine power of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-5)
- auxiliary engine power of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-6)
- main engine power of OGV FCCV (Table 3-16)
- auxiliary engine power of OGV FCCV (Table 3-22)
- main engine power of OGV other vessel types (Table 3-15)
- auxiliary engine power of OGV other vessel types (Table 3-20)
- auxiliary boiler power of OGV (Table 3-23)
- main engine power of Local Ferry (Table 3-15)
- auxiliary engine power of Local Ferry (Table 3-20)

With reference to Table 3-23 of MVEIS, there is no boiler for Fishing/Fish Processing Vessel of OGV.

14. The Baseline Specific Fuel Consumption (BSFC) makes reference to MVEIS and IMO Fourth Greenhouse Gas Study 2020:
- BSFC of RTV, Tug, Fast Launch and Small Vessels (Table 4-16, MVEIS)
- BSFC of OGV (Table 19, IMO Fourth Greenhouse Gas Study 2020)
  - SFC_BASE for ships built in Years 1984-2000 is adopted as a balance assumption.
  - According to Page 71 of IMO Fourth Greenhouse Gas Study, it is assumed that the Auxiliary Engine Specific Fuel Consumption Specific Fuel Consumption = Baseline Specific Fuel Consumption of Auxiliary Engines.
  - According to Page 71 of IMO Fourth Greenhouse Gas Study, it is assumed that the Auxiliary Boiler Specific Fuel Consumption Specific Fuel Consumption = Baseline Specific Fuel Consumption of Auxiliary Boilers.
- BSFC of main engine of Local Ferry (Table 3-27, MVEIS)
- BSFC of auxiliary engine of Local Ferry (Table 4-16, MVEIS)

15. The NOx emission factor refers to MVEIS and IMO Fourth Greenhouse Gas Study 2020:
- NOx emission of RTV, Tug and Fast Launch (Table 4-16, MVEIS)
- NOx emission of main engine of Pleasure Vessel (Table 4-16, MVEIS)
- NOx emission of auxiliary engine of Pleasure Vessel (Table 3-28, MVEIS)
- NOx emission of Small Fishing Vessel/Sampan, Tug Boat and Work Boat (Table 4-16, MVEIS)
- NOx emission factor of OGV (Table 49, Annex M, IMO Fourth Greenhouse Gas Study 2020)
- NOx emission factor of main engine of Local Ferry (Table 3-27, MVEIS)
- NOx emission factor of auxiliary engine of Local Ferry (Table 3-28, MVEIS)

16. The SO_2 emission factor is calculated based on the formula stated in Paragraph 4.2.31 of MVEIS:
SO_2 EF = BSFC x 2 x 0.97753 x Fuel Sulphur Fraction

17. The RSP emission factor is calculated based on the formula stated in Paragraph 4.2.31 of MVEIS:
PM_{10} EF = 0.23 + BSFC x 7 x 0.02247 x (Fuel Sulphur Fraction - 0.0024)

18. - According to the Forth IMO Greenhouse Gas Study, the RSP to FSP conversion factor used for OGV is 0.92.
- According to According to Paragraph 4.2.32 of MVEIS, the RSP to FSP conversion factor used for other vessel types is 0.97.

Emission Factors by Engine Category by Vessel

Vessel Category	Vessel Type	Route	Route Code	Engine Category	Operation Mode	Load Factor	NOx Emission Factors (g/hr) [1]	SO_2 Emission Factors (g/hr) [1]	RSP Emission Factors (g/hr) [1]	FSP Emission Factor (g/hr) [1]

Remarks

1. The load factor makes reference to the *Load_factor* sheet. Whenever a load factor is not available, it is assumed to be 0.02 for main engine and 1 otherwise for calculation purpose.
1. The calculations of the emission factor of each engine type refer to the following equation: Emission Factor of an Engine Type (g/hr) = Engine Power (kW) * Emission Factor (g/kWh) * Engine Load Factor.

Composite Emission Factors by Vessel

Vessel Category	Vessel Type	Route Code	Operation Mode	Composite NOx Emission Factors (g/hr) [1]	Composite SO2 Emission Factors (g/hr) [1]	Composite RSP Emission Factors (g/hr) [1]	Composite FSP Emission Factor (g/hr) [1]

Remark

1. Total Emission Rate is determined by this equation : Main Engine Emission Rate + Auxiliary Engine Emission Rate + Auxiliary Boiler Emission Rate (if applicable).

Notes

[1] The release height of the vessels are determined by desktop review or on-site observations.

[2] The exhaust temperature refer to the journal article: Dong, Thi Minh Hao & Xuan Phuong Nguyen. (2019). Exhaust Gas Recovery from Marine Diesel Engine in Order to Reduce the Toxic Emission and Save Energy: A Mini Review. Journal of Mechanical Engineering Research & Developments, 42(5):143-147. https://doi.org/10.26480/jmerd.05.2019.143.147. Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature of documented in this article was adopted as a conservative approach.

[3] According to desktop review, most of the local ferries and and fast launches are equipped with the water jet propulsion system. As conservative approach, it is assumed the water jet propulsion system is installed in all local ferries and fast launches, and their exhaust temperature refer to the engine specification of VETUS exhaust system (https://webshop.vetus.com/en/products/exhaust-systems). Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature documented was adopted as a conservative approach.

[4] Acoording to 'Examination Guidebook on Pleasure Vessel Operator Grade 2 Certificate of Competency' (May 2021) issued by the Hong Kong Marine Department, wet exhaust system would be installed in some pleasure vessels. As a conservative assessment, it it assumed that all pleasure vessels are equiped with water jet proplusion system and their exhaust temperature refer to the engine specification of VETUS exhaust system (https://webshop.vetus.com/en/products/exhaust-systems). Given that other emission sources identified in this study (i.e., industrial/vehicular emission sources) mostly affect the air quality at a lower level, the lowest temperature documented was adopted as a conservative approach.

[5] The stack parameters, except release height and exit temperature, refer to approved EIA - "Route 11 (Section between Yuen Long and North Lantau)" (EIA-297/2023).

[6] The stack parameters, except release height and exit temperature, refer to approved EIA - "Widening of Tsuen Wan Road and the associated junction improvement works" (EIA-296/2023).

Remark

1. Despite the actual routes, all general marine vessels are considered travelling in the water at the nearest and safe distance from the project site / nearby shipyards.
2. The average speed is calculated from the speed distribution for each vessel on each route.
3. The distance is measured for each route.
4. The calculations of emission factors refer to the following equation: Emission Factor (g/s-vessel) = Composite Emission Factor (g/hr) * Time-in-mode (hr) / 3600.

Subject: Re: Marine Traffic Forecast Methodology for Air Quality Impact Assessment
Attachments: 31048-R04-01.pdf

Dear [redacted],

Thank you for your email regarding the methodology for forecasting marine traffic data for the Air Quality Impact Assessment.

As the Air Quality Impact Assessment falls under the purview of the EPD, please consult directly with them regarding this matter.

Regarding the Marine Traffic Visual Survey on Part 3, I have no comments on its content.

For Part 6 - Major Planned/Other Committed Developments, I noticed that you mentioned the Kau Yi Chau Artificial Islands (KYCAI) Project. If you require details or the commencement timeline of this project, I suggest reaching out directly to CEDD for clarification.

Thank you.

Subject: Marine Traffic Forecast Methodology for Air Quality Impact Assessment

---

Dear [redacted],

We are the marine consultant for the Proposed CBP Development at Tam Kon Shan Road, Tsing YiAs noted in our environmental consultant's correspondence with the Environmental Protection Department (EPD), an Environmental Assessment (EA) has been submitted, in which marine traffic data has been adopted as part of the Air Quality Impact Assessment.

In this regard, please find attached the proposed methodology for forecasting marine traffic data, which is solely for use in the Air Quality Impact Assessment, for your review and consideration. Grateful if you could advise whether you have any in-principle objection to the methodology.

Thank you for your time and cooperation.

Yours sincerely,

[redacted]

Remarks

[1] NO/NO2 ratio, at the respective running speed, was calculated based on emisison factors extracted from EMFAC-HK.
[2] Due to the lack of information, NOx cold idling emission factor was referenced to the corresponding hot idling emission factor.
[3] Due to the lack of information, PM cold idling emission factor was referenced to the corresponding hot idling emission factor.
[4] Reference made to Table 36 of Vehicle Emissions and Air Demand for Ventilation (VEADV).
[5] Reference made to Table 37 of VEADV.
[6] Reference made to the approved Liantang / Heung Yuen Wai Boundary Control Point and Associated Works EIA Report.
[7] All TSP (PM) emissions were assumed for RSP and FSP as a conservative approach.
[8] Reference made to Table 33 of VEADV.
[9] Reference made to Table 34 of VEADV.
[10] PM cold and hot idling emission factors are assumed to be 0 as the running and starting emission factors from EMFAC-HK are also 0.
[11] Due to the lack of information and similarity in taxi and PC, hot idling emission factors were referenced to corresponding hot idling emission factor of PC (petrol).
[12] NOx idling emission factor was referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by EPD whenever available; otherwise the highest emission factor in the same vehicle class was adopted as a conservative approach.
[13] Reference made to Table 42 of VEADV.
[14] Reference made to Table 43 of VEADV.
[15] Reference made to Table 39 of VEADV.
[16] Reference made to Table 40 of VEADV.
[17] Reference made to Table 45 of VEADV.
[18] Reference made to Table 46 of VEADV.
[19] Reference made to Table 27 of VEADV.
[20] NOx cold idling emission factor was referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by EPD whenever possible; otherwise it was referenced to the corresponding hot idling emission factor.

Remark

[1] Maximum number of HGVs allowed to be parked overnight is determined by observation based on the length of the parking site (i.e. 10 HGVs).

[2] 10 HGVs are assumed to leave the parking site in each hour from 8PM to 7AM (i.e. allowed parking hours) as a conservative approach.

Remark
1. $W = R + S_{aw} + I$
where
W: total emission within PTI of a vehicle type with a fuel type in an hour,
R: running emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Running Emission within PTI (g)* table above,
S_{aw}: adjusted start emission within PTI of the vehicle type with the fuel type in the hour, obtained from the *Adjusted*

APPENDIX 3.7

Derivation of Cumulative Annual Average NOX-to-NO2 Conversion Equation using Jenkin Method

Appendix 3.7 Derivation of Cumulative Annual Average NOX-to-NO2 Conversion Equation using Jenkin Method

Jenkin Method for Long-term Cumulative NO_2 Assessment

With reference to the *Review of Methods for NO to NO_2 Conversion in plumes at short ranges*[1], Jenkin method was adopted for the conversion of cumulative annual average NO_x to NO_2 by using the functional form of annual mean of NO_2-to-NOx. The mentioned functional form is referenced from Jenkin, 2004a[2] and is presented below:

$$[NO2] = \frac{\left([\mathrm{NOx}] + [\mathrm{OX}] + \frac{\mathrm{J}}{\mathrm{k}}\right) - \sqrt{([NOx] + [OX] + \frac{J}{k})^2 - 4[NOx][OX]}}{2}$$

where

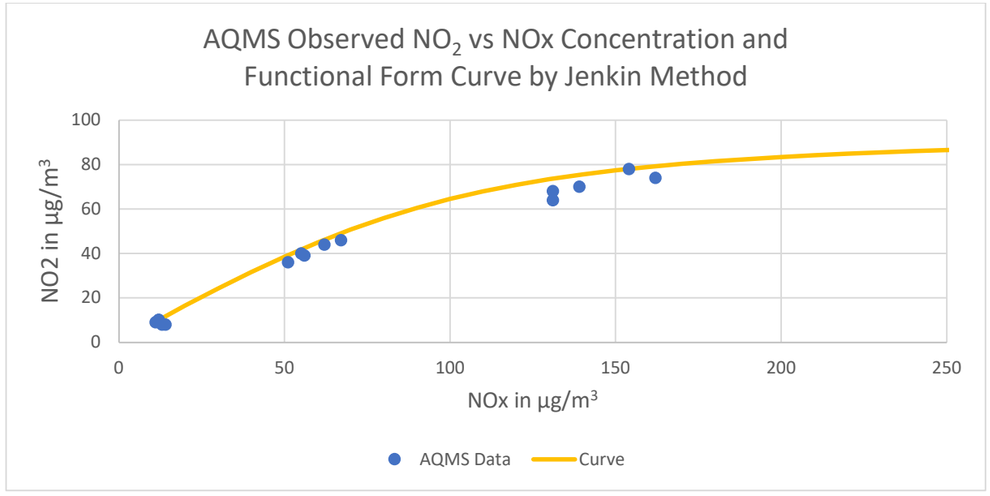
$[NO_2]$	is the NO_2 concentration
$[NO_x]$	is the NOx concentration
[OX]	is the sum of NO_2 concentration and O_3 concentration (i.e. [OX] = $[NO_2]$ + $[O_3]$)
J	is the photolysis rate of NO_2
k	is the rate coefficient for reaction between NO and O_3

The above functional form was used to analyze the annual mean data obtained from the nearest EPD's air quality monitoring stations (AQMS) including Tsuen Wan general station, Tap Mun general station and Roadside AQMS (i.e. Mong Kok roadside station). The recent five years annual mean data are extracted and presented in below table. Scattered plot for recent 5 years annual means NO_2 versus NO_x concentrations obtained from relevant AQMS was created. The functional form curve would fit the annual mean data when [OX] = 95.57 µg/m^3 and J/k = 17.114 µg/m^3. The value of [OX] and J/k are considered reasonable as they are within typical value range for Hong Kong. The resulting functional form curve was adopted for the cumulative annual average NO_x to NO_2 conversion. The curve is slightly higher than all the annual mean data obtained from AQMS, the calculated annual average NO_2 concentration using the obtained functional form curve based on the observed annual average NO_x obtained from AQMS are presented in below table, the calculated annual average NO_2 concentration are higher than the observed annual average NO_2 concentration, no underestimation of the annual average NO_2 concentration is expected.



For the long-term cumulative NO_2 assessment (i.e. predictions of annual average NO_2 concentration), cumulative annual average NO_x to NO_2 conversion equation for this assessment was calculated as follows:

$$[NO2]_c = \frac{([NOx]_c + 95.57 + 17.11) - \sqrt{([NOx]_c + 95.57 + 17.11)^2 - 4[NOx]_c \times 95.57}}{2}$$

where

$[NO_2]_c$	is the predicted cumulative NO_2 concentration
$[NO_x]_c$	is the predicted cumulative NO_x concentration

Site Walkover Checklist

Annex C1
Site Walkover Checklist

DATE OF INSPECTION 12 December 2024

GENERAL SITE DETAILS

~~SITE OWNER~~/CLIENT [redacted]

PROPERTY ADDRESS Tsing Yi Town Lot Nos. 14 and 15 and adjoining Government Land,
Tam Kon Shan Road, Tsing Yi, New Territories

PERSON CONDUCTING THE QUESTIONNAIRE

NAME Mr. Alex Fan / Ms. Chloe Ng

POSITION Graduate / Senior Environmental Consultant, AECOM

AUTHORIZED OWNER/CLIENT REPRESENTATIVE (IF APPLICABLE)

NAME [redacted]

POSITION [redacted]

TELEPHONE [redacted]

SITE ACTIVITIES

Briefly describe activities carried out on site, including types of products/chemicals/materials handled. **Obtain a flow schematic if possible.**

Number of employees:	Full-time:	1
	Part-time:	N/A
	Temporary/Seasonal:	N/A
Maximum no. of people on site at any time:		50
Typical hours of operation:		8am – 5pm
Number of shifts:		N/A
Days per week:		6
Weeks per year:		52
Scheduled plant shut-down:		N/A

Detail the main sources of energy at the site:

Gas	~~Yes~~/No
Electricity	Yes/~~No~~
Coal	~~Yes~~/No
Oil	~~Yes~~/No
Other	~~Yes~~/No

SITE DESCRIPTION

This section is intended to gather information on site setting and environmental receptors on, adjacent or close to the site.

What is the total site area: Approx. 4,335 m^2

What area of the site is covered by buildings (%): 30 %

Please list all current and previous owners/occupiers if possible. Supreme Enterprises, Limited

---

Is a site plan available? If yes, please attach. Yes/~~No~~ Refer to **Figure 7.1**

Are there any other parties on site as tenants or sub-tenants? ~~Yes~~/No

If yes, identify those parties: N/A

Describe surrounding land use (residential, industrial, rural, etc.) and identify neighbouring facilities and types of industry.

North: Open water

South: Tam Kon Shan Road

East: Shipyard (Industrial)

West: Shipyard (Industrial)

Annex C1
Site Walkover Checklist

Describe the topography of the area (flat terrain, rolling hills, mountains, by a large body of water, vegetation, etc.).

Flat reclaimed land by the sea.

State the size and location of the nearest residential communities.

Cheung On Estate (approx. 450m east of the Site, area of about 7.9 ha)

Are there any sensitive habitats nearby, such as nature reserves, parks, wetlands or sites of special scientific interest?

No.

Questionnaire with Existing/Previous Site Owner or Occupier

	Yes/No	Notes
1. What are the main activities/operations at the above address?	--	Private parking site
2. How long have you been occupying the site?	--	48 years, since 1976
3. Were you the first occupant on site? (If yes, what was the usage of the site prior to occupancy.)	Yes	Open water
4. Prior to your occupancy, who occupied the site?	N/A	
5. What were the main activities/operations during their occupancy?	--	Shipyard from 1976 to 1994
6. Have there been any major changes in operations carried out at the site in the last 10 years?	No	
7. Have any polluting activities been carried out in the vicinity of the site in the past?	No	
8. To the best of your knowledge, has the site ever been used as a petrol filling station/car service garage?	No	
9. Are there any boreholes/wells or natural springs either on the site or in the surrounding area?	Yes	
10. Do you have any registered hazardous installations as defined under relevant ordinances? (If yes, please provide details.)	Yes	There is a disused Dangerous Goods (DG) store previously used for storing oxy-acetylene cylinders located in the western building of the Site.
11. Are any chemicals used in your daily operations? (If yes, please provide details.)	No	
• Where do you store these chemicals?	N/A	
12. Material inventory lists, including quantities and locations available? (If yes, how often are these inventories updated?)	No	
13. Has the facility produced a separate hazardous substance inventory?	No	
14. Have there ever been any incidents or accidents (e.g. spills, fires, injuries, etc.) involving any of these materials? (If yes, please provide details.)	No	

	Yes/No	Notes
15. How are materials received (e.g. rail, truck, etc.) and stored on site (e.g. drums, tanks, carboys, bags, silos, cisterns, vaults and cylinders)?	N/A	No materials are received and stored for use on-site.
16. Do you have any underground storage tanks? (If yes, please provide details.)	No	
• How many underground storage tanks do you have on site?	N/A	
• What are the tanks constructed of?	N/A	
• What are the contents of these tanks?	N/A	
• Are the pipelines above or below ground?	N/A	
• If the pipelines are below ground, has any leak and integrity testing been performed?	N/A	
• Have there been any spills associated with these tanks?	N/A	
17. Are there any disused underground storage tanks?	No	
18. Do you have regular check for any spillage and monitoring of chemicals handled? (If yes, please provide details.)	No	
19. How are the wastes disposed of?	--	Wastes are disposed to the nearby refuse collection point.
20. Have you ever received any notices of violation of environmental regulations or received public complaints? (If yes, please provide details.)	No	
21. Have any spills occurred on site? (If yes, please provide details.)	No	
• When did the spill occur?	N/A	
• What were the substances spilled?	N/A	
• What was the quantity of material spilled?	N/A	
• Did you notify the relevant departments of the spill?	N/A	
• What were the actions taken to clean up the spill?	N/A	
• What were the areas affected?	N/A	
22. Do you have any records of major renovation of your site or re-arrangement of underground utilities, pipe work/underground tanks (If yes, please provide details.)	No	
23. Have disused underground tanks been removed or otherwise secured (e.g. concrete, sand, etc.)?	No	
24. Are there any known contaminations on site? (If yes, please provide details.)	No	
25. Has the site ever been remediated? (If yes, please provide details.)	No	

Annex C1
Site Walkover Checklist

Observations

	Yes/No	Notes
1. Are chemical storage areas provided with secondary containment (i.e. bund walls and floors)?	No	The chemicals are stored on a covered box / wooden plank or directly above concrete paved ground.
2. What are the conditions of the bund walls and floors?	--	The covered box / wooden plank and concrete paved ground were observed to be intact.
3. Are any surface water drains located near to drum storage and unloading areas?	N/A	
4. Are any solid or liquid waste (other than wastewater) generated at the site? (If yes, please provide details.)	No	
5. Is there a storage site for the wastes?	No	
6. Is there an on-site landfill?	No	
7. Were any stressed vegetation noted on site during the site reconnaissance? (If yes, please indicate location and approximate size.)	No	
8. Were any stained surfaces noted on-site during the site reconnaissance? (If yes, please provide details.)	No	
9. Are there any potential off-site sources of contamination?	No	
10. Does the site have any equipment which might contain polychlorinated biphenyls (PCBs)?	No	
11. Are there any sumps, effluent pits, interceptors or lagoons on site?	No	
12. Any noticeable odours during site walkover?	No	
13. Are any of the following chemicals used on site: fuels, lubricating oils, hydraulic fluids, cleaning solvents, used chemical solutions, acids, anti-corrosive paints, thinners, coal, ash, oily tanks and bilge sludge, metal wastes, wood preservatives and polyurethane foam?	No

12 December 2024

Dear Sir/Madam,

Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information of Chemical Waste Producer and Chemical Spillage Accident

AECOM Asia Co. Ltd. has been commissioned by Supreme Enterprise Limited as the Consultant to undertake land contamination assessment for the captioned project. The concerned site is indicated in the figure enclosed.

As part of the land contamination assessment and following the *Practice Guide for Investigation and Remediation of Contaminated Land* issued by EPD, we have to collect historical information regarding the past and present activities of the site. In order to facilitate our assessment, we would like to request for the following information regarding the captioned concerned site:

1. Current and past (as early as the records are available) registered Chemical Waste Producer(s) within the concerned site (preferably with the registration date, status (moved out or active), nature and quantity of the chemical waste); and
2. Reported accidents of spillage / leakage of chemicals within the concerned site.

Please feel free to contact our Ms. Chloe Ng at 3856 5662 / chloe.ng@aecom.com or Mr. Alex Fan at 3856 5244 / alex.fan@aecom.com should you have any queries.

Thank you very much for your kind assistance.

Yours faithfully,
AECOM Asia Co. Ltd.

Dear Ms. CHUNG,

Re. Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information of Chemical Waste Producer and Chemical Spillage Accident

I refer your above letter dated 12 December 2024 and the project layout plan. This Regional Office (West) has no record of reported cases of spillage/ leakage of chemicals at the application site as indicated in the project layout plan. You may need to check with other relevant parties/ government departments for such information as appropriate.

As for the records of Chemical Waste Producers (CWPs), you may contact Mr. K.H. LO at 2835 1357 for making an appointment to view the records of CWPs at the Territory Control Office.

Should you have any queries, please contact the undersigned.

Yours faithfully,

(Heidi H.Y. CHEUNG)

Dear Sir/Madam,

Land Contamination Assessment for Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

Request for Information about Dangerous Goods Store and Incidents Records

AECOM Asia Co. Ltd has been commissioned by Supreme Enterprise Limited as the Consultant to undertake land contamination assessment for the captioned project. The concerned site is indicated in the figure enclosed.

As a part of the land contamination assessment and following the *Practice Guide for Investigation and Remediation of Contaminated Land* issued by EPD, we have to collect historical information regarding the past and present activities of the site. In order to facilitate our assessment, we would like to request for the following information regarding the captioned concerned site:

1. Records of current and past (as early as the records are available) registration of Dangerous Goods storage (with type of dangerous goods, storage method, quantity, licence no., date of issue and storage location) within the concerned site;
2. Any records of reported accidents of spillage/leakage of dangerous goods stored within the concerned site; and
3. Any records of fire incidents within the concerned site.

Please feel free to contact our Ms. Chloe Ng at 3856 5662 / chloe.ng@aecom.com or Mr. Alex Fan at 3856 5244 / alex.fan@aecom.com should you have any queries.

Thank you very much for your kind assistance.

Request for Information of Dangerous Goods & Incident Records

I refer to your letter of 12.12.2024 regarding the captioned request and reply below in response to your questions:-

Please be advised that neither records of dangerous goods license, fire incidents nor incidents of spillage / leakage of dangerous goods were found in connection with the given conditions of your request at the subject location.

If you have further questions, please feel free to contact the undersigned.

Yours sincerely,

(AU Ting-hin)
for Director of Fire Services

APPENDIX 7.4

Risk-Based Remediation Goals (RBRGs) for Soil and Soil Saturation Limit and for Groundwater and Solubility Limit

Table 2.1
Risk-Based Remediation Goals (RBRGs) for Soil & Soil Saturation Limit

Notes:
(1) For Dioxins, the cleanup levels in USEPA Office of Solid Waste and Emergency Response (OSWER) Directive of 1998 have been adopted. The OSWER Directive value of 1 ppb for residential use has been applied to the scenarios of "Urban Residential", "Rural Residential", and "Public Parks", while the low end of the range of values for industrial, 5 ppb, has been applied to the scenario of "Industrial".
(2) Soil saturation limits for petroleum carbon ranges taken from the Canada-Wide Standards for Petroleum Hydrocarbons in Soil, CCME 2000.
(3) * indicates a 'ceiling limit' concentration.
(4) *** indicates that the C_{sat} value exceeds the 'ceiling limit' therefore the RBRG applies.

Response-to-Comment

Proposed Temporary Concrete Batching Plant (CBP) for a Period of 5 Years in "Other Specified Uses" annotated "Boatyard and Marine-oriented Industrial Uses" Zone, Area shown as 'Road' and Area not Covered by Statutory Plan, Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi, New Territories

(Application No. A/TY/150)

(i) A RtC table:

Departmental Comments		Applicant's Responses
1. Comments of the Marine Department (MD)		
(a)	With reference to Section 2.2 of the Barging Operation Plan (BOP), MD requests clarification regarding the stated maximum daily output of 3,800 units, specifically: Comprehensiveness of Calculation - does this figure account for all operational scenarios, including potential night-time operations? - if nighttime operations are implemented, will the daily output exceed the 3,800 limit?	The proposed CBP consists of 3 production lines, each with a design production capacity of approximately 100 m^3/hr. The plant is scheduled to operate from 07:00 to 21:00 daily, including public holidays. The design maximum concrete output is approximately 4,200 m^3/day. There are no planned night-time operations. In practice, daily production output will vary based on actual site demand and project-specific requirements. The figure of 4,200 m^3 per day represents the plant's design capacity and may be reached occasionally; however, not every day will require full-capacity production. Under the current barge delivery arrangement, which typically comprises 2 aggregate barges (each approximately 1,500 tonnes) and 1 cement barge (approximately 800 tonnes), the plant generally receives around 3,800 tonnes of raw materials per day. While a portion of these materials may be consumed immediately during periods of higher production, the CBP is also supported by on-site storage facilities, including approximately 3,000 tonnes for aggregates and 2,200 tonnes for cementitious materials. These storage buffers allow materials to be delivered in advance and stockpiled according to operational needs. This arrangement enables production to continue smoothly without being dependent on the exact timing of barge arrivals.
(b)	Consistency with Section 3.3 - the calculation provided (1,500 x 2 + 800 = 3,800) suggests this is the peak capacity under the current barge configuration (two aggregate barges + one cement barge). - if output exceeding 3,800 is feasible (e.g., through extended operations), Section 3.3 may require revision, as its assumptions appear based on this being an absolute maximum.	
(c)	The applicant should confirm the following: - is the 3,800 limit a strict operational ceiling, or can it be surpassed with additional resources (e.g., more barges are required)? - If exceeding 3,800 is possible, what adjustments (e.g., additional vessels or revised scheduling) would be necessary?	

(d)	The applicant should draw prompt attention to this matter and prepare detailed response to ensure alignment across all proposal (including but not limited to MTIA and BOP).	Any refinements to barge movement schedules, delivery coordination, or marine traffic implications will be addressed within the MTIA, which has been developed to assess a range of marine logistics scenarios. The BOP (**Annex 1**) has been updated accordingly to reflect the clarified design output of 4,200 m^3 per day and to confirm that all operations will remain within the designated 07:00 to 21:00 timeframe.

Annex 1

Revised Barging Operation Plan

Barging Operation Plan for S16 Planning Application of Proposed Temporary Concrete Batching Plant for a Period of 5 Years at Tsing Yi Town Lots 14 and 15 and Adjoining Government Land, Tam Kon Shan Road, Tsing Yi

1 Introduction

1.1 Background

The Applicant seeks approval under Section 16 of the Town Planning Ordinance (Cap. 131) to establish a Temporary Concrete Batching Plant (CBP) for a period of 5 years at Tsing Yi Town Lot Nos. 14 and 15 and adjoining Government Land (GL) along Tam Kon Shan Road, Tsing Yi, New Territories (the Site). The application site occupied an area of 4,335 m. sq, including 1,057 m. sq (about) of G.L., and partially falls within an area zoned “Other Specified Uses” annotated “Boatyard and Marine-oriented Industrial Uses” (“OU(BMIU)”) under the Approved Tsing Yi Outline Zoning Plan (OZP) No. S/TY/32 and partly outside the OZP boundary.

The CBP aims to address the increasing demand for ready-mixed concrete driven by infrastructure projects and residential developments in Hong Kong, particularly in the New Development Areas (NDAs) of the Northern Metropolis. The Site’s strategic location near established industrial activities and marine facilities ensures compatibility with surrounding land uses and supports the sustainable development of the construction industry.

AXON Consultancy Limited has been commissioned to prepare a Barging Operation Plan (BOP) to support the Section 16 application by ensuring safe, efficient, and environmentally compliant marine logistics for the proposed development.

1.2 Scope of Work

This Barging Operation Plan (BOP) outlines the operational framework for the proposed CBP, focusing on marine logistics and ensuring compliance with environmental, safety, and operational standards. Key components include:

- Marine Logistics Assessment: Evaluation of marine traffic patterns, metocean conditions, and potential impacts.
- Operational Planning: Development of frameworks for safe and efficient barge delivery, mooring, and unloading operations.
- Risk Mitigation Measures: Identification of risks and proposal of mitigation strategies to comply with safety and environmental standards.

- Emergency and Contingency Planning: Establishment of protocols for adverse weather conditions and emergency scenarios.

1.3 Objective

The primary objectives of this study are:

- To ensure the safe and efficient handling of CBP unloading and marine delivery operations while minimizing disruption to adjacent marine traffic and activities.
- To identify and address potential marine operational risks through comprehensive mitigation strategies.
- To demonstrate the Applicant's commitment to safety, environmental compliance, and responsible management of marine operations, ensuring the highest standards of operation.

2 Project Overview

2.1 Site Location and Characteristics

The proposed Temporary Concrete Batching Plant (CBP) is strategically located at Tsing Yi Town Lot (TYTL) Nos. 14 and 15, together with an adjoining parcel of Government Land held under Short Term Tenancy (STT), situated along Tam Kon Shan Road in the New Territories. The site occupies an area of approximately 4,335 square metres and benefits from direct marine frontage, offering a practical setting for barge-based material delivery and handling.

The red dotted line shown in the figure represents the boundary of the land currently leased by the applicant. To facilitate safe barge approach, berthing, and unloading of aggregates and cement, a proposed marine operation area has been identified in the waters beyond the land lot. This area is outlined in blue dotted line in Figure 2.1 and reflects the required space to accommodate the Pelican Aggregate Barge and the Cement Barge during routine delivery and unloading.

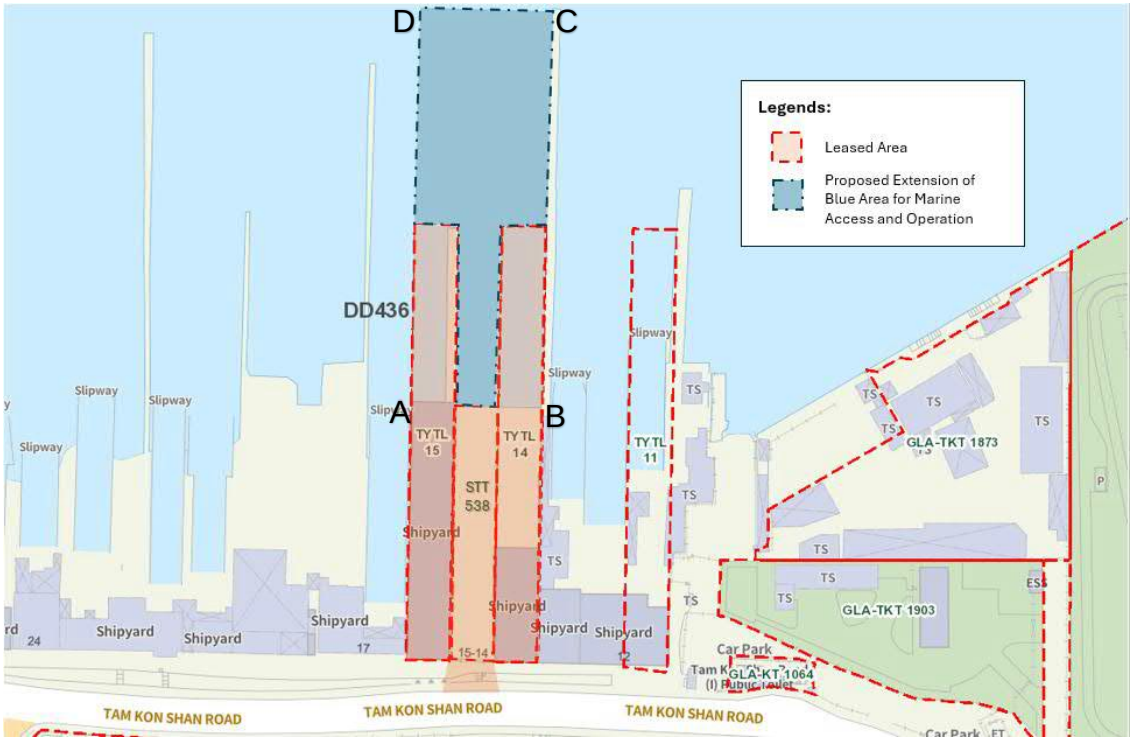
As land matters fall under the purview of the Development Bureau and the Lands Department (LandsD), the applicant is coordinating with its appointed lands consultant to review and follow up on any administrative arrangements necessary to support the proposed marine activity area. Ongoing engagement with relevant authorities will ensure alignment with lease conditions and prevailing statutory requirements.

Figure 2.1 illustrates the site location, the extent of the existing lease area (covering TYTL No. 14, TYTL No. 15, and the STT area), as well as the proposed marine operation zone, which is defined within the polygon bounded by Points A, B, C, and D, as listed in **Table 2.1.**

Table 2.1 Operation Area

Point No.	Latitude	Longitude
A	22º 21.7077’	114º 5.7155’
B	22º 21.7069’	114º 5.7371’
C	22º 21.7604’	114º 5.7387’
D	22º 21.7619’	114º 5.7163’

Figure 2.1 Site Location and Proposed Operational Boundary



2.2 Description of the Proposed CBP

The proposed CBP will operate for five years, offering a sustainable and efficient solution to meet the demand for concrete in Hong Kong’s ongoing infrastructure development.

The construction phase of the proposed concrete batching plant is projected to require approximately 9 to 12 months. During this period, no marine deliveries of construction materials are anticipated.

Full-scale operations are scheduled to commence by Q1 2026, following the completion of construction and the necessary regulatory approvals.

The proposed CBP consists of three production lines, each with a design production capacity of about 100 m³/hr. The plant operation hours of the proposed development are from 07:00 to 21:00 daily, including public holiday. The maximum design concrete production is approximately 4,200 m³ per day. In practice, daily production output will vary depending on actual site demand and project-specific requirements. The 4,200 m³ per day figure reflects the plant's design capacity and may be reached on occasion. Any materials not immediately used will be stored in the on-site silos to support subsequent production. Please refer to **Table 2.2** below for key operational parameters of the proposed CBP.

Table 2.2 Operation Details of Proposed CBP

Operation Parameter	**Details**
Hourly Processing Capacity	300 m³/hr
Total Aggregate Storage Capacity	3,000 tonnes
Total Cementitious Materials Silos Capacity	2,200 tonnes
Proposed Plant Operation Period	14 hours between 07:00 to 21:00

The concrete batching process at the CBP will consist of the following stages:

- **Delivery of Raw Materials**: Aggregates and cement will be transported to the site using self-propelled barges, which are readily available in the market and suitable for the project's operational needs. Limited quantities of raw materials may also be delivered to the site by trucks.
- **Conveyance to the Plant:** Raw materials will be efficiently transferred from barges to the batching plant using pipelines or conveyor systems.
- **Weighing and Mixing**: The materials will undergo precise weighing and controlled mixing to produce high-quality concrete in compliance with industry standards.
- **Distribution:** Batched concrete will be loaded onto mixer trucks for delivery to construction sites.

The site's strategic location ensures direct marine accessibility, enabling delivery operations while reducing cross-district road traffic and its associated environmental impacts.

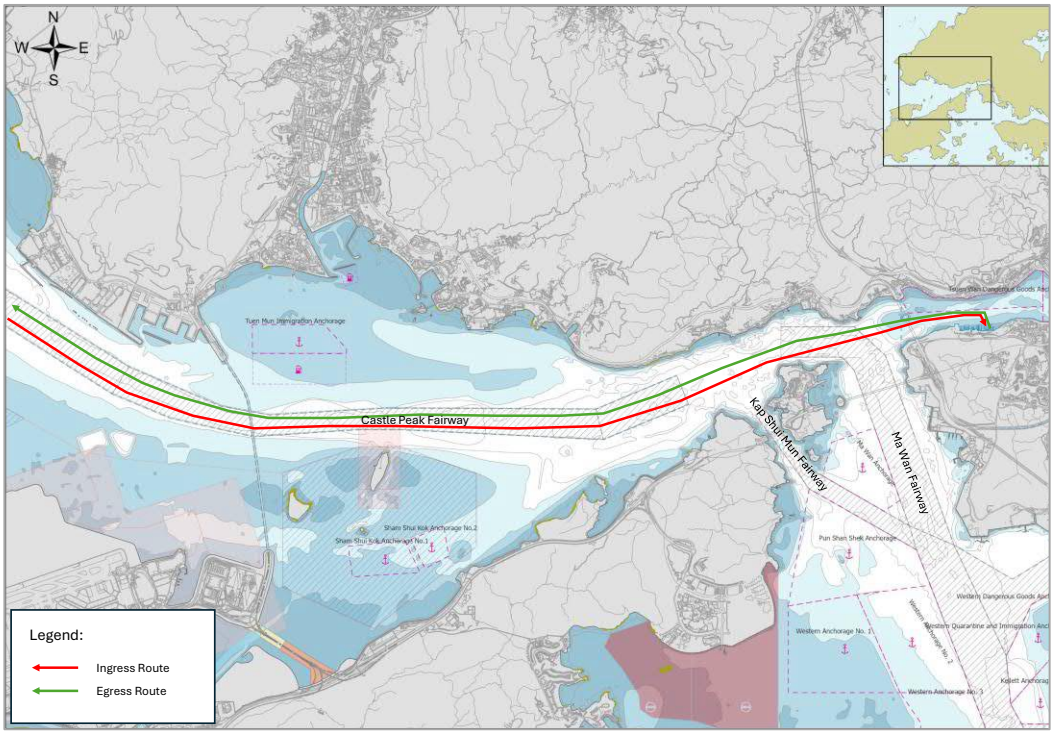
3 Delivery and Routing

3.1 Barge Delivery Route

The raw materials required for concrete batching, including aggregates and cement, will be transported using self-propelled rivertrade vessels. These vessels will follow established marine routes within Hong Kong waters to ensure safe and efficient transit.

The delivery routes, utilizing Castle Peak Fairway and Ma Wan Fairway, have been carefully selected to comply with Hong Kong maritime safety regulations and minimize navigational risks. The proposed delivery routes are illustrated in Figure 3.1.

Figure 3.1 Proposed Delivery Routes



3.2 General Navigational Guideline

The route planning for the proposed barge operations adheres to the International Regulations for Preventing Collisions at Sea (COLREGs) and Hong Kong Marine Department regulations.

Key guidelines include:

- Navigating along the starboard side of the fairway to maintain orderly traffic flow.
- Following COLREGs for overtaking, including appropriate signaling and maintaining safe distances.
- Making fairway crossings at right angles to minimize disruption and collision risk.
- Prohibiting anchoring and fishing within designated fairway limits to avoid navigational hazards.
- Prioritizing larger vessels, with smaller vessels required to avoid impeding their passage.

3.3 Delivery Frequency

A maximum of 3 round-trip barge movements per day will be scheduled at North Tsing Yi to deliver both aggregates and cement via self-propelled barges from the mainland. This includes three inbound trips (*one for cement and two for aggregates using the Pelican Aggregate Barge*) and three corresponding outbound trips. The delivery frequency has been carefully planned to optimize operational efficiency while minimizing potential impacts. Adjustments to the schedule may be made as needed to accommodate project demands, weather conditions, or other operational factors, ensuring flexibility and consistency in the delivery process.

3.4 Deployed Vessels and Unloading Process

The delivery operations will utilize two existing self-propelled barges designed to meet project demands and adhere to environmental and safety standards. Their key specifications and unloading processes are summarized in Table 3.1.

Table 3.1 Typical Specification of Deployed Vessels

Vessel Type	Length Overall (LOA)	Beam	Draft (Fully Loaded)	Capacity per Trip	Special Features
Pelican Aggregate Barge	50 m	15.2 m	3.4 m	1,500 tonnes	Self-propelled
Cement Barge	52 m	10.5 m	2.4 m	800 tonnes	Self-propelled

Pelican Aggregate Barge: Featuring a 1500-ton class stone aggregate belt self-discharging design, this vessel utilizes a built-in conveyor system to transfer aggregates directly to the batching plant's hopper on the quay. Its fully enclosed structure minimizes dust emissions and ensures environmental compliance. Operating at an unloading rate of 400 tons per hour, the vessel can fully unload in just 4 hours. Additionally, the vessel measures 50 meters in length and 15.2 meters in width, has a full-load draft of 3.4 meters, and is equipped with a 22-meter-long belt, ensuring efficient and precise aggregate handling.

Cement Barge: Featuring a self-discharging pumping system with portable pipelines to transfer cement directly to the batching plant silos, this controlled system effectively prevents spillage while ensuring efficient operations. With an unloading rate of 200 tons per hour, the entire load is discharged in just 4 hours. The 800-ton cement ship measures 52 meters in length, 10.5 meters in width, and has a full-load draft of 2.4 meters.

While the two barges typically deliver around 3,800 tonnes of raw materials per day, this volume does not directly correspond to the plant's maximum daily concrete production. In practice, actual production varies depending on project demand. On days when less material is needed, a portion of the delivered aggregates and cement may be stored for later use. The CBP is equipped with substantial on-site storage capacity, including approximately 3,000 tonnes for aggregates and 2,200 tonnes for cementitious materials. This storage capability supports flexible delivery schedules and enables continuous operation without relying solely on same-day barge deliveries. Even on days when production approaches the design maximum of 4,200 m^3, cubic metres, sufficient materials can be drawn from on-site reserves to maintain smooth operations.

3.5 Delivery of Product

The proposed concrete batching plant is designed to produce high-quality ready-mix concrete that is delivered exclusively by concrete mixing trucks. In this system, once the concrete is batched at the plant, it is loaded into mixer trucks and transported via the road network directly to the construction sites.

This truck-based delivery system eliminates the need for any marine or barge delivery, streamlining logistics and reducing potential risks associated with marine transport. The approach also offers greater scheduling flexibility and ensures that the concrete maintains its integrity from the batching plant to its final placement.

4 Dredging Requirements

4.1 Existing Situation

At the application site, sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe batching operations. To remedy this, maintenance dredging is necessary to remove the accumulated sediment and restore adequate water depth for vessel navigation.

4.2 Water Depth Requirement

According to the Table 3.1, to cater for the maximum draft of the pelican barge with a draft of 3.4m, a typical safe navigation requirement is to have an under-keel clearance of at least 10% of the draft. In this case, 10% of 3.4 m is approximately 0.34 m, so the minimum water depth required would be about 3.4 m + 0.34 m, roughly 3.74 m.

However, in practice, to accommodate tidal variations and provide a safety margin, a water depth of around 3.8 m (at Chart Datum) is generally maintained for operations involving a Pelican Aggregate Barge. This ensures that even under varying conditions, there is adequate clearance for safe navigation.

4.3 Extent of Dredging

The targeted dredging area is shown in Figure A1. Preliminary estimates suggest that approximately 3,000 – 5,000 square meters of the seabed would need to be dredged, subject to further detailed analysis.

Under the EIAO, a project qualifies as a designated project requiring a full Environmental Impact Assessment if the dredging volume exceeds 500,000 m^3. In this case, the proposed maintenance dredging operation involves less than 5,000 m^3, which is significantly below the threshold and thus considered insignificant. Consequently, it does not trigger the designated project requirements under the EIAO, although all other regulatory and administrative procedures must still be followed to ensure safe navigation and proper environmental management.

4.4 Dredging Administration

All administrative works related to the dredging operation will be carried out in strict compliance with the Project Administration Handbook for Civil Engineering Works, 2024 Edition. This means that every aspect, from the initial justification for dredging, sediment sampling and testing, through to the permit application and disposal procedures, will adhere to the detailed guidelines and requirements stipulated in Chapter 4 of the handbook. This ensures that all regulatory, environmental, and technical criteria are met during the dredging process.

For instance, the handbook outlines the proper procedures for submitting a Sediment Sampling and Testing Plan, preparing a Preliminary Sediment Quality Report (PSQR), and obtaining the necessary dumping permits under the Foreshore and Seabed (Reclamation) Ordinance. By following these established procedures, the project will maintain full accountability and control over the dredged materials, ensuring both safety and environmental compliance throughout the dredging and disposal phases.

Director of Environmental Protection (DEP) may waive the sediment sampling and testing requirements in specific circumstances to expedite critical dredging operations. This waiver applies in cases of emergency dredging when immediate action is needed to avert safety risks or environmental hazards, and for small-scale maintenance dredging projects involving volumes of less than 5,000 m^3 in situ. In such cases, the project proponent must submit any previously obtained data or historical information regarding the sediment quality in the vicinity, allowing DEP to assess the situation and determine the most appropriate handling arrangements without necessitating a full sampling and testing program.

4.5 Conclusion

The client will proceed with a maintenance dredge to restore the necessary water depth for safe navigation. The client is committed to following the administrative procedures outlined in the Project Administration Handbook for Civil Engineering Works, 2024 Edition, including the proper application for a dredging permit and compliance with all regulatory requirements for sediment disposal.

5 Mooring Stability

5.1 Introduction

Mooring stability is critical for both the Pelican Aggregate Barge and the Cement Barge to ensure safe and efficient delivery operations.

For the aggregate barge, stable mooring guarantees that the vessel remains securely in position during loading and unloading, preventing spillage and collisions while accommodating tidal fluctuations and currents.

Similarly, the cement barge requires a stable mooring arrangement to maintain precise alignment with the discharge point, thereby avoiding disruptions during cement transfer and ensuring that operations proceed without unintended material loss.

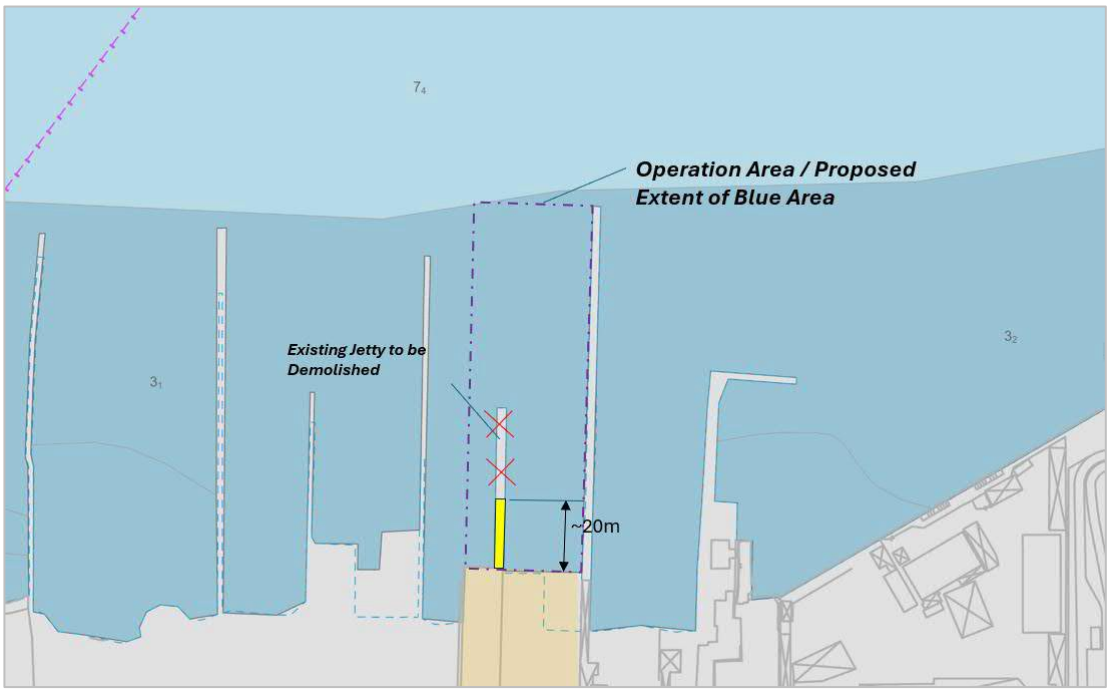
In both cases, effective mooring stability not only supports operational safety and efficiency but also minimizes environmental risks and interference with adjacent marine traffic.

5.2 Safety and Stability Improvement

The safety platform is part of the overall improvement measures (Figure 5.1). With this approach, and in combination with the planned dredging operations, vessels will be able to approach closer to the quay.

This proximity allows for a better arrangement of the new fenders, bollards, and anchoring systems, thereby enhancing the mooring facilities and ensuring increased stability for both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations.

Figure 5.1 Proposed Improvement of Safety Platform

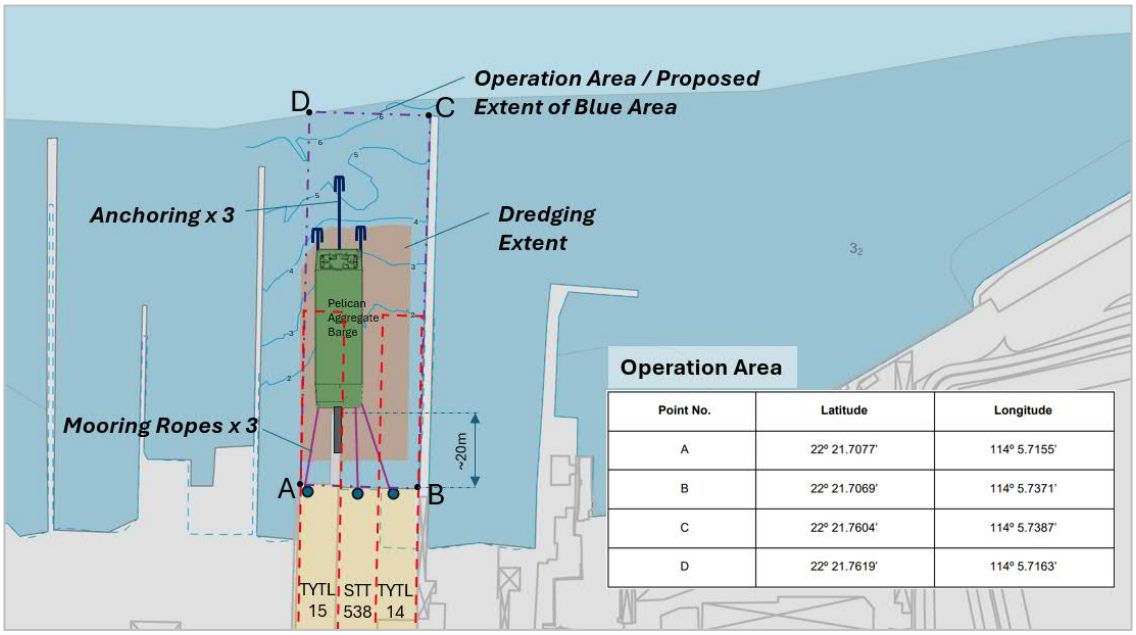


5.3 Mooring Arrangements

Pelican Aggregate Barge

As shown in Figure 5.2, the Pelican Aggregate Barge will positioned approximately 20 meters off the quay, secured by an anchor and two mooring ropes at the bow and three anchor lines at stern. This dual approach, mooring ropes plus anchoring, ensures the vessel remains stable and correctly aligned during aggregate loading and unloading. The anchors provide lateral and longitudinal restraint against tidal currents, while the mooring ropes maintain a firm connection to the quay. Combined, these measures minimize vessel movement and protect both the barge and the safety platform infrastructure throughout operations.

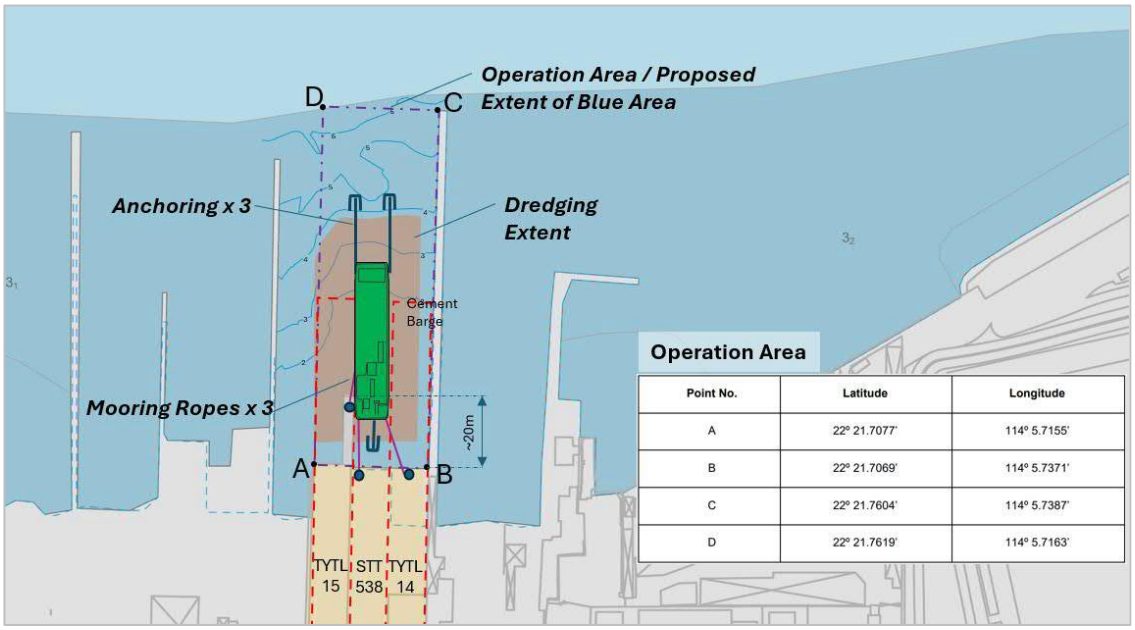
Figure 5.2 Mooring Arrangement of Pelican Aggregate Barge



Cement Barge

As shown in Figure 5.3, the Cement Barge will be stationed approximately 15 meters from the quay, with at least 5 meters of the safety platform stabilizing its starboard side. It is secured by three mooring ropes attached to both the safety platform and the quay, plus a single bow anchor and two stern anchors. This arrangement provides lateral and longitudinal balance, minimizing the barge's movement due to tidal currents or wave action. The mooring ropes ensure a firm connection to the shore infrastructure, while the forward and stern anchors contribute additional stability, keeping the barge properly aligned for efficient cement pumping operations.

Figure 5.3 Mooring Arrangement of Cement Barge

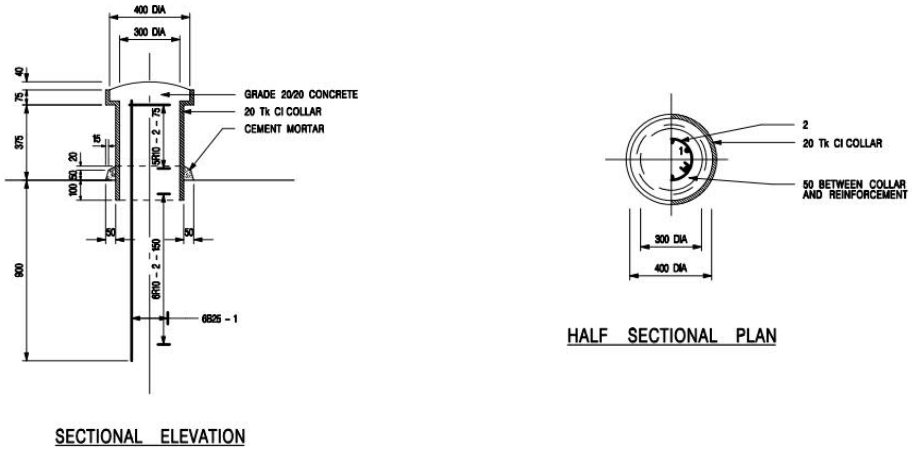


5.4 Mooring Facilities

New fenders and mooring bollards (*typical design as shown in* Figure 5.4) will be installed on the quay and safety platform to provide robust mooring facilities. These installations are essential for securing both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations, ensuring that the vessels remain stable and correctly aligned.

By enhancing the mooring infrastructure, the risk of vessel movement due to tidal fluctuations or currents is significantly reduced, thereby protecting both the marine equipment and the quay/safety platform structures while facilitating safe and efficient marine operations.

Figure 5.4 Typical Arrangements of Mooring Bollard



Source: CEDD Standard Drawing No. C3015B

5.5 Anchoring

In addition to installing new fenders and bollards on the quay and safety platform to secure the vessels, anchoring will also be employed as an extra measure to enhance stability. This anchoring system will work in tandem with the improved mooring infrastructure to firmly secure both the Pelican Aggregate Barge and the Cement Barge during loading and unloading operations.

By providing additional resistance against tidal fluctuations and adverse weather conditions, anchoring helps to prevent unwanted vessel movement, ensuring safe alignment and reducing the risk of operational hazards such as spillage or collision.

5.6 Conclusion

In conclusion, the enhanced mooring system, comprising new fenders, bollards, anchoring, and updated rope arrangements, combined with maintenance dredging, offers significant benefits. The maintenance dredging will restore adequate water depth, allowing vessels to approach the quay more closely and securely. This proximity facilitates improved mooring arrangements that stabilize both the Pelican Aggregate Barge and the Cement Barge, ensuring precise alignment and safe loading/unloading operations. Together, these measures not only boost operational efficiency and safety but also help to protect both the vessels and the surrounding infrastructure from the effects of tidal currents and environmental disturbances.

6 Unloading

6.1 General

The unloading operations at the site are designed to support the temporary concrete batching plant's efficient and safe delivery of materials. The Pelican Aggregate Barge and the Cement Barge unload aggregate and cement respectively via specialized transfer mechanisms at the safety platform. This process is optimized to ensure rapid material transfer, maintain environmental compliance, and minimize disruption to surrounding marine traffic, thereby supporting seamless construction operations.

6.2 Pelican Aggregate Barge Unloading

The Pelican Aggregate Barge is equipped with a built-in conveyor belt system that transfers aggregates directly from the barge to the safety platform and onward to the batching plant, ensuring a continuous and controlled material flow.

The enclosed design of the hopper and conveyor system provides environmental containment during the unloading process. This setup minimizes the release of dust and prevents debris or runoff from entering the surrounding waters. The enclosure also serves to reduce noise and vibration levels, supporting compliance with environmental standards and minimizing disruption to the nearby community and marine users.

The typical arrangement of aggregate unloading operations, including anchoring positions and equipment layout, is shown in **Figure 6.2.**

6.3 Cement Barge Unloading

On the other hand, the Cement Barge employs a self-discharging pumping system with pipelines that extend to the batching plant silos, allowing for smooth and precise cement delivery.

The cement barge employs a hot plug system to connect its self-discharging pumping system to the receiving pump line of the concrete batching plant. This hot plug mechanism facilitates a rapid, secure, and leak-free connection, allowing for continuous cement flow with minimal downtime.

Designed to handle high pressures and the corrosive nature of cement slurry, the hot plug ensures that the connection is both durable and reliable, reducing the risk of spillage and environmental contamination. By streamlining the transfer process, it enhances operational efficiency and maintains safety standards during cement delivery.

The concrete batching plant is equipped with an advanced suction system that enables cement to be pumped directly from the cement barge into the plant without needing to activate the vessel's onboard pump. This design not only streamlines the cement transfer process by using a dedicated suction line at the plant but also significantly improves air quality. By avoiding the operation of the vessel pump, which typically generates exhaust emissions and noise, the system reduces airborne pollutants and minimizes environmental disruption, thereby contributing to a cleaner and safer working environment.

The proposed mooring and cement transfer setup is illustrated in **Figure 6.3**

Figure 6.1 Illustration of Aggregate Unloading from Pelican Barge

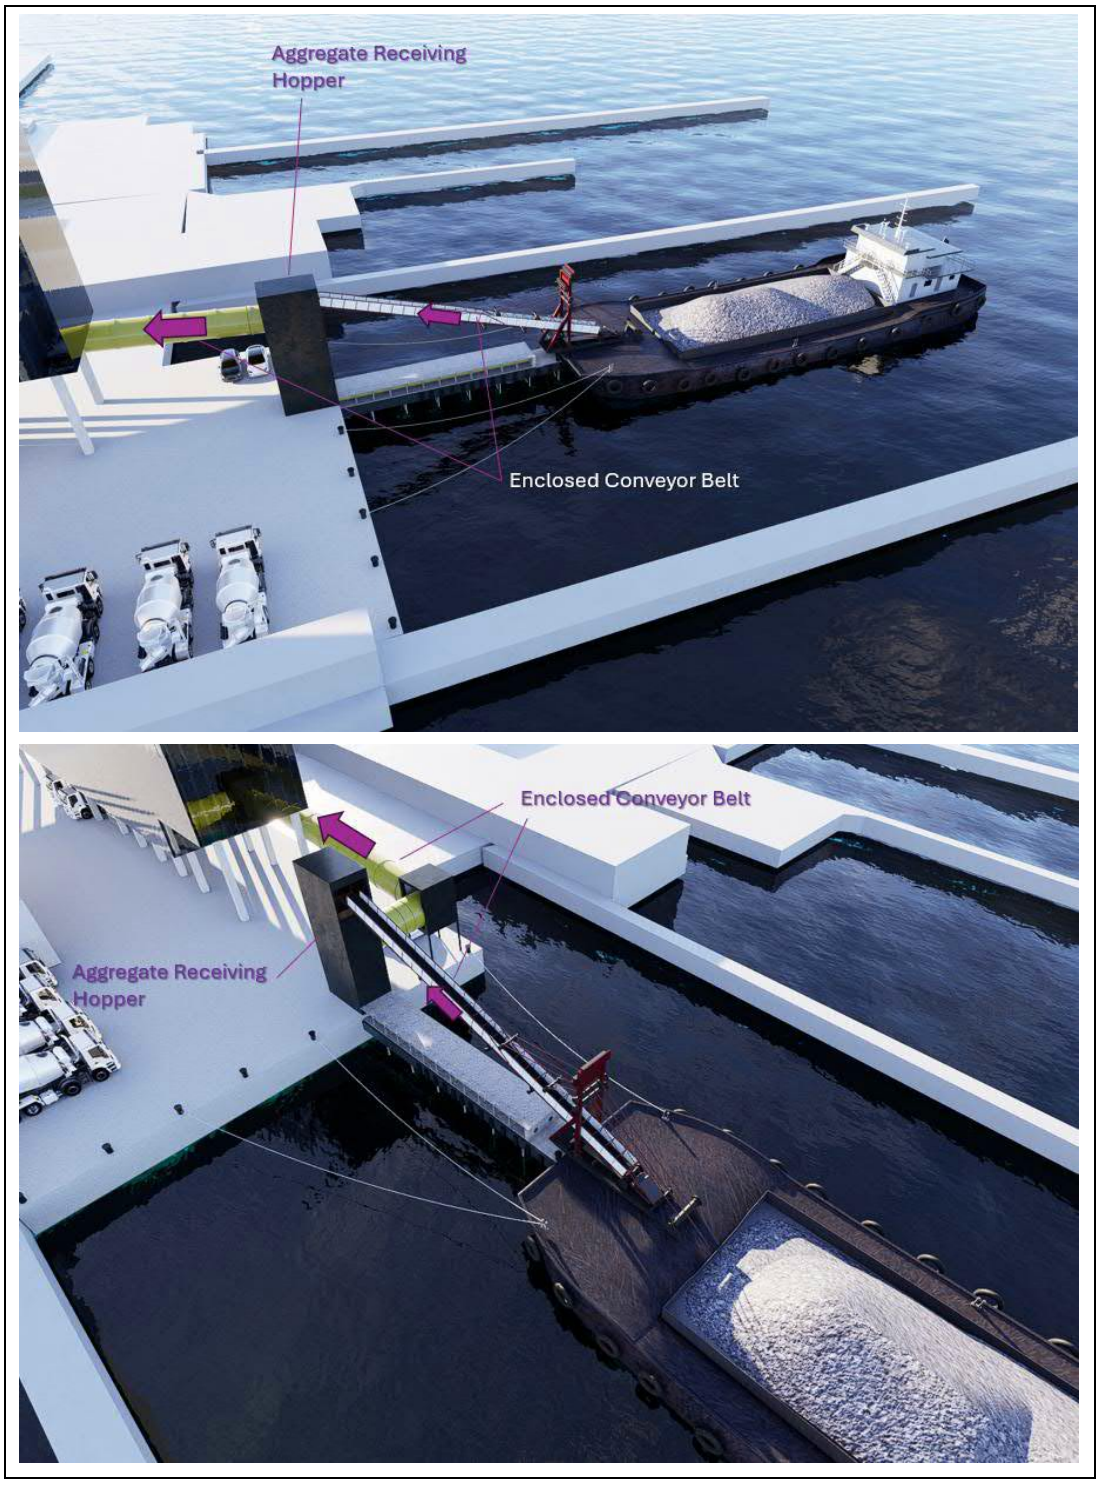


Figure 6.2 Illustration of Cement Unloading Using Pump System

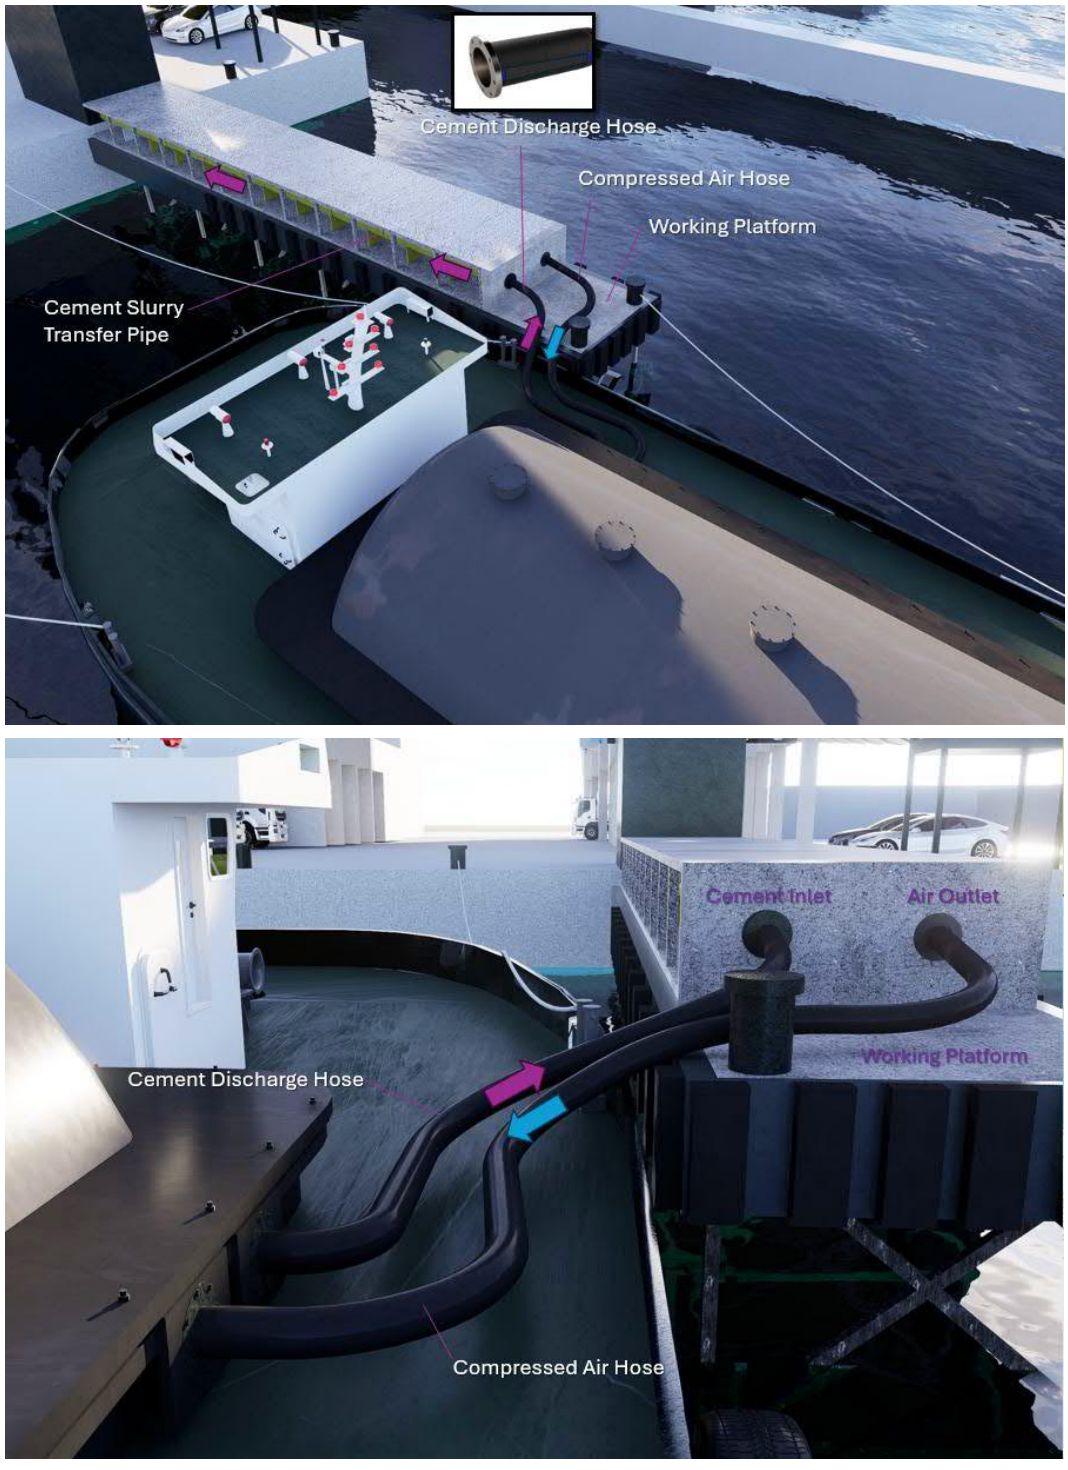

6.4 Approach and Departure

The barges, being self-propelled, autonomously navigate to their designated positions without requiring tug assistance, which ensures precise alignment and efficient manoeuvrability. The approach and departure routes have been carefully planned, illustrated in Figure 6.3 and Figure 6.4, to facilitate safe navigation.

Figure 6.3 Example of Arrival and Departure Path of Pelican Aggregate Barge

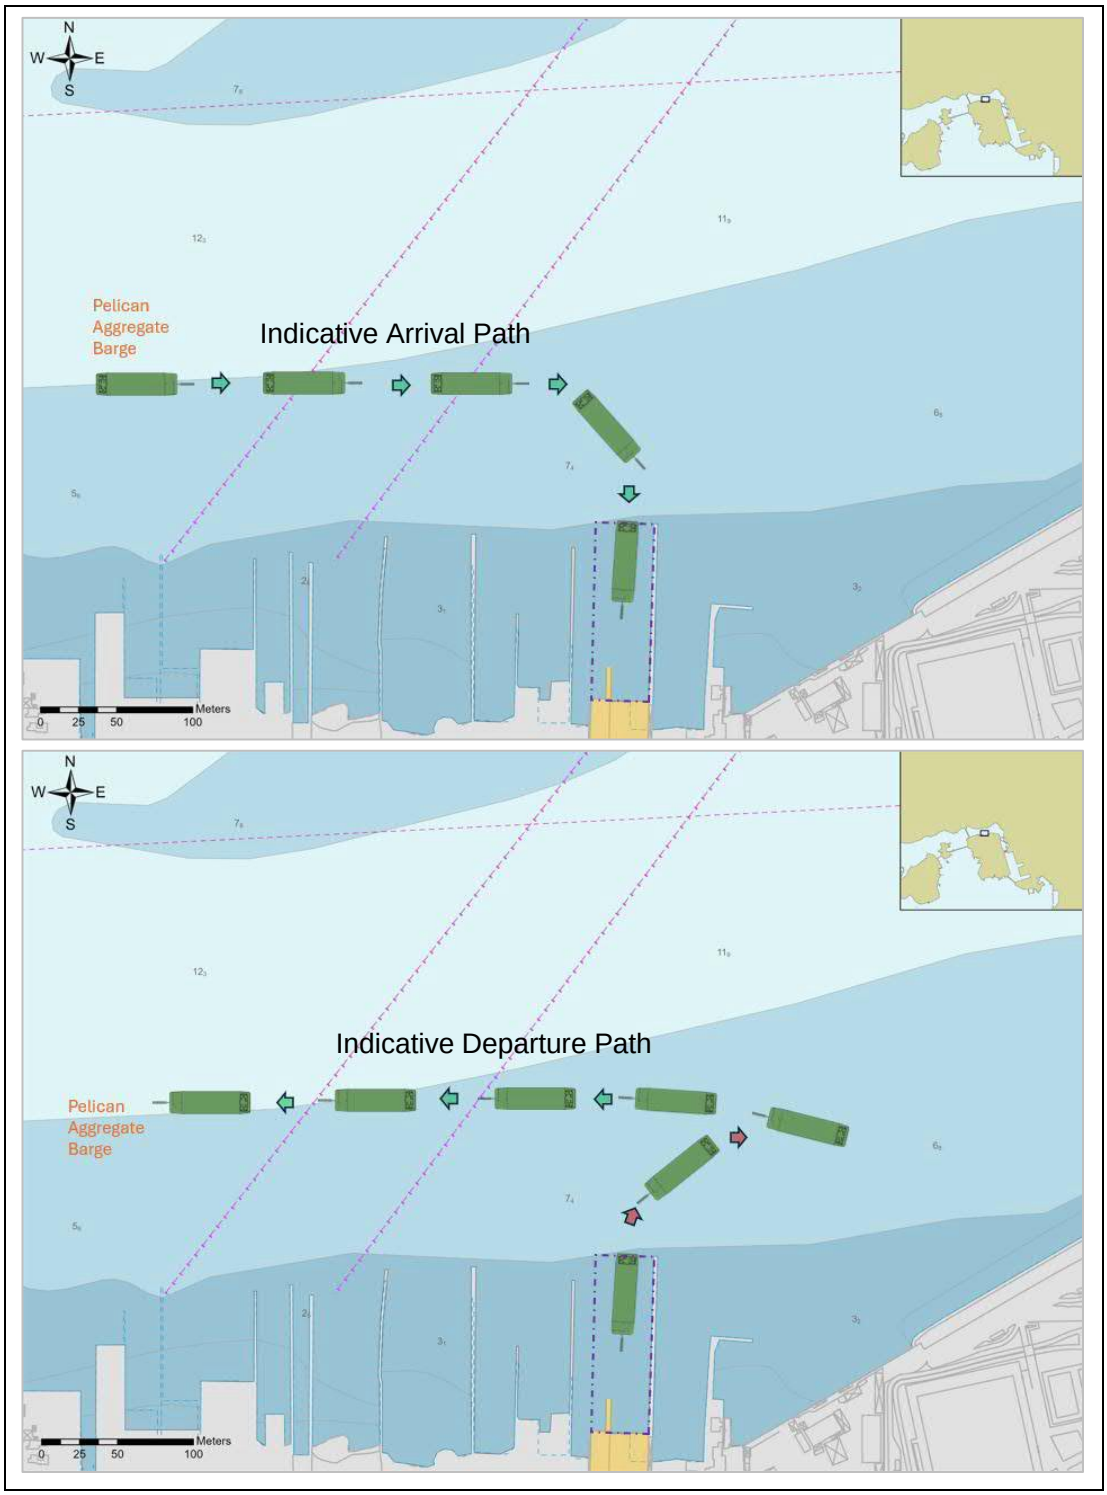

Figure 6.4 Example of Arrival and Departure Path of Cement Barge

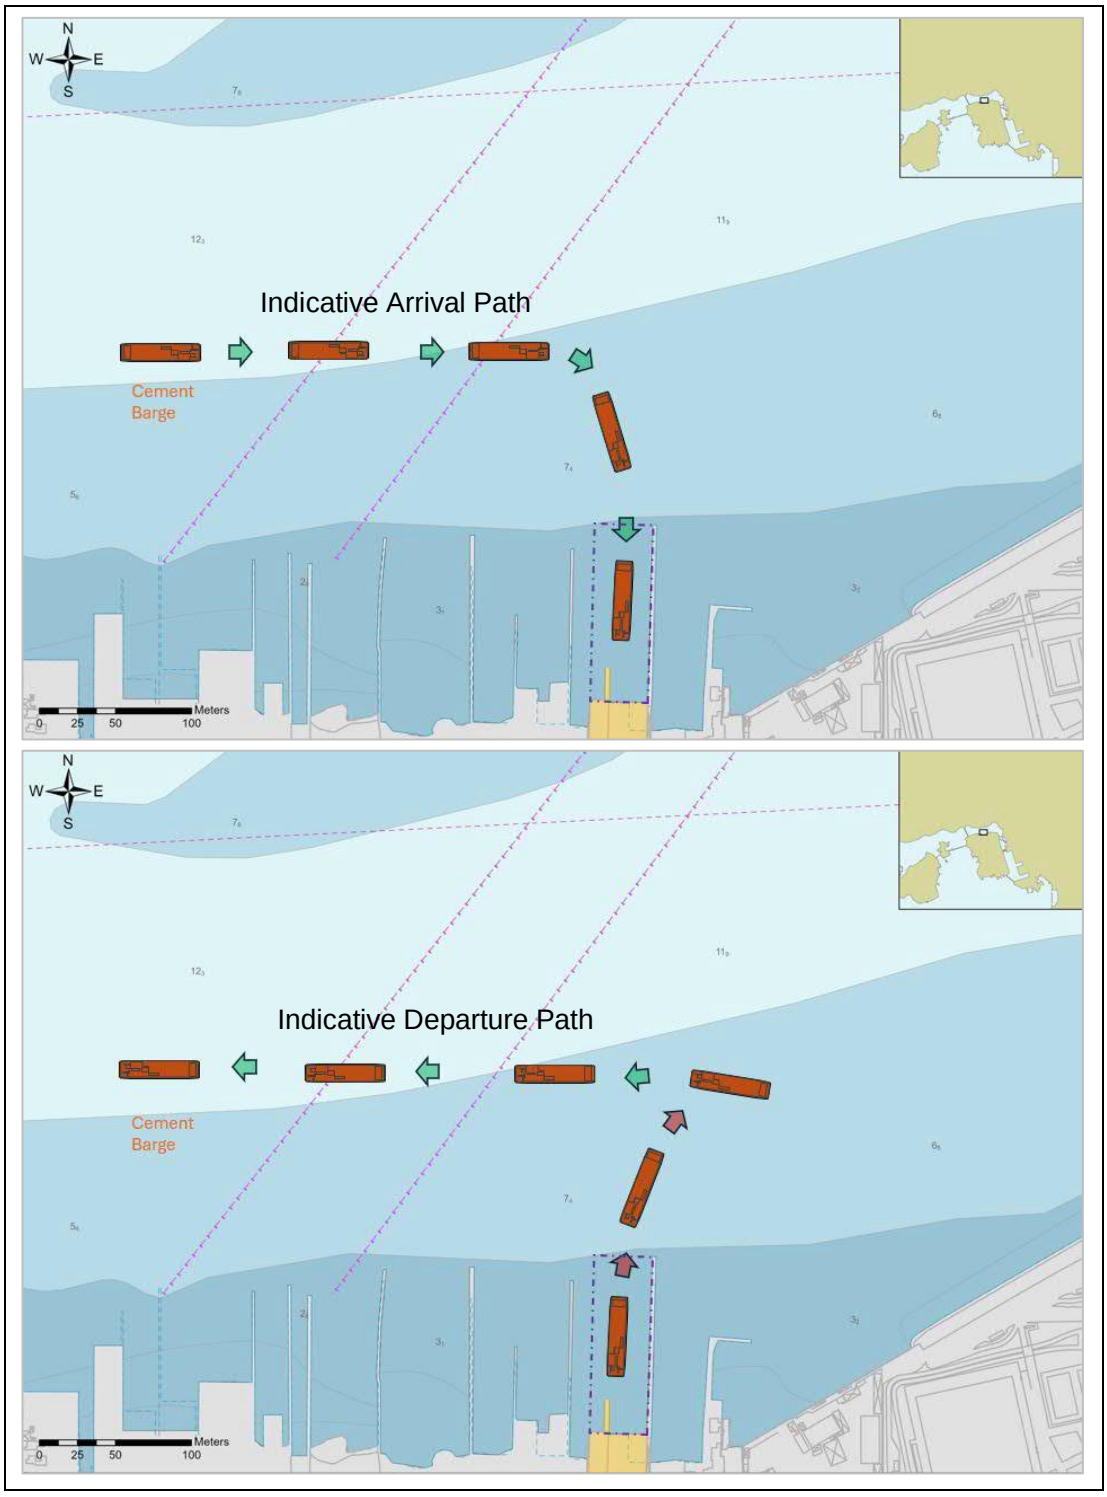


7 Marine Logistic Assessment

This section evaluates the feasibility and potential impacts of the proposed barging operations at the Cement Barging Plant (CBP). The assessment encompasses existing marine facilities, metocean conditions, and marine traffic patterns to ensure the operations are conducted safely and efficiently while minimizing any potential impacts on the surrounding marine environment.

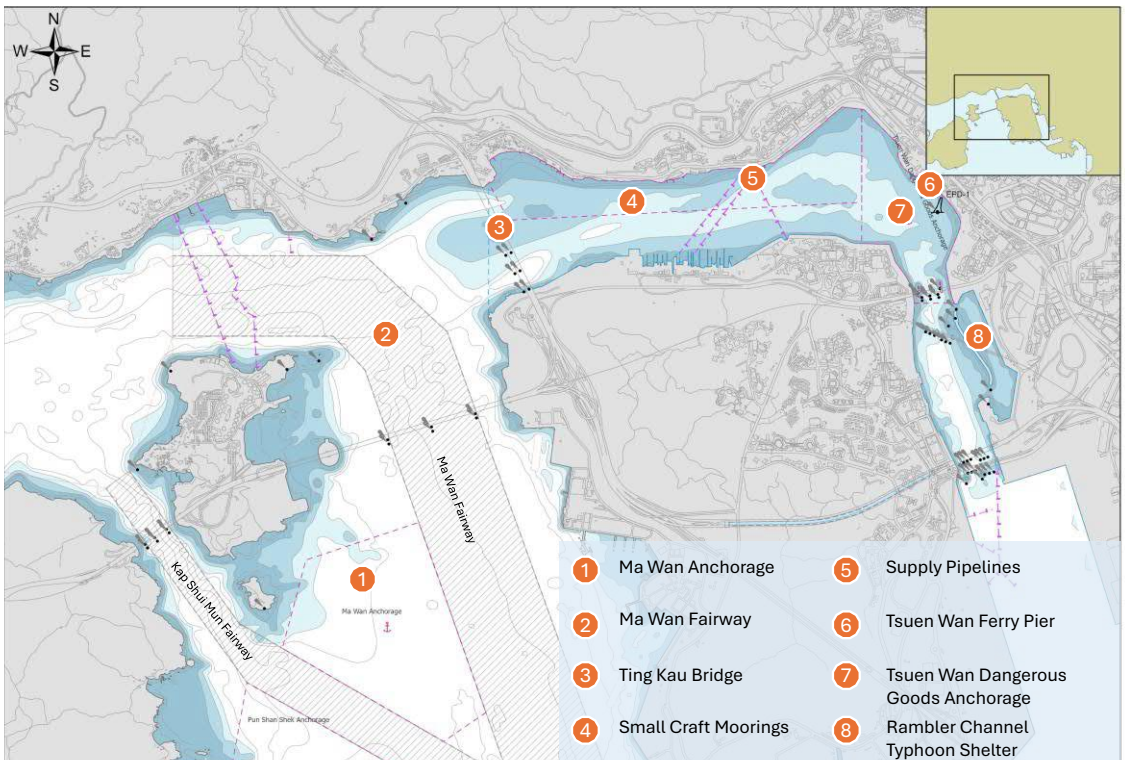
7.1 The Existing Marine Facilities

The vicinity of the project site features key marine facilities that influence navigational activities in the area. These facilities, as shown in Figure 7.1, include:

- **Ma Wan Anchorage:** The Ma Wan Anchorage is a designated area in the waters surrounding Ma Wan Island, primarily used for the safe mooring of vessels. This anchorage is part of the broader marine traffic management system in Hong Kong, which includes various fairways and traffic separation schemes designed to enhance navigational safety in busy maritime areas.
- **Man Wan Fairway:** The Ma Wan Fairway is a crucial maritime route that facilitates navigation between various channels in Hong Kong's busy waters. It connects to several other channels, including the Kap Shui Mun Channel and Tsing Yi Channel.
- **Ting Kau Bridge**: This bridge spans from the northwest of Tsing Yi Island to Tuen Mun Road. It has an air draft restriction of 53 meters above sea level, which must be considered for vessel navigation. feet in length, and a 100-meter-long repair berth for alongside repair services.
- **Small Craft Moorings**: Located north of Tsing Yi Island, these moorings consist of pairs of bow and stern buoys within the waterspace. Mooring requires a request to the Marine Department, and dues are applied.
- **Supply Pipeline**: Three submarine water supply pipelines are identified north and east of the proposed sites.
- **Tsuen Wan Ferry Pier**: Situated south of Tsuen Wan, adjacent to the MTR Tsuen Wan West Station, it provides ferry services connecting to Park Island Ferry Pier at Ma Wan.

- **Tsuen Wan Dangerous Goods Anchorage:** Located northeast of Tsing Yi Island, this anchorage has depths around 10 to 10.4 meters, with a shoal patch at the southeast corner. It primarily serves to provide adequate waterspace for mooring dangerous goods vessels.
- **Rambler Channel Typhoon Shelter**: Located near Kwai Chung in Rambler Channel, it provides 14 hectares of sheltered waterspace for vessels up to 50 meters in length.

Figure 7.1 Existing Marine Facilities near the Application Area



The Site is well-positioned within an area predominantly utilized for industrial purposes, including barge operations, shipyards, and cement storage, ensuring compatibility with existing marine activities.

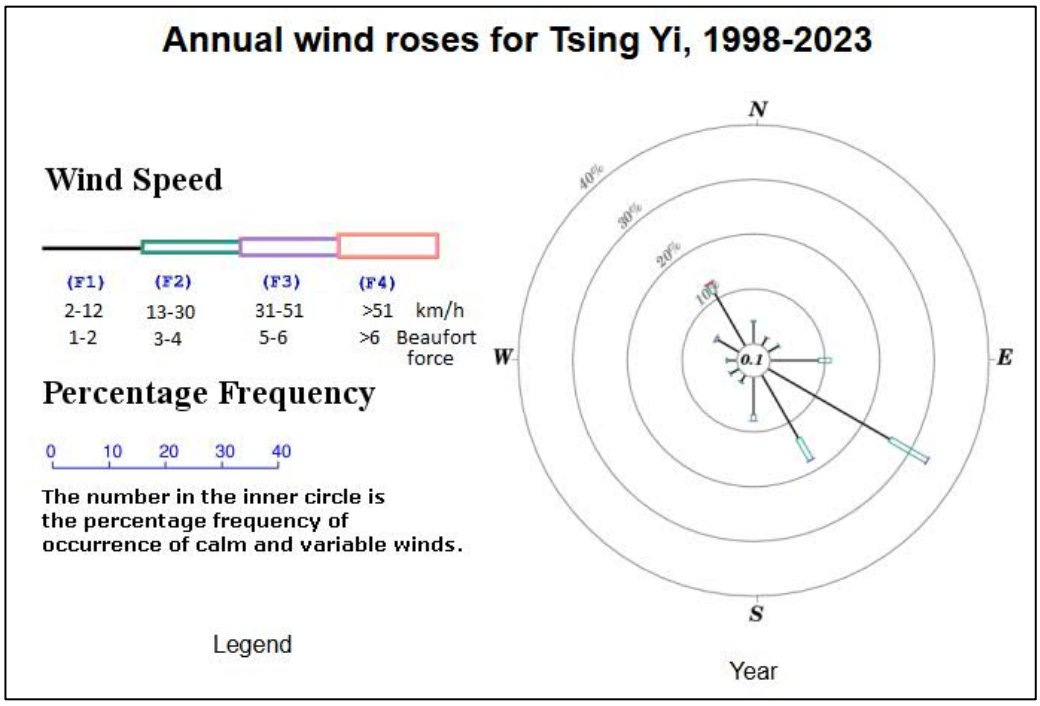
7.2 Metocean Environment

The metocean environment has been analysed to evaluate conditions that could affect marine operations, including wind, tidal levels, and currents.

Wind Environment

The wind environment at the study site was analyzed using historical wind data (1998–2023) from the Tsing Yi wind station, located at Shell Oil Depot on western Tsing Yi. The prevailing winds predominantly originate from the southeast, with typical wind speeds in the range of Beaufort Scale 1–4 (up to 16 knots) as illustrated in Figure 7.2.

Figure 7.2 Annual Wind Rose for Tsing Yi, 1998-2023



Source: Hong Kong Observatory

Due to the site's sheltered position north of Tsing Yi, wind effects are expected to be lighter, reducing potential operational disruptions. However, operations remain subject to temporary constraints under Typhoon Signals.

Tidal Levels

Tides in Hong Kong are mixed and mainly semi-diurnal. On most of the days in a month, there are two high tides and two low tides. Large tidal range occurs twice a month during spring tides when the moon is new or full. On days around neap tides when the moon is in its first or last quarter, however, tidal ranges become small and sometimes only one high and one low tide are observed. In general, the two high tides which occur each day are unequal in height with the higher high tide occurring mostly overnight in winter and during the day in summer.

Tidal data at Ma Wan has been chosen to demonstrate the typical tidal patterns, as they are the closest tidal stations to the Study Area. Tidal details are shown in Table 7.1.

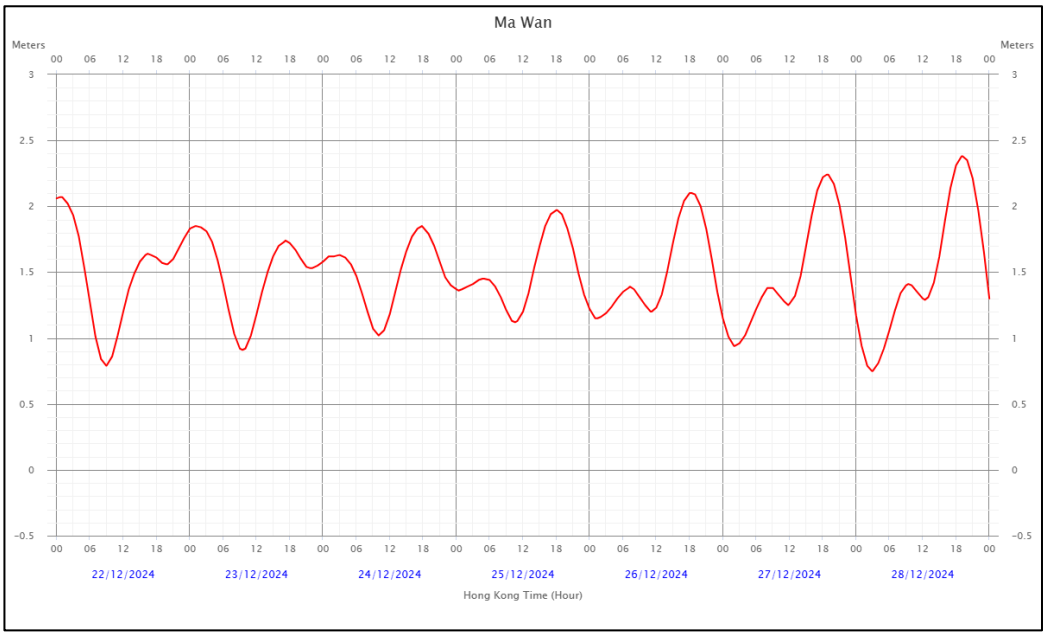
Table 7.1 Tidal Levels at Ma Wan

Location	Level (m) above Chart Datum		
	Mean Sea Level (mCD)	Mean Higher High Water Level (mCD)	Mean Lower Low Water Level (mCD)
Ma Wan	1.48	2.24	0.67

Source: Hydrographic Office Charts for Local Vessels 2018

For the berthing of barges, the actual tidal levels would significantly affect the water depth. In the light of this, the predicted tides for Ma Wan provided by the Hong Kong Observatory are used. A sample of the predicted tides is shown in Figure 7.3

Figure 7.3 Sample of Predicted Tides for Ma Wan



Source: Hong Kong Observatory

The Site's water depth of at least 5 meters (Chart Datum) is sufficient to support the draft requirements of the proposed delivery barges, maintaining safe under-keel clearance during standard tidal conditions.

Current

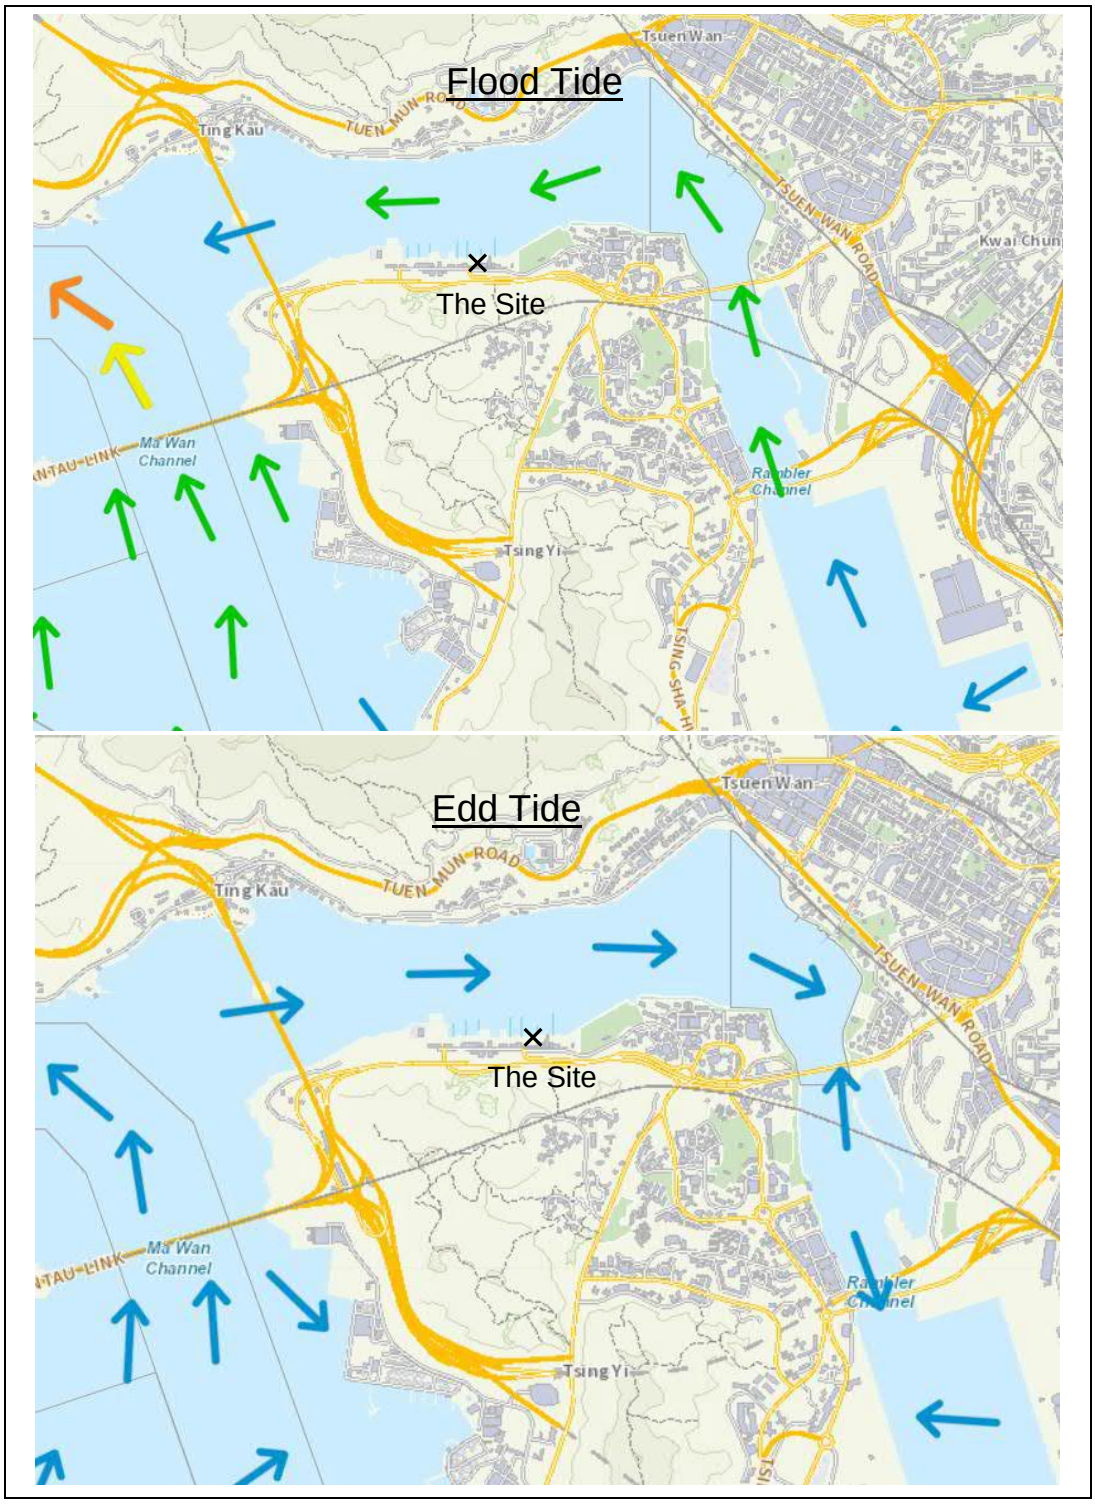
The currents along the project site have been thoroughly analysed using one year of comprehensive data (January 1, 2024, to December 31, 2024) from the Hong Kong Tidal Stream Prediction system (Hong Kong Hydrographic Office). This reliable dataset provides valuable insights into the typical tidal patterns at the site.

The tidal currents at the project site have been analysed using one year of comprehensive data (January 1, 2024, to December 31, 2024) from the Hong Kong Tidal Stream Prediction system (Hong Kong Hydrographic Office). This dataset provides reliable insights into the tidal patterns and flow characteristics in the region.

As illustrated in Figure 7.4, the analysed data point is located in the main tidal stream, where flood tides flow toward the west and ebb tides flow toward the east. Over the one-year period, the tidal current speed in this main stream averaged 0.45 knots, with a maximum recorded speed of 1.68 knots. While these values reflect relatively calm tidal conditions in the main stream, the project site, marked with an "X" on the map, is situated in a sheltered area away from the direct influence of stronger currents.

This sheltered position provides natural protection and calm conditions conducive to barge operations.

Figure 7.4 Illustration of Edd Tide and Flood Tide

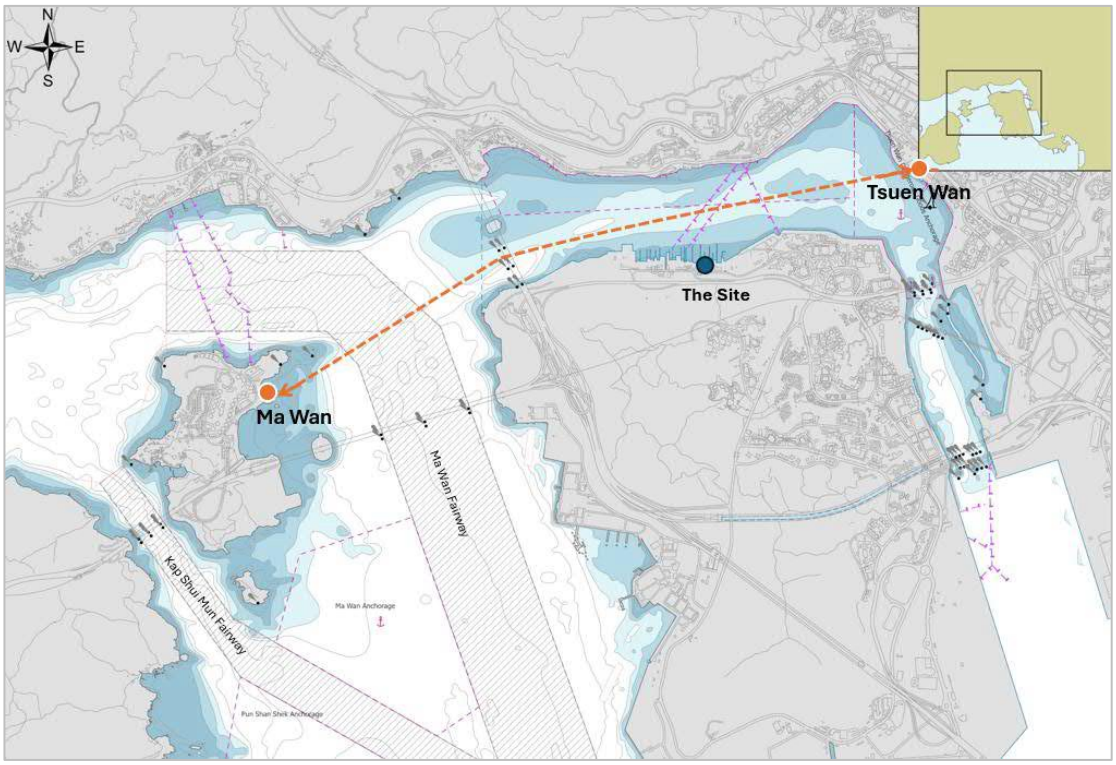


7.3 Local Marine Traffic Environment

Park Island Ferry Services

The ferry services between Ma Wan and Tsuen Wan are operated by Park Island Transport Company Limited. These services serve as transport connection for passengers traveling between the two locations. The ferry route is illustrated in Figure 7.5, showing the indicative vessel movement directions. Operating daily with a total of six trips, the service provides consistent accessibility for residents and visitors.

Figure 7.5 Traffic Gate and Vessels Movement Direction



The service schedule for the ferry operations is detailed in Table 7.2, summarizing the daily departure times.

Table 7.2 Ferry Services Schedule

Route	Scheduled Departure Times (Daily Mon-Sun)
From Ma Wan	10:15, 13:15, 16:15
From Tsuen Wan Pier	10:35, 13:35, 16:35

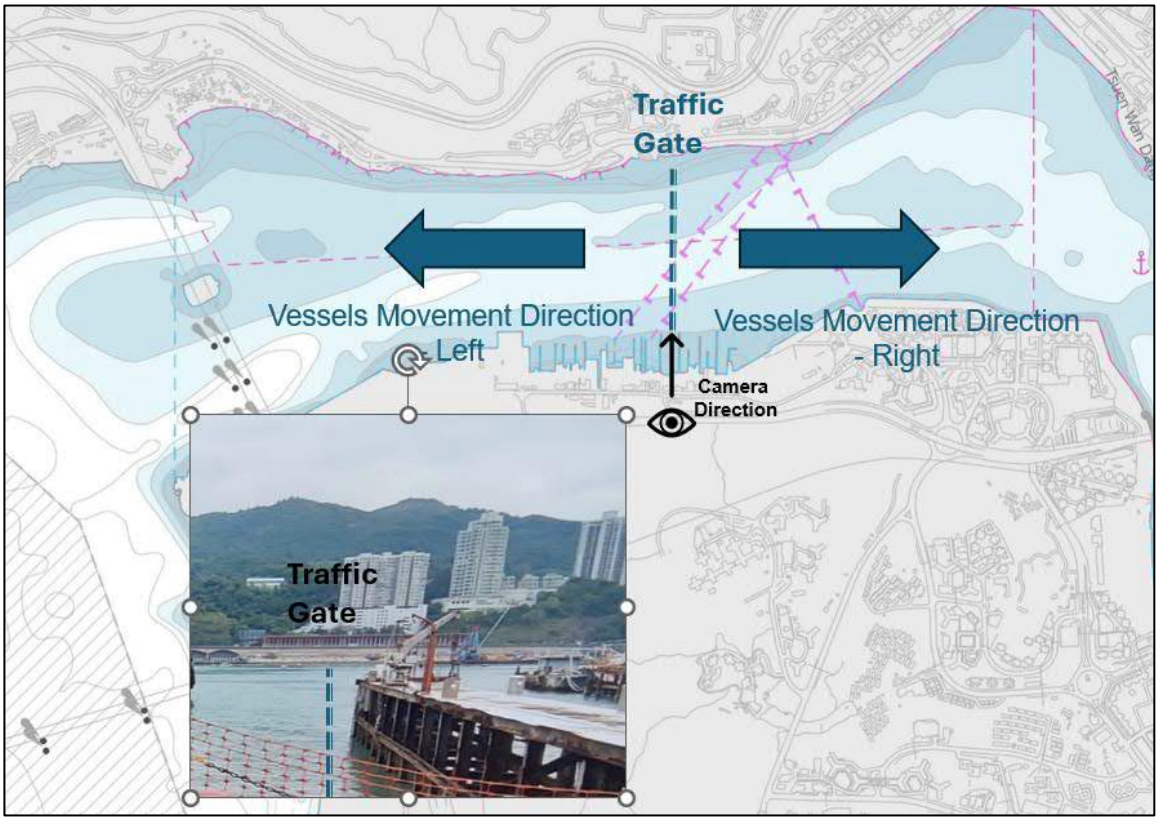
7.4 Daylight Visual Survey Study Methodology

To collect the latest marine traffic pattern in the area, a daylight visual survey was carried out for 30 consecutive calendar days (from November 2024 to December 2024) during daylight hours (0700-1900). Vessel counting was carried out on 12 selected days within the period.

The study area was defined by one imaginary line (Traffic Gates) as shown in Figure 7.5**.** All vessels passing through the traffic gates would be recorded by a video camera set up at the Site.

The cameras recorded the types, the numbers and the movements of the vessels transiting within the study area 24-hour daily. The data were collected to analyse the vessels activities and assess the traffic impact generated by the CBP.

Figure 7.6 Traffic Gate and Vessels Movement Direction



Vessel Type in Survey

The data collection for this study will be based on the classification of vessels to analyse marine traffic within the study area. The vessel types are classified as follows:

- OG-C (Ocean Going - Cargo): Large cargo vessels, including container ships, bulk carriers, and tankers, designed for international trade. These vessels typically exceed 100 meters in length.
- RT (River Trade): Medium-sized vessels, such as container ships, bulk carriers, and tankers, operating in regional and coastal waters. These vessels, with a length overall of 20 to 100 meters.
- T&T (Tug & Tow): Tugboats engaged in towing operations, often paired with barges. The combined length of the tug and tow ranges between 110 and 140 meters, primarily used for cargo transport and ship maneuvering.
- OG-P (Ocean Going - Passenger): Passenger vessels, including cruise ships and large ferries, operating on international routes.
- FF (Fast Ferry/High-Speed Craft): High-speed ferries operating at speeds of at least 20 knots, commonly used for passenger transportation between Hong Kong and neighboring regions.
- LF (Local Ferry): Domestic ferries providing short-distance passenger transport within Hong Kong waters. These vessels typically have a length of up to 22 meters.
- FL (Fast Launch): Small, fast-response government-operated vessels such as patrol boats, fire service speedboats, and pilot boats. These craft, up to 14 meters in length, are used for emergency response and navigation assistance.
- TB (Tugboat): Independent tugboats that assist larger vessels with berthing, docking, and maneuvering in confined waters such as ports and harbors.
- DG (Local Dangerous Goods): Vessels specifically designed to transport hazardous materials, including chemicals and fuel, within local waters. These vessels adhere to strict safety regulations.
- PV (Pleasure Vessel): Recreational vessels, such as yachts, cruisers, and sampans. This category may also include smaller fishing boats used for leisure activities.
- UC (Unclassified): Vessels not fitting into any specific category due to unique designs or operational roles. These may include research vessels or specialized service craft.

Average Daily Pattern of Traffic Gate

Data collected from 7:00 to 19:00 during 12 selected days reveals that an average of 226 vessels was observed daily, as shown in Table 7.3**.** The analysis indicates that the dominant vessel types within the study area are pleasure vessels and tugboats, followed by dangerous goods vessels and river trade vessels.

Given the prominence of these vessel types, it is essential for crews operating in the vicinity of the CBP (Concrete Batching Plant) to exercise caution. Awareness of the traffic patterns can help minimize encounter risks and maintain operational safety.

As part of the planned CBP operations, the barge delivery schedule includes six barge movements per day: one inbound and one outbound trip for cement, and two inbound and two outbound trips for aggregates via the Pelican Aggregate Barge

When compared to the existing daily marine traffic of 226 vessels, the additional barge movements represent a minor increase.

Table 7.3 Hourly Average Vessel Movement

Hourly Average Vessel Movement for Selected 12 Days Both Directions (Westbound and Eastbound)														
Hour			All	Cargo			Passenger				Others			
				OG-C	RT	T&T	OG-P	FF	LF	FL	TB	DG	PV	UC
7:00	-	8:00	24.9		0.4	0.5		3.6	2.3	11.5	2.1	2.1	2.5	
8:00	-	9:00	22.8		0.9	0.7		2.1	1.7	9.7	0.8	1.8	5.3	
9:00	-	10:00	14.2		1.4	0.3		0.3	1.0	3.5		2.3	5.5	
10:00	-	11:00	18.8		1.4	0.3		2.0		3.5	0.6	2.3	8.7	
11:00	-	12:00	16.9		1.8	0.8				3.7	1.6	3.2	5.9	
12:00	-	13:00	20.9		2.4	0.5				3.2	1.2	3.9	9.3	0.5
13:00	-	14:00	17.7		3.5	0.3		2.0		2.3	0.5	2.8	6.1	0.2

Total			226		17	4		16	5	68	10	23	81	1

7.5 Minimal Potential Impacts

The marine logistics assessment confirms that the proposed CBP operations will have a minimal impact on the existing marine environment. The additional barge operations, limited to 3 round-trips per day (one inbound and one outbound for cement, and two inbound and two outbound for aggregates via the Pelican Aggregate Barge), represent less than 2% of the typical daily vessel movements in the nearby waterway, constituting a negligible increase in traffic. The site's strategic location, with direct access to established fairways and existing mooring facilities, ensures that delivery operations will not disrupt primary navigational routes or interfere with nearby industrial activities.

Metocean conditions at the Site, including moderate tidal currents (average speed of 0.45 knots) and sufficient water depth (minimum of 5 meters Chart Datum), provide a stable and predictable environment for barge operations. These factors significantly reduce risks associated with manoeuvring and mooring. Additionally, the sheltered location along the northern coast of Tsing Yi minimizes the influence of strong winds, ensuring safe and reliable operations even during peak tidal movements.

8 Implementation and Mitigation Measures

This chapter outlines the comprehensive organizational structure, communication protocols, operational requirements, safety practices, and emergency response measures that govern the operations of the Cement Barging Plant (CBP). These measures aim to ensure safe, efficient, and environmentally compliant operations while mitigating risks associated with marine logistics and plant activities.

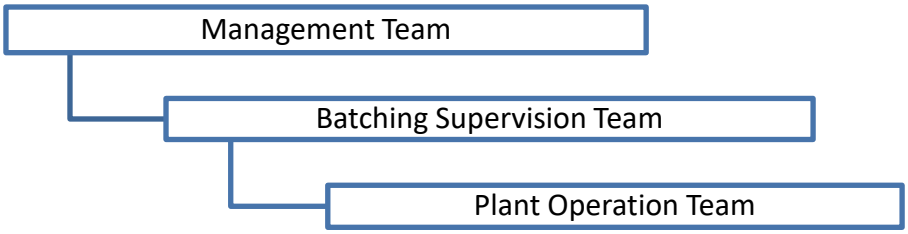
8.1 Organization

The CBP has established a well-trained and experienced team responsible for overseeing daily operations. The team ensures tasks are implemented as planned, takes immediate corrective actions when necessary, and maintains high safety standards.

Organization Chart

The CBP management team is organized to ensure that all precautionary and mitigation measures are effectively implemented. The organizational structure is shown in Figure 8.1 Organization Chart.

Figure 8.1 Organization Chart



Roles and Responsibility

- **Management Team:** Oversees overall CBP operations, coordinates deliveries with suppliers, and ensures compliance with regulations and operational protocols.
- **Batching Supervision Team:** Serves as the primary contact for vessel crews, monitors weather conditions, arranges berthing schedules, and manages unloading operations.

- **Plant Operations Team:** Executes instructions from the Batching Supervisor, liaises with vessel crews, maintains unloading facilities, and ensures smooth and safe unloading operations

8.2 Communications

Effective communication protocols are critical for safe and efficient CBP operations, ensuring seamless coordination among internal teams, vessel crews, and external stakeholders.

Table 8.1 Communications System in CBP

System	Function and Notes
Walkie-talkies	For internal communication among site staff
Mobile Phones	To facilitate contact with key personnel, including supervision and operations teams.
Email	To arrange deliveries, record notifications, and manage operational documentation.
VHF Radio	For direct communication between CBP operators and vessel crews.

Internal Communication

A structured pre-notification system ensures only one barge operates at the designated area at any given time:

- **72 Hours Pre-Notification**: The Batching Team sends delivery requests to the Management Team for coordination with suppliers.
- **12 Hours Prior Notification**: Vessel crews inform the Batching Supervisor of arrival details and seek approval.
- **Operational Updates**: The Batching Supervisor communicates arrangements to the Operations Team for preparation.

External Communication

- **Adjacent Users:** CBP coordinates with neighboring facilities to avoid scheduling conflicts and ensure only one vessel operates at the site simultaneously.

- **Marine Department (Vessel Traffic Service):** Vessel crews report transit information to the Vessel Traffic Service (VTS) using designated VHF channels during their approach and departure.

8.3 Implementation Requirement

Vessel Requirements

All vessels deployed for CBP operations must comply with the Merchant Shipping (Local Vessels) Ordinance (Cap. 548) and meet the following standards:

- Be maintained in a seaworthy condition and equipped with operational propulsion and mooring systems.
- Employ competent, qualified crews.
- Be equipped with Automatic Identification Systems (AIS) and multi-channel VHF radios.

Terminal Requirements

The terminal must maintain all equipment in accordance with Hong Kong regulations and operate it using qualified personnel. Regular certifications and maintenance checks are required to ensure compliance and operational safety.

Safety Equipment

Each vessel shall be equipped with the safety devices which include but not limit to the follows:

- **Personal Protective Equipment (PPE):** Gloves, masks, non-slip shoes, eye/ear protection.
- **First Aid Kits:** Up to required standards and readily accessible.
- **Firefighting Equipment**: Portable fire extinguishers and related equipment.
- **Lifesaving Appliance**s: Life jackets, lifebuoys, and emergency lights.
- **Safety Notice Boards**: Displaying key safety information.

8.4 Safety & Mitigation Measures

Operational Safety Objective

The operator of the proposed CBP is committed carrying out the marine delivery works in a manner that causes minimum harm to our employees and other marine users. This will be achieved through the establishment of clear objectives and the implementation of an effective safety management system which include:

- Prevent accidents and comply with relevant legislation.
- Maintain the highest safety standards and provide ongoing employee training.
- Conduct regular audits of the safety management system.

Training

The adequate safety training for levels of personnel including the skippers, marine crew onboard and crew on CBP, and the profession training for the utilisation of marine plants or system, shall be provided regularly to ensure their understanding and compliance of marine safety issues.

- **Induction Training**: The Plant Supervisor shall provide the site-specific induction training course to the employees including the CBP background, health & safety policy, employees' duties, Hong Kong government legislation &regulations, permit to work, foreseeable hazards, emergency preparedness, personal protective equipment, case studies, etc. The Plant Supervisor shall provide refresher training courses to its employees in every six months.
- **Skipper Training**: Before CBP implementation, the vessel crew from the supplier shall carry out the trial-run training to ensure the marine traffic and relevant safety issues are compiled by all the skippers, which shall be recorded as the housekeeping rules for monitoring and review. The skippers shall be well trained by traveling via the designated routes.

Weather Monitoring

To enhance navigation safety, real-time metocean (tidal, sea level) data and weather forecast from the Hong Kong Observatory and the Marine Department will regularly be reviewed.

The predictions will provide detailed and up-to-date Hong Kong and Guangdong weather forecast for the waters, which provides a sound basis for day-to-day planning and operations. The forecasts include the information of:

- Wave conditions and General weather outlook
- Rainfall
- Significant swell heights
- Wind conditions
- Gust and average speeds
- Wave conditions
- Miscellaneous data on relative humidity, and sea temperature

8.5 Adverse Weather Arrangement

The special arrangement shall be well prepared and implemented in response to typhoon or adverse weather occurrence accordingly, ensuring the safe CBP operation and the vessel and its crew can be evacuated in a safe and efficient manner.

Roles and Responsibilities under Adverse Weather

Batching Supervision Team:

- Closely monitor the weather forecast of Hong Kong and Guangdong;
- Announce the response plan accordingly;
- Monitor the response actions in CBP and ensure the safety of both personnel, equipment and facilities.

Plant Operation Team:

- Post tropical cyclone warning status for information;
- Liaise with Vessel Operation Team of Supplier to prepare specific tropical cyclone response plan and implement accordingly;
- Examine and secure the facilities on site;
- Ensure staff who works outdoor put on PPEs.

Vessel Operation Team of Supplier:

- Liaise with Plant Operation Team;
- Implement the specific tropical cyclone response plan;
- Ensure staff who works outdoor put on PPEs.

- Moor vessels at safe locations.

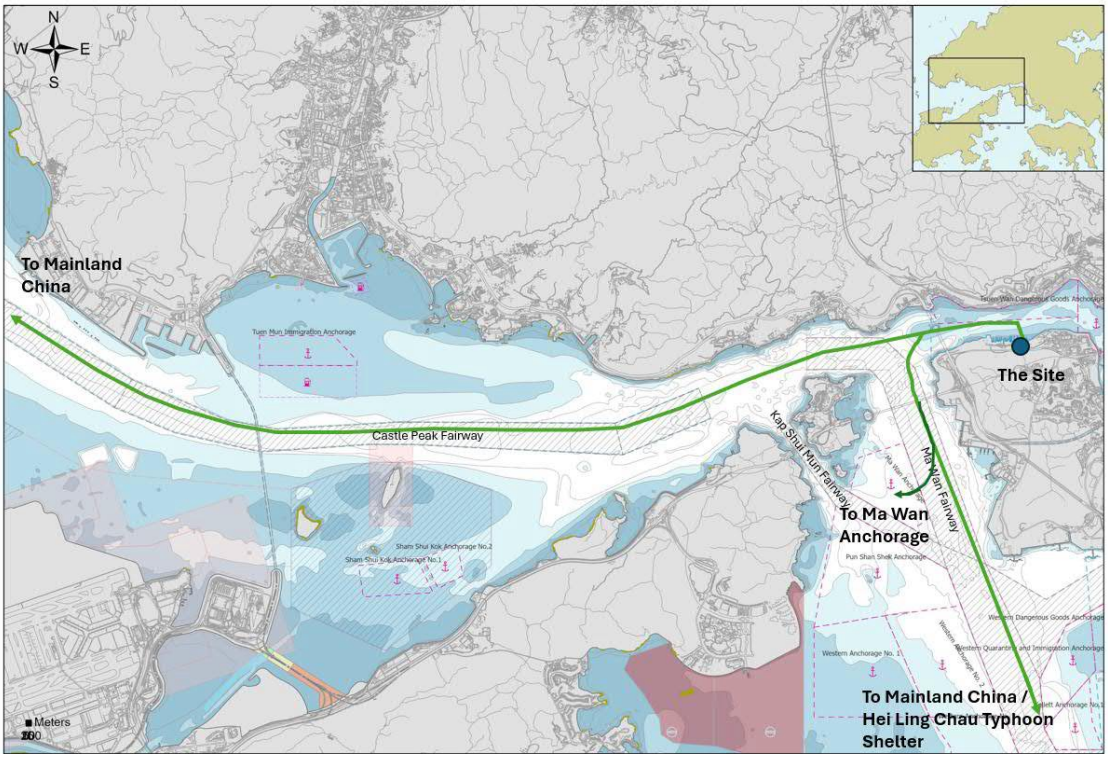
Adverse Weather Procedures

The aggregate delivery to CBP shall only be allowed when weather and sea state will not adversely affect the safe transit and will not create the risk of spillage or loss of materials from the vessels during voyage. The following procedures have been regulated for the CBP barge operation in response to adverse weather conditions:

Typhoon:

- **When Tropical Cyclone Signal No. 1 (TS1)** is Hoisted: The operations will be maintained, but the further typhoon development will be closely monitored by Plant Operators. The Batching Supervisor shall decide whether the material delivery would be arranged based on the weather information from HKO and Guangdong weather forecast.
- **When Tropical Cyclone Signal No. 3 (TS3)** or above is Hoisted: All agents, suppliers, and vessel crews will be notified immediately. Aggregate deliveries will be suspended, and on-site batching may only proceed under favorable weather conditions (e.g., no rainfall, strong winds, or adverse sea conditions) in strict compliance with the BOP protocols, including real-time weather monitoring and readiness to halt operations if conditions deteriorate. Vessels will evacuate work areas to seek safe shelter in Mainland, following Marine Department recommendations for river trade vessels. If Typhoon Signal No. 8 is forecasted and evacuation to Mainland is not possible, vessels will proceed to Hei Ling Chau Typhoon Shelter or alternative anchorages such as Ma Wan Anchorage. A standby tugboat will be deployed, if required, to accelerate the evacuation of barges and ensure the safety of operations.
- **Before TS 3** is issued, if in the case of the delivery barge is approaching HK during adverse weather condition, the vessel shall steer back to Mainland China and not stay in HK water.
- **When TS 3** is lowered and the weather condition is improved, the Plant Operators will consider whether to resume the operation based on the remaining time after TS3 lowering, the time taken to operation resume, etc.
- The applicant shall ensure that all delivery vessels strictly follow the adverse weather procedures set out in this plan. Any unauthorized anchoring or failure to evacuate will be considered non-compliant.
- The evacuation route for typhoon or contingency is depicted in Figure 8.2.

Figure 8.2 Evacuation Routes for Typhoon or Contingency



Rainstorm:

- When a red rainstorm signal is issued, the loading & unloading activities shall be ceased, the crew members should attend bilges and the on-site facilities will be examined and secured properly.
- When a black rainstorm signal is issued, the outdoor activities would be suspended and all crew member shall stay indoor in a safe place.

Low Visibility:

- All operations must cease when visibility is less than 1.5 nautical miles. The Marine Department's Vessel Traffic Centre (VTC) will broadcast visibility reports on VHF channels 12, 14, and 67 when visibility drops below 2 nautical miles. Operators must monitor these channels continuously.
- Barging operators must strictly comply with the "International Regulations for Preventing Collisions at Sea, 1972" (COLREGs), with emphasis on:
    - Rule 5: Maintain a proper lookout.

- Rule 6: Navigate at a safe speed.
- Rule 7: Assess the risk of collision.
- Rule 8: Take timely actions to avoid collisions.
- Rule 19: Use AIS, sound signals, and extreme caution in restricted visibility.

- Operators must reduce speed, maintain clear communication using AIS and sound signals, and coordinate with nearby vessels.
- In the event of an accident, this should be reported immediately to the Vessel Traffic Centre, either on V.H.F. (channel 12, 14 or 67) or by telephone (no. 2233 7801 or 2233 7302).

8.6 Emergency Responses

Once the emergency occurs, the person-in-charge onboard shall contact the Plant Operators. The responsible person shall report the occurrence forthwith to Fire Service Department (FSD) or MD orally about the accident time/position.

The emergency response shall be in accordance with the requirements of Merchant Shipping (Local Vessels) Ordinance Cap 548. The responses for key emergency scenarios are introduced as follows:

<u>Fire on CBP</u>

- Any staff member will activate the warning alarm and report to FSD immediately;
- All persons to evacuate the plant and building and assemble on at the emergency assembly area;
- Notify the fire warden if people are missing at a possible location;
- Report any anomalies to the fire warden and they will arrange search;
- On advice of fire warden, tenants and general public should then return to building or leave premises;
- Assist in securing the site and determine extent of damage, prepare the relevant clean-up plan and strategy to make good afterwards.

<u>Collision</u>

If collision occurs, Coxswain should:

- Cut engine power and inform all crew members on board;

- Inform Operations about vessel's position and time of accident and keep proper log of major events;
- Inform the crew members and keep them calm;
- Send crew member to inspect for damages and check for any oil leakage;
- Check for any injuries onboard and perform first-aid treatment as appropriate;
- If slightly taking on water occurs, send crew members to clear water by using emergency water pump;
- If more than one cabins taking on water and risk of sinking occurs, abandon ship signal has to be sent out by blowing 7 short follow 1 long blast on the whistle. Instruct crew members to prepare all LSA on board, and assist the personnel to put on life jackets for leaving the ship;
- Attract vessels in the vicinity for emergency assistance by blowing 3 short 3 long and follow by 3 short blasts on the whistle and hoist international distress signal;
- If there is no immediate danger of own vessel, assist the other vessel and record the information including vessel name, coxswain name, damage & condition of vessel;
- When abandon ship signals have been sent out, all crew members have to follow the emergency procedure.

Fire onboard

If fire occurs, Coxswain should:

- Stop the barge at a safe place or away from other vessels if circumstance permits;
- Activate fire alarm and instruct crew members to fire fight;
- Inform Operations and Marine Department for assistance;
- Stop engine, cut off power, shut fire damper, start fire pump & fire extinguishers and use all appropriate means on board to fight fire;
- Broadcast to keep the crew calm and if threatened, relocate to a safe area;
- When serious fire occurs, inform the crew to put on life jackets and stand-by for further instruction to leave ship;
- When fire is out of control, abandon ship action has to be taken. Instruct crew members to prepare all LSA on board, and put on life jackets for leaving the ship;
- When crew members have received abandon ship signal, cease fire fighting and immediately report to assigned stations to prepare for abandon ship.

Grounding

If grounding occurs, Coxswain should:

- Stop engine and inform all crew members on board;
- Inform Operations about vessel's position and time of accident and keep proper log of major events;
- Inform the crew and keep them calm;
- Send crew member to inspect damage and check for any oil leakage;
- Take sounding around and check status of seabed;
- Check any injury on board and perform first-aid treatment as appropriate;
- If slightly taking on water is found, prevent further leakage and use water pump as appropriate;
- Prevent the barge from drifting to shore;
- If taking on water is causing the barge to one side, abandon ship action should be taken. Instruct crew members to prepare and put on the LSA /life jackets for leaving the ship;
- Attract vessels in the vicinity for assistance by blowing 3 short and follow by 1 long blast on the whistle and hoist 'V" flag;
- Attract vessels in the vicinity for emergency assistance by blowing 3 short 3 long and follow by 3 short blasts on the whistle and hoist international distress signal;
- Aground signal: Day — by hoisting 3 black balls or shapes vertically on the main mast together with the anchor black ball; Night — by hoisting 2 red lights in a vertical line on the main mast together with the anchor light;
- Take precaution of tidal change;
- When abandon ship signals have been sent out, all crew members have to follow the emergency procedure and report to their assigned boat stations.

Man Overboard

If man overboard occurs, Coxswain should:

- Stop both main engines; blow 3 long blasts on the whistle to indicate man overboard;
- Deploy lifebuoy with buoy light to indicate the overboard position, and the crew member shall keep pointing at the location;
- Operate engines and turn towards the person overboard;

- Proceed back to the position with caution and give a lee side to the person overboard. Keep the person overboard well clear from the propeller;
- Keep clear of surrounding traffic, and take precaution to pick up the person overboard;
- Report to the Plant Operation Team of CBP and Marine Department.

Oil Leakage

If oil leakage occurs, Coxswain should:

- Cease filing, take precaution to avoid oil split overboard;
- Arrange crew members for assistance;
- Empty tank by transferring fuel to other oil tanks;
- If oil split overboard, inform the Plant Operation Team of CBP and Marine Department.

Engine Malfunction

If engine malfunction occurs, Coxswain should:

- Slow down or stop engine;
- Clear of traffic or prevent from obstructing fairway;
- Hoist up engine trouble signal;
- Drop anchor as appropriate;
- Inform Plant Operation Team and Marine Department;
- Check with Engineer whether the engine can be repaired by crewmember and time required;
- Inform the crew and keep them calm;
- If the engine cannot be repaired by crewmembers on board, inform the Plant Operation Team to arrange towage as soon as possible.

8.7 Conclusion

The implementation and mitigation measures outlined in this chapter demonstrate a comprehensive approach to ensuring the safe, efficient, and environmentally responsible operation of the Temporary Concrete Batching Plant. By establishing clear roles and responsibilities, robust communication protocols, and stringent operational and safety standards, the proposed operations mitigate risks to marine traffic, personnel, and the environment. Proactive weather monitoring, detailed emergency response plans, and adherence to international and local regulations further ensure operational resilience under normal and adverse conditions..

9 Summary and Conclusion

9.1 Introduction

The applicant proposes to develop a Temporary Concrete Batching Plant (CBP) at the approved Tsing Yi Outline Zoning Plan No. S/TY/32 for a duration of five years. To support the application, AXON Consultancy Limited has prepared this Barging Operation Plan (BOP), which outlines the marine logistics arrangements, evaluates potential traffic impacts, and proposes mitigation measures to ensure the proposed CBP operates in a safe, efficient, and environmentally sustainable manner.

9.2 Summary

The marine logistics operations for the proposed Concrete Batching Plant (CBP) are designed to ensure safe and efficient functionality. Aggregates and cement will be delivered via self-propelled barges from the mainland, with a maximum of 3 round trips per day— three inbound trips (one for cement delivery and two for aggregates via the Pelican Aggregate Barge) and three corresponding outbound trips.

Maintenance dredging is required to restore adequate water depth at the barging point, where sedimentation has reduced the nearshore depth below safe levels for batching operations; an estimated 4,000 m² of dredging is needed— a minor volume compared to larger project thresholds.

Mooring stability is enhanced through the installation of new fenders, bollards, and a robust anchoring system, which secure both the Pelican Aggregate Barge and the Cement Barge, ensuring precise vessel alignment and safe operations despite tidal fluctuations and currents.

Unloading operations are efficiently executed at the safety platform, with the aggregate barge using an integrated conveyor system to transfer material directly to the batching plant, and the cement barge employing a self-discharging pumping system, complemented by the plant’s advanced suction technology, to deliver cement while improving air quality by reducing exhaust emissions. Marine Traffic Review

A review of nearby marine facilities and the Metocean environment affecting CBP operations concluded that potential impacts are minimal. The site benefits from moderate tidal currents averaging 0.45 knots and a minimum water depth of 5 meters (Chart Datum), providing a stable and predictable environment for barge operations. Additionally, the sheltered location along the northern coast of Tsing Yi reduces the impact of strong winds, ensuring safe and reliable operations even during peak tidal conditions.

A daylight visual survey conducted in November–December 2024 (07:00–19:00) collected detailed data on vessel traffic in the area. Over 12 selected survey days, an average of 226 vessel movements were recorded daily, with the most common vessel types being pleasure vessels and tugboats, followed by dangerous goods vessels and river trade vessels. The planned barge operations, limited to six trips per day, account for less than 2% of the typical daily vessel movements, representing a negligible increase in marine traffic.

A comprehensive set of risk control measures has been established in this BOP, ensuring full compliance with safety and operational requirements. Clear roles and responsibilities have been assigned, and communication protocols have been implemented to ensure efficient internal operations and minimize conflicts with adjacent users or stakeholders.

Implementation requirements for vessel deployment, terminal infrastructure, safety equipment, and weather monitoring have been clearly defined to guide precautionary actions. Special arrangements for adverse weather conditions, including typhoons, rainstorms, and low visibility, have been prepared to ensure operational continuity and safety. Emergency response protocols for various scenarios have also been established, providing clear guidance for all responsible personnel.

The CBP operators are committed to maintaining the highest safety standards, treating safety and health as integral aspects of their performance, and mitigating potential hazards to the minimum feasible level.

9.3 Conclusion

The proposed CBP, supported by this barging operation plan, incorporates robust marine traffic arrangements, impact assessments, and implementation of mitigation measures. Although vessel movements associated with the CBP will interact with existing traffic conditions in the vicinity, survey data indicates that the induced marine traffic impact is negligible. Furthermore, any marine risks posed by these operations can be mitigated to an acceptable level, provided the proposed measures outlined in this BOP are implemented effectively.

MPC Paper No. A/TY/150

Previous Applications

Application No.	Development	Date of Consideration and Decision	Approval Conditions
A/TY/105	Proposed warehouse (godown for storage of steel plates and steel materials)	9.1.2009 Rejected by the Metro Planning Committee (MPC) of the Town Planning Board (TPB) 24.4.2009 Rejected/not agreed by the TPB on Review	(1) (2), (3), (4), (5) and (6)
A/TY/127	Temporary concrete batching plant for 5 years	18.12.2015 Rejected/not agreed by the MPC of TPB	(7), (8) and (9)
A/TY/134	Proposed temporary concrete batching plant for a period of 5 years	16.3.2018 Rejected/not agreed by the MPC of TPB 26.10.2018 Rejected/not agreed by the TPB on Review	(10) (10)

Similar Applications

Application No.	Development	Date of Consideration	Approval Condition(s)
A/TY/62	Temporary concrete batching plant for 5 years	12.1.2001 Approved with conditions by the MPC of the TPB	(A2), (A3), (C1), (D3), (E4)
A/TY/91	Temporary concrete batching plant for 5 years	4.3.2005 Approved with conditions by the MPC of the TPB	(A2), (C1), (D4), (E4)
A/TY/108	Temporary concrete batching plant for 5 years	12.2.2010 Rejected by the MPC of the TPB 6.8.2010 Approved with conditions by the TPB	(8) (A1), (A4), (C1), (E3)
A/TY/130	Temporary concrete batching plant for 5 years	25.11.2016 Approved with conditions by the MPC of the TPB	(A1), (A4), (B1), (C1), (E1), (E2), (E3),

Rejection Reasons:

(1) there was no information in the submission to demonstrate that goods vehicles could be turnaround within the application site;

(2) there was no proper vehicular access to the Site;

(3) provision for loading/unloading, parking and turnaround facilities within the Site were inadequate;

(4) the proposed reliance on multiple back-and-forth manoeuvres in lieu of provision of standard turning facilities within the proposed development was not acceptable on traffic safety ground;

(5) the applicant failed to demonstrate that the proposed development would not aggravate the current unsatisfactory traffic condition in the area;

(6) approval of the application would set an undesirable precedent for similar applications for warehouse use in the area, the cumulative effect of which would adversely affect the traffic condition of the area;

(7) the applicant failed to demonstrate that the proposed barging operation by using private mooring facility for the proposed concrete batching plant was feasible and would not have adverse impact on marine safety and the shipyards nearby;

(8) the applicant failed to demonstrate that the proposed development would not have adverse traffic impact and traffic management concerns on the road network;

(9) approval of the application would set an undesirable precedent for similar applications and the cumulative effect of approving such application would result in aggravating marine traffic safety issue in the concerned sea area and adverse traffic impact and traffic management concerns on the road network; and

(10) the applicant fails to demonstrate that the proposed barging operation by using slipway for the proposed concrete batching plant was feasible, practicable and safe and would not have adverse impact on marine safety and the shipyards nearby.

Approval Conditions:

Traffic

(A1) no queuing on public roads in the vicinity of the application site resulting from the operation of the plant should be allowed/no vehicle is allowed to queue back or reverse onto/from public road at any time during the planning approval period;

(A2) the submission of a transport plan including the access arrangement and the routing of the long or heavy vehicles to and from the application site to the satisfaction of the Commissioner for Transport or of the TPB;

(A3) the concrete batching plant should not be operated before the commissioning of the Tsing Yi North Coastal Road;

(A4) the submission and implementation of traffic management plan and associated mitigating measures, internal traffic circulation and pedestrian facilities within the application site, to the satisfaction of the Commissioner for Transport or of the TPB;

Landscape

(B1) the submission/implementation of landscape (and tree preservation) proposal within 12 months from the date of planning approval to the satisfaction of the Director of Planning or of the TPB;

Fire Safety

(C1) the submission/implementation/provision of water supplies for fire fighting, fire service installations (FSIs) proposals (and emergency vehicular access) within six/nine months from the date of planning approval/before commencement of operation of the proposed development to the satisfaction of the Director of Fire Services or of the TPB;

Environment

(D1) the submission of an application for Specified Process Licence under the Air Pollution Control Ordinance to the satisfaction of the Director of Environmental Protection;

(D2) the design and provision of environmental mitigation measures to the satisfaction of the Director of Environmental Protection or of the TPB;

Other Aspects

(E1) the submission of a Barging Operation Plan[2] (BOP) within 12 months from the date of the planning approval/before commencement of vessel, barging activities or operation of the proposed development to the satisfaction of the Director of Marine or of the TPB;

(E2) the implementation of the approved BOP and the (continuous) maintenance of the proposed/adopted measures at all times during the planning approval period to the satisfaction of the Director of Marine or of the TPB;

(E3) the permission shall cease to have effect unless prior to the said date either the development hereby permitted is commenced or the permission is renewed; and

(E4) the submission of a report on the tests and inspection of the existing conditions of the piles to the satisfaction of the Director of Civil Engineering or of the TPB.

Remarks:

[1] including contingency plan and associated mitigation measures, fleet management and monitoring/auditing mechanism and/or restrictions of vehicles at critical junctions

[2] including details of the type and size of the vessel/barge involved, relevant operation and/or mooring arrangement

Appendix III of
MPC Paper No. A/TY/150

Detailed Departmental Comments

1. Comment of the SDEV:

   (a) In relation to whether the proposed dredging works falls within the ambit of the Foreshore and Sea-bed (Reclamations) Ordinance (Cap. 127) ("FS(R)O") as per paragraph 4.2 of PAH Chapter 3, technical advice from SDEV is as follows:

      (i) referring to Part 4 of the BOP in the submission, dredging operation for removal of accumulated sediment at the proposed barging point is to be carried out. In particular, per paragraph 4.1 of the BOP, "[a]t the application site, sedimentation has reduced the nearshore water depth at the barging point to below the level required for safe batching operation. To remedy this, maintain dredging is necessary to remove the accumulated sediment and restore adequate water depth for vessel navigation";

      (ii) according to section 2 of FS(R)O, reclamation "includes any work over and upon any foreshore and sea-bed". Further interpretation of reclamation was given in Works Buearu Technical Circular (WBTC) No. 9/2001 which was then subsumed into PAH Chapter 3 paragraph 4.2 where it is stated that "[t] he term "reclamation" has a wide meaning. In general, it refers to all works of permanent nature over or upon the shore and bed of the sea and of any tidal water within Hong Kong below the line of the high water mark. For example, dredging with a view to reclaiming land or construction of a permanent structure is covered by the FS(R)O but routine maintenance dredging is excluded"; and

      (iii) as far as the dredging operation described in the BOP is concerned, the objective of the operation is said to be restoring adequate water depth for vessel navigation. The operation is not planned to be carried out for the purpose of or with a view to reclaiming land or construction of a permanent structure over or upon the foreshore or sea-bed on which the dredging operation is to be carried out. In contrast, the dredging operation is for maintaining the necessary water depth for safe navigation. In this connection, from a technical perspective, SDEV agrees that the nature of the dredging is maintenance in nature, and is unlikely to fall within the ambit of FS(R)O.

2. Comment of CHE/NTW of HyD:

   (a) the TIA and the traffic management issues should be commented by TD;

   (b) the applicant may need to construct a proper vehicular access from Tam Kon Shan Road to the site and reinstate the road to the satisfaction of HyD after use; and

   (c) adequate drainage measures shall be provided to prevent surface water running from the application site to the nearby public roads and drain.

3. Comments of the D of Marine:

(a) For the proposed dredging of the seabed to a depth of 3.8 metres, all statutory requirements must be followed;

(b) The applicant should liaise with the Lands Department to arrange a "blue area" to allow sufficient space for safe berthing;

(c) The project proponent should be reminded that their barging operations must not impede the existing private mooring (PM) owner(s) (including PM Nos. 1322 and 1381) from using their moorings. Consent from the nearby PM owner(s) must be obtained for the barging operation; and

(d) The proposed project will introduce new marine traffic, including 50-meter-long cement carriers to the concerned waters. Given the relatively strong tidal currents, the restricted manoeuvring space, and the presence of various nearby private mooring buoys and piers accommodating different types of vessels with frequent maritime activities, Marine Traffic Impact Assessment (MTIA) shall be conduct to detail the marine operations in both construction and operational stage, assess impact on existing marine traffic and finally to recommend mitigation measure to the risk. The current BOP for the construction stage does not provide details regarding the duration of these construction-related activities or the number of vessels involved. Addressing these aspects will be critical to ensuring the safe and efficient management of marine traffic during the project's implementation.

4. Comments of CBS/NTW of BD:

(a) if the structures are erected on leased land without the approval of the BA, they are UBW under the BO and should not be designated for any proposed use under the captioned application; and

(b) for UBW erected on leased land, enforcement action may be taken by the Building Department to effect their removal in accordance with the prevailing enforcement policy against UBW as and when necessary. The granting of any planning approval should not be constructed as an acceptance of any existing building works or UBW on the application site under the BO.

5. Comments of the CTP/UD&L of PlanD:

(a) the proposal does not fall within the criteria for air ventilation assessment (AVA) under the Joint Housing, Planning and Lands Bureau-Environment, Transport and Works Bureau Technical Circular on AVA No. 1/06 and no significant adverse impact on the pedestrian wind environment is anticipated.

(b) as it is unlikely to cause further significant adverse landscape impact, it is considered not necessary to impose any landscape condition in the planning permission, should the application be approved by the Board.

6. Comment of CE/Construction of WSD:

(a) the proposed development is outside the existing salt water supply zone of Tsing Yi Island. For provision of fresh water supply to the development, the applicant may need to extend his/her inside services to the nearest Government water mains for connection and seek approval from the Water Authority as necessary. The applicant shall resolve any land matter (such as private lots and STT) associated with the provision of water supply and shall be responsible for the installation, operation and maintenance of inside services within the Site to WSD's standards.

7. Comments of the DEMS:

(a) in the interests of public safety and ensuring the continuity of electricity supply, the parties concerned with planning, designing, organizing and supervising any activity near the underground cable or overhead line under the application should approach the electricity supplier (i.e. CLP Power) for the requisition of cable plans (and overhead line alignment drawings, where applicable) to find out whether there is any underground cable and/or submarine cable within and/or in the vicinity of the concerned site. They should also be reminded to observe the Electricity Supply Lines (Protection) Regulation and the "Code of Practice on Working near Electricity Supply Lines" established under the Regulation when carrying out works in the vicinity of the electricity supply lines and be reminded to enquire the electricity supplier for the required precautionary measures for work near submarines cables and to execute them during design and construction.

8. Comments of CE/PW of CEDD:

(a) the applicant should be reminded that the structural integrity and stability of existing marine structure/seawall must not be compromised during the construction or operation of the proposed works. Should any damage to these structures occur as a result of the works or related activities, the applicant will be fully responsible for repairing the damage at their own costs.

9. Comments of the STL:

(a) the applicant should be reminded that shipyards in Hong Kong are essential for providing timely and effective repair and maintenance services for local vessels. These services are crucial for port operations, marine safety, and sustainable development of the marine sector.

支持 A/TY/150規劃申請的意見

城市規劃委員會：

本人支持編號 A/TY/150 混凝土配料廠的規劃申請，懇請 貴委員會在審議時考慮以下重要理據，並批准申請。根據2025年至2030年的香港公營房屋供應計劃，將提供合共約189,000伙單位，較過往政府的五年期增加80%。私營房屋供應，未來五年較過去五年的平均數增加約15%

我們認為規劃申請A/TY/150能產生正面影響，希望城市規劃委員會能批准申請，謝謝。

本人支持A/YL/10混凝土廠申請，興建混凝土廠對香港城建亦有增益，疫情對香港發展已產生一定的影響，所以應為香港未來發展多作考慮。而且該區已有混凝土廠，已然成為重點工業用地。此外，就以在觀察，擔杆山附近除了工業車輛，亦甚少看見其他車輛出入，對交通並沒有造成額外影響，故希望增設混凝土廠後，可加速香港建造業發展，加快完善各個發展區，提升香港整體實力，惠及市民使用。

市民

Yuyo Chan

171

城規會：

作為市民，我支持項目A/TY/150混凝土配料廠的申請。

香港政府正全力推動北部都會區的發展，包括新界北新市鎮多個新發展區。這些項目將在未來十年內進入基建工程的高峰期，對混凝土的需求將急劇增加。青衣的混凝土配料廠不僅能夠滿足本地建設需求，其地理位置優越，由青衣北岸公路快速連鄰近多個新界新發展區，設立混凝土配料廠將能為附近項目提供穩定的材料供應，從而加快工程進度，提升工程效率。

因此，我支持在青衣設立混凝土配料廠的計劃，認為這將對香港的基建發展具有深遠的影響。

城市規劃委員會：

有關支持 A/TY/150 規劃申請的公眾意見

本人現致函，支持編號 A/TY/150 混凝土配料廠的規劃申請，懇請 貴委員會在審議時，充分考慮以下重要理據，並批准此項申請。

1. **滿足香港房屋供應需求**

   根據 2025 年至 2030 年的總體公營房屋供應計劃顯示，香港將提供合共 189,000 伙單位，比過往現屆政府上任時的五年期增加 80%。私營房屋供應方面，未來五年私人住宅單位每年平均落成量，較過去五年的平均數增加約 15%。這一龐大的建設需求意味著市場對混凝土的需求將大幅增加，設立混凝土廠將有助於滿足建屋需求。

2. **申請符合土地規劃意向**

   規劃申請位處於「其他指定用途」註明「船廠及依靠海運之工業用途」地帶，而本項申請屬於第二類用途，這些都反映到本申請的用途大致符合該地帶的規劃意向。城規會亦須考慮現時造船及船隻維修業衰退，部份年老的船廠負責人亦將退休，這導致相關工業的土地需求不斷下跌。為善用該地帶的土地，城規會應該積極考慮不同的工業用途。

3. **對附近環境沒有造成負面影響**

   申請人進行了環境評估，並且提出相關的舒緩措施，包括興建隔音屏障和車輛清潔系統，致力避免對環境的可能影響，可見申請人透過優化產業流程，降低生產帶來的污染，相信能使該廠房符合政府的環保要求。

綜上所述，我們認為規劃申請 A/TY/150 能產生正面影響，本人冀望城市規劃委員會能批准此項申請，謝謝。

城市規劃委員會：

我是青衣一帶的居民，現就 A/TY/150 規劃申請提出支持意見。隨着造船業的萎縮，該土地一直長期閑置，沒有被善用，浪費寶貴的土地資源。該石屎廠位於工業地帶，並且遠離附近主要住宅區，例如：長安及長發邨，我認為該選址十分恰當，並且與附近的土地用途互相吻合，該混凝土廠將能促進香港的工業發展，是香港的產業發展更多元化，懇請城規會已促進香港長遠發展為由，批准該項目申請。

城市規劃委員會：

關於 A/TY/150 項目，本人特此來函表達支持意見。

隨著香港即將建設北部都會區，未來對混凝土的需求將大幅增加。因此，香港十分急需建造更多混凝土廠以應付未來工程高峰期，這對於促進香港基建發展尤其重要。正因為如此，本人支持擬建的混凝土廠。

值得注意的是，該混凝土廠位於工業地帶(船廠及依靠海運之工業用途)，遠離附近的民居。附近的土地主要用作船廠或工場，因此不會與附近的土地用途產生衝突。相比之下，設置於工業地帶的混凝土廠更能滿足其營運需求，甚至比設置在市區或住宅附近的混凝土廠更為合理。因此，本人不擔心該廠會帶來負面的環境影響。

城市規劃委員會委員鈞鑒：

本人來函就規劃申請 A/TY/150 提出支持意見，以供城市規劃委員會審視個案時參考，有關意見支持理據如下：

1. 提升區域經濟活力

擬議之混凝土配料廠選址不僅完全符合「船廠及依靠海運之工業用途」地帶的規劃意向，更可進一步促進青衣，葵涌和荃灣地區的產業集聚效應。目前該區域聚集相當數量的工業設施，因此混凝土配料廠將能與周邊的工廠、重工業、物流及倉儲設施形成更緊密的產業鏈，提高整體生產效率。考量到香港工業用地日益稀缺，此工業地帶為本地工業發展提供寶貴的空間，促進香港經濟活力。

2. 申請對周邊影響極小

為確保營運不對附近環境構成任何顯著的負面影響，申請人已完成全面的環境評估，並據此制定了一系列緩解措施，例如制定嚴謹的廢物儲存、處理、海上交通運輸標準，相信申請人嚴謹的環評相信能夠減少混凝土廠帶來空氣、噪音、水質、廢物和土地污染。

3. 針對上次同類型申請的疑慮作出改善

申請人曾經於 2018 年提出同類申請，但並未獲城規會批准。申請人致力就躉船安排的安全標準和可行性問題進行更深入的考慮，並且擬定了躉船運作計劃，務求解決城規會上次同類型申請時提出的疑慮。

綜上所述，本人懇請城市規劃委員會批准 A/TY/150 規劃申請，以支持香港的整體發展與建設。

城規會: 21/5/2025

我支持項目 A/TY/150 的申請。

項目鄰近山脈，遠離公共房屋及私人發展項目，本人相信廠房的營運並不會對鄰居造成任何的空氣或噪音污染。

項目所產生的環境及交通問題會比其他同類廠房亦少，因為項目主要倚賴船隻運送貨物，減少了對陸路的倚賴，同時避免陸路運輸對青衣居民產生的噪音及廢氣污染。

由於上述原因，支持批准混凝土廠的申請。

市民

A/TY/150 規劃申請的公眾意見

致城市規劃委員會：

本人現致函支持編號 A/TY/150 的規劃申請，此申請旨於在青衣設立臨時混凝土配料廠。該廠的設立既能滿足本地對混凝土的需求，又不會對周邊環境造成明顯影響。懇請城市規劃委員會在審議時，充分考慮該選址的優越性。本人支持理據如下：

1. 土地用途相容性

   項目為處於的土地被規劃署指定位船塢及相關用途，屬於工業用途的一種。因此，混凝土廠設立在工業相關地帶能夠符合該地的規劃意向，並且與附近擔杆山的土地用途匹配。

2. 適切的物流安排

   混凝土廠附近的擔杆山路連接青衣北岸公路，能夠讓運送物料及成品的車輛快速進入及離開混凝土廠，並運送至市區或新界各處。同時，這亦能夠避免大型車輛駛經青衣市中心的住宅區，避免運輸帶來額外的排放污染。

3. 適切的廠房選址

   擬議混凝土廠選址鄰近青衣北岸公路，有利於大型車輛進出。同時，該地段與主要住宅區保持一定距離，有助於減少對居民的潛在影響。此外，該土地已經過初步平整，具備發展工業用途的良好基礎，可大幅縮短建廠所需時間。值得注意的是，香港的工業用地供應持續減少，而該選址能有效利用現有土地資源，支持本地工業發展，促進本地經濟的多元發展。

有鑒於擬議於青衣設立之臨時混凝土配料廠與當地土地用途相容、物流安排適切、選址合適，更能充分利用土地資源，支持本地工業發展，並已審慎評估對周邊環境之影響，懇請城市規劃委員會批准此項申請。

市民

RECEIVED
- 3 JUN 2025
Town Planning Board

178

城市規劃委員會：

本人現致函就 A/TY/150 的臨時混凝土配料廠規劃申請提出支持，理由如下：

a. 降低運輸成本

北部都會區各項大型基建項目正加速推進，對預拌混凝土的需求持續上升。然而，若依賴長途運輸供應混凝土，勢必增加運輸成本。該選址毗鄰主要道路，例如汀九橋，大欖隧道，該混凝土配料廠的設立，可針對新界西未來發展作穩定的混凝土供應，大幅縮短運輸距離，降低運輸成本。

b. 周全考慮交通影響

項目方深知混凝土配料廠之運營或會增加附近道路之交通流量，故已制定周全之交通管理方案，力求將潛在影響降至最低。除承諾於施工及營運期間嚴格遵守相關交通法規外，項目亦建議以躉船運送原材料，減少陸路車流量，避免對當地居民及遊客造成滋擾。

綜上所述，本人深信該規劃能配合香港未來建築需求，亦有規劃優點以彌補項目帶來的交通影響，本人懇請城市規劃委員會批准 A/TY/150 規劃申請。

市民[illegible]先生.

城市規劃委員會：

我十分支持 A/TY/150 混凝土廠申請。政府近期積極發展新界，興建基建設施和住宅項目。這些項目需要大量混凝土。由於青衣地理位置優越，若在該處設立混凝土廠，將能夠就近供應附近新發展區，如東涌一帶，從而加快住宅建設進度，讓更多人早日有屋居住，不用等到頸都長埋。因此，希望城規會處理混凝土廠申請時，能夠考慮長遠香港基建需要。

城市規劃委員會：

有關 A/TY/150 規劃申請的意見

本人特函支持編號 A/TY/150 位於打鼓嶺的臨時混凝土配料廠規劃申請。

a. 選址具有工業基礎

該土地已經過初步平整，並且已經擁有空置的廠房構築物，具備良好的工業基礎，卻現時該處正在空置，實屬浪費。另外，該地段亦設有一個現有的碼頭，有利未來營運者使用海路運送物資。以上的配套都有助申請者快速投入生產，避免冗長的建設時間。

b. 促進基建發展

香港的基礎建設正以前所未有的速度發展，各項新發展區正如火如荼地進行建設。正如香港政府在 2024 年的施政報告中強調，房屋供應需「持續提速、提量、提質、提效」。因此，政府將在未來十年內提供約 3,000 公頃的可發展土地。政府這些大型項目對預拌混凝土的需求量巨大，而混凝土作為建築工程中最常用的原材料之一，其穩定供應至關重要。

c. 選址合適

該選址位於青衣北岸工業區，遠離主要住宅區和生態敏感地點，適合設立混凝土配料廠。選址的交通便利性也是一個重要優勢，它毗鄰主要道路，例如：青衣北岸公路，能夠方便地將原材料和成品運送到北部都會區各個發展區域，提高運輸效率，降低運輸成本並減少交通擠塞。

基於以上理由，本人強烈支持此項規劃申請，並懇請城市規劃委員會批准該申請，以確保香港的基礎建設項目能夠順利進行，並為香港的經濟發展做出貢獻。

市民

謹啟

城市規劃委員會鈞鑒：

本人特此致函，就編號 A/TY/150 之規劃申請表達支持立場，敬請城市規劃委員會於審議時納入考量，具體理據詳述如下：

香港各項大型基建及房屋項目正如火如荼展開，包括古洞北/粉嶺北、洪水橋/厦村等新發展區，而部份工程項目包括新田科技城和牛潭尾新發展區，亦即將或剛剛開展，這些發展項目對預拌混凝土的需求龐大。根據政府的規劃，未來十年將提供約 3,000 公頃的可發展土地，興建公營房屋及私營住宅。因此，設立混凝土廠將可確保混凝土供應穩定，支持香港各項發展項目的順利進行。

混凝土廠附近的擔杆山路連接青衣北岸公路，能夠讓運送物料及成品的車輛快速進入及離開混凝土廠，並運送至市區或新界各處。同時，這亦能夠避免大型車輛駛經青衣市中心的住宅區，避免運輸帶來額外的排放污染。

總括而言，此規劃申請不僅有助於鞏固香港基建的穩固根基，更能為地區經濟注入新的活力。懇請 貴委員會明智決策，批准 A/TY/150 申請，讓香港的發展腳步得以穩健前行。

Details of the Comment :

I support approval on the A/TY/150 application with consideration of the following values to H ong Kong,
1) Releasing Land Values (釋放土地價值)
The application site seems idle for years, probably due to the decline of the boatyard industry. A llowing other industrial use at the site and benefiting Hong Kong's imminent needs is worth con sidering.

2) Basic Need for City Development (城市發展之需)
Ready-mixed concrete after batching must be used within a short period. This explains why con crete batching facility is a basic necessity for Hong Kong.

3) Innovation and New Productive Forces (新質生產力)
Innovation and creative solutions often rely on new facilities. Supporting new facility setup in H ong Kong is an appropriate strategy to support innovation and industrial advancement.

我非常讚成在這青衣區增設混凝土廠，交通方便，促進香港就業機會。

梁穩記船廠有限公司

LEUNG WAN KEE SHIPYARD LTD.

May 20, 2025

城市規劃委員會,

香港北角渣華道 333 號北角政府合署 15 樓

RE: 城市規劃委員會 - 申請 No. A/TY/150
擬議臨時混凝土配料廠於青衣担杆山路地段第 14 號及 15 號和毗連政府土地

我梁穩記船廠有限公司，強烈反對上述申請。

該路段用途應從事船廠及海事工程。如改作水泥配料廠將嚴重影響其他船廠工程運作，污染環境衛生，傷害船廠職工健康及製造交通混亂。

A/TY/150 申請項目曾分別於 4/2014 以 A/TY/124, 12/2014 以 A/TY/127 及 12/2016 以 A/TY/134 提出, 但均被城規會以 "拒絕/不同意" 理由否決。

由於此申請對本路段負面影響極其嚴重, 我司不得不致函貴會重申強烈反對。

反對原因如下：

1. 混凝土污染空氣，將嚴重傷害工人的健康。
2. 混凝土污染將嚴重影響地方環境衛生。
3. 水泥塵埃將破壞工程效果。
4. 惡化担杆山路已存在的陸路交通混亂。

梁穩記船廠有限公司

LEUNG WAN KEE SHIPYARD LTD.

5. 嚴重影響該區海上交通及運作。
6. 如有廢棄水泥沙石排放落海，則必將此淺水海域海床加高，使我船廠維修業更難於運作。

請貴署嚴正考慮此項申請，並予以否決 A/TY/150 申請。

此致

RE: 城市規劃委員會 - 申請 No. A/TY/150
擬議臨時混凝土配料廠於青衣担杆山路地段第 14 號及 15 號和毗連政府土地

得悉上述混凝土配料廠的申請。

我 青衣担杆山路造船業工人，基於下列原因，現向貴會提出強烈反對該項計劃。

反對原因：

7. 混凝土污染空氣，將嚴重傷害工人的健康。
8. 混凝土污染將嚴重影響地方環境衛生。
9. 水泥塵埃將破壞工程效果。
10. 惡化担杆山路已存在的交通混亂。

我等船廠基層作業工人，只求有一較衛生及安全的環境以賺取基本的生活開支。現担杆山路尾段已有一混凝土工廠導致環境極度污染，因何還要在中間路段計劃興建另一混凝土工廠以荼毒我等健康。

敬請貴會從嚴考慮該項申請。 我們隨時願意與貴會參與該計劃的人員會面詳述我們的訴求。

現附上部份工人反對該計劃的簽名以資貴會考慮。

意見詳情
Details of the Comment :

敬啟者：

本人就青衣担杆山路擬建為期五年之臨時混凝土配料廠申請，謹表達強烈反對，原因如下：

1. 缺乏必要性
現有區內已有混凝土廠，無需再增設臨時廠房。過去同址申請已被否決，現時內容高度重複，形同規避「一事不再議」原則，亦未有回應過去否決理據。

2. 交通壓力嚴重
担杆山路及周邊道路長期受大量重型車輛壓力，混凝土車違泊嚴重阻塞交通。運輸署2023年數據顯示，早高峰時段重型車佔比高達42%，遠超設計容量30%上限。新增廠房只會進一步加劇擠塞，影響通勤及物流。

3. 嚴重阻礙緊急救援通道
混凝土車長期違泊，除令交通擠塞，亦嚴重影響救護車、消防車等緊急車輛出入。警方記錄顯示，2023年上半年青衣西路/担杆山路口有87宗違泊檢控，當中63宗涉及混凝土車，這些違泊行為已多次阻礙緊急車輛通行，延誤救援黃金時間，對居民生命安全構成重大威脅。

4. 公共安全與學童風險
大量混凝土車違泊威脅行人安全，學童需經過該路段，500米範圍內有三所學校，每日逾2,000名師生受影響，明顯違反學校周邊交通安全指引。

5. 濫用臨時用地制度
五年期設施實屬長期運作，卻以「臨時」名義規避正式用地審查，扭曲政策原意。

基於以上理由，本人及社區居民堅決反對該規劃申請，懇請貴會嚴格把關，保障居民民生及安全。

專此奉達，敬頌
政安

你好,

附上有关 A/TY/150 的意见

谢谢!

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

0017

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

簽名：

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

簽名：

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地

擬議混凝土配料廠

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

簽名：

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

0074

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

簽名：

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

0084

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？

2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

簽名：

0122

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

一人一信強烈反對青衣担杆山路青衣市地段第 14 號及第 15 號和毗連政府土地擬議混凝土配料廠

0141

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

0151

申請編號: A/TY/150

交通及安全問題:

1. 此石屎廠房申請有三條生產線，每小時最少有 100 部田螺車架次出入，運輸署有否審視如此大的交通流量絕對會導致附近一帶交通癱瘓 。
2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

2. 政府如何監管石屎廠之車輛不會進入村內？只加添一個道路指示牌指示司機出廠後向右轉，根本就不能杜絕車輛進入村內 。
3. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，此石屎廠只會增加附近一帶交通環境及安全問題 。
4. 該地段位置範圍有限，田螺車並其他重型車輛未必有足夠位置泊車等候。最終會堵塞至該廠房以外範圍的地方，影響行人使用，造成安全問題！
5. 擔杆山路已有幾間石屎廠於迴旋處盡頭，經常有很多田螺車及重型車輛與擔杆山路進出，已經造成擔杆山路交通嚴重負荷 。再加上如此大生產力的石屎廠所帶來的累計負面連鎖反應，絕對會造成交通及行人道路安全嚴重問題！
6. 擔杆山路經常有重型車輛違例泊車，行人路兩旁泊滿重型車輛並其他車輛，甚至有田螺車泊上行人路！如再加上這間混凝土廠的大型車輛，行人要走在馬路上，是否要造成人命傷亡政府才會正視？！

海路問題:

7. 有關路段對出之海域海床深度相對較淺，絕對不可能容納停泊泥船石料船 ，只會增加海難的風險！
8. 就算申請人提議挖掘海床深度亦會帶來海洋環境污染，釋放有害物質。
9. 石料船經常會有沙石跌落海床，使海床深度變得更淺 。政府如何監管申請人長期要挖掘海床使其深度能容納泥船石料船之停泊安全？
10. 如果船隻擱淺而導致人命傷亡，並環境污染所帶來的損害，政府是否會負全責 ？

環境健康問題:

11. 相隔石屎廠 200 米就已經是足球場、公園、居民的休憩設施，再 500 米就有學校屋村屋苑，環保署有否審視並考慮此石屎廠對居民的影響？
12. 田螺車於出廠閘前會洗車，但其污水連帶泥漿無可避免地會帶出街外，導致街道泥漿處處，並造成渠道阻塞問題 。
13. 混凝土所產生的空氣污染物使空氣污濁，經常有泥塵輕沙，隨風飄散，使空氣混濁，影響室內及室外空氣質素！使附近居民及工作者現有呼吸道疾病（如哮喘）的病況必定加劇！沙、石、混凝土內的有害的微細粒子在空氣中飄浮，當有大風吹時或落入居民或其他人的食物鏈中，將嚴重污染食物和食水，影響所有人的健康！

反對擬議臨時混凝土配料廠事宜

收到廠戶來信，廠戶強烈反對新界青衣担杆山路青衣地段第 14 號及 15 號和毗連政府土地，擬議申請臨時混凝土配料廠 (申請編號 NO. A/TY/150)，本區廠戶及工友亦向本會強烈反對上述申請臨時混凝土配料廠。

船廠區廠房主要是維修船隻，如設有臨時混凝土配料廠，泥塵橫飛，會嚴重影响船隻油漆維修工程。現在担杆山路尾段已經設有一間水泥廠，泥頭車輛途經担杆山路，泥塵及沙石飛滿街道，本會亦多次投訴食環處清洗街道，嚴重影响本區工人健康及行車安全。

現時泥頭車輛在担杆山路來往，馬路車輛已經是飽和，對於交通流量亦難以負担，會做成交通擠塞問題，對於工人及車輛出入會做成危險。

對於在海路用航運上落混凝土配料，就算做足環保措施，亦難免會有泥塵排放及廢物流出海面，嚴重影响海上環境衛生，航道多了很多大型運輸混凝土配料船行駛，及有關船隻停留在海面，對於往來船隻造成危險，和對航道船隻流量造成負擔，容易發生海上意外。

本會向 貴署提出強烈反對，不要在船廠區增設混凝土配料廠，否則會嚴重影响本區廠戶維修工程問題、工人健康問題、馬路交通問題及海上航運問題。

如有查詢，請與本會秘書聯絡 :(鍾小姐

本公司反對改變用途建水泥廠。
反對理由為:
1) 萬順船廠離本公司很近,差不多2間船廠距離。本公司約有60多名員工上、下班、去公廁及中午出去吃飯是必經之路, 本身担杆山路兩旁上下班及中午時間段已停滿了泥頭車(應該是担杆山路另一間香港水泥廠), 更有泥頭車直接泊在行人路上, 已影響行人及車輛進出的安全, 如建成會造更加混亂, 嚴重威脅本公司員工的人身安全。
2) 如建水泥廠會直接造成周圍環境污染, 而且離民居太近。

I strongly OBJECT to the proposed changes not only this changes will create air pollution to the public where the site is sitting next to the public park and close to the residential areas. Traffic at the area is at the worst situation as the leading road to the site always parked with so many cars blocking the traffic, adding more traffic with heavy trucks loading with sands is a real hassle to t he pedesttrian and car drivers.
In the past the site was denied to use as the storage area for the steel, I do not see any reason that should even consider to use as the sorage area for the sand bags now.

反對：在青衣担杆山路青衣市地段第14號及第15號和毗連政府土地 擬議臨時混凝土配料廠（為期5年）
原因：(一）工作所需，一週六天從長發巴士總站 步行，經過青衣北岸公園至擔杆山路11-13地段，早上及中午經常見到田螺車停泊在擔杆山路邊，最嚴重時間沿路兩邊泊滿田螺車（近山邊田螺車停在行人路上），大部份田螺車停車沒有熄匙，排放死氣污染空氣，嚴重影響附近出入仕的健康。（二）英泥廠搬得越近青衣北岸公園，越多田螺車停在公園路邊，停車沒有熄匙，排放死氣，讓公園內在做運動的居民吸入更多癈氣。

本人反對興建臨時混凝土配料廠, 原因是製造大量環境污染, 沙塵滿天飛,危害健康
本人在此附近上班, 興建臨時混凝土配料廠會增加此段路之交通負擔, 增加大型車輛行駛會引至阻塞交通,大量混凝土車行駛, 引至空氣污濁, 直接影響本人之健康.
故本人強烈反對在担杆山路興建臨時混凝土配料廠,

Subject: Application No. A/TY/150 Comments

Comment of Objection to Application No. A/TY/150 (Proposed Temporary Concrete Batching Plant at Tam Kon Shan Road, Tsing Yi)

I strongly object to the proposed Section 16 application on the following grounds:

1. **Mismatch with Future Development Trends and Strategic Planning**
   The justification for this plant is premised on meeting "future construction demand," yet **Hong Kong's major upcoming developments are concentrated in the Northern Metropolis**—including San Tin Technopole, Kwu Tung North, and Hung Shui Kiu NDAs. These areas are geographically **far removed from Tsing Yi**, and any cross-district concrete supply would create **inefficient logistics**, unnecessary carbon emissions, and traffic burden. There is **no strategic rationale** for adding more plants in Tsing Yi when supply should be developed closer to future demand.

2. **Scale of Operations Not Consistent with 'Temporary' Use**
   The application seeks a "temporary" approval for 5 years, yet the proposed concrete batching plant is designed with a **massive capacity of 4,200 m³ per day**, 3 production lines, a 31m-tall structure, and extensive barge and truck logistics. This is clearly **not a stopgap or interim facility**, but a **large-scale industrial operation** disguised under the label of "temporary use." The scale and permanence of the infrastructure suggest the applicant's true intent is long-term occupation and expansion—contrary to the planning principle of flexible, reversible land use during temporary tenure.

In summary, this application contradicts the **territory's strategic planning direction**, and seeks to install a de facto **permanent heavy industrial facility under the guise of a temporary one**. It should therefore be **rejected outright**.

Zan

致： 規劃署署長
葉子季先生，JP

反對於青衣担杆山路青衣地段第14號及第15號設置臨時混凝土配料廠
（規劃申請編號 A/TY/150）

本人近日接獲造船業總商會就上述事宜之來函，現致函轉達，希望 署方能予以考慮。

據該總商會所述，青衣担杆山路青衣地段設有多個維修船隻的廠房，如在區內設混凝土配料廠，其造成的空氣污染，將增加鄰近船廠工人的健康風險；另外，混凝土配料廠及其車輛出入都會造成塵土飄揚，影響船舶機件維修及油漆質量；再者，現時鄰近的一家水泥廠，已增加區內的交通負荷，倘若再增設一混凝土配料廠，只會加劇區內交通擠塞的問題，因此，希望 署方能反對有關建議。

對於商會表示擔心混凝土廠在生產過程中會產生大量粉塵，造成空氣污染，對區內船廠工人的健康及設備造成影響是可以理解，因過去有不少涉及空氣污染的投訴是由混凝土廠所產生。再者，現時建議的地點附近有青衣東北公園供市民休憩之用，無疑對市民的健康造成風險。事實上，除空氣外，混凝土廠產生的污染物亦會污染附近水域。另外，現有的水泥廠其運輸活動已不時令區內的道路擠塞，若再增設混凝土廠，其需要頻繁運輸原材料（如水泥、砂石），將令區內道路不勝負荷，並影響鄰近造船廠的物料運輸。

考慮到有關申請對區內環境、鄰近作業員工及居民健康，甚至造船業的影響，希望 署方否決於青衣担杆山路青衣地段第 14 號及第 15 號設置臨時混凝土配料廠。謝謝！

易志明

易志明 謹啓

2025年6月3日

附件

東義造船業總商會有限公司

信件編號：No:10/25
致：城市規劃署
香港北角渣華道 333 號北角政府合署 15 樓

敬啟者：

反對擬議臨時混凝土配料廠事宜

收到廠戶來信，廠戶強烈反對新界青衣担杆山路青衣地段第 14 號及 15 號和毗連政府土地，擬議申請臨時混凝土配料廠 (申請編號 NO. A/TY/150)，本區廠戶及工友亦向本會強烈反對上述申請臨時混凝土配料廠。

船廠區廠房主要是維修船隻，如設有臨時混凝土配料廠，泥塵橫飛，會嚴重影响船隻油漆維修工程。現在担杆山路尾段已經設有一間水泥廠，泥頭車輛途經担杆山路，泥塵及沙石飛滿街道，本會亦多次投訴食環處清洗街道，嚴重影响本區工人健康及行車安全。

現時泥頭車輛在担杆山路來往，馬路車輛已經是飽和，對於交通流量亦難以負担，會做成交通擠塞問題，對於工人及車輛出入會做成危險。

對於在海路用航運上落混凝土配料，就算做足環保措施，亦難免會有泥塵排放及廢物流出海面，嚴重影响海上環境衛生，航道多了很多大型運輸混凝土配料船行駛，及有關船隻停留在海面，對於往來船隻造成危險，和對航道船隻流量造成負擔，容易發生海上意外。

本會向 貴署提出強烈反對，不要在船廠區增設混凝土配料廠，否則會嚴重影响本區廠戶維修工程問題、工人健康問題、馬路交通問題及海上航運問題。

如有查詢，請與本會秘書聯絡 :(鍾小姐

本區擔桿山路段已有興建混凝土廠，平日車輛來往泊車情況造成車道變窄，經常出現車輛壅塞，如再建混凝土配料廠，定會增加大型車輛行駛，進一步加劇壅塞情況。
混凝土廠及車輛所造成的環境污染、空氣污染、噪音污染、水污染、廢棄物污染，對於鄰近住宅區絕對不適合興建及營運。此外，大型車輛盲區大、轉彎半徑大，在學校、市場、住宅區附近通行，嚴重威脅行人、自行車、摩托車安全，尤其兒童和老人。
此申請項目將對本區生活環境和社區帶來嚴重影響，包括環境汙染、交通堵塞、空氣質量下降，影響民生及區內居民生活質素，因此本廠戶強烈反對。

本人為土生土長青衣居民, 現看到城規會申請編號A/TY/150 提出反對意見。 因青衣島內已有水泥廠、混凝土廠、油庫、香港化學廢物處理中心, 以上全是污染性及危險性高產業。 現再增加一間混凝土配料廠, 位置離民居、學校及東北公園太近, 這會直接及間接影響人民健康, 重型車量增加相對廢氣排放增加。 本人更不希望像油塘事件在青衣重演。

Sent: 2025-06-06 星期五 10:02:31
To: tpbpd/PLAND <tpbpd@pland.gov.hk>
Subject: Comments to Planning Application No. A/TY/150

I respectfully submit the following objection to the above-mentioned Section 16 application:

Saturation of Concrete Batching Plants in the Area
There is already a **concentration of concrete batching plants** operating within close proximity of the subject site, particularly along Tam Kon Shan Road, Sai Tso Wan Road, and Tsing Tim Street. These existing facilities are fully capable of meeting the projected demand for ready-mixed concrete in the Tsing Yi area and beyond. The addition of yet another plant would result in **over-provision**, intensifying industrial activity without corresponding need, leading to unnecessary environmental and logistical burdens on the district

Nearly Half the Site Falls Outside the Statutory Outline Zoning Plan
According to the planning documents, **approximately 48% of the application site falls outside the boundary of any statutory OZP**. This presents a serious planning irregularity. There is no established zoning intention, planning control, or designated permissible uses for this unzoned area. Including such a large unregulated portion within a statutory planning application undermines the integrity of the OZP framework and **sets a dangerous precedent** that may encourage future misuse or circumvention of statutory planning mechanisms.

Proximity to Public Recreation Area – Tsing Yi Northeast Park
The proposed development site is located **approximately 200 metres from Tsing Yi Northeast Park**, which includes one of Hong Kong's best full-sized football pitches and serves as a major recreational and sporting hub for the local community. Allowing a high-capacity concrete batching plant—with heavy vehicular traffic, air and noise emissions, and marine operations—to operate within such proximity would be **detrimental to the park environment** and **diminish the public's enjoyment and safe use of this valued open space**.

C Chan

Subject: Concerns and comments on No. A/TY/150 Planning App for Tsing Yi concrete plant

Dear Sir/Madam,

I wish to raise serious concerns and object to the proposed development on the following grounds:

1. **Heavy Reliance on Marine Delivery** Poses Safety and Operational Risks in Major Waterway
   The application claims that raw materials will be delivered by marine traffic to reduce road congestion. However, the proposed site is located directly adjacent to Rambler Channel, a strategically important and busy marine corridor. With an output capacity of 4,200 m^3/day, the number of barge trips and required vessel mooring will be substantial. The proposal lacks clarity on vessel queuing, berthing schedules, and standby arrangements, which introduces serious navigational safety and congestion risks to nearby shipyards and marine operators. *This concern was one of the reasons a similar application (A/TY/134) was rejected previously.*

2. **Contradictory Logistics**: Either Unaccounted Vessel Congestion or Understated Road Traffic
   If, as suggested, the plant is to rely primarily on marine delivery for aggregates, cement, PFA, and GGBS, this implies that up to four vessels may be operating simultaneously or in quick succession. If this is not the case, it implies that a portion of the raw materials will arrive by road transport, which is not adequately reflected in the Traffic Impact Assessment. This inconsistency raises questions about the accuracy and reliability of the supporting technical assessments. Either scenario presents unacceptable risks: marine over-congestion or underestimated traffic impact.

In light of the unclear logistics, government land usage without public accountability, and marine safety implications, I urge the Town Planning Board to exercise caution and reject this application.

Yours Sincerely,

Mr. Chan

To: tpbpd/PLAND <tpbpd@pland.gov.hk>
Subject: Application No. A/TY/150 Comments

Comment of Objection to Application No. A/TY/150 (Proposed Temporary Concrete Batching Plant at Tam Kon Shan Road, Tsing Yi)

I object to the proposed application on the basis that it is a **repackaged version of a previously rejected proposal (Application No. A/TY/134)**, with **no material or compelling change in the technological setup, surrounding planning context, or market demand** to warrant reconsideration.

1. **Same Site, Same Use, Same Issues – No Justification for Reopening a Rejected Case**
   The current application is **virtually identical in land use and purpose** to the one rejected in 2018 (A/TY/134), which was turned down by both the Metro Planning Committee and the Town Planning Board due to **traffic management and marine safety concerns**. While the applicant claims to have revised certain technical aspects (e.g. using mooring and anchoring instead of a slipway), the **core proposal remains unchanged**: an intensive concrete batching operation (5x increase from 700 to 4,200 m3/hour) in a heavily trafficked marine and industrial corridor, adjacent to sensitive uses. No meaningful technological breakthroughs or structural design changes have been presented that would address the fundamental reasons for the earlier rejection.

2. **No Notable Technological Advancement to Justify Reassessment**
   The current proposal vaguely refers to "low-carbon technologies," "dust insulation," and "electric mixers," but these are **generic environmental claims** and not **enforceable technological commitments**. There is **no evidence** of any proprietary system, innovative plant design, or performance guarantee that would materially reduce the environmental or logistical footprint of the proposed plant. Without demonstrable, quantifiable improvements the application **does not reflect any real technological advancement** from what was previously proposed.

3. **No Substantial Change in Planning Context of Tsing Yi**
   Since 2018, **Tsing Yi's planning landscape has not changed** in a way that makes it more suitable for another large-scale CBP. The industrial environment remains **dense**, the road network remains **narrow and congested**, and the nearby residential developments, parks, and recreational facilities (such as Tsing Yi Northeast Park) remain **just as vulnerable** to pollution, noise, and disruption. If anything, the rising importance of **environmental health and liveability in urban planning** should make such developments **less acceptable today than in 2018**, not more.

4. **Market Demand Does Not Justify a New Plant in Tsing Yi**
   The applicant argues that rising demand for ready-mixed concrete supports the need for this facility. However, this demand is **geographically concentrated in the Northern Metropolis and New Territories**, far from Tsing Yi. There is **no shortage of batching capacity** in the region, particularly along the Kwai Chung-Tsing Yi corridor, which already houses several CBPs. Without any **localized supply deficit**, the economic justification for this specific site is weak and unsubstantiated.

5. **Undermining the decisions made by the TPB**
   Reversing a prior rejection on essentially the same facts undermines **policy consistency**,

weakens the credibility of prior Board decisions, and sends a signal to developers that **reapplication with minor cosmetic changes** is a viable route to approval. This sets a dangerous precedent and may **open the floodgates for planning creep**, whereby previous land use decisions are quietly overturned over time without clear justification.

結論而言，此次申請並非一項實質創新的提案，而是對先前已被否決的工業項目進行的再次嘗試。該案並未提出任何顯著的創新、規劃重劃或基礎建設升級，無法合理支持重新審議此案的必要性。2018 年該案被否決的理由在當前政策環境下依然成立，甚至更加迫切。因此，懇請城規會維持先前的立場，駁回申請編號 A/TY/150。

Regards,

Mr. J.Chan

Subject: Comments - A/TY/150 Proposed Temporary Concrete Batching Plant at Tam Kon Shan Road, Tsing Yi

Dear Sir/Madam

Involvement of Government Land Raises Governance and Fairness Concerns
The application includes over 1,000 m² of Government Land and references a modification of an existing Short Term Tenancy to support plant operations. It is inappropriate to allow private commercial gain—especially from an intensive industrial activity like concrete batching—on government land without a transparent and competitive land allocation process. This risks setting a precedent that bypasses proper tendering mechanisms and undermines public trust in land administration.

Yours Sincerely,
Ms. Kwok

Subject: Comment of Objection to Application No. A/TY/150 (Proposed Temporary Concrete Batching Plant at Tam Kon Shan Road, Tsing Yi)

Dear Sir

Lessons from the Yau Tong Concrete Batching Plant Controversy
The situation in Yau Tong, where concrete batching plants operated adjacent to residential areas, became a well-known urban planning failure. It took substantial public pressure, media scrutiny, and government intervention to cease those operations due to persistent issues with dust, noise, heavy vehicle traffic, and incompatibility with surrounding uses. Given this precedent, it is alarming and short-sighted to allow another high-capacity batching plant to be established in a densely developed area like Tsing Yi, risking similar public backlash and long-term disruption. The government should not repeat the same mistake by approving this application.

Best regards
Ms. So

Appendix V of
MPC Paper No. A/TY/150

Recommended Advisory Clauses

(a) to note the comment of DLO/TW&KT, LandsD that:

(i) the applicant may need to note that the Lots do not abut Tam Kon Shan Road due to the level difference of drainage channel. The ingress/egress arrangement over the adjoining GL and footpath shall be subject to the comment from TD and the Highways Department (HyD). In addition, there is an existing drainage box-culvert within STT 538 K&T. As such, the Drainage Services Department (DSD) should be consulted in due course;

(ii) the applicant may need to note that if the planning approval is given, the lot owner/tenant should apply to LandsD for a temporary waiver for the amendments of the concerned lease conditions of TYTL Nos. 14 and 15 and a modification of STT 538 K&T subject to the support obtained from relevant policy bureau(x). The applications will be considered by LandsD acting in the capacity as landlord at its sole discretion. LandsD will consult the relevant policy bureau(x) whether policy support will be given in processing the application. There is no guarantee that any such application will be approved by the Government. Any approval if given will be subject to such terms and conditions including, inter alia, payment of waiver fee/rental and administration fee as may be approved by the Government; and

(iii) the applicant may need to note that LandsD reserves comment on the proposed schematic design, which would only be examined in detail during the building plan submission stage upon completion of the said applications of waiver and modification of STT. There is no guarantee that the schematic design presented in the subject application will be acceptable under lease if it is so reflected in future building plan submission(s).

(b) to note the comment of CHE/NTW, HyD that:

(iv) the applicant may need to construct a proper vehicular access from Tam Kon Shan Road to the site and reinstate the road to the satisfaction of HyD after use; and

(v) adequate drainage measures shall be provided to prevent surface water running from the application site to the nearby public roads and drains.

(c) to note the comment of DEP that:

the applicant is advised that the proposed CBP will need to be operated with a Specified Process Licence (SPL) complying with requirements as stipulated in Best Practicable Means for Specified Process – Cement Works (Concrete Batching Plant) BPM 3/2 (2025) (BPM);

(d) to note the comment of CE/Construction of WSD that:

(i) the applicant may need to extend his/her inside services to the nearest Government water mains for connection and seek approval from the Water Authority as necessary; and

(ii) resolve any land matter (such as private lots and STT) associated with the provision of water supply and shall be responsible for the installation, operation and maintenance of inside services within the Site to WSD's standards.

(e) to note the comment of D of FS that:

detailed fire services requirements will be formulated upon receipt of formal submission of STT/STW, general building plans or referral of application via relevant licensing authority as appropriate. Furthermore the EVA provision in the captioned work shall comply with the standard as stipulated in Section 6, Part D of the Code of Practice for Fire Safety in Buildings 2011, which is administered by BD.

(f) to note the comment of DEMS that:

(i) the applicant should approach the electricity supplier (i.e. CLP Power) for the requisition of cable plans (and overhead line alignment drawings, where applicable) to find out whether there is any underground cable and/or submarine cable within and/or in the vicinity of the concerned site;

(ii) to observe the Electricity Supply Lines (Protection) Regulation and the "Code of Practice on Working near Electricity Supply Lines" established under the Regulation when carrying out works in the vicinity of the electricity supply lines; and

(iii) to enquire the electricity supplier for the required precautionary measures for work near submarines cables and to execute them during design and construction.

(g) to note the comment of D of Marine that:

(i) it is noted that the proposed dredging of the seabed to a depth of 3.8 metres, the applicant should be reminded that all statutory requirements must be followed;

(ii) the applicant should be reminded to liaise with the Lands Department to arrange a "blue area" to allow sufficient space for safe berthing;

(iii) the applicant should be reminded that their barging operations must not impede the existing private mooring (PM) owner(s) (including PM Nos. 1322 and 1381) from using their moorings. Consent from the nearby PM owner(s) must be obtained for the barging operation; and

(iv) the applicant should be reminded to introduce new marine traffic, including 50-meter-long cement carriers to the concerned waters. Given the relatively strong tidal currents, the restricted manoeuvring space, and the presence of various nearby private mooring buoys and piers accommodating different types of vessels with frequent maritime activities, Marine Traffic Impact Assessment (MTIA) shall be conduct to detail the marine operations in both construction and operational stage, assess impact to existing marine traffic and finally to

recommend mitigation measure to the risk. The current BOP for the construction stage does not provide details regarding the duration of these construction-related activities or the number of vessels involved. Addressing these aspects will be critical to ensuring the safe and efficient management of marine traffic during the project's implementation.

(h) to note the comment of CBS/NTW, BD that:

(i) it is noted that the temporary concrete batching plant is proposed in the application. Before any new building works (including containers/ open sheds as temporary buildings, demolition and land filing, etc.) are to be carried out on application site, prior approval and consent of the BA should be obtained, otherwise they are unauthorized building works (UBW) under the Building Ordinance (BO). An Authorized Person should be appointed as the coordinator for the proposed building works in accordance with the BO;

(ii) the site abuts on a specified street (Tam Kon Shan Road) of not less than 4.5m wide. Its permitted development intensity shall be determined under the First Schedule of the Building Regulations (B(P)R) at the building plan submission stage;

(iii) if the structures are erected on leased land without the approval of the BA, they are UBW under the BO and should not be designated for any proposed use under the captioned application; and

(iv) for UBW erected on leased land, enforcement action may be taken by the Building Department to effect their removal in accordance with the prevailing enforcement policy against UBW as and when necessary. The granting of any planning approval should not be constructed as an acceptance of any existing building works or UBW on the application site under the BO.

(i) to note the comment of STL that:

(i) the applicant should be reminded that shipyards in Hong Kong are essential for providing timely and effective repair and maintenance services for local vessels. These services are crucial for port operations, marine safety, and sustainable development of the marine sector.

(j) to note the comment of DFEH that:

(i) if any FEHD facility is affected by the development, FEHD’s prior consent must be obtained. Reprovisioning of the affected facilities by the project proponent up to the satisfaction of FEHD may be required; and

(ii) the proposed work and operation should be no encroachment on the public space and no environmental nuisance should be generated to the surroundings. Its state should not be a nuisance or injurious or dangerous to health and surrounding environment. For any waste generated from such activity/operation, the applicant should arrange disposal properly at their own expenses.

(k) to note the comment of CE/FM, CEDD that:

(i) in view of minimizing environmental impacts from the proposed dredging in seafront area in front of the application site to provide sufficient water depth for vessels, the applicant is advised to retaining the sediment in place as much as possible while reviewing their design in future; and

(ii) should disposal of dredged material into sediment disposal facilities be necessary, the rationale/justification for sediment removal must be submitted to the Secretary of the Marine Fill Committee for agreement as early as possible, preferably during the Environmental Impact Assessment stage.

(l) to note the comment of CE/PW of CEDD that

(i) the applicant should be reminded that the structural integrity and stability of existing marine structure/seawall must not be compromised during the construction or operation of the proposed works; and

(ii) the applicant will be fully responsible for repairing the damage at their own costs, should any damage to these structures occur as a result of the works or related activities.

(m) to note the comment of HO, DEVB that

(i) The Site falls within the harbourfront area under the purview of Harbourfront Commission's Task Force on Harbourfront Developments in Kowloon, Tsuen Wan and Kwai Tsing (KTF). The gist of the application was circulated to KTF Members for their information and comments. By the deadline, HO of DEVB has not received any comments from KTF Members, nor specific request from KTF Members on discussing the application concerned. That said, the applicant should, as far as practicable, take into account the Harbour Planning Principles and Guidelines, among others, when taking forward the proposed development.
