1.4.6 The potential waste management issues in connection with the construction and operation of the Proposed Development Sites will be discussed in Section 5. Waste management Practices and mitigation measures will be recommended in order to alleviate the impacts, where necessary.

1.5 Interim Industrial / Residential Interface

1.5.1 The presence of Industrial / Residential ("I/R") interface scenario has long been a circumstance when the Yau Tong Bay was first zoned as CDA. The Application Site is located at the southwestern fringe of Yau Tong Industrial Area (YTIA). Based on the information, the YTIA is rezoned to "CDA", "R(E)", and "Commercial" zone with the intention of phasing out the existing industrial activities. Currently there are still a number of existing industrial operations in the vicinity of the Application Site under other "CDA" sub-zones and "R(E)" zone, for example the fish market to the southwest

of the Application Site. According to the Notes of the OZP, the "CDA" zone is intended for comprehensive development/redevelopment of the area for residential and/or commercial uses with the provision of open space and other community and supporting facilities. Under the "R(E)" zone, existing industrial uses will be tolerated, while new industrial developments are not permitted in order to avoid perpetuation of I/R interface problems.

1.5.2 It should be emphasised that various recommendations based on the findings of this Environmental Assessment Report have been incorporated in the MLP of the Proposed Development with a view to fully addressing the interim I/R interface issues, including but not limited to the followings:

(i) Podium Design

Podium of 14.40mPD have been incorporated in the current design so that the residential uses start on elevated levels. It can reduce the air quality and noise impacts induced from the nearby roads, especially Tung Yuen Street and Ko Fai Road.

(ii) Building Layout / Orientation

Since the Application Site is located next to Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

(iii) Direct Noise Mitigation Measures – Enhanced Acoustic Balcony (Baffle Type) in ProPECC PN 5/23 (EAB (BT)- (EPD-PN)]

As mentioned in Section 3.7.6, EAB (BT)- (EPD) with sidewall are proposed for living rooms to mitigate the road traffic noise impact. The industrial noise modelling results shows that there is no exceedance for NSRs F1-01 and F1-02, which immediately next to the concrete batching plant. In fact, the sidewall in the provision of the EAB (BT)- (EPD) applied at F1-01 and F1-02 could be consider as an effective barrier to provide further protection and completely blocked the line of sight from the NSRs to the concrete batching plant. Thus, the predicted industrial noise level in F1-01 and F1-02 should be lower as than modelling results. To present a worst-case scenario, such barrier correction has not applied at the mentioned NSRs in the assessment.

1.5.3 It should be emphasised the findings of this environmental assessment report confirm that there would not be any adverse noise or air quality impact with respect to the Proposed Development. That is, the predicted road traffic and industrial noise levels would comply with the relevant standards and air pollutant concentrations and odour at the fresh air intake locations for the clubhouse would comply with the Air Quality Objectives and odour criterion respectively. Nevertheless, in view of the nearby industrial activities are occurring in close proximity of the Application Site, the applicants would provide channels to assist the future residents to deal with their complaints relating to I/R interface issues of the Proposed Development. For instance, a designated hotline would be setup by the future management office to handle complaints with respect to the interim I/R interface matters. The future management office would also help future owners actively communicate and liaise with the nearby industrial operators to minimise disruption to the future residents.

1.6 Structure of the Environmental Assessment Report

1.6.1 According to the appraisal above, the environmental assessment reports are set out as follows:

- Section 2 Construction Noise Impact Assessment
- Section 3 Road Traffic Noise Impact Assessment
- Section 4 Industrial Noise Impact Assessment
- Section 5 Land Contamination Review and Waste Management
- Section 6 Overall Conclusion of the Environmental Assessment

2. CONSTRUCTION NOISE IMPACT ASSESSMENT

2.1 Introduction

2.1.1 The noise impact assessment is prepared to evaluate potential construction noise impact to the surroundings and to recommend mitigation measures where practicable to attenuate the impact.

2.2 Construction Phase Impact

2.2.1 During the construction phase of the proposed development, major noise impacts would arise from piling works, operation of Powered Mechanical Equipment (PME), and construction-related traffic.

Construction Noise Criteria

2.2.2 Construction noise is controlled under the Noise Control Ordinance (NCO) which prohibits the use of powered mechanical equipment (PME) during the restricted hours (7 p.m. to 7 a.m. on normal weekdays and any time on a public holiday, including Sunday) without a valid Construction Noise Permit (CNP) from the Authority. The criteria and procedures for issuing such a permit are specified in the "Technical Memorandum on Noise From Construction Works Other than Percussive Piling" (TM1). While there is no planned construction works to be carried out during the restricted hours, TM1 should be followed in case there is any need to carry out works in such time period in future.

2.2.3 With effect from 1 November 1996, the use of specified powered mechanical equipment (SPME) for carrying out construction work other than percussive piling and/ or the carrying out of prescribed construction work (PCW) within a designated area are also brought under control. The relevant technical details are provided in the "Technical Memorandum on Noise from Construction Work in Designated Areas" (TM2).

2.2.4 Percussive pilling is controlled similarly by a construction noise permit system and described in the NCO and the "Technical Memorandum On Noise From Percussive Piling" (TM3) which restrict the number of hours during which piling can be conducted. Percussive piling is prohibited between 7 p.m. and 7 a.m. and on holidays (including Sundays). Percussive piling during the daytime (i.e. between 7 a.m. and 7 p.m. on any day not being a holiday) may be carried out in accordance with the permitted hours and other conditions under a valid construction noise permit.

2.2.5 For construction works other than percussive piling, although TM1 does not provide control over daytime construction activities, noise limits as shown in below Table are set out in the "Practice Note for Professional Persons Environmental Consultative Committee" (ProPECC) PN/1 issued in 2024.

Table 2.1 Noise Limit for Daytime Construction Activities

NSR	0700 to 1900 Hours on Any Day Not Being a Sunday or General Holiday, Leq (30 min), dB(A)
Dwelling	75
School	70 (65 during examinations)

Notes:

(i) The above standards apply to uses which rely on opened windows for ventilation;

(ii) The above standards shall be viewed as the maximum permissible noise levels assessed at 1 m from the external façade.

2.2.6 In all circumstances, future contractor will be required to exercise adequate mitigation measures to minimise potential construction noise impact on the surrounding noise sensitive uses.

Mitigation Measures

2.2.7 Sufficient noise mitigation measures should be introduced in the development to alleviate potential noise impacts on nearby NSRs. The Contractor(s) will be required under the contract to ensure regular maintenance of all plant and equipment, and that noise generation at source would be minimized and practicable noise mitigation measures would be in use. The Contractor(s) will be required to adopt quiet type construction plants (e.g. EPD's quality powered mechanical equipment (QPME) inventory), wherever practicable. Similarly, quieter method other than percussive piling will be adopted as far as practicable for any piling works subject to ground investigation result (which usually dictates the piling method). Movable noise barriers will also be erected around noisy plants in order to minimize noise generation at source. With these measures in place noise generation due to construction activities would be minimized.

2.2.8 The following general noise mitigation measures are recommended for implementation:

- Use of quieter equipment and construction method where practicable;
- Application of properly designed silencers, mufflers, acoustically dampened panels and acoustic sheds or shields, etc.;
- Use of electric-powered equipment where applicable instead of diesel-powered or pneumatic-powered equipment;
- Erecting noise enclosures/ movable noise barriers around noisy plants;
- Only well-maintained plants should be operated on-site;
- Plants should be serviced regularly during the construction programme;
- Noisy activities can be scheduled to minimize exposure of nearby NSRs to high levels of construction noise. For example, noisy activities can be scheduled for midday or at times coinciding with periods of high background noise;
- Noisy equipment such as emergency generators shall always be sited as far away as possible from noise sensitive receivers;
- Location of noise emitting plants at maximum possible distances from sensitive receivers;
- Contractual clauses for construction works; and
- Schedule of noisy operations during non-restricted hours where possible.

2.2.9 The above-mentioned noise mitigation measures will be included in the contractual clauses for implementation by the contractor(s) during the construction stage.

2.2.10 "Recommended Pollution Control Clauses for Construction Contracts" is available on EPD website. These clauses spell out the recommended noise control measures to be implemented by the contractor(s) during the construction stage of the Project. The

Project Proponent will include the "Recommended Pollution Control Clauses for Construction Contracts" in the construction contract(s).

2.2.11 With these measures in place, construction noise due to the Proposed Development can be minimized, and no significant noise impact is anticipated.

2.3 Conclusion

2.3.1 With the implementation of recommended mitigation measures, including the use of QPMEs, installing temporary noise barrier and enclosure for PMEs as required in ProPECC PN 1/24, quiet construction methods and applying good site practices and together with the clauses of the "Recommended Pollution Control Clauses for Construction Contracts" in the construction contract(s) implemented by the contractor(s), the noise impact generated during the construction works on the NSRs will be minimised.

3. ROAD TRAFFIC NOISE IMPACT ASSESSMENT

3.1 Introduction

3.1.1 This road traffic noise impact assessment is prepared to address road traffic noise impact on the noise sensitive uses of the Proposed Development and to recommend mitigation measures where practicable to attenuate the impact.

3.2 Assessment Criteria

3.2.1 Noise standards are recommended in Chapter 9, "Environment", of the Hong Kong Planning Standards and Guidelines (HKPSG) for planning against possible noise impact from road traffic, railway and aircrafts.

3.2.2 For the Proposed Development, only dwellings will rely on openable window for ventilation purpose. The clubhouse will be provided with air-conditioning system and will not be provided with any openable windows / openings for ventilation.

3.2.3 According to the guidelines, the criterion for road traffic noise impact on domestic premises (habitable rooms) is $L_{10(1\text{-hour})}$ 70dB(A). This criterion applies to uses which rely on openable windows for ventilation.

3.3 Assessment Methodology

3.3.1 In this assessment, the potential noise impact arising from nearby existing and future road carriageways on the development has been assessed. It involved the prediction of future noise impacts on Noise Sensitive Receivers (NSRs) arising from traffic flows along existing and future road carriageways situated within or in the vicinity of the Application Site. Calculation of predicted road traffic noise were based on the worst-case peak hour traffic flows projected within a 15-year period from the target completion date (Year 2032) of the Proposed Development. For worst-case scenario evaluation, the assessment year was chosen to be year 2047, which has the maximum forecasted traffic flow within the 15-year period. The year 2047 traffic forecast data is prepared by the project traffic consultant and attached in Appendix 3.1.

3.3.2 The U.K. Department of Transport's procedure "Calculation of Road Traffic Noise" (CRTN) has been applied to predict the hourly L10(1-hour) noise levels generated from road traffic at selected representative NSRs. Practicable environmental mitigation measures have been recommended, where necessary. The predicted noise levels were compared with the relevant HKPSG noise criterion (i.e., L10(1-hour) 70dB(A)).

3.3.3 Based on the site visit, the construction works at the YTIL 45 has already been started, the building blocks of the YTIL 45 is considered in this assessment as noise barriers.

3.4 Road Characteristics

3.4.1 Appendix 3.1 presents the predicted 2047 peak hour traffic data (i.e. road speed, traffic volume and percentage of heavy vehicle) on the main road carriageways surrounding the Application Site. The Tung Yuen Street is considered to be the dominant road traffic noise sources contributing on the Proposed Development. All roads are assumed with an impervious surface.

3.5 Noise Sensitive Receivers

3.5.1 All residential dwellings with openable windows/doors of habitable room (noise sensitive use) for prescribed ventilation purposes have been assigned with assessment points. All assessment points were taken at 1.2m above the floor and 1m away from

the facade of openable windows in rooms of sensitive use. Figure 3.1 shows the location of the NSRs of dwellings for road traffic noise impact assessment.

3.6 Road Traffic Impact Assessment Result (Base Case)

3.6.1 The assessment result for dwelling under base case scenario is presented in Detailed result is presented in Appendix 3.2 and summarised below.

Table 3.1 Assessment Result under Base Case Scenario

Scenario	Max Predicted Noise Level dB(A)	Total Number of Exceedances	Compliance Rate
AM	74	88	75%
PM	74	80	77%

3.6.2 Based on the result table above, scenario for AM peak flow is considered to be the worst-case scenario. Noise mitigation measures are recommended for the Proposed Development based on the AM scenario to attenuate the road traffic noise impact.

3.7 Proposed Road Traffic Noise Mitigation Measures

3.7.1 Noise mitigation measures have been duly studied and applied where practicable.

a. Podium Building

3.7.2 Since the Proposed Development on slope with the Tung Yuen Street at lower mPD level (+3.9 to +4.6 mPD) than the Proposed Development (+21.10 mPD FFL for first typical residential floor) podium (+14.40 mPD) has been provided to the Application Site. The podium would provide some shielding effects and increase the separation between the noise sources for the residential units.

b. Acoustic Window / Enhanced Acoustic Balcony (Baffle Type) (AW(BT)-(EPD-PN) / EAB(BT)-(EPD-PN)

3.7.3 Innovative noise mitigation measures are being explored in recent years. Baffle type acoustic windows and acoustic doors have been adopted for numerous residential developments for attenuating road traffic noise. It is understood that Environmental Protection Department (EPD) has issued the ProPECC PN 5/23 Application of Innovative Noise Mitigation Designs in Planning Private Residential Developments against Road Traffic Noise Impact (hereafter referred as "EPD-PN") for mitigating road traffic noise impact.

3.7.4 The reference cases in EPD-PN have been proposed in the Proposed Development. It refers to the type of window that has an inner sliding panel behind the outer opening, both readily openable, for creating an air gap for the supply of fresh air with noise mitigation effect. It comprises two glazing: -

(i) the outer window system with side hung openable window; and

(ii) the inner sliding panel.

3.7.5 The "designed setting" to reduce noise entering indoor area is achieved by placing the inner sliding panel behind the openable window, so that noise from outside cannot pass through the opening window and enter indoor area directly. As there is no gap at top and bottom of the sliding panel, direct transmission of sound energy into the habitable room is avoided. Instead, outdoor noise has to pass through the gap between the inner sliding panel and outer façade aside the opening window in order to enter indoor area. The design allows natural ventilation through the aforementioned gap (although extent of natural ventilation may be inferior to the case without the inner

sliding panel behind) and prevent most noise from entering indoor environment. According to the latest PNAP APP-130: "Lighting and Ventilation Requirements – Performance-based Approach", the proposed EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) are considered complying with prescribed ventilation requirement if the net opening when the inner sliding panel is moved to another side with least obstruction to the openable window at the outer façade.

3.7.6 A road traffic noise sound attenuation of EAB(BT)-(EPD-PN) with sidewall applied in 14m^2 living rooms reaches 8.0 dB(A), and AW(BT)-(EPD-PN) applied in 8m^2 bedroom can reach 6.0 dB(A). The indicative EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) design adopted in the Proposed Development is shown in Error! Reference source not found..

3.7.7 The outer opening size & room size also play a significant role in affecting the sound attenuation performance. The sound attenuation performance provided by EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) increases with room size because of the longer reverberation time and lower reverberation effect in larger room. Due to the room size difference between the Proposed Development and the EPD-PN, further adjustment is needed and is made by accounting the difference between the room size between the Proposed Development and the EPD-PN. As a conservative approach, the corrected noise level would not be greater than the EPD-PN even the room size of the Proposed Development is larger than the EPD-PN. Error! Reference source not found. shows the sound attenuation adjustment of EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) adopted in the Proposed Development. In case, the noise reduction of the proposed EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) is higher than the residual exceedance, it is assumed that the reduction is equal to the residual exceedance for conservative assessment approach.

3.8 Road Traffic Impact Assessment Result (Mitigated Case)

3.8.1 The predicted road traffic noise effects on the selected NSRs based on the noise mitigation measures discussed above were assessed and presented in Appendix 3.5. With the implementation of the above recommended mitigation measure, full compliance can be achieved for the residential towers. The compliance rate would be 100%.

3.9 Conclusion

3.9.1 Road traffic noise impact assessment has been carried out for the Proposed Development.

3.9.2 Effective noise mitigation measures have been explored, which include podium building, acoustic window (baffle type), acoustic balcony (baffle type).

3.9.3 With the implementation of the above mitigation, no exceedance is found, i.e., 100% full compliance with the traffic noise standard. No adverse road traffic noise impact is anticipated for the Proposed Development. Figure 3.2 and Appendix 3.6 show the location and schedule of the consolidated noise mitigation measures respectively.

4. INDUSRTIAL NOISE IMPACT ASSESSMENT

4.1 Introduction

4.1.1 The aim of this study is to assess potential noise impacts arising from nearby industrial noise source of the industrial buildings and activities on the Proposed Development. Practicable noise mitigation measures would be recommended, where necessary.

4.1.2 There is a planning application (A/K15/129) of residential development is located at 18-20 Sze Shan Street southeast to the Proposed Development (hereinafter referred as "129 Approval Scheme") recently approved in 2023. The information from this recently approved planning application is referenced for this assessment. Site visits had been carried out in Aug, Sep, Nov, Dec 2023, and Feb, Oct and Nov 2024 to review and update the information of the industrial activities in the area in comparison with that identified in the 129 Approval Scheme. In general, the industrial noise sources identified in the 129 Approval Scheme remains. Apart from that identified in the 129 Approval Scheme, there is a temporary recycling workshop "全記" located north of the Ko Fai Road.

4.1.3 Since the Application Site is located next to Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

4.2 Assessment Criteria

4.2.1 Industrial noise impact assessment has been conducted in accordance with the Technical Memorandum for the Assessment of Noise from Places Other Than Domestic Premises, Public Places or Construction Sites (IND-TM), published under the Noise Control Ordinance (NCO). The IND-TM specifies the applicable Acceptable Noise Levels (ANLs) at Noise Sensitive Receivers (NSRs) which are dependent on the Area Sensitivity Rating (ASR) and the time period concerned. The ASR of NSR is determined based on the perceived usage of the study area and the presence of any influencing factors such as major roads, industrial areas, and airports.

4.2.2 The Application Site is located in urban area. Since there are a number of industrial establishments surrounding the site, such as Mai Tong Industrial Building, Ajisen Group Tower, Safer Industrial Building, Wholesale Fish Market, Redland Concrete Ltd., as well as other industrial buildings within 300m from the site etc), the Application Site is considered to be either directly or indirectly affected by these influence factors. According to the TM for the Assessment of Noise from Places or Construction Sites, an Urban Area with directly or indirectly affected by the Influence Factor is considered to having the Area sensitivity rating (ASR) of "C". Noise standards of 70 dB(A) and 60 dB(A) are adopted for daytime and night-time respectively.

4.2.3 For the façade facing away from the clusters of the industrial establishment, i.e. facing towards the Victoria Harbour, these façades are considered to be not affected by the influencing factor, and so ASR "B" is adopted.

4.2.4 Figure 4.1 shows the applicable ASR of the noise sensitive facades of the Proposed Development.

Table 4.1 Acceptable Noise Level (ANLs), dB(A)

Time Period	ASR	
	B	C
Day and Evening (0700 to 2300 hours)	65	70
Night (2300 to 0700 hours)	55	60

4.3 Industrial Noise Sources

Site Inspections

4.3.1 According to the recent site surveys carried out in Aug, Sep, Nov, Dec 2023, and Feb, Oct and Nov 2024, there are various industrial establishments in the vicinity of the Application Site. During site surveys, the industrial noise sources identified would include Saltwater Pumping Station, Redland Concrete Ltd., Kwun Tong Wholesale Fish Market, Tung Yuen Street Cooked Food Market, Tung Lee Motor Services Centre, Ko's Brother Hardware Shop, and Cooling Towers at the roof top of Ajisen Group. For the concrete batching plant at the eastern end of Tung Yuen Street, i.e. China Concrete Co. Limited, Hong Kong Concrete Co. Limited, their specified process licences have been expired. Additionally, to the further north of the Application Site, industrial noise generated from material screening and loading & unloading activities as well as were observed temporary recycling workshop "全記" at YTML No.1-4.

4.3.2 Although the Specified Process Licences (SP Licence) of China Concrete Co. Limited and Hong Kong Concrete Co. Limited has been expired and their zoning is for residential use, the industrial noise coming from these concrete batching plants will be considered in the assessment as a hypothetic conservative scenario.

4.3.3 Site inspections, for both day & evening time and night-time, were conducted in Aug, Sep, Nov & Dec 2023, and Feb, Oct and Nov 2024 to verify and update the industrial activities information, if necessary. Figure 4.2 shows the locations of the identified noise sources in the vicinity of the Application Site.

4.3.4 Photo records of site investigation are shown in Appendix 4.1.

Noise Measurement for the Industrial Activities

4.3.5 Noise measurements were carried out by using a calibrated Bruel&Kjaer (B&K) Precision Integration Sound Level Meter Type 2250L, which complies with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). The weather condition was fine with calm wind during measurements, which satisfied the required criteria. The equipment was properly calibrated immediately prior to and following each measurement by a B&K Sound Level Calibrator Type 4321.

4.3.6 Sound Power Levels (SWLs) of the noise activities are determined in accordance with standard acoustical principles, and "International Standard ISO 3746: Acoustics – Determination of sound power levels of noise sources using sound pressure – survey method using an enveloping measurement surface over a reflecting plane" (herein referred as ISO 3746), where necessary and practicable.

4.3.7 For 全記, standard acoustic principle was adopted for measuring the noise level generated from the industrial activities carried out in it. Details is shown in Appendix 4.2.

4.3.8 Measurement locations and data of the industrial noise sources are shown in Appendix 4.2.

4.3.9 Calculations of the SWLs are shown in Appendix 4.3.

4.3.10 Table 4.2 below lists out the identified industrial noise sources and the respective SWLs based on the findings of recent site surveys. The derived SWLs have taken into account the acoustic characteristics of tonality, impulsiveness and intermittency, if any.

Table 4.2 Identified Industrial Noise Sources

Noise Sources	Observations	Key Noise Sources	Noise Source IDs	Type of Industrial Noise Sources (Point Source/ Area Source)	Sound Power Level (SWLs), dB(A)	
					Day & Evening time	Nighttime
China Concrete Co. Limited	General Description and Characteristics • As observed from site surveys, the plant is enclosed without any opening at the top and sides. The main openings were located at the entrance / exit in front of Tung Yuen Street. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 71.8 dB(A) to 81.9 dB(A). • Given the size of the openings are considerable large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.	Concrete Batching Plant (Concrete Lorry Mixer)	CCC_1	Area Source	96.3	Nil
		Concrete Batching Plant (Concrete Lorry Mixer)	CCC_2	Area Source	95.2	Nil
		Concrete Lorry Mixer Washing Bay	CCC_3	Area Source	100.4	Nil
		Concrete Lorry Mixer Washing Bay	CCC_4	Area Source	100.4	Nil
		Concrete Batching Plant (Tanker)	CCC_5	Area Source	94.3	Nil
		Concrete Batching Plant (Tanker)	CCC_6	Area Source	97.9	Nil
		Screw Pumping Barge	CCC_7	--	102.0	Nil
Hong Kong Concrete Co. Limited	General Description and Characteristics • Site inspections revealed that the concrete batching plant is enclosed without any opening at the top and sides, resulting in no direct line of sight of the concrete lorry mixed and the associated loading operation within the concrete batching plant to all NSRs of the Proposed Development. There are only openings at the entrance / exit in front of Tung Yuen Street. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 74.4 dB(A) and 82.8 dB(A). • Given the size of the openings are considerable large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.	Concrete Batching Plant (Concrete Lorry Mixer)	HKA_1	Area Source	102.4	Nil
		Concrete Batching Plant (Tanker)	HKA_2	Area Source	96.2	Nil
		Screw Pumping Barge	HKA_3	--	102.0	Nil

Kwun Tong Wholesale Fish market	<u>General Description and Characteristics</u> • According to site investigations and as confirmed with the staff of the Wholesale Fish Market, peak hours of the operation of Fish Market are 07:00 – 12:00 for day-time and 04:00 – 6:00 for night-time. During day-time (07:00-12:00), noisy activities include fish unloading activities from fishing boats and lorries from restaurants or supermarkets picking up and packing from the Fish Market before noon which started from the early morning. During night-time (04:00-06:00), there are mainly fish unloading activities from fishing boats. <u>Derivation of Sound Power Level (SWL)</u> • The measured noise levels of the openings range from 64.3 dB(A) to 76.2 dB(A) for day-time and 63.3 dB(A) to 74.3 dB(A) for night-time. • Please refer to Appendix 4.2 for noise measurement details. <u>Time Period of Operation</u> • Both daytime and night-time operations were observed.	Operation Noise	Day & Evening time: WFM_1; Night-time: WFM_1N	Area Source	92.9	91.6
		Loading and Unloading By Marine Vessels	Day & Evening time: WFM_2; Night-time: WFM_2N	Point Source	96.7	94.8
Cooked Food Stall	<u>General Description and Characteristics</u> • The Cooked Food Stall comprises two ordinary cooking stove equipment which are considered to be the major noise sources. <u>Derivation of Sound Power Level</u> • The measured noise levels of the opening was 63.8 dB(A). • Given the size of the openings are considerably large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). <u>Time Period of Operation</u> • The operating hours is observed to be between 07:30 to 17:00. Thus, no night-time operation is anticipated.	Operation Noise	CFS_1	Area Source	75.3	Nil
Ajisen Group Tower	<u>General Description and Characteristics</u> • Four medium size (A) and one small size (B) of cooling towers were identified at the roof top of the building. According to on-site observation, the diameter of four medium size cooling towers is within the range of 1.5m – 2m; while the diameter of the smaller cooling tower is estimated within 1.2m – 1.5m. It is assumed that all 5 nos. of cooling towers are in operation. <u>Derivation of Sound Power Level (SWL)</u> • Due to restriction of access, SPL* provided from catalogue in Appendix 4.5 is applied to evaluate the SWLs of cooling towers based on their estimated size. To make a conservative assumption, the medium cooling towers are assumed as model FT-50 – FT-80 with max. SPL* of 59 dB(A). **SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level according to the catalogue in Appendix 4.5.* <u>Time Period of Operation</u> • As advised by the property management staff of the Ajisen Group, there would not be any night-time operation within the building and hence the cooling towers would be shut down during night-time period.	Cooling Tower	AGT_1	Point Source	91.1	Nil
			AGT_2	Point Source	91.1	Nil
Safer Industrial Building	<u>General Description and Characteristics</u> • A forklift was parked outside the store with bulks of goods surrounded. Loading and unloading activities with the forklift were observed during site visit. <u>Derivation of Sound Power Level (SWL)</u> • The measured noise level for loading and unloading activities is 70.5 dB(A) with 5m distance from the identified noise source. <u>Time Period of Operation</u>	Loading and Unloading Activities	RCI_1	Point Source	92.5	Nil

	• As advised by the worker and site observation during night-time, there is no operation at night. Therefore, only the noise impact during day-time period is assessed.					
Yau Tong Salt Water Pumping Station	<u>General Description and Characteristics</u> • The operational plant was enclosed within the building. It was observed that there were only small sized louvers and window that emit sound. <u>Derivation of Sound Power Level (SWL)</u> • The measured noise levels of the openings range from 71.4 dB(A) to 71.8 dB(A) for day-time and 63.9 dB(A) to 64.5 dB(A) at night-time. • Given the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). <u>Time Period of Operation</u> • Both day-time and night-time operations were observed.	Operation Noise	WPS_1	Area Source	84.3	84.3
Tung Lee Motor Service Centre	<u>General Description and Characteristics</u> • Tung Lee Motor Service Centre is located at Shung Tak Wai to the further north of the Application Site. Based on observations from site surveys, the operation mainly involves insignificant grinding hammering and air-compressor noise. <u>Derivation of Sound Power Level (SWL)</u> • The measured noise levels of the openings range from 61.3 dB(A) to 61.9 dB(A). • Given the size of the openings are considerable large, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). <u>Time Period of Operation</u> • No night-time operation was being observed.	Operation Noise	TLM_1	Area Source	80.8	Nil
Redland Concrete Limited	<u>General Description and Characteristics</u> • The concrete batching plant is enclosed without any opening at the top and sides. There are only openings at the entrance / exit in front of Tung Yuen Street. <u>Derivation of Sound Power Level (SWL)</u> • The measured noise levels of the openings range from 74.8 dB(A) to 75.7 dB(A). • Given the size of the openings are considerably large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). <u>Time Period of Operation</u> • No night-time operation was being observed.	Operation Noise	RLC_1	Area Source	97.9	Nil
	<u>General Description and Characteristics</u> • Two cooling towers were identified located at the roof of Redland concrete plant. According to observations from site surveys, the diameter of cooling towers are less than 4m. <u>Derivation of Sound Power Level (SWL)</u> • Since noise measurement was unable to conduct due to restriction of access, SWLs are derived from the SPL* provided from a catalogue in Appendix 4.5 based on their estimated size. For a conservative approach, two cooling towers are assumed as model FT-225 – FT-250 with SPL* of 63 dB(A). **SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level according to the catalogue in Appendix 3.5.* <u>Time Period of Operation</u> • No night-time operation was being observed.	Cooling Tower	RLC_2	Point Source	95.1	Nil
		Cooling Tower	RLC_3	Point Source	95.1	Nil

	Derivation of Sound Power Level (SWL) • Noise measurement was not able to conduct due to restriction of access. SWL used for the industrial noise impact assessment was referenced from “TECHNICAL MEMORANDUM ON NOISE FROM CONSTRUCTION WORK OTHER THAN PERCUSSIVE PILING” (GW-TM). Time Period of Operation • No night-time operation was being observed.	Derrick Barge	RLC_4	Point Source	102.0	Nil
全記	General Description and Characteristics • As observed from site surveys, the industrial activities of the recycling workshop mainly involve screening material and loading and unloading. • Derivation of Sound Power Level (SWL) • The measured noise levels of the activities about 105 dB(A). • Appendix 4.3 shows noise measurement details and derivation of sound power level, respectively). Based on the analysis of the measurement data, no tonality correction is to be adopted in the calculation. The analysis is also shown in Appendix 4.3. Time Period of Operation • No night-time operation was being observed during the site visits.	Operation Noise	QJ_1	Area Source	105.0	Nil

4.4 Assessment Methodology

4.4.1 Standard acoustical principles were adopted for prediction of cumulative industrial noise impact. In accordance with the "Technical Memorandum On Noise From Construction Work Other Than Percussive Piling", a -10dB shielding correction was adopted where the line of sight from the representative NSR would be completely blocked by buildings or barriers. A façade correction of +3dB was assumed. Corrections for tonality, intermittency or impulsiveness shall be applied where necessary.

4.5 Noise Sensitive Receivers

4.5.1 A total of 11 Representative NSRs of residential towers nearest to the identified noise sources have been selected for the assessment. The NSRs are taken at 1m away from the façade opening and 1.2m above the floor level of habitable rooms. Figure 4.4 shows the locations of the representative NSRs.

4.6 Assessment Result (Base Case)

4.6.1 From the results of industrial noise impact assessment, it is also found that the major industrial noise source which have significant contribution to Industrial noise at the NSRs are the concrete batching plant - Redland Concrete Limited, which is found to be the same findings of the adjacent residential development, the Coastline I and II. As such, mitigation measures would be required for mitigating these exceedances.

4.6.2 As mentioned in Section 3.7.6, EAB (BT)- (EPD) with sidewall are proposed for living rooms to mitigate the road traffic noise impact. The industrial noise modelling results shows that there is no exceedance for NSRs F1-01 and F1-02, which immediately next to the concrete batching plant. In fact, the sidewall in the provision of the EAB (BT)-(EPD) applied at F1-01 and F1-02 could be consider as an effective barrier to provide further protection and completely blocked the line of sight from the NSRs to the concrete batching plant. Thus, the predicted industrial noise level in F1-01 and F1-02 should be lower as than modelling results. To present a worst-case scenario, such barrier correction has not applied at the mentioned NSRs in the assessment.

4.6.3 A summary of predicted industrial noise levels at selected NSRs are tabulated in Table 4.3 below. Detailed calculations are shown in Appendix 4.4.

Table 4.3 Industrial Noise Impact Assessment Results under Unmitigated Scenario

NSR ID	ASR	Noise Criteria, dB(A)		Predicted Noise Level, dB(A)	
		Day & Evening, dB(A)	Nighttime, dB(A)	Day & Evening, dB(A)	Nighttime, dB(A)
F1-01	C	70	60	70	46
F1-02	C	70	60	68	41
F1-03	C	70	60	65	55
F1-04	C	70	60	65	52
F2-01	B	65	55	70	40
F2-02	B	65	55	69	40
F2-03	B	65	55	69	40
F2-04	B	65	55	68	40
F2-05	B	65	55	67	40
F2-06	B	65	55	67	40
F2-07	B	65	55	67	40

4.7 Proposed Industrial Noise Mitigation Measures

Building Layout / Orientation

4.7.1 Since the Application Site is located next to the Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

Vertical Acoustic Fin

4.7.2 Full-height vertical acoustic fins with the length from 1.8 m to 2.5 m long are proposed at strategic locations to further reduce the view angle to nearby source.

4.7.3 It is understood that erection of vertical fins near NSRs would possibly create a semi-enclosure area and hence induce possible multi-reflection effect. To minimize the possible effect, sound absorptive material (SAM) is proposed at the surface and tip of all vertical fins.

4.7.4 The proposed fixed noise mitigation measures are shown in Figure 4.4 and Table 4.4.

Table 4.4 Detailed Schedule of Noise Mitigation Measures for Industrial Noise

NSR ID	Flat	Floor	Room	Noise Mitigation Measures
F2-01	1b	1/F – 25/F	MBR	2.5 m Vertical Fin
F2-02	1b	1/F – 25/F	BR	2.5 m Vertical Fin
F2-03	1b	1/F – 25/F	BR	2.5 m Vertical Fin
F2-04	1b	1/F – 19/F	LIV/DIN	2.5 m Vertical Fin
F2-05	1b	1/F – 19/F	LIV/DIN	1.8 m Vertical Fin
F2-06	1b	1/F – 19/F	BR	1.8 m Vertical Fin
F2-07	1b	1/F – 19/F	MBR	1.8 m Vertical Fin

4.8 Assessment Result (Mitigated Case)

4.8.1 The predicted Industrial noise levels at selected NSRs for mitigated scenario are tabulated in Table 4.5. Detailed calculation is shown in Appendix 4.7. With the proposed mitigation measures in place, all NSRs comply with industrial noise standard. No exceedance is found.

Table 4.5 Industrial Noise Impact Assessment Results under mitigated Scenario

NSR ID	ASR	Noise Criteria, dB(A)		Predicted Noise Level, dB(A)	
		Day & Evening, dB(A)	Nighttime, dB(A)	Day & Evening, dB(A)	Nighttime, dB(A)
F1-01	C	70	60	70	46
F1-02	C	70	60	68	41
F1-03	C	70	60	65	55
F1-04	C	70	60	65	52
F2-01	B	65	55	63	40
F2-02	B	65	55	62	40
F2-03	B	65	55	62	40
F2-04	B	65	55	62	40
F2-05	B	65	55	62	40
F2-06	B	65	55	62	40
F2-07	B	65	55	62	40

4.9 Conclusion

4.9.1 An industrial noise impact assessment has been carried out. No unacceptable noise impact is envisaged without noise mitigation measure in place.

4.9.2 In order to avoid adverse noise impact of the future industrial noise sources onsite on the surrounding NSRs, the future contractor shall ensure that the equipment within the Proposed Development would be designed and installed to meet the HKPSG criteria.

5. WASTE MANAGEMENT AND PRELIMINARY LAND CONTAMINATION REVIEW

5.1 Introduction

5.1.1 During the construction phase of the proposed development, there would be waste generation. Practicable environmental mitigation measures are recommenced to reduce the impact to acceptable ranges.

5.1.2 Potential land contamination impacts at the Schemes due to previous land uses and/or the existing operations are also being preliminary assessed. As the subject site is currently occupied with industrial building and concrete batching plant, detail assessment and site investigation will be carried out during the detailed design stage prior to the commencement of the construction of the proposed development, if this preliminary land contamination assessment identify further study is required.

5.2 Construction Waste Disposal

5.2.1 The following legislations and guidelines are relevant to the handling, treatment and disposal of waste in HKSAR and references were made in assessing the potential impacts and their avoidance or mitigation:

- Waste Disposal Ordinance (Cap. 354);
- Waste Disposal (Chemical Waste) (General) Regulation (Cap. 354C);
- Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N); and
- Practice Note for Authorized Persons and Registered Structural Engineers – Construction and Demolition Waste (PNAP ADV-19, also known as PN for AR&RSE No. 243)

5.2.2 The following guidelines also relate to waste management and disposal:

- Waste Disposal Plan for Hong Kong (1989);
- Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 9 – Environment;
- WBTC No. 2/93, Public Dumps;
- WBTC No. 2/93B, Public Filling Facilities;
- WBTC No. 12/2000, Fill Management, Hong Kong SAR Government;
- WBTC No. 12/2002, Specification Facilitating the Use of Recycled Aggregates, Works Bureau, Hong Kong SAR Government;
- WBTC No. 32/92, The Use of Tropical Hard Wood on Construction Site;
- ETWB TC(W) No. 19/2005 Environmental Management on Construction Sites;
- DEVB TC(W) No. 2/2011, Encouraging the Use of Recycled and other Green Materials in Public Works Projects;
- DEVB TC(W) No. 6/2010, Trip Ticket System for Disposal of Construction & Demolition Materials, Development Bureau, Hong Kong SAR Government;
- DEVB TC(W) No. 8/2010, Enhanced Specification for Site Cleanliness and Tidiness, Works Bureau, Hong Kong SAR Government;
- DEVB TC(W) No. 9/2011, Enhanced Control Measures for Management of Public Fill;

- CEDD TC No. 3/2015, Management of Construction and Demolition Materials;
- ProPECC PN2/97, Handling of Asbestos Containing Materials in Buildings;
- Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes, EPD (1992); and
- Project Administration Handbook for Civil Engineering Works.

5.3 Assessment Methodology

5.3.1 The assessment of the potential waste management implications during the construction and operation phases of the Project has been conducted in accordance with Annexes 7 and 15 of the EIAO-TM, including the following tasks:

- Estimation of the types and quantities of the wastes generated;
- Evaluation of opportunities for waste reduction and re-use;
- Identification of disposal options for each type of wastes;
- Assessment of potential environmental impacts arising from the wastes management with respect of potential hazards, air and odour emissions, noise, wastewater discharge, and public transport; and
- Assessment of the impacts caused by handling, collection, transportation and re-use /disposal of wastes.

5.3.2 Prior to considering the disposal options for various types of waste, opportunities for reducing waste generation, on-site or off-site reuse and recycling have been evaluated. Measures which can be taken in the planning and design phases (e.g. by modifying the design approach) and in the construction phase for maximizing waste reduction have been separately considered. Practices to promote segregation of waste materials are additionally considered for advancing the waste management efficiency.

5.3.3 After considering the opportunities for reducing waste generation and maximizing reuse, the types and quantities of the waste required to be disposed of have been estimated and the disposal options for each type of waste have been described. The disposal method recommended for each type of waste has been taken into account the result of the assessment. The impacts caused by handling (including stockpiling, labelling, packaging and storage), collection and reuse / disposal of waste have been addressed and appropriate mitigation measures have been proposed.

5.4 Identification and Evaluation of Potential Impact during Construction Stage

5.4.1 The construction activities to be carried out for the proposed Project would generate a variety of wastes that can be divided into distinct categories based on their composition and ultimate method of disposal. The identified waste types include:

- Construction and Demolition (C&D) materials (including those from site clearance);
- General refuse generated by the workforce;
- Chemical and oily wastes due to maintenance of equipment; and
- Asbestos containing materials (ACM)

C&D Materials

5.4.2 C&D materials comprise mainly of unwanted materials, including surplus materials arising from excavations that are generated from the works (e.g. site clearance,

demolition works of substructure, site formation works, excavation work for basement). Inert soft C&D materials comprise of soil, sand, clay, slurry, etc., while hard C&D materials comprise of crushed concrete, asphalt, rock, etc. The amount of non-inert C&D materials generated during site clearance would be minor (as there is little vegetation at the Application Site). C&D materials may comprise different types of materials, including:

- Inert C&D materials (also known as public fill, including soil, rock debris, rubble earth, concrete, etc.) do not decompose and are suitable to reuse as filling materials for land reclamation and site formation. Inert C&D materials could be reused on-site as filling materials. For those inert C&D materials that cannot be reused should be delivered to Public Fill Reception Facilities.
- Non-inert C&D materials (also known as C&D waste, including bamboo, timber, paper, metal, glass, plastic, packaging wastes, etc.). Non-inert C&D materials should be reused or recycled as far as possible. For those non-inert C&D materials that cannot be reused or recycled, they should be disposed of at designated landfill sites as last resort.

5.4.3 The general waste management strategy is to avoid waste generation in the first place. Should it be unavoidable, reduction and segregation at-source should be exercised as far as practicable, and recycling and reuse should be adopted at the same time to salvage all the recyclable and reusable materials as much as possible.

5.4.4 Inert C&D materials should be re-used on-site (e.g for backfilling) if it is practical and/or delivered to public filling area or other CEDD designated public fill reception facilities. Non-inert C&D materials (i.e. C&D waste) should be re-used or recycled. For those that cannot be reused or recycled, they should be disposed of at designated landfill sites as last resort.

5.4.5 According to ETWB TC(W) 19/2005 on "Environmental Management on Construction Sites", waste management plan (WMP) becomes part of Environmental Management Plan (EMP) to be submitted to Architect/ Engineer for approval before construction works. The Project team will require the Contractor(s) to submit WMPs for approval. The WMPs will include appropriate mitigation measures to avoid, reduce, reuse and recycle C&D materials. It will ensure that the day-to-day operations on site comply with the approved WMPs. It will control the disposal of inert C&D materials and non-inert C&D materials to public fill reception facilities and landfills, respectively, through a trip-ticket system. It will require the Contractor(s) to separate public fill from C&D materials for disposal at appropriate facilities. It will record the disposal, reuse and recycling of C&D materials for monitoring purposes.

5.4.6 The Contractor(s) should be responsible for ensuring that all on-site wastes will be collected by approved waste collectors and appropriate measures should be undertaken to minimise adverse impacts to the surrounding environment, such as dust generation. The Contractor(s) must also ensure that all necessary waste disposal permits have been obtained before actions.

5.4.7 Prior to disposal of non-inert C&D materials, it is recommended that wood, steel, glass and other metals will be collected separately for re-use and/or recycling and inert C&D materials utilized as fill materials to minimize the quantity of waste to be delivered to the Public Fill Reception Facilities and landfill. The details are shown in Table 5.1.

5.4.8 All the soil generated from the underground work should be refill on site to form the site to the required level. Other C&D materials should be used on-site as far as practicable.

5.4.9 If the total quantity of C&D materials generated from the Project is estimated to be over 50,000 m³, a Construction and Demolition Material Management Plan (C&DMMP) is required to be prepared at the feasibility study or preliminary design stage in accordance with Chapter 4 Clause 4.1.3 of Project Administration Handbook for Civil Engineering Works. The purpose of the C&DMMP is to actively seek to minimise generation of C&D materials and to reuse inert materials generated, including rock, as far as possible. The C&DMMP shall be signed off by a D1 officer. The C&DMMP has been prepared in accordance with the guidelines stipulated in Appendix 4.9 of Project Administration Handbook for Civil Engineering Works for separate submission.

Chemical Waste

5.4.10 Construction plant and equipment will require regular maintenance and servicing, which would generate waste such as solvents, lubrication oil and fuel, etc. Chemical wastes arising during the construction phase may pose serious environmental, health and safety hazards if not stored and disposed of in an appropriate manner.

5.4.11 It is difficult to quantify the amount of chemical wastes as it will solely depend on the contractor's on-site maintenance practice and the quantities of plant and vehicles utilized at the construction site. Nevertheless, it is anticipated that the quantity of chemical waste such as lubrication oil and solvent produced from equipment maintenance would be small and less than hundred litres per month.

5.4.12 The contractor is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes.

5.4.13 Storage, handling, transportation and disposal of chemical waste should be arranged in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Waste published by the EPD. Chemical wastes such as wasted solvents, lubrication oil and fuel, etc. will need special handling and storage arrangements and should be collected by licensed collectors for subsequent disposal and appropriate treatment at licensed waste disposal facilities, for example the Chemical Waste Treatment Facility Centre (CWTC) in Tsing Yi. Mitigation and control requirements for chemical waste are provided in the "Recommended Pollution Control Clauses for Construction Contracts" available in EPD website mentioned the handling, storage and disposal of chemical wastes. With good management and site particles, adverse environmental impacts should not result.

General Refuse

5.4.14 The volume of general site wastes to be generated will depend on the Contractor's operating procedure and practices. In addition, during the construction phase, the workforce would generate general refuse, comprising food scraps, paper, empty containers etc. Rapid and effective collection of site wastes will be required to prevent waste materials being blown around by wind, flushed or leached into the environment, and odour nuisance. The amount of general refuse which is likely to arise will be largely dependent on the size of the workforce employed by the Contractor(s).

5.4.15 As no information regarding the number of workers on-site is available at this early project state, it has been assumed that about 80 workers in average will work on the Application Site during site formation at any one time. Based on a generation rate of 0.65kg per worker per day, the daily arising of general refuse during site formation would be approximately 52kg/day.

Asbestos Containing Materials (ACM)

5.4.16 Asbestos was widely used in the construction industry prior to the early 1980s for fireproofing, thermal and electrical insulation as well as in sound absorption materials. However, asbestos is currently recognized as hazardous materials, due to its etiological effects on human respiratory system.

5.4.17 As the Schemes involve the demolition of buildings/ structures that were built before 1980s, ACM may be present in the buildings within the Schemes. Thus, ACM which may be disturbed during demolition activities, should be removed and disposed of in a proper manner prior to the demolition work, so as to avoid the release of harmful asbestos fibres to environment and minimise potential hazard.

5.4.18 All ACM if confirmed to be present within the existing premises must be removed and disposed of in accordance with the Air Pollution Control Ordinance (APCO) and WDO prior to the demolition works. A Registered Asbestos Consultant and Registered Asbestos Laboratory shall be engaged to conduct investigation for the presence of ACM. An Asbestos Investigation Report, an Asbestos Abatement Plan (AAP) (if required) and a notification of commencement of asbestos abatement works commences. Also, the removal of ACMs should be carried out by a Registered Asbestos Contractor according to the approved AAP under the supervision of a Registered Asbestos Consultant. The asbestos waste generated shall be disposed of by a licensed collector in compliance with the WDO.

5.4.19 Table 5.1 below presents the estimation of waste generated during construction phase.

Table 5.1 Summary Table of Estimated Waste during Construction Phase

Waste Material Type		Estimated Quantity Generated	Disposal Method
Inert C&D materials (Soil, rock debris, rubble earth, concrete etc.)	Demolition of Existing Building	200 m^3	To be reused or recycled on site or in other projects; and delivered to Public Fill Reception Facilities for other beneficial reuse
	Excavation of Basements	6,527 m^3	
	Construction of New Buildings/Structures	80 m^3	
Non-inert C&D materials (Bamboo, timber, paper, metal, glass, plastic, packaging wastes etc.)	Demolition of Existing Building and Excavation of Basements	2,530 m^3	Disposed to NENT landfill.
	Construction of New Buildings/Structures	20 m^3	
Chemical Waste	-	Less than hundred litres /month (preliminary estimate)	To be collected by licensed chemical waste collector and delivered to CWTC

General Refuse	-	52kg/day (Preliminary estimate, assuming there are 80 workers at any one time with generation rate of 0.65kg per worker per day)	Recyclables to recyclers; non-recyclables to landfill
ACM	TBC [(b)]	TBC[(b)]	TBC[(b)]

Note:

(a) The above estimated quantities are subject to detailed design stage.

(b) As the majority of sites are managed by private owners and still in operation, further investigation is required by the asbestos specialist after land resumption, when access to the sites becomes available.

5.5 Mitigation Measures During Construction Phase

5.5.1 The mitigation measures for construction phase are recommended based on the waste management hierarchy principles. Recommendations of good site practices, waste reduction measures as well as the waste transportation, storage and collection are described in following sub-sections.

Good Site Practices

5.5.2 Appropriate waste handling, transportation and disposal methods for all waste arisings generated during the construction phase should be implemented to ensure that construction waste do not enter the nearby water sensitive receivers.

5.5.3 It is expected that adverse impacts from waste management would not arise, provided that good site practices are strictly followed. Recommendations for good site practices during construction include:

- Nomination of approved personnel, such as a site manager, to be responsible for good site practices, and making arrangements for collection of all wastes generated at the site and effective disposal to appropriate facilities;
- Training of site personnel in proper waste management and chemical waste handling procedures;
- Provision of sufficient waste disposal points and regular collection for disposal;
- Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers;
- Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors.

5.5.4 In order to monitor the disposal of C&D material at landfills and public fill reception facilities, as appropriate, and to control fly tipping, a trip-ticket system should be included as one of the contractual requirements to be implemented by the Contractor. Reference shall be made to DEVB TCW No. 6/2010 for details.

Waste Reduction Measures

5.5.5 Good management and control can prevent the generation of significant amounts of waste. Waste reduction is best achieved at the planning and design stage, as well as

by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:

- Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;
- Separate labelled bins shall be provided to segregate aluminium cans from other general refuse generated by the work force, and to encourage collection of by individual collectors;
- Any unused chemicals or those with remaining functional capacity shall be recycled;
- Maximising the use of reusable steel formwork to reduce the amount of c&d material;
- Prior to disposal of non-inert c&d material, it is recommended that wood, steel and other metals shall be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill;
- Proper storage and site practices to minimise the potential for damage or contamination of construction materials;
- Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste; and
- Minimize over ordering of concrete, mortars and cement grout by doing careful check before ordering.

5.5.6 In addition to the above good site practices and waste reduction measures, specific mitigation measures are recommended for the identified waste to minimise environmental impacts during handling, transportation and disposal of these wastes.

General Refuse

5.5.7 Recycle bins will be provided onsite to collect recyclable wastes such as paper, metal (e.g. cans), plastic and glass. Recyclable wastes will be segregated from non-recyclable waste to be stored in enclosed bins or compaction units. A reputable waste collector should be employed by the contractor to remove general refuse from the site on a daily basis. Recyclable waste will be collected in appropriate frequency to ensure no over stacking of recyclable wastes. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material.

Construction and Demolition Material

5.5.8 The C&D material generated from site formation should be sorted on-site into inert C&D material (that is, public fill) and non-inert C&D material. In order to minimise the impact resulting from collection and transportation of C&D materials for off-site disposal, the excavated material comprising fill material should be reused on-site as backfilling material as far as practicable. Non-inert C&D material, such as wood, plastic, steel and other metals should be reused or recycled and, as a last resort, disposed of to landfill.

5.5.9 Suitable areas should be designated within the site for temporary stockpiling of C&D material and to facilitate the sorting process. Within stockpile areas, the following measures should be taken to control potential environmental impacts or nuisance:

- Covering material during heavy rainfall;
- Locating stockpiles to minimise potential air quality, water quality and visual impacts; and

- Minimising land intake of stockpile areas as far as possible.

Chemical Wastes

5.5.10 For those processes which would generate chemical waste, it may be possible to find alternatives to eliminate the use of chemicals, to reduce the generation quantities or to select a chemical type of less impact on environment, health and safety as far as possible.

5.5.11 If chemical wastes are produced at the construction site, the Contractor should register with EPD as a Chemical Waste Producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosives, flammable, oxidising, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed collector to transport, and disposal of the chemical wastes generated at the Chemical Waste Treatment Centre at Tsing Yi, or other licenced facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.

Asbestos Containing Materials

5.5.12 Due to the potential presence of ACM during the site clearance stage, asbestos investigation is required. An asbestos specialist shall be employed during the design and construction stage to investigate this issue.

5.5.13 Sufficient and reasonable lead time shall be allowed for the preparation, vetting and implementation of asbestos investigation report and asbestos abatement plan in accordance with APCO before commencement of any demolition or site clearance work.

5.5.14 Some key precautionary measures related to the handling and disposal of asbestos based on Handling of Asbestos Containing Materials in Buildings (ProPECC PN 2/97) are listed as following:

- Adoption of protection, such as full containment, mini containment, or segregation of work area;
- Provision of decontamination facilities for cleaning of workings, equipment and bagged waste before leaving the work area;
- Adoption of engineering control techniques to prevent fibre release from work area, such as use of negative pressure equipment with high efficiency particulate air (HEPA) filters to control air flow between the work area and the outside environment;
- Wetting of asbestos containing materials before and during disturbance, minimising the breakage and dropping of asbestos containing materials, and packing of debris and waste immediately after it is produced;
- Cleaning of work area by wet wiping and vacuuming with HEPA filtered vacuum cleaner;
- Coating on any surfaces previously in contact with or contained by asbestos with a sealant;
- Proper bagging, safe storage and disposal of asbestos and asbestos contaminated waste;

- Pre-treatment of all effluent from the work area before discharged; and
- Air monitoring strategy to check the leakage and clearance of the work area during and after the asbestos work.

5.6 Identification and Evaluation of Potential Impact during Operational Phase

5.6.1 During operational phase of the proposed development, since the uses are mainly residential, recreational, and social service. Disposal of chemical, livestock and clinical waste are not anticipated. Instead, general waste is anticipated to be the major type of waste generated during the operation of the proposed development. With reference to the latest data from "Monitoring of Solid Waste in Hong Kong 2022" by EPD, the MSW disposal rate was 1.51 kg/person/day in Year 2022, and the recovery rate for recycling was 32% of the MSW generation. By calculation, the MSW generation rate, disposal rate and recycled rate were 2.18 kg/person/day, 1.51 kg/person/day and 0.70 kg/person/day in 2022 respectively. Based on the estimated total number of residents and visitors for the residential and non-domestic portions of the Proposed Development is 1518 person/day and 240 person/day respectively, the total MSW generated from the operation of the Project is estimated to be 3.83 tonnes/day, in which 32% (i.e., 1.23 tonnes) would be recycled, and the remaining 68% (i.e., 2.30 tonnes) would be disposed of to the landfill.

5.6.2 The refuse shall be properly managed by suitable waste collectors so that intentional or accidental release to the surrounding environment will not occur. Storage of general refuse would generate odour nuisance and visual impact if they are not managed in a proper manner. Vermin and pests may also be attracted if the waste containers are not cleaned or maintained properly and frequently. Therefore, general refuse should be temporarily stored in proper containers with covers to avoid adverse impact to the surroundings. To reduce waste and improve recycling, sufficient properly labelled recycling bins for paper, plastic and aluminium should be provided at appropriate locations of the site to collect recyclables for off-site recycling. Regular (e.g., daily) waste removal and recyclables collecting should be arranged to avoid odour nuisance or pest/vermin problem. These waste management practices and good site practises should be properly implemented to ensure adverse environmental impacts from handling and disposal of general refuse would not arise.

5.6.3 For the food wastes such as leftovers, it is recommended an adequate number of enclosed waste containers will be provided to avoid over-spillage of waste. Also, leftovers will be placed in bags and stored in enclosed containers. Rather than disposing of the food waste to the designated landfill directly, the project proponent is recommended to deliver the food waste to the Organic Resources Recovery Centre (ORRC) to reduce the pressure on the existing landfill. Therefore, the chances of odour nuisance and hygiene issues are reduced.

5.7 Conclusion

5.7.1 The types of wastes which may be generated from the construction and operation of the Project have been identified. The quantities of waste shall be estimated during the later project design stage when more information is available. The storage, handling and disposal of the identified wastes shall follow relevant guidelines in order to minimize potential environmental nuisance to the nearby sensitive receivers.

5.8 Assessment Criteria for Preliminary Land Contamination Review

5.8.1 This preliminary land contamination review has been prepared following the below guidelines published by EPD:

- *Guidance Manual for Use of Risk-Based Remediation Goals for Contaminated Land Management (RBRGs), EPD, Revised in April 2023*
- *Guidance Note for Contaminated Land Assessment and Remediation, EPD, Revised in April 2023*; *and*
- *Practice Guide for Investigation and Remediation of Contaminated Land (EPD's Practice Guide), EPD, Revised in April 2023*

5.8.2 As the RBRGs and the EPD's Practice Guide were the latest guidelines promulgated for use in August 2007 and August 2011 respectively, the RBRGs criteria and the requirements stated in the EPD's Practice Guide will be adopted in this land contamination review.

5.9 Review of Historical and Currently Available Information

5.9.1 The Application Site is zoned as "Residential (Group E)" (RE) under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP).

5.9.2 The Subject Site comprises an industrial building, (i.e., Wah Tung Godown). The building was 6 storeys high without basements.

5.9.3 In the aerial photograph taken in 1963 by the Lands Department (LandsD), the Application Site was depicted as a sea area. Reclamation work began around 1964, and by 1967, the Application Site had been formed and become vacant land. In 1977, a building (i.e., Wah Tung Godown Building) was constructed at Lot No. YTML 70. It is important to note that the building at YTML 70 has remained unchanged until the present day.

5.9.4 Upon review of the aerial photographs in Years 1963, 1964, 1967, 1972, 1976, 1977, 1982, 1987, 1992, 1997, 1998, 2003, 2008, 2013, 2018, and 2022 from the Lands Department (LandsD), the land uses of the Subject Site are summarized in Table 5.2. The relevant aerial photographs from LandsD are presented in Appendix 5.1.

Table 5.2 Historical Landuse Summary of the Subject Site

Period / Year	Landuse / Description	Sources of Information
	YTML70	
1963	The Application Site was a sea area.	Aerial photographs from LandsD
1964	The Application Site was a sea area.	Aerial photographs from LandsD
1967	The Application Site was being formed by reclamation and become vacant land.	Aerial photographs from LandsD
1972	The Application Site was become vacant land.	Aerial photographs from LandsD
1976	The Application Site was become vacant land.	Aerial photographs from LandsD
1977	A building (i.e., Wah Tung Godown Building) was constructed.	Aerial photographs from LandsD

Period / Year	Landuse / Description	Sources of Information
	YTML70	
1982 - 1992	No landuse change for the Application Site.	Aerial photographs from LandsD
1997	No landuse change for the Application Site.	Aerial photographs from LandsD
1998	No landuse change for the Application Site.	Aerial photographs from LandsD
2003-2022	No landuse change for the Application Site.	Aerial photographs from LandsD

Site Inspection and Observation

5.9.5 Desktop review and site inspection to the Application Site was conducted on Nov, Dec 2023 and Feb, Oct, Nov 2024. Photo records are provided in Appendix 5.2.

5.9.6 For the building (i.e., Wah Tung Godown Building) at YTML 70, it is observed that the ground floor generally consists of car park. There were no aboveground / underground oil storage tanks, chemicals and dangerous goods observed to be stored on site during the site visit. Besides, the site was fully paved with good condition.

5.9.7 Due to the nature of the existing industrial building, potential land contamination issues need to be ascertained in later stage.

Information available from BRAVO website

5.9.8 Building Records Access and Viewing On-line (BRAVO) of Buildings Departments (BD) was visited to obtain records for completed private buildings. It is observed there is one (1) building plan for the Application Site. The captured shown of BRAVO is provide in Appendix 5.3.

Information from Government Department

5.9.9 Apart from the historical aerial photos, the following Hong Kong Special Administration Region (HKSAR) Government Departments have been enquired on the latest update on the availability of land contamination and/or spillage (i.e. (i) Dangerous Goods Incidents, (iv) Explosive Storage/Spillage, (v) Spillage/Leakage of Chemical or Dangerous Goods; and (vi) Fire Incidents) for Subject Site. The summary of correspondence is tabulated in Table 5.3 below. Copy of the response letters and emails are included in Appendix 5.4.

5.9.10 As advised by Environmental Protection Department (EPD), there are 3 chemical waste producer registrations in the Application Site.

5.9.11 As advised by Civil Engineering and Development Department (CEDD), There are no licences issued for the manufacture, storage, or use of explosives in the Application Site, and no records indicating that any incidents related to explosives occurred in the concerned area.

5.9.12 As advised by Lands Department, they are not in a position to provide on the land contamination issues.

5.9.13 As advised by Fire Services Department, there are no records of dangerous goods license, fire incidents nor incidents of spillage/ leakage of dangerous goods were found at Subject Site.

Table 5.3 Enquiries and Responses on Land Contamination Issue

Consultant's Letter Ref.	Department	Response Letter Ref.	Response Date	Summary
CRC_4TYSEI00_0_0002L.24	Environmental Protection Department (EPD)	Email	4 March 2024	No record of a chemical spillage/leakage accident at the Application Site in past 5 years.
CRC_4TYSEI00_0_0003L.24	Fire Services Department (FSD)	(63) in FSD GR 6-5/4 R Pt.52	25 March 2024	No records of dangerous goods license, fire incidents nor incidents of spillage/ leakage of dangerous goods were found at Subject Site.
CRC_4TYSEI00_0_0004L.24	Planning Department (PlanD)	--	--	The response would be supplemented once available.
CRC_4TYSEI00_0_0005L.24	Lands Department (LandsD)	(167) in DLOKE 852/KPA/ 63	8 April 2024	Not in a position to provide on the land contamination issues.
CRC_4TYSEI00_0_0006L.24	Civil Engineering and Development Department (CEDD)	() in CEDD-MIN-06-20-1	7 March 2024	There are no licences issued for the manufacture, storage, or use of explosives in the Application Site, and no records indicating that any incidents related to explosives occurred in the concerned area.

Discussion

5.9.14 The whole Application Site was formed by reclamation in the 1960s and was vacant until 1977. From 1977 to 1997, a building structure was observed at YTML 70, with the land use as an industrial building. The building at YTML 70, known as Wah Tung Godown Building, have remained unchanged to this day.

5.9.15 Based on the desktop review and site inspection, considering the nature of the existing industrial building and land uses, it is concluded that the Application Site has a potential land contamination issue related to its historic land use. The potential land contamination issue needs to be ascertained in later stage.

5.10 Conclusion

5.10.1 A preliminary land contamination review has been conducted for the Application Site. Background

5.10.2 from Lands Department and building plans from Buildings Department have been reviewed. Site inspection has also been conducted to identify the potential land contamination in the Application Site.

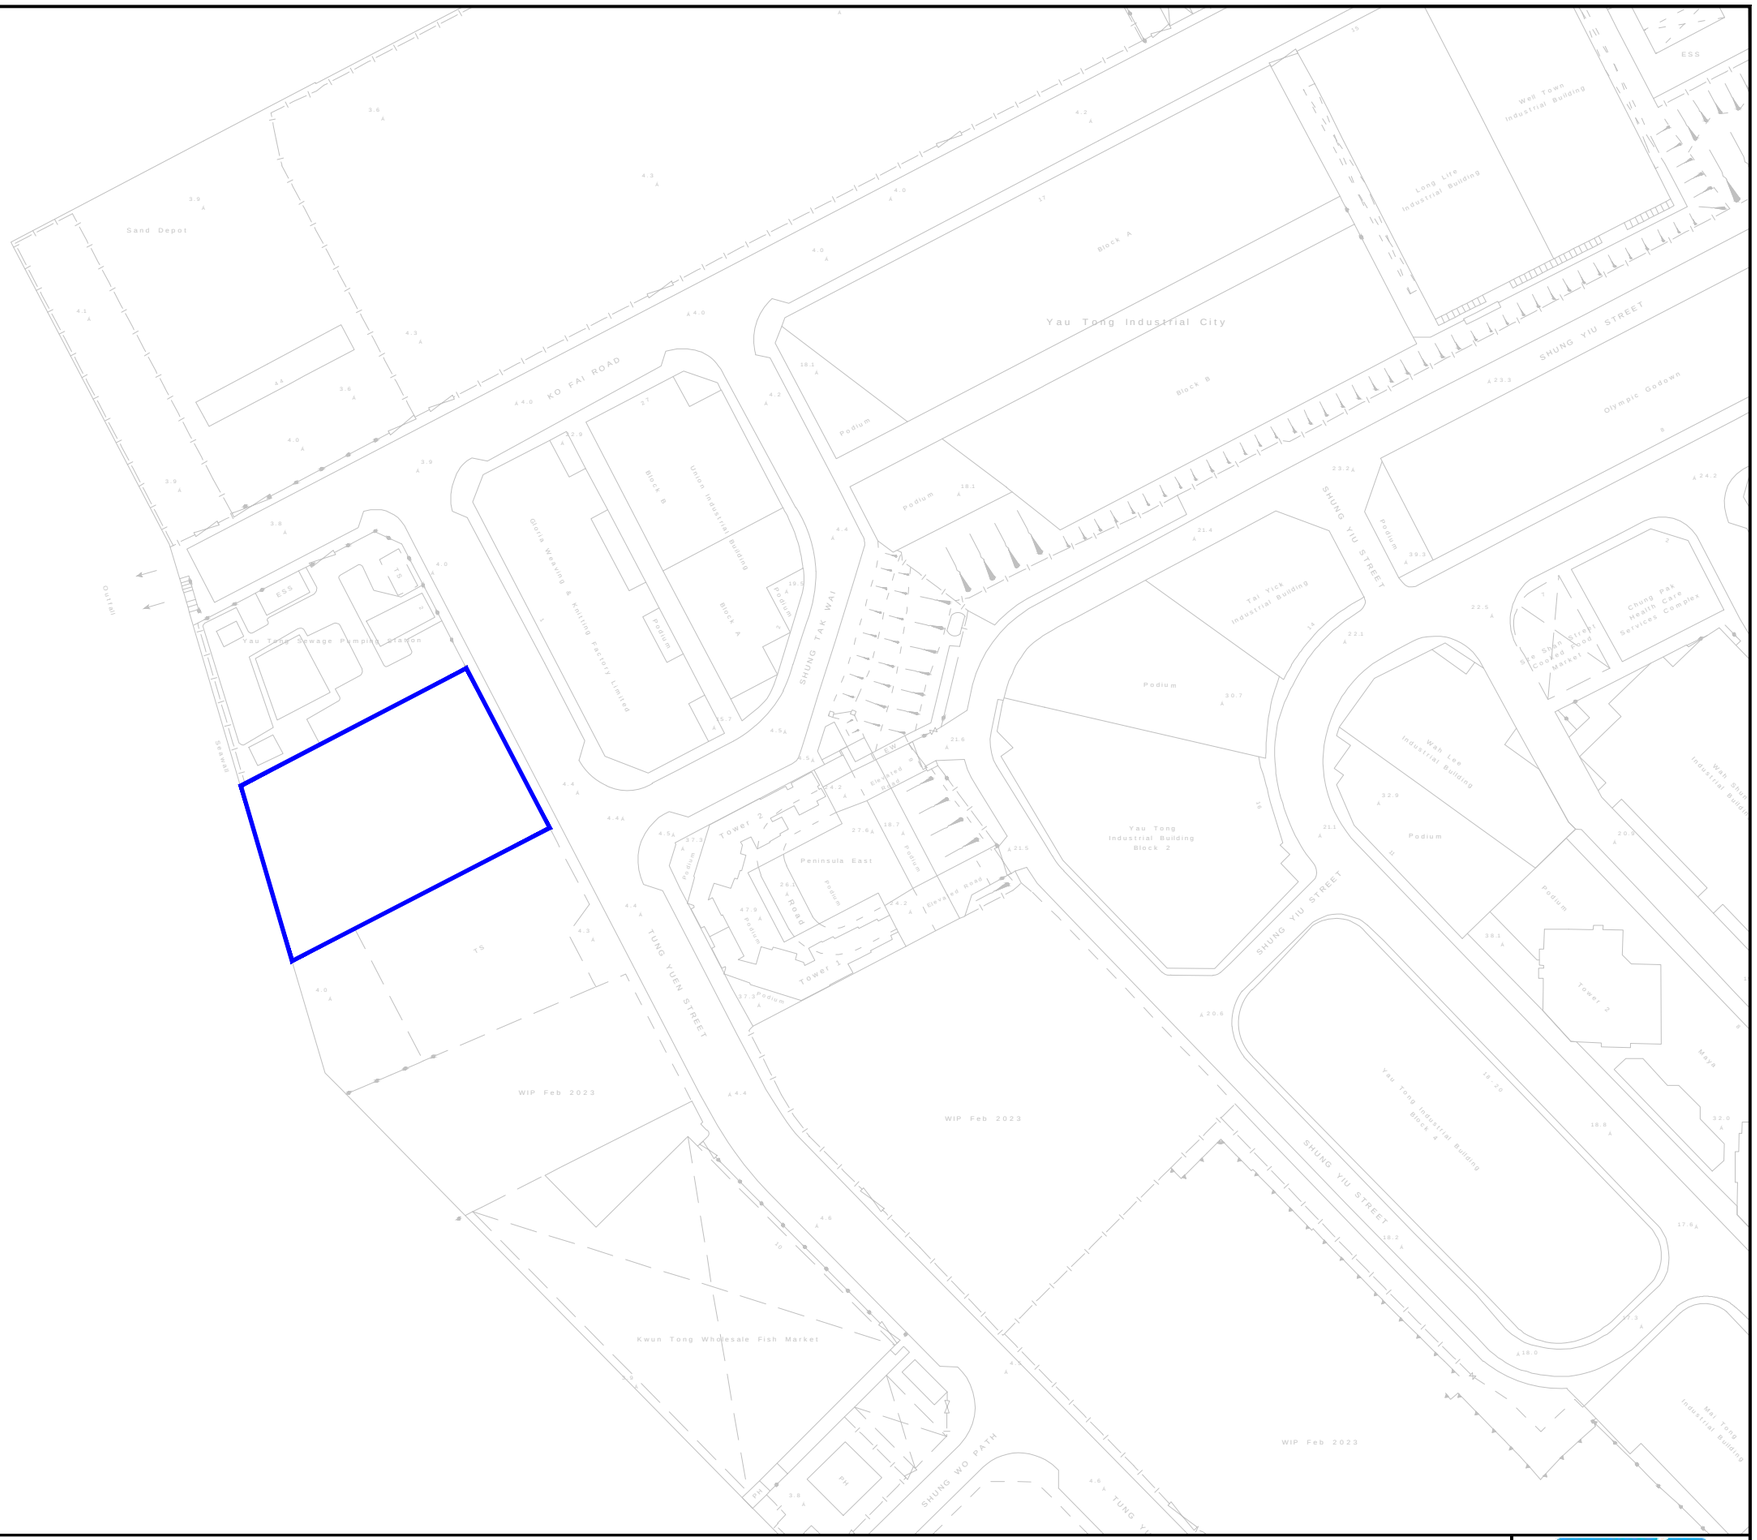
5.10.3 In considering the nature of existing industrial building at the Application Site and the surrounding land use, further site investigations shall be conducted to determine whether potential contamination sources are present at the Application Site subject to the findings of site investigation, a detailed land contamination study and hence Contamination Assessment Plan (CAP), Environmental Site Investigation (SI) and Contamination Assessment Report (CAR), if necessary, is recommended to be

conducted and prepared in the later stage to determine the presence and extent of contamination on the Subject Site.

5.10.4 Further land contamination assessment and/or remediation works will be completed before commencement of any construction works for the development, in accordance with relevant guidelines issued by government departments.

6. OVERALL CONSULSION

6.1.1 In order to confirm the environmental acceptability of the Proposed Development, an Environmental Assessment was carried out to examine the impacts associated with the Proposed Development. Potential environmental impacts, including air and noise impact have been assessed. Quantitative Air quality Impact Assessment is included in separation submission.



6.1.2 According to the road traffic noise impact assessment and industrial noise impact assessment, with the implementation of appropriate noise mitigation measures, the Proposed Development shall not be subject to adverse road traffic noise and industrial noise impact.

6.1.3 Due to the usage of the Project Site (i.e., industrial building and concrete batch plant), there are potential land contamination issues associated. Detail study will be carried out at later stages. The land contamination assessment and/or remediation works will be completed before commencement of any construction works for the development, if the later stage assessment demonstrated the land is contaminated.

6.1.4 With the implementation of the waste management measures, no adverse impact is anticipated due to the waste generated during construction and operational stages.

6.1.5 This Environmental Assessment confirms the feasibility of the Proposed Development from an environmental point of view.

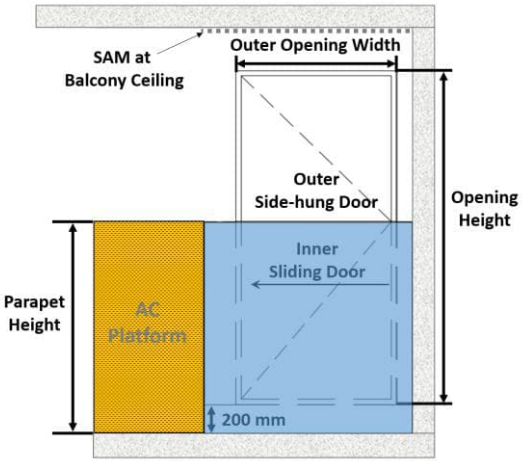
Appendix 3.3 Indicative Design of EAB(BT)-(EPD-PN) & AW(BT)-(EPD-PN) Adopted in the Proposed Development

(I) Possible design of "Acoustic Window (Baffle Type)" for 8m² and 18m² habitable rooms (i.e. dining room, living room or bedroom)

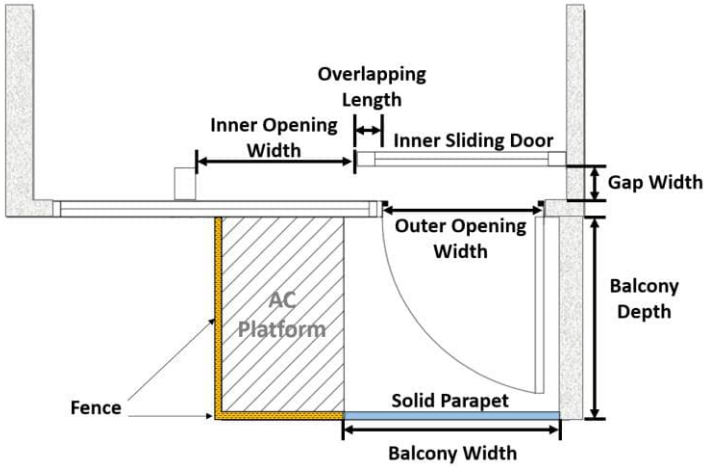
INTERNAL VIEW (NOT TO SCALE)

PLAN (NOT TO SCALE)



Possible Designs of "Acoustic Window (Baffle Type)" for 8m² and 18m² rooms					
Room Size (m^2)	**Room Dimensions (mm^3)**	**Inner Window Opening (mm^2)**	**Outer Window Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
8	**3200 (W) x 2500 (D) x 3400 (H)**	**580 (W) x 870 (H)**	**600 (W) x 870 (H)**	**≥ 100**	**100 to 175**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**750 (W) x 1500 (H)**	**750 (W) x 1500 (H)**	**≥ 100**	**100 to 175**

Notes:



a. These are feasible designs of AW(BT) for 8m² and 18m² rooms.

b. For optimum performance of noise reduction, the air gap should have a pane-to-pane overlapping length of ≥ 100mm and a gap width between 100mm and 175mm, with the inner sliding glass panel in a closed position. The window pane shall be ≥ 6mm in thickness.

(II) Possible designs of "Enhanced Acoustic Balcony (Baffle Type)" in 14m^2 and 18m^2 habitable rooms (i.e. dining room, living room or bedroom)

EXTERNAL VIEW (NOT TO SCALE)

PLAN (NOT TO SCALE)

Fence (≥ 70% Permeability) Solid Parapet

Possible Designs of "Enhanced Acoustic Balcony (Baffle Type)" for 14m^2 and 18m^2 rooms								
Room size (m^2)	**Room Dimensions (mm^3)**	**Balcony Width (mm)**	**Balcony Depth (mm)**	**Parapet Height (mm)**	**Inner Opening (mm^2)**	**Outer Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
14	**3400 (W) x 4100 (D) x 3100 (H)**	**≥ 1440**	**≥ 1300**	**≥ 1450**	**1025 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**≥ 2055**	**≥ 1300**	**≥ 1450**	**1150 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**

Notes:
1. These are feasible designs of EAB for 14m^2 and 18m^2 rooms. The room with EAB should meet the natural lighting and ventilation requirements in regulations 30 & 31 of the Building (Planning) Regulations (B(P)R). The AC platform should comply with the requirements under Appendix B of Code of Practice on Access for External Maintenance 2021 (AfEM Code), and balconies for residential buildings should comply with the criteria and conditions set out in Joint Practice Note (JPN) 1 for application of exemption from gross floor area and/or site coverage under the B(P)R.
2. SAM at balcony ceiling refers to sound absorptive material of noise reduction coefficient ≥ 0.7. It is an essential feature to attain the basic noise reduction performance in Annex B.
3. Comparable noise performance is anticipated should the AC platform be replaced by balcony with solid parapet.

Appendix 3.4 Sound Attenuation Adjustment of EAB(BT)-(EPD-PN) & AW(BT)-(EPD-PN) Adopted in the Proposed Development

Adjustment of Sound Attenuation for Traffic Noise Impact Assessment

Tung Lee Motor Service Workshop (TLM_1)

Measurement Date: 19 Sep 2023 (Tue) 1100 – 1130 Weather Condition: Sunny Noise Source ID: QJ_1	Noise measurement was therefore carried out at 25m away of the sources, which having direct line of sight with the activities. 

Sound Level meter: Norsonic 139	Sound Calibrator: Norsonic 1256

Deduced Sound Power Level for the Chiller

Activity	SPL, dB(A)	Background Noise, dB(A)	Calculated SPL, dB(A)	Façade Correction, dB(A)	Measurement distance (D), m	Derived SWL, dB(A)*	Duration (min) / 30mins
Loading and unloading	72.0	70.7	66.2	+3	25	105.1	30

Note:

1. Only noise measurement was conducted during daytime as no operation was observed during site survey at nighttime.

Remark:

* Derived SWL = SPL + 20 x log (D) + 8 + façade correction

Frequency Analysis to determine the correction of tonality in accordance with IND-TM (Fixed Noise Source (S1) - VRV at the roof of the Police Station)

Noise Source Type(s): *operation Sound*

Highest	62.5
Overall	72.0
Tonality Correction Adopted, dB(A)	*0*

A correction for tonality shall be applied if, between 31.5Hz and 16kHz, any one-third octave band or any pair of adjacent one-third octave bands of the A-weighted spectrum of the noise under investigation satifies all of the following conditions:

(a) the level of the one-third octave band under consideration, or, in the case of a pair of bands, the level of the highest band in that pair, is not more than 15.0 dB below the level of the highest one-third octave band;

(b) the level of the one-third octave band under consideration, or, in the case of a pair of bands, the arithmetic average of the levels of the two bands, is more than 1.0 dB higher than the level of each of the adjacent bands on either side of the band or pair of bands under consideration; and

(c) the level difference, known as the tonality factor, ftone, between the level of the one-third octave band under consideration, or, in the case of a pair of bands, the arithmetic average of the levels of the two bands, and the arithmetic average of the levels of the adjacent bands on either side of the band or pair of bands under consideration is 3.0 dB or more

f_{tone}(dB)	C_{tone}(dB(A))	
	in cases where the frequency of any band under consideration is below 250 Hz	in cases where the frequency of each band under consideration is higher than or equal to 250 Hz
greater than or equal to 3.0 and less than 6.0	0	3
greater than or equal to 6.0 and less than 9.0	3	6
greater than or equal to 9.0	6	6

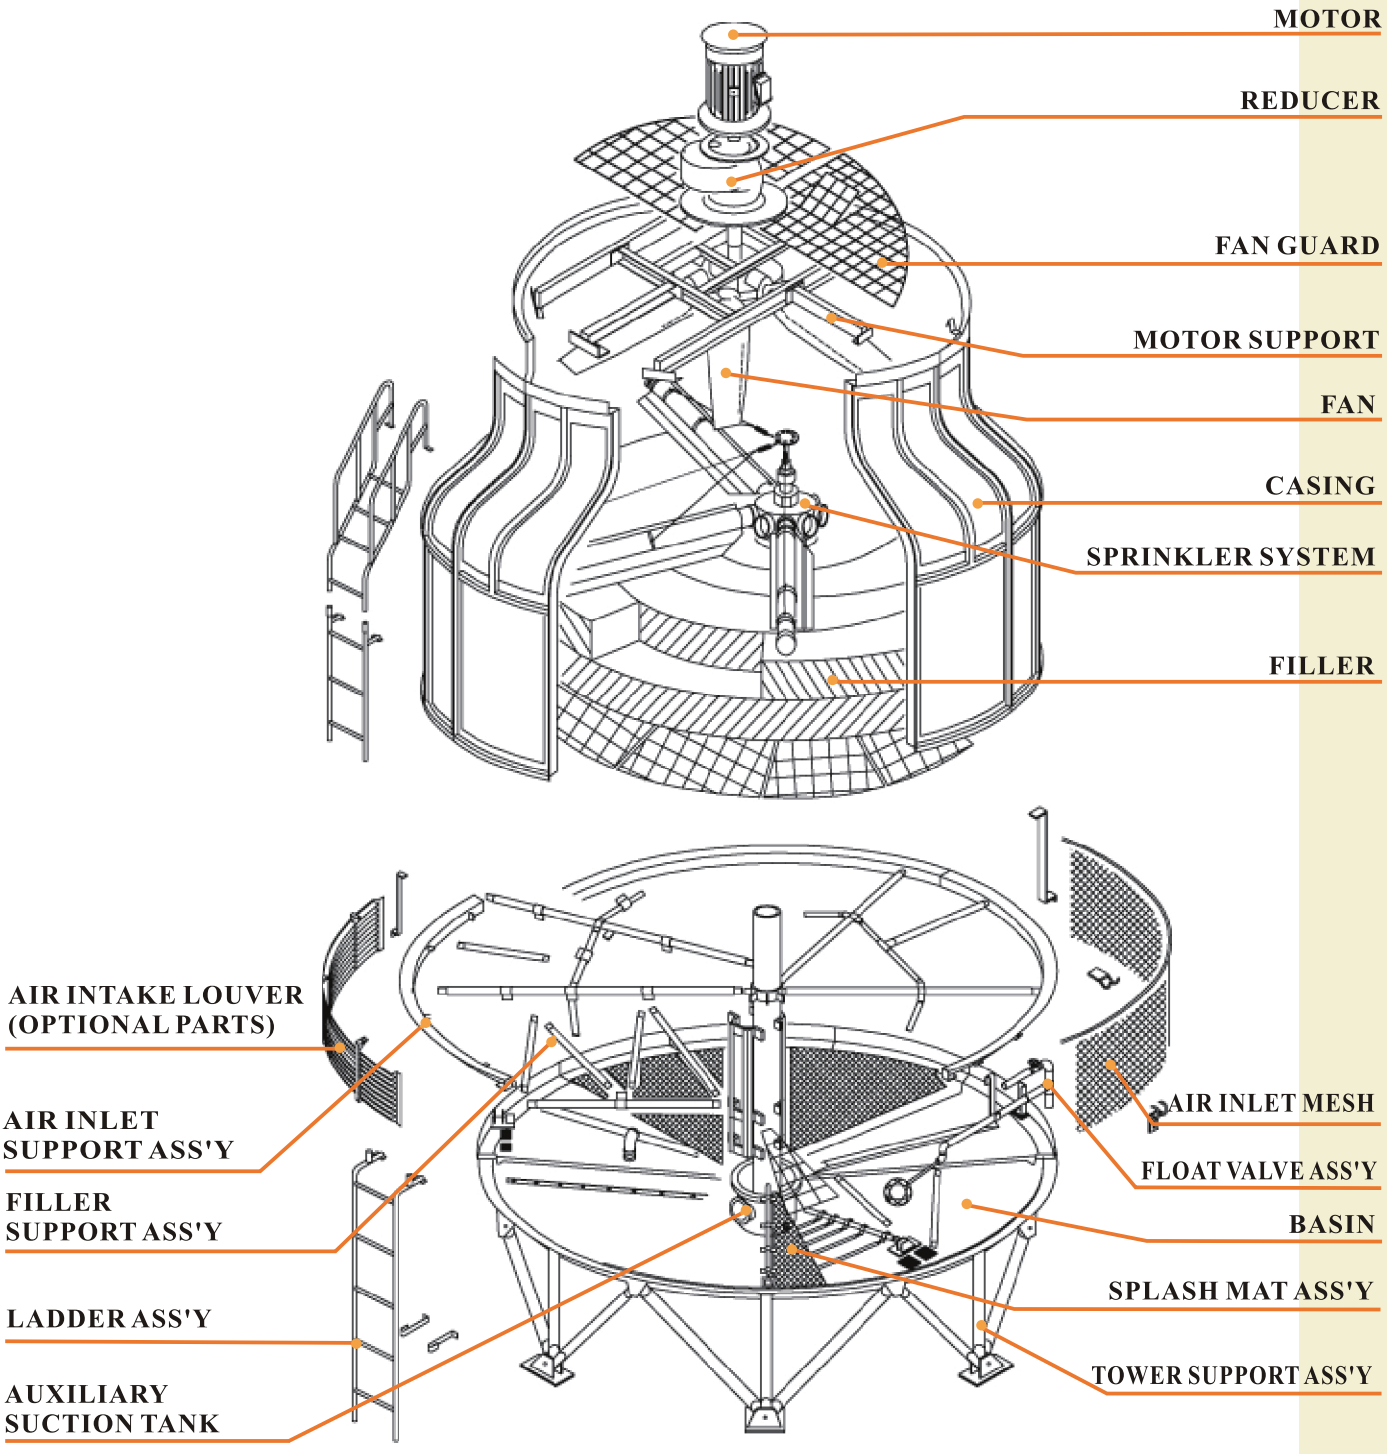
Appendix 4.5 Catalogues of Cooling Towers

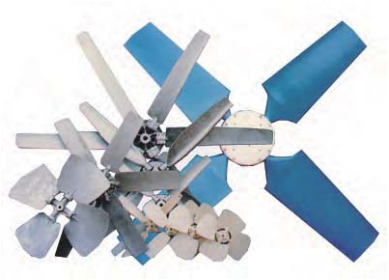


菱和
ryowo™

FRP COUNTER FLOW FT SERIES

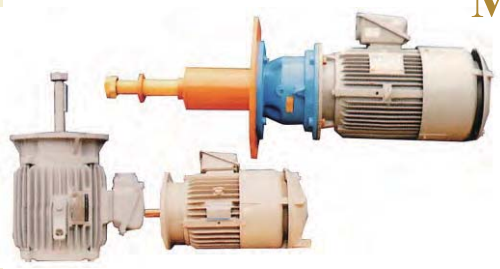
COOLING TOWER

STRUCTURE



PRINCIPLE OF OPERATION

Hot water is distributed over the filler through the low velocity automatic sprinkler system and is mixed with the upward draft of ambient air causing evaporation and thus heat is removed from the water. The cooled water falls into the basin and is pumped to the heat sources for recirculation.



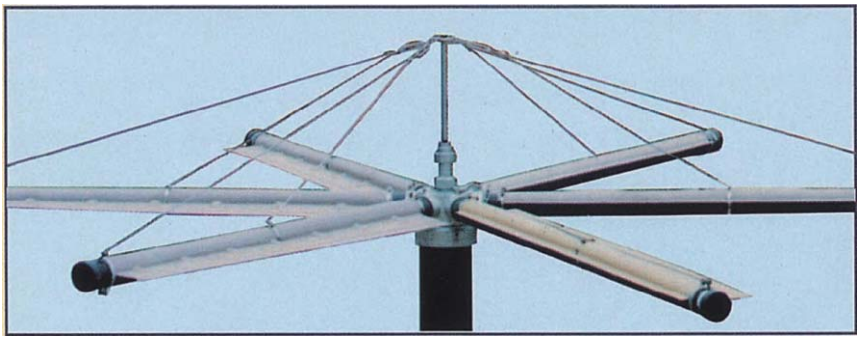
COMPONENT FUNCTION & FEATURE

AXIAL FAN

All fans are induced-draft axial type with adjustable pitch. Material chosen are non-corrosion of plastic, FRP or alu-minium alloy. The high efficiency design ensures low running cost and the lowest possible noise level . Fan blade pitches is factory set and balanced.

MOTOR

The motors, totally enclosed, fan cooled flange type, 380V/ 3ph/ 50 Hz, induction weather proof, are specially designed for RYOWO. Motors from 5.5 kw and up are Y- start and below are direct-on-line start.



TRANSMISSION SYSTEM

The fans of small models are designed to be driven by low speed motor of 6,8,10 or 12 poles which can minimise the numbers of transmission parts used. For large models, the fans are vee-belt or gear driven with 4 poles motors so the speed of fans can be adjustable to suit various application.

SPRINKLER SYSTEM

Automatic rotary sprinkler system with rotary head and sprinkler pipe distributes the hot water over the entire face area of the filler. Sprinkler pipes are non-clogging, require low-pressure to operate, and assures uniform water flow with minimal operating pump head. The F.R.P. eliminators attached to sprinkler pipes are specifically designed for Low pre Ssure drop and minimises the drift loss of water.

COMPONENT FUNCTION & FEATURE

CASING & BASIN

F.R.P. (fibreglass reinforced polyester) formed casings are durable, non-corrosive, weather-proof, and light weight. Cylindrical form is shaped to fully withstand wind pressure, vibration and such F.R.P. casings obliviate need for painting, reduce maintenance costs and guarantee long dependable service.

Bowl-shape basins are also made from F.R.P. with built in socket or flanged outlets for piping connections. For large models, a F.R.P. aux. suction tank is employed and fitted with piping flanges or sockets.

STEEL STRUCTURE

All supporting steel members are hot-dip galvanized to minimise rusting and corrosion ensuring long service life even in corrosive atmosphere. The stainless hardware members are also available upon request.

FILLER

High performance RYOWO V-30 film filler is the heart of the tower. The specially formed PVC sheets maximize the air/water contact area and minimise air pressure drop to assure efficient heat transfer while keeping fan power requirement low. It is virtually immune to corrosion and decay.

Eliminator

Specially made drift eliminator consisted of 2 types of sheets forms a “v” shape path for the transmission of the cooling tower discharge air stream. The small water droplets in the stream impact the surfaces of the drift eliminator sheets and are separated from the stream such that the drift loss ratio maintain at less than 0.001% of circulating water flow rate.

SPLASH MAT (LOW NOISE MODELS)

Specially designed noise absorbing splash mat is provided for low noise models on the water basin to minimise the unpleasant water dripping noise in the basin.

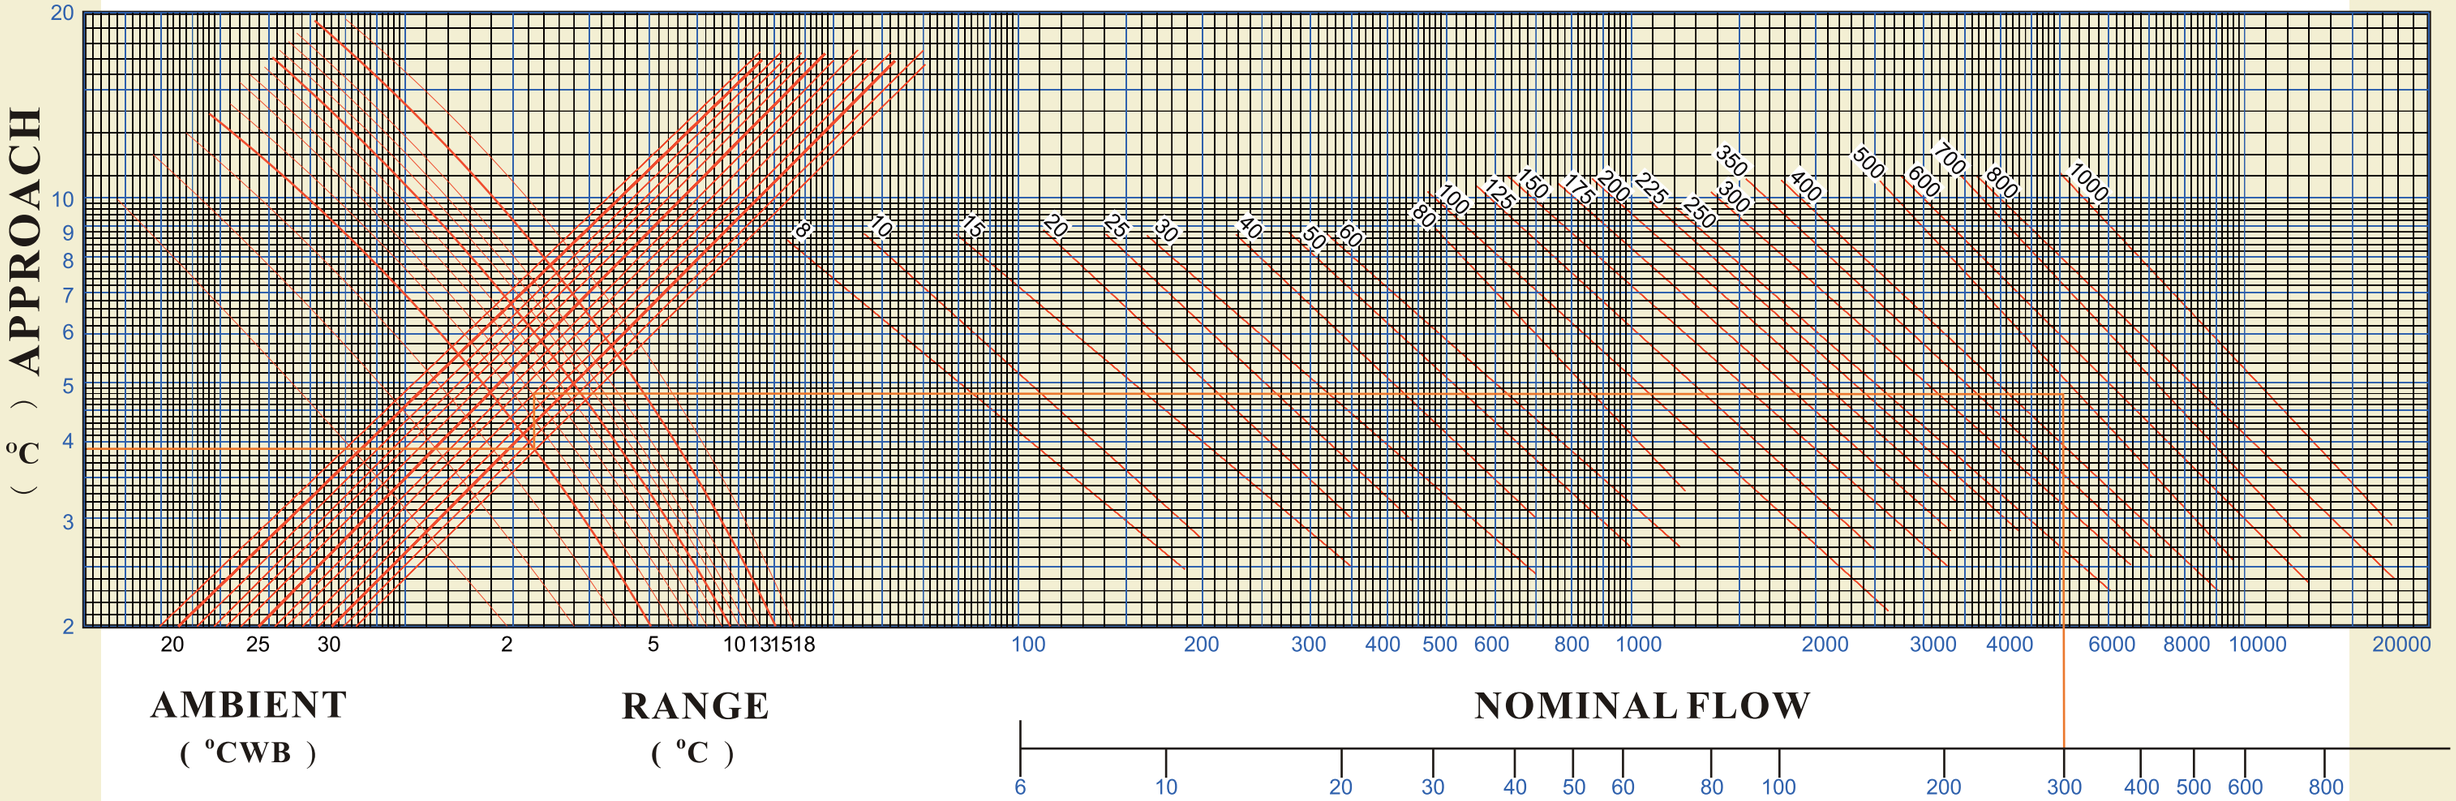
NOTE : Nominal cooling capacity is based on 13 ℓ / min / RT (1 RT=3,900 Kcal / hr) at 37ºC inlet water tpmperature, 32ºC outlet water temperature and 27ºC ambient wet bulb temperature.



The SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level.

Pump head is obtained by adding resistance of piping/condenser and the tower height(H).

The unit dimension in this catalogue is metric. Specifications listed in this catalogue are subject to change without further noticefor technical improvement of our products.

FT OR FT/LN SERIES QUICK SELECTION TABLE

(20°CWB~30°CWB)

EXAMPLE:

RATE :300m³/hr

INLET WATER TEMP :37°C

OUTLET WATER TEMP :32°C

WET BULB TEMP :28°C

RANGE: INLET WATER TEMP-OUTLET WATER TEMP
: 37°C - 32°C = 5°C

APPROACH: OUTLET WATER TEMP -WET BULB TEMP
: 37°C - 32°C = 5°C

TOWER SELECTED: FT - 500 OR FT/LN - 500

COOLING TOWER	CT							
NOMINAL FLOW	m³/hr							
INLET WATER	HWT°C							
OUTLET WATER	CWT°C							
AMBIENT WB	WB°C							
RANGE	(HWT-CWT)°C							
APPROACH	(CWT-WB)°C

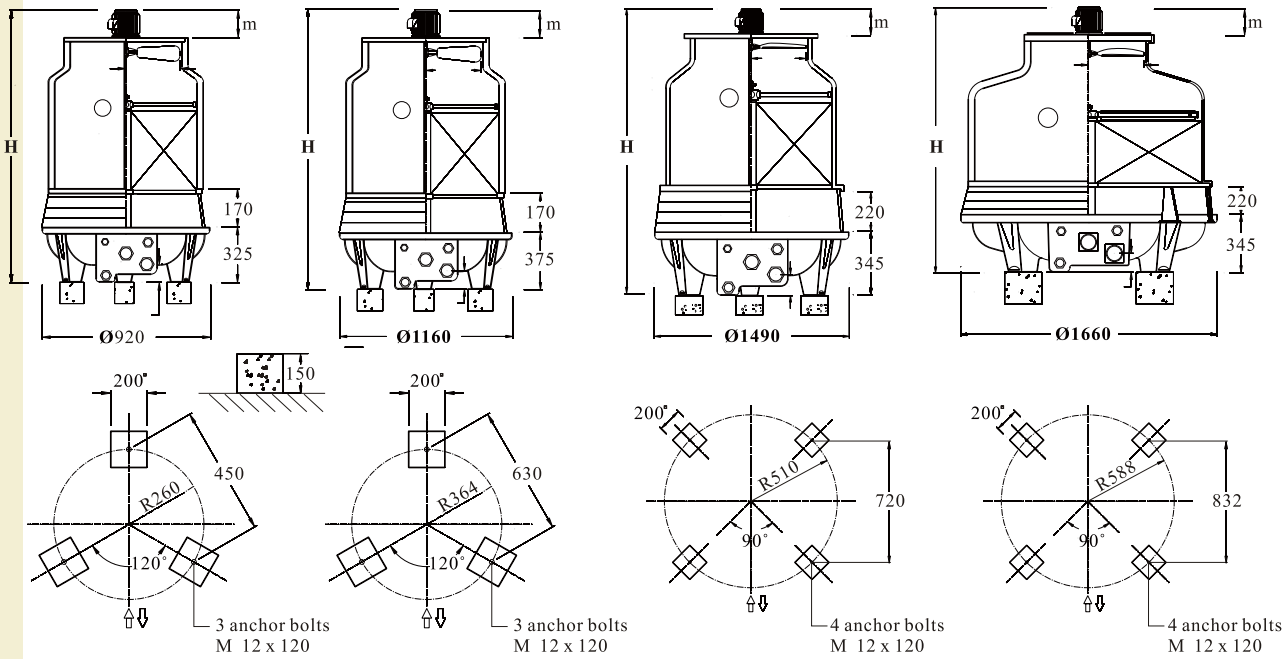
GUARANTEE:

All components are guaranteed against defective material for a period of one (1) year.

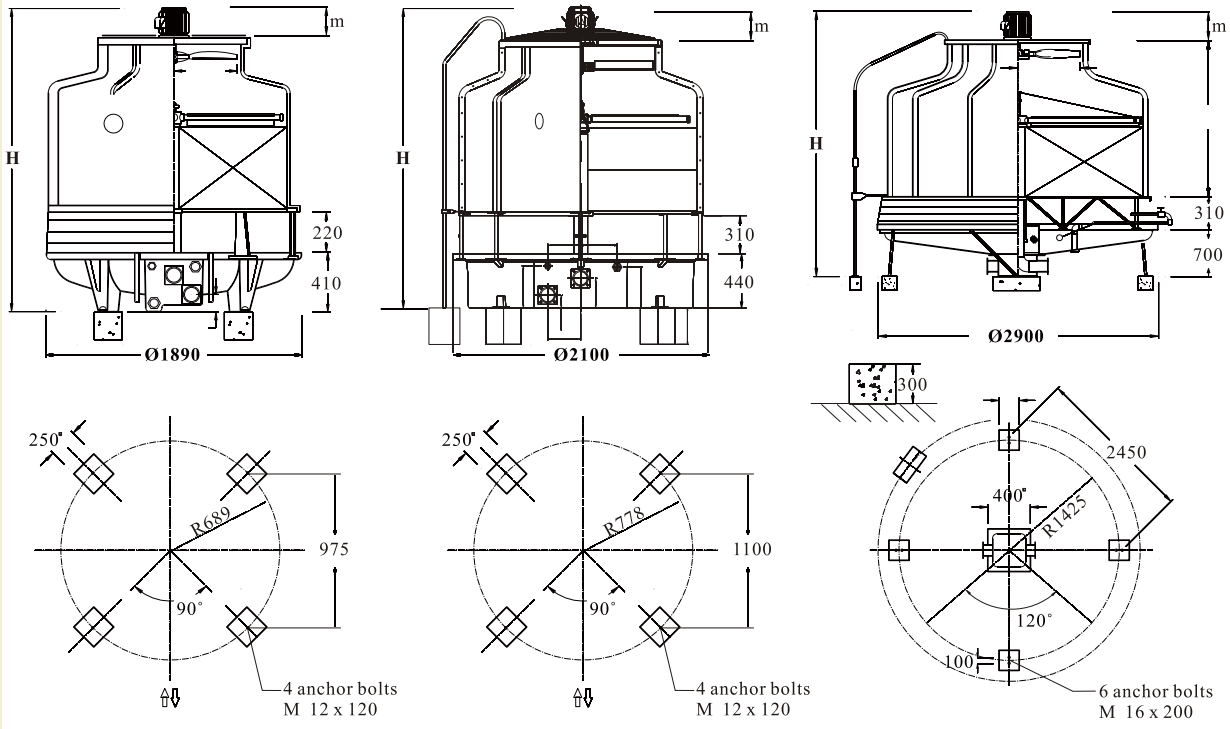
When return to RYOWO with transportation prepaid , all parts found by factory inspection to be defective will be repaired replaced without charge , FOB HONG KONG.

No liability will be assumed for loss or damage resulting from misuse of products.



APPLICATION

For inquiry on RYOWO cooling towers , please contact local agents and specify the following conditions:



a). Circulating water flow
b). Inlet water temperature
c). outlet water temperature
d). ambient wet bulb temperature
e). power sources-voltage & frequency

AVAILABLE OPTIONAL ACCESSORIES

DISCHARGE HOOD

This option is available on small models. It provides another direction of discharge air leaving the tower. It is made of F.R.P. with services door and wiring mesh on the air outlet.

HIGH TEMPERATURE FILLER

For high temperature operation such as waste water treatment , P.P. filler can withstand up to 80℃inlet water. (Special arrangement should be made for other components, please contact us for details.)

STAINLESS STEEL COMPONENTS

As an option, we can provide type 304 stainless steel major steel members, bolts and nuts.

TWO-SPEED MOTOR

As an option, two-speed motor can be provided in 4P/6P single winding configeration. A considerable reduction in noise and energy management can be achieved.

F.R.P. AIR INLET LOUVER

Inlet louver constructed of F.R.P. material can be provided, which matches the rest of tower and prevents water splashing out from the tower.

BASIN HEATERS

Electric immersion heaters with thermostat and control box are available to keep the basin water from freezing in sub-zero weather.

BODY COLOR

Cooling tower installed on the roof of building may be barely noticeable from the ground, and a colored cooling tower matching to building color will make it "good look".

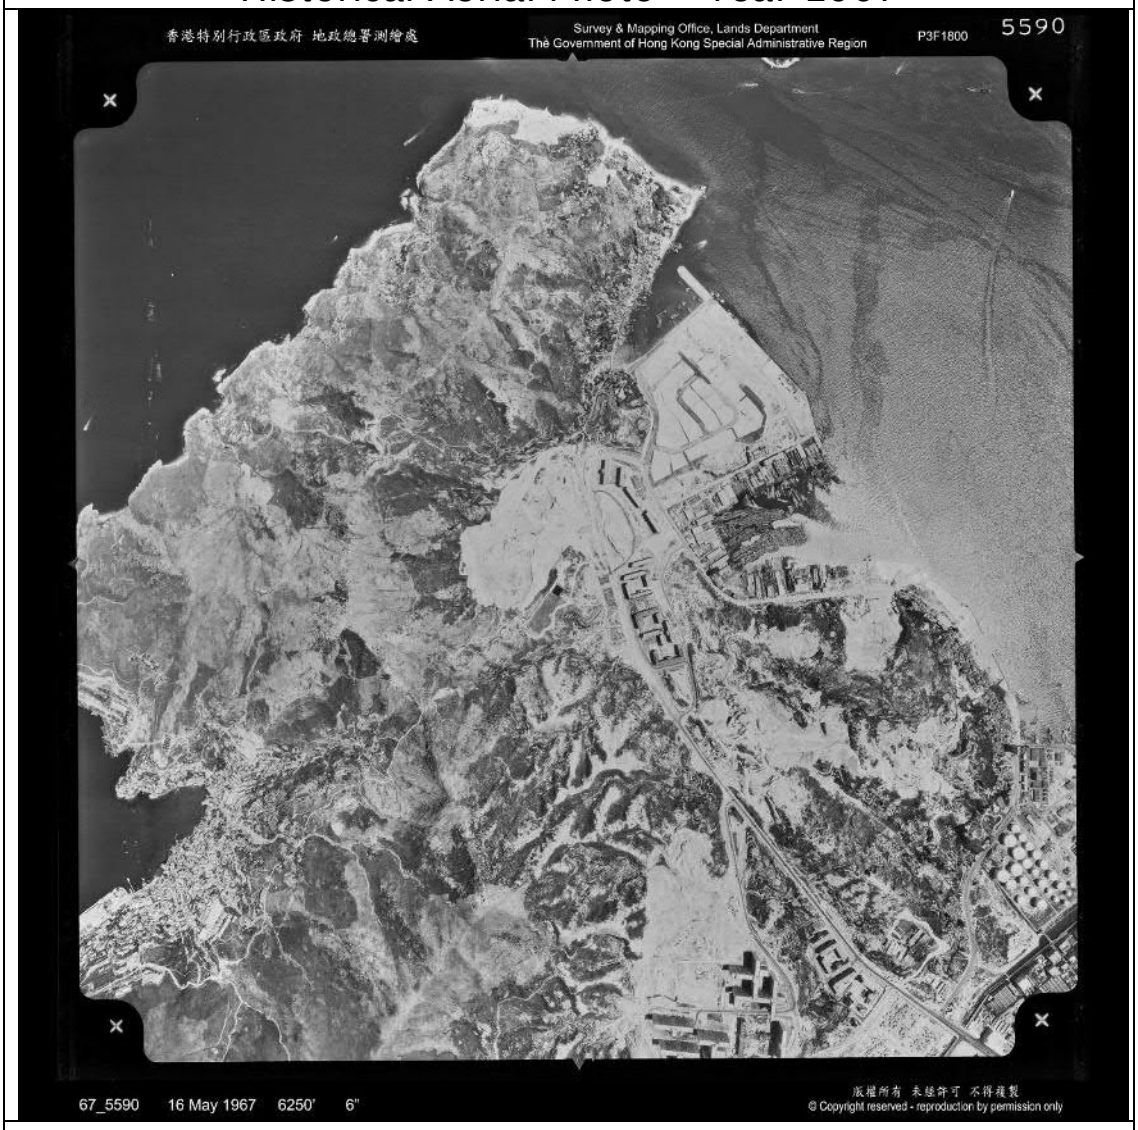
	1963	The Application Site was a sea area



Historical Aerial Photo – Year 1964

Aerial photo from LandsD (Ref.: 5367), Height: 1800 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1964	The Application Site was a sea area.

Historical Aerial Photo – Year 1967

Aerial photo from LandsD (Ref.: 5590), Height: 6250 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1967	The Application Site was being formed by reclamation and become vacant land.

Historical Aerial Photo – Year 1972

Aerial photo from LandsD (Ref.: 00079), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1972	The Application Site was become vacant land.

Historical Aerial Photo – Year 1976

Aerial photo from LandsD (Ref.: 12250), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1976	The Application Site was become vacant land.

Historical Aerial Photo – Year 1977

Aerial photo from LandsD (Ref.: 18753), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1977	A building (i.e., Wah Tung Godown) was constructed at Lot No. YTML 70 .

Historical Aerial Photo – Year 1982

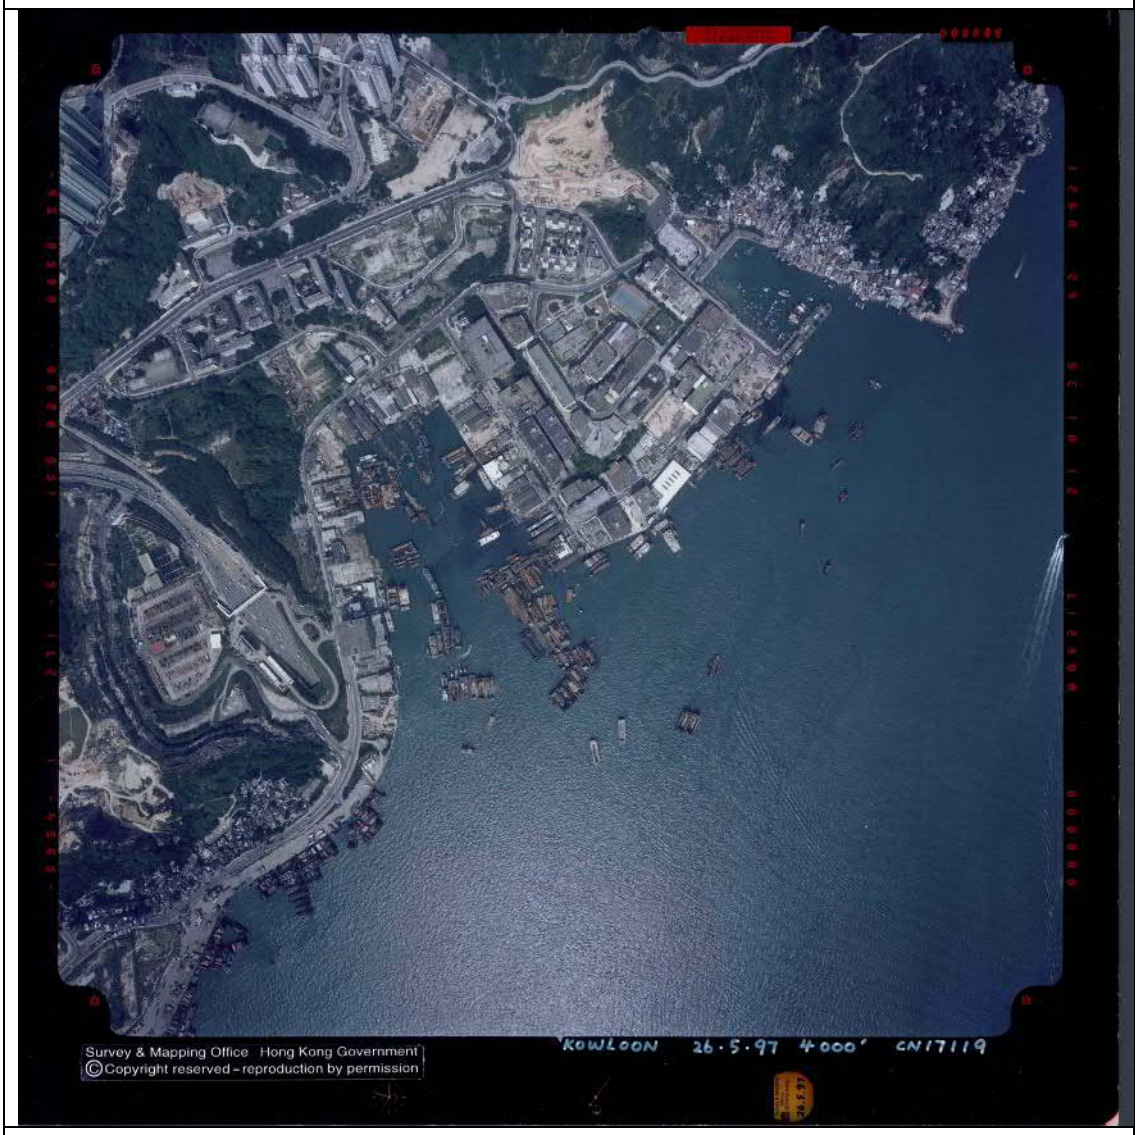
Aerial photo from LandsD (Ref.: 41193), Height: 3500 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1982	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1987

Aerial photo from LandsD (Ref.: A08892), Height: 2000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1987	No landuse change for the Subject Site.



Historical Aerial Photo – Year 1992

Aerial photo from LandsD (Ref.: CN3131), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1992	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1997

Aerial photo from LandsD (Ref.: CN17119), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1997	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1998

Aerial photo from LandsD (Ref.: CN20115), Height: 3500 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1998	No landuse change for the Subject Site.

Historical Aerial Photo – Year 2003

Aerial photo from LandsD (Ref.: CW47662), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2003	No landuse change for the Application Site.

Historical Aerial Photo – Year 2008

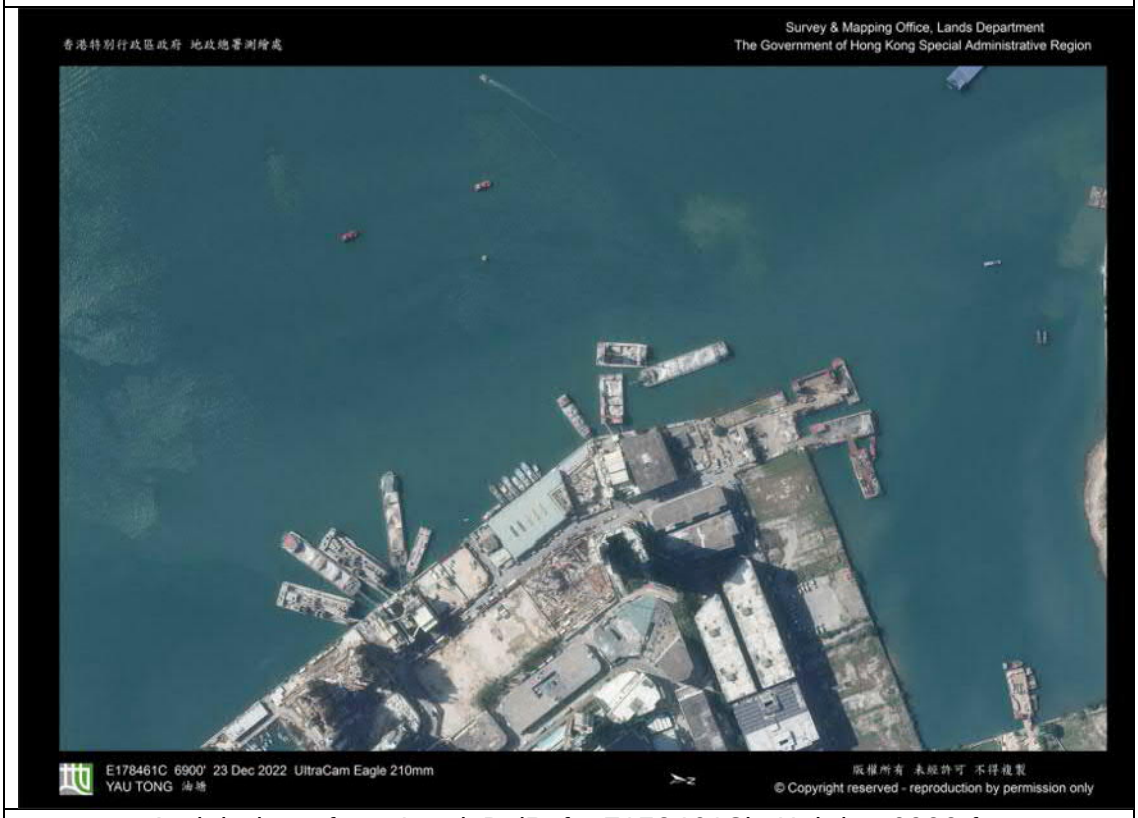
Aerial photo from LandsD (Ref.: CS13379), Height: 6000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2008	No landuse change for the Application Site.

Historical Aerial Photo – Year 2013

Aerial photo from LandsD (Ref.: CS44647), Height: 6000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2013	No landuse change for the Application Site.



Historical Aerial Photo – Year 2018

Aerial photo from LandsD (Ref.: E047102C), Height: 6900 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2018	No landuse change for the Application Site.

Historical Aerial Photo – Year 2022

Aerial photo from LandsD (Ref.: E178461C), Height: 6900 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2022	No landuse change for the Application Site.

By Fax (2756 8588) & Post

Dear Sir / Madam,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot no. YTML68 & YTML70) - Enquiry for Land Contamination Information

We are conducting a Land Contamination Assessment Study for a site at Tung Yuen Street, Yau Tong (see attached Annex 1). As required by the "Practice Guide for Investigation and Remediation of Contaminated Land" published by the Environmental Protection Department of the Government of HKSAR (EPD), information pertaining to the change of land uses/past activities/incidents/accidents at the subject site are required as part of the vetting process.

In view of this, we would like to request for the following information for our assessment.

1. Potentially contaminating activities that have occurred at the site such as storage and handling of chemicals, oils and/or hazardous waste, on-site waste disposal, burn pits, etc.;

2. Accidents, fires, explosions, spillages and any pollution incidents attributed to the site and any remediation that has occurred at the site or neighboring areas; and

3. Any land contamination assessment that has conducted at the site or neighboring areas.

Due to the tight timeline of the project, we would be much appreciated if you could provide the requested information ay your earliest convenience.

Should you have any queries, please do not hesitate to contact our Mr. Kyle Kam at 3465 2855 (email: kylekam@ramboll.com) or the undersigned at 3465 2878 (email: wendytin@ramboll.com). We thank you in anticipation of your help in the matter.

Thank you for your attention.

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

Wendy Tin
Consultant

Dear Sir / Madam,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot no. YTML68 & YTML70) - Enquiry for Land Contamination Information

We are conducting a Land Contamination Assessment Study for a site at Tung Yuen Street, Yau Tong (see attached Annex 1). As required by the "Practice Guide for Investigation and Remediation of Contaminated Land" published by the Environmental Protection Department of the Government of HKSAR (EPD), information pertaining to the change of land uses/past activities/incidents/accidents at the subject site are required as part of the vetting process.

In view of this, we would like to request for the following information for our assessment.

1. Potentially contaminating activities that have occurred at the site such as storage and handling of chemicals, oils and/or hazardous waste, on-site waste disposal, burn pits, etc.;

2. Accidents, fires, explosions, spillages and any pollution incidents attributed to the site and any remediation that has occurred at the site or neighboring areas; and

3. Any land contamination assessment that has conducted at the site or neighboring areas.

Due to the tight timeline of the project, we would be much appreciated if you could provide the requested information ay your earliest convenience.

Should you have any queries, please do not hesitate to contact our Mr. Kyle Kam at 3465 2855 (email: kylekam@ramboll.com) or the undersigned at 3465 2878 (email: wendytin@ramboll.com). We thank you in anticipation of your help in the matter.

Thank you for your attention.

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

By Fax (2714 0193) & Post

Dear Sir / Madam,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot no. YTML68 & YTML70) - Enquiry for Land Contamination Information

We are conducting a Land Contamination Assessment Study for a site at Tung Yuen Street, Yau Tong (see attached Annex 1). As required by the "Practice Guide for Investigation and Remediation of Contaminated Land" published by the Environmental Protection Department of the Government of HKSAR (EPD), information pertaining to the change of land uses/past activities/incidents/accidents at the subject site are required as part of the vetting process.

In view of this, we would like to request for the following information for our assessment.

1. Potentially contaminating activities that have occurred at the site such as storage and handling of chemicals, oils and/or hazardous waste, on-site waste disposal, burn pits, etc.;

2. Accidents, fires, explosions, spillages and any pollution incidents attributed to the site and any remediation that has occurred at the site or neighboring areas; and

3. Any land contamination assessment that has conducted at the site or neighboring areas.

Due to the tight timeline of the project, we would be much appreciated if you could provide the requested information ay your earliest convenience.

Should you have any queries, please do not hesitate to contact our Mr. Kyle Kam at 3465 2855 (email: kylekam@ramboll.com) or the undersigned at 3465 2878 (email: wendytin@ramboll.com). We thank you in anticipation of your help in the matter.

Thank you for your attention.

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

Wendy Tin
Consultant

Dear Sir / Madam

Re: **Proposed Residential & Commercial Development at**
No. 4 Tung Yuen Street, Yau Tong (Lot no.YTML68 & YTML70)
Letter of Acceptance for Environmental Consultancy Services for S16 Application

With reference to your fee proposal dated 3 July 2023, subsequent tender query reply dated 28 July 2023, we, on behalf of Good Hour International Limited, are pleased to confirm the acceptance of your fee proposal for Environmental Consultancy Services for S16 Application at the following fee, rates and payment schedule:-

1. Fee

Base Fee for the Environmental Consultancy Services for S16 Application in the lump sum of [redacted]

In which Lump Sum [redacted] for Noise Impact Assessment;
Lump Sum [redacted] for Air Quality Assessment;
Lump Sum [redacted] or Sewerage Impact Assessment;
Lump Sum [redacted] or Drainage Impact Assessment;
Lump Sum [redacted] for Air Ventilation Assessment.

2. Optional Fee (Included) for the following items:-
   (a) Land Contamination Preliminary Review in the lump sum of [redacted]
   (b) Water Quality Impact Assessment in the lump sum of [redacted]
   (c) Waste Management Assessment in the lump sum of [redacted]
   (d) Odour Assessment in the lump sum of [redacted] Only);
   (e) Sediment Quality Assessment in the lump sum of [redacted]
   (f) Land Contamination Assessment (CAP, CAR, RAP) in the lump sum of [redacted]

1. INTRODUCTION

1.1 Background and Objectives

1.1.1 The Proposed Development is located at No. 4 Tung Yuen Street, Yau Tong ("Application Site"). It is zoned as "R(E)" site under OZP S/K15/27 Cha Kwo Ling, Yau Tong, Lei Yue Mun, gazetted on 18/11/2022.

1.1.2 This S16 application is submitted to the Town Planning Board for the Proposed Flat, Shop and Services, and Eating Places with Minor Relaxation of Plot Ratio and Building Height Restrictions at the Application Site.

1.1.3 Ramboll Hong Kong Limited is commissioned by the Applicants to prepare this Drainage and Sewerage Impact Assessment (DSIA) Mitigation measures will be identified if it is necessary. Development parameters of the Proposed Development are provided by project architect, P&T.

1.2 Application Site and its Environ

1.2.1 The Application Site has an area of about 2,419 m^2, which are situated in Yau Tong area. The Application Site is bounded by Yau Tong Sewage Pumping Station to the Northwest, Tung Yuen Street to the Northeast, The Coastline to the Southeast. Figure 1.1 shows the location of the Application Site and its environ.

1.3 Proposed Residential Development

1.3.1 The Proposed Development consist of 1 residential tower, providing not more than 342 residential units. The residential tower is situated atop a 3 storeys podium for shop and services, eating place, and clubhouse with two level of basements for carparking and loading/ unloading spaces.

1.3.2 The development parameters of the Proposed Development are shown in Appendix 1.1.

2. DRAINAGE IMPACT ASSESSMENT

2.1.1 Surface runoff is mainly from rainfall, and it would be directly to existing public storm drains. As the paved and unpaved area for the Application Site remain unchanged, the proposed development can be completed without aggravating the flooding conditions within, upstream, or downstream of the Application Site. Therefore, it is anticipated that there will not be any impact on the existing drainage system. As such, no upgrading work on the drainage system is required.

3. SEWERAGE IMPACT ASSESSMENT

3.1 Scope of Work

3.1.1 The aim of this SIA is to assess whether the capacity of the sewerage network serving the Application Site is sufficient to cope with the sewage flow from the proposed development.

3.2 Assessment Criteria and Methodology

3.2.1 The Commercial and Industrial Floor Space Utilization Survey (CIFSUS) conducted by the Planning Department has been used to determine the worker density for various economic activities and planned usage types.

3.2.2 Environmental Protection Department's (EPD's) Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning, Version 1 (GESF) has been referred to for the purposes of estimating the quantity of the sewage generated from the Proposed Development and the existing catchment area. Sewage flow parameters and global peaking factors in this document have been adopted for this SIA.

3.2.3 According to the GESF, the overall unit flow is composed of flows due to employees and the associated activities. The following unit flow factors have been adopted in the SIA calculation in accordance with Tables T-1, T-2 and T-3 of the GESF:

- Residential housing: 0.19m^3/day (Private R1)
- Restaurant & Hotel: 1.58m^3/day (Commercial Employee and J10 – Restaurant & Hotel)
- Wholesale & Retail: 0.28m^3/day (Commercial Employee and J4 – Wholesale & Retail)
- Industrial: 1.08m^3/day (Industrial Employee and J1 – Yau Tong)

3.2.4 The catchment inflow factor, PCIF of 1.1 (East Kowloon), is adopted in catchment calculations.

3.3 Existing and Future Sewerage System

3.3.1 With reference to the sewerage impact assessment of the Yau Tong Inland Lots (YTILs) 4 S.B & 9, Yau Tong Marine Lot (YTML) 57 and adjoining Government Land for the proposed amendments to Approved Scheme (under Application No. A/K15/119), the sewers of the area will be upgraded by the Charm Smart Development Limited. The future sewerage network proposed under the SIA of YTILs 4 S.B & 9, YTML 57 and adjoining Government Land is shown in Appendix 3.1.

3.3.2 All the sewage generated from the proposed development will be discharged to the terminal manhole (T0) which is located at the eastern side of the proposed development. The terminal manhole TMH-01 (S0) is connected to the planned manhole FMH4034524 (S1) outside the proposed development via a new Ø300mm polyethylene pipe.

3.3.3 Invert levels and pipe size of the proposed terminal manholes and new manholes are shown in Figure 3.1.

3.4 Wastewater Generated by the Proposed Development

3.4.1 The sewage generated by the proposed development will be mainly contributed by the residential units and restaurant.

3.4.2 Detailed calculation of sewage generation from the proposed development is given in Table 3.1 below.

Table 3.1 Estimated Peak Flow

Calculation for Sewage Generation Rate of the Proposed Development at the Application Site			
1. Proposed Residential Development			
Total number of residential units	=	342	units
Total number of residents	=	855	residents (refer to Census and Statistics Department 2021 data - average household size of 2.5 in Yau Tong West)
Design flow	=	0.19	m^3/person/day -- (Private R1 in Table T-1 of GESF)
Sewage generation rate	=	162.5	m^3/day
2. Club House			
Assumed Area	=	735	m^2 (refer to Appendix 1.1)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS – Community, Social & Personal Services)
Total number of employees	=	34	employees
Design flow	=	200	litre/employee/day -- (refer to Table T-2 of GESF - J11 Community, Social & Personal Services)
Sewage generation rate	=	6.7	m^3/day
3. Swimming Pool			
Assumed area	=	250	m^2 (refer to Appendix 1.1)
Average depth of water	=	1.5	m (assumption)
Volume of swimming pool	=	375	m^3
Turnover rate	=	6	hr
Surface loading rate of filter	=	50	$m^3/m^2/hr$
Filter areas required	=	1.3	m^2
Backwash duration	=	3	min/d
Backwash flow rate	=	30	$m^3/m^2/hr$
Design flow for swimming pool backwashing	=	37.5	m^3/hr
Design flow for swimming pool backwashing	=	10.4	litre/sec
4. Retail			
Assumed area	=	1306.3	m^2
Assumed floor area per employee	=	28.6	m^2 per employee – (refer to Table 8 of CIFSUS – Retail Trade)
Total number of employees	=	80	employees
Design flow	=	200	litre/employee/day -- (refer to Table T-2 of GESF – J4 Wholesale & Retail)
Sewage generation rate	=	12.9	m^3/day
5. F&B			
Assumed used area	=	870.8	m^2
Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurant)
Total number of employees	=	44	employees
Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
Design flow for commercial activities	=	1500	litre/employee/day -- (refer to Table T-2 of GESF Job Type J10)
Sewage generation rate	=	69.5	m^3/day
Flow rate (without swimming pool)	=	251.6	m^3/day

Flow rate with P_{CIF} (without swimming pool)	=	276.7	m^3/day (refer to Table T-4 of GESF – East Kowloon - 1.0)
Contributing population	=	1025	people
Peaking factor	=	6	(refer to Table T-5 of GESF for a population between 1000-5000 incl. stormwater allowance)
Peak flow (without swimming pool)	=	17.5	litre/sec
Peak flow (with swimming pool)	=	27.9	litre/sec

Remark:

(1) CAP 132, Section 42 Swimming Pools Regulation: Covered pool: Turnover rate = once every 4 hours, Open Air Pool: Turnover rate = once every 6 hours

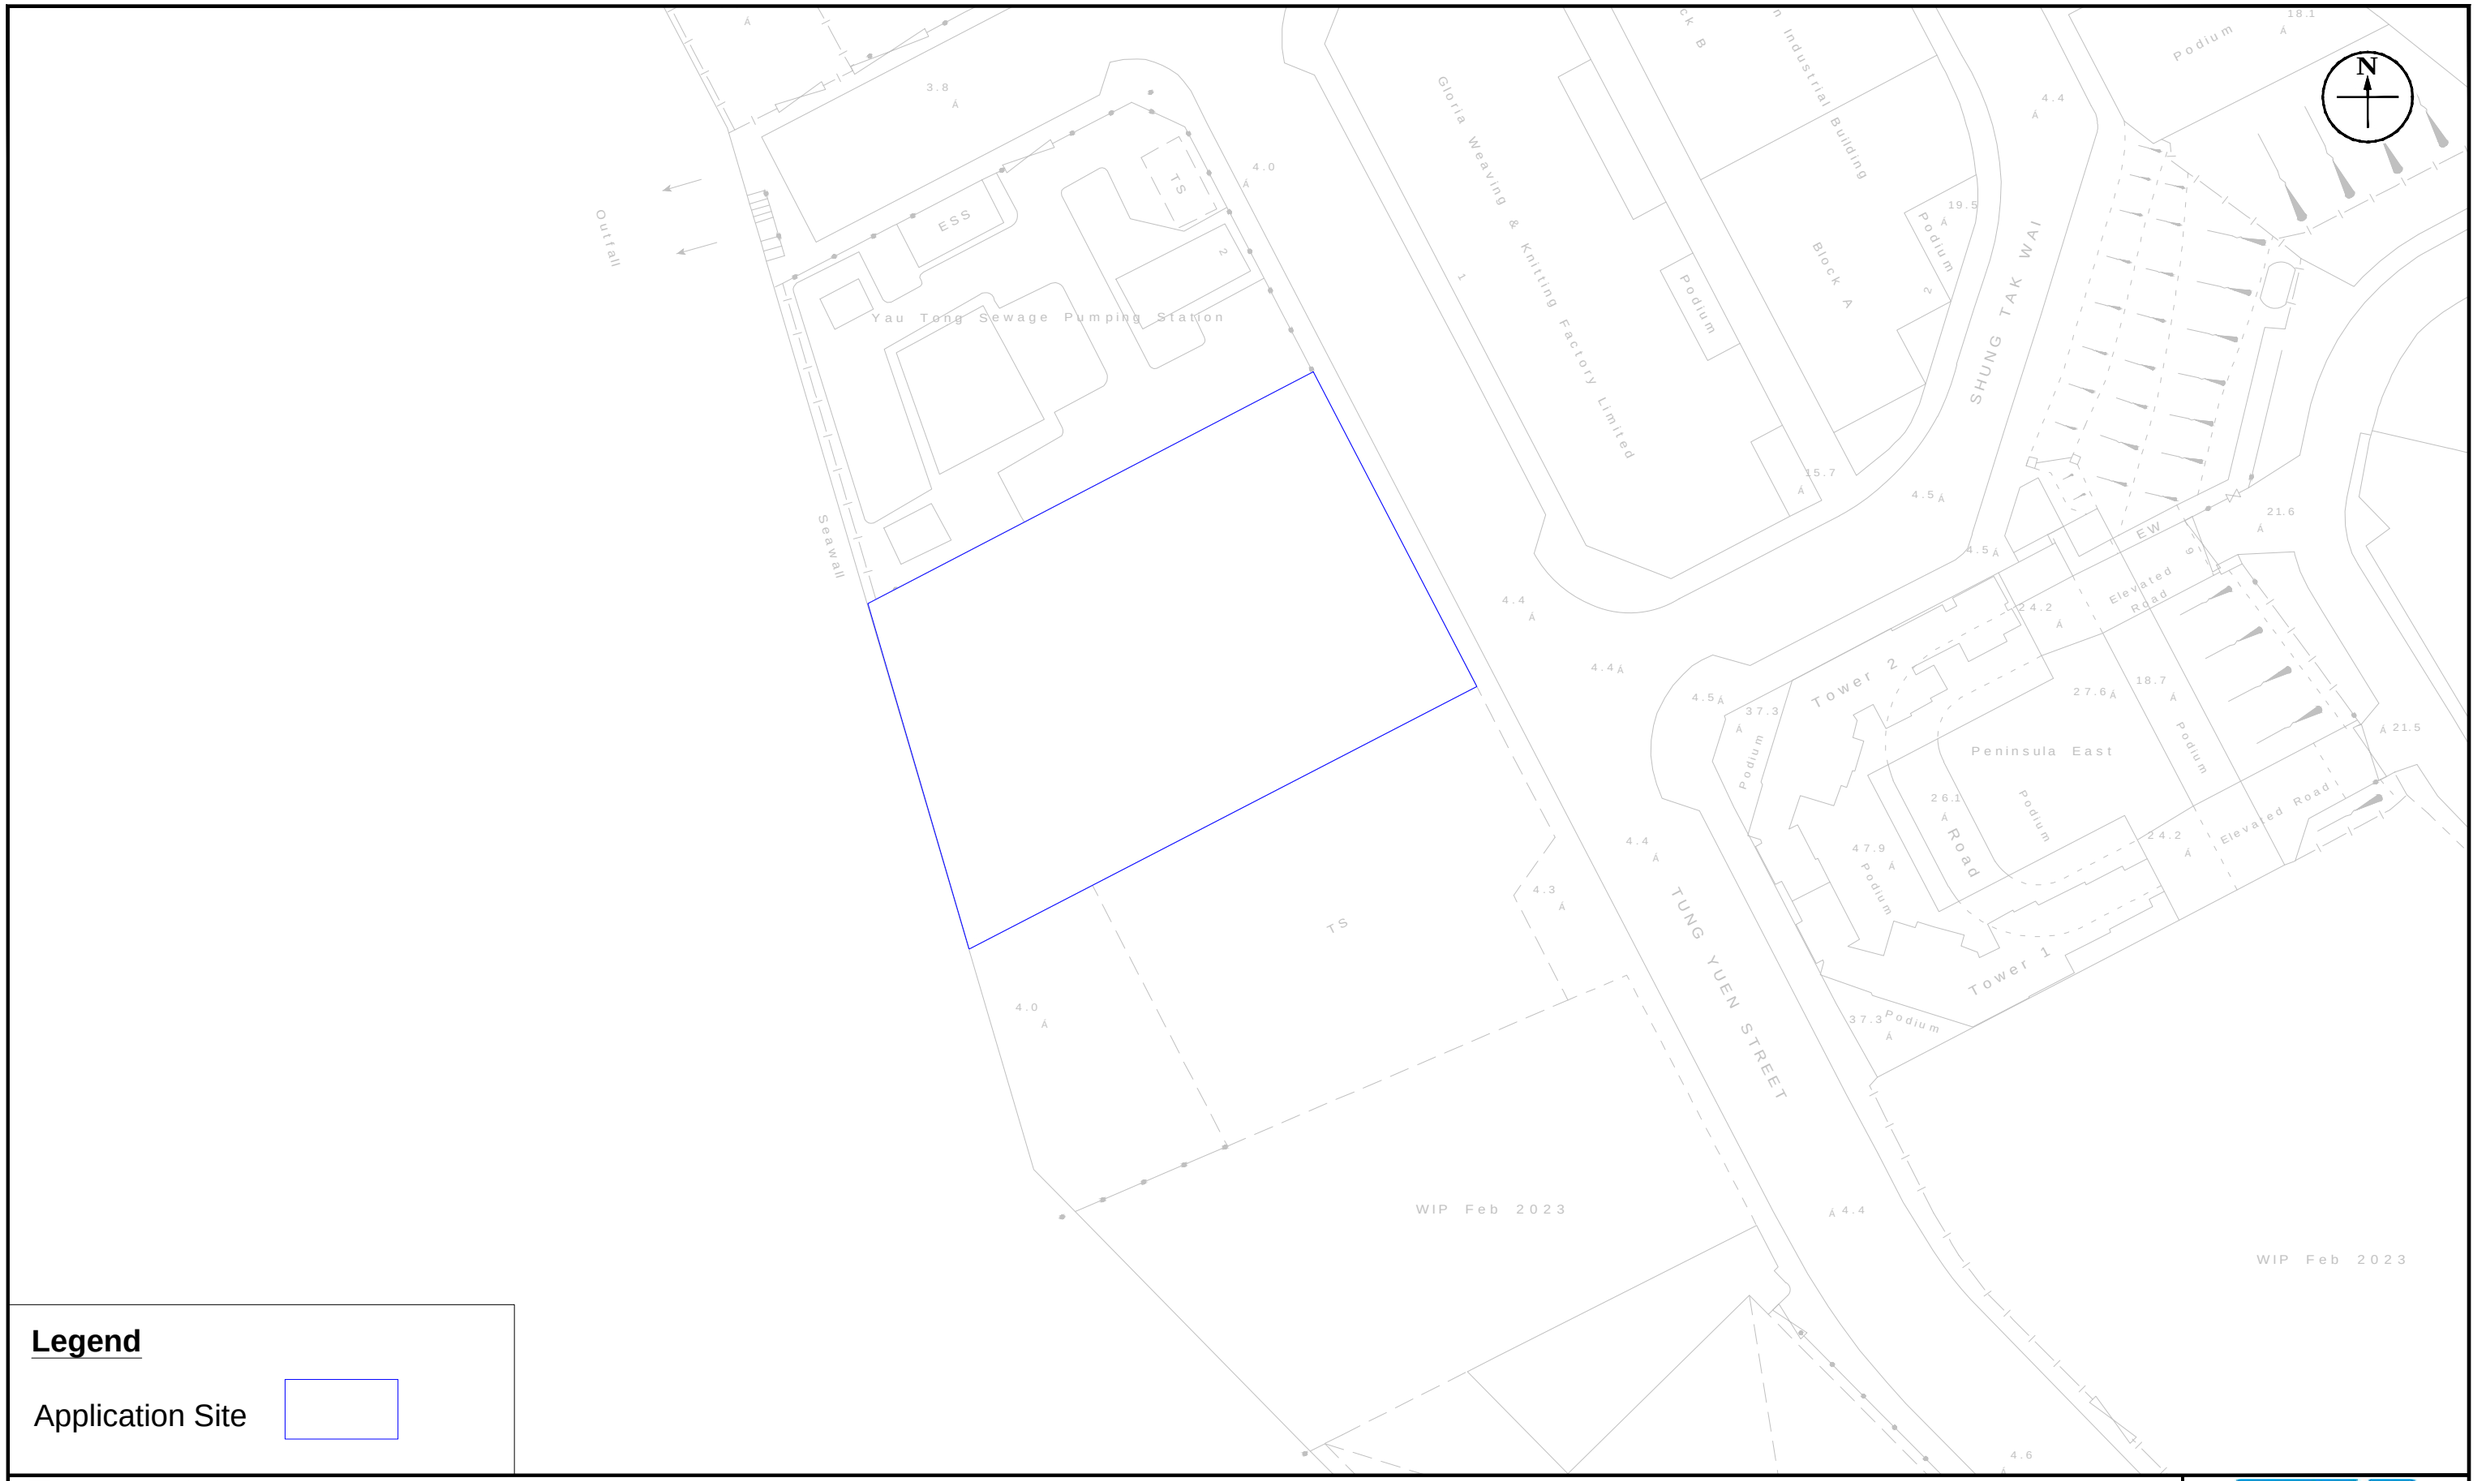
3.5 Assessment of Sewerage Impact

3.5.1 Sewage generated from the proposed development will be discharged via the terminal manhole to the existing public manhole FMH4034524 (S1) at Tung Yuen Street as shown in Figure 3.1. Catchments in the vicinity of the Application Site are shown in Figure 3.2.

3.5.2 Detailed calculation of sewage generation, peak flow estimation and the capacity of the public sewer can be referred to Appendix 3.2. Based on the assessment results, there would be sufficient capacity for the future public sewers to cater for the sewage generated from the Proposed Development as well as the surrounding existing buildings and nearby approved developments.

3.5.3 No further upgrading of the future public sewers is required.

4. OVERALL CONCLUSION



4.1.1 As the paved and unpaved area for the Application Site remain unchanged, the proposed development can be completed without aggravating the flooding conditions within, upstream, or downstream of the Application Site. Therefore, it is anticipated that there will not be any impact on the existing drainage system. As such, upgrading work on the drainage system is NOT required.

4.1.2 The potential sewerage impact arising from the Application Site has been quantitatively assessed by comparing the estimated sewage flow from the proposed development and the capacity of the future sewerage system in the vicinity which is to be constructed by Charm Smart Development Limited.

4.1.3 Based on the results of sewerage impact assessment, as shown in Appendix 3.2, the capacity of planned future sewerage system will be sufficient to cater for the sewage generated from the proposed development. Upgrading on the future sewerage system is NOT required.

4.1.4 This DIA and SIA confirm the feasibility of the proposed development in terms of its drainage and sewerage impact.

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Site Coverage (SC)			
- Below 15m	N/A	Not more than 70%	-
- Above 15m	N/A	Not more than 33.3%	
No. of Residential Block	N/A	1	-
No. of Flats	N/A	About 342	-
Average Flat Size	N/A	About 43m^2	-
Anticipated Population	N/A	About 855 [4]	-
Local Open Space	N/A	Total area of not less than 855m^2, which includes a voluntary waterfront promenade of not less than 608m^2 for public access and enjoyment	-
Greenery Provision	N/A	Not less than 20%	-
Car Parking Spaces			
Private Car Parking Spaces	N/A	63 (incl. 2 accessible car parking spaces)	
- Residential	N/A	50	-
- Visitor	N/A	5	-
- Shop and Services/ Eating Place	N/A	8	-
Motorcycle Parking Spaces	N/A	4	
Loading/ Unloading (L/UL) Bays	N/A	3 (1 Light Goods Vehicle Space and 2 Heavy Goods Vehicle Spaces)	-
Completion Year	N/A	2032	-

Notes:

[1] Proposed clubhouse GFA (5% of total domestic GFA) is exempted from GFA calculation.

[2] The area of the covered public passageway (about 223m^2) for public access from Tung Yuen Street to the waterfront promenade through our proposed building at ground level is not included in the non-domestic GFA of 2,177.1m^2. Considering the nature of serving the public and users of the proposed development with reference to PNAP APP-108, the 223m^2 is proposed as an exempted GFA.

[3] On top of the PR/GFA set out above, a bonus PR of not more than 0.082 (equivalent to a GFA of not more than 198m^2) will be claimed for the 39.586m^2 of ODP-required setback areas. While the bonus PR will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2) at detailed design stage, nevertheless, the bonus PR has been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.

[4] A person per flat (PPF) ratio of 2.5 is adopted with reference to the average domestic household size of the subject Yau Tong West District Council Constituency Area as reported in the 2021 Population Census results published by the Census and Statistics Department.

Appendix 3.1 Future Sewerage Network Proposed under the SIA of YTILs 4 S.B & 9, YTML 57 and adjoining Government Land

Appendix 3.2 Detailed Sewerage Impact Assessment Calculations

Table 1 Calculation for Sewage Generation Rate of the Proposed Residential Development at the Application Site

1. Proposed Residential Development			**Remarks**
1. Residential Towers (T1-T3)			
a. Total number of units	=	342	units
b. Total number of residents	=	855	people -- (average household size of 2.5 from Hong Kong 2021 Population Census -Yau Tong West)
c. Design flow	=	0.19	m^3/person/day -- (Private R1 in Table T-1 of GESF)
d. Sewage Generation rate	=	**162.5**	m^3/day
2. Club House			
a. Assumed used area	=	735	m^2
b. Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
c. Total number of employees	=	24	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J11)
f. Sewage generation rate	=	**6.7**	m^3/day
3. Swimming Pool			
a. Assumed Area of Swimming Pool	=	250	m^2
b. Average Depth of Water	=	1.5	m (assumption)
c. Volume of Swimming Pool	=	375	m^3
d. Turnover Rate	=	6	hr
e. Surface Loading Rate of Filter	=	50	m^3/m^2/hr
f. Filter Areas required	=	1.3	m^2
g. Backwash Duration	=	3	min/d
h. Backwash flow rate	=	30	m^3/m^2/hr
i. Design flow for Swimming Pool Backwashing	=	37.5	m^3/hr
j. Design flow for Swimming Pool Backwashing	=	**10.4**	litre/sec
4. Retail			
a. Assumed used area	=	1306.3	m^2
b. Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
c. Total number of employees	=	46	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J4)
f. Sewage generation rate	=	**12.9**	m^3/day
5. F&B			
a. Assumed used area	=	870.8	m^2
b. Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurant)
c. Total number of employees	=	44	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	1500	litre/employee/day -- (refer to Table T-2 of GESF Job Type J10)
f. Sewage generation rate	=	**69.5**	m^3/day
Total Flow at Manhole T0			
Flow Rate (Without Swimming Pool)	=	251.6	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	276.7	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	1025	people
Peaking factor	=	6	Refer to Table T-5 of GESF for population 1,000 - 5,000 including stormwater allowance
Peak Flow (Without Swimming Pool)	=	17.5	litre/sec
Peak Flow (With Swimming Pool)	=	**27.9**	litre/sec

Table 2a Hydraulic Capacity at Sewers along Tung Yuen Street, Yau Tong

Segment	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Invert Level 1	Invert Level 2	g	k_s	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s^2	m		m^2/s	m/s	m^2	m^3/s	L/s
T0-S1	Terminal Manhole	FMH4034524	300	9.5	1.04	0.97	9.81	0.0015	0.007	0.000001	1.19	0.07	0.08	84
S1-S2	FMH4034524	FMH4034525	900	41.7	0.97	0.94	9.81	0.0015	0.001	0.000001	0.75	0.64	0.48	477
S2-S3	FMH4034525	FMH4034509	900	8.0	0.94	0.93	9.81	0.0015	0.001	0.000001	0.99	0.64	0.63	629

Remarks: (1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 1.5 mm is used with reference to Slimed uPVC Sewers, poor example in Table 5 of Sewerage Manual Part 1.

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used:

$$V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

(5) The pipe information in Table 2a is obtained from Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3)

Table 3a Hydraulic Capacity of Sewers (Catchment A)

1. Full Bore of Pipes FWD4036773, FWD4036778 and FWD4125280 (Assumption)

Pipe Reference	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Upstream Invert Level	Downstream Invert Level	g	k_s	s	v	V	Area	Q	Estimated Capacity

													Sub-total	183

Remarks:

(1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 6mm is used for the calculation of concrete sewer (based on Table 5: Recommended roughness values in Sewerage Manual)

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used: $V=-\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D}+\frac{2.51v}{D\sqrt{(2gDs)}}\right)$

(5) The pipe information is obtained from Geoinfo Map.

2. 18 Tung Yuen Street (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 91 m^3/day (from EPD)

b. Sewage Generation rate at FMH4034558 = 136 m^3/day (from EPD)

c. Total Dewerage Generate rate = 227 m^3/day

3. Application for Proposed Admendments to Approved Scheme (under Application No. A/K15/119) in "CDA(3)" Zone and Area Shown as 'Road', at YTML No. 57, YTILs No. 4 sB and 9, and Adjoining Government Land, Tung Yuen Street, Yau Tong, Kowloon (R7481_v1.3)

a. Sewage Generation rate = 1075.2 m^3/day

4. Residential (Other Proposed Residential Development ref. YTML No. 69 & YTIL No. 4RP) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 627 m^3/day (from EPD)

5. Commercial (Kwun Tong Wholesale Fish Market and Tung Yuen Street Cooked Food Market) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 30 m^3/day

6. Peninsula East (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate = 193.5 m^3/day

7. Industrial (Redland Concrete Limited) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate = 27 m^3/day

Total Flow at Manhole S1 (FMH4034524), including Proposed Development and Catchment A

Flow Rate (Without Swimming Pool & Item 1 of Catchment A)	=	2431.3	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	2674.4	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	9905	people
Peaking factor	=	5	Refer to Table T-5 of GESF for population 5,000 - 10,000 including stormwater allowance)
Peak Flow (Without Swimming Pool)	=	323.8	litre/sec
Peak Flow (With Swimming Pool)	=	**334.2**	litre/sec

Table 4a Comparision of the Hydraulic Capacity of Existing Sewers for Sewerage generated from the Proposed Development and Surrounding Catchment Areas

Segment	Pipe Dia. (mm)	Pipe Length (m)	Gradient	Estimated Capacity (L/s)	Estimated Flow including the Proposed Development only (L/s)	Contributed by the Proposed Development only (%)	Status	Estimated Flow including the Proposed Development and Catchment Areas (L/s)	Contributed by the Proposed Development and the Surrounding Catchment Areas (%)	Status	Included Catchment Area
T0-S1	300	9.5	0.0074	84	27.9	33.2%	OK	27.9	33.2%	OK	A

1. INTRODUCTION

1.1 Background

1.1.1 The Application Site is located at Yau Tong Marine Lot No. 70, Tung Yuen Street (hereinafter collectively called "Application Site"). The Application Site is zoned as "Residential (Group E)" ("R(E)") under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27. Figure 1.1 shows the location of the Application Site.

1.1.2 Ramboll Hong Kong Limited is commissioned by the Applicants to provide environmental consultancy services and prepare the relevant submissions to demonstrate the environmental sustainability of the Proposed Development for this section 16 planning application.

1.1.3 The master layout plan (MLP) is provided by the project architect – P&T Architects Ltd. The traffic forecast for vehicular emission impact assessment and road traffic noise impact assessment is provided by the project traffic consultant – MVA Asia Ltd.

1.2 Application Site and its Environ

1.2.1 "Residential (Group E)" ("R(E)") under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP). The area of the Site is about 2,419 m^2 and currently occupied by Wah Tung Godown Building.

1.2.2 The Application Site is bounded by Tung Yuen Street to the east and Ko Fai Road to the north. The surrounding areas are currently dominated by industrial and residential uses. Figure 1.1 shows the location of the Application Site and its environs.

1.3 Proposed Development

1.3.1 The Proposed Development consists of 1 residential tower, providing not more than 342 residential units. The residential tower is situated atop a 3 storeys podium accommodating a shopping arcade, E&M rooms and clubhouse. 2 storeys of carpark and loading/ unloading area are located at the basement.

1.3.2 The residential tower has a various building height, ranging from ~ 80mPD to ~ 100 mPD, and the level of first residential floor is from 21.10 mPD.

1.3.3 Floor layout plans and sections of the Proposed Development are shown in Appendix 1.1.

1.3.4 Table 1.1 shows the summary table of the key parameters for the Proposed Development.

Table 1.1 Key Development Parameters of Proposed Development

`Key Development Parameters	Proposed Scheme
No. of Storey for Residential	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark
Floor Level of lowest Residential Floor (mPD)	21.10
Building Height (mPD)	80mPD to 100mPD (for inland portion only)

`Key Development Parameters	Proposed Scheme
Ancillary Facilities	Clubhouse, shopping arcade
No. of Residential Block	1
No. of Residential Units	342
Anticipated Completion year	2032
Site Area (m^2)	About 2,419m^2

2. QUANTITATIVE AIR QUALITY IMPACT ASSESSMENT

2.1 Scope of Work

2.1.1 This assessment predicts air quality pollutant concentration at the Proposed Development, informing the provision of air quality mitigation measures to ensure future residents are not exposed to unacceptable levels of poor air. The air pollutants assessed are Nitrogen Dioxide (NO_2), Sulphur Dioxide (SO_2), Respirable Suspended Particulate (RSP) and Fine Suspended Particulate (FSP). Concentrations of these pollutants are predicted at air sensitive receivers (ASRs) within the Proposed Development through the use of quantitative computer modelling and are compared with the relevant Air Quality Objectives (AQOs).

2.1.2 The study also considers nearby odour sources within 500m radius of the Application Site and identified three potential odour sources, i.e. Yau Tong Sewage Pumping Station, Kwon Tong Wholesale Fish Market and Sam Ka Tsuen Typhoon Shelter. According to the several site visits conducted in November 2023, December 2023, there are no changes to the aforementioned odour sources as compared to those mentioned in the 126 Approval Scheme. Therefore, the odour emission information used in the 126 Approval Scheme is adopted in this assessment.

2.1.3 The assessment area of 500m radius from the Application Site is shown in Figure 2.1.

2.1.4 Appropriate mitigation measures will be recommended if exceedances of AQOs and/or odour units are identified.

2.1.5 The air quality control measures during the construction phase of Proposed Development are also addressed in this chapter.

2.2 Relevant Legislations, Standards and Guidelines

2.2.1 The following legislation and regulations provide the standards and guidelines for evaluation of air quality impacts and the type of works that are subject to air pollution control:

- Air Pollution Control Ordinance (APCO) (Cap. 311) and the Air Quality Objectives (AQO)
- Air Pollution Control (Construction Dust) Regulation
- Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation
- Air Pollution Control (Fuel Restriction) Regulation
- Recommended Pollution Control Clauses for Construction Contracts
- Control of Air Pollution in Car Parks (ProPECC PN 2/96)

Air Pollution Control Ordinance (CAP 311)

2.2.2 A set of Air Quality Objectives (AQOs) is established under the Air Pollution Control Ordinance (Cap. 311). The latest set of AQOs that came into effect on 1 January 2022 is presented in Table 2.1.

Table 2.1 Hong Kong Air Quality Objectives (AQOs)

Pollutants	Average Time	Standard [i] (µg/m3)	No. of exceedances allowed
SO_2	10-min	500	3
	24-Hour	50	3
RSP (PM_{10}) [ii]	24-Hour	100	9
	Annual	50	NA
FSP ($PM_{2.5}$) [iii]	24-Hour	50	35
	Annual	25	NA
NO_2	1-Hour	200	18
	Annual	40	NA
Ozone (O_3)	8-Hour	160	9
Carbon Monoxide (CO)	1-Hour	30,000	0
	8-Hour	10,000	0
Lead (Pb)	Annual	0.5	NA

Notes:

[i] All measurements of the concentration of gaseous air pollutants, i.e. sulphur dioxide, nitrogen dioxide, ozone and carbon monoxide, are to be adjusted to a reference temperature of 293 Kelvin and a reference pressure of 101.325 kilopascal.

[ii] Respirable suspended particulates mean suspended particles in air with a nominal aerodynamic diameter of 10 µm or less.

[iii] Fine suspended particulates mean suspended particles in air with a nominal aerodynamic diameter of 2.5 µm or less.

2.2.3 In accordance with the EIAO-TM, odour predicted at all ASRs should meet 5 odour units (OUs) based on an averaging time of 5 seconds.

Air Pollution Control (Construction Dust) Regulation

2.2.4 Made under Section 43 of the APCO, this Regulation defines notifiable and regulatory works for achieving the purpose of dust control for a number of activities. The Regulation requires that any notifiable work shall give advance notice to EPD, and the Contractors shall ensure that the notifiable and regulatory works are carried out in accordance with the Schedule of the Regulation. Dust control and suppression measures are also provided in the Schedule.

2.2.5 The proposed construction works for the proposed Project are both regulatory and notifiable works due to activities including material stockpiling and dusty material handling as potential sources of fugitive dust emissions as detailed under Parts I to IV of the Schedule on Dust Control Requirements.

Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation

2.2.6 The Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation, which aims to control emissions from non-road mobile machinery (NRMMs) to improve air quality, became effective on 1 June 2015. NRMMs include non-road vehicles, as well as mobile machines and equipment (regulated machines) such as crawler cranes, excavators and air compressors.

2.2.7 Under the regulation, regulated machines have to comply with the Stage IIIA emission standards of the European Union (EU). It also requires all regulated machines sold or leased for use in Hong Kong to bear an approval or exemption label issued to them by the EPD, started from 1 September 2015. It restricts specified activities and locations including construction sites, designed waste disposal facilities and specified processes to use only NRMMs that bear an approval or exemption label issued to them by the EPD, with effect from 1 December 2015.

Air Pollution Control (Fuel Restriction) Regulation

2.2.8 The Air Pollution Control (Fuel Restriction) Regulation was enacted in 1990 to impose legal control on the type of fuels allowed for use and their sulphur contents in commercial and industrial processes to reduce sulphur dioxide (SO_2) emissions. In June 2008, the Regulation was amended to tighten the control requirements of liquid fuels. The Regulation does not apply to any fuel-using equipment that is used or operated in premises used solely as a dwelling or is used or operated in or on a vessel, motor vehicle, railway locomotive or aircraft.

Practice Note on Control of Air Pollution in Car Parks

2.2.9 This practice notes include air quality guidelines required for the protection of public health and factors that should be considered in the design and operation of car parks in order to achieve the required air quality. The limits for air pollutants as recommended by the practice notes are summarised in Table 2.2.

Table 2.2 Limits of Air Pollutant Concentrations Inside Car Parks

Air Pollutant	Average Time	Maximum Concentration (µg/m3) [i]	Parts Per Million (ppm)
Carbon Monoxide (CO)	5 minutes	115,000	100
Nitrogen Dioxide (NO_2)	5 minutes	1,800	1

Notes:
[i] All limits are expressed as at reference conditions of 298K and 101.325kPa.

2.3 Existing Air Quality in Kwun Tong District

2.3.1 The nearest air quality monitoring station (AQMS) to the Proposed Development is the Kwun Tong AQMS. The five most recent years of air quality monitoring data, 2019 to 2023, from this station are summarized in Table 2.3. According to the AQMS monitoring data presented in Table 2.3, exceedance in annual NO_2 concentrations is recorded.

Table 2.3 Air Quality Monitoring Data at Kwun Tong AQMS

Pollutant	Averaging Time	AQO	Pollutant Concentration (µg/m³)				
			2019	2020	2021	2022	2023
Respirable Suspended Particulates (RSP)	10th Highest 24-hour	100 (9)	73	67	72	49	57
	Annual	50	38	32	31	24	26
Fine Suspended Particulates (FSP)	36th Highest 24-hour	50 (35)	34	27	28	26	25
	Annual	25	21	16	17	14	15

Pollutant	Averaging Time	AQO	Pollutant Concentration (μg/m³)				
			2019	2020	2021	2022	2023
Carbon Monoxide (CO)	1st Highest hour	30000 (0)	-	-	-	-	-
	1st Highest 8-hour	10000 (0)	-	-	-	-	-
(a) Bolded values exceed the relevant AQO. (b) Data extracted from EPD's Smart Air Modelling Platform (SAMP v2.0).							

2.3.2 Apart from the air quality monitoring data, a set of background levels from PATH v3.0 ("Pollutants in the Atmosphere and their Transport over Hong Kong") is also reviewed. As the tentative year of the completion of the Proposed Development is 2032, the hourly background concentrations of NO_2, RSP and FSP of the year of 2030 in Grid 46,30; 46,31; 47,30 and 47,31 have been adopted for the purpose of this assessment and summarized in Table 2.4. With respect to the future background air quality predicted by PATH v3.0 in Table 2.4, all values are below the relevant AQOs except O_3.

Table 2.4 Year 2030 Background Annual Average Concentrations of the Air Pollutants from PATH v3.0

Pollutant	Averaging Time	AQO	Data Summary	PATH v3.0 Grid in Year 2030			
				46,31	46,30	47,31	47,30
RSP	24-hour	100 (9)	10th	51	49	50	50
			Exceedance	0	0	0	0

2.4 Identification of Representative Air Sensitive Receivers (ASRs) during Construction Phase

2.4.1 There are a number of industrial buildings, residential buildings, churches, community centres, sports centres and playgrounds located within 500m of the Proposed Development. Location of representative ASRs during construction phase are shown in Figure 2.2. Their details are listed below:

Table 2.5 Details of Representative Air Sensitive Receivers during Construction Phase

Representative ASR ID	Description	Land Use	Assessment Height (m)	Horizontal Distance from the Application Site (m)
A01	Planned Transitional Housing	Residential	1.5 - 33.0	18
A02	Peninsula East	Residential	1.5 - 150	34
A03	Kwun Tong Wholesale Fish Market	G/IC	1.5 - 18.0	138
A04	Planned Residential Development (Application No. A/K15/122)	Residential	1.5 - 100	37
A05	Planned Comprehensive Residential Development (Application No. A/K15/126)	Residential	1.5 - 100	203
A06	Planned Residential Development (Application No. A/K15/121)	Residential	1.5 - 75.5	222
A07	Montego Bay	Residential	1.5 - 100	351
A08	Yau Tong Industrial City Block B	Industrial	1.5 - 54.0	121
A09	Wah Lee Industrial Building	Industrial	1.5 - 53.0	177
A10	Maya by Nouvelle	Residential	1.5 - 112	224
A11	Planned Residential Development (Application No. A/K15/129)	Residential	1.5 - 120.0	160
A12	Mai Tong Industrial Building	Industrial	1.5 - 33.0	268
A13	The Spectacle	Residential	1.5 - 150	305
A14	Canaryside at Shung Shun Street	Residential	1.5 - 120	402
A15	Ocean One at Shung Shun Street	Residential	1.5 - 120	424
A16	Ko Fai Industrial Building	Industrial	1.5 - 50.0	323
A17	Sam Ka Tsuen Recreation Ground	G/IC	1.5	308
A18	Yau Tong Centre Tower 7 at Ka Wing Street	Residential	1.5 - 18.0	443

2.5 Impact arising from Proposed Development - Construction Phase

Identification of Sources

2.5.1 Major source of potential air quality impact during construction phase would be fugitive dust generated from wind erosion of the stockpiles and open sites, as well as from the following construction activities:

- Excavation resulting in exposed ground vulnerable to air erosion;
- Earth moving, loading and unloading of excavated material;
- Wind effect on material stockpiling; and
- Vehicle movements on haul roads and over the construction site.

2.5.2 There will be potential impacts from the criteria pollutants (e.g. nitrogen oxides (NO_x), sulphur dioxide (SO_2), and carbon monoxide (CO)). Emission from diesel trucks for the haulage of materials and construction plants will contain high percentage of smoke particulate and unburned hydrocarbons in comparison with petrol driven vehicles. In all circumstances, the contractor will be required to observe all relevant regulations and maintain all equipment in good condition to avoid any excessive emission. Under the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation, only approved or exempted non-road mobile machineries (NRMMs) (including mobile generator, air compressor, excavator, crawler crane, bulldozer and etc.) with a proper label are allowed to be used in the construction site. Exempted NRMMs shall be avoided as far as practicable to minimize the fugitive dust and gaseous emissions. In addition, availability of electricity supply during construction of the project will be explored and such requirement will be specified in future contract. If available, contractor should maximise use of electric non-road mobile machinery (NRMMs) and with least reliance of diesel fuelled equipment (e.g. for electricity powered stationary equipment such as pump instead of using generator).

2.5.3 The Proposed Development includes excavation of basement for car parking facilities, erection of residential towers and ancillary facilities. The tentative excavation area is around 1,800m^2 with a depth of about 12m. The site topography is generally flat so that no extensive site formation work is required. Excavation, pilling, and superstructure works are typical of many residential developments in Hong Kong. The effective mitigation measures for the construction activities (mentioned below) will be considered and implemented to minimize the air quality impacts arising from the Proposed Development during the construction periods.

Mitigation Measures for Dust Emission

2.5.4 Fugitive dust emission arising from the construction can be effectively suppressed by incorporating proper mitigation measures into work procedures through contractual clauses (e.g. regular and sufficient watering, enclosure of potential dust sources, etc.), good site management, and close enforcement of the resident engineers. The contractor(s) shall be required to follow the requirements of the Air Pollution Control (Construction Dust) Regulation which requires notification before carrying out construction works and to adopt dust reduction measures while carrying out construction activities. A monitoring programme can be instigated to monitor the construction process in order to enforce dust controls and modify methods of works to reduce the dust emission down to acceptable levels.

2.5.5 To mitigate fugitive dust impacts, all dust control measures recommended in the Air Pollution Control (Construction Dust) Regulation, where applicable, shall be implemented. Relevant dust control measures include:

- The works area for site clearance shall be sprayed with water before, during and after the operation so as to maintain the entire surface wet;
- Restricting heights from which materials are to be dropped, as far as practicable to minimize the fugitive dust arising from unloading/ loading;
- Immediately before leaving a construction site, all vehicles shall be washed to remove any dusty materials from the bodies and wheels. However, all spraying of materials and surfaces should avoid excessive water usage;
- When a vehicle leaving a construction site is carrying a load of dusty materials, the load shall be covered entirely by clean impervious sheeting to ensure that the dusty materials will not leak from the vehicle;
- Erection of hoarding of not less than 2.4 m high from ground level along the site boundary, where appropriate;
- Any stockpile of dusty materials shall be covered entirely by impervious sheeting; and/or placed in an area sheltered on the top and four sides;
- All dusty materials shall be sprayed with water immediately prior to any loading, unloading or transfer operation to maintain the dusty materials wet; and
- To reduce the traffic induced dust dispersion and re-suspension, the travelling speed of vehicles within the site should be controlled.

2.5.6 In addition, emission control during the construction phase shall be carried out in accordance with the requirements of the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation. The emissions of non-road mobile machinery (NRMMs) include mobile machines and vehicles powered by internal combustion engines used primarily off-road. All NRMMs operating on-site which are subject to the emissions control of the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation shall be approved/exempted (as the case may be) and affixed with the requisite approval/exemption labels.

2.5.7 The recommended dust mitigation measures for protection of nearby ASRs are described below:

Good Site Management

2.5.8 Good site management is important in reducing potential air quality impacts to an acceptable level. As a general guide, the contractor(s) shall maintain a high standard of housekeeping to prevent fugitive dust emissions. Loading, unloading, handling and storage of fuel, demolished debris and wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission.

2.5.9 Appropriate working methods should be devised and arranged to minimise dust emissions and to ensure any installed control system and/or measures are operated and/or implemented in accordance with their design merits. No free falling of debris should be allowed. Debris should be lowered by a hoist to the ground, preferably with an enclosed tunnel.

2.5.10 A high standard of housekeeping shall be maintained. Any piles of materials accumulated on or around the work areas shall be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas shall be carried out in a manner that does not generate fugitive dust emissions. Prior to cleaning, the materials should be handled properly to prevent fugitive dust emission.

2.5.11 Frequent mist spraying should be applied on dusty areas. The frequency of spraying will depend upon local conditions such as rainfall, temperature, wind speed and

humidity. The amount of mist spraying should be just enough to dampen the materials without over-watering, which could result in surface water runoff.

Dust Emissions from Site Traffic

2.5.12 Dust emission from construction traffic is generated predominantly from the travelling of waste removal lorries. Areas within the Application Site where there are regular vehicle movements should have a hard surface. Speed controls at an upper limit of 10km/hr should be imposed and their movements should be confined to designated roadways within the Application Site. All dusty vehicle loads should have side and tail boards covered by tarpaulin extending at least 300mm over the edges. Wheel-wash troughs and hoses should be provided at exit points of the Application Site.

2.5.13 "Recommended Pollution Control Clauses for Construction Contracts" is available on the EPD website which set out the recommended air pollution control measures to be implemented by the contractor(s) during the construction stage of the Project.

2.5.14 With the adoption of good practices, it is expected that emission of construction fugitive dust can be kept to an acceptable level.

2.6 Identification of Air Sensitive Receivers (ASRs) during Operational Phase

2.6.1 Representative ASRs within the Proposed Development are selected to assess the air quality at the Proposed Development and determine the appropriate fresh air intake locations for the podium of the Proposed Development.

2.6.2 Assessment heights of each ASR are scattered from the local ground floor to the higher floors of the residential towers.

2.6.3 The locations of the representative ASRs during operational phase are shown in Figure 2.3 and summarized in Table 2.6. All the fresh air intake and openable window of facilities have been included as ASRs.

Table 2.6 Details of Representative Air Sensitive Receivers during Operational Phase

ASR ID	Local Ground mPD	Flagpole Height, mAG	Assessment Height, mPD
D01 to D14	4.4	1.5 – 92.85	5.9 – 97.25

2.7 Identification of Pollution Sources During Operational Phase

General

2.7.1 In line with EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", all three tiers of emissions that will contribute to the total air quality impacts on ASRs within the assessment area have been identified, including:

(1) Primary Contribution: Project induced

(2) Secondary Contributions: Pollutant-emitting activities in the immediate neighbourhood

(3) Background Contributions: Pollution not accounted for by (1) and (2)

2.7.2 Primary and secondary contributions are near-field source impacts due to sources within the assessment area such as vehicular emission from existing road network and proposed roads (if any), industrial emissions and marine emissions, etc. Background contributions are far-field source impacts outside the assessment area and are predicted using the PATH v3.0. The cumulative air quality impact assessment for

operation phase is a combination of all three tiers of contributions and thus has considered the near-field and far-field sources.

2.7.3 Several site visits were conducted in November 2023, December 2023, February 2024 and September 2024 to verify the presence of chimneys and other industrial activities. Upon the visits, no active chimney was identified within 500m assessment area from the site boundary of the Site. Besides, there will not be any proposed air emission sources within the Site anticipated.

2.7.4 As referred to 2nd paragraph of Section 2.3 of EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", for Tier 3 – Background Contributions, a major point source located within 4km from a receptor should be evaluated to see if it can cause direct impact. According to the list of major point sources provided in the guideline, two major point sources, i.e. Kai Tak Cruise Terminal and Cape Collinson Crematorium, have been identified within the 4km radius area of the Application Site. The details of identified major point sources would be discussed in Section 2.7.29 to 2.7.32.

2.7.5 As mentioned above, emissions from open roads and industrial sources (i.e. secondary contributions), and major sources (i.e. background contributions), have been considered and assessed. Table 2.7 shows a summary of the sources and the associated air pollutants of concern.

Table 2.7 Summary of Emission Sources

Sources		SO_2	NOx	RSP	FSP
(i)	Industrial Emissions	X	X	✓	✓
(ii)	Marine Vessels Emissions	✓	✓	✓	✓
(iii)	Other Major Emission Sources within 4km	✓	✓	✓	✓
(iv)	Vehicular Emissions				
	a. Bus Terminus	-	-	-	-
	b. Open Roads	X	✓	✓	✓

2.7.6 A summary of model input in AERMOD for sources is given in Appendix 2.8.

(i) Industrial Emissions

Emissions from Concrete Batching Plant

2.7.7 In general, the process of concrete batching plant involves mixing of aggregate, cement and other cementitious materials without combustion. Therefore, the major emission from concrete batching plants is dust emission, i.e. RSP and FSP.

2.7.8 As shown in Figure 2.4, three concrete batching plants are recorded within 500m radius of the Application Site, including Redland Concrete Limited, China Concrete Co. Limited and Hong Kong Concrete Co. Limited. The emissions from these concrete batching plants have been included in this assessment.

2.7.9 Although the Specified Process (SP) Licenses of China Concrete Co. Limited and Hong Kong Concrete Co. Limited has been expired during 2018 to 2020 (see Appendix 2.1) and their zoning is for residential use, the emissions coming from these concrete batching plants will be considered in the assessment as a hypothetic conservative scenario.

2.7.10 According to Annex I of A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Cement Works (Concrete Batching Plant) BPM 3/2 (16) issued in February 2016, the concentration limit of particulate matter should be limited to 10mg/m^3 for license renewal by 1 January 2018. Therefore, any one of

the three concrete batching plants after 2032 (the commission year of the Proposed Development) has to comply with the relevant requirements.

2.7.11 Site visits conducted in November 2023, December 2023, February 2024 and September 2024 requested the emission information from all the plant's operators available. However, due to the confidentiality, nil or rejection replies were received from the companies and site staffs. Based on the latest available information, the emission information of China Concrete Co. Limited and Hong Kong Concrete Co. Limited and Redland Concrete Limited are referenced from the SP license (see Appendix 2.1).

2.7.12 Haul road emissions were modelled as area sources and the extent of which were based on the operations observed during the several site surveys for the three concrete batching plants.

2.7.13 Sand at the concrete batching plants will be refilled by barges, given that the refilling activities and sand storage area of the barge were enclosed, wind erosion from these activities are not anticipated.

2.7.14 Detailed calculations of concrete batching plant emissions are shown in Appendix 2.2.

Emissions from Sand Depot at Yau Tong Bay

2.7.15 A sand depot at Yau Tong Bay is identified within the 500m assessment area. The location of the sand depot is presented in Figure 2.4. Detailed calculations of sand depot are presented in Appendix 2.3.

(ii) Marine Vessels Emissions

2.7.16 Desktop review and a number of site visits were conducted in November 2023, December 2023, February 2024 and September 2024 to identify the emissions from marine vessels within the 500m radius assessment area. The details of model input of marine vessels emissions are shown in Appendix 2.1. The identified sources are as follows:

- Ferry service between Sam Ka Tsuen and Sai Wan Ho provided by Coral Sea Ferry Service;
- Ferry service between Sam Ka Tsuen and Tung Lung Island provided by Coral Sea Ferry Service;
- Barge serving China Concrete Co. Limited and Hong Kong Concrete Co. Limited and Redland Concrete Limited;
- Speedboats and sampans at Sam Ka Tsuen Typhoon Shelter;
- Fishing Vessels at the Kwun Tong Wholesale Fish Market; and
- Planned local vessels at Lei Yue Mun Waterfront

2.7.17 With reference to "Study on Marine Vessels Emission Inventory – Final Report" by HKUST in February 2012, the total emissions from vessels can be calculated using the following equations:

$$\text{Total Emission}_{(\text{pollutant})} = \sum \text{Emission (pollutant, activity mode, equipment)}$$

$$\text{Emission}_{(\text{pollutant, activity mode, equipment})} = P \times FL \times T \times EF$$

where P is the installed power of equipment;

FL is fractional load of equipment in a specific mode;

T is operation time-in-mode; and

EF is fractional load emission factor of equipment.

2.7.18 Emissions from ferries and barges during sailing have been modelled as evenly distributed point sources representing the segment they travel to and from the berths within the 500m assessment area. The individual routes are shown in Figure 2.5.

Ferry services between Sam Ka Tsuen and Sai Wan Ho/ Tung Lung Island provided by Coral Sea Ferry Service

2.7.19 No information of the engine powers, engine load factors and time-in-mode can be obtained from operators. The information of passenger ferries including release height, exit temperature, exit velocity and internal diameter of its chimney extracted from Appendix 3.5 of approved EIA for Lei Yue Mun Waterfront Enhancement Project (EIA-258/2018) are therefore adopted.

2.7.20 According to the current ferry schedule on the operator's website[1],the visiting frequencies of different modes at each hour are studied and presented in Appendix 2.5.

Barges for Concrete batching Plants

2.7.21 Based on the site visits, both main engine and auxiliary engine of the barges will be switched off during the berth. The auxiliary engine will operate intermittently during sand refilling of silos only. As a conservative approach, it is assumed that the auxiliary engine of the barge will be in operation during sand refilling process for the entire working hours. In additions, only one barge can berth at one loading/ unloading point at any one time based on observation, therefore, the maximum number of barges in operation at any time would be three. Since the barge will berth at the CBPs for several days, it is assumed that there would be one arrival/ departure per hour of barge at each loading/ unloading point during operation hours for the worst-case scenario.

2.7.22 According to the site visits, raw materials stored on the barges are not fully enclosed on some occasions, wind erosion of raw materials may impose negative impact on the Proposed Development. To be conservative, wind erosion of raw materials from barges at the three concrete batching plants are included as shown in Figure 2.4 and it is assumed that the barges stay at the berths for the whole day.

2.7.23 Detailed calculations of barge emissions and its wind erosion are shown in Appendix 2.2.

Fishing Vessels at Kwun Tong Wholesale Fish Market

2.7.24 Information for the fishing vessels at Kwun Tong Wholesale Fish Market was not provided by the operator, referenced is therefore made to the approved S16 application for Proposed Residential Development in "Comprehensive Development Area (4)" Zone and "Road" at No. 18 Tung Yuen Street, Cha Kwo Ling Yau Tong, Kowloon (A/K15/121). As stated in A/K15/121, the activities at Kwun Tong Whole Sale Fish Market include delivery and collection of fish by fishing vessels during the morning (i.e. 05:00 to 12:00) and night (i.e. 00:00 to 02:00) periods. The maximum number of fishing vessels berthing can be up to 16 at 07:00 to 12:00 as advised by AFCD. For assessment purposes, it is assumed that there would be 16 fishing vessels and 2 night-time fishing vessels (i.e. 2 vessels for night-berthing as there would be 2 arriving / departing according to AFCD) berthing at the market during the morning and night periods, respectively. The auxiliary engines of fishing vessels will be in continuous operation for the entire period for conservative approach.

2.7.25 Detailed calculations of fishing vessels emissions and the visiting frequency (extracted from A/K15/121) are shown in Appendix 2.5.

[1] https://www.coralseaferryservice.com.hk/timetable

Planned Local Vessel/ Ferry/ Tour Vessel/Government Vessel at Sam Ka Tsuen Landing Steps and Lei Yue Mun New Landing Steps

2.7.26 There will be additional marine traffic at Sam Ka Tsuen Landing Steps and Lei Yue Mun New Landing Steps, and tentatively scheduled for completion in the fourth quarter of 2024[2]. The emissions from the additional marine traffic at Sam Ka Tsuen Landing Steps and Lei Yue Mun New Landing Steps are included in this assessment.

2.7.27 Due to lack of information, the emission parameters for the planning local vessels are referenced to the approved planning application A/K15/121 and presented in Appendix 2.6.

Speedboats and sampans at Sam Ka Tsuen Typhoon Shelter

2.7.28 Several site visits were conducted in November 2023, December 2023, February 2024 and September 2024 to observe the speedboats and sampans activities at Sam Ka Tsuen Typhoon Shelter. Less than 5 speedboats and sampans were sailing within the shelter in every hour based on observation. In addition, the operators turned off the engine after berthing. The impact is considered insignificant and therefore would not be included in the assessment.

(iii) Other Major Point Sources within 4km

2.7.29 As referred to EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", for Tier 3 – Background Contributions, a major point source located within 4km from a receptor should be evaluated to see if it can cause direct impact.

Kai Tak Cruise Terminal

2.7.30 According to the list of major point sources provided in the guideline, the cruise emission in hotelling mode at Kai Tak Cruise Terminal was identified as a major point source about 2.4km from the site boundary of the Application Site. According to the latest cruise schedule from 2024 to 2027, the highest number of scheduled cruise liners visiting Hong Kong will be in the Year 2024 and, hence, the cruise liner type in 2024 has been reviewed. As presented in Appendix 2.7, Costa Serena has the highest engine power among all cruise ships in Year 2024. Given there are two berthing spaces at the Cruise Terminal, another cruise ships with the second-highest engine power have been identified, including Spectrum of the Seas, Quantum of the Seas, Queen Mary 2 and Celebrity Solstice which have the same engine power. However, in view of the frequency of visit to Hong Kong of these four cruises, Spectrum of the Seas has therefore been selected as the second cruise ship for hotelling at Kai Tak Cruise Terminal at the same time for every hour of a day as "Costa Serena" for a conservative approach.

2.7.31 The details of model inputs and the detailed information of the emission rates of these cruise vessels are shown in Appendix 2.7.

Cape Collinson Crematorium

2.7.32 Cape Collinson Crematorium has been identified as a major point source located about 3.9km from the site boundary of the Application Site. However, the emission from Cape Collinson Crematorium would not have a direct impact to the representative ASRs of the Application Site due to screening by natural terrain. The potential impact from the emission of Cape Collinson Crematorium is considered sufficiently represented by the PATH v3.0 model (i.e. Tier 3 contribution) and thus not separately modelled by local dispersion model.

[2] LC Paper No. CB(4)390/19-20(03) (https://www.legco.gov.hk/yr19-20/english/panels/edev/papers/edevcb4-390-3-e.pdf)

(iv) Vehicular Emission

a. Bus Terminus

2.7.33 Two bus terminuses, namely Yau Tong (Shung Tak Wai) Bus Terminus and Yau Tong Bus Terminus, are found to be located within the 500m air assessment area. Since the Yau Tong Bus Terminus is far away from the Application Site (over 470m), it is considered that the start emission generated by this bus terminus is insignificant to the Proposed Development. An on-street bus terminus "Yau Tong (Shung Tak Wai) Bus Terminus" is located at northeast of the Application Site which is being served for one bus route only. In view of this terminus scale is relatively small, the start emission generated by the bus terminus is minimal. Nevertheless, start emission of all 18 vehicle classes (including FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the bus terminus.

b. Open Roads Emissions

2.7.34 Air pollutant concentration at the Application Site due to the emission from the nearby road networks (vehicular tailpipe emissions) was assessed. The emission rate of each road within 500m from the Application Site is calculated from with latest EMFAC-HK issued by EPD. Based on the emission rate of each road, the air pollutant concentration at the Application Site was modelled with AERMOD.

2.8 Dispersion Modelling and Modelling Approach for Emission Sources

Computer Modelling

2.8.1 The dispersion of NO_X, RSP, FSP and SO_2 were modelled using AERMOD software released by Lakes Environmental Software. The model is based on the principle of Gaussian dispersion and is widely accepted by EPD and is used in this assessment to predict both concentration and deposition of pollutants from line, point and area sources. As discussed in Section 2.7.2, PATH v3.0 was adopted to provide the background pollutant concentrations in assessing the total air quality impact on the representative ASRs. In addition, met data including temperature and relative humidity extracted from the SAMP v2.0 were also adopted for modelling.

2.8.2 The Application Site and its 500m assessment area fall within the PATH grids (46,30), (46,31), (47,30) and (47,31). The predicted meteorological data for the relevant PATH grids from PATH v3.0 obtained from EPD's website were used for model input. The WRF meteorological data, including wind data, temperature, relative humidity, pressure, cloud cover, mixing height and Pasquill stability classes, for Year 2019 extracted from the PATH v3.0 released by EPD in January 2024 at the relevant grids have been adopted as on-site data into AERMET.

2.8.3 Land use types surrounding the Proposed Development, the albedo, Bowen ratio for the 10km x 10 km area, surface roughness for the 1km area, and the Surface File and Profile File to be used as input in AERMOD are downloaded and extracted from the AERMET tool in the SAMP v2.0. The relevant information is provided in Appendix 2.9.

2.8.4 Model input parameters and assumptions for the operation phase are summarised in Table 2.8.

Table 2.8 Model Input Parameters and Assumptions for Operation Phase

Input Parameters & Assumptions	Descriptions
Type of Sources	• Emissions from concrete batching plants: Point and Area sources

Input Parameters & Assumptions	Descriptions
	• Emissions from marine vessels and major point source: Point sources • Vehicular Emissions: Line sources
Assessment Parameters	• Hourly and annual NOx/ NO/ NO_2 • Daily and annual RSP • Daily and annual FSP • 10-min and daily SO_2
Meteorological data	• Year 2019 WRF data from PATH v3.0 • PATH grids: (46,30) • Mixing height values recorded by HKO in 2019 were in the range of 119m to 2009m. Mixing heights from WRF data which are lower than 119 or higher than 2009 were adjusted to 119m and 2009m, respectively • Wind speed <0.5m/s adjusted to 0.5m/s • Anemometer height of WRF data: 8.5m

EMFAC-HK (embedded in SAMP v2

2.8.5 2032 is chosen as the Model Year for EMFAC-HK year in the SAMP v2.0 to represent the worst-case scenario emission.

2.8.6 In accordance with a Guideline of Use of Temperature and Relative Humidity Data for Vehicular Emission Factor Prediction published by EPD in March 2021, the monthly minimum temperature and relative humidity (RH) (i.e. ranging from 11°C – 26°C and 25% to 61%) were applied for both short-term (i.e. hourly) and long-term (i.e. annual average) air quality impact of NO2 while annual minimum temperature and RH (i.e. 11°C and 25%) were applied for both short-term (i.e. daily average) and long-term (i.e. annual average) air quality impact of RSP and FSP.. Summary of met data is shown in Appendix 2.10.

Traffic Data

2.8.7 Project specific hourly traffic data for 2047 having the maximum traffic data of the concerned roadway network within 15 years from the assumed completion year of the developments was adopted in combination with emission factors based on the EMFAC-HK Model (with calendar year set as 2032) to estimate the highest vehicular emission rate for each roadway. The traffic data predicted by the project traffic consultant includes hourly traffic flows with a composition of 18 vehicle classes according to "Guideline on Modelling Vehicle Emissions". Traffic forecast, based on the traffic count including vehicles from all concrete batching plants within the vicinity, is included in Appendix 2.11, which shows the hourly Vehicle Kilometer Travelled (VKT), the number of trips travelled, and the hourly averaged speed of road carriageways respectively, with 24-hour speed limits of 50 kilometers per hour (kph).

2.8.8 The estimated 18-class distribution as defined in EMFAC-HK was derived by sectoring the relevant classes in the Transport Department's Annual Traffic Census record or vehicle distribution obtained from manual traffic count surveys, in proportion to the recorded distribution in EPD document: "2018 Licensed Vehicle by Age and Technology Group Fractions".

2.8.9 The roadway network within the 500m study area consists of 73 distinct roadway links.

2.8.10 The established road traffic data, including traffic flow, 24-hour vehicle mix and speed limits (with the latter assumed to be the same under the same road groups) will be confirmed by the Project Traffic Consultant. Relevant correspondence of the endorsement and the confirmation letter from traffic consultant on the validity of the traffic data will be provided when it is available.

Calculation of Vehicular Emissions

2.8.11 The road segments within 500m assessment area and their corresponding predicted traffic flow were imported into SAMP v2.0. Setting of the road width and centerline XY for all roads within 500m assessment area are followed the "Modelling Open Road Emissions using AERMOD" published by EPD. Zero emission vehicle scenario was adopted in the assessment. The total composite emission rate calculated by SAMP contains the running emissions and start emissions by broad-brush approach. For calculations of start emissions by the broad-brush approach, start emissions for each vehicle class are assumed directly proportional to Trips per Vehicle-kilometer-travelled ratio (Trip/VKT) with consideration of the proportion of local and rural roads within Hong Kong based on the Annual Traffic Census (ATC) prepared by the TD. For SAMP v2.0, default trip and VKT values from EMFAC-HK model v4.3 are used in the calculations and the proportion of local and rural roads within Hong Kong of 14.34% is assumed based on ATC 2022.

Noise Barrier

2.8.12 No vertical or cantilevered noise barriers are found within 500m from the Site.

Road Elevation

2.8.13 The base elevation is the elevation of the ground surface underneath the road link in meter above Principal Datum (mPD). The height of the road surface above ground (in mAG) should be added to the release height.

2.9 Post-processing of Modelling Results and Background Pollutant Contribution

2.9.1 Pollutant dispersion from vehicular, industrial and marine emissions have been simulated using the AERMOD model. Dispersion results and background pollutant contributions have been combined and post-processed for the different averaging periods required for comparison with the relevant AQOs.

Ozone Limiting Method for Short-term Cumulative NO_2 Assessment

2.9.2 The conversion of NO_x to NO_2 is a result of a series of complex photochemical reactions and determines the prediction of near field impact of NO_x emissions. To determine vehicular emission impacts, the emission factors of NO_2 are extracted from the results of the EMFAC-HK Model version 4.3 and the emission factors of NO are calculated from the emission factors of NO_x and NO_2 for all motor vehicle types. For the industrial emissions, initial NO_2 to NO_x ratio for chimneys is assumed as 10% with reference to the Heathrow Airport EIA report.

2.9.3 For NO_x in particularly, an algorithm has been built-in to convert a portion of NO_x predicted at ASRs into NO_2 using the Ozone Limiting Method (OLM) when they mix with the ambient O_3. The OLM assumes a conversion process that is stoichiometrically limited by the ambient O_3 levels, and hence the latter can be used to predict the maximum convertible NO_2 from NO_x for superimposing onto the initial "out-of-tailpipe / in-stack" NO_2 levels as the base level. OLM has been applied for the sum of the vehicular, industrial and marine sources to compare with the available ozone for conversion to NO_2.

$$[NO_2]_{Predicted} = [NO_2]_{initial} + Min([NO]_{Predicted} or \frac{46}{48}[O_3]_{PATH})$$

where

$[NO_2]_{Predicted}$ is the predicted NO_2 Concentration;

$[NO_2]_{initial}$ is the initial NO_2 Concentration;

Min means the minimum of the two values within the bracket;

$[O_3]_{PATH}$ is the representative O_3 PATH Concentration (from other contribution;

$\frac{46}{48}$ is the molecular weight of NO_2 divided by the molecular weight of O_3.

Jenkin Method for Long-term Cumulative NO_2 Assessment

2.9.4 For the long-term cumulative NO_2 assessment (i.e. predictions of annual average NO_2 concentration), Jenkin Method was adopted for the conversion of cumulative annual average NOx to cumulative annual average NO_2. The details of Jenkin Method for this assessment extracted from the SAMP v2.0 are shown in Appendix 2.12.

Background Pollutant Contribution

2.9.5 The latest Pollutants in the Atmosphere and their Transport over Hong Kong model (PATH v3.0) released by EPD is used to estimate the background air quality. Since Year 2032 has been selected as the assessment year, PATH v3.0 for Year 2030 of Grid 46,30 has been adopted as the background concentration.

2.10 Assessment Results

2.10.1 The predicted air quality concentrations from surrounding vehicular, industrial and marine emissions have been quantitatively assessed separately for SO_2, NO_2, RSP and FSP. The predicted results of SO_2, NO_2, RSP and FSP at all predetermined ASRs are summarized in Appendix 2.13. The range of the assessment results of all the pollutants are summarized below.

Table 2.9 Range of Assessment Results of All Pollutants

ASR ID	NO_2		RSP		FSP		SO_2	
	19th Highest Hourly (AQO=200)	Annual Average (AQO=40)	10th Highest Daily (AQO=100)	Annual Average (AQO=50)	36th Highest Daily (AQO=50)	Annual Average (AQO=25)	4th Highest 10-min (AQO=500)	4th Highest Daily (AQO=50)
D01	82.5-104.3	13.8-25.7	49.4-51.0	18.7-20.4	23.4-24.0	11.1-11.8	22.6-22.7	6.8
D02	82.5-104.1	13.8-25.7	49.4-51.2	18.7-20.7	23.4-24.1	11.1-11.8	22.6-22.7	6.8

ASR ID	NO_2		RSP		FSP		SO_2	
	19th Highest Hourly (AQO=200)	Annual Average (AQO=40)	10th Highest Daily (AQO=100)	Annual Average (AQO=50)	36th Highest Daily (AQO=50)	Annual Average (AQO=25)	4th Highest 10-min (AQO=500)	4th Highest Daily (AQO=50)
D03	82.5-104.8	13.8-25.9	49.4-51.3	18.7-21.2	23.4-24.1	11.1-11.9	22.6-22.7	6.8
D04	82.7-105.0	13.8-25.6	49.4-51.8	18.7-22.5	23.4-24.1	11.1-12.3	22.6-22.7	6.8
D05	85.3-88.9	13.8-19.9	49.4-60.9	18.7-26.8	23.4-24.4	11.1-13.6	22.6-22.7	6.8

D14	83.2-88.9	13.8-20.6	49.4-51.2	18.7-20.6	23.4-23.8	11.1-11.7	22.6-22.7	6.8

SO_2

2.10.2 The predicted results of the 4th highest 10-minute average and daily average SO_2 concentration at ASR levels are summarized in Appendix 2.13. The results indicate that SO_2 concentrations at the Proposed Development comply with the relevant AQOs.

NO_2

2.10.3 The predicted results of the 19th highest 1-hour average and annual average NO_2 concentration at all selected ASR levels are summarized in Appendix 2.13. The results indicate that NO_2 concentrations at all locations of the Proposed Development comply

with the relevant AQOs, except those of 19th highest 1-hour average at G/F lobby (1.5m above ground) at the south portion of the proposed Development.

RSP

2.10.4 The predicted results of the 10th highest 24-hours and annual average RSP concentrations at all ASR levels are summarized in Appendix 2.13. The results indicate that RSP concentrations at all locations of the Proposed Development comply with the relevant AQOs.

FSP

2.10.5 The predicted results of the 36th highest 24-hours and annual average FSP concentration for all selected ASRs at all levels are summarized in Appendix 2.13. The results indicate that FSP concentration at all locations of the Proposed Development comply with the relevant AQOs.

2.11 Odour Impact Assessment

Introduction

2.11.1 Based on the several site visits carried in November 2023, December 2023, February 2024 and September 2024, the odour source of the area is same as that assessed in the approved planning application of the 126 Approval Scheme, i.e. three identified odour sources are Yau Tong Sewage Pumping Station, Kwun Tong Wholesale Fish Market and Sam Ka Tsuen Typhoon Shelter as shown in Figure 2.7. Also, there is no change in their operation. Therefore, the odour impact assessment used in the previous assessment for A/K15/126 is adopted in this assessment.

Identified Odour Sources

a. Yau Tong Sewage Pumping Station

2.11.2 Yau Tong Sewage Pumping Station (YTPS) is located at the junction of Ko Fai Road and Tung Yuen Street which is next to the Application Site. The pumping station has three sewage pumps that operate in a 2 duty and 1 standby mode with each pump having a design capacity of 0.55 m^3/s. Therefore, the ultimate design capacity for YTPS is 1.1 m^3/s according to the approved EIA Study for Yau Tong Bay Development – Engineering Feasibility Study for the Comprehensive Development at Yau Tong Bay (AEIAR-054/2002).

2.11.3 Several site visits were conducted to identify any noticeable odour at the site boundary of the sewage pumping station. No identifiable odour was detected at the site boundary of the sewage pumping station and the junction of Shung Tai Wai and Tung Yuen Street. With the consideration of the above findings, odour impact from sewage pumping station is not anticipated.

b. Kwun Tong Wholesale Fish Market

2.11.4 Kwun Tong Wholesale Fish Market, which is located at the junction of Shung Wo Path and Tung Yuen Street, is at about 100m from the Application Site. The peak operating hour of the market would be from 7:00am to 12:00 noon. The market activities include the delivery by fishing vessels and immediate collection, after transaction, by lorry of boxed fresh marine fish. The live fish are delivered in containers which are transferred to shore, alive, and are placed in aquariums inside the market or transported directly to waiting lorries which are equipped with aquariums inside. Since fish market office building and Tung Yuen Street Cooked Food Market are situated at the northern and southern sides of the fish market respectively and the fish market is covered by a roof, odour can only be emitted at the sides facing the sea and Tung Yuen Street.

2.11.5 Based on several site visits, it is observed that some fish stores were not in operation and floor was dry at some area. In addition, polyfoam boxes were collected at a designated area inside the fish market and disposed of by dump trucks regularly. However, in this odour assessment, to be conservative, apart from carpark, indoor storage area and administrative building, all other area are regarded as different types of odour sources (see Figure 2.8). Impact from these area sources is modelled by AERMOD. Emission parameters for the Kwun Tong Wholesale Fish Market are referenced to the approved planning application A/K15/126 and are presented in Appendix 2.15.

c. Sam Ka Tsuen Typhoon Shelter

2.11.6 Sam Ka Tsuen Typhoon Shelter is located to the southeast of the Application Site. The proposed residential buildings are at least 180m away from the Typhoon Shelter. In the south-eastern side of the typhoon shelter, many seafood restaurants and shops exist to serve the public and tourists visiting the area.

2.11.7 The area is predominantly impacted by sewage outfalls of the seafood restaurant, shops and low-rise village houses in the vicinity. In order to resolve the odour problem arising from the sewage outfalls, in-situ bioremediation works for facilitating decomposition of organic pollutants in sediments were carried out in the typhoon shelter in 2004 [Ref-3]. Several studies [Ref-2,4,5,6&7] documented its successful application to treat odorous sediments at Sam Ka Tsuen Typhoon Shelter where over 95% of odorous acid volatile sulphides were removed. Referring to the meeting minute of the Legislative Council on 1 February 2012 [Ref-2], no complaint regarding odour of Sam Ka Tsuen Typhoon Shelter was recorded in Year 2009 to 2011 (i.e. 5 to 7 years after the bioremediation works).

2.11.8 Moreover, Drainage Services Department (DSD) is carrying out a study "Lei Yue Mun Village Sewerage – Investigation, Design and Construction (4398DS)" to improve the water quality at Sam Ka Tsuen Typhoon Shelter and the hygiene conditions of the unsewered areas at Lei Yue Mun by providing sewerage system which is expected to be completed in Year 2021 [Ref-8] i.e. one year before the operation of the Project. In light of this, it is expected that Sam Ka Tsuen Typhoon Shelter therefore will no longer be impacted by sewage outfalls of the unsewered areas during heavy rainfall.

2.11.9 Odour patrol was conducted at the boundary of Sam Ka Tsuen Typhoon Shelter. A slightly detectable odour was noticed at the Sam Ka Tsuen Typhoon Shelter. However, no odour was noticeable at around 20m away from the Sam Ka Tsuen Typhoon Shelter. Since the boundary Application Site is around 180m away from the Sam Ka Tsuen Typhoon Shelter, it is anticipated that the associated odour impact is not anticipated.

Odour Impact Appraisal and Assessment Result

2.11.10 Nevertheless, a quantitative odour assessment was conducted in an environmental study supporting a S16 town planning application of a neighbouring planned residential

site under Application No. A/K15/126 (Feb 2022). The report also identified that Yau Tong Sewage Pumping Station, Kwun Tong Fish Market and Sam Ka Tsuen Typhoon Shelter as existing odour sources in the vicinity of their Application Site. Similar to the findings in this EAS, odour impact for Yau Tong Sewage Pumping Station and Sam Ka Tsuen Typhoon Shelter was not anticipated at the planned residential site. Therefore, a quantitative odour impact assessment was carried out under the environmental study of Application No. A/K15/126 for the Kwun Tong Wholesale Fish Market only, which is considered relevant and applicable for this EAS.

2.11.11 The predicted result of odour impact for all selected ASRs at all levels are summarized in Appendix 2.16. It reveals that odour at all locations of the Proposed Development comply with the criterion (i.e. <5OUs).

2.12 Review on Impact from Proposed Carpark

2.12.1 Basement carpark has been proposed for the Proposed Development. The air quality inside the basement carpark should satisfy the air pollutant standards as recommended by the ProPECC PN 2/96 Control of Air Pollution in Car Parks. Therefore, the mechanical ventilation system and layout the basement carpark should be properly designed. Furthermore, the exhaust outlet of the mechanical ventilation system of the basement carpark should also be designed by facing away from the nearest air sensitive uses as practicable as possible to ensure not to cause a nuisance to the occupants/ residents of the air sensitive uses including the surrounding developments and the Proposed Development. As the Project is still under initial design stage, the location of the exhaust outlet of the mechanical ventilation system is yet available.

3. CONCLUSION

3.1.1 Based on the air quality impact and odour assessment results, the Proposed Development will not be subject to any unacceptable air quality or odour impact provided that the air pollutant concentrations and odour at the fresh air intake locations for the Proposed Development comply with the AQOs and odour criteria. Besides, the fresh air intake for the Proposed Development is recommended to be located at or above 1.5mAG.

3.1.2 Based on above conclusion, it confirms the feasibility and acceptability of the Proposed Redevelopment from an environmental perspective.

China Concrete Co. Ltd.

Appendix 7

REGISTER OF APPLICATIONS UNDER SECTION 14(3)(a) OF THE AIR POLLUTION CONTROL ORDINANCE

Serial No.: A0567

1. Type of Application*

New Licence	☐
Renewal of Licence	☐
Variation of Licence	☑
Transfer of Licence	☐
A Licence subsequent to the Cessation of an Exemption under Section 21	☐
Cancellation or Variation of Any Term or Condition of Exemption	☐

2. Name of Applicant (English) China Concrete Co. Ltd.

(Chinese) 中國混凝土有限公司

3. Address of Applicant 24/F, China Merchants Tower, Shun Tak Centre, 168-200 Connaught Road,. Central, Hong Kong

4. Date of Application 12 February, 2003

5. Date of Entry into Register 26 April, 2003

6. Date of Last Notice in Newspapers 26 April, 2003

*Tick the appropriate box

7. Premises Where the Specified Process is Conducted

Name of Premises		Address
English	Chinese	
China Concrete Co. Ltd.	中國混凝土有限公司	No. 22, Tung Yuen Street, Yau Tong, Kowloon

8. Nature of Work

Existing Licence No.	Expiry Date	Classification of Specified Process† under Application	Mode of Operation (Continuous / Batch)	~~Installed~~/ Processing* Capacity	Silo Capacity (for Cement Works Only) (tonnes (t))	Total No. of Emission Points
L-3-194(1).	22 May, 2006.	Cement Works	Batch	Concrete production: Existing licence: 120 cubic metre per hour Proposed variation: 240 cubic metre per hour	Cement: 4x1000 t, 2x130 t PFA: 1x100 t Microsilica: 1x100 t	Existing licence: 13 Proposed variation: 12 (EP12 to be deleted)

9. Other Specified Processes Conducted in Same Premises: Not applicable.

Classification of Specified Process †	Licence / Exemption* Numbers

9A. Air Pollution Control Plan under Section 14A

a. Has the plan been submitted Yes/~~No~~ *

b. Whether the plan is available for inspection Yes/~~No~~ *

† As specified in the Schedule 1 of the Ordinance * Delete if not applicable

China Concrete Co. Ltd.

10. Noxious or Offensive Emissions *

Emission Point No	Exhaust Gas Flowrate (m^3/h)		Mode of Discharge to Atmosphere											
			Exit Temperature (°C)		Fugitive Emission (Yes/No)		Discharge or Chimney Height (m)		Cross-Section of Discharge Exit or Chimney					
									Width (m)		Length (m)		Diameter (m)	
	1	2	1	2	1	2	1	2	1	2	1	2	1	2

Column 1 of each item refers to PROPOSED VALUE in the case of a new application or EXISTING VALUE if otherwise and column 2 refers to PROPOSED VARIATION

NOTE A: EP5a, i.e. an aggregate receiving hopper (ARH-2) serves as a back up for EP5, i.e. an aggregate receiving hopper (ARH-1).

† As specified in the Schedule 1 of the Ordinance

China Concrete Co. Ltd.

11. Note:

Any person may object within 30 days of notice in newspapers, to the granting of the application on the grounds that the Air Quality Objective in that area is being threatened or the emission of noxious or offensive emissions would be, or be likely to be, prejudicial to health. An objection requires the name, address, and identity of the person making the objection, the address of the premises of the proposed specified process, and how the Air Quality Objective is being threatened or how the emission of noxious or offensive emissions would cause prejudice to health. Objections should be made in Form 5 in the Second Schedule to the Air Pollution Control (Specified Processes) Regulations and be forwarded to the Authority and copied to the Secretary for the Environment, Transport and Works.

Redland Concrete Limited

11. Note:

Any person may object within 30 days of notice in newspapers to the granting of the application on the grounds that the air quality objective in that area is being threatened or the emission of noxious or offensive emissions would be, or be likely to be, prejudicial to health. An objection requires the name, address ,and identity of person making the objection, the address of the premises of the proposed specified process, and how the air quality objective is being threatened or how the emission of noxious or offensive emission would cause prejudice to health. Objections should be made in Form 5 in the Second Schedule to the Air Pollution Control (Specified Processes) Regulation 1987 and be forwarded to the Authority and copied to the Secretary for the Environment and Food.

Appendix 2.2 Calculation of Concrete Batching Plant Emissions

Calculations of Time-In-Mode (TIM) for Barge to/ from the Concrete Batching Plant (CBP)

Premise	Vessel Type	Length of Sailing Route (m) [1]	Design Speed (m/s)	Speed Under Various Mode (m/s)		Time-In-Mode (min)	
				Hotelling	Maneuvering [2]	Hotelling [3]	Maneuvering [4]
China Concrete Co. Ltd.	Barge	581.7	NA	0	3.09	60	3.14
HK Concrete Co. Ltd.	Barge	592.4	NA	0	3.09	60	3.20
Redland Concrete Ltd.	Barge	483.5	NA	0	3.09	60	2.61

Notes:
[1] Length of sailing route within 500m assessment area.
[2] No information is available from the operator. The travelling speed of sand barges with similar nature and operation mode are recorded and can be found at https://www.marinetraffic.com. The recorded averaged speed of sand barges (i.e. about 6 knots, 3.09m/s) is adopted in this assessment, assuming the travelling speed of the barges is the same during their journey. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.
[3] Time-In-Mode (TIM) for hotelling - As advised by the operator, there would be one barge at one time serving each CBP and the barges would stay for around one to two days then depart. Given that the long duration of stay and infrequent sailing schedule of the barges, it is assumed that there would be one barge for each CBP hotelling continuously during the operation hours as a conservative assessment.
[4] TIM for maneuvering is estimated based on the recorded averaged speed of the barges and the length of sailing route within 500m assessment area.

Emisson Factor for Barge of Concrete Batching Plant (CBP)
Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Premise	Vessel Type	Engine Type	Average Engine Power (kW) [1]	Loading Factor [4]		Time-In-Mode (min) [5]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [2]	NOx [2]	RSP [2]	FSP [2]
China Concrete Co. Ltd.	Barge	Main Engine	727	0.00	0.30	60	3.14	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.14	0.21	10.00	0.40	0.39
HK Concrete Co. Ltd.	Barge	Main Engine	727	0.00	0.30	60	3.20	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.20	0.21	10.00	0.40	0.39
Redland Concrete Ltd.	Barge	Main Engine	727	0.00	0.30	60	2.61	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	2.61	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine and Auxiliary Engine - No information from operator is available. Referenced to Table 4-5 and 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012, Main Engine Power and Auxiliary Engine of Barge at GRT Class >=1000 for conservative purpose.
[2] Emission Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012, engine type of ME(Cat.1) for main engine and AE for Auxiliary Engine.
[3] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh
[4] Loading Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Tables 4-7 and 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012, vessel type of All except tug and All RTVs respectively for conservative purpose.
[5] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Barge to / from the concrete batching plant.

Detailed Emission Rate

Premise	Vessel Type	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
China Concrete Co. Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.370E-03	1.141E-01	3.422E-03	3.308E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	5.420E-04	2.608E-02	1.043E-03	1.017E-03
HK Concrete Co. Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.413E-03	1.162E-01	3.485E-03	3.368E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	5.520E-04	2.656E-02	1.063E-03	1.036E-03
Redland Concrete Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	1.970E-03	9.480E-02	2.844E-03	2.749E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	4.505E-04	2.168E-02	8.672E-04	8.455E-04

Note:
[1] It is assumed that there would be one barge hotelling at each concrete batching plant during the operation hours.
[2] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering at China Concrete Co. Ltd. (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (116 x 0.43 x 10.0 x 3.246 / 60 / 1000)
= 0.02698 kg/hour

Calculations of Emission Factor for Wind Erosion within Concrete Batching Plant (CBP)

		Emission Factor	Unit	Reference
TSP	=	0.85	Mg/hectare/yr	Table 11.9.4 of AP-42 S11.9

Therefore,

RSP	=	0.40	Mg/hectare/yr	Multiplied by a conversion factor of 0.47 for TSP to RSP according to Table 2 of AP-42 S13.2.4
	=	1.27E-06	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.
FSP	=	0.06	Mg/hectare/yr	Multiplied by a conversion factor of 0.07 for TSP to FSP according to Table 2 of AP-42 S13.2.4
	=	1.89E-07	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.

Calculations of Emission Factor for Paved Road within Concrete Batching Plant (CBP)

$$E = k\,(sL)^{0.91} \times (W)^{1.02}$$

where

E= Emission factor in grams per vehicle kilomter travelled (g/veh-km)

k= Particle size multiplier, k = 0.62 g/veh-km for RSP and 0.15 g/veh-km for FSP as defined according to Table 2 of AP42 S13.2.1-1

sL= Road surface silt loading (g/m^2), as per AP-42 Table 13.2.1-3, mean silt loading for concrete batching plant is 12 g/m^2

W= Average weight (ton) of vehicles travelling on road, 22 tons is assumed as full load condition

RSP Emission Factor = 0.139 g/veh-m

FSP Emission Factor = 0.034 g/veh-m

Description	Source ID	Distance (m)	Road Width (m)	Road Surface Area (m^2)	Peak Hourly Flow of Mixer Trucks [1]	Dust Removal Efficiency (%) [2]	Emission Rate [3][5]	
							RSP ($g/s/m^2$)	FSP ($g/s/m^2$)
China Concrete Co. Ltd. [4]	L11	17	6	102	-	-	3.10E-05	7.49E-06
	L12	6	45	268	-	-	3.10E-05	7.49E-06
HK Concrete Co. Ltd.	L31	3	18	53	22	91.70%	4.01E-06	9.70E-07
	L32	37	3	113	22	91.70%	2.35E-05	5.69E-06
Redland Concrete Ltd.	L21	7	16	110	22	91.70%	4.44E-06	1.08E-06

Note:

1. Peak hourly mixer trucks count of each concrete batching plants based on site observations.
2. Calculation of Dust Removal Efficiency for HK Concrete Co. Ltd. and Redland Concrete Ltd.

$$= 100 - \frac{0.8pdt}{}$$

(ref.: Eq. 3-2 in Section 3.3.3 of USEPA Control of Open Fugitive Duat Sources - Final Report)

where

C = Average control efficiency, in percent

p = Potenial average hourly daytime evaporation rate, 0.23676 mm/h (p = 0.0049 x 48.3189 inch is equivalent to total evaporation of 1227.3mm obtained from Hong Kong Observatory)

d = Average hourly daytime traffic rate per hour, 22 veh/hr based on site observation

t = Time between applications in hour, once in each working hour as observed during site visit

i = Application intensity, 0.5 L/m^2 for haul road as minimum application intensity

Therefore,

C = 100-(0.8)(0.2368)(22)(1)/0.5 = 91.7%

3. Emission Rate(g/s) = Emission Factor x (1- Dust Removal Efficiently) x No. of Trucks per hour x Travelling Distance/Road Surface Area
4. According to the SP License for China Concret Co. Ltd. (L-3-194(4)), the maximum dust emission rate from paved roads is 0.215kg/hr with dust control equipment (i.e. water spray).
5. According to Table 2 of AP42 S13.2.1-1, Particle size multiplier (k) of TSP, RSP and FSP for paved road is defined as 3.23 g/veh-km, 0.62 g/veh-km and 0.15 g/veh-km, respectively. The conversion ratio of TSP to RSP and FSP for paved road has thus referenced to the particle size multiplier.

Calculations of Emission Sources within Concrete Batching Plant (CBP)

Description	Fugitive Emission (Y/N)	Source ID	Source ID from SPL	Emissions/ Parameters extracted from SP License [1]							Concentration	Emission Rate adjusted to Emission Concentration Limit (10 mg/m^3) [2][3]		Exit Velocity (m/s)	Operation Hours [4]
				Exhaust Gas Flowrate (m^3/h)	Exit Temp (K)	Emission Height (mAG)	Stack Width (m)	Stack Length (m)	Stack Diameter (m)	Max Emission Rate (kg/hr)	RSP (mg/m3)	RSP (g/s)	FSP (g/s)

Note:

1. No information is provided by the operators, reference has been made to the Specified Processes (SP) License (L-3-194(4) for China Concrete Co. Ltd.; L-3-218(3) for HK Concrete Co. Ltd.; and L-3-117 (6) for Redland Concrete Ltd.).
2. According to Appendix B.2, General Particle Size Distributions, page B.2-13, AP-42, 1/95 version, USEPA, RSP and FSP are 51% and 15% of TSP for general concrete batching activity.
3. According to Annex I of A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process - Cement Works (Concrete Batching Plant) BPM3/2(16) (Februrary 2016), the concentration limit of Particulate Matter (PM) would be limited to 10mg/m^3 for license renewal by 1 January 2018 for all plants.
4. Operation hours of these three CBPs were made reference to Approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA258/2018).

Appendix 2.3 Calculation of Sand Depot at Yau Tong Bay

Calculation of Emission factor for Berthing Emissions from Barge (Sand Depot)

Emission Factor is referenced from Applications for Variation of Environmental Permits (VEP-627/2023): Fill Bank at Tseung Kwan O Area 137

where

			Remark
RSP Emission Factor =	8.60	g/hr/vessel	Appendix A1 of VEP-627/2023, Fill Bank at Tseung Kwan O Area 137.
FSP Emission Factor =	8.39	g/hr/vessel	

	RSP	FSP
Unmitigated Emission Factor, E ($g/m^2/s$) =	**2.39E-03**	**2.33E-03**

Calculation of Emission factor for Berthing Emissions from Derrick Lighter (Sand Depot)

Emission Factor is referenced from Applications for Variation of Environmental Permits (VEP-627/2023): Fill Bank at Tseung Kwan O Area 137

where

			Remark
RSP Emission Factor	46.40	g/hr/vessel	Appendix A1 of VEP-627/2023, Fill Bank at Tseung Kwan O Area 137.
FSP Emission Factor	45.30	g/hr/vessel	

	RSP	FSP
Unmitigated Emission Factor, E ($g/m^2/s$) =	**1.29E-02**	**1.26E-02**

Calculation of Emission factor for Wind Erosion at Sand Dunes (Sand Depot)

Emission Factor is referenced to USEPA AP-42, 5th ed. 8/04 ed.: Section 11.9

where

			Remark
p = Percentage active area =	100.0%		
d = Number of working days per year =	365		Emission to be applied during 19:00 and 07:00 hours
TSP Emission Factor =	0.85	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 11.9.2, Table 11.9-4 for Western Surface Coal Mining
RSP Emission Factor =	0.40	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 13.2.4.3 TSP to RSP ratio: 0.35/0.74=0.473=47.3%
FSP Emission Factor =	0.06	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 13.2.4.3 TSP to RSP ratio: 0.053/0.74=0.072=7.2%

	RSP	FSP	
Unmitigated Emission Factor, E ($g/m^2/day$) =	1.10E-01	1.68E-02	
Unmitigated Emission Factor, E ($g/m^2/s$) =	**1.27E-06**	**1.94E-07**	24 hour emission

Appendix 2.4 Calculation of Passenger Ferry Emissions and Visiting Frequencies

Calculations of Time-In-Mode (TIM) for Marine Vessels

Vessel Type	Journey	Length of Sailing Route (m) [1]	Design Speed (m/s)	Averaged Travelling Speed (m/s) [2]	Time-In-Mode (min)	
				Maneuvering	Hotelling [3]	Maneuvering [4]
Sam Ka Tsuen <-> Sai Wan Ho						
Ferry	Departure	620.1	NA	2.78	5	3.72
	Arrival	620.1	NA	2.78	5	3.72
Sam Ka Tsuen <-> Tung Lung Chau						
Ferry	Departure	99.2	NA	2.78	5	0.59
	Arrival	99.2	NA	2.78	5	0.59

Notes:
[1] Length of sailing route within 500m assessment area. The entire length of the navigation route (within and outside assessment area) is indeed 1.5km and 7.5km for Sam Ka Tsuen <-> Sai Wan Ho and Sam Ka Tsuen <-> Tung Lung Chau, respectively.
[2] No information is available from the operator. The averaged travelling speed of the ferry is referenced to the approved planning application A/K15/126 (i.e. 2.78m/s) and it has been adopted for assessment purpose. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, it is assumed that the kaito ferry is travelling under maneuvering mode within the assessment area for assessment purpose.
[3] TIM for hotelling is referenced to the approved planning application A/K15/126 (i.e. 5) and it has been adopted for assessment purpose.
[4] TIM for maneuvering is estimated based on the averaged speed of the ferry and the length of sailing route within 500m assessment area.

Emisson Factor for Marine Vessels

Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Vessel Type	Journey	Engine Type	Engine Power (kW) [1]	Loading Factor [2]		Time-In-Mode (min) [3]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [5]	NOx [4]	RSP [4]	FSP [4]
Sam Ka Tsuen <-> Sai Wan Ho											
Ferry	Departure	Main Engine	643	0.00	0.30	5	3.72	0.21	10.00	0.30	0.29
		Auxiliary Engine	66	0.43	0.43	5	3.72	0.21	10.00	0.40	0.39
	Arrival	Main Engine	643	0.00	0.30	5	3.72	0.21	10.00	0.30	0.29
		Auxiliary Engine	66	0.43	0.43	5	3.72	0.21	10.00	0.40	0.39
Sam Ka Tsuen <-> Tung Lung Chau											
Ferry	Departure	Main Engine	643	0.00	0.30	5	0.59	0.21	10.00	0.30	0.29
		Auxiliary Engine	66	0.43	0.43	5	0.59	0.21	10.00	0.40	0.39
	Arrival	Main Engine	643	0.00	0.30	5	0.59	0.21	10.00	0.30	0.29
		Auxiliary Engine	66	0.43	0.43	5	0.59	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine - No information from operator is available. Referenced to "Other Vessel" (GRT 0-499) in Table 4-5 of the Study on Marine Vessels Emissions Inventory, February 2012.
Engine Power for Auxiliary Engine - No information from operator is available. Referenced to "Others" in Table 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012.
[2] Loading Factor for Main Engine - No information from operator is available. Reference to "All except tug" in Table 4-7 of the Study on Marine Vessels Emissions Inventory, February 2012.
Loading Factor for Auxiliary Engine - No information from operator is available. Reference to "All RTVs" in Table 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012.
[3] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Marine Vessels
[4] Emission Factor for the Propulsion Engine & Auxiliary Engine of Ferry - No information from operator is available. As a conservative approach, the emission factors for river-trade vessels from Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012 are adopted.
[5] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh

Detailed Emission Rate

Vessel Type	Journey	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
Sam Ka Tsuen <-> Sai Wan Ho										
Ferry	Departure	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.48E-03	1.20E-01	3.59E-03	3.47E-03
		Auxiliary Engine	4.91E-04	2.37E-02	9.46E-04	9.22E-04	3.65E-04	1.76E-02	7.03E-04	6.86E-04
	Arrival	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.48E-03	1.20E-01	3.59E-03	3.47E-03
		Auxiliary Engine	4.91E-04	2.37E-02	9.46E-04	9.22E-04	3.65E-04	1.76E-02	7.03E-04	6.86E-04
Sam Ka Tsuen <-> Tung Lung Chau										
Ferry	Departure	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	3.97E-04	1.91E-02	5.73E-04	5.54E-04
		Auxiliary Engine	4.91E-04	2.37E-02	9.46E-04	9.22E-04	5.84E-05	2.81E-03	1.12E-04	1.10E-04
	Arrival	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	3.97E-04	1.91E-02	5.73E-04	5.54E-04
		Auxiliary Engine	4.91E-04	2.37E-02	9.46E-04	9.22E-04	5.84E-05	2.81E-03	1.12E-04	1.10E-04

Note:
[1] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (66 x 0.43 x 10.0 x 3.72 / 60 / 1000)
= 0.0176 kg/hour

Notes:

(1) The daily schedule of the ferry service is reference to the operator's website (https://www.coralseaferryservice.com.hk/timetable); accessed on 9 March 2024.

(2) The hour of arrival is determined by the departure time and hotelling duration at Sai Wan Ho Public Ferry Pier as well as sailing time to arrive the pier.
e.g. If a ferry departs Sam Ka Tsuen Public Ferry Pier at 07:00 and the total sailing time to arrive the pier & hotelling time before departure is about 13 minutes according to "Calculations of TIM for Marine Vessel connecting Sam Ka Tsuen / Sai Wan Ho / Tung Lung Chau" as referenced from Appendix 3.7 of the approved planning application A/K15/121, it will arrive Sam Ka Tsuen Public Ferry at 06:47. Hour 6-7 is then adopted as the arrival hour of the ferry.

(3) The hour of departure is the hour the ferry departs at Sam Ka Tsuen Public Pier.

Notes:

(1) The daily schedule of the ferry service is reference to the operator's website (https://www.coralseaferryservice.com.hk/timetable); accessed on 9 March 2024.

(2) The ferry services between Sam Ka Tsuen and Tung Lung Island are only provided on Saturday, Sunday & public holidays.

(3) The hour of departure is the hour the ferry departs at Sam Ka Tsuen Public Pier.

Appendix 2.5 Calculation of Fishing Vessel Emissions and Visiting Frequencies

Calculations of Time-In-Mode (TIM) for Fishing Vessels

Vessel Type	Journey	Length of Sailing Route (m) [1]	Design Speed (m/s)	Averaged Travelling Speed (m/s) [2]	Time-In-Mode (min) [3][4]	
				Maneuvering	Hotelling [3]	Slow Cruise [4]
Ferry	Departure	452.2	NA	4.12	60	1.83
	Arrival	452.2	NA	4.12	60	1.83

Notes:
[1] Length of sailing route within 500m assessment area.
[2] Averaged travelling speed of the fishing vessel was referenced AIS Marine traffic (http://www.marinetraffic.com/). The speed of the fishing vessels range from 8.2 to 10.2knots. 8 knotes (4.12m3/h) is adopted as a conservative assumption due to the longest TIM resulted. As the design speed of the fish vessel is not available, it is assumed the vessels will be sailing under its maximum speed. Therefore, the vessel is assumed travelling under slow cruise mode within the assessment for assessment purpose.
[3] TIM for hotelling is assumed as continuous operation (i.e. 60 mins) per hour as a conservative assumption.
[4] TIM for cruising is estimated based on the averaged speed of the ferry and the length of sailing route within 500m assessment area.

Emisson Factor for Marine Vessels

Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Vessel Type	Journey	Engine Type	Engine Power (kW) [1]	Loading Factor [2]		Time-In-Mode (min) [3]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [5]	NOx [4]	RSP [4]	FSP [4]
Ferry	Departure	Main Engine	250	0.00	0.45	60	1.83	0.21	10.00	0.30	0.29
		Auxiliary Engine	83	0.43	0.43	60	1.83	0.21	10.00	0.40	0.39
	Arrival	Main Engine	250	0.00	0.45	60	1.83	0.21	10.00	0.30	0.29
		Auxiliary Engine	83	0.43	0.43	60	1.83	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine - No information from operator is available. Referenced to "Other Vessel" (GRT 0-499) in Table 4-5 of the Study on Marine Vessels Emissions Inventory, February 2012.
Engine Power for Auxiliary Engine - No information from operator is available. Referenced to "Others" in Table 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012.
[2] Loading Factor for Main Engine - No information from operator is available. Reference to "All except tug" in Table 4-7 of the Study on Marine Vessels Emissions Inventory, February 2012.
Loading Factor for Auxiliary Engine - No information from operator is available. Reference to "All RTVs" in Table 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012.
[3] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Fishing Vessel
[4] Emission Factor for the Propulsion Engine & Auxiliary Engine of Ferry - No information from operator is available. As a conservative approach, the emission factors for river-trade vessels from Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012 are adopted.
[5] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh

Detailed Emission Rate

Vessel Type	Journey	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
Ferry	Departure	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	7.13E-04	3.43E-02	1.03E-03	9.95E-04
		Auxiliary Engine	7.42E-03	3.57E-01	1.43E-02	1.39E-02	2.26E-04	1.09E-02	4.35E-04	4.24E-04
	Arrival	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	7.13E-04	3.43E-02	1.03E-03	9.95E-04
		Auxiliary Engine	7.42E-03	3.57E-01	1.43E-02	1.39E-02	2.26E-04	1.09E-02	4.35E-04	4.24E-04

Note:
[1] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (66 x 0.43 x 10.0 x 3.72 / 60 / 1000)
= 0.0176 kg/hour

Notes:
1. The schedule of fishing vessels is made referenced to the approved S16 application for Proposed Residential Development in "Comprehensive Development Area (4)" Zone and "Road" at No. 18 Tung Yuen Street, Cha Kwo Ling Yau Tong, Kowloon (A/K15/121). AFCD advised that the maximum number of fishing vessels berthing can be up to 16 at 07:00 to 12:00. For assessment purposes, it is assumed that there would be 16 and 2 fishing vessels (i.e. 2 vessels for night-berthing as there would be 2 arriving / departing according to AFCD) berthing at the market during the morning and night periods, respectively.

Appendix 2.6 Extracts from Approved Planning Application A/K15/121 - Emission Rates and Visiting Frequencies of Planned Local Vessels

Emission Inventory (Marine Emission from Lei Yue Mun Enhancement Project)

Notes:
[1] Information referenced from approved EIA for Lei Yue Mun Waterfront Enhancement Project (AEIAR-219/2018).
[2] With reference to approved EIA for Lei Yue Mun Waterfront Enhancement Project (AEIAR-219/2018), the operation of the Project will commence in Q1 2023. As a conservative assumption, emission contribution from the Project is included for the Year 2022.

Daily Profile (Marine Emission from Lei Yue Mun Enhancement Project)

Hour		Number of Vessel per hour							
		Local Vessel		SKT Ferry to/from LYM New Landing Facility		Tour Vessel to/from LYM New Landing Facility		Governemnt Vessel to/from LYM New Landing Facility

Appendix 2.7 Calculation of Cruise Terminal Emissions and Year 2024 Cruise Schedule

Derivation of Emission Rates and Inventory of 4km Major Point Source (Tier 3)

Marine Emission from Cruises at Kai Tak Cruise Terminal

Emission Factors for Cruises

Cruises	Engine Type	Engine Power kW	Loading Factor [5]	Emission Factor (g/kWh) [6]		
			Hotelling	NOx	RSP	FSP
Spectrum of the Seas	Main Engine [1]	67200	0	13.20	0.31	0.29
	Auxiliary Engine [3]	18682	0.416	13.90	0.32	0.29
	Boiler [4]	1000	1	2.00	0.19	0.14
Costa Serena	Main Engine [2]	75600	0	13.20	0.31	0.29
	Auxiliary Engine [3]	21017	0.416	13.90	0.32	0.29
	Boiler [4]	1000	1	2.00	0.19	0.14

Note:

[1] Engine Power for the Main Engine of Spectrum of the Seas is referenced from website https://en.wikipedia.org/wiki/Spectrum_of_the_Seas

[2] Engine Power for the Main Engine of Costa Serena is referenced from website https://www.fincantieri.com/globalassets/prodotti-servizi/navi-da-crociera/costa/scheda_costa_concordia_serena_pacifica.pdf

[3] Engine Power for the Auxiliary Engine - According to Table 3-20 of the Study on Marine Vessels Emissions Inventory, February 2012, the ratio of the engine power for the Auxiliary Engine is equal to 0.278 of the engine power of the Main Engine.

[4] Engine Power for the Boiler - According to Table 3-23 of the Study of Marine Vessels Emissions Inventory, February 2012, the engine power for the boiler of the Cruise with the passenger carrying capacity >= 2600 is adopted as the passenger carrying capacity of Costa Serena (https://www.fincantieri.com/globalassets/prodotti-servizi/navi-da-crociera/costa/scheda_costa_concordia_serena_pacifica.pdf) and Spectrum of the Seas (https://en.wikipedia.org/wiki/Spectrum_of_the_Seas) are 4890 and 4905, respectively.

[5] Loading Factor for the Main Engine - Table 3-18 of the Study on Marine Vessels Emissions Inventory, February 2012 is referred.
Loading Factor for the Auxiliary Engine - Table 3-21 of the Study on Marine Vessels Emissions Inventory, February 2012 is referred.
Loading Factor for the Boiler - 100% of loading is assumed as a conservative approach.

[6] According to the Air Pollution Control (Fuel for Vessels) Regulation, starting from 1 January 2019, all vessels except for specified vessel types as set out in the Regulation, are required to use low sulphur marine fuel (i.e. with sulphur content no exceeding 0.5% by weight).

- Emission Factor for the Main Engine - According to Table 3-27 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the engine type of Medium Speed Diesel engine and use of marine gas oil with 0.5% sulphur content).
- Emission Factor for the Auxiliary Engine - According to Table 3-28 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the use of of marine gas oil with 0.5% sulphur content).
- Emission Factor for the Boiler - According to Table 3-29 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the use of marine gas oil with 0.5% sulphur content).

Emission Rate (Hotelling)

Emission Rate = Engine Power x Loading Factor x Emission Factor

Cruises	Air Pollutants	Emission Rate (kg/hr)				Emission Rate for 60 mins within an hour (g/s) [1]
		Main Engine	Auxiliary Engine	Boiler	Total	
Spectrum of the Seas	NOx	0.00	108.02	2	110.02	30.56
	RSP	0.00	2.49	0.19	2.68	0.74
	FSP	0.00	2.25	0.14	2.39	0.66
Costa Serena	NOx	0.00	121.53	2	123.53	34.31
	RSP	0.00	2.80	0.19	2.99	0.83
	FSP	0.00	2.54	0.14	2.68	0.74

Note:

[1] As there is no emission factor for TSP in the Study of Marine Vessels Emissions Inventory, February 2012, the emisison rate of TSP is derived from the ratio between all PM and PM10 (55% of all PM is PM10), referenced from USEPA AP-42, 5th ed. 8/04 ed., Section 1.3, Table 1.3-7 Cumulative Particle Size Distribution and Size-specific Emission Factors Uncontrolled Commercial Boilers Burning Residual Or Distillate Oil.

Note:

1. Please refer to "Calculations of Emission Sources within Concrete Batching Plant (CBP)" for details.
2. Please refer to "Calculations of Emission Factor for Paved Road within Concrete Batching Plant (CBP)" for details.

Wind Erosion of Sand Barge - Area Source

Description [1] [2]	ID	X	Y	RSP	FSP	Release Height	X length	Y length	Source Angle	Plume Height	Operation Hours
				g/s-m^2	g/s-m^2	mAG	m	m	degree clockwise from N.	m	
China Concrete Co. Ltd.	SB01	842232.7	816960.7	1.27E-06	1.89E-07	1.5	20	50	46	0	Full day
HK Concrete Co. Ltd.	SB02	842214.2	816979.4	1.27E-06	1.89E-07	1.5	20	50	46	0	Full day
Redland Concrete Ltd.	SB04	842026.2	817196.7	1.27E-06	1.89E-07	1.5	20	50	71	0	Full day

Notes:

1. All parameters of Wind Erosion of Sand Barge of concrete batching plants are referenced to the approved S16 application for Proposed Residential Development in "Comprehensive Development Area (4)" Zone and "Road" at No. 18 Tung Yuen Street, Cha Kwo Ling Yau Tong, Kowloon (A/K15/121) (extracted in Appendix 2.3).
2. Mean Sea Level is 1.5m, referenced to 2016 data of Hong Kong Observatory.
3. Details of RSP and FSP emission rates were shown in "Calculations of Emission Factor for Wind Erosion within Concrete Batching Plant (CBP)".

Yau Tong Bay Sand Depot - Point Source

Description [1] [2]	ID	X	Y	RSP	FSP	Release Height [1]	Exit Temp [1]	Area (4)	Approximate Air Flow Volume of Dust Collector	Discharge rate at Exit Temp. (2)	Exit Velocity (3)	Equiv. Stack dia. (5)	Operation Hours
				g/s-m^2	g/s-m^2	mAG	K	m^2	**m^3/h**	**m^3/s**	m/s	m	
Berthing Emission from Barge	YTBEP1	842292.8	817633.0	2.39E-03	2.33E-03	15.0	803.0	0.07	2,036	0.57	8.0	0.30	0700-1900
Berthing Emission from Derrick Lighter	YTBEP2	842291.8	817615.2	1.29E-02	1.26E-02	9.0	795.0	0.02	509	0.14	8.0	0.15	

Notes:

1. Referenced from Appendix A1 of VEP-627/2023, Fill Bank at Tseung Kwan O Area 137.
2. The discharge rate is calculated by Area * Exit Velocity
3. Exit velocity referenced from Appendix A1 of VEP-627/2023, Fill Bank at Tseung Kwan O Area 137.
4. Area is calculated by πr^2
5. The stack diameter is referenced from Appendix A1 of VEP-627/2023, Fill Bank at Tseung Kwan O Area 137.

Wind Erosion at Yau Tong Bay Sand Depot - Area Source

Description [1] [2]	ID	X	Y	RSP	FSP	Release Height	X length	Y length	Source Angle	Plume Height	Operation Hours
				g/s-m^2	g/s-m^2	mAG	m	m	degree clockwise from N.	m	
Wind Erosion at Yau Tong Bay Sand Depot	WE01	842334.3	817646.9	1.27E-06	1.94E-07	0.5	21	48	63	0	Full day

Note:

1. Please refer to "Calculation of Emission factor for Berthing Emissions from Barge (Sand Depot)" for details.

Input Parameters of Marine Emission Sources in AERMOD

Marine Emission - Passenger Ferry (Sam Ka Tsuen <-> Tung Lung Island)

Description [1] [2]	ID	Source Type	X	Y	SO2	NOx	RSP	FSP	Exit Temperature	Exit Velocity	Internal diameter	Release Height	Operation Hours

Notes:
1. All parameters including emission rates of planned local vessels are referenced to approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121).

Input Parameters of Major Point Sources in AERMOD

Major Point Sources within 4km Assessment Area - Cruise Vessels at Kai Tak Cruise Terminal

Description [1] [2] [3]	ID	Type	X	Y	SO2	NOx	RSP	FSP	Exit Temperature	Exit Velocity	Internal diameter	Release Height	Operation Hours
					g/s	g/s	g/s	g/s	K	m/s	m	mAG	
Hotelling of Spectrum of the Seas	H1	Point	839744	818698	5.36	30.56	0.74	0.66	537	24.6	1.9	63.2 [1]	Full day
Hotelling of Costa Serena	H2	Point	840021	818427	5.93	34.31	0.83	0.74	537	24.6	1.9	62 [2]	

Notes:

1. The emission height of the chimney of Spectrum of the Seas is estimated based on the website (https://zh.wikipedia.org/wiki/%E6%B5%B7%E6%B4%8B%E5%85%89%E8%AD%9C%E8%99%9F#%E5%A4%96%E9%83%A8%E9%93%BE%E6%8E%A5). The estimated height is about 63.2m (above water surface).

2. The emission height of the chimney of Costa Serena is estimated based on the observation. The estimated height is about 60m (above water surface) which is close to the height of the Post-Panamax (62m above water surface) as stated in the Approved EIA Report for Kai Tak Development. Therefore, the height of 62m above water surface has been adopted for the assessment.

Note:

1. Shaded cell in orange denotes the predicted air quality exceeds the relevant HKAQOs.
2. Bolded cell denotes the largest value.

Note:

Due to the erected concrete block wall at the northeast side of KTFM, release height is set at 3m, which is the worst-case scenario for the proposed residential development comprising residential units starting from 9m above ground.

Appendix 2.16 Predicted Odour Impact Assessment Results

Note:

1. Shaded cell in orange denotes the predicted air quality exceeds the relevant HKAQOs.
2. Bolded cell denotes the largest value.

1. INTRODUCTION

1.1 Project Background

1.1.1 The Subject Site is situated at Yau Tong Marine Lot No.70. The Site is zoned as "Residential (Group E)" (R(E)) under the approved Cha Kwo Ling, Yau Tong, Lei Yue Mun OZP S/K15/27.

1.1.2 Ramboll Hong Kong Limited has been commissioned by the project proponent to undertake an Air Ventilation Assessment (AVA) for the Subject Sites in support of the lease application.

1.2 Objectives

1.2.1 This AVA contains a quantitative Computational Fluid Dynamics (CFD) assessment of the potential ventilation impact of the proposed building design on the future pedestrian wind environment.

1.3 Subject Site and its Environs

1.3.1 The Subject Site covers an area of about 2,419 m^2 and currently occupied by Wah Tung Godown Building.

1.3.2 The Subject Site is located at a harbourfront site and bounded by Tung Yuen Street to the east. Tung Yuen Street runs from northwest to the southeast immediate northeast of the Site. Yau Tong Sewage Pumping Station is located to the immediate northwest of the Site. Ko Fai Road is located to the further north. A concrete batching plant ran by Redland Concrete Ltd. is located to the immediate south of the Site. The Coast Line I, which is a residential development under construction, is located to the further south of the Site; while the Coast Line II is located east of the Site, opposite site of the Tung Yuen Street. Future high-rise developments are planned to be developed along the water front of the Yau Tong Bay. In general, the surrounding area is dominated by industrial and residential developments.

1.3.3 **Figure 1** shows the location and the environs of the Subject Site.

1.4 Future/ Committed Development

1.4.1 The following future/ committed developments have been considered in this study. **Figure 3** illustrates the location and building blocks of these developments which have been included in the CFD simulation.

1. Planning Application A/K15/112 and 130
2. The Coast Line I & II
3. Planning Application A/K15/126
4. Planning Application A/K15/121
5. Montego Bay
6. Planning Application A/K15/90
7. Planning Application A/K15/129
8. Planning Application A/K15/127

1.5 Baseline Scheme

1.5.1 The Baseline Scheme adopts existing site condition in the quantitative assessment, i.e. one seven-storey industrial building which extent cover the whole Site without any setback from site boundary.

1.5.2 **Appendix 1** shows the layout plan of the Baseline Scheme from Common Spatial Data Infrastructure (CSDI) of Lands Department.

1.6 Proposed Scheme

1.6.1 **Appendix 2** shows the Master Layout Plan (MLP) of the Proposed Scheme.

1.6.2 The Proposed Scheme consists of one residential tower, which is situated atop a three-storey podium. The podium is for accommodation for retail and clubhouse.

1.6.3 The overall layout of the residential tower forms an L shape. The inland portion of the Proposed Scheme, positioned along Tung Yuen Street, has an elevation of 100mPD, while the residential band towards the waterfront promenade is oriented in a west-east direction and is slightly lower at 80mPD.

1.6.4 The Proposed Scheme includes a 5m-wide public passageway on the ground floor, connecting the Tung Yuen Street to the promenade in a west-east direction. Additionally, there is a 15m-wide setback from the Proposed Scheme to the western site boundary at the waterfront promenade.

2. SITE WIND AVAILABILITY

2.1 Site Wind Availability Data

2.1.1 According to the Planning Department's website, a meso-scale Regional Atmospheric Modeling System (RAMS) was used to produce a simulated 10-year wind climate at the horizontal resolution of 0.5 km x 0.5 km covering the whole territory of Hong Kong. The simulated wind data represents the annual, winter and summer wind conditions at various levels, i.e. 200 m, 300 m, and 500 m above terrain.

2.1.2 It is considered an acceptable starting point to use the simulated RAMS data for Site wind availability. The use of RAMS data (grid: X;092, Y:037) is preferred over measurement data at Waglan Island as it can reflect the effect of topography to wind availability.

2.1.3 The relevant annual windrose for the district under concern has been extracted from the Planning Department's website for Subject Sites wind availability data. **Figure 5** shows the relevant windrose diagram (at 500 m) representing the frequency and wind speed distribution of the district concerned for both summer and annual conditions. The simulated windroses show that the annual prevailing is coming from E direction (20.5%) with contributions from ENE (15.0%); while the summer prevailing is coming from SW direction (14.5%) with contributions from SSW (11.7%). In this quantitative AVA, a CFD software has been used. According to the *Technical Guide*, simplification of wind data for the initial study has been adopted. The wind directions with highest probability of occurrence are selected for AVA purposes. 8 most frequently occurred prevailing wind directions were selected for both annual and summer conditions with overall frequency of occurrence equivalent to 77.6% and 79.3% respectively of the time in a year.

2.1.4 **Table 2.1** summarizes the simulated wind availability data including probability of occurrence.

Table 2.1 Summary of RAMS Data and Wind Direction

Wind Direction	Probability for Annual Condition (%)	Probability for Summer Condition (%)
N	2.7	0.9
NNE	5.5	1.1
NE	8.3	1.6
ENE	15.0	3.3
E	20.5	8.9
ESE	10.7	9.0
SE	6.2	7.3
SSE	4.2	8.0
S	4.5	10.4
SSW	5.4	11.7
SW	6.0	14.5
WSW	3.8	9.5
W	3.0	6.8
WNW	1.5	3.0
NW	1.3	2.5

Wind Direction	Probability for Annual Condition (%)	Probability for Summer Condition (%)
NNW	1.1	1.0

2.2 Topography and Building Morphology

Topography

2.2.1 The Subject Site is located at Yau Tong Area. Lei Yue Mun and Victoria Harbour are located to the south and west of Yau Tong Area respectively. Kwun Tong Tsai Wan is located to the north. Devil's Peak, with an elevation at about 200mPD is located to the further east of the Subject Site.

2.2.2 The terrain in the immediate vicinity of the Subject Site is rather flat with hilly terrain (Devil's Peak) from approximately 1 km to the east. On the other hand, the terrain height is gradually increased towards inland, i.e. from Tung Yuen Street to Shung Yiu Street.

2.2.3 Although the influence of local topography to the wind flow pattern around the Subject Site is minimal, the Subject Site is surrounded by a number of existing and planned developments in all most all directions. As such, the wind flow pattern in the vicinity would be influenced by these surrounding built environments. Since Lei Yue Mun and Victoria Harbour are located to the south and west of the Subject Site and sea breeze would be the dominant wind in summer condition. South to west prevailing wind towards the Subject Site is currently unobstructed and the wind availability is considered to be optimal.

Building Morphology

2.2.4 The Subject Site is surrounded by a number of existing and planned developments, such as The Coast Line 1 at 80mPD to the south and Peninsula East at 148mPD to the east. Coast Line II at 100mPD is also located further east of the Site. The planned residential developments at ~ 70 to 100 mPD along the water front of Yau Tong Bay is located further north of the site. Since surrounding buildings are already closely located, it is generally considered to be unfavourable for wind penetration. Under such circumstances, most wind could only skim over the low or mid-rises developments such as podium of developments of the existing low-rise industrial buildings, or flow along carriageways at pedestrian level rather than through the building gaps. Since the frontage of the inland portion of the Proposed Scheme is slightly wide, it is likely slightly block incoming wind to its surrounding area. Nevertheless, the public passageway allows penetration of summer prevailing wind such as WSW direction.

2.2.5 **Table 2.2** highlights the building height of the nearby developments.

Table.2 Surrounding Developments

Name of Development	Max. Building Height (mPD)	Location from Site
The Coast Line I	80	South
The Coast Line II	100	Southeast
Planning Application A/K15/126	80-100	Southeast
Peninsula East	148	East
Gloria Weaving & Knitting Factory Ltd	30	Northeast

Name of Development	Max. Building Height (mPD)	Location from Site
Union Industrial Building	~31	Northeast
Yau Tong Sewage Pumping Station	~10	North
Planning Application A/K15/112 and 130	T1: 72 T2: 81.5 T3: 91.1 T4: 100.7	North/ Northeast
Planning Application A/K15/129	120	Southeast

3. QUANTITATIVE ASSESSMENT METHODOLOGY

3.1 Atmospheric Conditions

3.1.1 Simulated wind profile curves are extracted from the Planning Department's website using RAMS site wind availability data and is directly adopted for this quantitative AVA. **Figure 6** shows the wind profile curves for grid X:092, Y:037.

3.1.2 Wind profile curves (i.e. approach condition from the detail study) 0, 1, and 2 would be utilized for quantitative AVA according to the selected wind directions in **Table 2.1**.

3.1.3 For elevation from 0 to 10 m where wind profile information is not available, the wind speed is assumed based on fitted Log Law and measured wind speed value at 10 m from the RAMS Site wind availability data for each wind profile curve.

3.1.4 The wind profile of 0 m to 10 m is interpolated and then combined with the wind profile curves on RAMS site wind availability data.

3.2 CFD Code and Major Parameters

3.2.1 A quantitative assessment based on the requirement for Initial Study stipulated in the relevant Technical Guide has been conducted for the purpose of comparing the air ventilation performance between the Proposed and the Baseline Schemes.

3.2.2 The quantitative assessment is conducted by using a commercial CFD code, FLUENT. FLUENT model has been widely applied for various AVA research and studies worldwide. The accuracy level of the FLUENT model is well-accepted by the industry for AVA application.

3.2.3 Realizable K-epsilon turbulence providing better prediction of separation and vortexes has been adopted for air ventilation assessment as recommended in COST action C14.

3.2.4 Generally, the assessment area is determined by the height (H) of the highest building within the surrounding area (i.e. The Spectacle with a building height of around 150mPD).

3.2.5 The domain covers the model area of over 300m. The surrounding area is determined by 2 times the height of the highest building within the model area which is equivalent to at least 2H of the highest building (i.e. >2H where H=150 m) from the Project Site boundary. It is confirmed that all major noise barriers, elevated structures, and planned / committed / existing developments in the model area have been modelled in the simulation. **Figure 1** indicates the assessment area and the surrounding area of the CFD model.

3.2.6 The domain dimension is about 5200m x 5400m and with an elevation of 1700m. More than 6,400,000 grid cells have been defined to simulate the air flow. Given the large domain adopted in this assessment and the physical limitation on the computational resources of the CFD model, the horizontal and vertical grid size employed in the CFD model in the vicinity of the Project Area is taken as a global minimum size of 2m, and the size of the grid cells further away from the Project Area is increased by a growth ratio of 1.3. The global maximum size of cells is 32m while smaller cells size of 0.5m were used. Besides, four layers of prism cells (each layer of 0.5m thickness) are employed above the terrain of Subject Sites. The blockage ratio is less than 3%.

3.2.7 The windward boundary is defined as inflow with the wind profile defined. The leeward boundary is defined as outflow. The sky and lateral boundaries are defined as a symmetric boundary condition.

3.2.8 **Appendix 3** shows the domain size and the CFD model in different views.

3.2.9 The advection terms of the momentum and viscous terms are resolved with the second order numerical schemes. The scaled residuals are converged to an order of magnitude of at least 1 x 10-4 as recommended in COST action C14.

3.3 Important Areas

3.3.1 For the proposed development, important surrounding areas that the public would often access have been identified as follows:

(1) Ko Fai Road

(2) Shung Tai Wai

(3) Tung Yuen Street

(4) Shung Wo Path

(5) Shung Yiu Street

(6) Waterfront Promenade

(7) The Coast Line I

(8) The Coast Line II

(9) Peninsula East

(10) Approved Application No. A/K15/130

(11) Approved Application No. A/K15/126

3.4 Test Point Location

3.4.1 A total of 104 test points (including 30 numbers of perimeter test points defined along the boundary of the Subject Sites, 53 numbers of overall test points within the assessment area and 21 number of special test points) have been selected. The overall test point generally represents important pedestrian areas which are listed in **Section 3.3** above. All test points are located at 2m above ground level. **Figure 7** shows the test points selected for quantitative air ventilation assessment.

4. KEY FINDINGS

4.1 Spatial Average Wind Velocity Ratios

4.1.1 The velocity ratio under a specific wind direction at a test point is calculated by dividing the simulated wind speed at the test point under a certain wind direction by the velocity at gradient height under the same wind direction. All test points are located at 2m above ground level.

4.1.2 **Table 4.1** shows the Subject Sites spatial average velocity ratio (SVR), local spatial average velocity ratio (LVR), and average wind velocity ratio along surrounding sensitive area during annual condition and summer condition (for the Proposed Scheme (PS) and Baseline Scheme (BS)).

4.1.3 **Appendix 6** shows the detailed simulation results of the Proposed Scheme and the Baseline Scheme.

Table 4.1 Summary of Spatial Average Wind Velocity Ratios (VR) – Annual and Summer Condition

Location	Test Point	Annual Condition		Summer Condition	
		BS	PS	BS	PS
SVR	P01-P30	0.07	**0.10**	0.10	**0.18**
LVR	P01-P30, T01-T55	0.14	0.14	0.16	**0.20**
Ko Fai Road	T01-T13	0.19	**0.20**	0.24	**0.27**
Shung Tai Wai	T14-T19	**0.19**	0.15	**0.18**	0.17
Tung Yuen Street	T05, T20-T30, T54-55 P12, P16, P20	0.13	**0.14**	0.19	**0.21**
Shung Yiu Street	T37, T40-T44	**0.19**	0.18	**0.16**	0.15
Waterfront Promenade	T45-T53	**0.19**	0.18	0.19	0.19

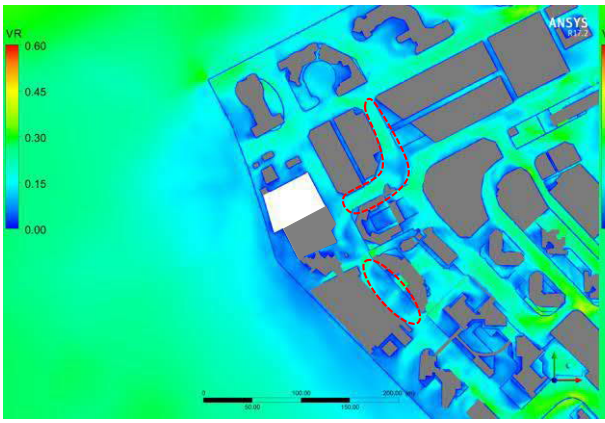
Approved Application No. A/K15/130	S13- S16	0.17	0.17	0.16	0.16

Note: Highlighted in **red** where VR is higher in the Proposed Scheme

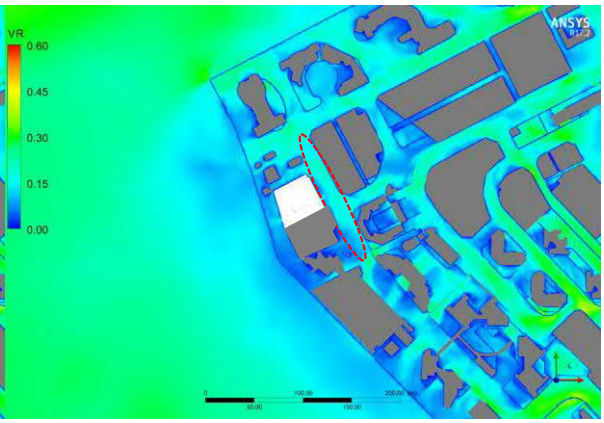
Highlighted in **blue** where VR is higher in the Baseline Scheme

4.2 Discussion on Air Ventilation Performance



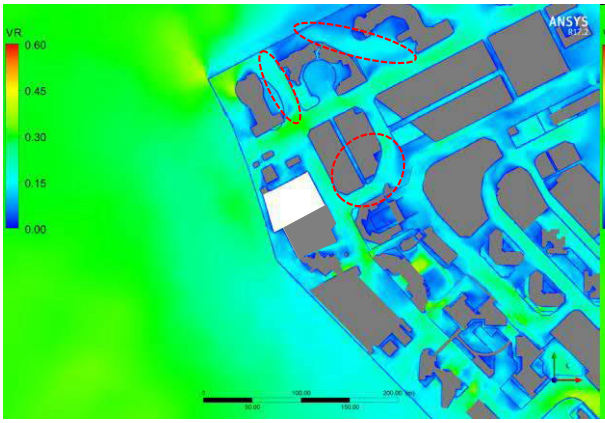
Discussion for VR Table

4.2.1 According to **Table 4.1** above, it is noted that the SVR and LVR are better in the Proposed Scheme under both annual and summer conditions. The large increment of SVR in the Proposed Scheme is due to the reduced footprint of the building blocks such as the 5m public passage to promenade and 15m promenade. Similarly, the higher LVR in the Proposed Scheme is owing to the large increment of VR of perimeter test points. It is believed that the Proposed Scheme has comparable VR of overall test points with the Baseline Scheme.

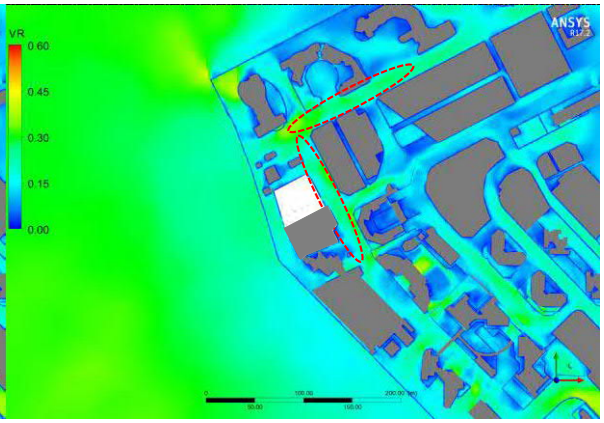


4.2.2 There are some variations between the Baseline Scheme and Proposed Scheme. The VR is higher under the Proposed Scheme at Ko Fai Road (annual and summer condition), Tung Yuen Street (annual and summer condition) and Peninsula East (summer condition).

4.2.3 On the other hand, the VR is higher under the Baseline Scheme at Shung Tai Wai (annual and summer condition), Shung Yiu Street (annual and summer condition), Waterfront Promenade (annual condition), The Coast Line I (annual and summer condition), The Coast Line II (annual condition) and Peninsula East (annual condition).



4.2.4 Discussion for Weighted Average contour Plot



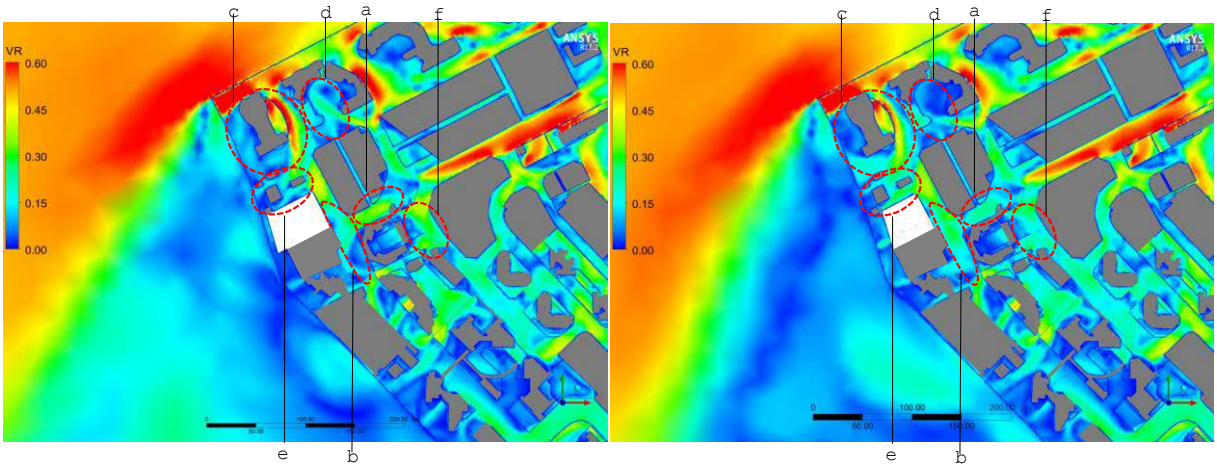
Annual Condition - Baseline Scheme

Annual Condition - Proposed Scheme

Summer Condition - Baseline Scheme

Summer Condition - Proposed Scheme

4.2.5 According to the weighted average contour plot, the ventilation performance of the Assessment Area (except the immediate area on the project site boundary) is likely to be similar between the Baseline Scheme and Proposed Scheme in annual condition and summer condition.



4.2.6 For the immediate area, as observed in the contours, Proposed Scheme would have lower VR at Shung Tak Wai, and some area within the Approved Application No. A/K15/130. Under the annual condition, the winds hit on the high level of the Proposed Development and flow from the proposed development across Tung Yuen Street, towards Shung Tak Wai. This downwash wind flow against the upcoming wind from Shung Tak Wai and create a turbulence at the southern portion of Shung Tak Wai, so a lower VR is observed in this area. While during the summer condition, flow from seaside flowing along the public passageway of the site would also counter the upcoming wind and induce wake area.

4.2.7 However, Tung Yuen Street portion to the east of the Subject Site has higher VR under the Proposed Scheme due to the downwash winds under the annual condition. The

high-level wind is captured by the proposed development and directed to the immediate pedestrian level, Tung Yuen Street. Under the summer condition, the 5m-wide public passage on the ground floor connects Tung Yuen Street to the promenade helping to divert more incoming seaside wind towards Tung Yuen Street.

4.3 Directional Analysis

Wind performance under wind direction of NNE

Contour plot for Baseline Scheme

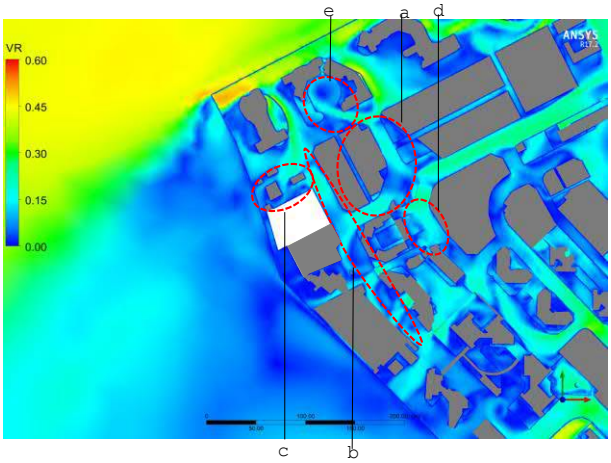
Contour plot for Proposed Scheme

4.3.1 According to the contour plots under NNE wind, the upcoming wind flows from the seaside. While the contour of the sea on the downwind side of the buildings differs between the two schemes, there are no sensitive receivers in the sea area. Consequently, the assessment area can remain unchanged.

a. The upcoming NNE wind from Shung Yiu Street hits on Union Industrial Building and is diverted towards two directions of Shung Tak Wai. Compared with the seven-storey block in the Baseline Scheme, the much higher residential tower in the Proposed Scheme captures high level wind and diverts it towards pedestrian level due to the downwash effect. This downwash wind flows towards Shung Tak Wai would counter with abovementioned upcoming wind. Thus, there is a slightly reduction in wind flow is observed at this portion of Shung Tak Wai under the Proposed Scheme.

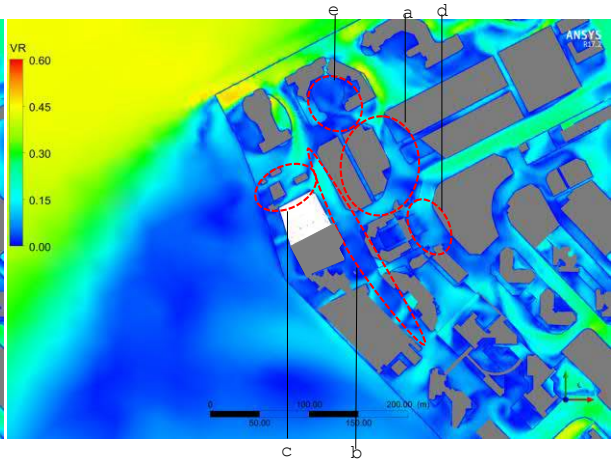
b. The higher residential towers under the Proposed Scheme capture the high-level wind and divert them towards two directions of Tung Yuen Street. The strong downwash wind improves the wind environment at Tung Yuen Street under the Proposed Scheme.

c. Under the Proposed Scheme, the strong downwash wind towards north along Tung Yuen Street counters with the upcoming wind from waterfront along the building separation within Approved Application No. A/K15/130. Therefore, the wind performance of the area at the above-mentioned building separation is slightly reduced in the Proposed Scheme. However, the wind performance at southern portion of the Approved Application is better and the waterfront area is slightly lower under the Proposed Scheme. From the vector, it is observed that more downwash wind is present at the southern tower of the Approved Application. This additional downwash wind may be due to the redirected wind from the Proposed Development. Some of NNE wind hits the Proposed Development and redirected towards north, then hit on the southern tower and flow towards the pedestrian level and benefit the surrounding areas.



d. Under the Proposed Scheme, the wind flow along Shung Tai Wai is slightly reduced. With a reduced wind, the wind flow from Shung Tai Wai towards the

T2 of Approved Application No. A/K15/130 is slightly reduced under the Proposed Scheme. Thus, the VR of T2 is lower under the Proposed Scheme.



e. Downwash wind caused by the Proposed Development continuously flows towards Yau Tong Sewage Pumping Station. The wind performance of Yau Tong Sewage Pumping Station is better under the Proposed Scheme.

f. The high-level wind collected by Peninsula East is diverted to the pedestrian level of Shung Yiu Street. The wake area at Shung Tai Wai may have impact on Shung Yiu Street and reduces the wind performance at Shung Yiu Street under the Proposed Scheme.

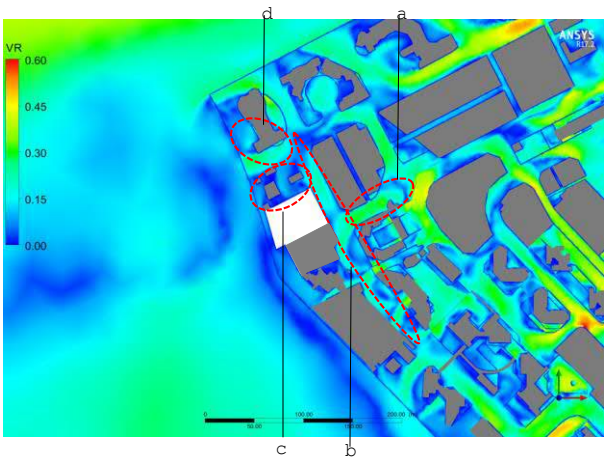
Wind performance under wind direction of NE

Contour plot for Baseline Scheme

Contour plot for Proposed Scheme

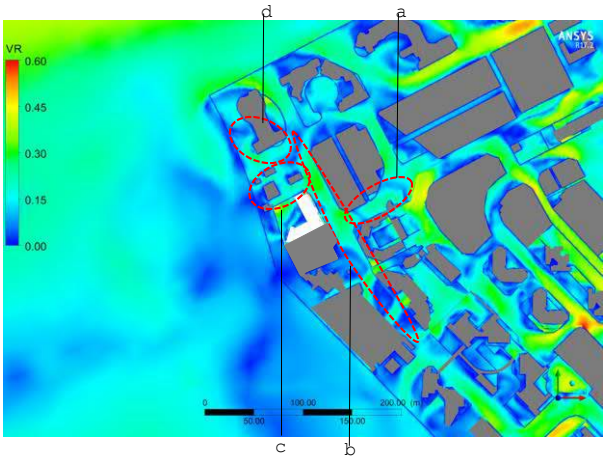
4.3.2 According to the contour plots under NE wind, the upcoming wind flows from the seaside. While the contour of the sea on the downwind side of the buildings differs between the two schemes, there are no sensitive receivers in the sea area. Consequently, the assessment area can remain unchanged.

a. The upcoming NE wind from Shung Yiu Street hits on Union Industrial Building and is diverted towards two directions of Shung Tak Wai. Compared with the seven-storey block in the Baseline Scheme, the much higher residential tower in the Proposed Scheme captures high level wind and diverts it towards pedestrian level due to the downwash effect. This downwash wind flows towards Shung Tak Wai would counter with abovementioned upcoming wind. Thus, lower VR is observed at Shung Tak Wai under the Proposed Scheme.



b. In the Baseline Scheme, the wind flow from Shung Tai Wai would be diverted towards north and south directions along Tung Yuen Street. While the higher residential towers under the Proposed Scheme cause downwash wind and divert it towards two directions of Tung Yuen Street. This downwash wind may counter the wind from the eastern portion of Tung Yuen Street. Therefore, from the contour plot, a lower VR along Tung Yuen Street is observed under the Proposed Scheme.

c. Downwash wind caused by the residential towers continuously flows towards Yau Tong Sewage Pumping Station. Therefore, a slightly better wind performance at north of the subject site is observed in the Proposed Scheme.



d. Under the Proposed Scheme, the wake area at Shung Tai Wai mentioned in point a) above may have impact on Shung Yiu Street and reduces its wind performance.

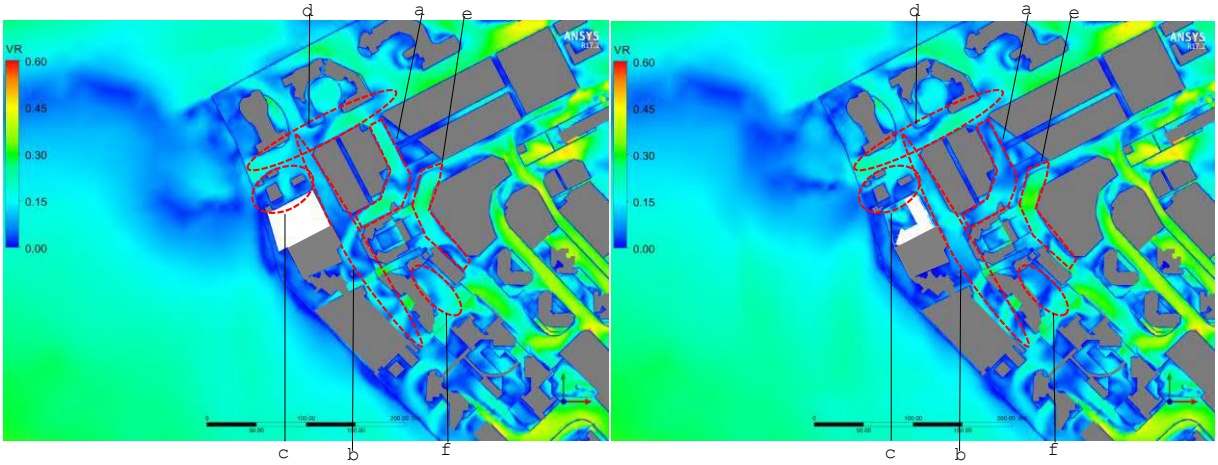
e. Under the Proposed Scheme, the wind flow along Shung Tai Wai is reduced. With a reduced wind, the wind flow from Shung Tai Wai towards the T2 of Approved Application No. A/K15/130 is slightly reduced under the Proposed Scheme. Thus, the VR of T2 is lower under the Proposed Scheme.

Wind performance under wind direction of ENE

Contour plot for Baseline Scheme

Contour plot for Proposed Scheme

4.3.3 According to the contour plots under ENE wind, the upcoming wind flows from the seaside as well as the streets aligned in ENE-WSW direction. While the contour of the sea on the downwind side of the buildings differs between the two schemes, there are no sensitive receivers in the sea area. Consequently, the assessment area can remain unchanged.



a. Compared with the seven-storey block in the Baseline Scheme, the much higher residential tower in the Proposed Scheme captures high level wind and diverts it towards pedestrian level due to the downwash effect. This downwash wind flows towards Shung Tak Wai and counters with the upcoming ENE wind. Thus, lower VR is observed at portion of Shung Tak Wai under the Proposed Scheme.

b. The higher residential towers under the Proposed Scheme capture high level wind and cause downwash wind and divert it towards two directions of Tung Yuen Street. As a result, the wind performance in the section of Tung Yuen Street north of The Coast Line II is slightly improved in the Proposed Scheme. However, unlike the Baseline Scheme, where winds from Shung Tak Wai are diverted south along Tung Yuen Street, the Proposed Scheme generates more downwash winds that also flow south. This change alters the wind patterns further south, specifically in the section of Tung Yuen Street between The Coast Line II and the Kwun Tong Wholesale Fish Market.

c. Downwash wind caused by the residential towers of the Proposed Scheme continuously flows towards Yau Tong Sewage Pumping Station. The VR of Yau Tong Sewage Pumping Station is higher under the Proposed Scheme.

d. The abovementioned downwash wind under the Proposed Scheme penetrates into Yau Tong Sewage Pumping Station and increases the VR around T1 of Approved Application No. A/K15/130.

Wind performance under wind direction of E

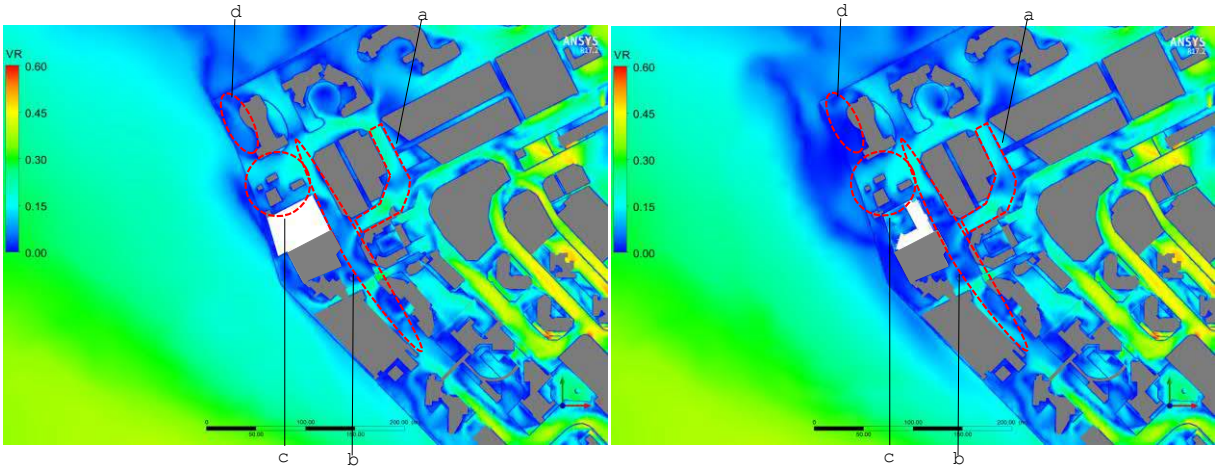
Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.4 According to the contour plots under E wind,

a. Compared with the seven-storey block in the Baseline Scheme, the much higher residential tower in the Proposed Scheme captures high level wind and diverts it towards pedestrian level due to the downwash effect. Part of this downwash wind flows towards Shung Tak Wai and counters with the upcoming wind from east. Thus, lower VR is observed at portion of Shung Tak Wai under the Proposed Scheme.

b. The higher residential towers under the Proposed Scheme cause downwash wind and divert it towards two directions of Tung Yuen Street. Thus, the wind performance along Tung Yuen Street, particular the area in front of the tower is better in the Proposed Scheme.

c. The upcoming E wind along Ko Fai Road hits on T1 of Approved Application No. A/K15/130 and is diverted towards south along Tung Yuen Street as well as Yau Tong Sewage Pumping Station. However, the downwash wind caused by the Proposed Scheme would be diverted towards west along the building separation between the Subject Site and Yau Tong Sewage Pumping Station. Therefore, the wind flow pattern at Yau Tong Sewage Pumping Station is different under the two schemes.



d. The upwind flows from east to west along Ko Fai Road. Since the wind flowing from Shung Tai Wai and Tung Yuen Street would also join Ko Fai Road, the wind patterns at Ko Fai Road are different under the two schemes due to the different wind environments at Shung Tai Wai as well as Tung Yuen Street.

e. The downwash wind caused by the Proposed Scheme towards Shung Tak Wai may have impact on the VR at Shung Yiu Street that the wind pattern at this street seems to be slightly different under the two schemes.

f. From the vector plot, under the Baseline Scheme, wind flows from east to west along the building separation between Peninsula East and The Coast Line II to

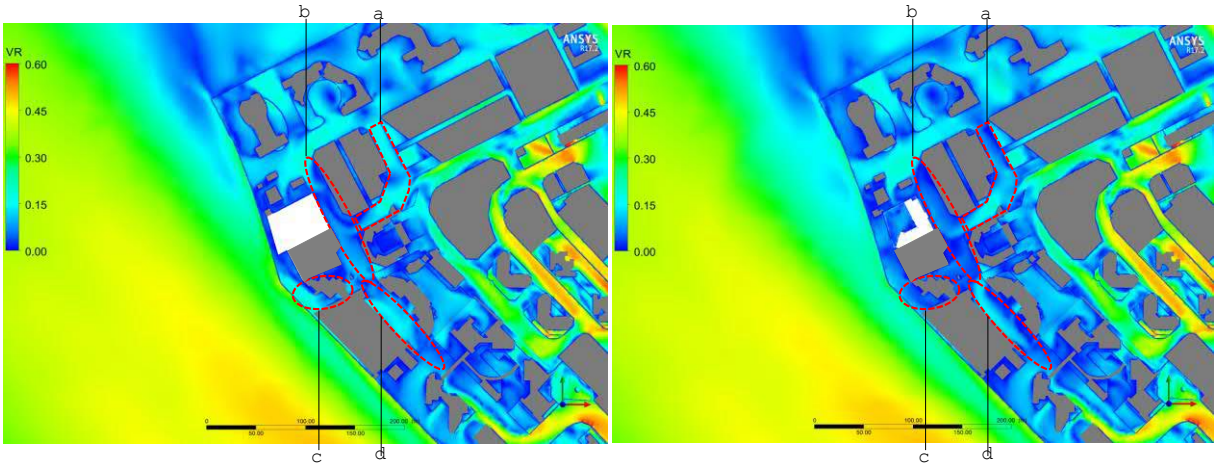
reach Tung Yuen Street. This flow will be rebounded towards the building separation between Tower 2A & 2B of Coast Line II and slightly improves the wind environment at Coast Line II. However, in the Proposed Scheme, this mentioned wind flow is likely to be diverted by the downwash wind from the Proposed Scheme. From the vector plot, no rebounded wind is observed and so there is less wind flowing towards the building separation between Tower 2A & 2B of The Coast Line II, thus the wind performance at the area behind the Coast Line II is reduced in comparing with that in the Baseline Scheme.

Wind performance under wind direction of ESE

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.5 According to the contour plots under ESE wind,

a. Compared with the seven-storey block in the Baseline Scheme, the much higher residential tower in the Proposed Scheme captures high level wind and diverts it towards pedestrian level due to the downwash effect. Part of this downwash wind flows towards Shung Tak Wai and counters with the upcoming wind from east. Thus, lower VR is observed at portion of Shung Tak Wai under the Proposed Scheme.



b. From the vector plots of both schemes, the upcoming ESE wind along Shung Yiu Street hits on Union Industrial Building and is diverted towards north along Shung Tak Wai. It continues along Ko Fai Road before entering Tung Yuen Street. In the Baseline Scheme, due to the longer façade along the northwestern boundary, the wind hits on the existing Wah Tung Godown Building and flow toward Tung Yuen Street, and this rediverted wind joins the flow direction of the upcoming ESE wind from the junction of the Ko Fai Road and Tung Yuen Street and flowing along Tung Yuen Street, as shown in the vector plot. However, in the Proposed Scheme, with the setback of the building and provision of the podium garden, from the vector plot, there is less rebounded wind flowing along the northwestern boundary, allowing more wind to flow directly along Tung Yuen Street. Consequently, the wind performance in the area—especially in front of the subject site—is slightly reduced.

c. Comparing to the Proposed Scheme, the northern building façade is slightly longer in the Baseline Scheme, which could divert more upcoming wind from Ko Fai Road to flow through Yau Tong Sewage Pumping Station along the building façade towards Tung Yuen Street. There is setback of the residential

tower and the podium garden in the Proposed Scheme, and part of the above-mentioned wind may flow into the podium garden instead of rebounding from façade of the existing godown to the sewage pumping station. Therefore, the VR of Yau Tong Sewage Pumping Station is slightly lower in the Proposed Scheme.

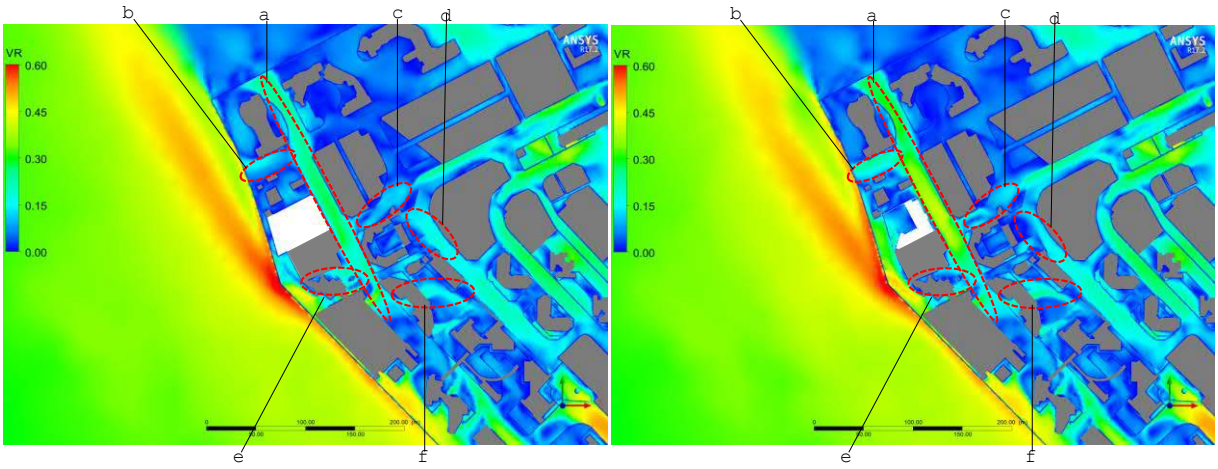
d. from the vector plots, the upcoming wind flows from the seaside to the north of Application no. A/K15/130 and reaches the area to the west of T1. The increased building height in the Proposed Scheme creates a larger wake area, which may affect the flow patterns in this region. As a result, the ventilation rate (VR) is lower to the west of T1 under the Proposed Scheme.

Wind performance under wind direction of SE

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.6 According to the contour plots under SE wind,

a. The upcoming SE wind along Shung Yiu Street hits on Union Industrial Building and is rebounded to flow along Shung Tak Wai towards two sides. Comparing to the seven-storey height block of the Baseline Scheme, higher residential tower of the Proposed Scheme could capture the high-level wind and divert it towards pedestrian level at Tung Yuen Street. This downwash wind counters with the wind flow along Shung Tak Wai. As such, slightly lower VR is observed at Shung Tak Wai under the Proposed Scheme.



b. The downwash wind from the Proposed Scheme will flow along Tung Yuen Street towards Ko Fai Road, as shown in the vector plot. The wind performance of Tung Yuen Street northeast of the Subject Site is therefore slightly better under the Proposed Scheme.

c. Under both schemes, the downwash wind captured by The Coast Line I merges with the upcoming wind from Kwun Tong Wholesale Fish Market to flow towards promenade area of The Coast Line I, as shown in the vector plots. The increased building height of the Proposed Scheme causes downwash winds which may interact with the abovementioned wind flow within The Coast Line I and reduces the wind performance in this promenade area.

d. From the vector plot, under the Baseline Scheme, the downwash wind along the building separation between Peninsula East and The Coast Line II is diverted towards south along Tung Yuen Street by the building block at the northern

portion of Kwun Tong Wholesale Fish Market. A turbulence is generated under the cover of the fish market. However, stronger downwash wind flows towards the fish market under the Proposed Scheme. This downwash wind may hit Tower 1 of the Peninsula East and join the wind flow between the Peninsula East and Coat Line II. This stronger wind hit the Fish Market and flow along its edge.

Wind performance under wind direction of SSE

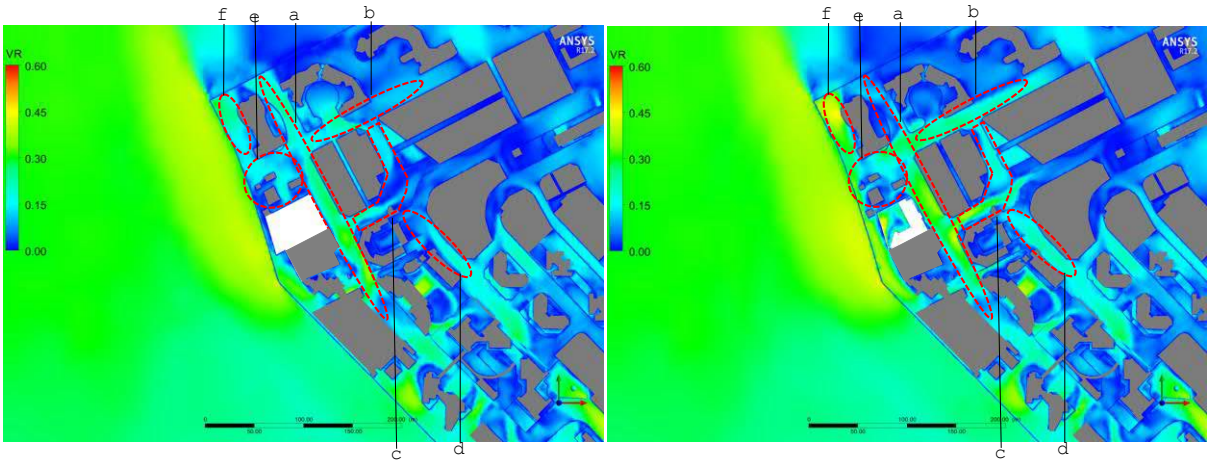
Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.7 According to the contour plots under SSE wind,

a. Comparing with the Baseline Scheme, the slightly larger setback from the eastern boundary of the proposed development allows more wind flow from south to flow along Tung Yuen Street. Thus, the VR at Tung Yuen Street is slightly higher under the Proposed Scheme.

b. The stronger wind flow along Tung Yuen Street is diverted towards west along Ko Fai Road. Therefore, better wind performance is observed at this area under the Proposed Scheme.

c. The upcoming SSE wind along Shung Yiu Street hits on Union Industrial Building and is rebounded to flow along Shung Tak Wai towards two sides. The stronger wind flow along the Tung Yuen Street may counter with the abovementioned upcoming wind. As such, a slightly larger wake area is observed at this area under the Proposed Scheme.



d. The stronger wind flow from Peninsula East would counter with the upcoming wind from SSE along Shung Yiu Street under the Proposed Scheme. Therefore, lower VR is observed at Shung Yiu Street under the Proposed Scheme.

e. The downwash wind from the taller building of the Proposed Scheme may counter the upcoming wind from east of Tung Yuen Street and create a turbulence at the immediate area. A lower wind performance at the area between the Subject Site and The Coast Line I is observed under the Proposed Scheme.

f. This wake area in front of The Coast Line I under the Proposed Scheme may create a barrier for the wind flow passing through the Fish Market. After passing through the Fish Market, more SSE wind may flow towards the Coast Line II

instead of flow towards the western portion of Tung Yuen Street. Therefore, a higher wind performance is observed at the area behind the Coat Line II under the Proposed Scheme.

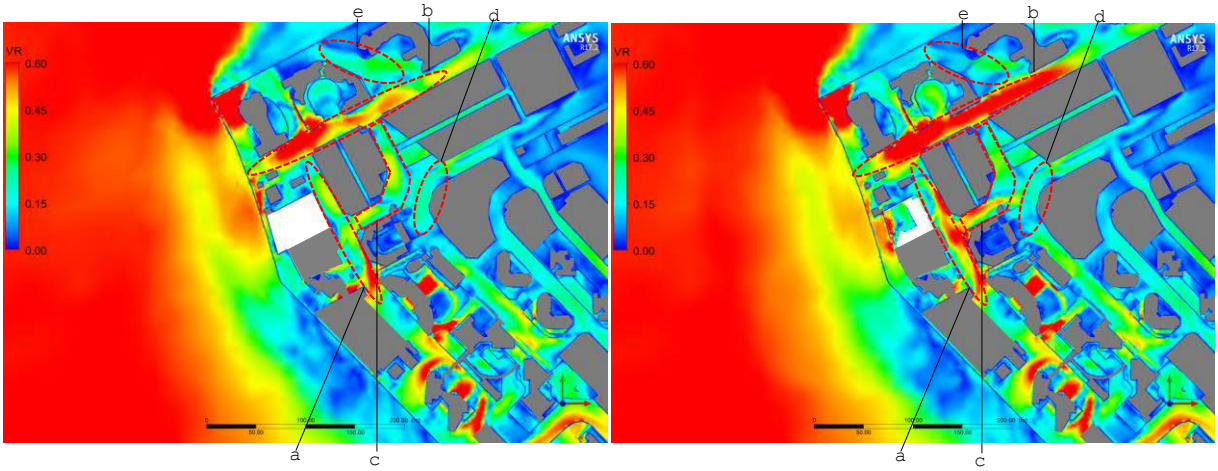
Wind performance under wind direction of S

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.8 According to the contour plots under S wind,

a. Comparing with the Baseline Scheme, the slightly larger setback in the Proposed Scheme from the eastern boundary allows more wind flow from south to flow along Tung Yuen Street. Thus, the VR at Tung Yuen Street is slightly higher under the Proposed Scheme.

b. From the vector plots, a portion of the upcoming wind flow along Tung Yuen Street is diverted towards Ko Fai Road towards east in both schemes. In the Baseline Scheme, due to its low building height, T1 of Application No. A/515/130 captures high-level wind and diverts to the pedestrian level along Ko Fai Road. However, in the Proposed Scheme, there is no downwash wind generated from T1 due to the much higher building height of the Proposed Scheme. On the other hand, the 15m promenade setback allows more S wind to pass through the promenade and reach Ko Fai Road, where they can also be diverted eastward. As a result, the wind performance at Ko Fai Road is improved in the Proposed Scheme due to enhanced airflow along the promenade and Tung Yuen Street.



c. In the Baseline Scheme, the downwash caused by the T3 of Approved Application No. A/K15/130 flows towards Shung Tak Wai. However, in the Proposed Scheme, it is primarily the stronger wind flow along Ko Fai Road that is diverted towards Shung Tai Wai. Additionally, the enhanced wind flow along Tung Yuen Street further benefits the southern portion of Shung Tak Wai in the Proposed Scheme. As a result, the VR at Shung Tak Wai increases under the Proposed Scheme.

d. With a reduced wake zone to the southeast of Union Industrial Building, more upcoming wind from Shung Yiu Street could flow towards Shung Tak Wai. Thus, higher VR is observed at this portion of Shung Yiu Street under the Proposed Scheme.

e. Under the Baseline Scheme, T1 of Approved Application No. A/K15/130 would collect more high-level wind from south and divert it towards Ko Fai Road due to lower building height of the Baseline Scheme. However, the 15m promenade to the west of the Proposed Scheme allows more wind to pass through towards north. This wind is rebounded by T1 of Approved Application No. A/K15/130 and creates a turbulence at the pumping station. Thus, the VR at Yau Tong Sewage Pumping Station is reduced in the Proposed Scheme.

f. The 15m promenade to the west of the Proposed Scheme allows more wind to pass through towards north. The promenade to the west of T1 in Approved Application No. A/K15/130 is higher in the Proposed Scheme.

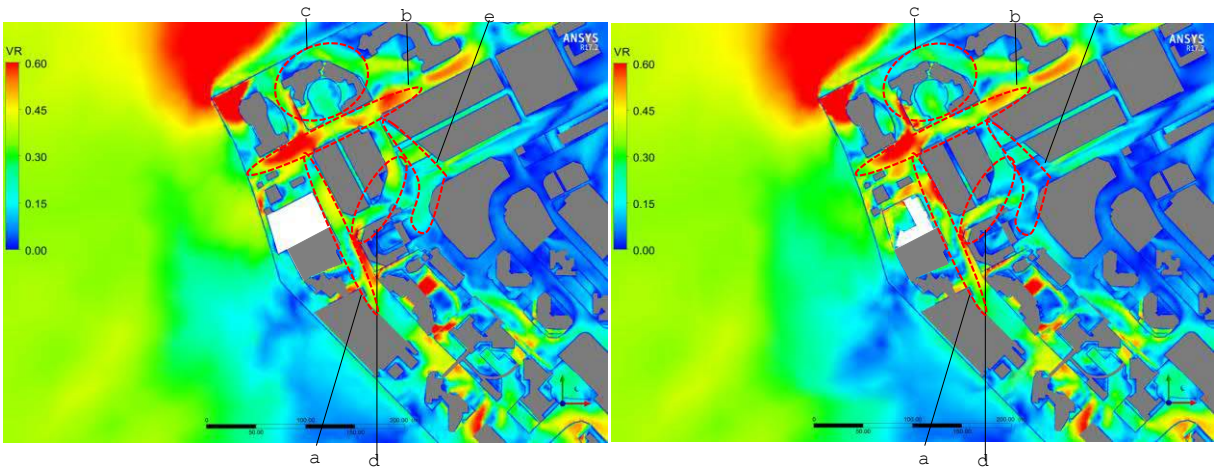
Wind performance under wind direction of SSW

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.9 According to the contour plots under SSW wind,

a. The SSW wind from waterfront flows under the cover of Kwun Tong Wholesale Fish Market to reach Tung Yuen Street. Comparing with the larger footprint of the Baseline Scheme block, the 5m public passage within the site and the 15m promenade in the Proposed Scheme allows upcoming wind to flow along the podium and is diverted towards east along the boundary of the Subject Site to the Tung Yuen Street. As such, the wind performance of Tung Yuen Street near the site is better in the Proposed Scheme.

b. The two storeys design of the podium in the Proposed Scheme as well as the 15m promenade allows much more upcoming wind from seaside towards Ko Fai Road. Therefore, the VR of Ko Fai Road is higher under the Proposed Scheme.



c. The 5m public passage within the site boundary in the Proposed Scheme allows upcoming flow towards Tung Yuen Street and continuously towards Shung Tak Wai. The wind performance at the southern portion of the Shung Tak Wai is better under the Proposed Scheme. However, this continuously flows along Shung Tak Wai may counters with the wind coming from north at Ko Fai Road, resulting that the wind performance at the northern and middle portion of Shung Tak Wai is lower in the Proposed Scheme.

d. The stronger wind flow from the southern portion of the Shung Tak Wai under the Proposed Scheme continuously flows along Shung Tak Wai and this wind

may counter the upcoming wind along the Shung Yiu Street. Therefore, the wind performance at Shing Yiu Street is lower under the Proposed Scheme.

e. Linear buildings are located along both sides of the Ko Rai Road and create a channel effect along it. The much stronger wind flow along Ko Fai Road under the Proposed Scheme may reduce the wind flowing into the gap between the buildings as the wind with high speed may by-pass the building gaps and continuously flow to further downwind area. From the vector plots, it is observed that there is less wind entering the area between T2 and T3 of the Approved Application No. A/K15/130 under the Proposed Scheme, but more wind continuously flows to downwind area, and thus a lower wind performance is observed in this area.

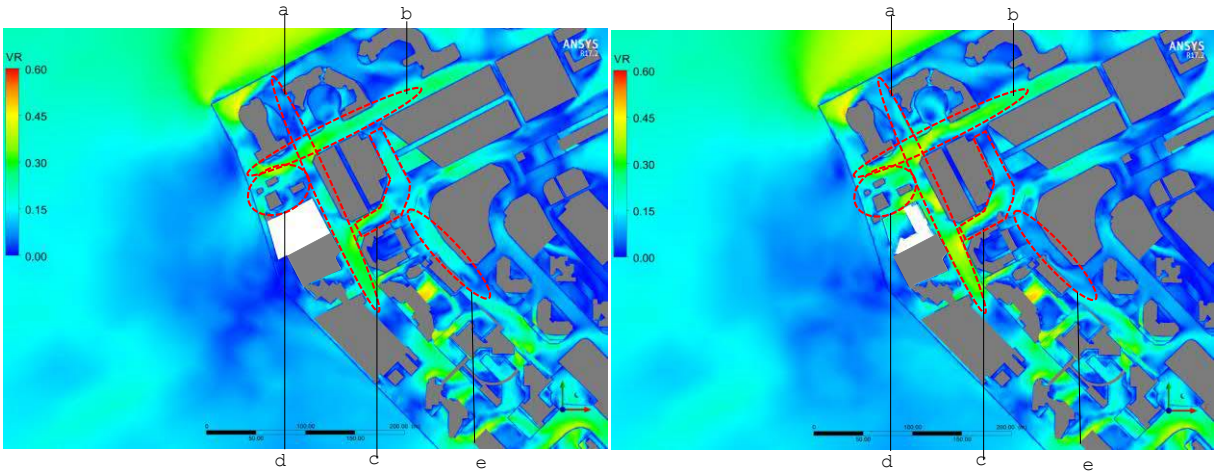
Wind performance under wind direction of SW

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.10 According to the contour plots under SW wind,

a. The upcoming SW wind from seaside flows towards inland through several building separations or streets, such as Ko Fai Road and Kwun Tong Wholesale Fish Market Substation. Comparing with the Baseline Scheme, the 15m promenade in the Proposed Scheme allows more SW wind to flow through it and divert this flow along the building separation between the Proposed Scheme and Yau Tong Sewage Pumping Station to reach Tung Yuen Street. In addition, the additional 5m public passage in the Proposed Scheme could facilitate the wind to flow along it and reach Tung Yuen Street. As such, the wind performance at Tung Yuen Street is slightly better under the Proposed Scheme.

b. However, the wind performance at Ko Fai Road under the Proposed Scheme is slightly lower than the Baseline Scheme, as shown in the contour. With more wind passing through the edge of subject site to Tung Yuen Street, it seems that there may be less wind passing along the Ko Fai Road, and so a slightly lower VR observed at the junction between Tung Yuen Street and Ko Fai Road, as well as the portion slightly further east of the Ko Fai Road.



c. The 15m promenade and the L-shape of the residential tower in the Proposed Scheme allows more high-level wind to reach the inner area of T2 of Application No. A/K15/130. In contrast, the stronger wind flow along Ko Fai

Road in the Baseline Scheme continuously flows towards the area between T2 & T3 of Application No. A/K15/130 to the northern area of T2, which may counter with the upcoming flow along Tung Yuen Street. As such, under the Proposed Scheme, the inner area of T2 has better wind performance while the northern area of T2 has lower VR instead.

d. With the 5m public passage within the subject site, the SW wind would penetrate the Proposed Scheme and continuously flow towards Shung Tak Wai, therefore, a higher wind performance is observed at the junction of Tung Yuen Street and Shung Tak Wai. However, this stronger wind continuously flows along Shung Tak Wai and counters with the wind coming from north at Ko Fai Road. Therefore, the wind performance at the middle portion of Shung Tak Wai is lower under the Proposed Scheme.

e. The increased building height in the Proposed Scheme results in less high-level wind reaching the towers of Yau Tong Industrial City. According to the vector plot, the wind flow at the podiums of Yau Tong Industrial City is primarily downwash from its towers. This downwash wind above the podiums flows continuously toward Shung Yiu Street. As a result, the VR in this area is lower under the Proposed Scheme.

Wind performance under wind direction of WSW

Contour plot for Baseline Scheme **Contour plot for Proposed Scheme**

4.3.11 According to the contour plots under WSW wind,

a. The upcoming WSW wind from seaside flows towards inland through several building separations or streets, such as Ko Fai Road, the building separation between The Coast Line I and Kwun Tong Wholesale Fish Market Substation. Comparing with the Baseline Scheme, the 15m promenade allows more WSW wind to flow through it and divert this flow along the building separation between the Proposed Scheme and Yau Tong Sewage Pumping Station to reach Tung Yuen Street. In addition, the 5m public passage could also facilitate the wind to flow along it and reach Tung Yuen Street. As such, the wind performance at the Tung Yuen Street is slightly better under the Proposed Scheme.

b. The 15m promenade and the 2-storey landscape podium in the Proposed Scheme allows much more upcoming wind from seaside towards Ko Fai Road

via the Sewerage Pumping Station and Tung Yuen Street in between. Therefore, the VR of Ko Fai Road is higher under the Proposed Scheme.

c. The stronger wind flow along Tung Yuen Street continuously towards the Shung Tak Wai. Therefore, the wind performance near junction area of Tung Yuen Street and Shung Tak Wai is slightly better under the Proposed Scheme. However, the increased building height in the Proposed Scheme results in less high-level wind reaching the towers of Yau Tong Industrial City. According to the vector plot, the wind flow at the podiums of Yau Tong Industrial City and Shung Tak Wai northern section is primarily downwash from its towers. As a result, the VR in this area is lower at the northern portion of Shung Tak Wai under the Proposed Scheme.

d. As mentioned above, the upcoming wind along the 15m promenade would be diverted towards the building separation between the Proposed Scheme and Yau Tong Sewage Pumping Station. As such, the wind performance at Yau Tong Sewage Pumping Station is better under the Proposed Scheme.

e. As mentioned above, the increased building height in the Proposed Scheme results in less high-level wind reaching the towers of Yau Tong Industrial City. The wind flow at the podiums of Yau Tong Industrial City and Shung Tak Wai is mainly downwash from the towers, which continuously directs the wind toward Shung Yiu Street. Consequently, the VR at Shung Yiu Street is lower in the Proposed Scheme.

5. CONCLUSION

5.1.1 The proposed development, which is located in Yau Tong area, has been evaluated from an air ventilation perspective.

5.1.2 According to section 4.2 above, it is noted that the SVR and LVR are better in the Proposed Scheme under both annual and summer conditions. The large increment of SVR in the Proposed Scheme is due to the reduced footprint of the building blocks such as the 5m public passageway to promenade and 15m promenade. While the block of the Baseline Scheme is very close to the site boundary. Similarly, the higher LVR in the Proposed Scheme is owing to the large increment of VR of perimeter test points. The result shows that the Proposed Scheme has comparable VR of overall test points with the Baseline Scheme.

5.1.3 There are some variations between the Baseline Scheme and Proposed Scheme. The VR is higher under the Proposed Scheme at Ko Fai Road (annual and summer condition), Tung Yuen Street (annual and summer condition) and Peninsula East (summer condition).

5.1.4 On the other hand, the VR is higher under the Baseline Scheme at Shung Tai Wai (annual and summer condition), Shung Yiu Street (annual and summer condition), Waterfront Promenade (annual condition), The Coast Line I (annual and summer condition), The Coast Line II (annual condition) and Peninsula East (annual condition).

5.1.5 From the simulation result, Tung Yuen Street portion to the east of the Subject Site is better in the Proposed Scheme under both annual and summer conditions. Under the annual condition, it is due to the downwash wind caused by the residential tower. While under the summer condition, the 5m public passage allows the upcoming wind to reach Tung Yuen Street. In addition, wind from seaside could flow along the 15m promenade and is diverted towards the building separation between the Proposed Scheme and Yau Tong Sewage Pumping Station to reach Tung Yuen Street.

5.1.6 However, slightly larger wake zone is observed at Shung Tak Wai in the Proposed Scheme under both annual and summer condition. With the Proposed Scheme, there will be stronger wind flow along Tung Yuen Street in view of the additional downwash wind captured from high-level during annual condition and the additional flow from sea flowing along the setback of the site during summer condition. The stronger wind flow along Tung Yuen Street may counter the upcoming wind from north to south along the Shung Tak Wai and induce a localized wake zone.

5.1.7 Based on the design features and the assessment result, the LVR of is comparable in annual condition. The increase of LVR in summer conditions is primarily attributed to the rise in permeable points, it is concluded that the proposed building design would not induce significant adverse impact to the nearby environment.

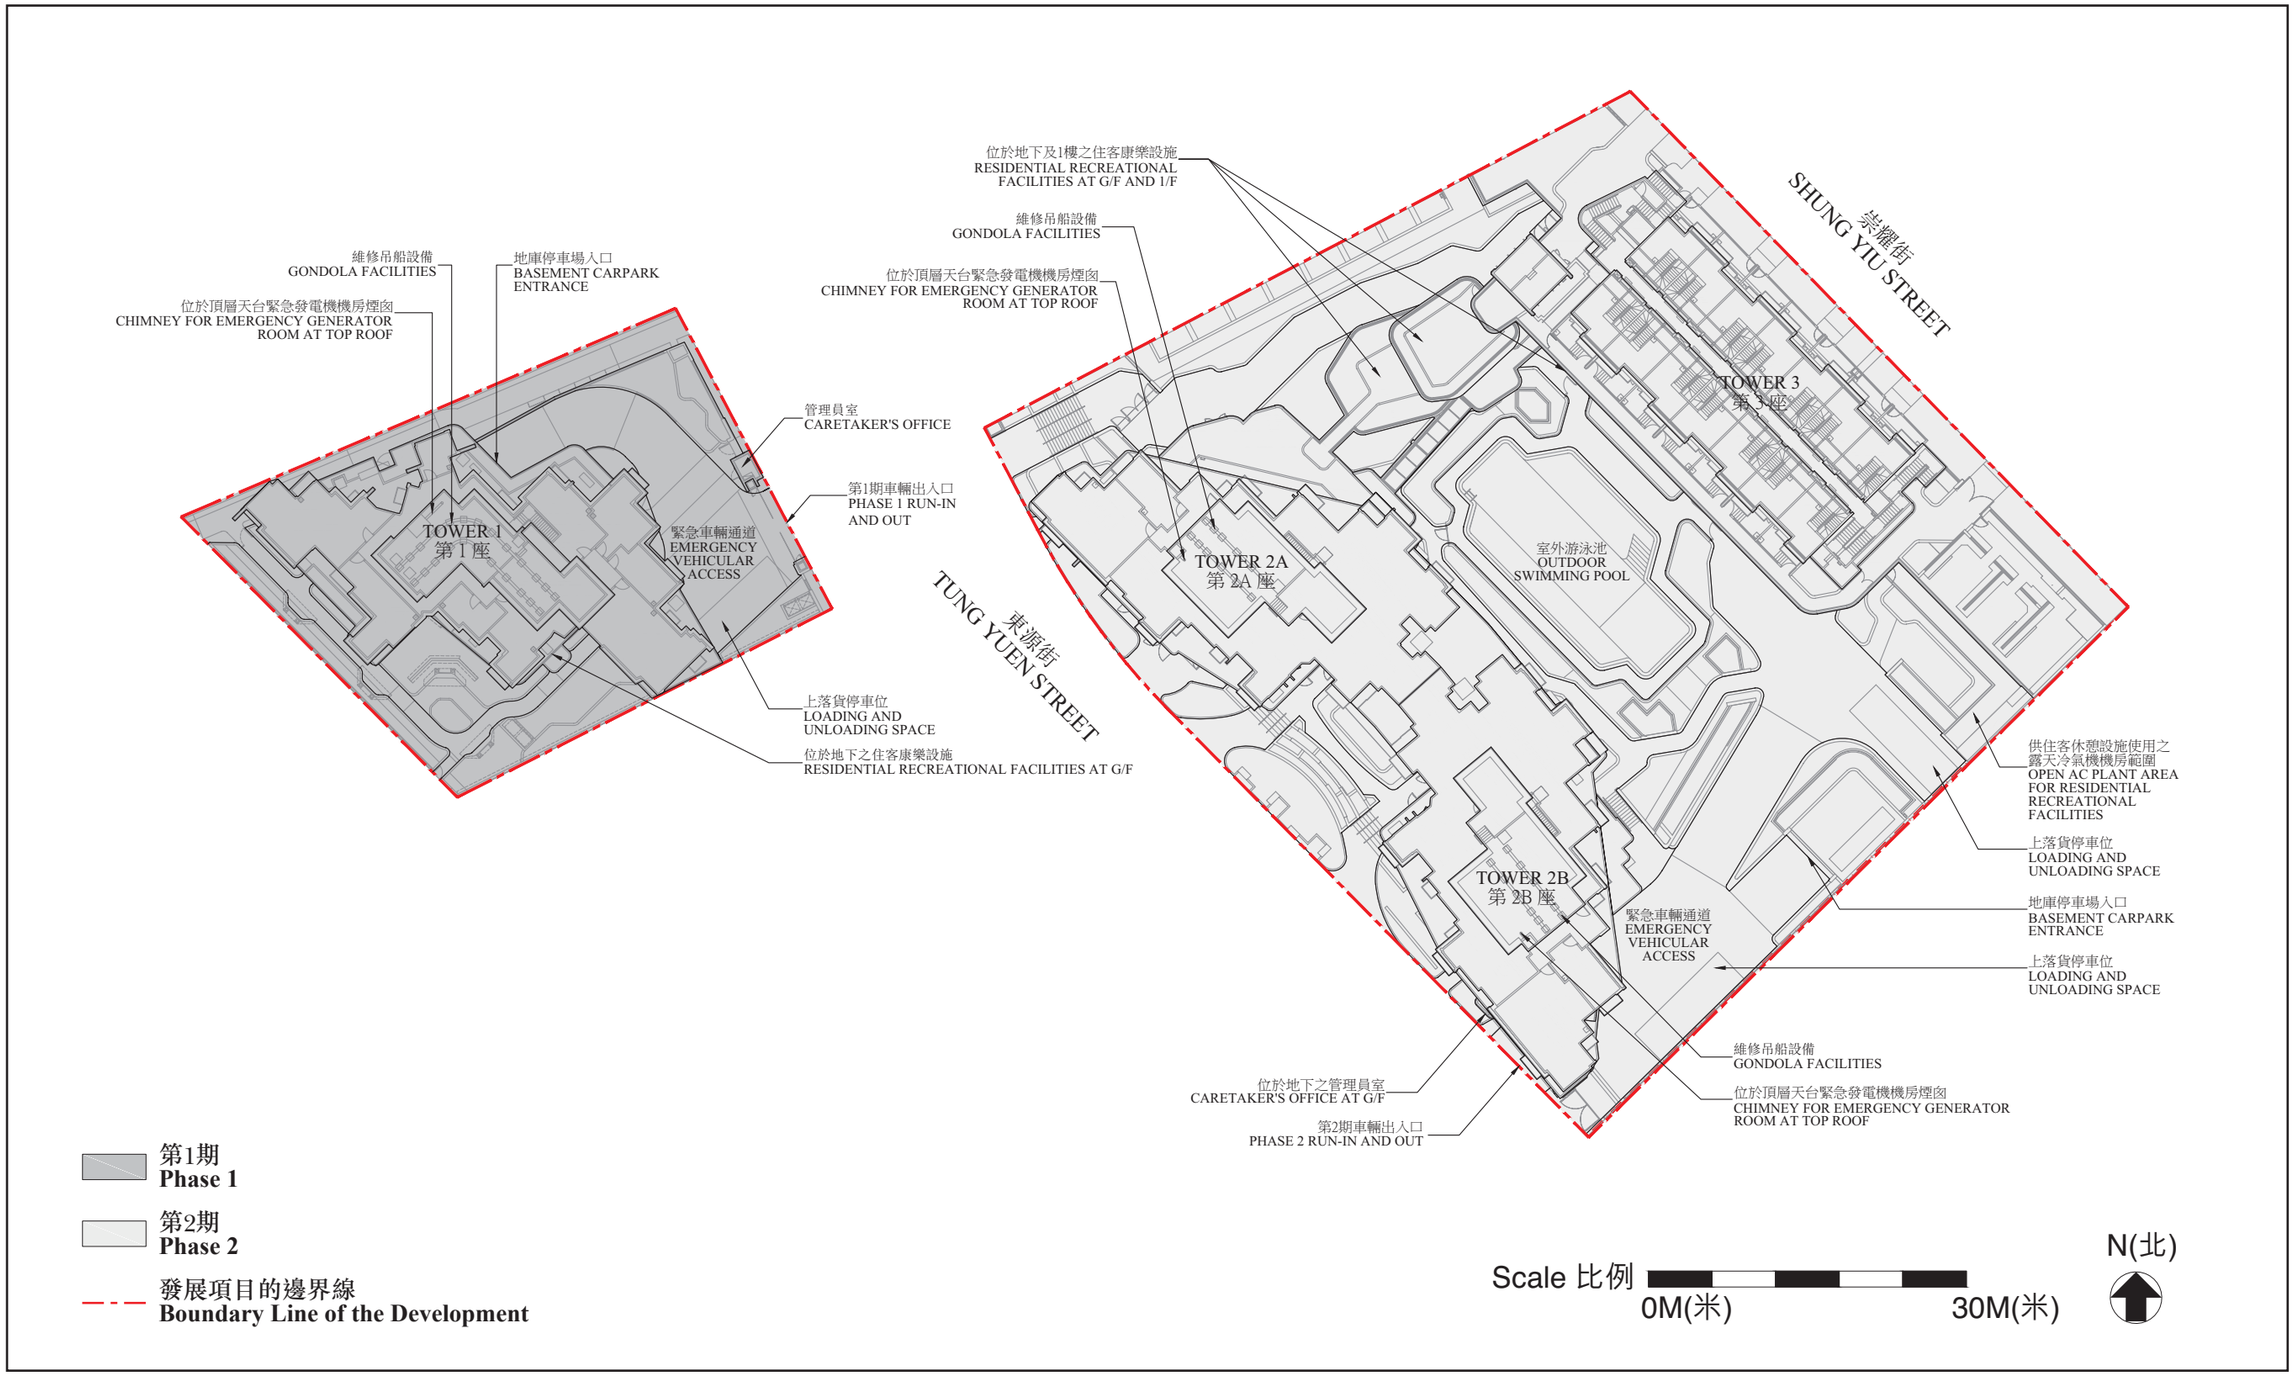
於發展項目的所在位置圖未能顯示之街道全名：
Street name(s) not shown in full in the Location Plan of the Development:

* 茶果嶺道
CHA KWO LING ROAD

NOTATION 圖例

- 發電廠(包括電力分站)
  A Power Plant (including Electricity Sub-stations)
- 公廁
  A Public Convenience
- 公眾停車場(包括貨車停泊處)
  A Public Carpark (including a Lorry Park)
- 體育設施(包括運動場及游泳池)
  Sports Facilities (including a Sports Ground and a Swimming Pool)
- 公用事業設施裝置
  A Public Utility Installation
- 市場(包括濕貨市場及批發市場)
  A Market (including a Wet Market and a Wholesale Market)
- 公共交通總站(包括鐵路車站)
  A Public Transport Terminal (including a Rail Station)
- 社會福利設施(包括老人中心及弱智人士護理院)
  Social Welfare Facilities (including an Elderly Centre and a Home for the Mentally Disabled)
- 公園
  A Public Park
- 學校(包括幼稚園)
  A School (including a Kindergarten)
- 消防局
  A Fire Station

地圖由空間數據共享平台提供，香港特別行政區政府為知識產權擁有人。
The map is provided by the Common Spatial Data Infrastructure (CSDI) Portal and intellectual property rights are owned by the Government of the HKSAR.

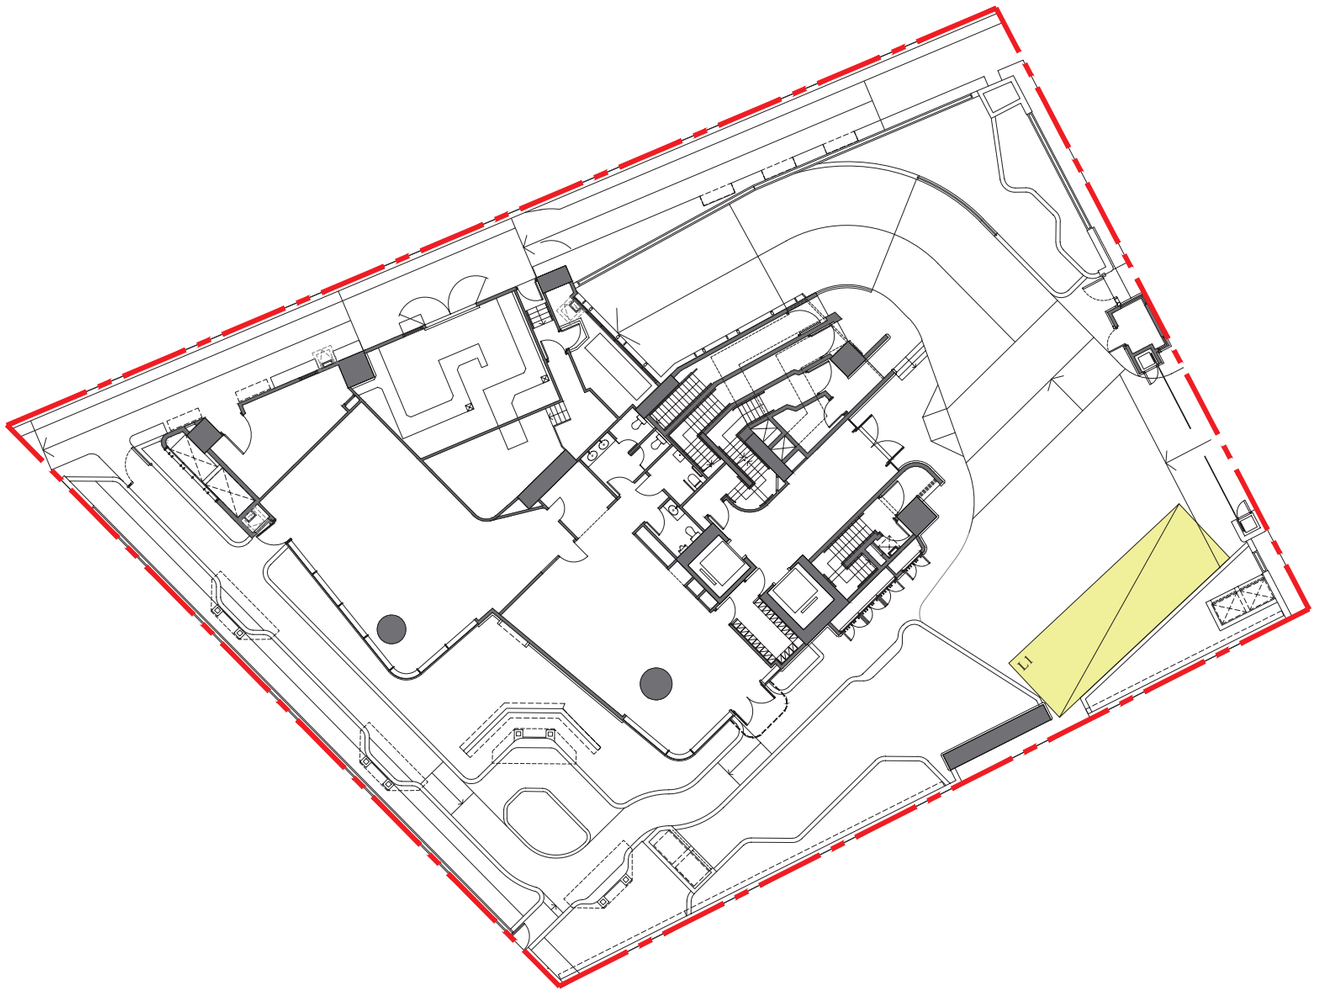


此位置圖是由賣方參考地政總署測繪處於2023年12月20日出版之數碼地形圖擬備，圖幅編號為11-SE-B，有需要處經修正處理。
This Location Plan is prepared by the Vendor with reference to the Digital Topographic Map No. 11-SE-B dated 20 December 2023 available from Survey and Mapping Office of the Lands Department, with adjustments where necessary.

備註 Notes：

因技術原因（例如發展項目之不規則形狀），所在位置圖所顯示之範圍多於《一手住宅物業銷售條例》所要求顯示的範圍。
Due to technical reasons (such as the irregular shape of the Development), the location plan has shown more than the area required under the Residential Properties (First-hand Sales) Ordinance.

賣方亦建議準買方到有關發展地盤作實地考察，以對該發展地盤、其周邊地區環境及附近的公共設施有較佳了解。
The Vendor also advises prospective purchasers to conduct an on-site visit for a better understanding of the development site, its surrounding environment and the public facilities nearby.



發展項目的布局圖 Layout plan of the development

發展項目的認可人士提供的未落成建築物或設施的預計落成日期：第1期：2025年1月15日；第2期：2025年4月15日
THE ESTIMATED DATE OF COMPLETION OF THE UNCOMPLETED BUILDINGS AND FACILITES AS PROVIDED BY THE AUTHORIZED PERSON FOR THE DEVELOPMENT: Phase 1: 15th January 2025; Phase 2: 15th April 2025

上落貨停車位
Loading and Unloading Space

期數的邊界線
Boundary Line of the Phase

停車位類別 Category of parking space	數目 Number	每個停車位尺寸(長x寬)(米) Dimensions of each parking space (L x W) (m)	每個停車位面積(平方米) Area of each parking space (sq. m)
上落貨停車位 Loading and Unloading Space	3	11.0 x 3.5	38.5

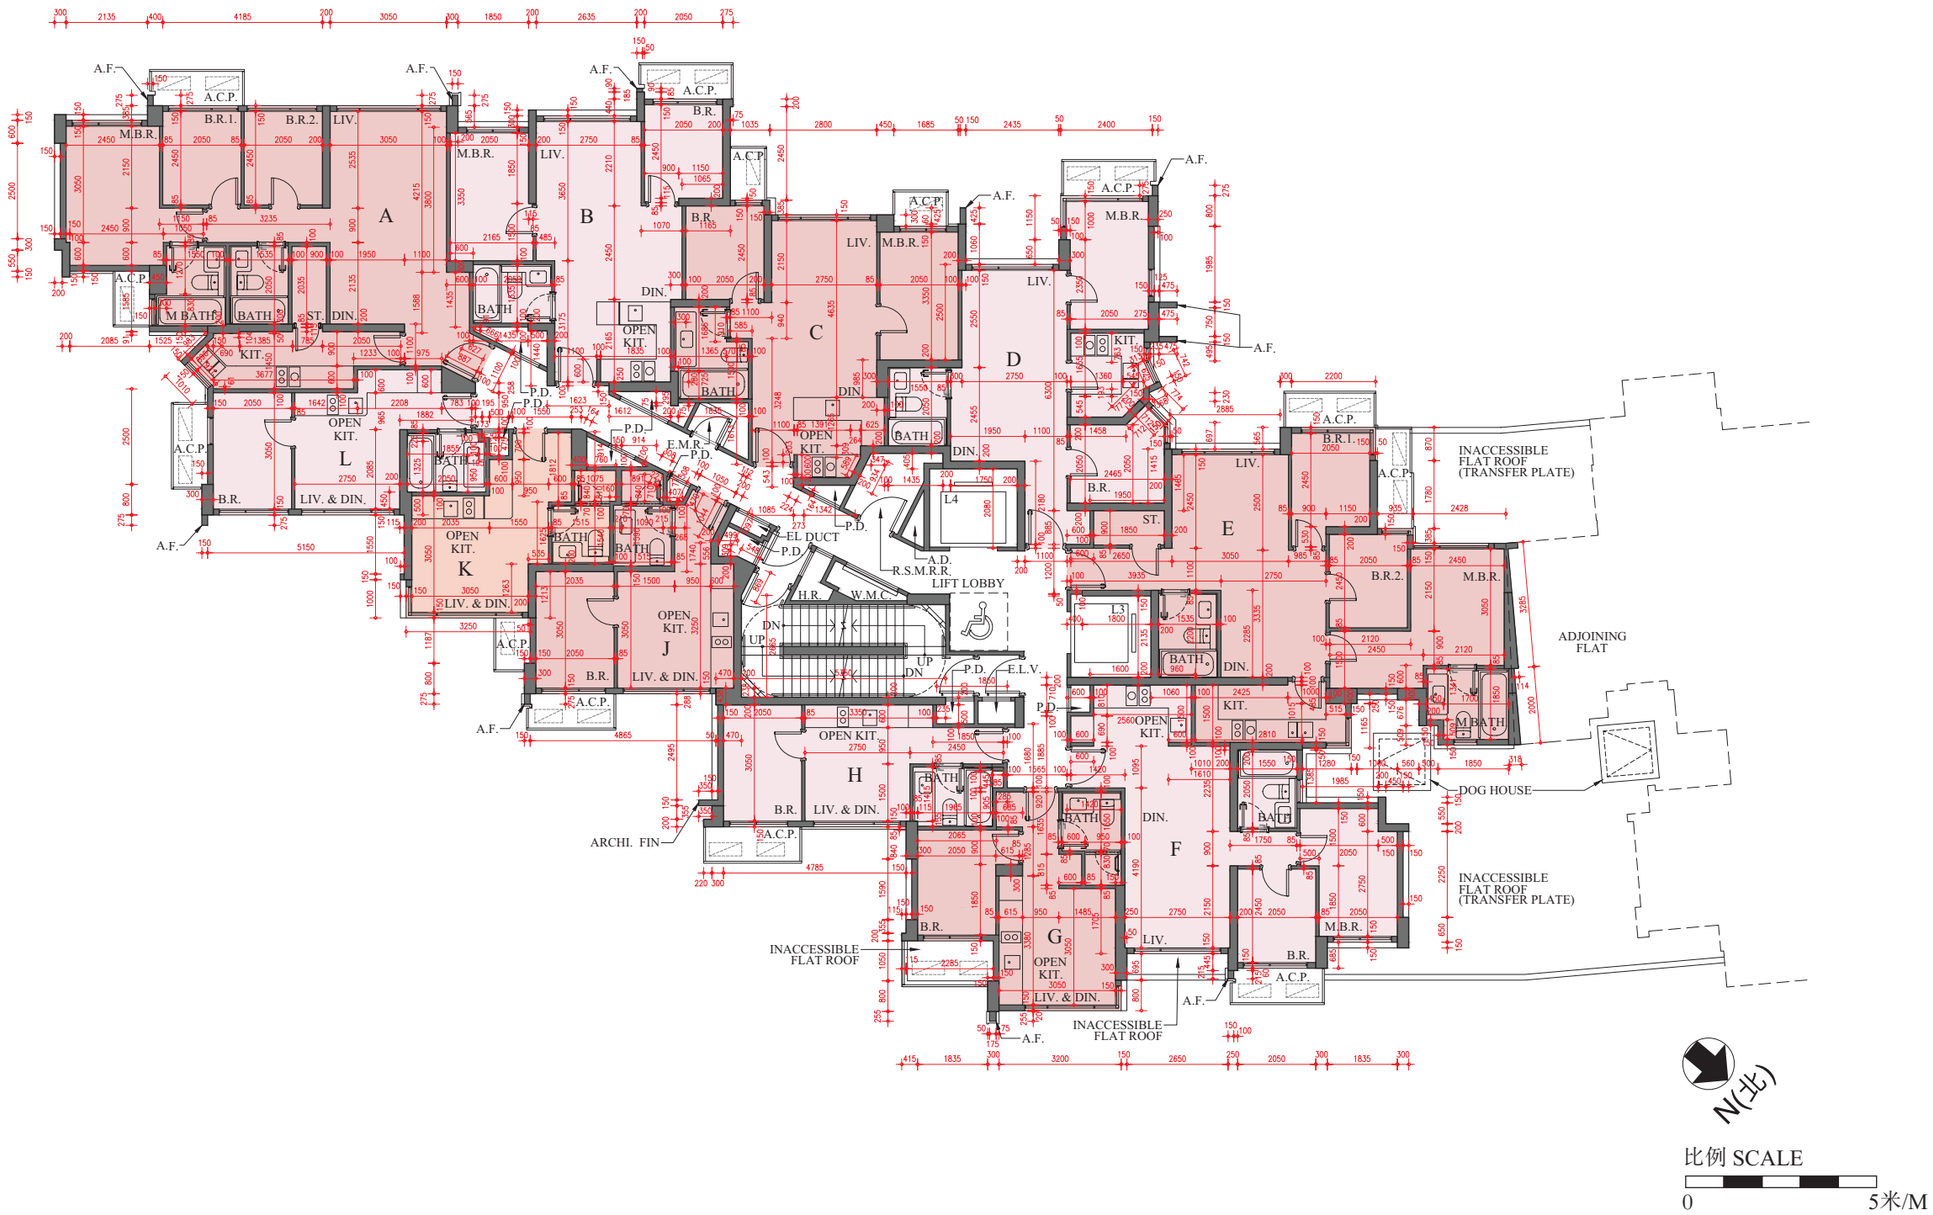
每個住宅物業的樓板（不包括灰泥）的厚度：A、B、C、F、G、H、J、K及L單位：125毫米及150毫米；D單位：125毫米、150毫米及575毫米；E單位：125毫米、150毫米及200毫米

The thickness of the floor slabs (excluding plaster) of each residential property: Flats A, B, C, F, G, H, J, K and L: 125mm and 150mm; Flat D: 125mm, 150mm and 575mm; Flat E: 125mm, 150mm and 200mm

每個住宅物業的層與層之間的高度：2.975米

The floor-to-floor height of each residential property: 2.975m

因住宅物業的較高樓層的結構牆的厚度遞減，較高樓層的內部面積，一般比較低樓層的內部面積稍大。（註：此根據《一手住宅物業銷售條例》附表1第一部第10(2)(e)條所規定的陳述並不適用於期數。）



The internal areas of the residential properties on the upper floors will generally be slightly larger than those on the lower floors because of the reducing thickness of the structural walls on the upper floors. (Note: This statement requested under Section 10(2)(e) in Part 1 of Schedule 1 to the Residential Properties (First-hand Sales) Ordinance is not applicable to the Phase.)

備註：

1) 以上樓面平面圖中顯示之名詞及簡稱之詞彙表請參閱「期數的住宅物業的樓面平面圖」一節首頁。
2) 第2A及第2B座住宅樓層不設4樓、13樓、14樓、24樓、各樓層I單位及1至2樓E和F單位。第3座住宅樓層不設4樓、各樓層A4及B4單位。

Remarks:

1) Please refer to the first page of the section “Floor Plans of Residential Properties in the Phase” for glossary of the terms and abbreviations shown in the floor plan above.
2) Residential floors 4/F, 13/F, 14/F, 24/F, Flat I on all floors and Flats E & F on 1/F and 2/F of Towers 2A and 2B are omitted. Residential floor 4/F and Flats A4 and B4 on all floors of Tower 3 are omitted.

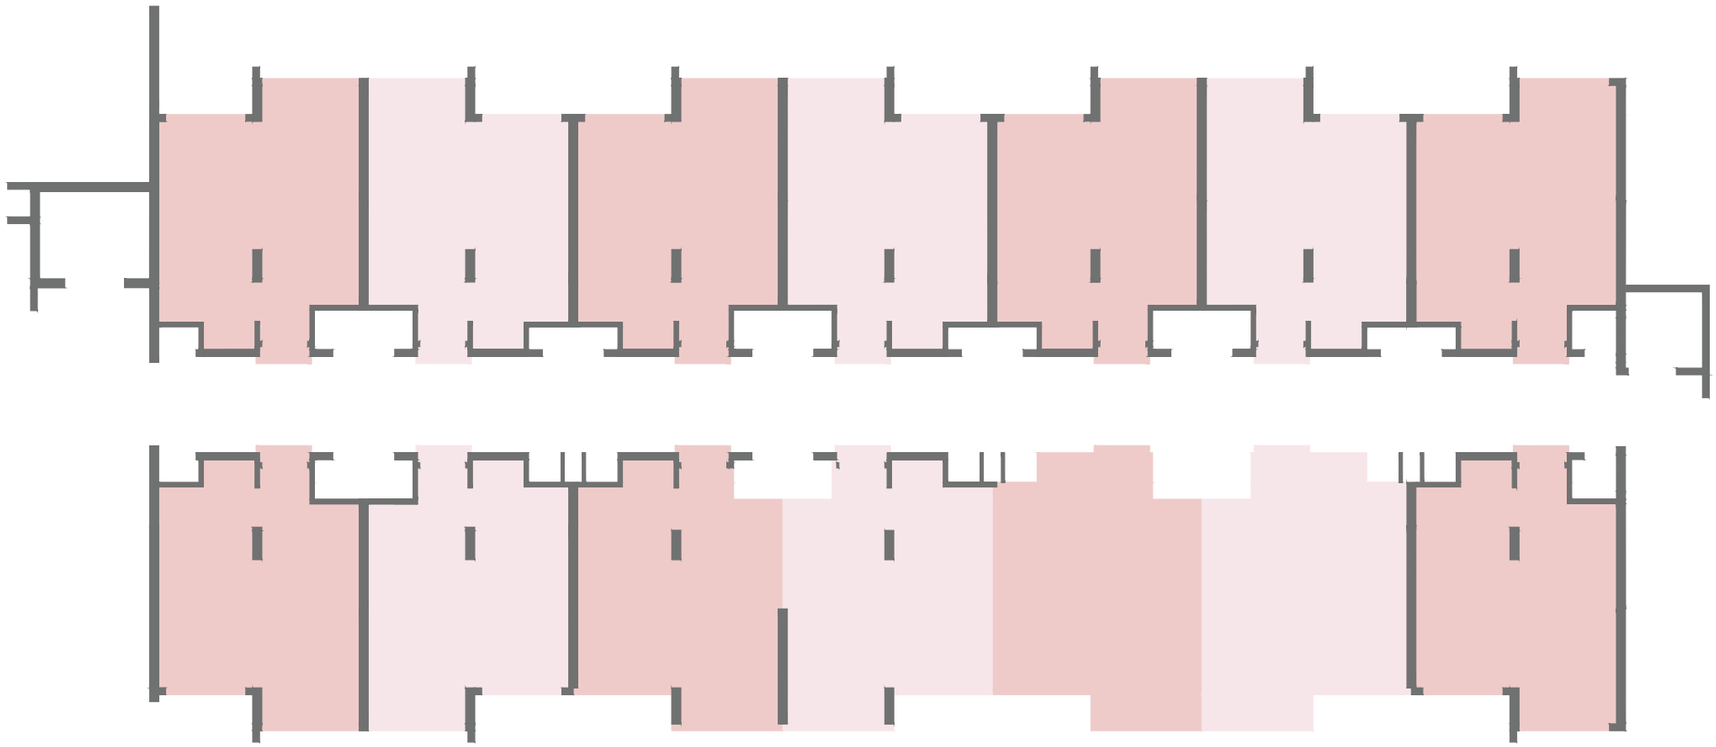
每個住宅物業的樓板（不包括灰泥）的厚度：B、C、F、G、H、J、K及L單位：125毫米及150毫米；A及D單位：125毫米、150毫米及575毫米；E單位：125毫米、150毫米及200毫米

The thickness of the floor slabs (excluding plaster) of each residential property: Flats B, C, F, G, H, J, K and L: 125mm and 150mm; Flats A and D: 125mm, 150mm and 575mm; Flat E: 125mm, 150mm and 200mm

每個住宅物業的層與層之間的高度：2.975米

The floor-to-floor height of each residential property: 2.975m

因住宅物業的較高樓層的結構牆的厚度遞減，較高樓層的內部面積，一般比較低樓層的內部面積稍大。(註：此根據《一手住宅物業銷售條例》附表1第一部第10(2)(e)條所規定的陳述並不適用於期數。)



The internal areas of the residential properties on the upper floors will generally be slightly larger than those on the lower floors because of the reducing thickness of the structural walls on the upper floors. (Note: This statement requested under Section 10(2)(e) in Part 1 of Schedule 1 to the Residential Properties (First-hand Sales) Ordinance is not applicable to the Phase.)

1. INTRODUCTION

1.1.1 This Visual Impact Assessment (VIA) is prepared in support of the Section 16 Planning Application for Proposed Flat, Shop and Services and Eating Place with Minor Relaxation of Plot Ratio (PR) and Building Height (BH) Restrictions in the "Residential (Group E)" ("R(E)") zone at No. 4 Tung Yuen Street, Yau Tong, Kowloon (Application Site).

1.1.2 The Application Site, with an area of about 2,419m^2, is a harbourfront site located at the northwestern fringe of the Yau Tong Industrial Area (YTIA). The Application Site is bounded by Yau Tong Sewage Pumping Station to its immediate north, Tung Yuen Street to its immediate east and an existing concrete batching plant to its immediate south. The Application Site is currently occupied by a 7-storey industrial building (IB) (i.e. Wah Tung Godown). According to the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (the OZP), the Application Site is zoned "R(E)" and is subject to a maximum domestic PR of 5.0, a maximum non-domestic PR of 1.0 and a maximum BH of 80mPD.

1.1.3 With the intention of optimising housing supply at a convenient urban location, creating a continuous waterfront promenade connecting Lei Yue Mun, Yau Tong, and Kai Tak in East Kowloon, as well as providing pedestrian safety and comfort improvement measures for the community, the Proposed Scheme submitted under this Planning Application comprises one 22 to 28-storey residential tower with BH of 80 to 100mPD above a 2-storey podium for 'Shop and Services' and 'Eating Place' uses plus two basement levels for car parking and loading/unloading (L/UL) spaces as well as an additional waterfront promenade of not less than 15m-wide, seeks minor relaxation of domestic PR from 5.0 to 6.0 and BH restriction from 80mPD to 100mPD (Proposed Scheme). Despite that the Application Site does not fall within the area covered by the planning briefs (PBs) for the Yau Tong Bay (YTB) and the YTIA "Comprehensive Development Area" ("CDA") zones, the Applicants have taken initiative to provide a waterfront promenade of not less than 15m-wide within the Application Site, alongside with a public access of 5m-wide connecting to the Tung Yuen Street. In respect of the requirement stipulated on the Draft Cha Kwo Ling, Yau Tong & Lei Yue Mun Outline Development Plan (ODP) No. D/K15C/1B, a full-height setback of 5m-wide from Tung Yuen Street is proposed for provision of a footpath of 3.5m-wide. In addition to the ODP footpath, the setback of 1.5m abutting the building façade is proposed with tree planting at the northwestern end of the proposed setback. With the fact that about one-fourth of the Application Site has been assigned for the additional voluntary waterfront promenade, and to accommodate the genuine intention to provide more residential flats, minor relaxation of BH (i.e. from 80mPD to 100mPD) for one of the two proposed residential bands at the inland portion is proposed. Notwithstanding this, the Proposed Scheme with two BH bands (i.e. 80mPD and 100mPD) would be compatible with the BH profile across Tung Yuen Street and respect the overall stepped BH profile concept for the YTIA. It is anticipated that the Proposed Scheme would set a desirable precedent to facilitate the transformation of existing YTIA into a quality harbourfront living neighbourhood.

1.1.4 Point (e) of Para. 2.3 of the TPB Guidelines (TPB PG) No. 41 states that a VIA is required when "*the proposal involves modification of development parameters of a site to deviate from the statutory planning restrictions applicable to the site or the neighbourhood, and the modification will amount to pronounced increase in development scale and intensity*

and visual changes from key public viewing points". Accordingly, this VIA is prepared to assess the visual impact of the Proposed Scheme in support of this planning application.

1.1.5 The VIA approach adopted in this report has considered the approved/planned developments in the surrounding Yau Tong area under the Baseline and Proposed Schemes. The approved/planned developments incorporated in the Baseline and Proposed Schemes create a reasonably near future condition for the evaluation of visual impacts. This VIA evaluates the visual compatibility and degree of anticipated visual impacts of the Proposed Scheme on the Visually Sensitive Receivers (VSRs) relevant to the Application Site. Based on the evaluation, the VIA comments on the visual acceptability of the Proposed Scheme.

1.1.6 The outline for the VIA is set out below:

- **Section 2** outlines the visual context of the Application Site and its Surrounding Area;
- **Section 3** describes the key planning and design principles for the Proposed Scheme;
- **Section 4** identifies the Assessment Area and provides an analysis of the viewing points (VPs);
- **Section 5** assesses the visual impacts; and
- **Section 6** concludes the VIA.

2. VISUAL CONTEXT OF THE APPLICATION SITE AND ITS SURROUNDING AREA

2.1 Site Context and Existing Land Use

2.1.1 The Application Site is located at the northwestern fringe of the YTIA with direct view across the Victoria Harbour to Quarry Bay and Shau Kei Wan on the Hong Kong Island. With a site area of about 2,419m^2, the Application Site with a site level of 4.4mPD has a gentle relief surrounded by rising topographies of Chiu Keng Wan Shan and Devil's Peak towards the southwest.

2.1.2 The Application Site is currently occupied by a 7-storey IB for godown use (i.e. Wah Tung Godown).

2.2 Surrounding Context

2.2.1 With rapid transformation taking place in the YTIA over the past decade, the Application Site is currently surrounded by a cluster of existing/planned residential developments intermixed with existing industrial developments. High-dense residential developments including Peninsula East, Montego Bay, The Spectacle, Maya, Canaryside, Ocean One and One East Coast and other planned residential development can be found within the YTIA. Besides, some of the existing public housing developments within Yau Tong including Ko Chun Court, Ko Yee Estate, Yau Mei Court, Yau Tong Estate, Lei Yue Mun Estate and other planned developments can also be found on the rising topographies towards the northwest.

2.2.2 To the **immediate north** across Ko Fai Road, **further northeast** and **further north** across the open water of the YTB are mainly the vacant land with a few existing individual industrial developments within the YTB "CDA" zone. The whole YTB "CDA" site is the subject of an Approved Application No. A/K15/130 for a comprehensive development with minor relaxation of PR restriction from 4.5 to 5 (Approved YTB Development). The Approved YTB Development includes a total of 29 residential towers at T1 to T14 and T17 as well as three hotels at T15, T16 and T18 with a stepped BH profile descending from 120mPD to 60.5mPD and 72mPD at the western and northern end of the "CDA" zone respectively. Whilst the site of Wing Shan Industrial Building is the subject of a partially agreed S12A Application No. Y/K15/6 for commercial development with BH of not more than 120mPD, the site of Yau Tong Ice Plant is the Development Site of Approved Application No. A/K15/130 (or Phase III of the whole YTB "CDA" development) for residential development with BH of 115mPD. Besides, there is a long-term planning intention from the Government for a waterfront promenade of not less than 15m-wide along YTB. The proposed waterfront promenade will connect Lei Yue Mun, Yau Tong to Cha Kwo Ling and further to the Kowloon East area.

2.2.3 To the **immediate south** is an existing concrete batching plant and a planned comprehensive residential development under Approved Application No. A/K15/122 (i.e. The Coast Line I & II under construction) (80 to 100mPD) within the waterfront portion of the "CDA(1)" site and the inland portion of the "CDA(1)" site across Tung Yuen Street. To the **further south**, the adjoined "CDA(2)" zone is currently occupied by Kwun Tong Wholesale Fish Market and Tung Yuen Street Cooked Food Market. To the **southeast**

across Shung Wo Path are the planned comprehensive residential development (80mPD to 100mPD) under Approved Application No. A/K15/126 within the waterfront portion and inland portion of "CDA(3)" zone, and another planned comprehensive residential development (80mPD) under the Approved Application No. A/K15/121 within "CDA(4)" zone. To the **further southeast** bounded by Yan Yue Wai is Montego Bay (80mPD to 100mPD) within the "CDA(5)" zone. Similar to the YTB "CDA" zone, there is a long-term planning intention for a waterfront promenade of not less than 15m-wide along the YTIA as specified in the PB of the YTIA and designated in the OZP. The waterfront promenade will connect Lei Yue Mun to YTB and Cha Kwo Ling and further to the Kowloon East area. To the **further southeast** beyond Shung Shun Street are Sam Ka Tsuen Ferry Pier, Lei Yuen Mun Typhoon Shelter Breakwater Sitting Out Area and Sam Ka Tsuen Typhoon Shelter.

2.2.4 To the **immediate east** and **southeast** across Tung Yuen Street are "R(E)" zones and the inland portion of "CDA(1)", "CDA(3)" and "CDA(5)" zones with BH restriction of 100mPD. To the **further east** and **further southeast** bounded by Shung Yiu Street or across Yan Yue Wai are the other two (E)" zones with BH restrictions of 100mPD and 120mPD. Whilst there is an existing residential development with BH exceeding the restriction as stipulated in the OZP (i.e. Peninsula East (147mPD)), the BH bands of about 100mPD and 120mPD among the stepped BH profile descending from towards the waterfront can still be formed alongside with other planned comprehensive/residential developments to the east of Tung Yuen Street. Other than those existing/planned residential developments, some existing IBs also can be identified in these zones, including Gloria Weaving & Knitting Factory Limited to be developed as transitional housing via wholesale conversion[1].

2.2.5 To the **east** and **southeast** beyond Sze Shan Street are other "R(E)" zones with BH restrictions of 120mPD and 140mPD respectively. High-rise residential developments including Canaryside (120mPD), Ocean One (120mPD), The Spectacle (148mPD) and Maya (140mPD) can be found within the two "R(E)" zones to the east of Sze Shan Street, forming other two BH bands of about 120mPD and 140mPD among the stepped BH descending towards Yau Tong waterfront. Except those residential developments, a few Government, Institution or Community (GIC) facilities including Sze Shan Street Cooked Food Market and Chung Pak Healthcare Services Complex can also be found. Sam Ka Tsuen Recreation Ground zoned "Open Space" is located in between in these two "R(E)" zones.

2.2.6 To the **further east** beyond Cha Kwo Ling Road are a cluster of existing/planned public housing developments with GIC facilities, including Ko Chun Court (122mPD to 124mPD), Ko Yee Estate (65mPD to 115mPD), Yau Mei Court (150mPD to 154mPD), Yau Tong Estate (132mPD to 144mPD), Lei Yue Mun Estate Phase I to III (126mPD to 151mPD), planned Lei Yue Mun Estate Phase IV (150mPD), planning public housing development with minor relaxed BH at Pik Wan Road (185mPD approved under Application No. A/K15/123) and other planned developments. Situating at the rising topographies of Chiu Keng Wan Shan and Devil's Peak, those existing/planned public

---

[1] The transitional housing project 'Light Factory' for about 166 units and about 560 population at the Tung Yuen Street No.1 is estimated to be completed by Q3 2024 via wholesale conversion of the existing IB. For details, please refers to Housing Bureau's website (https://www.hb.gov.hk/eng/policy/housing/policy/transitionalhousing/details_98.html).

housing generally would form part of the highest BH bands of the stepped BH profile in Yau Tong area.

2.2.7 To the **west** of Application Site is the Victoria Harbour.

2.2.8 In summary, a distinct gradation of height profile with descending BH towards the waterfront has been formed by the existing and planned comprehensive/residential developments in the Yau Tong area.

3. THE PROPOSED SCHEME

3.1 General Planning and Design Principles

3.1.1 **Contributing to Additional Private Housing Supply while Enhancing Liveability** – Situating at an urban centre location conveniently served by public transport services, there is an opportunity to optimise the precious land resource at the Application Site for contributing to the housing supply at the territorial level. Meanwhile, the Proposed Scheme would fully align with the latest Government policy of minimum flat size requirement of 26m^2 to enhance liveability with more spacious living space. Therefore, the Applicants seek minor relaxation of domestic PR from 5.0 to 6.0 to facilitate the provision of additional private housing flats (equivalent to additional flats of about 60) with enhanced living space in the proposed residential development at the Application Site.

3.1.2 **Providing an Additional Waterfront Promenade to Celebrate the Iconic Victoria Harbourfront –** the Applicants have taken initiative to provide a voluntary waterfront promenade of not less than 15m-wide within the Application Site, alongside with a 5m-wide public access connecting to the Tung Yuen Street. The additional waterfront promenade, owned by the Applicants, will be open for public enjoyment and the Applicants would take up responsibility for its construction, maintenance and management, ensuring it is a well-maintained and inviting space for all visitors. Upon its completion, it will form part of the continuous waterfront network for Kowloon East, enhancing the connectivity of the area.

3.1.3 **Enhancing Pedestrian Connectivity, Safety and Comfort in addition to the Planned Setback –** To fully respect the ODP requirements, a full-height setback of about 5m-wide from Tung Yuen Street, of which including a footpath of 3.5m-wide under ODP requirement and an additional setback of 1.5m-wide, is incorporated in the Proposed Scheme to improve pedestrian circulation in the YTIA. Tree plantings will also be provided near the run-in/out and the public access along Tung Yuen Street to further improve pedestrian comfort and walking experience of the area.

3.1.4 **Respecting the Harbour Planning Principles and Guidelines and Local Expectations –** In view of the harbourfront location of the Application Site, the planning and design of the Proposed Scheme has fully respected the Vision and Mission Statements as well as the Harbour Planning Principles and Guidelines promulgated by the former Harbourfront Enhancement Committee. Besides, the Proposed Scheme with a voluntary waterfront promenade for public enjoyment would also respect the Harbour Planning Guidelines and relevant Urban Design Guidelines in Chapter 11 of HKPSG to "*bring people to the harbour and the harbour to the people*".

3.1.5 **Providing Suitable Amount of Non-domestic Floor Space for Retail Uses to Serve Surrounding Residents –** Respecting the planning intention of "R(E)" zone, the Proposed Scheme would obtain PR of 0.9 for non-domestic uses, in the form of 'Shop and Services' and 'Eating Place' uses at the lower floors of the Proposed Scheme. These retail uses along Tung Yuen Street (one of the main streets in YTIA) and the waterfront promenade

would create an active shop frontage for a more vibrant street life and serve local essential needs.

3.1.6 **Respecting the Distinct Gradation of Height Profile with Descending Building Height Towards the Harbourfront –** Despite that the proposed residential band in the inland portion is with minor relaxed BH of 100mPD, the residential band fronting the Victoria Harbour would be kept at 80mPD, which is fully in line with the BH restriction on the "R(E)" zone along the waterfront. Besides, the relaxed BH for the residential band at inland portion will not exceed the BH restriction (i.e.100mPD) along Tung Yuen Street. The stepped BH profile for the Proposed Scheme will maintain the distinct gradation of height profile with descending BH towards the harbourfront, while at the same time accommodate additional flat supply and the additional waterfront promenade, resulting in a win-win scenario.

3.2 Key Development Parameters

3.2.1 The key development parameters of the Proposed Scheme as compared with the Baseline Scheme (i.e. Development Parameters of "R(E)" zone under the OZP) are summarised in **Table 3-1** below.

Table 3-1 Key Development Parameters of the Proposed Scheme

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Site Area (m^2)	About 2,419m^2	About 2,419m^2	-
Proposed Uses	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	'Flat', 'Shop and Services' and 'Eating Place' are Column 2 uses while 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	Column 2 uses (S16 Application required)
Plot Ratio (PR)			
- Total PR	Not more than 6	Not more than 6.9 [1]	+ 15%
- Domestic PR	Not more than 5	Not more than 6	+ 20%
- Non-domestic PR	Not more than 1	Not more than 0.9 [2]	-
Gross Floor Area (GFA) (m^2) [1]			
- Total GFA (excluding Bonus GFA to be claimed)	Not more than 14,514m^2	Not more than 16,691.1m^2	+ 15%
- Domestic GFA (excluding Bonus GFA to be claimed)	Not more than 12,095m^2	Not more than 14,514m^2	+ 20%
- Non-domestic GFA	Not more than 2,419m^2	Not more than 2,177.1m^2 [2]	-

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Bonus Plot Ratio (Bonus GFA)	Provision under Remark (5) of the Notes of "R(E)" zone	Not more than 0.082 [3] (to be included in Domestic PR) (Not more than 198m^2)	Provision under Remark (5) of the Notes of "R(E)" zone
Building Height (BH) (mPD)	Not more than 80mPD	80mPD to 100mPD (for inland portion only)	+25% (for inland portion only)
No. of Storeys	N/A	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark	-
Site Coverage (SC)			
- Below 15m	N/A	Not more than 70%	-
- Above 15m	N/A	Not more than 33.3%	
No. of Residential Block	N/A	1	-
No. of Flats	N/A	About 342	-
Average Flat Size	N/A	About 43m^2	-
Anticipated Population	N/A	About 855 [4]	-
Local Open Space	N/A	Total area of not less than 855m^2, which includes a voluntary waterfront promenade of not less than 608m^2 for public access and enjoyment	-
Greenery Provision	N/A	Not less than 20%	-
Car Parking Spaces			
Private Car Parking Spaces	N/A	63 (incl. 2 accessible car parking spaces)	
- Residential	N/A	50	-
- Visitor	N/A	5	-
- Shop and Services/ Eating Place	N/A	8	-
Motorcycle Parking Spaces	N/A	4	
Loading/ Unloading (L/UL) Bays	N/A	3 (1 Light Goods Vehicle Space and 2 Heavy Goods Vehicle Spaces)	-
Completion Year	N/A	2032	-

Notes:

[1] Proposed clubhouse GFA (5% of total domestic GFA) is exempted from GFA calculation.

[2] The area of the covered public passageway (about 223m^2) for public access from Tung Yuen Street to the waterfront promenade through our proposed building at ground level is not included in the non-domestic GFA of 2,177.1m^2. Considering the nature

of serving the public and users of the proposed development with reference to PNAP APP-108, the 223m^2 is proposed as an exempted GFA.

[3] On top of the PR/GFA set out above, a bonus PR of not more than 0.082 (equivalent to a GFA of not more than 198m^2) will be claimed for the 39.586m^2 of ODP-required setback areas. While the bonus PR will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2) at detailed design stage, nevertheless, the bonus PR has been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.

[4] A person per flat (PPF) ratio of 2.5 is adopted with reference to the average domestic household size of the subject Yau Tong West District Council Constituency Area as reported in the 2021 Population Census results published by the Census and Statistics Department.

4. ASSESSMENT AREA AND SELECTION OF VIEWING POINTS

4.1 Assessment Area

4.1.1 According to the TPB PG-No. 41, the Assessment Area is defined by approximately three times of overall maximum BH of the subject development, i.e. 95.6m (100mPD with 4.4mPD at ground level). Thus, a radius of 286.8m (i.e. 95.6m × 3) from the boundary of the Application Site defines the boundary of the Assessment Area (**Figure 2**).

4.2 Selection of Viewing Points

4.2.1 The Urban Design Guidelines in the Hong Kong Planning Standards and Guidelines (HKPSG) have identified strategic viewing points for the consideration of harbourfront development (Figure 3 of Chapter 11 of HKPSG refers), of which the strategic VP at Quarry Bay Park is chosen for assessment purpose.

4.2.2 When assessing the potential visual impacts of the Proposed Scheme, the classification of VPs is categorised as follows:

Table 4-1 Classification of Visual Sensitivity

Receivers	Main Activities	Sensitivity
Recreational	Those viewers who would view the Application Site while engaging in recreational activities.	High
Travellers	Those viewers who would view the Application Site from vehicles or on foot.	Medium
Occupational	Those viewers who would view the Application Site from their workplaces.	Low

4.2.3 In summary, a total of 6 VPs are adopted in the VIA (**Figure 2**) to evaluate the medium-range and long-range VPs. They are:

- **VP1: Yau Lai Estate – Fung Lai House** – This VP is located on the podium of the southern part of Yau Lai Estate, a public housing estate which is located to the north of the Application Site with a distance of approximately 650m and a site level of about 35mPD. Since it serves as one of the important commuting routes for the residents travelling from Yau Lai Estate to Yau Tong MTR Station, this medium-range VP is selected to assess the travellers who have a direct view towards the YTB and the YTIA but not directly visit to the Application Site. Owing to the transient nature of this VP, visual sensitivity is considered **medium**.

- **VP2: The Rooftop Garden (the Outdoor Maze Area) atop Domain Mall** – This VP is situated about 550m to the northeast of the Application Site across Cha Kwo Ling Road. This VP has been selected since it is one of the major public open spaces where residents in the adjacent public housing estates (such as Yau Tong Estate) would visit for passive recreation activities. Besides, the Rooftop Garden is also a famous

destination for visitors from other districts due to its unique architectural design. It is a medium range VP to represent views of the local residents and visitors from this recreation area towards the YTIA where the Application Site is located. The visual sensitivity of this VP is considered **high**.

- **VP3: Devil's Peak – Wilson Trail –** Located to the southeast of the Application Site with a distance of about 900m, this VP is taken on Devil's Peak presenting a long-range VP with panoramic view towards the YTIA where many new/planned residential developments are situated. From this VP, a distinct stepped height profile with descending BH towards the waterfront can be observed from a higher ground. It represents views of the hikers on this popular Wilson Trail on the Devil's Peak. The compatibility of the Proposed Scheme with the stepped building height profile at Yau Tong will be assessed through this VP. The visual sensitivity of this VP is considered **high**.

- **VP4: Lighthouse at Lei Yue Mun Rest Garden –** This VP is located at the waterfront area of Lei Yue Mun Rest Garden, which is situated about 700m to the southeast of the Application Site. It is a medium-range VP to represent views of the visitors and local villages/residents in Lei Yue Mun Village towards the planned/existing residential developments along the waterfront area of the YTIA. The compatibility of the Proposed Scheme with the stepped BH profile at Yau Tong will be assessed through this VP. The visual sensitivity of this VP is considered **high**.

- **VP5: Quarry Bay Park –** This VP is situated on the Hong Kong Island at about 1500m away from the southwest of the Application Site, which is a strategic VP as set out in the Urban Design Guidelines to assess impacts on the views to Kowloon Peak and other major Kowloon ridgelines. It is a long-range VP representing visitors or residents who engage in passive recreational activities such as walking, sitting-out and resting purposes while having a view towards the Application Site with the Victoria Harbour in the foreground. The compatibility of the Proposed Scheme with the overall visual composition of Eastern Kowloon from across the Victoria Harbour will be assessed via this VP. The visual sensitivity of this VP is considered **high**.

- **VP6: Kai Tak Runway Park –** This VP is located to the northwest from the Application Site with a distance of about 2,100m. This VP is selected due to its representation of a major long-range vantage point towards the Application Site along the harbour, as well as its popularity with local users for outdoor recreational activities, sitting-out and walking and overseas visitors from the Kai Tak Cruise Terminal. It is a VP to assess visual impacts of the Proposed Scheme with consideration of the overall visual composition of Kowloon East against the backdrop of Devil's Peak. Due to its prominent location and containing both passive and active recreational space with a medium duration of view, the visual sensitivity of this VP is considered **high**.

5. ASSESSMENT OF VISUAL IMPACT

5.1.1 This Section examines the visual impact of the Proposed Scheme by comparing it with the Baseline Scheme. While the planned / approved developments in the surroundings are included in both Proposed and Baseline Conditions, an OZP Scenario Scheme for the future development at the Application Site would be incorporated into the Baseline Condition for assessment. The OZP Scenario Scheme in this VIA refers to a residential development with domestic PR of 5, non-domestic PR of 1 and BH of 80mPD. The waterfront promenade is not provided under that OZP Scenario Scheme.

5.1.2 Reference is made to TPB PG No. 41, and **Table 5-1** summarises the relevant appraisal aspects. The visual appraisal for the Proposed Scheme is evaluated on the basis of 'visual composition', 'visual obstruction', 'effect on public viewers' and 'effect on visual resources.

Table 5-1 Appraisal Aspects

Appraisal Aspects	Major Considerations
Visual Composition	Visual composition is the total visual effect of all the visual elements due to their variation in locations, massing, heights, dispositions, scales, forms, proportions and character vis-à-vis the overall visual backdrop. Visual composition may result in visual balance, compatibility, harmony, unity or contrast. The appraisal should have due regard to the overall visual context and character within the wider and local contexts.
Visual Obstruction	A development may cause views in its foreground or background to be intercepted or blocked. The appraisal should assess the degree of visual obstruction and loss of views or visual openness due to the proposed scheme from all key public viewing points within the assessment area.
Effect on Public Viewers	The effects of visual changes from key public viewing points with direct sightlines to the proposed scheme should be assessed and demonstrated in the VIA. The changes in views to the existing and future public viewers should be compared before and after the proposed scheme. The effects of the visual changes can be graded qualitatively in terms of magnitude as substantial, moderate, slight or negligible
Effect on Visual Resources	The condition, quality and character of the assessment area may change positively or negatively as a result of a development. The applicant should appraise if the proposed scheme may improve or degrade the condition, quality and character of the assessment area and any on-site and off-site visual impact such as that on the visual resources, visual amenities, area of special character, natural and built heritage, sky view, streetscape, townscape and public realm related to the development.

5.1.3 TPB PG No. 41 sets out the classifications of visual impact and its associated description. The classifications are tabulated in **Table 5-2** to appraise the Overall Visual Resultant Impact of the Proposed Scheme on the VSRs (Para. 4.11 of the HKPSG refers). This Section evaluates the visual impact of the Proposed Scheme as compared with the Baseline Scheme with the existing and planned developments in the surroundings.

Table 5-2 Classification of Overall Resultant Visual Impact

Classification of Overall Resultant Visual Impact	Description
Enhanced	If the Proposed Scheme in overall term will improve the visual quality and complement the visual character of its setting from most of the identified key public viewing points.
Partly Enhanced/Partly Adverse	If the Proposed Scheme will exhibit enhanced visual effects to some of the identified key public viewing points and at the same time, with or without mitigation measures, exhibit adverse visual effects to some other key public viewing points
Negligible	If the Proposed Scheme will, with or without mitigation measures, in overall terms have insignificant visual effects to most of the identified key public viewing points, or the visual effects would be screened or filtered by other distracting visual elements in the assessment area.
Slightly Adverse	If the Proposed Scheme will, with or without mitigation measures, result in overall terms in some negative visual effects to most of the identified key public viewing points.
Moderately Adverse	If the Proposed Scheme will, with or without mitigation measures, result in overall terms in negative visual effects to most of the key identified key public viewing points.
Significantly Adverse	If the Proposed Scheme will in overall terms cause serious and detrimental visual effects to most of the identified key public viewing points even with mitigation measures.

VP1: Yau Lai Estate –Fung Lai House (Figure 3)

5.1.4 This medium-range VP represents travellers in the neighbourhood of Yau Lai Estate with a transient view towards the Proposed Scheme at the Application Site on their way to/from the MTR station.

5.1.5 **Effects on Visual Composition** – The foreground of this VP is occupied by a cul-de-sac with roadside greenery within Yau Lai Estate while the middle-ground is dominated by clusters of residential buildings including the planned residential developments in the YTB. Both the Baseline and Proposed Schemes can be seen at the backdrop with other residential developments in the YTIA. The Proposed Scheme will blend in with other planned residential developments in the vicinity upon completion. Therefore, there will be **negligible** impact to the concerned visual composition.

5.1.6 **Effects on Visual Obstruction and Visual Permeability –** Only a small portion of both the Baseline and Proposed Schemes will be seen in the background, with most part of it hidden behind the approved YTB development. Thus, minor relaxation of BH for the Proposed Scheme will only create very minor additional visual obstruction as compared to the Baseline Scheme with the adjacent planned residential developments. Therefore, the Proposed Scheme will have **negligible** effect on visual obstruction and visual permeability.

5.1.7 **Effects on Public Viewers –** From this VP, more kinetic public viewers will be walking along the podium within Yau Lai Estate. Given that the Proposed Scheme will blend in with the planned and existing developments in the YTIA, it is unlikely to attract public

viewers' attention with the minor relaxation of BH as compared to the Baseline Scheme. Therefore, the Proposed Scheme will have **negligible** effect to the public viewers.

5.1.8 **Effects on Visual Elements/Resources –** The Proposed Scheme will not be highly visible as it will blend in well to building clusters in the background of this VP. The cul-de-sac with roadside greenery within Yau Lai Estate in the foreground and high-rise residential developments such as the Peninsula East (147mPD) will remain as significant components of the VP with the Proposed Scheme. The open sky view will not be affected by the Proposed Scheme. Therefore, the effects on visual elements/resources will be **negligible**.

5.1.9 Based on the above, the Proposed Scheme will bring **negligible** visual impact to the public viewers in this VP.

VP2: The Rooftop Garden (the Outdoor Maze area) atop Domain Mall (Figure 4)

5.1.10 This medium-range VP represents views of local residents or visitors from other districts who enjoyed passive recreation activities at the Rooftop Garden atop Domain Mall (the Outdoor Maze area). From this VP, only the topmost part of the Baseline Scheme or Proposed Scheme is visible at the background as they are mostly intercepted by existing developments in the foreground.

5.1.11 **Effects on Visual Composition –** The visual composition from this VP consists of low to medium-rise IBs in the foreground as well as the existing and planned high-rise residential developments in the YTIA and the YTB such as planned residential under Approved Application No. A/K15/127 (120mPD), Maya (140mPD), Peninsula East (147mPD) and The Coast Line II (100mPD) under construction etc. In view of that both the Baseline and Proposed Scheme blends in well with the existing and planned high-rise residential developments with only the topmost portion visible, views to the waterfront will not be affected with the minor relaxation of BH under the Proposed Scheme. The impact to visual composition caused by the Proposed Scheme is thus **negligible**.

5.1.12 **Effects on Visual Obstruction and Visual Permeability –** In view of the insignificant visual change of the Proposed Scheme at this VP, slight additional visual obstruction created by the Proposed Scheme is considered minimal at this VP as compared to the Baseline Scheme. While those high-rise developments near Quarry Bay across the Victoria Harbour still can be seen in this VP, the Proposed Scheme largely maintains the visual permeability which is comparable to the Baseline Scheme. Hence, the potential effects visual obstruction and visual permeability caused by the Proposed Scheme are **negligible**.

5.1.13 **Effects on Public Viewers –** Only the upper levels of the Proposed Scheme will be visible between the planned residential developments and blends in well with the high-rise residential developments in the surrounding. The change of BH under the Proposed Scheme might be unnoticeable to the public viewers given that existing and planned high-rise developments (e.g. Peninsula with BH of 147mPD, Maya with BH of 140mPD and Approved Application No. A/K15/127 of 120mPD) will likely attract visual attention at this VP. The Proposed Scheme remains highly compatible and integrated with the design

of the building masses of the surrounding high-rise developments. Hence, the Proposed Scheme has caused **negligible** effect on public viewers.

5.1.14 **Effects on Visual Elements/Resources –** In view of that Proposed Scheme is visually integrated into the high-rise existing and planned residential developments in the background, the cityscape of this VP would generally be remained. The minor relaxation of BH might not be highly noticeable from this VP. The visual resources have been gradually amended by the on-going transformation of the YTB and YTIA under the Baseline Condition. The Proposed Scheme would bring no significant changes on the key visual elements/ resources from this VP, including the view towards Victoria Harbour. The effect on visual elements/ resources is therefore considered **negligible**.

5.1.15 Based on the above, the Proposed scheme will bring **negligible** visual impact to the recreational users in the Rooftop Garden atop Domain Mall.

VP3: Devil's Peak – Wilson Trail (Figure 5)

5.1.16 This long-range VP represents views of hikers and travellers who are hiking along the Wilson Trail of Devil's Peak. From this VP, only a slight part of both the Baseline and Proposed Schemes are visible at the background as they are intercepted by the existing residential development including Maya, Spectacle and Lei Yue Mun Estate Phase 1 – 3 as well as the planned Lei Yue Mun Estate Phase 4.

5.1.17 **Effects on Visual Composition –** The visual composition from this VP consists of vegetations in the foreground and high-rise residential developments in the YTIA and Lei Yue Mun in the middle-ground (i.e. Lei Yue Mun Estate Phase 1-3, planned Lei Yue Mun Estate Phase 4, and other existing and planned residential developments such as The Spectacle, Maya, Ocean One, Canary side, One East Coast and Montego Bay). The Victoria Harbour view constitutes the background of this VP. In view of that the Proposed Scheme blends in with the existing and planned high-rise residential developments with only a small portion visible, the view towards the waterfront is not affected as compared to the Baseline Condition. Hence, the impact to visual composition caused by the Proposed Scheme is considered **negligible**.

5.1.18 **Effects on Visual Obstruction and Visual Permeability –** In view of the insignificant visual change of the Proposed Scheme at this VP, the slight additional visual obstruction created by the Proposed Scheme is considered minor at this VP. The visual permeability to the Victoria Harbour at the background is largely maintained in the Proposed Condition with the minor relaxation. Hence, potential effects visual obstruction and visual permeability caused by the Proposed Scheme are **negligible**.

5.1.19 **Effects on Public Viewers –** The upper levels of the Proposed Scheme will only be visible at the narrow gap between the planned residential clusters at the foreground and blends in well with the residential development at the backdrop. The change in the BH is largely unnoticeable to the public viewers hiking along the trail. The Proposed Scheme remains highly compatible and integrated with the design of the building masses of the surrounding high-rise developments. The public viewers may pay attention to the overall urban profile

of the YTIA and Lei Yue Mun area instead of the minor relaxation of BH of the Proposed Scheme. Hence, the Proposed Scheme has caused **negligible** effect on public viewers.

5.1.20 **Effects on Visual Elements/Resources –** The Proposed Scheme is visually integrated into the existing and planned high-rise residential developments in the middle-ground and is hardly noticeable from this VP. The visual resources have been gradually amended by the on-going transformation of the YTIA and Lei Yue Mun area under the Baseline Scheme. The Proposed Scheme would bring no significant changes on the key visual elements/resources from this VP, including the view towards Victoria Harbour and Hong Kong Island in this VP. The effect on visual elements/ resources is therefore considered **negligible**.

5.1.21 In gist, the Proposed Scheme will bring **negligible** visual impact at this VP on the visual composition, visual obstruction and permeability, public viewers, and visual elements/resources.

VP4: Lighthouse at Lei Yue Mun Rest Garden (Figure 6)

5.1.22 This VP is located at the waterfront area of Lei Yue Mun Rest Garden. This medium-range VP is taken to represent the public view of the visitors enjoying in this recreational area and local villages/residents in Lei Yue Mun Village. Part of the Baseline and Proposed Scheme are both visible in the middle-ground of the VP.

5.1.23 **Effects on Visual Composition –** The existing view from this medium range VP primarily comprises the beach in the foreground with some high-rise residential developments in the middle-ground, with Victoria Harbour and the Lion Rock at the background. The Proposed Scheme located behind the planned residential under construction (i.e. The Coast Line I) at the centre of the middle-ground will integrate with the planned and existing residential development at both sides of Tung Yuen Street with BH ranging from 80mPD to 147mPD in the background. Upon completion, the form and scale of the Proposed Scheme (80mPD to 100mPD) will be in harmony with the surroundings, echoing with the stepped BH profile of YTIA as observed at this VP. Therefore, impact to the visual composition caused by the Proposed Scheme is thus **negligible**.

5.1.24 **Effects on Visual Obstruction and Visual Permeability –** Only the topmost portion of the Proposed Scheme will be observed at this VP, with majority part of the building bulk screened off by planned residential development in front. The minor relaxation of BH at the inland portion of the Application Site will not bring obstruction of views towards the skyline and waterfront, indeed in harmony with the stepped BH profile from this VP. Besides, as compared with the Baseline Scheme, the waterfront promenade under the Proposed Scheme also enhances the permeability along the waterfront. Thus, visual obstruction and visual permeability under the Proposed Scheme would be **partly enhanced**.

5.1.25 **Effects on Public Viewers –** The public viewers from this VP at the lighthouse of Lei Yue Mun Rest Garden will be able to view the Proposed Scheme in the centre of middle-ground. Besides, the public viewers are more interested to appreciate the open view of the Victoria Harbour with the cityscape as the backdrop for this VP. Provided that the development scale of the Proposed Scheme is compatible with other surrounding residential development upon completion, the effect on public viewers will be finite as it

will be viewed as part of the skyline. Therefore, the visual impact to the public viewers is **negligible**.

5.1.26 **Effects on Visual Elements/Resources –** The compatible building profile of the Proposed Scheme (maintaining a stepped BH of 80mPD to 100mPD) with the adjacent planned residential development will create visual interests by the stepped building height profile from this VP. Victoria Harbour in the foreground and open sky view with Lion Rock in the background will be retained upon completion. No additional interception to the skyline and waterfront will be resulted with the Proposed Scheme as compared with the Baseline Scheme. In this regard, the Proposed Scheme will have **negligible** effects on the visual elements/resources.

5.1.27 In view of the above, the Proposed Scheme will generally bring **negligible** impacts on the visual composition, visual obstruction and permeability, public viewers and visual resources associated with this VP at the lighthouse in Lei Yue Mun Rest Garden.

VP5: Quarry Bay Park (Figure 7)

5.1.28 This VP is situated at about 1500m away from the southwest of the Application Site, which is a strategic VP identified in the Urban Design Guidelines to assess impacts on the views to Kowloon Peak and other major Kowloon ridgelines. It is a long-range VP representing recreational users and public viewers who engage in passive recreational activities such as sitting-out and resting purposes while having a view toward the Application Site with the Victoria Harbour in the foreground.

5.1.29 **Effects on Visual Composition –** The foreground of this VP is occupied by the Victoria Harbour while the middle-ground is dominated by clusters of buildings in Kowloon East. The ridgelines of Devil's Peak, Chiu Keng Wan Shan and Black Hill can be seen alongside with the open sky view in the background. The Proposed Scheme will blend in with existing and planned residential developments in the vicinity, maintained the stepped BH profile towards the Kowloon waterfront, with no impact to the ridgeline of Devil's Peak upon completion. Therefore, there will be **negligible** impact to the concerned visual composition towards the Kowloon ridgelines.

5.1.30 **Effects on Visual Obstruction and Visual Permeability –** The Proposed Scheme will only be seen in the middle-ground. Thus, the Proposed Scheme will be blending in the surrounding high-rise developments and will not create additional visual obstruction to the ridgeline and skyline as compared to the Baseline Scheme with the adjacent planned residential developments. Therefore, the Proposed Scheme will have **negligible** effect on visual obstruction and visual permeability.

5.1.31 **Effects on Public Viewers –** From this VP, more kinetic public viewers would walk along the waterfront promenade in Quarry Bay Park. Instead of focusing on one individual development, more attention may be paid to the overall visual profile of East Kowloon and its relationship with the ridgeline of this VP by the recreational users. Given that the Proposed Scheme will be well blend with building cluster and form part of the stepped BH profile in Yau Tong, it is unlikely to attract public viewers' attention with the minor

relaxation of BH at its inland portion. Therefore, the Proposed Scheme will have **negligible** effect to the public viewers.

5.1.32 **Effects on Visual Elements/Resource –** The Proposed Scheme will not be highly visible as it will be mixed into the clusters of building in the middle-ground of this VP. Views to the Victoria Harbour in the foreground and the open sky view in the background will remain as a significant component of the VP with the Proposed Scheme. The view to the ridgelines in Kowloon will not be affected upon completion of the Proposed Scheme. Therefore, the effects on visual elements/resources will be **negligible**.

5.1.33 Based on the above, the Proposed Scheme will bring **negligible** visual impact on the visual composition, visual obstruction and permeability, public viewers and visual resources associated with this VP.

VP6: Kai Tak Runway Park (Figure 8)

5.1.34 This VP is located approximately 2100m to the northwest from the Application Site and is selected due to its representation of a major long-range vantage point towards the Application Site along the harbour, as well as its popularity with local users for outdoor recreational activities, sitting-out and walking and overseas visitors from the Kai Tak Cruise Terminal. It is a VP to assess visual impacts of the Proposed Scheme with the considerations of the overall visual composition of Kowloon East against the backdrop of Kowloon Peak and Devil's Peak from Kai Tak. Due to its prominent location and containing both passive and active recreational space with a medium duration of view, the visual sensitivity of this VP is considered **high**.

5.1.35 **Effects on Visual Composition –** The visual composition of this VP comprises of Kai Tak Runway Park and the Victoria Harbour in the foreground, and clusters of buildings and green knolls of Cha Kwo Ling in the middle-ground. The ridgeline of Kowloon and open sky view occupies the background of this VP. While both the Baseline and the Proposed Scheme will not be standout from this VP as both of them will be well-blended with other planned and existing residential developments along Kowloon East waterfront, the stepped BH profile design under the Proposed Scheme will be coherent with the gradual descending ridgeline towards Victoria Harbour. Therefore, the effects on visual composition will be **negligible**.

5.1.36 **Effects on Visual Obstruction and Visual Permeability** – Given that the Proposed Scheme in the middle ground will be fully blended into the stepped BH profile of the Yau Tong waterfront, there will be no noticeable additional visual obstruction to the cityscape along the harbourfront. Besides, the visual permeability with the proposed minor relaxation of BH towards visual elements such as the Victoria Harbour, the Kowloon ridgelines and the open skyline would generally be remined as compared to the Proposed Scheme. Therefore, the Proposed Scheme will cause **negligible** visual obstruction as compared to the Baseline Scheme with the adjacent planned residential developments.

5.1.37 **Effects on Public Viewers –** The public viewers visiting Kai Tak Runway Park will only be able to view the Proposed Scheme as part of the urban landscape of Kowloon East from this VP. Given that the Proposed Scheme will be well blend with building cluster and form part of the stepped BH profile in Yau Tong, it is unlikely to attract public viewers'

attention with the minor relaxation of BH at its inland portion. As such, the Proposed Scheme will have **negligible** effect to the public viewers.

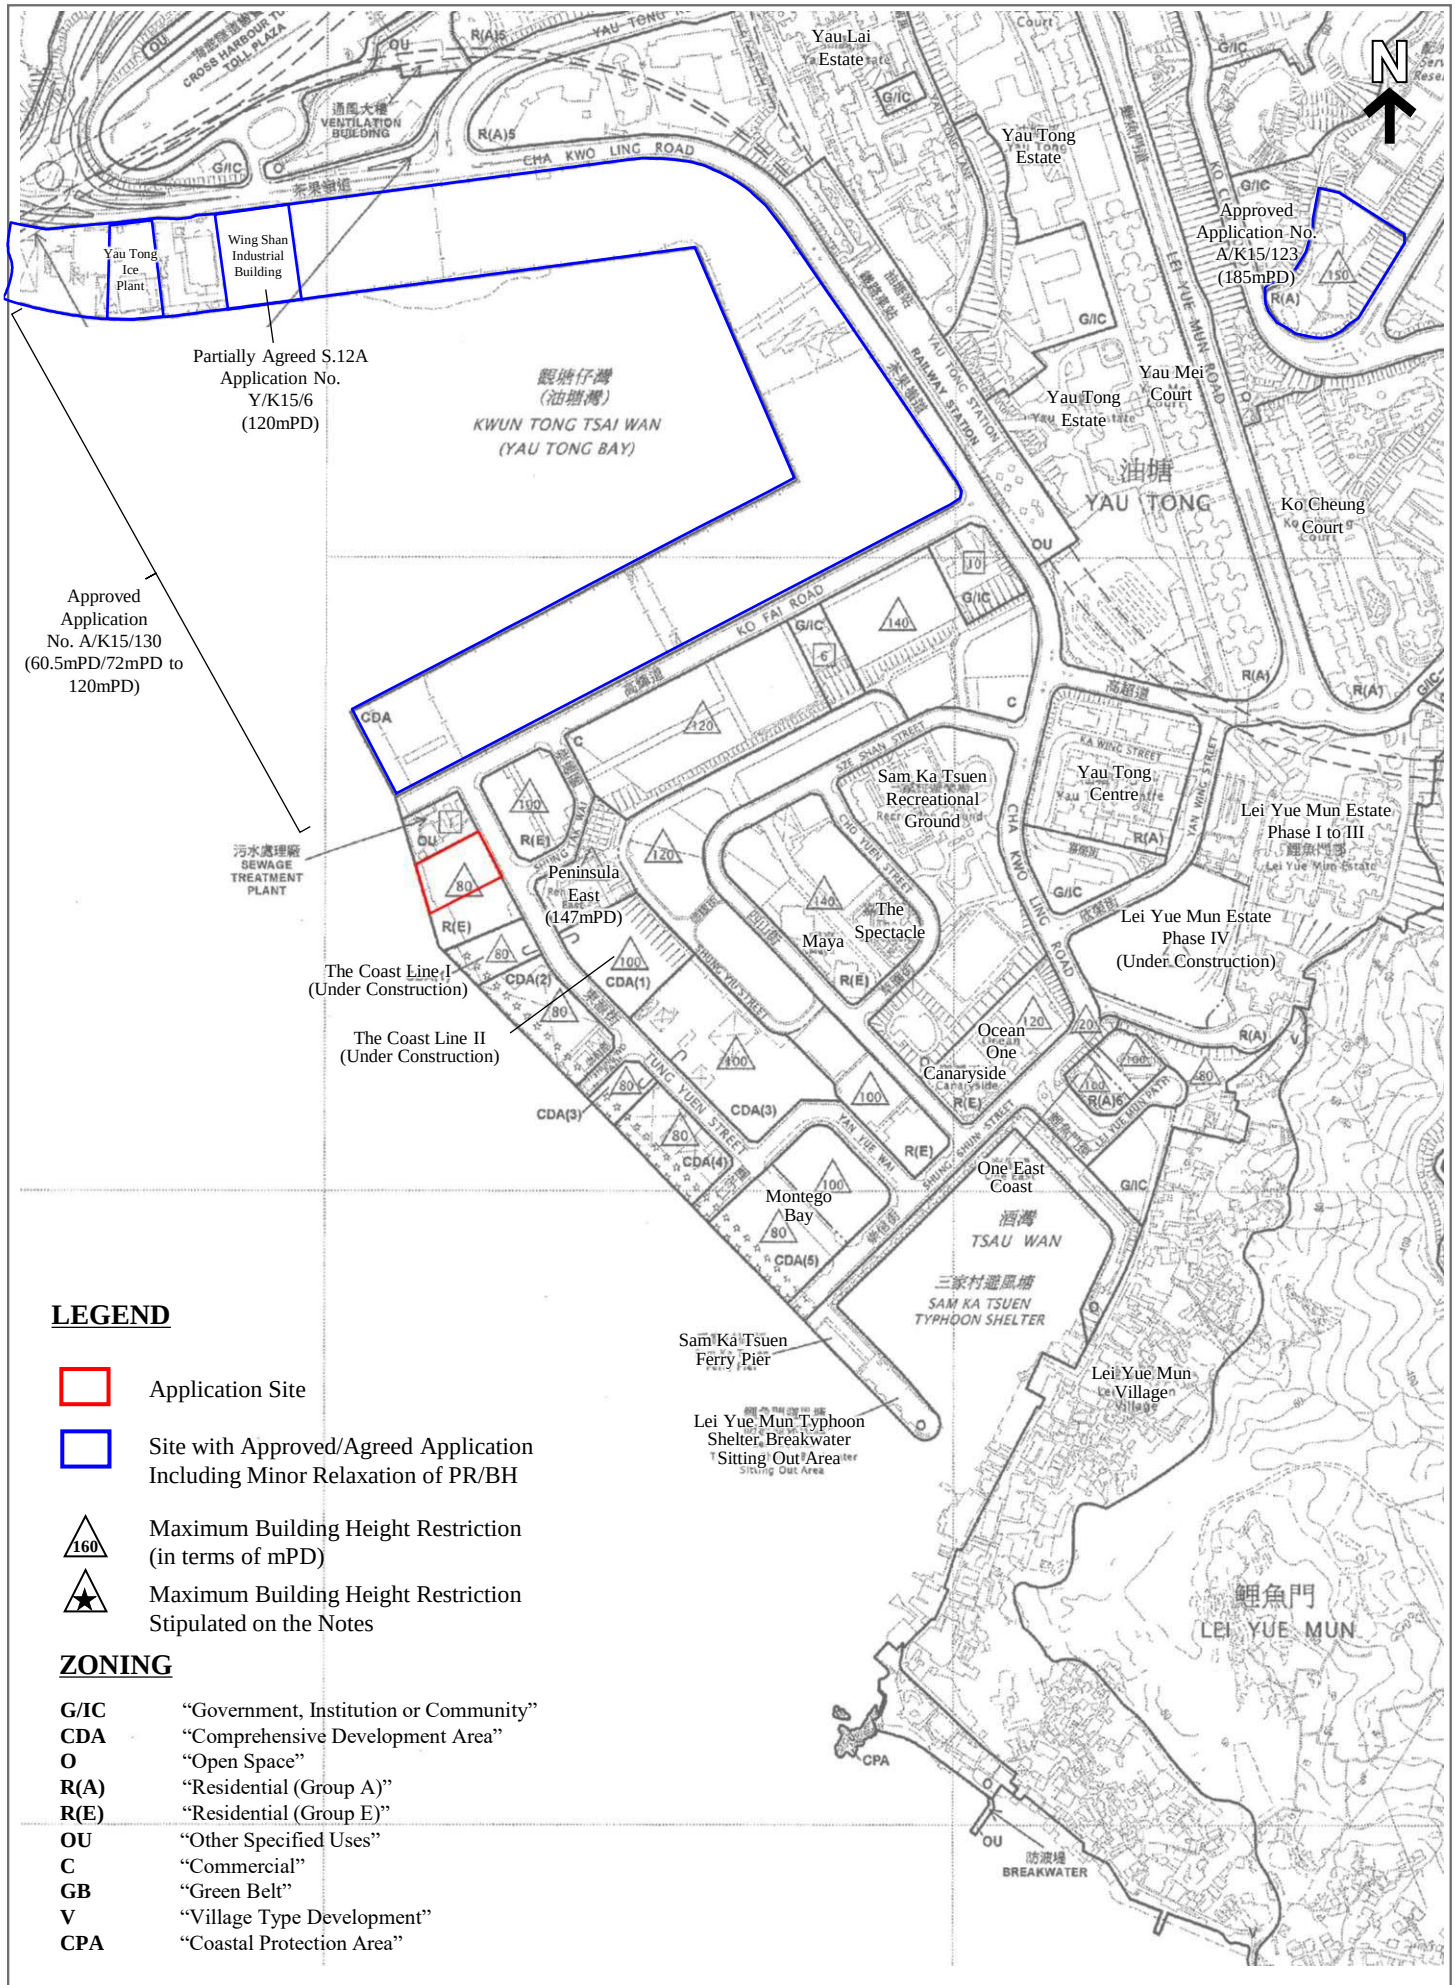
5.1.38 **Effects on Visual Elements/Resource –** As compared to the Baseline Scheme, the Proposed Scheme will not degrade the existing condition as it does not obstruct any views to existing visual resources and is fully integrated with the surrounding environment. Views to the Victoria Harbour in the foreground and the open sky view in the background will be preserved. Besides, the view to the ridgelines in the Kowloon East will not be affected upon completion of the Proposed Scheme. Therefore, the effects on visual elements/resources will be **negligible**.

5.1.39 Based on the above, the Proposed scheme will bring **negligible** visual impact to the recreational users in Kai Tak Runway Park.

5.1.40 Please refer to **Table 5-3** for summary of visual impacts as discussed in the above section.

Table 5-3 Visual Impact Assessment Summary

VP	Visual Sensitivity	Appraisal Components				Conclusion
		Visual Composition	Visual Obstruction	Effect on Public Viewers	Effect on Visual Resources	
VP1: Yau Lai Estate – Fung Lai House	Medium	Negligible	Negligible	Negligible	Negligible	**Negligible**
VP2: The Rooftop Garden (the Outdoor Maze area) atop Domain Mall	High	Negligible	Negligible	Negligible	Negligible	**Negligible**
VP3: Devil's Peak – Wilson Trail	High	Negligible	Negligible	Negligible	Negligible	**Negligible**
VP4: Lighthouse at Lei Yue Mun Rest Garden	High	Negligible	Partly Enhanced	Negligible	Negligible	**Negligible**
VP5: Quarry Bay Park	High	Negligible	Negligible	Negligible	Negligible	**Negligible**
VP6: Kai Tak Runway Garden	High	Negligible	Negligible	Negligible	Negligible	**Negligible**



6. CONCLUSION

6.1.1 This VIA is prepared in support of the Planning Application for Permission under S16 of the Town Planning Ordinance (Cap. 131) for Proposed Flat, Shop and Services and Eating Places with Minor Relaxation of PR and BH Restrictions in "R(E)" zone, No. 4 Tung Yuen Street, Yau Tong, Kowloon. To respond to the pressing demand on housing units and to facilitate the phasing out of incompatible industrial uses at the transforming neighbourhood of the YTIA, the Applicants have formulated the Proposed Scheme to create a quality harbourfront residential development with about 342 flats and a voluntary waterfront promenade of not less than 15m-wide that integrates with the surrounding and creates a more harmonised and balanced skyline at the prominent harbourfront location at the YTIA.

6.1.2 With the proposed minor relaxation of BH from 80mPD to 100mPD for only one residential band on its inland portion, the stepped height profile descending towards the waterfront can be maintained by the two bands of BH designed within the Application Site, respecting the planning intention for the Yau Tong area. In order to assess the visual impact, comparisons have been made between the Proposed Scheme and Baseline Scheme (OZP Scenario Scheme).

6.1.3 A total of 6 VPs, including one strategic VP identified with reference to the Urban Design Guidelines of the HKPSG were assessed in this VIA. Findings of the VIA concludes that the Proposed Scheme will result with negligible impact as compared with the Baseline Scheme. Based on the above, the Proposed Scheme is considered to be fully acceptable in terms of visual impact.

The Secretary
Town Planning Board
15/F, North Point Government Offices
333 Java Road
North Point
Hong Kong

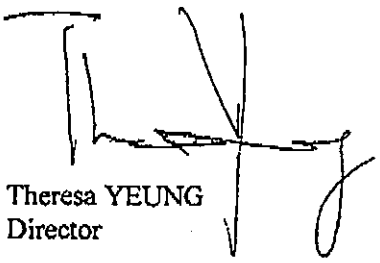
28 January 2025

Dear Sir/Madam,

Application for Planning Permission Under Section 16 of the Town Planning Ordinance (Cap. 131) for Proposed Flat, Shop and Services and Eating Place with Minor Relaxation of Plot Ratio and Building Height Restrictions at Yau Tong Marine Lot No. 70, No. 4 Tung Yuen Street, Yau Tong, Kowloon
(Planning Application No. A/K15/132)

Submission of Further Information – Responses to Departmental Comments

We refer to the comments from Environmental Protection Department on the captioned S16 Planning Application received on 16 January 2025.



We are pleased to submit via shared link and 4 copies of CD rom herewith the noise modelling files, air modelling files as well as EMFAC files and all calculation spreadsheets of emission inventories of Environmental Assessment and Air Quality Impact Assessment reports in support of the Planning Application for your consideration.

This submission only serves as technical clarifications without changing the scheme or includes any major changes in the assumptions, methodologies, findings and the proposed mitigation measures, and thus should be exempted from recounting requirement.

We sincerely seek for favourable consideration from the Town Planning Board to approve this S16 Planning Application.

Should you have any queries, please contact the undersigned or our Ms. Natalie LEUNG at [redacted] or our Mr. Ryan CHAN at [redacted].

Yours faithfully,

Theresa YEUNG
Director

Table 1 Calculation for Sewage Generation Rate of the Proposed Residential Development at the Application Site

1. Proposed Residential Development			**Remarks**
1. Residential Towers (T1-T3)			
a. Total number of units	=	342	units
b. Total number of residents	=	855	people -- (average household size of 2.5 from Hong Kong 2021 Population Census -Yau Tong West)
c. Design flow	=	0.19	m^3/person/day -- (Private R1 in Table T-1 of GESF)
d. Sewage Generation rate	=	**162.5**	m^3/day
2. Club House			
a. Assumed used area	=	735	m^2
b. Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
c. Total number of employees	=	24	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J11)
f. Sewage generation rate	=	**6.7**	m^3/day
3. Swimming Pool			
a. Assumed Area of Swimming Pool	=	250	m^2
b. Average Depth of Water	=	1.5	m (assumption)
c. Volume of Swimming Pool	=	375	m^3
d. Turnover Rate	=	6	hr
e. Surface Loading Rate of Filter	=	50	m^3/m^2/hr
f. Filter Areas required	=	1.3	m^2
g. Backwash Duration	=	3	min/d
h. Backwash flow rate	=	30	m^3/m^2/hr
i. Design flow for Swimming Pool Backwashing	=	37.5	m^3/hr
j. Design flow for Swimming Pool Backwashing	=	**10.4**	litre/sec
4. Retail			
a. Assumed used area	=	1306.2	m^2
b. Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
c. Total number of employees	=	46	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J4)
f. Sewage generation rate	=	**12.9**	m^3/day
5. F&B			
a. Assumed used area	=	870.8	m^2
b. Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurant)
c. Total number of employees	=	44	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	1500	litre/employee/day -- (refer to Table T-2 of GESF Job Type J10)
f. Sewage generation rate	=	**69.5**	m^3/day
Total Flow at Manhole T0			
Flow Rate (Without Swimming Pool)	=	251.6	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	276.7	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	1025	people
Peaking factor	=	6	Refer to Table T-5 of GESF for population 1,000 - 5,000 including stormwater allowance
Peak Flow (Without Swimming Pool)	=	17.5	litre/sec
Peak Flow (With Swimming Pool)	=	**27.9**	litre/sec

Table 2a Hydraulic Capacity at Sewers along Tung Yuen Street, Yau Tong

Segment	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Invert Level 1	Invert Level 2	g	k_s	s	v	V	Area	Q	Estimated Capacity

S2-S3	FMH4034525	FMH4034509	900	8.0	0.94	0.93	9.81	0.0015	0.001	0.000001	0.99	0.64	0.63	629

Remarks: (1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 1.5 mm is used with reference to Slimed uPVC Sewers, poor example in Table 5 of Sewerage Manual Part 1.

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used:

$$V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

(5) The pipe information in Table 2a is obtained from Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3)

Table 3a Hydraulic Capacity of Sewers (Catchment A)

1. Full Bore of Pipes FWD4036773, FWD4036778 and FWD4125280 (Assumption)

Pipe Reference	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Upstream Invert Level	Downstream Invert Level	g	k_s	s	v	V	Area	Q	Estimated Capacity

													Sub-total	183

Remarks:

(1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 6mm is used for the calculation of concrete sewer (based on Table 5: Recommended roughness values in Sewerage Manual)

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used: $V=-\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D}+\frac{2.51v}{D\sqrt{(2gDs)}}\right)$

(5) The pipe information is obtained from Geoinfo Map.

2. 18 Tung Yuen Street (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 91 m^3/day (from EPD)

b. Sewage Generation rate at FMH4034558 = 136 m^3/day (from EPD)

c. Total Dewerage Generate rate = 227 m^3/day

3. Application for Proposed Admendments to Approved Scheme (under Application No. A/K15/119) in "CDA(3)" Zone and Area Shown as 'Road', at YTML No. 57, YTILs No. 4 sB and 9, and Adjoining Government Land, Tung Yuen Street, Yau Tong, Kowloon (R7481_v1.3)

a. Sewage Generation rate = 1075.2 m^3/day

4. Residential (Other Proposed Residential Development ref. YTML No. 69 & YTIL No. 4RP) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 627 m^3/day (from EPD)

5. Commercial (Kwun Tong Wholesale Fish Market and Tung Yuen Street Cooked Food Market) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate = 30 m^3/day

6. Peninsula East (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate = 193.5 m^3/day

7. Industrial (Redland Concrete Limited) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate = 27 m^3/day

Total Flow at Manhole S1 (FMH4034524), including Proposed Development and Catchment A

Flow Rate (Without Swimming Pool & Item 1 of Catchment A)	=	2431.3	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	2674.4	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	9905	people
Peaking factor	=	5	Refer to Table T-5 of GESF for population 5,000 - 10,000 including stormwater allowance)
Peak Flow (Without Swimming Pool)	=	323.8	litre/sec
Peak Flow (With Swimming Pool)	=	**334.2**	litre/sec

Table 4a Comparision of the Hydraulic Capacity of Existing Sewers for Sewerage generated from the Proposed Development and Surrounding Catchment Areas

Calculations of Time-In-Mode (TIM) for Barge to/ from the Concrete Batching Plant (CBP)

Premise	Vessel Type	Length of Sailing Route (m) [1]	Design Speed (m/s)	Speed Under Various Mode (m/s)		Time-In-Mode (min)	
				Hotelling	Maneuvering [2]	Hotelling [3]	Maneuvering [4]
China Concrete Co. Ltd.	Barge	581.7	NA	0	3.09	60	3.14
HK Concrete Co. Ltd.	Barge	592.4	NA	0	3.09	60	3.20
Redland Concrete Ltd.	Barge	483.5	NA	0	3.09	60	2.61

Notes:
[1] Length of sailing route within 500m assessment area.
[2] No information is available from the operator. The travelling speed of sand barges with similar nature and operation mode are recorded and can be found at https://www.marinetraffic.com. The recorded averaged speed of sand barges (i.e. about 6 knots, 3.09m/s) is adopted in this assessment, assuming the travelling speed of the barges is the same during their journey. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.
[3] Time-In-Mode (TIM) for hotelling - As advised by the operator, there would be one barge at one time serving each CBP and the barges would stay for around one to two days then depart. Given that the long duration of stay and infrequent sailing schedule of the barges, it is assumed that there would be one barge for each CBP hotelling continuously during the operation hours as a conservative assessment.
[4] TIM for maneuvering is estimated based on the recorded averaged speed of the barges and the length of sailing route within 500m assessment area.

Emisson Factor for Barge of Concrete Batching Plant (CBP)
Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Premise	Vessel Type	Engine Type	Average Engine Power (kW) [1]	Loading Factor [4]		Time-In-Mode (min) [5]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [2]	NOx [2]	RSP [2]	FSP [2]
China Concrete Co. Ltd.	Barge	Main Engine	727	0.00	0.30	60	3.14	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.14	0.21	10.00	0.40	0.39
HK Concrete Co. Ltd.	Barge	Main Engine	727	0.00	0.30	60	3.20	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.20	0.21	10.00	0.40	0.39
Redland Concrete Ltd.	Barge	Main Engine	727	0.00	0.30	60	2.61	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	2.61	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine and Auxiliary Engine - No information from operator is available. Referenced to Table 4-5 and 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012, Main Engine Power and Auxiliary Engine of Barge at GRT Class >=1000 for conservative purpose.
[2] Emission Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012, engine type of ME(Cat.1) for main engine and AE for Auxiliary Engine.
[3] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh
[4] Loading Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Tables 4-7 and 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012, vessel type of All except tug and All RTVs respectively for conservative purpose.
[5] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Barge to / from the concrete batching plant.

Detailed Emission Rate

Premise	Vessel Type	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
China Concrete Co. Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.370E-03	1.141E-01	3.422E-03	3.308E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	5.420E-04	2.608E-02	1.043E-03	1.017E-03
HK Concrete Co. Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.413E-03	1.162E-01	3.485E-03	3.368E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	5.520E-04	2.656E-02	1.063E-03	1.036E-03
Redland Concrete Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	1.970E-03	9.480E-02	2.844E-03	2.749E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	4.505E-04	2.168E-02	8.672E-04	8.455E-04

Note:
[1] It is assumed that there would be one barge hotelling at each concrete batching plant during the operation hours.
[2] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering at China Concrete Co. Ltd. (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (116 x 0.43 x 10.0 x 3.246 / 60 / 1000)
= 0.02698 kg/hour

Calculations of Emission Factor for Wind Erosion within Concrete Batching Plant (CBP)

		Emission Factor	Unit	Reference
TSP	=	0.85	Mg/hectare/yr	Table 11.9.4 of AP-42 S11.9

Therefore,

RSP	=	0.40	Mg/hectare/yr	Multiplied by a conversion factor of 0.47 for TSP to RSP according to Table 2 of AP-42 S13.2.4
	=	1.27E-06	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.
FSP	=	0.06	Mg/hectare/yr	Multiplied by a conversion factor of 0.07 for TSP to FSP according to Table 2 of AP-42 S13.2.4
	=	1.89E-07	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.

Calculations of Emission Factor for Paved Road within Concrete Batching Plant (CBP)

$$E = k\,(sL)^{0.91} \times (W)^{1.02}$$

where

E= Emission factor in grams per vehicle kilomter travelled (g/veh-km)

k= Particle size multiplier, k = 0.62 g/veh-km for RSP and 0.15 g/veh-km for FSP as defined according to Table 2 of AP42 S13.2.1-1

sL= Road surface silt loading (g/m^2), as per AP-42 Table 13.2.1-3, mean silt loading for concrete batching plant is 12 g/m^2

W= Average weight (ton) of vehicles travelling on road, 22 tons is assumed as full load condition

RSP Emission Factor = 0.139 g/veh-m

FSP Emission Factor = 0.034 g/veh-m

Description	Source ID	Distance (m)	Road Width (m)	Road Surface Area (m^2)	Peak Hourly Flow of Mixer Trucks [1]	Dust Removal Efficiency (%) [2]	Emission Rate [3][5]	
							RSP ($g/s/m^2$)	FSP ($g/s/m^2$)
China Concrete Co. Ltd. [4]	L11	17	6	102	-	-	3.10E-05	7.49E-06
	L12	6	45	268	-	-	3.10E-05	7.49E-06
HK Concrete Co. Ltd.	L31	3	18	53	22	91.70%	4.01E-06	9.70E-07
	L32	37	3	113	22	91.70%	2.35E-05	5.69E-06
Redland Concrete Ltd.	L21	7	16	110	22	91.70%	4.44E-06	1.08E-06

Note:

1. Peak hourly mixer trucks count of each concrete batching plants based on site observations.
2. Calculation of Dust Removal Efficiency for HK Concrete Co. Ltd. and Redland Concrete Ltd.

$$= 100 - \frac{0.8pdt}{}$$

(ref.: Eq. 3-2 in Section 3.3.3 of USEPA Control of Open Fugitive Duat Sources - Final Report)

where

C = Average control efficiency, in percent

p = Potenial average hourly daytime evaporation rate, 0.23676 mm/h (p = 0.0049 x 48.3189 inch is equivalent to total evaporation of 1227.3mm obtained from Hong Kong Observatory)

d = Average hourly daytime traffic rate per hour, 22 veh/hr based on site observation

t = Time between applications in hour, once in each working hour as observed during site visit

i = Application intensity, 0.5 L/m^2 for haul road as minimum application intensity

Therefore,

C = 100-(0.8)(0.2368)(22)(1)/0.5 = 91.7%

3. Emission Rate(g/s) = Emission Factor x (1- Dust Removal Efficiently) x No. of Trucks per hour x Travelling Distance/Road Surface Area
4. According to the SP License for China Concret Co. Ltd. (L-3-194(4)), the maximum dust emission rate from paved roads is 0.215kg/hr with dust control equipment (i.e. water spray).
5. According to Table 2 of AP42 S13.2.1-1, Particle size multiplier (k) of TSP, RSP and FSP for paved road is defined as 3.23 g/veh-km, 0.62 g/veh-km and 0.15 g/veh-km, respectively. The conversion ratio of TSP to RSP and FSP for paved road has thus referenced to the particle size multiplier.

Calculations of Emission Sources within Concrete Batching Plant (CBP)

Description	Fugitive Emission (Y/N)	Source ID	Source ID from SPL	Emissions/ Parameters extracted from SP License [1]							Concentration	Emission Rate adjusted to Emission Concentration Limit (10 mg/m^3) [2][3]		Exit Velocity (m/s)	Operation Hours [4]

Note:

1. No information is provided by the operators, reference has been made to the Specified Processes (SP) License (L-3-194(4) for China Concrete Co. Ltd.; L-3-218(3) for HK Concrete Co. Ltd.; and L-3-117 (6) for Redland Concrete Ltd.).
2. According to Appendix B.2, General Particle Size Distributions, page B.2-13, AP-42, 1/95 version, USEPA, RSP and FSP are 51% and 15% of TSP for general concrete batching activity.
3. According to Annex I of A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process - Cement Works (Concrete Batching Plant) BPM3/2(16) (Februrary 2016), the concentration limit of Particulate Matter (PM) would be limited to 10mg/m^3 for license renewal by 1 January 2018 for all plants.
4. Operation hours of these three CBPs were made reference to Approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA258/2018).

25 April 2025

Dear Sir/Madam,

Application for Planning Permission Under Section 16 of the Town Planning Ordinance (Cap. 131) for Proposed Flat, Shop and Services and Eating Place with Minor Relaxation of Plot Ratio and Building Height Restrictions at Yau Tong Marine Lot No. 70, No. 4 Tung Yuen Street, Yau Tong, Kowloon
(Planning Application No. A/K15/132)

Submission of Further Information – Responses to Departmental Comments

We refer to the comments from various Government departments on the captioned S16 Planning Application received between 27 January 2025 and 17 April 2025.

We are pleased to submit herewith a Responses-to-Comments Table (**Attachment A**) together with Updated Architectural Layout of the Proposed Scheme (**Appendix A**), Replacement Pages of Updated Supporting Planning Statement (**Appendix B**), Replacement Pages of Updated LMP Report (**Appendix C**), Replacement Pages of Updated Visual Impact Assessment (**Appendix D**), Updated Drainage & Sewerage Impact Assessment (**Appendix E**), Updated Environmental Assessment (**Appendix F**), Updated Air Quality Impact Assessment (**Appendix G**), Replacement Pages of Updated Traffic Impact Assessment (**Appendix H**) and Justifications for Parking Provisions (**Appendix I**) in support of the Planning Application for your consideration.

We sincerely seek for favourable consideration from the Town Planning Board to approve this S16 Planning Application.

Should you have any queries, please contact the undersigned or our Ms. Natalie LEUNG at [redacted] or our Mr. Ryan CHAN at [redacted].

Yours faithfully,

Theresa YEUNG
Director

RECEIVED
25 APR 2025
Town Planning Board

COMMENTS FROM RELATED DEPARTMENTS

No.	Comments	Responses
1.	**Buildings Department, New Buildings Division 1, Kowloon Section, dated 24 February 2025**	
	1. Application for bonus PR in return for surrender of land for street widening under regulation 22(2) of the Building (Planning) Regulations (B(P)R) will be dealt with individually according to the special circumstances of each case subject to that the surrender is considered essential and acceptable to relevant government departments and the relevant criteria under PNAP APP-20 be complied with. Such application will be processed under the BO in the building plans submission stage.	Noted.
	2. It is noted that the applicant takes the initiative to dedicate such passage for public to connect the voluntary waterfront promenade (15m wide) with Tung Yuen Street. Whether such passage can be exempted from the GFA calculation required under B(P)R 23(3)(a) will depend on the justification to demonstrate a genuine need by the public and individual merits. Relevant criteria under PNAP APP-108 should be complied with. Such application for GFA exemption will be processed in the building plans submission stage.	Noted.
	3. All building works should comply with the Buildings Ordinance (BO) and its allied regulations.	Noted.
	4. Detailed comments under the BO will be provided at the building plans submission stage.	Noted.
2.	**Civil Engineering and Development Department, Civil Engineering Office, Port Works Division, District Section, dated 27 January 2025**	
	This office has no objection to the application with the following advisory comments:	
	(a) The applicant should maintain the seawall and other marine structures and facilities within, fronting or adjoining the site or formed for	Noted.

No.	Comments	Responses
	provision of services to or formed for the support or protection of the site at his own cost up to the satisfaction of the Government. (b) The maximum superimposed load behind the existing seawall shall be limited to such an extent so as not to render inadequate the margin of safety of, or impair the structural integrity and stability of, or cause danger to any existing seawall. (c) As the proposed location is relatively exposed under extreme conditions, the coastal flood risk is relatively high due to overtopping wave and relative low ground level. Coastal risk assessment should be carried out and appropriate resilience measures (e.g. management measures and installation of demountable flood barriers during extreme conditions) should be considered in planning and design stage. Sea level rise should be considered due to global warming. The proposed design and facilities should be adaptive and could be enhanced progressively to cater for the threat of sea level rise in the future.	Noted. Noted. Please refer to Section **2.2** in **Appendix E (Updated Drainage & Sewerage Impact Assessment)** for the discussion on the sea level rise due to climate change and its relevant mitigation measures.
3.	**Development Bureau, Planning and Lands Branch, Planning Division, Harbour Office, dated 27 January 2025** 1. The subject site falls within the harbourfront area under the purview of Harbourfront Commission's Task Force on Harbourfront Developments in Kowloon, Tsuen Wan and Kwai Tsing (KTF). The project proponent should take into account the Harbourfront Planning Principles and Guidelines (HPP&G), which set out the major considerations from the harbourfront enhancement angle. The HPP&G are provided at the following links – HPPs: http://www.hfc.org.hk/filemanager/files/harbour_planning_principles_e.pdf HPGs: http://www.hfc.org.hk/filemanager/files/harbour_planning_guidelines.pdf 2. We note that a public waterfront promenade (PWP) is included as a part of the	Noted. Please note that the Applicant intends to provide a voluntary waterfront promenade

No.	Comments	Responses
	development and that commercial/retail elements would be included in the subject site. The proponent is reminded that the PWP should be planned, designed and constructed in accordance with the relevant requirements of the concerned outline zoning plan as appropriate and coherent with the planning requirements with adjacent developments.	that will be open for public enjoyment on a 24/7 basis.
	3. As per established practice, the proponent should consult KTF on the proposed development ***preferably*** before the concerned application is to be discussed at TPB, including the detailed design of the PWP as well as other related matters such as details on greenery provision, connectivity and accessibility, planning permission, implementation programme, required works areas, etc. in good time before it is finalised.	Noted. The Applicants have consulted the KTF of the Harbourfront Commission on 14 Mar 2025. Please refer to our response to KTF's comments in the meeting in comment#19 below.
4.	**Drainage Services Department, Electrical and Mechanical Branch, Sewage Treatment Division 2, Sewage Treatment Division 2 Sub-Division 1, Sewage Treatment Division 2 Sub-Division 1/2, dated 26 February 2025**	
	Please find below comments on the AQIA report. It appears that the odour impact of the sewage pumping station is not properly assessed and thus no appropriate mitigation measures would be implemented, as elaborated below: -	Noted.
	2.11.1. -please clarify what A/K15/126 Approval Scheme is and provide the report for reference.	A/K15/126 is an approved planning application of Yau Tong Inland Lots (YTMLs) 4 S.B and 9, Yau Tong Marine Lot (YTML) 57 and adjoining Government Land, Tung Yuen Street, Yau Tong, Kowloon.
	2.11.3 -odour measurement in and around the sewage pumping station (SPS) shall be carried out more extensively, including and not limited to day/night and in different seasons (in or not prevailing wind conditions).	Several site visits were conducted on 23 August 2023, 18 & 25 September 2023, 28 February 2024 and 14 & 15 March 2025 to verify the potential odour sources which covered the different seasons. No noticeable odour was observed during the site visits.

No.	Comments	Responses
	2.11.3 -please provide the odour measurement and measuring instruments for reference.	As stated in **Section 2.11.4** of **Appendix G (Updated Air Quality Impact Assessment (AQIA))**, upon the visits, no identifiable odour was detected at the site boundary of the sewage pumping station and the junction of Shung Tai Wai and Tung Yuen Street. In addition, according to the reply from EPD's regional office (see **Appendix 2.18** of **Appendix G**), there is no odour complaint in the concerned area including Yau Tong Sewage Pumping Station (YTSPS).
	2.11.3 -it is unrealistic to anticipate no odour impact from SPS, for reference, during the normal operation and maintenance (O&M) of the SPS, odour emission in the magnitude of 5 ppm (roughly 10,000 OU) could occur occasionally. The odour impact during the O&M activities shall be considered and mitigated by the proposed development.	There may be some odour emission during the maintenance period, it is only expected to be experienced for a short period of time. The temporary retention tank shall not impose unacceptable odour impact upon the nearby sensitive receiver. In addition, for the normal operation, according to the reply from EPD's regional office (see **Appendix 2.18** of **Appendix G**), there is no odour complaint in the concerned area including YTSPS. Also, no noticeable odour was observed during the site visits carried on 23 August 2023, 18 & 25 September 2023, 28 February 2024 and 14 & 15 March 2025. With the consideration of the above findings, odour impact from sewage pumping station is not anticipated.
	2.11.8 -while the DSD project is completed, the village sewer connection works is still in progress, please seek update from appropriate parties	According to the reply from EPD's regional office (see **Appendix 2.18** of **Appendix G**), there is no odour complaint in the concerned area including Sam Ka Tsuen Typhoon Shelter.
	2.11.10 -A quantitative odour impact assessment shall be carried out for YTSPS	With the consideration of the findings, odour impact from sewage pumping station is not anticipated, a quantitative odour impact assessment would not be carried out.
5.	**Drainage Services Department, Electrical and Mechanical Branch, Sewage Treatment Division 2, Sewage Treatment Division 2 Sub-**	

No.	Comments	Responses
	Division 1, Sewage Treatment Division 2 Sub-Division 1/2, dated 11 March 2025 Please find the attached existing and proposed layout plan for you review on the feasibility of taking up the design and construction works of the waterfront promenade fronting existing YTSPS. Based on the preliminary information, the estimated width of setback for opening the waterfront promenade is around 4.3m. The demolition of existing boundary wall and reconstruction of existing boundary wall is required. DSD anticipated the setback area could be released starting from Q3 2026 the earliest. For the small section of rising mains falling within the setback area, DSD advised that it will be diverted by end 2025 tentatively. Yau Tong SPS_old layout_new wall.pdf DC202104_MIEL_DF _161B_markup.pdf	Noted. After reviewing the implementation programme and financial implications, the Applicants are unable to commit to taking up the design and construction work for the portion of promenade at the YTSPS site. Nonetheless, the Applicants welcome a future connection of the waterfront promenade at the YTSPS site with the voluntary waterfront promenade provided at the Application Site. The Applicants are committed to coordinating on the design to ensure a coherent and seamless public experience.
6.	**Drainage Services Department, Operations & Maintenance Branch, Mainland South Division, Mainland South 6(Tseung Kwan O, Sai Kung and Yau Tong), dated 9 January 2025** Comments on Sewerage Impact Assessment (i) Please state the intake year of your proposed development; (ii) Section 3.4.2 Table 3.1 - Please review the calculations of total number of employees and design flow under 2. Club House and 4. Retail; (iii) Section 3.4.2 Table 3.1 and Appendix 3.2 Table 1 - The catchment inflow factor should be 1.1 for East Kowloon, please revise the calculation of peak flow accordingly;	Noted. Please refer to **para 1.3.2** of **Appendix E**. Noted. It was a typo and has been revised. Noted. It was a typo and has been revised.

No.	Comments	Responses
	(iv) Appendix 3.2 - Please supplement your calculations in Excel format for review.	Noted and supplemented in **Appendix 3.2** of **Appendix E**.
	Comments on Drainage Impact Assessment	
	(i) Please request the project proponent to confirm whether any change to site conditions (e.g. change of site formation level) will alter the flow path. If affirmative, assessment will be required to ensure that there will be no impact to be induced to the existing drainage system; and	Please be advised that there will be no change in the gradient (i.e. ground level 4.9mPD) of the Application Site after redevelopment as confirmed by the Applicants. Please note that according to PNAP APP-152, at least 20% of greenery will be provided after development. The provision of a greenery area of approximately 480m^2 will further increase filtration of stormwater and minimize surface runoff. As there is a slight increase in greenery area in the Proposed Development, peak runoff from the Application Site will slightly decrease as compared to existing site conditions. Adverse impact to the public drainage system is thus not anticipated. Upgrading works is considered not necessary.
	(ii) Since the development is in coastal area, please remind the project proponent should formulate appropriate measures against sea level rise due to climate change.	Noted. An additional **Section 2.2** in **Appendix E** has been supplemented to discuss the sea level rise due to climate change.
7.	**Environmental Protection Department, Environmental Assessment Division, Territory South Group, Kowloon, dated 5 February 2025**	
	Please find the first batch comment from EPD on AQIA and DSIA :	Noted.
	We would provide further comments on EA wrt noise impact and waste management/land contamination aspect once available.	Noted.
	EPD's comments on AQIA at Appendix G	
	General Comments	
	1. We received supplementary information on air modelling files, files of vehicular emissions/EMFAC and calculation excel spreadsheets of emission inventories from PlanD on 28.1.2025 and we are still reviewing and checking the information. While we	Noted.

No.	Comments	Responses
	provided our comments below and some of these comments will involve adjustment/amendment on the air modelling inputs, please advise the applicant to review and address the comments, and revise the air modelling files accordingly for their next submission.	
	2. Please include the summary of emission factors generated by SAMP as appendices.	Due to the large file size, the summary of emission factors generated by SAMP is included in the modelling zip file for the checking.
	3. Please provide the contour maps at the worst hit levels for all the air pollutants and odour.	Noted, the contour maps at the worst hit levels for all the air pollutants and odour are shown in **Appendix 2.14** and **Appendix 2.18** of **Appendix G**.
	4. Based on the preliminary checking, it was found that the model output files (in .pst format) that contain the predicted hourly concentrations are missing. Please provide the information.	Please note the model output files (in .pst format) are provided for checking.
	Specific comments	
	Main Text	
	1. Section 2.1.2: Please clarify what 126 Approval Scheme is and provide the approved report for reference.	The odour emission information is referenced Approved Planning Application A/K15/126. To avoid confusion, the last two sentences in **Section 2.1.2** of **Appendix G** are removed.
	2. Section 2.2.2: Please note that the AQOs would be updated in year 2025 tentatively and the AQIA needs to follow the new AQOs when they are released.	The new AQOs is included in **Section 2.2.2** and **Table 2.1** of **Appendix G**.
	3. Section 2.2.9: Please specify "ProPECC PN2/96 - Control of Air Pollution in Car Parks" in the text.	**Section 2.2.9** of **Appendix G** is revised.
	4. Section 2.3.2: Please clarify why it only mentions "hourly background concentrations of NO2, RSP and FSP" in the text.	All pollutants in PATH 3.0 have been reviewed. **Section 2.3.2** of **Appendix G** is revised.
	5. Table 2.5: Please review if there is ASR to the northwest of Yau Tong Sewage Pumping Station (e.g. Architectural Salvage Store and	全記五金貿易有限公司 is identified and selected as a representative ASR (i.e. ASR A19).

No.	Comments	Responses
	Real Estate Agency as identified in Google Map).	
	6. Table 2.5: Please include the site to the northwest of A05, Yau Tong Industrial Building, Union Industrial Building and Sam Ka Tsuen Recreation Ground as representative ASRs.	Please note Sam Ka Tsuen Recreation Ground has already selected as a representative ASR (i.e. A17). The site to the northwest of A05 (i.e. Planned Residential Development (Application No. A/K15/122)) (i.e. A20), Yau Tong Industrial Building (i.e. A21) and Union Industrial Building (i.e. A22) are newly added as representative ASRs.
	7. Section 2.5: Please supplement and discuss whether there are any concurrent projects in the surrounding area and if yes, their cumulative air quality impact shall be addressed.	The list of concurrent projects in the vicinity and their cumulative air quality impact are included in **Section 2.5** of **Appendix G**.
	8. Section 2.5.2: Please supplement the amount of excavated materials to be handled and the number of marine vessels/dump trucks to be used per time over the work site; and discuss the measures in reducing the gaseous emissions from the operation of marine vessels/dump trucks.	The tentative excavation area is around 1,800m^2 with a depth of about 12m. As this planning application stage, there is no detailed information on the construction program; however, with reference to other similar scale projects, there is likely to be around 2 dump trucks per hour during the site formation stage of the Proposed Development. Watering the haul road and the site once per hour would be implemented to minimize the potential dust emission during the traveling of the dump trucks within the site. Above statement has been supplemented in **Section 2.5.3** of **Appendix G**.
	9. Section 2.5.6: Please supplement the number of mechanical equipment to be used per time over the work site.	With reference to other similar scale projects, the number of on-site diesel/petroleum fuelled machinery (2-3 machineries) to be used for construction works is limited owing to the small size of the work site with an area of 2,419 m^2. Above statement has been supplemented in **Section 2.5.2** of **Appendix G**.

No.	Comments	Responses
	10. Section 2.7: Please explain why quantitative AQIA is required for the Proposed Development.	As there are numerous industrial emissions (such as concrete batching plant) and marine vessels emissions identified within the 200m assessment area from the site boundary of the Application Site which cannot satisfied the buffer distance as stipulated in Table 3.1 of HKPSG Ch.9, a quantitative air quality impact assessment is therefore conducted to assess and ensure the future air sensitive receivers of the proposed development would not be under adverse air quality impact.
	11. Section 2.7.3: Please supplement if desktop review from relevant approved EIA reports and/or approved planning applications has been carried out to confirm that there are no active industrial chimneys in the assessment area.	As stated in **Section 2.7.4** of **Appendix G** (renumbered), several site visits were conducted to verify the presence of chimneys and other industrial activities. It is confirmed that there is no active chimney within 500m assessment area from the site boundary of the Site upon the visits.
	12. Please move Section 2.7.3 to under (i) Industrial Emissions with a suitable sub-heading. Also, please incorporate Section 2.7.4 into 2.7.29 accordingly. In addition, please revise the wordings in Section 2.7.5 to state that the details of the summary in Table 2.7 are discussed in corresponding sections.	Previous S2.7.3 and S2.7.4 have been moved to **Section 2.7.7** and **2.7.29** of **Appendix G**, respectively. The wordings in **Section 2.7.5** of **Appendix G** are revised.
	13. Section 2.7.8: Please provide the source reference for the identification of the three concrete batching plants. Besides, please incorporate the information in Section 2.7.7 into this section accordingly.	Reference is made to Hong Kong Environmental Database - SP licence search (https://sp-license.odensystems.net/SS), one concrete batching plant, Redland Concrete Limited, is recorded within 500m radius of the Application Site.
	14. Section 2.7.12: Please include the tailpipe emissions from trucks, including their running emissions and start emissions with precious approach, associated with their movement inside the concrete batching plants.	Based on on-site observations, there were no terminating trucks inside the concrete batching plant (CBP) and the peak hourly flow of mixer trucks (Heavy Good Vehicle>24t) within Redland Concrete Ltd Haul Road were 17 trucks. For the concerned emission from mixer trucks inside the CBP, the observed peak hourly flow of mixer trucks (17 trucks) were assumed in each operation hour and adopted in open road assessment (SAMP) during the operation period (From: 07:00 to 19:00) of Redland Concrete Ltd Concrete Batching

No.	Comments	Responses
		Plant as conservative approach in order to avoid underestimation. Please refer to **Appendix 2.11** of **Appendix G**.
	15. Section 2.7.13: Wind erosion should be included as one of the emissions from concrete batching plant. Besides, it is noted from Section 2.7.22, Figure 2.4 and Appendix 2.2 that wind erosion from barges are included. Please revise this section accordingly.	**Section 2.7.13** of **Appendix G** is revised.
	16. Section 2.7.16: The model input of marine vessel emissions is not shown in Appendix 2.1. Please rectify	**Appendix 2.1** of **Appendix G** presents the detailed calculation of marine vessel emissions. Typo in **Section 2.7.16** of **Appendix G** is revised.
	17. Section 2.7.16: Please include the marine vessels to/from Yau Tong Bay (including the Sand Depot as mentioned in Section 2.7.15 and the barging facility connected to Architectural Salvage Store as identified in Google Map).	Barge serving Architectural Salvage Store (全記五金貿易有限公司), Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext) are included in **Section 2.7.16** of **Appendix G**.
	18. Section 2.7.20: Appendix 2.5 should read Appendix 2.4. Please rectify.	Typo is revised.
	19. Section 2.7.26: Please review if the planned marine vessels has commenced operation and revise the discussion accordingly.	Montego Bay circular route (i.e. Sam Ka Tsuen Pier – Tsim Sha Tsui No.4 Pier – Central No.10 Pier) has been commenced operation on 15 December 2024. The emission from this circular route has been included in the assessment.
	20. Section 2.7.29: Please supplement that the major point sources are identified in Figure 2.6.	**Section 2.7.29** of **Appendix G** is revised.
	21. Section 2.7.30: Please update and review the cruise schedule from 2025. Cruise schedule in 2024 is outdated. Please revise the calculations in Appendix 2.7 as well. For conservative assessment, please assume that there are two cruises with the highest emissions hoteling concurrently at the cruise terminal.	The cruise schedule for Year 2025 has been reviewed. According to the latest cruise schedule Year 2025, Costa Serena has the highest engine power among all cruise ships. Given there are two berthing spaces at the Cruise Terminal, another cruise ships with the second-highest engine power have been identified, including Anthem of the Seas, Celebrity Solstice, Ovation of the Seas and Spectrum of the Seas which have the same

No.	Comments	Responses
		engine power. However, in view of the frequency of visit to Hong Kong of these four cruises, Spectrum of the Seas has therefore been selected as the second cruise ship for hoteling at Kai Tak Cruise Terminal at the same time for every hour of a day as Costa Serena for a conservative approach.
	22. Section 2.7.33: This section should be supplemented to discuss the identification and assessment approach of both bus termini, PTIs and on-site street parking spaces. Therefore, please review and supplement the on-site street parking spaces, e.g. Cho Yuen Street, Tung Yuen Street and Ko Fai Road. In addition, please include a Figure to show the locations of the bus termini, PTIs and on-site street parking spaces as identified. Please also explain the methodology of broad-brush approach.	In addition to bus terminuses, on-site street parking spaces were also identified based on the information from SAMP. In general, no starting emission will be applied if the roads with double yellow line and the road classified as District Distributor, Primary Distributor, Trunk Road & Expressway. In view of the on-site street parking spaces within 500m assessment area, e.g. Cho Yuen Street, Tung Yuen Street and Ko Fai Road, all roads are considered as with starting emission. Similar with bus terminus abovementioned, start emission of all 18 vehicle classes (including FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the on-site street parking spaces. Please refer to **Section 2.7.34** of **Appendix G**. Location of Bus Termini and on-site Street Parking Spaces from SAMP: 
	23. Section 2.8.6: The relative humidity and temperature are extracted from the meteorological output of the PATH grid in SAMP v2.1 where the road segment locates. The following approaches are used to generate the vehicular emission factors by the tool. Please review and rectify.	Please note the relative humidity and temperature are extracted from SAMP v2.1. As stated in **Section 2.8.6** of **Appendix G**, the monthly minimum temperature and relative humidity (RH) were applied for both short-term and long-term air quality impact of NO2 while annual minimum temperature

No.	Comments	Responses
		and RH were applied for both short-term and long-term air quality impact of RSP and FSP.
	➢ Short-term (i.e. hourly or daily average) or long term (i.e. annual): Use the daily profile of lowest temperature and relative humidity data in each hour for each month (i.e. 24 hours data in each month and for 12 months) to calculate the vehicular emission factors in the corresponding period on an hourly basis.	The revised road index plan is shown in **Appendix 2.11** of **Appendix G**.
	➢ Long-term only: Use the daily profile of averaged temperature and relative humidity data in each hour for each month (i.e. 24 hours data in each month and for 12 months) to calculate the vehicular emission factors in the corresponding period on an hourly basis.	Noted. The proportion of local and rural roads within Hong Kong of 3.615% is also updated based on ATC 2023.
	24. Section 2.8.11: Please provide a road link map which is overlayed with PATH grids and indicate the roads with and without start emissions in different colors.	The unit is provided in **Table 2.9** of **Appendix G**.
	25. Section 2.8.11: ATC 2023 is available. Please update.	Based on the latest discrete results, NO_2 concentrations at all locations of the Proposed Development comply with the relevant AQOs. **Section 2.10.3** of **Appendix G** is revised.
	26. Table 2.9: Please provide the unit of the presented concentrations and AQOs.	According to the reply from EPD's regional office (see **Appendix 2.18** of **Appendix G**), there is no odour complaint in the concerned area such as YTSPS, concrete batching plant & Wholesale Fish Market.
	27. Section 2.10.3: Please explain why there is exceedance of 19th highest 1-hour average at G/F lobby while the modelled concentrations in Table 2.9 does not show any.	Please refer to **Section 2.7.4** of **Appendix G** for the detail of the site visit. Repeated text regarding the site visit is removed accordingly.
	28. Section 2.11; Please check with regional office of EPD to see if there are any complaints for the odour sources identified in this section.	The detail of the site visit is included in **Section 2.7.4** of **Appendix G**. Repeated texts regarding the site visit are removed accordingly.
	29. Section 2.11.3: Please specify the date of the site visits.	The separation distance between the project and the Sam Ka Tsuen Typhoon Shelter in **Section 2.11.7** of **Appendix G** (renumbered) is revised.

No.	Comments	Responses
	30. Section 2.11.5: Please specify the date of the site visits.	Ref-2 in **Section 2.11.7** of **Appendix G** is removed and the link for Ref-8 is supplemented.
	31. Section 2.11.6: The separation distance between the project and the Sam Ka Tsuen Typhoon Shelter is more than 400m. Please review and revise.	The date of the odour patrol is provided.
	32. Section 2.11.7: Please review and revise the reference list (no Ref-2 and the link for Ref-8 is not accessible).	The summary table showing the odour result is presented in **Table 2.10** of **Appendix G**.
	33. Section 2.11.9: Please provide the date of the odour patrol.	The references have been further review. For the marine emission, the information required for air model including release height, exit temperature, exit velocity and internal diameter of its chimney of existing barges, passenger ferries and fishing vessels are referenced from Appendix 3.5 of approved EIA report for Lei Yue Mun Waterfront Enhancement Project (EIA-258/2018) due to lack of information available from the operators. For the planned local vessels (i.e. Route of SKT Ferry to/from LYM New Landing Facility), information required for the assessment is not available such as route, operator, schedule, etc. Therefore, the reference was made to the approved S16 Planning Application (Application No.: A/K15/121) for the information of the planned local vessels. For the schedule of the fishing vessels, reference was made to approved S16 Planning Application (Application No.: A/K15/121) as on-site survey on the frequency of fishing vessels was conducted with the consultation to AFCD on the operating activities at Kwun Tong Whole Sale Fish Market. In view of the operation of the whole sale fish market is similar as before, the assumed frequency of fishing vessels in approved planning application is therefore adopted in the assessment.

No.	Comments	Responses
	34. Section 2.11.11: Please summarize and present the odour assessment results in a table.	SAMP v2.1 is adopted in the study. Typos are revised.
	35. Please review which reference, whether EIA for Lei Yue Mun Waterfront Enhancement Project (EIA-258/2018) or the approved planning application A/K15/121 or A/K15/126 should be adopted, for the marine vessel emission parameters in different Appendix and ensure the consistency. Please provide justifications if different references are needed for the calculation of different marine vessel emissions from their respective routes.	Typos are revised.
	36. The prevailing version of SAMP is v2.1. Please use the prevailing version and revise SAMP v2.0 to v2.1 across the report.	The detail of the site visit is included in **Section 2.7.4** of **Appendix G**. Repeated texts regarding the site visit are removed accordingly.
	37. Air Pollution Control (Fuel Restriction) Regulation should read Air Pollution Control (Fuel Restriction) Regulations. Please amend the relevant information throughout the report.	The list of concurrent projects in the vicinity and their cumulative air quality impact are included in **Section 2.5** of **Appendix G**.
	38. Please use a single section to present the details of the site visit and quote the section if necessary instead of repeating the site visit throughout the text.	The tentative excavation area is around 1,800m^2 with a depth of about 12m. As this planning application stage, there is no detailed information on the construction program; however, with reference to other similar scale projects, there is likely to be around 2 dump trucks per hour during the site formation stage of the Proposed Development. Watering the haul road and the site once per hour would be implemented to minimize the potential dust emission during the traveling of the dump trucks within the site. Above statement has been supplemented in **Section 2.5.3** of **Appendix G**.
	Figures	
	39. Figure 2.2: The ASRs should be identified as a point of the nearest air sensitive uses from the sites to the proposed development. Please review and revise (e.g. A05 & A06).	Location of A05 and A06 are revised.

No.	Comments	Responses
	40. Figure 2.4: Please include the names of the concrete batching plants.	The names of the concrete batching plants are included in **Figure 2.4** of **Appendix G**.
	41. Figure 2.4: Please delete the marine routes of planned local vessel which are completed outside the assessment area.	The marine routes of planned local vessel which are completed outside the 500m assessment area are removed and excluded in the assessment.
	42. Figure 2.6: Please add the location of Cape Collinson Crematorium.	Location of Cape Collinson Crematorium is included in **Figure 2.6** of **Appendix G**.
	Appendix 2.2	
	43. Please provide a table listing the emission inventory of the marine emissions from barges and their emission parameters (including each emission source ID and their coordinate/dimension, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc).	Please note the **Appendix 2.2** of **Appendix G** aims to present the calculation of the emissions from concrete batching plant including the barges, paved road and wind erosion. The emission inventory of the emissions from concrete batching plant and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.
	44. Please provide a table listing the emission inventory of emissions from wind erosion and their emission parameters (including each emission source ID and coordinate/dimension, source type, release height, emission hour, emission rate, etc).	Please note the **Appendix 2.2** of **Appendix G** aims to present the calculation of the emissions from concrete batching plant including the barges, paved road and wind erosion. The emission inventory of the emissions from concrete batching plant and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.
	45. Please provide a table listing the emission inventory of paved road emissions and their emission parameters (including each emission source ID and coordinate/dimension, source type, release height, emission hour, emission rate, etc).	Please note the **Appendix 2.2** of **Appendix G** aims to present the calculation of the emissions from concrete batching plant including the barges, paved road and wind erosion. The emission inventory of the emissions from concrete batching plant and their emission parameters (including source ID,

No.	Comments	Responses
		XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.
	46. Please assess and include the tailpipe emissions from trucks, including their running emissions and start emissions with precious approach, associated with their movement inside the concrete batching plants.	Based on on-site observations, there were no terminating trucks inside the concrete batching plant (CBP) and the peak hourly flow of mixer trucks (Heavy Good Vehicle>24t) within Redland Concrete Ltd Haul Road were 17 trucks. For the concerned emission from mixer trucks inside the CBP, the observed peak hourly flow of mixer truck (17 trucks) were assumed in each operation hour and adopted in open road assessment (SAMP) during the operation period (From: 07:00 to 19:00) of Redland Concrete Ltd Concrete Batching Plant as conservative approach in order to avoid underestimation. Please refer to **Appendix 2.11** of **Appendix G**.
	47. Please provide the referenced webpage/report from AIS Marine Traffic website which indicates the assumed averaged speed at about 6 knots.	The travelling speed of barge is referenced to Appendix 3.5 of approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA-258/2018). (i.e. about 4.5 knots, 2.315m/s) and adopted in this assessment. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.
	48. Please review if there is loading/unloading from the barge SB04 to Redland Concrete Ltd and if yes, please review if the paved road should be extended to the location/unloading point from L21.	Based on the desktop review and site observation, there is no loading/ unloading from the barge SB04, therefore, the extension of paved road from L21 to loading/unloading point is not necessary.
	49. Please provide reference for the assumption of 22 tonnes as the average weight of vehicles in the calculation of emission factor for paved road.	Reference is made to approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121).
	50. Please review and check the correctness of the calculated values, e.g. wind erosion emission factors and haul road emission rates. The	The calculations have been updated accordingly.

No.	Comments	Responses
	values are slightly different from our checking which may be due to the adoption of different decimal places.	
	51. For the table of "Calculations of Emission Sources within Concrete Batching Plant (CBP)", please provide reference regarding the assumption for the locations of emission sources which are identified in Figure 2.4.	Reference is made to approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121).
	52. Please provide reference for the maximum emission rate assumed for P313 of HK Concrete Co. Ltd, which is not presented in the SP Licence.	Please note the emission from HK Concrete Co. Ltd is excluded in the assessment.
	53. Please provide reference for the assumption of stack dimension for P230 of Redland Concrete LTD, which is not presented in the SP Licence.	The stack diameter is calculated from the dimensions (i.e. length and width) of the emission source available in the SP Licence (L-3-117 (6)) (e.g. Stack Diameter = 2 x sqrt (Length of Emission Source x Width of Emission Source)/ π).
	Appendix 2.3	
	54. Please explain why only emissions of particulates from berthing activity of the barge/derrick lighter are considered. NO2 and SO2 emissions from the berthing activity and the emissions from the maneuvering activity of barge/derrick lighter should be considered and assessed.	The calculation of sand depot (YTML 25 &Ext) is updated, please refer to Appendix 2.3 for details.
	55. Please note that another updated VEP for the referenced EIA for Fill Bank at TKO137 is available. Please make reference to VEP-641/2024 if deemed appropriate.	The calculation of sand depot (YTML 25 &Ext) is updated, please refer to **Appendix 2.3** of **Appendix G** for details.
	56. Please provide a table listing the emission inventory of the marine emissions from barge/derrick lighter and the emissions from wind erosion at sand dunes and their emission parameters (including each emission source ID and their coordinate/dimension, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc).	Please note the **Appendix 2.3** of **Appendix G** aims to present the calculation of emissions from sand depot including the berthing emission from barge and derrick lighter, and wind erosion at sand dunes. The emission inventory of the emissions from sand depot and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.

No.	Comments	Responses
	Appendix 2.4	
	57. Please provide a table listing the emission inventory of the marine emissions and their emission parameters (including each emission source ID and their coordinate/dimension, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc).	Please note the **Appendix 2.4** of **Appendix G** aims to present the calculation of passenger ferry emission. The emission inventory of the passenger ferry emissions and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.
	58. Please explain why the engine powers under GRT 0-499 instead of under GRT>1,000 are adopted.	The engine powers under GRT>1,000 is adopted for the assessment.
	59. Regarding the passenger ferry schedule (Sam Ka Tsuen <-> Sai Wan Ho), the explanation for the assumed number of hoteling/maneuvering for departure/arrival is unclear. Please review and revise Note [2]. Besides, please explain why the assumed total sailing and hoteling time of 13min is referenced to another planning application A/K15/121 instead of the same assumption and reference made under Calculations of Time-In-Mode (TIM) for Marine Vessels (Note [2]) in this Appendix.	It is assumed that there is no ferry parking at the Sam Ka Tsuen Pier. Hour 6-7 is then adopted as the arrival hour of the ferry as a conservative approach.
	Appendix 2.5	
	60. Please provide a table listing the emission inventory of the marine emissions and their emission parameters (including each emission source ID and their coordinate/dimension, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc).	Please note the **Appendix 2.5** of **Appendix G** aims to present the calculation of fishing vessel emission. The emission inventory of the fishing vessel emissions and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in Appendix 2.8.
	61. Please provide the referenced webpage/report from AIS Marine Traffic website which indicates the assumed speed from 8.2 to 10.2 knots.	Averaged travelling speed of the fishing vessel was referenced Vessel Finder (https://www.vesselfinder.com/). The speed of the fishing vessels is about 3.4 knots. (1.75m3/h) is adopted as a conservative assumption due to the longest TIM resulted.

No.	Comments	Responses
		
	62. Please explain why the engine powers under GRT 0-499 instead of under GRT>1,000 are adopted.	The engine powers under GRT>1,000 is adopted for the assessment.
	63. Regarding the fishing vessels schedule, please review if the assumed frequency from the referenced report has been outdated as the report was approved few years ago. Please review if an on-site survey should be carried out to obtain the updated data for assessment purpose.	In view of the operation of the whole sale fish market is similar as before, the assumed frequency from the referenced report (i.e. Approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121)) is still valid.
	Appendix 2.6	
	64. The appendix should be revised to evaluate the emissions and present the emission inventory of the planned vessels which are considered in AQIA of the project. The extract of the referenced materials should be presented as a supporting document at the end of the Appendix.	The emission inventory of the planned vessels is presented in **Appendix 2.8** of **Appendix G**. **Appendix 2.6** of **Appendix G** is a supporting document showing the extract of the referenced materials.
	Appendix 2.7	
	65. Please provide a table listing the emission inventory of the marine emissions and their emission parameters (including each emission source ID and their coordinate/dimension, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc).	Please note the **Appendix 2.7** of **Appendix G** aims to present the calculation of cruise emission. The emission inventory of the marine emissions and their emission parameters (including source ID, XY coordinate, source type, release height, exit temperature, exit velocity, stack diameter, emission hour, emission rate, etc) are presented in **Appendix 2.8** of **Appendix G**.
	66. Emission rate of SO2 is missing. Please supplement.	Emission rate of SO2 is supplemented.
	67. Note [1] under Emission Rate (Hoteling) is irrelevant. Please remove.	Note [1] under Emission Rate (Hoteling) is removed.

No.	Comments	Responses
	EPD's comments on DSIA report at Appendix F **Specific comments** Section 1	
	Please advise the intake year of the proposed development	Noted. Please refer to **Section 1.3.2** of **Appendix E**.
	Section 3.2.3	
	The UFF for Job Type J11 Community, Social & Personal Services is missing in the Assessment Criteria and Methodology. Please supplement. – Section 3.2.3, Section 3.4.2 Table 3.1 (1), Appendix 3.2 Table 1	Noted and revised in **Section 3.2.3** of **Appendix E**.
	Please review the UFF of residential housing – Section 3.3.1, Section 3.5.3, Section 4.1.2, Appendix 3.1	Noted. UFF- R2 has been adopted as a conservative approach and revised in relevant sections and tables of **Appendix E**.
	Application No. A/K15/119 is superseded. Please propose mitigation measures (if any) under this submission – Section 3.4.2 Table 3.1 (2), Section 3.4.2 Table 3.1 (3), Section 3.4.2 Table 3.1 (4), Appendi.it 3.2 Table 1	Noted and revised in relevant sections of **Appendix E**.
	The UFF for commercial employee for Club House, Swimming Pool and Retail are missing in the calculations. Please revise – Section 3.4.2 Table 3.1 (2), Section 3.4.2 Table 3.1 (4), Appendix 3.2 Table 1	Noted and revised in relevant sections and tables of **Appendix E**.
	Please review the calculation steps on the estimation of employee number of Club House and Retail – Section 3.4.2 Table 3.1 (3), Appendix 3.2 Table 1	Noted and revised in relevant sections and table of **Appendix E**.
	Please advise if the swimming pool is outdoor or indoor; and review the turnover rate	Noted. It should be outdoor swimming pool, an updated calculation is provided in relevant sections and tables of **Appendix E**.

No.	Comments	Responses
	– Section 3.4.2 Table 3.1 (3), Appendix 3.2 Table 1 Please review the swimming pool backwash duration – Section 3.4.2 Table 3.1 Please review the catchment inflow factor of East Kowloon – Section 3.4.2 Table 3.1, Appendix 3.2 Table 1 Please review the calculation steps on peak flow (without swimming pool) Appendix 3.2 Please provide hydraulic calculation on downstream sewers until Yau Tong Sewage Pumping Station and propose mitigation measures for sewer sections with utilization over 90%, to ensure that the proposed development would not cause adverse impact to the public sewerage system Appendix 3.2 Table 3a Please review and provide estimation for the entire Table 3a as Application No. A/K15/119 is superseded; and include a layout plan to indicate the sewage catchments	Noted and revised and revised in relevant sections and tables of **Appendix E**. Noted and revised in **Section 3.4.2 Table 3.1** of **Appendix E**. Noted and revised in relevant sections and tables of **Appendix E**. The estimated sewage generated including existing development and Proposed Development is about 7166.5m^3/day, which the flow is occupied about 25% of the current capacity of YTSPS. It is unlikely that the YTSPS will be overloaded. Detailed calculation for the capacities of YTSPS is given in **Appendix 3.1** of **Appendix E**. Noted and revised in **Appendix 3.2 Table 3a** of **Appendix E**.

Application for Planning Permission Under Section 16 of the Town Planning Ordinance (Cap.131) for Proposed Flat, Shop and Service and Eating Place with Minor Relaxation of Plot Ratio and Building Height Restrictions at Yau Tong Marine Lot No.70, No.4 Tung Yuen Street, Yau Tong, Kowloon

<u>General Comments</u>

1. Please re-visit the assessment based on the above comments.

2. Please note that the implementation of sewerage works shall also meet the satisfaction of DSD.

3. Please note that EPD only provides comments on contents related to sewerage planning. For contents related to drainage impact, please seek views from DSD.

4. The consultant is suggested to provide softcopy of the report (in pdf) and calculation spreadsheet (in Excel spreadsheet) as well as all Response to Comments from EPD and DSD as appendix. Please also highlight the revised / updated content of the SIA report in next submission to facilitate review.

No.	Comments	Responses
	Further to our earlier email dd 5.2.2025 providing EPD's first batch of comments on AQIA and SIA for the captioned planning application, please find below EPD's further comments on EA. General	Please be advised that the AQIA and SIA have been revised based on the comments.
	Please include a separate section in both EA and AQIA to address Industrial/Residential (I/R) interface issue for the proposed development and discuss what specific design/mitigation measures would be incorporated in the proposed development e.g. setback, building orientation and deposition, height of podium, etc. in order to address the I/R interface issue.	Please be advised that a separate section to address I/R interface issue has been included in both revised EA (**Section 1.5** of **Appendix F**) and AQIA (**Section 2.7.1, 2.7.8 to 2.7.16** of **Appendix G)**.
	Waste management/land contamination (1) Para. 5.1.1	
	Please be advised that waste will also be generated during the project's operation phase. Please update the first sentence for clarity.	Please be advised that the first sentence has been revised to include the operation phase in **para 5.1.1** of **Appendix F (Updated Environmental Assessment (EA))**.
	(2) Para. 5.1.2	
	In view of the different nature and requirements of "Waste Management Implication" and "Land Contamination" aspects, the Consultant is advised to divide them into two standalone chapters. Please review and update as appropriate.	Noted and please be advised that two separate sections (**Section 5** and **6**) have been provided in **Appendix F**.
	(3) Para. 5.1.2	
	(a) Please review and incorporate all relevant Ordinances, Regulations, Guidelines, and Technical Circulars on waste management for this Project. For instance, (i) Public Health and Municipal Services Ordinance (Cap. 132), (ii) Land (Miscellaneous Provisions) Ordinance (Cap. 28) and (iii) Monitoring of Solid Waste in Hong Kong 2023.	Noted and please be advised that relevant ordinances, regulations, guidelines and technical circulars on waste management have been included in **para 5.1.2** of **Appendix F**.
	(b) According to Section 5.9 of this submission, the site was depicted as a sea area back in the 1960s, and the Consultant is advised to review whether the Project Site is situated on reclaimed land. If affirmative, please examine relevant information and confirm if	Noted and updated in **Section 5.9** of **Appendix F**.

No.	Comments	Responses
	land-based sediment is anticipated in this Study. Should land-based sediment be anticipated from this Project, the Consultant shall adequately address the potential environmental impacts and the handling and disposal of these excavated materials in accordance with "Guidance Note. No. 1/2024" under Dumping at Sea Ordinance, Cap. 466" and "Dumping at Sea Ordinance (Cap.466)".	
	(c) Please review the relevance of the "Project Administrative Handbook" to this private project.	Noted and included in the **Appendix F**.
	(4) Para. 5.2.2	
	(a) Per the quantity estimation of C&D materials in this Project, the Consultant shall review the relevance of DEVB TCW No. 9/2011 Enhanced Control Measures for Management of Public Fill. If it is deemed not applicable, the Consultant shall remove it accordingly to avoid confusion.	Please be advised that the quantity of C&D materials has been estimated, and stated in **para 5.4.5** of **Appendix F**.
	(b) CEDD TC No.03/2015 is outdated. Please refer to the latest edition of the CEDD Technical Circular for Management of Construction and Demolition Materials (i.e., Technical Circular No. 11/2019).	Noted and please be advised that the latest edition of the CEDD Technical Circular for Management of Construction and Demolition Materials (CEDD TC No. 11/2019) has been updated in **para 5.2.2** of **Appendix F**.
	(5) Para. 5.3.1	
	Please consistently use "operational phase" or "operation phase" throughout the report to avoid confusion.	Noted and revised in **para 5.3.1** of **Appendix F**.
	(6) Para. 5.4.1	
	The Consultant is advised to incorporate all major construction activities that would be considered in the quantity estimation and evaluation of waste impacts during the construction phase.	Noted and please be advised that key sources of C&D materials and construction activities have been included in **para 5.4.1** of **Appendix F**.
	(7) Para. 5.4.4	
	(a) Given that public filling areas are part of the CEDD-designated public fill reception	Noted. Original para 5.4.4 has been deleted. Please refer the updated **para 5.4.2** of **Appendix F** for details.

No.	Comments	Responses
	facilities; the Consultant is advised to update the first sentence to avoid confusion.	
	(b) The second part of Para. 5.4.4 duplicates the content of the last bullet in Para. 5.4.2. The Consultant is advised to review and update as appropriate.	Noted. Original para 5.4.4 has been deleted. Please refer the updated **para 5.4.2** of **Appendix F** for details.
	(8) Para. 5.4.5	
	Since surplus inert C&D materials will be delivered to Public Fill Reception Facilities for beneficial reuse in other projects, please avoid using the terms "dispose" and "disposal" in this connection. Please thoroughly review and update the entire submission.	Noted and revised in **para 5.4.5** of **Appendix F**.
	(9) Para. 5.4.8	
	According to the schematic layout and section drawing, two levels of basement floors are anticipated in the proposed development. The Consultant shall review and elaborate further on the fill demand of this Project and the estimated quantity for on-site reuse of inert C&D materials.	Noted. Please note that the current project is a planning application with preliminary information only. Nevertheless, the estimation under **Table 5.1** is included in **Appendix F**.
	(10) Para. 5.4.9	
	Since this is a private project, the Consultant shall review the relevance of the "Project Administrative Handbook" and the requirement of submitting C&DMMP in this Project, with reference to the estimated quantity in Table 5.1.	Noted and updated in **para 5.4.9** of **Appendix F**.
	(11) Para. 5.4.13, Para. 5.4.18 and Para. 5.5.11	
	Please revise “licensed collectors” to “licensed chemical waste collectors”.	Noted and relevant paragraphs have been revised in **Appendix F**.
	(12) Para. 5.4.13	
	The amount of chemical waste to be generated shall be quantified in the Waste Management Plan (WMP) as part of the Environmental Management Plan (EMP) to be prepared by the Contractor.	Noted and revised in **para 5.4.13** of **Appendix F**.
	(13) Para. 5.4.14	
	Please clarify the meaning of “general site wastes”.	Noted and revised in **para 5.4.14** of **Appendix F**.

No.	Comments	Responses
	(14) Para. 5.4.18 The Consultant is advised to update the disposal arrangement for ACM. Please be advised that the legislation requires that all asbestos wastes must be disposed of at designated or licensed facilities. In Hong Kong, the only proven method of disposing of asbestos is by secure burial in a landfill site. Please specify such outlet to avoid confusion.	Noted and updated in **para 5.4.19** of **Appendix F**.
	(15) Table 5.1 (a) The Consultant is advised to elaborate further on the excavation extent (i.e., area and depth) of the basement of the proposed development site to facilitate the vetting of the quantity estimation for inert C&D materials. Please carefully review the accuracy of the current estimation with reference to the schematic layout and section drawing enclosed in Appendix 1.1.	Noted. **Table 5.1** of **Appendix F** has been updated.
	(b) As presented in Para. 6.4.8, excavated materials will be refilled on-site, the Consultant shall elaborate further on the fill demand for this Project.	Noted. **Table 5.1** of **Appendix F** has been updated.
	(c) Please specify that the destination of inert C&D materials is subject to the designation by the Public Fill Committee according to DEVB TC(W) No.6/2010.	Noted. **Table 5.1** of **Appendix F** has been updated.
	(d) Please specify that the disposal of non-inert C&D materials at designated landfill shall be subject to agreement with the relevant section of the EPD.	Noted. **Table 5.1** of **Appendix F** has been updated.
	(e) To tally the presentation between inert and non-inert C&D materials, the Consultant shall individually assess and estimate the waste quantity for (i) demolition of the existing building and (ii) excavation of basements.	Noted. **Table 5.1** of **Appendix F** has been updated.
	(f) Although no information is currently available for the quantity estimation for ACM, the Consultant shall specify the nature of the concerned construction activity as well as the recommended disposal outlet.	Noted. **Table 5.1** of **Appendix F** has been updated.

	(16) Para. 5.5.7 Food waste is the main source of unpleasant odour and environmental hygiene concerns. Please consider separating food waste from other waste to facilitate the recycling of food waste on-site or off-site. Recycling bins should be placed in prominent places to promote waste separation at the source.	Noted. Please refer to **para 5.5.8** of **Appendix F**.
	(17) Para. 5.5.9 The Consultant shall review whether it is appropriate to incorporate the recommendations below	
	"All dump trucks engaged on-site for delivery of inert and non-inert C&D material from the site to the designated disposal location, including PFRFs, landfill etc., should be equipped with GPS or equivalent system for tracking and monitoring of their travel routings and parking locations by the Contractor to prohibit illegal dumping and landfilling of materials; and	Noted and updated in **para 5.5.10** of **Appendix F**.
	"The data collected by GPS or equivalent system should be recorded properly for checking and analysis the travel routing and parking locations of dump truck engaged on site."	Noted and updated in **para 5.5.10** of **Appendix F**.
	(18) Para. 5.5.14 In addition to ProPECC PN2/97, Handling of Asbestos Containing Materials in Buildings, the Consultant is advised to review whether other Code of Practice related to the handling and disposal of Asbestos Containing Materials shall be referred to.	Noted and updated in **para 5.5.15** of **Appendix F**.
	(19) Para. 5.6.1 (a) The Monitoring of Solid Waste in Hong Kong 2023 has been published in December 2024. The Consultant is advised to refer to the latest information on quantity estimation. Please share the calculation for further vetting and review.	Noted and updated in **para 5.6.1** of **Appendix F**.
	(b) To avoid confusion, The Consultant is advised to separately assess and estimate the	Noted and updated in **para 5.6.1** of **Appendix F**.

No.	Comments	Responses
	quantity of general refuse from the domestic and C&I sectors. (20) Section 5.5 Please clarify whether land-based sediment is anticipated during the construction phase. The Consultant shall review the geological profile within or close to the Project Site and the excavation requirements of this Project to determine the necessity of assessing the waste management implications arising from land-based sediment in this Study. If affirmative, please briefly elaborate on the quantity estimation, handling arrangement, disposal options, and mitigation measures to be incorporated. (21) Section 5.6 Please clarify whether chemical waste is anticipated during the operational phase. If affirmative, please briefly elaborate on the quantity estimation and the mitigation measures to be incorporated to minimize the waste management implications arising from chemical waste. (22) Table 5.2 The Consultant is advised to incorporate an additional column showing the off-site properties immediately adjacent to the Project Site. (23) Appendix 5.1 To facilitate vetting and evaluate the land contamination potential, the Consultant is	Noted. Please refer to **para 5.5.17** of **Appendix F**. Please note that at this planning stage, there is no detailed information about the land-based sediment. As shown in the MLP, the concrete structure of the proposed basement carpark reaches -4.65mPD. With reference to the surrounding Drillhole Record of project "East Kowloon Sewerage Improvements and Pollution Control, Stage I", there is no marine deposits were observed above -2.18mPD. However, once the relevant information is available and land-based sediment is confirmed, the Consultant shall adequately address the potential environmental impacts. Meanwhile, it is recommended that the marine sediment would be reused onsite as much as possible; otherwise, the handling and disposal of these excavated materials in accordance with "Guidance Note. No. 1/2024" under the Dumping at Sea Ordinance, Cap. 466" and "Dumping at Sea Ordinance (Cap.466)". Noted. Please refer updated **para 5.6.4-5.6.6** of **Appendix F**. Noted. **Table 5.1** of **Appendix F** has been updated. Noted. **Appendix 6.1** of **Appendix F** has been updated.

	advised to incorporate the site boundary onto each aerial photograph. (24) Appendix 5.2	
	(a) To facilitate vetting and evaluate the potential for land contamination, the Consultant is advised to incorporate the site boundary into the locational plan.	Noted. **Appendix 6.2** of **Appendix F** has been updated.
	(b) The photographic records could not sufficiently show the condition of the site on the industrial buildings' ground floor. The Consultant shall carefully review the content as appropriate.	Noted. **Appendix 6.2** of **Appendix F** has been updated.
	(c) The Consultant is advised to supplement the site walkover checklist for further vetting.	Noted. **Appendix 6.2** of **Appendix F** has been updated.
	(d) Please clarify whether a site interview with the current or previous occupier was conducted.	Noted. **Appendix 6.2** of **Appendix F** has been updated.
	(25) Para. 5.9.7 Please elaborate on the content, particularly on how the Consultant could ascertain the potential land contamination issues.	Noted. Please refer to the **para 6.2.5-6.2.7** of **Appendix F**.
	(26) Para. 5.9.8 The Consultant is advised to elaborate further on the information on the building plan of the Application Site acquired from the BRAVO.	Noted. **Appendix 6.3** of **Appendix F** has been updated.
	(27) Appendix 5.3 The capture screen from BRAVO shows only the content page of the approved plan; please extract and supplement the relevant information from the plan to facilitate further vetting.	Noted. **Appendix 6.3** of **Appendix F** has been updated.
	(28) Appendix 5.4	
	(a) It is spotted that the site boundary does not tally between the enquiry letter (covering the temporary structures at the south of the Godown and Figure 1.1 of this submission. The Consultant is advised to provide	Noted. **Appendix 6.4** of **Appendix F** has been updated.

No.	Comments	Responses
	clarification and update the content as appropriate to avoid confusion.	
	(b) Only an interim reply from FSD dated 11 March 2024 was attached. The Consultant shall supplement the finalized response from FSD dated 25 March 2024 for further vetting.	Noted. **Appendix 6.4** of **Appendix F** has been updated.
	(29) Para. 5.9.10	
	Please elaborate on the CWP registration within the Project Site. The Consultant is advised to compile a summary table with information including but not limited to (i) identity of the CWP, (ii) nature of business, (iii) chemical type, (iv) address, and (v) activeness/validity. For clarity, please also specify the date of inspection of the registry of chemical waste producers.	Noted. The information would be supplemented once available.
	(30) Table 5.3	
	According to the response from EPD enclosed in Appendix 5.4, information related to CWP is also provided, please incorporate them into the last column for clarity.	Noted. **Table 6.2** of **Appendix F** has been updated.
	(31) Para. 5.9.15	
	Please revise "historic land use" to "historical land use" in the first sentence to avoid confusion.	Noted and updated in **para 6.2.15** of **Appendix F**.
	(32) Para. 5.10.1 and Para. 5.10.2	
	The two paragraphs are confusing and incomplete; please carefully review and update them as appropriate.	Noted and updated in **para 6.3.1-6.3.3** of **Appendix F**.
	(33) Para. 5.10.3	
	Please be advised that the Consultant shall agree with EPD on the Contamination Assessment Plan before undergoing site investigation works.	Noted and updated in **para 6.3.1-6.3.3** of **Appendix F**.
	Noise planning perspective:	
	(1) S.3.3.1	
	– Written proof of TD's endorsement on the traffic forecast data in Year 2047 should be provided.	Noted and please be advised that TD's endorsement on the traffic forecast data in year 2047 would be provided once available.

	(6) Appendix 4.3	
	– The source name of RCI-1 is not the same in Appendix 4.2 and Table 4.2. Please review.	Noted and revised in **Appendix 4.3** of **Appendix F**.
	– Redland Concrete Limited is duplicated.	Noted and removed in **Appendix 4.3** of **Appendix F**.
	– Please review the SWL calculation, such as CCC_3, CCC_4 and WFM1.	Noted and please be advised that the SWLs of CCC_3, CCC_4, and WFM1 are referenced to the Approved Planning Application No. A/K15/126.
	– The SPL of QJ_1 in Appendix 4.3 did not alight with Appendix 4.2. Please review.	Noted and revised in **Appendix 4.3** of **Appendix F**.
	(7) S.4.7.2	
	– Please justify the noise reduction by the vertical fin for fixed noise source, such as providing drawings/diagrams on the reduced line-of-sight.	Noted. Line of sight drawing have been supplemented in **Figure 4.5a-4.5g** of **Appendix F**.
	(8) Table 4.4	
	– Please review the no. of floors for NSR F2-01 and F2-03.	Noted and revised in **Table 4.4** of **Appendix F**.
	(9) Table 4.5	
	– Please review the predicted noise level for F2-02 & F2-03 during day & evening time as they did not align with the calculation from Appendix 4.6.	Noted and revised **Table 4.5** of **Appendix F**.
	(10) Appendix 4.4	
	– Please review the barrier correction for NSR F1-03, such as TLM_1 and etc.	Noted and revised **Appendix 4.4** of **Appendix F**.
	Textual Comment	
	(11) S.3.7.6, S.3.7.7	
	– Please delete “Error! Reference source not found”.	Noted and relevant typos have been removed **para 3.7.6-3.7.7** of **Appendix F**.
	(12) S.4.8.1	

No.	Comments	Responses
	– Detail calculations for the fixed noise mitigation scenario are shown in Appendix 4.6 instead of Appendix 4.7. Please review.	Noted and revised in **para 4.8.1** of **Appendix F**.
9.	**Environmental Protection Department, Environmental Assessment Division, Territory South Group, Kowloon, dated 26 February 2025**	
	Further to our earlier email dd 5.2.2025 providing EPD's first batch of comments on AQIA for the captioned planning application, please find below EPD's further comments in relation to vehicular emissions.	Noted.
	1. Section 2.7 (iv) Vehicular Emission: Please review if there are HGV car parks within the 500m assessment area, such as Yau Tong Industrial City and Yau Tong Industrial Building; and review if they should be considered and evaluated in the assessment.	On-site street parking spaces were identified based on the information from SAMP. In general, no starting emission will be applied if the roads with double yellow line and the road classified as District Distributor, Primary Distributor, Trunk Road & Expressway. In view of the on-site street parking spaces within 500m assessment area, e.g. Cho Yuen Street, Tung Yuen Street and Ko Fai Road, all roads are considered as with starting emission. The start emission of all 18 vehicle classes (including FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the on-site street parking spaces.
	2. Section 2.8.11: Please update the minor road ratio according to the latest ATC 2023. Besides, pleas revise "the proportion of local and rural roads within Hong Kong" to "the proportion of minor roads within Hong Kong".	The estimated percentage of VKT for local and rural roads with possible starting emission is ~21.7988% of total VKT, which is calculated by raw data of 2023 provided by TD. The calculation has been checked and agreed by TD and the estimated % of VKT for local and rural roads is agreed with EPD (see **Appendix 2.19** of **Appendix G**).
	3. Please supplement a road map and SAMP results for open road in Appendix.	The road index plan and summary of open road emission factors generated by SAMP v2.1 are shown in **Appendix 2.11** of **Appendix G**.
	We understand that the consultant had not provided any update/feedback on the missing model output files, as requested in our earlier email dated 4 Feb 2025. Please request the	Revised modelling files will be provided for further checking.

No.	Comments	Responses
	applicant/consultant to follow up closely so that our air modeller can continue the air modelling review.	
10.	**Environmental Protection Department, Environmental Assessment Division, Territory South Group, Kowloon, dated 7 March 2025** Please find below EPD's further comments from our air modeller **Marine emission source** 1. The base elevation should be set at the mean sea level which according to the LandsD is 1.3mPD. Please rectify. 2. The diameter and release height of the emission source "FVH01" could not tally between model file and the report, please rectify. Please note that the discrete result checking is pending due to missing model output files as raised in our earlier comments.	 1.3mPD mean sea level is included in the assessment. Model file is updated accordingly. Revised modelling files will be provided for further checking.
11.	**Environmental Protection Department, Environmental Assessment Division, Territory South Group, Kowloon, dated 21 March 2025** For the AQIA submitted under the captioned planning application, please be advised that our air modelling team has no comment on the discrete results of the current submission while they understand that the consultant will update the model runs (and hence the results) based on the previously provided comments.	 Noted.
12.	**Fire Services Department, Corporate Strategy Command, Planning and Development Division, dated 24 February 2024** Please be informed that I have no specific comment on the captioned proposal. Advisory clauses: Detailed fire services requirements will be formulated upon receipt of a formal submission of STT/STW, general building plans or referral of	 Noted. Noted.

No.	Comments	Responses
	application via relevant licensing authority. Furthermore, the EVA provision in the captioned work shall comply with the requirements as stipulated in Section 6, Part D of the Code of Practice for Fire Safety in Buildings 2011, which is administered by the Building Authority.	
13.	**Highways Department, Urban Region, District and Maintenance Section, Special Maintenance Section, Tunnels Section (Kowloon), District Section, dated 27 January 2025** Regarding the proposal of setting back and surrender of land for widening of footpath by the subject development, this Office have no objection to take up the maintenance responsibility of the surrender area upon completion of the road formation works by the lot owner and subject to the following conditions are met:-	
	1. TD agrees to take up the management responsibility of the proposed surrender area;	Noted.
	2. The surrender area should be designed and constructed to HyD Standard and TPDM requirements;	Noted.
	3. The surrender area shall be in general free of structures and private facilities;	Noted.
	4. TD shall be consulted of the details of all street furniture, traffic signs and road markings on the proposed surrender area;	Noted.
	5. Please seek comment from Lighting Division, HyD whether relocation and/or additional provision of street lighting is required for the proposed surrender area;	Please be advised that this Application has been circulated to the Lighting Division of Highways Department (HyD) for comment.
	6. Please advise the lot owner to carry out utility circulation and allow all utility works to be carried out in conjunction with his works in the proposed surrender area;	Please be advised that the Applicants would carry out utility circulation and allow all utility works to be carried out in conjunction with his works in the Application Site.
	7. A clear physical demarcation between public road and the private lot shall be provided on the pavement to delineate the lot boundary and hence the maintenance responsibility of the lot owner. It shall be	Noted and please refer to **Figure A-01** of **Appendix A (Updated Architectural Layout of the Proposed Scheme)** for the updated Master Layout Plan (MLP). Please be advised that the construction of the full

No.	Comments	Responses
	constructed at the cost of the lot owner and to the satisfaction of this Office.	height setback along Tung Yuen Street would be at the Applicants' own cost and to the satisfaction of HyD in detailed design stage.
14.	**Lands Department, Lands Administration Office, District Lands Office, Kowloon East, dated 27 January 2025**	
	1. The application site is located at Yau Tong Marine Lot No. 70 ("the Lot") which is restricted for industrial purposes requiring direct access to the sea as may be approved by the then Director of Commence and Industry, or godown purposes or both excluding the storage of bulk oil and petroleum products and offensive trade with a building height restriction of not exceeding 100 feet above HKPD. The proposed redevelopment which consists of one 22 to 28-storey residential block (excluding basement carparks), providing 342 units, atop a 3-storey for shops and services, eating place and clubhouse with two basement levels for car parking and loading/unloading spaces is in conflict with the existing lease conditions.	Noted.
	2. If the planning application is approved by the Town Planning Board (TPB), the owner(s) of the Lot shall apply to the Lands Department (LandsD) for a lease modification to implement the proposal. However, there is no guarantee that the lease modification application will be approved. Such application, if received by LandsD, will be considered by LandsD acting in the capacity as the landlord at its sole discretion. In the event any such application is approved, it would be subject to such terms and conditions including, among others, the payment of premium and administrative fee as may be imposed by LandsD.	Noted.
15.	**Planning Department, District Planning Branch, Metro District Planning Division, Kowloon District Planning Office, dated 27 January 2025**	
	1. The applicant seeks planning permission for proposed residential development with	Noted.

No.	Comments	Responses
	commercial at the application site (the Site) which is occupied by Wah Tung Godown at No. 4 Tung Yuen Street, Yau Tong (YTML 70). The Site, of about 2,419m2, falls within an area zoned "Residential (Group E)" ("R(E)") on the approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan (OZP) No. S/K15/27. This zone is intended primarily for phasing out of existing industrial uses through redevelopment (or conversion) for residential use. According to Schedule I (for nonindustrial buildings) of the Notes of the OZP for "R(E)" zone, the proposed 'Flat' is a Column 2 use requiring planning permission from the Town Planning Board, while 'Shop and Services' and 'Eating Place' are always permitted (a) on the lowest three floors of a building, taken to include basements; or (b) in the purpose-designed non-residential portion of an existing building, both excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room. The subject "R(E)" zone is restricted to a maximum domestic plot ratio (PR) of 5.0, a maximum nondomestic PR of 1.0, and a maximum building height (BH) of 80mPD.	
	2. According to the Planning Statement (PS) (Para. 4.3 refers), the proposed development will be comprised of one 22 to 28 storeys residential block, providing 342 units, atop a 3-storey for shops and services, eating place and clubhouse with two basement levels for car parking and loading/unloading spaces. In order to pursue the proposed development, the applicant also seeks planning permission for proposed minor relaxation of (i) maximum domestic PR from 5.0 to 6.0 (+1.0; +20%) and (ii) BH restriction from 80mPD to 100mPD (20mPD; +25%).	Noted.
	General Comment:	
	3. To the immediate north and south of the Site is occupied by Yau Tong Sewage Pumping Station at GLA-NK 533 and a concrete batching plant at YTML 68 respectively, it is noted that the deposition of some parts of	Findings from our submitted EA and AQIA have confirmed that the Proposed Scheme is environmentally acceptable in technical terms and the Proposed Development shall not be subject to adverse or insurmountable

No.	Comments	Responses
	residential towers is close to the lot boundary. The applicant is required to demonstrate that the new residential development will be environmentally acceptable, and suitable mitigation measures, if required, will be implemented to address the potential industrial/residential (I/R) interface problems.	impacts from the adjacent Yau Tong Sewage Pumping Station and concrete batching plant.
	4. According to Para. 7.5.6 of the ES of the OZP, BHRs from 140mPD to 80mPD are stipulated for the "R(E)" zones in the Yau Tong Industrial Area for "a distinct gradation of height profile with descending building height towards the harbourfront" to "improve visual permeability". The applicant is advised to provide strong justifications and planning merits for minor relaxation of BHR and PR for consideration by TPB.	The proposed minor relaxation of plot ratio (PR) from 5 to 6 would optimise the potential of the Application Site to provide additional 60 housing units (total 342 flats) in the YTIA. A PR0.9 for non-domestic use (retail) will be retained on the lower floors of the Proposed Scheme to improve street-level vibrancy in YTIA, respecting the planning intention of the "R(E)" zones. In view of the waterfront location of the Application Site, despite not a requirement on "R(E)" zones, the Applicants intend to provide a waterfront promenade with not less than 15m, open for public enjoyment on a 24/7 basis. This result in ¼ of the Application Site (i.e. 608m^2) being used for the promenade for public enjoyment and not usable for proposed housing/ retail use. Together with the minor relaxation of domestic PR mentioned above, a minor relaxation of BH from 80mPD to 100mPD (inland portion only) will be required to realise the Proposed Scheme. It should be emphasised that only the inland portion (fronting Tung Yuen Street) will be at 100mPD, which will be the same BH as the development across Tung Yuen Street. Therefore, the proposed minor relaxation of BH (inland portion only) at the Application Site will be coherent with the stepped BH profile intended in the YTIA and indeed creating a more dynamic BH profile within the Application Site. Findings in our submitted VIA also confirmed that the Proposed Scheme is fully acceptable from visual aspect and fully compatible to the surrounding environment from the 6 public viewing points.

No.	Comments	Responses
	Key Development Parameters	
	Open Space (Voluntary Waterfront Promenade (VWP) for public use)	
	5. According to para. 4.2.2 of the PS, I noted the applicant will take up the maintenance and management (M&M) of the VWP, please clarify whether you will intend to surrender the VWP to government upon request and confirm the M&M obligations of the VWP will not transfer to the individual flat owners of the proposed development.	Please be advised that the Applicants intend to own the voluntary waterfront promenade (VWP) and would take up the responsibility for the construction, maintenance and management of the VWP which would not be transferred to the individual flat owners of the Proposed Scheme.
	6. Please confirm the VWP will be opened 24hrs for public use.	Please be confirmed that the VWP would be opened for public enjoyment on a 24/7 basis.
	7. Please clarify the connection of the PWP to the adjacent sites.	Please be advised that the Applicants have proposed a 5m-wide covered public passageway at G/F of the Proposed Scheme to welcome members of the public from Tung Yuen Street. The design of the VMP will also allow for future connection with the wider PWP network for Kowloon East.
	8. Please include Landscape Master Plan (LMP) into Appendix A and indicate the area of not less than 608m^2 for the VWP into the Master layout Plan and LMP.	Noted and please refer to **Appendix A** for the updated MLP and Landscape Master Plan (LMP).
	Covered Public Passage to Promenade (CPPP)	
	9. Please confirm the 5m wide CPPP will be opened 24hrs for public use and indicate the headroom of the CPPP.	Please be advised that the 5m-wide CPPP would be opened for public use on a 24/7 basis and its floor-to-floor height would be about 5.5m.
	Flat no.	
	10. Please provide the estimated flat no. in compliance with the OZP restriction for domestic GFA (i.e. 5.0)	Please be advised that about 285 flats are estimated in compliance with the OZP restriction under domestic PR 5.0. With the Proposed Scheme (i.e. Proposed Minor Relaxation of PR), the Application Site will be able to provide an additional about 60 units, with a total of 342 flats by 2032.

No.	Comments	Responses
	Bonus Site Coverage (SC) and Plot Ratio (PR) **Footnote (3) of Table 4-1:**	
	a) Please note the bonus PR should be about 0.081 instead of 0.082 (**rounded down**, equivalent to a GFA of not more than 197.93m^2 instead of 198m^2 will be claimed for the 39.586 m^2 of the ODP, please review and rectify the figures.	Noted and relevant parts of **Appendix B (Replacement Pages of Updated Supporting Planning Statement)** have been revised.
	b) Please review and amend the wording of the footnote (3) as "*On top of the PR/GFA set out above, the applicant has indicated that bonus PR of about0.081 (rounded down, equivalent to a GFA of about 197.93m^2) will be claimed for the 39.586m^2 of ODP-required setback areas to be surrendered to the Government. While the bonus PR will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2), nevertheless, the bonus PR has been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.* ***Inclusive of bonus SC of XX% in pursuant of above****."*	Noted and revised in **footnote [3]** of **Table 4-1** in **Appendix B**.
	11. Please clarify the bonus SC will be claimed with demonstration of the calculation by formula under B(P)R22(2).	Please be clarified that the bonus site coverage (SC) shall be 0.257% according to the B(P)R 22(2) (a). Please find the calculation below: 1500 x surrendered area / original site area x building height = (1500 x 39.586m^2) / (2419m^2 x 95.6m) = 0.257%
	12. Please indicate the full height setback area to be surrender to the government which will be claimed for bonus PR and voluntary full height setback without claiming bonus PR with legend in MLP and all relevant floor plans.	Noted and please refer to **Appendix A** for details.
	Building Height	
	13. Please indicate the building height demarcation of 80mPD and 100mPD clearly of the portion of Tower in the MLP /	Noted and please refer to **Figure A-01** of **Appendix A** for the updated MLP.

	addition of a Building Height Demarcation Plan	
	14. Please indicate the spot height/height of the roof top structures of the tower in the MLP and relevant Sections.	Noted and please refer to **Figures A-01, A-07 and A-08** of **Appendix A** for the updated MLP, Sections A-A' and B-B'. Please be advised that the spot levels of the proposed rooftop structures are indicative only and subject to detailed design at later stage.
	Master Layout Plan	
	15. Please indicate clearly and naming of the streets and the surrounding buildings/ adjacent to the Site.	Noted and please refer to **Figure A-01** of **Appendix A** for the updated MLP.
	16. Please indicate the width of Tung Yuen Street.	Noted and please refer to **Figure A-01** of **Appendix A** for the updated MLP.
	17. Please clarify the function/use of the area of 3/F (spot height of +21.1) of the Tower to the adjacent Concrete Batching Plant.	Please be clarified that the use of the area of spot height of +20.15mPD shall be the top level of the transfer plate of the Proposed Development.
	Sections	
	18. Please indicate the Floor to Floor height of each floor and the height of the proposed transfer plate.	Noted and please refer to **Figures A-07 and A-08** of **Appendix A** for the updated Sections A-A' and B-B'.
	19. Please rectify the discrepancy of the cutting line of the section A-A' in the key plan and the corresponding section A-A'.	Noted and please refer to **Figure A-07** of **Appendix A** for the updated Section A-A'.
	Open Space demarcation Plan	
	20. Please indicate the area of VWP and the private open space at floor L2.	Noted and please refer to **Appendix C (Replacement Pages of Updated LMP Report)** for the updated Open Space Demarcation Plan.
	21. Please indicate the area of the VWP (not less than xxxm^2) in the relevant plans, sections and the eventual LMP;	Noted and please refer to **Appendix C** for the updated LMP, Open Space Demarcation Plan and relevant section plans.
	Greenery Provision	
	22. Please clarify the percentage of greenery provision to be provided in total and at primary zone and state it in the table of key development parameters.	Please be clarified that all countable greenery is located at Primary Zone, i.e. 15m vertical zone of the Application Site, in accordance with PNAP APP-152 (Sustainable Building Design Guidelines). The percentage of greenery provision in total

No.	Comments	Responses
		and at primary zone are 20% which comply with the minimum SC of greenery as stipulated in the PNAP APP-152. **Table 4-1** of **Appendix B** has been revised.
	Planning and Design Merits	
	23. Please include a separate plan illustrating all relevant planning and design merits (with dimensions) including but not limited to the below:	Noted and please refer to **Figure E-03** of **Appendix A** for the illustration of Planning and Design Merits.
	(i) Full height setback from the northeastern boundary along Tung Yuen Street for provision of a 3.5m-wide footpath	Please refer to the response to comment item no. 23.
	(ii) The voluntary 1.5m-wide full height setback abutting the building façade within the Application Site;	Please refer to the response to comment item no. 23.
	(iii) 5m-wide CPPP at from Tung Yuen Street to the waterfront promenade through the G/F of the proposed building;	Please refer to the response to comment item no. 23.
	(iv) 15m-wide waterfront promenade (Not less than 608m^2) would be accessible by the public and its opening hours,	Please refer to the response to comment item no. 23.
	(v) Greenery provision, e.t.c.	Please refer to the response to comment item no. 23.
	24. Para. 2.4.5: Please amend as "…Canaryside (~~120~~ 140mPD)…"	Noted and **para 2.4.5** of **Appendix B** has been updated.
	ODP	
	Figure No. 3-3 and relevant section –As the ODP shown in the Figure 3-3 is not the latest one, please update the latest ODP "the draft Cha Kwo Ling, Yau Tong and Lei Yue Mun Outline Development Plan (ODP) **No. D/K15C/1B-A**"	Noted and **Section 3.2.1** and **Figure 3-3** of **Appendix B** have been revised.
	Technical Assessments	
	Traffic Impact Assessment	
	25. **Table 4.4: The Planned and committed development in Yau Tong area**	
	a) Please note the comprehensive residential development at Yau Tong Inland Lot No. 44 is a completed development. The	Noted and updated in the **Table 4.4** of **Appendix H** (**Replacement Pages of Updated Traffic Impact Assessment**).

No.	Comments	Responses
	development comprises shop and service/eating place and public vehicle park.	
	b) Private development at NKIL No. 6593 at Ko Chiu Road - Flat No. should be 634 instead of 500	Noted and updated in the **Table 4.4** of **Appendix H**.
	c) Please clarify the source for the retail GFA for Public Housing development at Pik Wan Road	Noted and updated in the **Table 4.4** of **Appendix H**.
	d) Please rectify the flat no. of Ex-Cha Kwo Ling Kaolin Mine Site: Private Housing: 1331 flats (source: from public domain).	Noted and updated in the **Table 4.4** of **Appendix H**.
	e) Please rectify the flat no. of Transitional Housing: 224 units (source: from public domain)	Noted and updated in the **Table 4.4** of **Appendix H**.
	f) Please take into account the commercial GFA of the proposed residential development under approved planning application no. A/K15/127 and A/K15/129 as appropriate.	Noted and updated in the **Table 4.4** of **Appendix H**.
	g) Please review and amend Kwun Tong Action Area: Office: Approx. 62,600m^2 GFA, Retail/R&B: Approx. 17,000m^2 GFA, Arts, cultural/institutional uses: 1,700m^2 GFA, PTI: Approx. 7,050 m^2 GFA	Noted and updated in the **Table 4.4** of **Appendix H**.
	Visual Impact Assessment	
	26. Para. 2.2.5: Please amend as "…Canaryside (~~120~~ 140mPD)…"	Noted and para 2.2.5 of **Appendix D (Replacement Pages of Updated Visual Impact Assessment)** has been updated.
	27. Photomontage	
	a) Please refer to my comment marked in the **Appendix I**  Appendix I_photomontage.pd	Noted and relevant Figures in **Appendix D** have been revised.
	Public comments	
	28. During the publication period from 14.1.2025 to 26.1.2025, there is six public	Please refer to the responses to comments in below section of public comments.

No.	Comments	Responses
	comments, please response to the public comments as appropriate.	
16.	**Planning Department, District Planning Branch, Metro District Planning Division, Kowloon District Planning Office, dated 24 February 2025** Please provide justification(s) for the proposed 5m wide (including any guideline or practice notes refer to) for the covered public passageway at G/F	Please be advised that the Applicants proposed 5m-wide covered public passageway at G/F of the Proposed Scheme to welcome members of the public from Tung Yuen Street and improve street-level vibrancy in YTIA, respecting the planning intention of the "R(E)" zones.
17.	**Planning Department, District Planning Branch, Metro District Planning Division, Kowloon District Planning Office, dated 10 March 2025** According to the Environmental Assessment, it is noted that a number of mitigation measures (including (i) a podium of 14.4mPD with elevated residential floors, (ii) precautionary building layout design for disposition and orientation and (iii) provision of enhanced acoustic balcony with sidewall for living rooms) are proposed to mitigate the road traffic noise impact towards the development site. As Yau Tong Sewage Pumping Station (YTSPS) and a concrete batching plant (CBP) are situated at the site immediate north and south respectively, please clarify what mitigation measures are proposed to handle the odour and air quality impacts towards the site.	According to **Section 2.11.4** of **Appendix G**, no identifiable odour was detected at the site boundary of YTSPS and at the junction of Shung Tai Wai and Tung Yuen Street upon the site visits. Furthermore, according to the reply from EPD's region office as presented in AQIA Appendix 2.18, there is no odour complaint on YTSPS. With the consideration of the above findings, odour impact from YTSPS is not anticipated and no mitigation measures is proposed. According to **Section 2.7.9** to **Section 2.7.15** of **Appendix G**, for the potential air quality impact of CBP (i.e. Redland Concrete Ltd.), a quantitative air quality impact assessment has been conducted and the results have indicated that all locations of the Proposed Development would comply with the relevant criteria of new AQOs except ASR D06 at 4/F and 5/F (i.e. 27.5m and 30.6m above ground). However, as no fresh air intake, openable window and air sensitive uses would be located within the exceedance zone. Thus, it is anticipated that the Proposed Development will not be subject to any adverse air quality impact.

No.	Comments	Responses
	Please mention all mitigation measures clearly in both environmental assessment and air quality impact assessment	Please refer to **Sections 3.7, 4.7** and **5.5** of **Appendix F** for details.
18.	**Planning Department, District Planning Branch, Metro District Planning Division, Kowloon District Planning Office, dated 21 March 2025** **<u>Air Ventilation</u>** Given the site is relatively small in scale and the frontage to the sea is only about 40m, there will be no significant adverse air ventilation impact.	Noted.
19.	**Planning Department, District Planning Branch, Metro District Planning Division, Kowloon District Planning Office, dated 17 April 2025** Please find the attached Gist of Major Comments following the 49th KTF meeting on 14 March 2025 regarding the captioned application for your follow-up action. Many thanks. <u>Gist of Major Comments</u> ***Overall*** 1. Although the meeting expressed appreciation to the Proponent for its proposal to provide a harbourfront promenade and some retail activities in the redeveloping the subject site at 4 Tung Yuen Street, Yau Tong (hereafter 'the Site'), it opined that the justifications given were not convincing enough for the rather substantial increase in domestic plot ratio (PR) and building height (both about 20%) under the Proponent's proposal.	Noted. The proposed minor relaxation of plot ratio (PR) from 5 to 6 would optimise the potential of the Application Site to provide additional 60 housing units (total 342 flats) in the YTIA. A PR0.9 for non-domestic use (retail) will be retained on the lower floors of the Proposed Scheme to improve street-level vibrancy in YTIA, respecting the planning intention of the "R(E)" zones. In view of the waterfront location of the Application Site, despite not a requirement on "R(E)" zones, the Applicants intend to provide a waterfront promenade with not less than 15m, open for public enjoyment on a 24/7 basis. This result in ¼ of the Application Site (i.e. 608m^2) being used for the promenade for public enjoyment and not usable for proposed housing/ retail use. Together with the minor relaxation of domestic PR mentioned above, a minor relaxation of BH from 80mPD to 100mPD

No.	Comments	Responses
		(inland portion only) will be required to realise the Proposed Scheme. It should be emphasised that only the inland portion (fronting Tung Yuen Street) will be at 100mPD, which will be the same BH as the development across Tung Yuen Street. Therefore, the proposed minor relaxation of BH (inland portion only) at the Application Site will be coherent with the stepped BH profile intended in the YTIA and indeed creating a more dynamic BH profile within the Application Site. Findings in our submitted VIA also confirmed the Proposed Scheme is fully acceptable from visual aspect and fully compatible to the surrounding environment from the 6 public viewing points.
	Proposed harbourfront promenade within the Site	
	2. The meeting appreciated that the Proponent was willing to provide a promenade and open it for use by the general public round the clock, and to take up management and maintenance responsibilities of the proposed promenade.	Noted.
	3. The meeting noted the provision of retail activities at the lower floors and suggested that this could increase harbourfront vitality.	Noted.
	Harbourfront connectivity	
	4. Stressing the importance of connectivity along the harbourfront, the meeting expressed reservations about the Proponent's proposal since it did not offer any public gains in favour of improving the harbourfront connectivity at a critical location in the region.	Please be advised that the proposed 15m-wide waterfront promenade is not required under "R(E)" zone. The Applicants proposed 15m-wide waterfront promenade with seating benches, wooden deck and ornamental planting for public leisure activities. Future users, including residents of the Proposed Scheme as well as visitors from other parts of Hong Kong, can reach the waterfront of YTIA directly from Tung Yuen Steet via the proposed 5m-wide covered public passageway on a 24/7 basis. Along the Tung Yuen Street frontage, a full-height setback of about 5m-wide is proposed adjoining the planned footpath. It is

No.	Comments	Responses
		anticipated that the provision of retail shop frontage at street level with widened footpath and tree plantings along Tung Yuen Street would not only enhance the current street environment, but also activate the street life and support the need of local neighbourhood. The design of the VMP will also allow for future connection with the wider public waterfront promenade network for Kowloon East. Please refer to **Figure E-03 (Illustration of Planning and Design Merits)** of **Appendix A** for details.
	5. The Site currently lacks connection with the adjoining lots on both sides, and the only access route leading to the said promenade was via the proposed 5-metre-wide public passageway within the Site. The meeting raised concerns that this proposed arrangement might make the promenade a 'private garden' for the future residents of the Site and customers of the lower-floor retailers only rather than a leisure open space opened for the general public.	Please be confirmed that the Applicants are committed to open the 15m voluntary waterfront promenade and the 5m public passageway for public use/enjoyment on a 24/7 basis.
	6. The meeting noted the status of the adjoining lots of the Site – while the future redevelopment plan of 6 Tung Yuen Street (located to the south of the Site) is subject to the initiative of the lot owner, the Drainage Services Department (DSD) has agreed set back about 4m from the sea frontage (hereafter 'the setback area') within the existing Yau Tong Sewage Pumping Station (YTSPS) (located to the north of the Site) to facilitate the connection of the proposed harbourfront promenade and Ko Fai Road. The meeting strongly suggested that the Government, the private developer or the two parties working together to undertake the design and construction of the setback area so that a continuous promenade to the north of the Site can be provided. The meeting also noted that given the recent financial conditions of the Government, it appears difficult for the Government to enhance harbourfront connectivity on its	Noted. After reviewing the implementation programme and financial implications, the Applicants are unable to commit to taking up the design and construction work for the portion of promenade at the YTSPS site. Nonetheless, the Applicants welcome a future connection of the waterfront promenade at the YTSPS site with the voluntary waterfront promenade provided at the Application Site. The Applicants are committed to coordinating on the design to ensure a coherent and seamless public experience.

No.	Comments	Responses
	own at this stage without private participation.	
	7. The Proponent was also suggested to explore developing the setback area of YTSPS so as to provide a seamless connection with the proposed promenade within the Site. The Proponent raised two concerns during the meeting, namely: (a) the uncertain timeline of construction work within YTSPS and releasing the setback area for promenade development; and (b) the uncertainty of future management and maintenance responsibilities of the setback area of YTSPS upon completion of the promenade construction. For Concern (a), the meeting noted that the setback area could be released by end 2026.	Noted.
	[Post meeting note: For Concern (b), as the setback area falls within Government land, the Government will undertake the future management and maintenance responsibilities. In other words, the Government will arrange the site handover with the concerned construction agent, assuming it to be a private developer, so long as the promenade of the setback area has been so constructed to the satisfaction of the concerned B/D.]	Noted.
	8. With the above, the Proponent was suggested to review the possibility of developing the setback area of YTSPS for connecting with the proposed promenade within the Site, and to further discuss with the Government in detail. Full support to the proposal would be given, subject to that the Proponent could improve the harbourfront connectivity in the aforesaid aspects as public gains.	Please refer to our response to (6) above.
	Other comments	
	9. The Proponent was suggested to revisit the design of the proposed 5-m passageway so as to make it more integrated with the design of the proposed promenade and welcoming for use by the general public.	Please be confirmed that the Applicants are committed to open the 15m voluntary waterfront promenade and the 5m public passageway for public use/enjoyment on a 24/7 basis.

No.	Comments	Responses
	10. The Proponent was requested to provide a rationale for the proposed relaxation in domestic PR and building height restriction, as well as to conduct a comprehensive assessment (e.g. wind and air ventilation, reception of sunlight) on the impacts of such proposed relaxation to the surrounding environment.	Please refer to our response to comment (1) above on the rationale for the proposed PR and BH relaxation. Please note that findings from our submitted technical assessments, including but not limited to TIA, EA, DSIA, AQIA, AVA, VIA confirmed that the Proposed Scheme would not generate adverse impact to the surrounding environment.
	11. The Proponent was requested to review the width of the promenade actually usable by users and to ensure that the effective width (after landscaping) is comparable to the nearby promenade.	Please be advised that the width of the voluntary waterfront promenade will not be less than 15m, which is comparable to the nearby promenade in adjoining Yau Tong Bay and YTIA area. The design of the promenade is also intended to encourage social interaction and harbour-viewing with the provision of seating benches, wooden deck and ornamental planting which would be compatible to the adjacent waterfront promenades. The Applicants are also committed to coordinating on design with adjoining promenade in detailed design stage to ensure a coherent and seamless public experience.
	12. The meeting suggested the Proponent to consider providing landing steps within the Site.	Please be advised a total of 7 landing steps existed/planned along the Yau Tong waterfront. 3 of them are located within 500m of the Application Site and the remaining 4 are planned under the Approved Applications No. A/K15/121 and A/K15/130. It is considered that the available landing steps along the Yau Tong waterfront are sufficient for public use.
	13. The meeting suggested the Proponent to ensure that potential odour issue from the nearby YTSPS would be addressed.	Please note that findings from our submitted AQIA confirmed that the Proposed Scheme would not generate or susceptible to adverse odour impact.
20.	**Planning Department, District Planning Branch, Special Duties Division, Urban Design & Landscape Section, Urban Design Unit, dated 27 January 2025** **<u>Supporting Planning Statement</u>**	
	1. It is noted that the requirement on building separation is not applicable and no further	Noted.

No.	Comments	Responses
	setback from the street is required regarding the requirement on building setback under Sustainable Building Design Guidelines (Paras. 4.4.4 and 4.4.5 of the SPS refers).	
	2. The opening hours of the (i) proposed 15m-wide PWP and (ii) the 5m-wide covered public passage should be supplemented.	Please be advised that the 15m-wide VWP and 5m-wide covered public passageway would be opened for public use on a 24/7 basis.
	3. **Table 4.1** – A supplementary note for the proposed floor-to-floor height of residential floors of about 3.15m should be added as per Para. 5.7.2 of the SPS.	Noted and **Table 4-1** of **Appendix B** has been supplemented.
	Visual Impact Assessment	
	4. **Table 3.1** – A supplementary note for the proposed floor-to-floor height of residential floors of about 3.15m should be added as per Para. 5.7.2 of the SPS.	Noted and **Table 3-1** of **Appendix D** has been supplemented.
	5. **Para. 4.2.2** – As TPB PG-No. 41 focuses on the protection of public views, mention of occupational receivers is not necessary and should be removed.	Noted and relevant row has been removed.
	6. **Para. 5.1.1** – It is noted that the VIA assesses the visual impact of the Proposed Scheme by comparing it with the Baseline Scheme taking into account planned/approved developments in the surroundings, with the Baseline Scheme being an OZP Scenario Scheme (i.e. a residential development with domestic PR of 5, nondomestic PR of 1 and BH of 80mPD without waterfront promenade).	Noted.
	VP1	
	7. **Para. 4.2.3 and all relevant text/figures** – The Consultant should confirm whether **all** the selected VP is publicly accessible, especially VP1. If negative, please revise the name of the VP as appropriate.	Noted and text in **Appendix D** has been reviewed.
	8. **Figure 3, photomontages (Baseline Scheme and Proposed Scheme)** – As per our internal checking, it seems the BH and bulk of the approved Application No. A/K15/130 is underestimated, in that majority of the sky view should be	Noted and please refer to **Figure 3** of **Appendix D** for the updated VP1.

No.	Comments	Responses
	obstructed and both the Baseline and Proposed Schemes would be completely screened off.	
	9. **Para. 5.1.5** – It should be supplemented that the sky view forms part of the visual composition at the background.	Noted and **para 5.1.5** of **Appendix D** has been supplemented.
	10. **Paras. 5.1.5 to 5.1.9** – Subject to the revision of the photomontages at Figure 3, all paragraphs should be suitably revised that both the Baseline and Proposed Schemes would be completely screened off and would not be visible.	Noted and relevant paras of **Appendix D** have been revised.
	VP2	
	11. **Para. 5.1.11** – Other than views to the waterfront, it should be supplemented that the sky view forms part of the visual composition and a very minor portion of the open sky view would be obstructed by the Proposed Scheme compared with the Baseline Condition.	Noted and **para 5.1.11** of **Appendix D** has been revised.
	12. **Para. 5.1.12** – The sentence should be revised to read as "…slight additional visual obstruction created by the Proposed Scheme **to the open sky view** is considered minimal…"	Noted and **para 5.1.12** of **Appendix D** has been revised.
	13. **Para. 5.1.14** – While there may be no significant changes on the key visual elements, it should be supplemented that a very minor portion of the open sky view would be obstructed by the Proposed Scheme compared with the Baseline Condition.	Noted and **para 5.1.14** of **Appendix D** has been revised.
	14. **Paras. 5.1.11 to 5.1.15** – As there is very minor additional visual obstruction to the sky view compared with the Baseline Scheme, please review if the ratings from each aspect and the overall rating would be **negligible to slightly adverse** instead of "negligible".	Noted and relevant sentences in **para 5.1.11** to **5.1.14** of **Appendix D** have been revised. Please be advised that the overall rating for VP 2 shall remain as negligible as the Proposed Scheme would bring no significant changes on the key visual elements/ resources from this VP.
	VP3	
	15. **Figure 5, photomontages (Baseline Scheme and Proposed Scheme)** – As per our internal checking, it seems the position	Noted and please refer to **Figure 5** of **Appendix D** for the updated VP 3.

No.	Comments	Responses
	of the Baseline and Proposed Schemes should shift slightly to the left such that both the Baseline and Proposed Schemes would be completely screened off by the Spectacle.	
	16. **Paras. 5.1.17 to 5.1.21** - Subject to the revision of the photomontages at Figure 5, all paragraphs should be suitably revised that both the Baseline and Proposed Schemes would be completely screened off and would not be visible.	Noted and relevant paras of **Appendix D** have been revised.
	VP4	
	17. **Figure 6, photomontages (Baseline Scheme and Proposed Scheme)** – As per our internal checking, it seems the BH of the Proposed Scheme is slightly overestimated such that both the Baseline and Proposed Schemes would be nearly completely screened off by Coast Line I (i.e. approved Application No. A/K15/122) under construction and only a very tiny minor portion would be visible.	Please be confirmed that the Baseline Scheme would be completely screened off by Coast Line I which is at 80mPD and the Proposed Scheme, at 100mPD, would still be partially visible from this VP4.
	18. **Para. 5.1.23** – It should be supplemented that the open sky view forms part of the visual composition in the background.	Noted and **para 5.1.23** of **Appendix D** has been supplemented.
	19. **Para. 5.1.24 –**	
	a. As per the submitted photomontages, it seems the waterfront promenade under the Proposed Scheme cannot be seen from this VP. The sentence "Besides, as compared with the Baseline Scheme…along the waterfront" should be removed.	Noted and relevant sentence in **para 5.1.24** of **Appendix D** has been removed.
	b. As per the above comment, it is not obvious from the submitted photomontages that the Proposed Scheme would partly enhance the view compared to the Baseline Scheme. It should be reviewed whether the rating would be negligible instead.	Noted and relevant sentence in **para 5.1.24** of **Appendix D** has been revised.
	20. **Paras. 5.1.23 to 5.1.27** - Subject to the revision of the photomontages at Figure 6, the paragraphs should be suitably revised that both the Baseline and Proposed Schemes would be nearly completely screened off.	Please be clarified that the Baseline Scheme would be completely screened off by Coast Line I which is at 80mPD and the Proposed Scheme, at 100mPD, would still be partially visible from this VP4. Relevant paras of **Appendix D** have been revised.

No.	Comments	Responses
	VP5	
	21. **Paras. 5.1.29 to 5.1.32** – As per the submitted photomontages, while the ridgeline may not be affected by the Proposed Scheme, it should be supplemented that a very minor portion of the mountain backdrop would be obstructed by the Proposed Scheme compared with the Baseline Scheme.	Noted and relevant paras of **Appendix D** have been revised.
	22. **Paras. 5.1.29 to 5.1.33** - As there is very minor additional visual obstruction to the mountain backdrop compared with the Baseline Scheme, please review if the ratings from each aspect and the overall rating would be **negligible to slightly adverse** instead of "negligible".	Noted and relevant sentences in **para 5.1.29** to **5.1.30** of **Appendix D** have been revised. Please be advised that the overall rating for VP5 shall remain as negligible as the Proposed Scheme would bring no significant changes on the key visual elements/ resources from this VP.
	Summary of Visual Impact and Conclusion	
	23. **Table 5-3** – The ratings in the table should be revised as per the comments above.	Noted and please be advised that relevant parts in **Table 5-3** of **Appendix D** have been revised.
	24. **Para. 6.1.3** – As per the above comments, it should be revised to read as "…the Proposed Scheme will result with **negligible to negligible to slightly adverse** visual impact…"	Please be advised that the Proposed Scheme will result with negligible impact as compared with the Baseline Scheme with 6 selected VPs.
21.	**Planning Department, District Planning Branch, Special Duties Division, Urban Design & Landscape Section, Landscape Unit, dated 10 February 2025**	
	General Comments	
	2. With reference to the image of Geographical Information Hub (GIH) in 2023, the site is situated in the southwestern fringe of Yau Tong Industrial Area. An existing manufacturing plant is located to its southeast and Victoria Harbour to its southwest. The proposed residential redevelopment in "R(E)" zone and landscaping and tree planting works are not incompatible with the surrounding landscape environment.	Noted.
	3. According to the submission, a total of 7 existing trees are identified within the application boundary and all the existing trees	Noted.

No.	Comments	Responses
	are proposed to be removed. 7 new trees are proposed to be planted in the proposed promenade within the application site. Also, the proposed promenade is intended for public entry from Tung Yuen Street via the public passage within the site. In this regard, significant adverse landscape impact is not anticipated.	
	Detail Comments	
	4. Please clarify if the *Barrier Free Access 2019* is referred to *Design Manual – Barrier Free Access 2008 (2024 Edition)* and revise as appropriate.	Noted and please be confirmed that the *Barrier Free Access 2008 (2024 Edition)* be referred. Please refer to revised **5.3.4** under **Section 5** of **Appendix C**.
	5. According to Landscape Plan – Composite Plan, there are tree planting opportunities in the planters on the podium along the northern site boundary. Please review.	Please be advised that tall hedge buffer planting will be added along the northern boundary to soften the building facade and enhance overall landscape quality. These tall hedges provide a strong visual mitigative buffer to the adjacent sewage pumping station. The podium landscape is further enhanced by planting a variety of large and flowering shrubs. Please refer to updated **LMP** and **Landscape Section B** of **Appendix C** for illustration. Tall hedge planting species have been incorporated into the revised **Table 1B** under **Section 6** of **Appendix C**.
	6. Please clarify if the proposed promenade and passage from Tung Yuen Street within the site will be opened to the public for 24 hours	Please be advised that the proposed 15m-wide waterfront promenade and 5m-wide covered public passageway from Tung Yuen Street would be opened for public use on a 24/7 basis.
	7. Based on para. 6.6 of Appendix C, it is mentioned that the softworks contactor would undertake the establishment of soft landscape works of a period of minimum 12 months following Practical Completion of the proposed development. Please confirm if the Applicant would undertake the future maintenance of the hard and soft landscape works in the proposed promenade.	Please be advised that the Applicants would undertake the future maintenance of the hard and soft landscape works in the proposed voluntary promenade.
	Background	
	8. The Site (about 2419 sq.m.) falls within an area zoned "Residential (Group E)" ("R(E)") on the approved Cha Kwo Ling, Yau Tong, Li	Noted.

No.	Comments	Responses
	Yue Mun Outline Zoning Plan No. S/K15/27. The Applicant proposed for minor relaxation of maximum domestic PR from 5.0 to 6.0 and BH restriction from 80mPD to 100mPD. Advisory Remarks to the Applicant 9. The Applicant is reminded that the approval of the application under Town Planning Ordinance does not imply the approval of the site coverage of greenery, requirements under APP PNAP-152 and/ or under the lease. The site coverage of greenery calculation should be submitted separately to BD/relevant authority for approval.	Noted.
22.	**Transport Department, Urban Regional Office, Traffic Engineering (Kln.) Division, Kln. District East (South) Section, dated 27 January 2025** Please note our comments from a district traffic engineering viewpoint:- Traffic Impact Assessment (TIA) Report Table 2.1 - Please include the following junctions in the assessment : • J/O Lei Yue Mun Road / Slip Road to EHC • J/O Cha Kwo Ling Road / Shung Shun Street • J/O Shung Shun Street / Yan Yue Wai • J/O Ko Fai Road / Tung Yuen Street • J/O Yan Yue Wai / Tung Yuen Street Drawing no. 2.2 - Please indicate the Area of Influence on the drawing and include the junctions as mentioned in the above comment Drawing nos. 2.3 to 2.10 - Some the layouts of existing junctions are not updated, please check again the drawings especially for Drawings 2.4 / 2.5 / 2.6. Section 2.3.3 - Please specify the date(s) of traffic surveys conducted.	Noted and included the 5 junctions below in **Table 2.1** of **Appendix H**. Noted and updated in **Appendix H**. Noted and updated in **Appendix H**. Noted. The traffic surveys were arranged and conducted during morning peak hours between 07:30 – 09:30 and the evening peak

No.	Comments	Responses
		hours between 17:00 – 19:00 on 9th and 10th of September 2024.
	Table 2.2 - It seems that the values of RC for J/O Wai Yip Street / Wai Fat Road are on a low side when compared to recent TIA reports submitted for other developments. Please review if any specific event resulting in such difference and, if necessary, conduct another surveys to collect data to reflect the existing traffic conditions. Should such low RC values remain after reviews, please supplement observed queue lengths for further review.	Noted and reviewed this junction accordingly in **Table 2.2** of **Appendix H**.
	Drawing no. 3.1- Please indicate the width of vehicular access.	Noted and updated in **Appendix H**.
	Drawing nos. 3.2 & 3.3 - Please indicate the directional splits of various ingress / egress routes.	Noted and updated in **Appendix H**.
	Section 3.2.3 - Please include schematic layout plans for the internal transport facilities (including parking spaces, loading/unloading bays and internal driveway) in this report.	Noted and added the plans in **Appendix H**. The loading/unloading bays are on the GF. There are 2 storeys of basement to provide 63 parking spaces.
	Table 3.2 - Please adopt the upper end values of provision range for the proposed provision of parking spaces and loading/unloading bays, and update the total numbers of parking provision in Section 3.3.3.	Please refer to **Appendix I** (**Justifications for Parking Provisions**) for further review.
	Section 4.1.6 - Traffic forecast by growth factor is considered inappropriate as Trunk Road T2 would be in place in the design year. Please consider to adopt traffic models. Otherwise, please demonstrate adoption of growth factor is on conservative side.	The opening of Trunk Road T2 in 2026 will reduce the through traffic in the area which helps to relieve the traffic situations of the junctions in the area. In this case when the growth factor is adopted, it is on conservative side for the traffic volume.
	Section 4.1.8 - Please explain why the ATC data of year 2023 has not been taken into account.	The ATC data of year 2023 was released in Nov. 2024. The new ATC data of year 2023 has been included and assessed in **Section 4.1.8** of **Appendix H**.
	Table 4.2 - Road section of Station No. 4651 is incorrect, please check again. Also, please add Station 3237 and Station 4074.	Noted, updated Road section of Station No. 4651 and added 3237 in **Table 4.2** of **Appendix H**. As for the ATC Station No. 4074, it is on Cha Kwo Ling Road, the annual traffic growth rate (2019-2023) is about 14%, reflecting the opening of Tseung Kwan O - Lam Tin Tunnel, but not the changes in local traffic volume. Therefore,

No.	Comments	Responses
		the ATC Station No. 4074 is not taken into the calculations of growth factor.
	Table 4.4 - Please seek PlanD's agreement on the planned / committed developments.	Noted.
	Section 5.1 - Please advise the proponent and commissioning years of the improvement works. Junction performance assessment of the modified signalised junctions at Lei Yue Mun Rd should be included. Also, please also include the proposed improvement works at J/O Cha Kwo Ling Road / Ko Chiu Road under the PWP Item No. B812CL Site Formation and Infrastructure Works for Public Housing Developments at Pik Wan Road, Yau Tong. *(See attached file: B812CL-GZ01.pdf)*  B812CL-GZ01.pdf	Noted and included the proposed improvement works in the assessment of junction D in **Section 5.1** of **Appendix H**.
	Section 5.1.3 & Drawing no. 5.1 - Please remove this improvement scheme at J/O Cha Kwo Ling Road / Yau Tong Road from the report as it is unlikely to be completed by the design year of 2035.	This improvement scheme is from A/K15/130 Section 16 application of the Yau Tong Bay Comprehensive Development. This improvement scheme is needed to cater all the traffic volume to be generated by Yau Tong Bay Comprehensive Development. The phasing of Yau Tong Bay Comprehensive Development is still unknown to public. As the traffic volume to be generated by Yau Tong Bay Comprehensive Development is included in our analysis, in order to better analysis the traffic situation in this area, we think this junction improvement scheme should be included in our analysis as well.
	Section 5.1.6 & Appendix B. The right-turning movements at J/O Wai Yip Street / Wai Fat Rd would be retained to avoid excessive traffic and public transport diversions. Please update the traffic assessment accordingly.	Noted and added in **Section 5.1.6** and **Appendix B** of **Appendix H**.
	Other - Assessment on public transport services to cater the proposed development should be included.	Noted and added in **Appendix H**.

No.	Comments	Responses
	Other - Please include pedestrian routes for further review.	Noted and added in **Appendix H**.
	Planning Statement	
	1. Section 3.4.2 and footnote [3] of Table 4.1 - In general, full-height building setback is not necessary from traffic viewpoints.	Noted and please be advised that **Section 3.4.2** of **Appendix B** has been updated.
	2. Section 3.4.2 - As there is no pedestrian assessment in the TIA report, the 3.5m footpath ODP setback areas and voluntary full-height building are not essential nor necessary from traffic perspectives. Please revise this section to incorporate this. In particular, please delete "improve pedestrian safety", "reducing congestion" and "safer" unless demonstrated by traffic assessments.	Noted and please be advised that Section 3.4.2 of **Appendix B** has been updated.
	3. Section 4.2.3 - Please delete "safety" unless demonstrated by traffic assessments.	Noted and relevant word has been deleted.
	4. Table 4-1 - The numbers of parking provision should be updated as per our comments in the TIA report.	Please be advised that the number of parking provision remain unchanged. Please refer to **Table 4-1** of **Appendix B** for details.

(Last Updated: 24 Apr 2025)

PUBLIC COMMENTS

Summary of Public Comments Nos. 1 – 17

No.	Summary of Comments	Responses
1.	**Comments on Environmental Impacts**	
	(a) The concrete batching plant adjacent to the Application Site will induce adverse environmental impacts, including air quality and noise impacts to the living quality of the Proposed Development.	Findings from our submitted EA and AQIA have confirmed that the Proposed Scheme is environmentally acceptable in technical terms and the Proposed Development shall not be subject to environmental impacts.
	(b) There are opposing views on the air ventilation and the building height profile of surrounding developments in coastal areas of Yau Tong.	Please note that findings from our submitted technical assessments, including but not limited to TIA, EA, DSIA, AQIA, AVA, VIA confirmed that the Proposed Scheme would not generate adverse impact to the surrounding environment.
2.	**Comments on Planning Considerations**	
	(a) The proposed development should develop together with the adjacent concrete batching plant.	Noted. The Applicants support the redevelopment of the adjacent by their landowners in align with the planning intention of the "R(E)" zone.
	(b) The proposed development should adopt a stepped building height profile.	Please be advised that the Proposed Scheme has adopted a stepped BH profile descending from 100mPD (fronting Tung Yuen Street) to 80mPD (fronting the waterfront). This helps to create an interesting skyline with the Application Site while not compromising the stepped BH profile planned for the YTIA.
	(c) There are concerns on the minor relaxation of building height restriction and the proposed development may obstruct the harbour view and overall skyline from the surrounding developments in the inland areas.	Findings in our submitted VIA confirmed that the Proposed Scheme is fully acceptable from visual aspect and fully compatible to the surrounding environment from the 6 public viewing points.
	(d) There are concerns on the proposed development partially exceeds the building height restriction of the nearby developments.	It should be emphasised that only the inland portion (fronting Tung Yuen Street) will be relaxed to 100mPD, which will be the same BH as the development across Tung Yuen Street. Therefore, the proposed minor relaxation of BH (inland portion only) at the Application Site will be coherent with the stepped BH profile intended in the YTIA and indeed creating a more dynamic BH profile within the Application Site.

Application for Planning Permission Under Section 16 of the Town Planning Ordinance (Cap.131) for Proposed Flat, Shop and Service and Eating Place with Minor Relaxation of Plot Ratio and Building Height Restrictions at Yau Tong Marine Lot No.70, No.4 Tung Yuen Street, Yau Tong, Kowloon
Responses to Comments

No.	Summary of Comments	Responses
3.	**Comments on Impacts to Surrounding Developments** (a) The stepped building profile will be affected as the building height of the inland portion of the proposed development is the same as the nearby buildings.	Please refer to response to public comment item no. 2(c).

1. INTRODUCTION

1.1.1 Pursuant to Section 16 of the Town Planning Ordinance (TPO), this Supporting Planning Statement is prepared and submitted to seek approval from Town Planning Board (TPB) for Proposed Flat, Shop and Services and Eating Place with Minor Relaxation of Plot Ratio (PR) and Building Height (BH) restrictions (Proposed Scheme) in the "Residential (Group E)" ("R(E)") zone at No. 4 Tung Yuen Street, Yau Tong, Kowloon (Application Site).

1.1.2 The Application Site, with an area of about 2,419m^2, is located at the northwestern fringe of the Yau Tong Industrial Area (YTIA) where the Yau Tong Mass Transit Railway (MTR) Station is at its northeast within a walkable distance. The Application Site is currently occupied by an existing Industrial Building (IB) (i.e. Wah Tong Godown).

1.1.3 The Application Site falls within "R(E)" zone on the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (the OZP). According to the Notes of the OZP, the planning intention for "R(E)" zone is for "*phasing out of existing industrial uses through redevelopment (or conversion) for residential use on application to the TPB*". As specified in the Schedule I of the "R(E)" zone in the Notes of the OZP, the proposed 'Flat', 'Shop and Services' and 'Eating Place' uses are all under Column 2 uses. Hence, a Section 16 Application is herewith submitted to seek approval from the TPB.

1.1.4 According to the OZP and Remark (1) for "R(E)" zone of the Notes, the Application Site is subject to a maximum domestic PR of 5.0 and maximum non-domestic PR of 1.0, or the PR of existing building(s); and a maximum BH of 80mPD, or the height of the existing building(s), whichever is the greater. In addition, Remark (6) for "R(E)" zone also indicated that minor relaxation of the PR/BH restrictions may be considered by the TPB based on the individual merits of a development or redevelopment proposal.

1.1.5 With a view to addressing the acute demand on territorial housing needs, the Government has paid the best of its endeavour to increase housing supply from public and private initiatives, as well as impose a minimum flat size requirement of 26m^2 (i.e. 280ft^2) for residential plots in recent land sale. In accordance with the Government's aspiration, the Applicants intend to realise the planning intention of the subject "R(E)" zone to phase out existing industrial uses through redevelopment for residential use in order to address the industrial/residential (I/R) interface problem. Despite that the Application Site does not fall within the planning briefs (PBs) for the Yau Tong Bay (YTB) and the YTIA "Comprehensive Development Area" ("CDA") zones, the Applicants have taken initiative to provide an additional waterfront promenade of not less than 15m-wide within the Application Site alongside with a 5m-wide public passageway connecting to the Tung Yuen Street, to link up with waterfront area of Lei Yue Mun, Yau Tong Bay and Kai Tak and form a continuous waterfront promenade in East Kowloon. The said waterfront promenade and 5m-wide public passageway from Tung Yuen Street will be opened on a 24/7 basis for public enjoyment. Besides, opportunities are also taken to provide retail facilities and pedestrian safety/comfort improvement measures to activate local streets and enhance walkability. Therefore, this Application also seeks minor relaxation of PR and

BH in support of the various initiatives mentioned above to serve territorial housing need and for an enhanced living environment.

1.1.6 The Proposed Scheme, comprising one 22 to 28-storey residential tower with BH of 80 to 100mPD above a 2-storey podium for 'Shop and Services' and 'Eating Place' uses plus two basement levels for car parking and loading/unloading (L/UL) spaces as well as a an additional waterfront promenade of not less than 15m-wide, seeks minor relaxation of domestic PR from 5.0 to 6.0 and BH restriction from 80mPD to 100mPD. With the fact that about one-fourth of the Application Site has been assigned for the additional waterfront promenade for public enjoyment on a 24/7 basis, as well as to accommodate the provision of more residential flats (minor relaxation of domestic PR1), minor relaxation of BH (i.e. from 80mPD to 100mPD) for one of the two proposed residential bands at the inland portion of the Application Site along Tung Yuen Street will be needed. Notwithstanding this, the Proposed Scheme with two BH bands (i.e. 80mPD to 100mPD) would be compatible with the BH profile across Tung Yuen Street and respect the overall stepped BH profile concept for the YTIA. Overall speaking, approval of the Proposed Scheme would set a desirable precedent to facilitate the transformation of the YTIA into a quality seaside residential living neighbourhood.

1.1.7 This Supporting Planning Statement is to provide TPB with relevant information including Landscape Master Plan (LMP) and Tree Treatment Proposal, Traffic Impact Assessment (TIA), Drainage and Sewerage Impact Assessment (DSIA), Environmental Assessment (EA), Air Ventilation Assessment (AVA), Air Quality Impact Assessment (AQIA) and Visual Impact Assessment (VIA), which ascertain the technical feasibility of the Proposed Scheme for this Section 16 Application. It is structured as below:

- **Section 2** provides a brief description of the Application Site and its surrounding context;
- **Section 3** presents the planning context of the Application Site;
- **Section 4** details the Proposed Scheme in relation to general planning and design principles, and key development parameters;
- **Section 5** illustrates the planning justifications in support of this Planning Application; and
- **Section 6** concludes the whole Supporting Planning Statement.

1.1.8 We sincerely seek favourable consideration from the TPB to grant approval to this well justified Section 16 Application.

Approved Application No. A/K15/130 (or Phase III of the whole YTB "CDA" development) for residential development with BH of 115mPD. Besides, there is a long-term planning intention from the Government for a waterfront promenade of not less than 15m-wide along YTB. The proposed waterfront promenade will connect Lei Yue Mun, Yau Tong to Cha Kwo Ling and further to the Kowloon East area.

2.4.3 To the **immediate south** is an existing CBP and a planned comprehensive residential development under Approved Application No. A/K15/122 (i.e. The Coast Line I & II under construction) (80 to 100mPD) within the waterfront portion of the "CDA(1)" site and the inland portion of the "CDA(1)" site across Tung Yuen Street. To the **further south**, the "CDA(2)" zone is currently occupied by Kwun Tong Wholesale Fish Market and Tung Yuen Street Cooked Food Market. To the **southeast** across Shung Wo Path are the planned comprehensive residential development (80mPD to 100mPD) under Approved Application No. A/K15/126 within the waterfront portion and inland portion of "CDA(3)" zone, and another planned comprehensive residential development (80mPD) under the Approved Application No. A/K15/121 within "CDA(4)" zone. To the **further southeast** bounded by Yan Yue Wai is Montego Bay (80mPD to 100mPD) within the "CDA(5)" zone. Similar to the YTB "CDA" zone, there is a long-term planning intention for a waterfront promenade of not less than 15m-wide along the YTIA as specified in the PB of the YTIA and designated in the OZP. The waterfront promenade will connect Lei Yue Mun to YTB and Cha Kwo Ling and further to the Kowloon East area. To the **further southeast** beyond Shung Shun Street are Sam Ka Tsuen Ferry Pier, Lei Yuen Mun Typhoon Shelter Breakwater Sitting Out Area and Sam Ka Tsuen Typhoon Shelter.

2.4.4 To the **immediate east** and **southeast** across Tung Yuen Street are "R(E)" zones and the inland portion of "CDA(1)", "CDA(3)" and "CDA(5)" zones with BH restriction of 100mPD. To the **further east** and **further southeast** bounded by Shung Yiu Street or across Yan Yue Wai are the other two "R(E)" zones with BH restrictions of 100mPD and 120mPD. Whilst there is an existing residential development with BH exceeding the restriction as stipulated in the OZP (i.e. Peninsula East (147mPD)), the BH bands of about 100mPD and 120mPD among the stepped BH profile descending from towards the waterfront can still be formed alongside with other planned comprehensive/residential developments to the east of Tung Yuen Street. Other than those existing/planned residential developments, some existing IBs also can be identified in these zones, including Gloria Weaving & Knitting Factory Limited to be developed as transitional housing via wholesale conversion[1].

2.4.5 To the **east** and **southeast** beyond Sze Shan Street are other "R(E)" zones with BH restrictions of 120mPD and 140mPD respectively. High-rise residential developments including Canaryside (140mPD), Ocean One (120mPD), The Spectacle (148mPD) and Maya (140mPD) can be found within the two "R(E)" zones to the east of Sze Shan Street, forming other two BH bands of about 120mPD and 140mPD among the stepped BH descending towards Yau Tong waterfront. Except those residential developments, a few Government, institution or community (G/IC) facilities including Sze Shan Street Cooked Food Market and Chung Pak Healthcare Services Complex can also be found. Sam Ka

[1] The transitional housing project 'Light Factory' for about 166 units and about 560 population at the Tung Yuen Street No.1 is estimated to be completed by Q3 2024 via wholesale conversion of the existing IB. For details, please refers to Housing Bureau's website (https://www.hb.gov.hk/eng/policy/housing/policy/transitionalhousing/details_98.html).

PR/BH restrictions may be considered by the TPB on application under Section 16 of the TPO. Each application will be considered on its individual merits".

3.1.6 Please refer to **Figures 3-1a** to **3-1c** and **Figures 3-2a** to **3-2b** for the respective Plan and extracts of the Notes and ES of the OZP.

3.2 Departmental Plan Footpath Requirement

3.2.1 According to the Draft Cha Kwo Ling, Yau Tong & Lei Yue Mun Outline Development Plan (ODP) No. D/K15C/1B-A, the boundary of the development along Tung Yuen Street is required to be set back for provision of 3.5m-wide footpath to improve pedestrian circulation of the YTIA area. Apart from respecting the ODP requirement, the Applicants are keen to explore further setback within the Application Site to provide a more comfortable pedestrian environment (with a total of 5m) with landscaping for the local community.

3.2.2 Please refer to **Figure 3-3** and **Figures 3-4a** and **3-4b** for the relevant extracts of the Plan and Explanatory Statement of the ODP.

3.3 Planning Briefs for the five "CDA" zones in the Yau Tong Industrial Area and the "CDA" zone in the Yau Tong Bay adjoining the Application Site

3.3.1 With full respect of the planning intentions of surrounding sites in the YTIA and the YTB in proximity to the Application Site, the two PBs for the sites zoned "CDA" in the YTIA and the YTB have been taken into the account during the planning and design process for the Proposed Scheme despite the fact that the Application Site fall outside these "CDA" zones.

3.3.2 The "CDA" sub-zones in the YTIA and the "CDA" zone in the YTB are both intended for comprehensive development/redevelopment of the area for residential and/or commercial uses with the provision of open space and other community and supporting facilities. These "CDA" zones are subject to maximum BHs ranging from 80mPD to 120mPD with a distinct gradation of height profile with descending BH towards the harbourfront.

3.3.3 Moreover, both PBs requires a public waterfront promenade of not less than 15m-wide along the Yau Tong waterfront, which is intended to create a continuous waterfront promenade connecting to the Kai Tak Development Area and Lei Yue Mun Village. Being also a waterfront site along the YTIA, the Applicants are intended to provide a voluntary waterfront promenade open for public enjoyment on a 24/7 basis, with a width

of not less than 15m-wide within the Application Site to connect to the wider waterfront framework for Kowloon East.

3.4 Pedestrian Comfort along Tung Yuen Street

3.4.1 Currently, the narrow street frontage with limited landscaping resources along Tung Yuen Street has hinder pedestrian comfort and walking experience.

3.4.2 With the intention to enhance pedestrian environment along Tung Yuen Street, in addition to the footpath of 3.5m-wide required under the ODP, this additional space will not only provide more room for pedestrians, but also provide opportunities for street furniture, greenery, and amenities to create a more comfortable, and aesthetically pleasing environment for pedestrians along Tung Yuen Street.

3.5 Recent Government Initiative to Improve Living Spaces in Private Residential Developments

3.5.1 On 24 February 2022, the Development Bureau (DEVB) announced that a minimum flat size requirement, i.e. saleable area of each residential unit should be less than 26m^2 (or about 280ft^2), would be applied to all to all Government land sale, railway property development projects, projects of the Urban Renewal Authority as well as lease modification/land exchange applications for other private residential development projects. The minimum flat size requirement would also apply to all new applications for the relevant private treaty grants, lease modifications or land exchanges received by the Lands Department from 25 February 2022 onwards. To respond the recent Government initiative, the Proposed Scheme will provide residential flats with a minimum flat size of not less than 26m^2 to improve the living space.

3.6 Government's Initiative to Allow Minor Relaxation of Maximum Domestic PR by 20%

3.6.1 Since the 2014 Policy Address, the Government has indicated that "*except for the north of Hong Kong Island and Kowloon Peninsula which are more densely populated, the maximum domestic PRs that can be allowed for housing sites located in the other Density Zones of the Main Urban Areas and New Towns would be raised generally by about 20% as appropriate. In accordance with the established practice, the Government will duly consider factors such as traffic and infrastructural capacity, local characteristics, existing development intensity and various possible impacts of the Proposed Scheme in the area concerned*" [2]. With a view to optimise the precious land resources for increasing housing supply at the Application Site where situates at Density Zone 1 in the Main Urban Area well-served by existing public transport and infrastructure, the Proposed Scheme would take into account the consideration factors listed above for examining the feasibility of applying for minor relaxation of domestic PR at the Application Site.

[2] Paragraph 1.1.3 of Chapter 2, Hong Kong Planning Standards and Guidelines

covered public passageway adjoining retail shops on both sides to enhance vibrancy and create a more welcoming environment for all visitors, connecting to Tung Yuen Street. The additional waterfront promenade, owned by the Applicants, will be open for public enjoyment on a 24/7 basis and the Applicants would take up the responsibility for its construction, maintenance and management, ensuring it is a well-maintained and inviting space for all visitors. Upon its completion, it will form part of the continuous waterfront network for Kowloon East, enhancing the connectivity of the area. The landscape design will also be coherent with the adjoining waterfront promenade for coherent walking experience along the harbourfront.

4.2.3 **Enhancing Pedestrian Connectivity, Safety and Comfort in addition to the Planned Setback –** To fully respect the ODP requirements, a full-height setback of about 5m-wide from Tung Yuen Street, of which including a footpath of 3.5m-wide under ODP requirement and an additional setback of 1.5m-wide within the Application Site, is incorporated in the Proposed Scheme to improve pedestrian circulation in the YTIA. Tree plantings will also be provided to further improve pedestrian comfort and walking experience.

4.2.4 **Respecting the Harbour Planning Principles and Guidelines and Local Expectations –** In view of the harbourfront location of the Application Site, the planning and design of the Proposed Scheme has fully respected the Vision and Mission Statements as well as the Harbour Planning Principles and Guidelines promulgated by the former Harbourfront Enhancement Committee. Besides, the Proposed Scheme with a voluntary waterfront promenade for public enjoyment would also respect the Harbour Planning Guidelines and relevant Urban Design Guidelines in Chapter 11 of HKPSG to "*bring people to the harbour and the harbour to the people*".

4.2.5 **Providing Suitable Amount of Non-domestic Floor Space for Retail Uses to Serve Surrounding Residents –** Respecting the planning intention of "R(E)" zone, the Proposed Scheme would obtain PR of 0.9 for non-domestic uses, in the form of 'Shop and Services' and 'Eating Place' uses at the lower floors of the Proposed Scheme. These retail uses along Tung Yuen Street (one of the main streets in YTIA) and the waterfront promenade would create active frontages for a more vibrant street life and serve local essential needs.

4.2.6 **Respecting the Distinct Gradation of Height Profile with Descending Building Height Towards the Harbourfront –** Despite the proposed residential band in the inland portion is with a minor relaxed BH of 100mPD, the residential band fronting the Victoria Harbour would be kept at 80mPD, which is fully in line with the BH restriction on the "R(E)" zone along the waterfront. Besides, the relaxed BH for the residential band at inland portion will not exceed the BH restriction (i.e.100mPD) across Tung Yuen Street. The stepped BH profile for the Proposed Scheme will maintain the distinct gradation of height profile with descending BH towards the harbourfront, while at the same time accommodate additional flat supply and the additional waterfront promenade, resulting in a win-win scenario.

4.2.7 Please refer to the architectural layout of the Proposed Scheme in **Appendix A**, as well as the summary of planning and design merits of the Proposed Scheme in **Appendix B**.

4.3 Key Development Parameters

4.3.1 The key development parameters of the Proposed Scheme as compared with the OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) are summarised in **Table 4-1** below.

Table 4-1 Key Development Parameters of the Proposed Scheme

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Site Area (m^2)	About 2,419m^2	About 2,419m^2	-
Proposed Uses	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	Column 2 uses (S16 Application required)
Plot Ratio (PR)			
- Total PR	Not more than 6	Not more than 6.9 [1]	+ 15%
- Domestic PR	Not more than 5	Not more than 6	+ 20%
- Non-domestic PR	Not more than 1	Not more than 0.9 [2]	-
Gross Floor Area (GFA) (m^2) [1]			
- Total GFA (excluding Bonus GFA to be claimed)	Not more than 14,514m^2	Not more than 16,691.1m^2	+ 15%
- Domestic GFA (excluding Bonus GFA to be claimed)	Not more than 12,095m^2	Not more than 14,514m^2	+ 20%
- Non-domestic GFA	Not more than 2,419m^2	Not more than 2,177.1m^2 [2]	-
Bonus Plot Ratio (Bonus GFA)	Provision under Remark (5) of the Notes of "R(E)" zone	Not more than 0.081 [3] (to be included in Domestic PR) (Not more than 197.93m^2)	Provision under Remark (5) of the Notes of "R(E)" zone
Building Height (BH) (mPD)	Not more than 80mPD	80mPD to 100mPD (for inland portion only)	+25% (for inland portion only)
Floor-to-Floor Height	N/A	Basement: about 4.5m Retail: about 4.5-5.5m Clubhouse: about 3.9m Transfer Plate: about 1.85m	-

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
		Typical Residential: about 3.15m	
No. of Storeys	N/A	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark	-
Site Coverage (SC) - Below 15m - Above 15m	 N/A N/A	 Not more than 70% Not more than 33.3%	 -
No. of Residential Block	N/A	1	-
No. of Flats	N/A	About 342	-
Average Flat Size	N/A	About 43m^2	-
Anticipated Population	N/A	About 855 [4]	-
Local Open Space	N/A	Total area of not less than 855m^2, which includes a voluntary waterfront promenade of not less than 608m^2 for public access and enjoyment	-
Greenery Provision	N/A	Not less than 20% [5]	-
Car Parking Spaces Private Car Parking Spaces - Residential - Visitor - Shop and Services/ Eating Place Motorcycle Parking Spaces	 N/A N/A N/A N/A N/A	 63 (incl. 2 accessible car parking spaces) 50 5 8 4	 - - -
Loading/ Unloading (L/UL) Bays	N/A	3 (1 Light Goods Vehicle Space and 2 Heavy Goods Vehicle Spaces)	-
Completion Year	N/A	2032	-

Notes:

[1] Proposed clubhouse GFA (5% of total domestic GFA) is exempted from GFA calculation.

[2] The area of the covered public passageway (about 223m^2) for public access from Tung Yuen Street to the waterfront promenade through our proposed building at ground level is not included in the non-domestic GFA of 2,177.1m^2. Considering the nature of serving the public and users of the proposed development with reference to PNAP APP-108, the 223m^2 is proposed as an exempted GFA.

[3] On top of the PR/GFA set out above, a bonus PR of not more than 0.081 (rounded down, equivalent to a GFA of not more than 197.93m^2) and SC of 0.257% will be claimed for the 39.586m^2 of ODP-required setback areas. While the bonus PR and SC will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2) at detailed design

stage, nevertheless, the bonus PR and SC have been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.

[4] A person per flat (PPF) ratio of 2.5 is adopted with reference to the average domestic household size of the subject Yau Tong West District Council Constituency Area as reported in the 2021 Population Census results published by the Census and Statistics Department.

[5] The total greenery provision is located at Primary Zone, i.e. 15m vertical zone, of the Application Site which accounts for not less than 20% of SC of greenery.

4.4 Building Design Concept

Stepped Building Height Design that is Compatible with the Building Height Profile of Surroundings

4.4.1 With a view that about one-fourth of the site area (i.e. about 608m^2) has been designated for the waterfront promenade open for public enjoyment on a 24/7 basis, there are limited room within the Application Site to accommodate the optimised residential floor space and retail uses within the BH restriction of 80mPD stipulated on the "R(E)" zone.

4.4.2 To respect the stepped BH profile in the Yau Tong area, a stepped BH design with two BH bands descending towards the harbourfront are proposed for the Proposed Scheme. In the current architectural design, most of the Proposed Scheme still complies with the BH restriction of 80mPD while only one residential band in the inland portion of the Application Site is with BH of 100mPD, which is not higher than the BH restriction of adjacent developments across Tung Yuen Street, ensuring compatibility.

Compliance with Relevant Provisions of Sustainable Building Design Guidelines (SBDG)

4.4.3 The building design of the Proposed Scheme complies the SBDG as stipulated in the Practice Note for Authorised Persons, Registered Structural Engineers and Registered Geotechnical Engineers (APP-152) issued by the Buildings Department.

Building Separation

4.4.4 The Application Site is less than 20,000m^2 in area with continuous projected façade of less than 60m. Therefore, the requirement on building separation is not applicable.

Building Setback

4.4.5 Since Tung Yuen Street is wider than 15m, no further setback from the street is required under the SBDG requirement. Notwithstanding this, a full-height setback of 5m-wide is proposed from Tung Yuen Street road kerb for provision of the 3.5m-wide footpath under

ODP requirement and a further full-height setback of 1.5m-wide abutting the building façade. Tree planting is also proposed at the northwestern end of the proposed setback.

Greenery

4.4.6 Since the area of the Application Site is more than 1,000m^2 and less than 20,000m^2, the minimum site coverage of greenery of 20% of the site area, i.e. not less than 484m^2 to be provided in accordance to PNAP APP-152.

4.5 Landscape Design

Design Objective

4.5.1 The primary landscape objectives of the Proposed Scheme are:

To generate suitable massing, composition and arrangement of development that initiates renovation process with the surrounding context;

- To integrate the Proposed Development with the waterfront and waterfront promenade;
- To provide linkage and connections from Tung Yuen Street to the waterfront promenade;
- To provide a quality and sustainable living environment for future occupants; and
- To maximise greening opportunities and create a high-quality environment for the residents and the public.

Landscape Design Concept

4.5.2 The landscape framework of the Proposed Scheme is summarised as follow:

- **Waterfront Promenade of not less than 15m-wide** – The design of the waterfront promenade is intended to encourage social interaction and harbour-viewing, as well as linking up Tung Yuen Street to the waterfront via a Public Passage on G/F level. The design of the waterfront promenade will make reference to the "CDA(1)" zone waterfront promenade for compatibility in a broader context.
- **Design of the Waterfront Promenade within the Application Site** – Geometric pattern will be adopted to generate a unique configuration and arrangement of hard and soft landscape. Colour paving and patterns will be used to delineate the waterfront promenade and adjacent Proposed Development to create an inviting environment upon which pedestrians will feel safe and comfortable. Seating benches, wooden deck and ornamental planting will be provided for public enjoyment on a 24/7 basis.
- **Streetscape along the Tung Yuen Street** – Paving pattern facing Tung Yuen Street will be matching with the Footpath outside the Lot to create a smooth transition. A canopy tree facing Tung Yuen Steet will be provided at the entrance ramp to basement carpark as streetscape enhancement.

5. PLANNING JUSTIFICATIONS

5.1 Realising the Planning Intention of the "R(E)" zone with Provision of an Additional Waterfront Promenade for Public Enjoyment

5.1.1 While the Application Site was rezoned from "Industrial" to "R(E)" zone in 1998, it is currently occupied by an IB for godown use. No previous application has been submitted since then. Meanwhile, the YTIA has undergone a rapid transformation from an industrial area to a residential area in the past two decades, with numerous planned and completed comprehensive/residential developments adjoining the Application Site.

5.1.2 With the proactive response from the Applicants to optimise the valuable land resources at the Application Site for a seaside residential development with retail facilities and a additional waterfront promenade, the Proposed Scheme with minor relaxation of PR and BH fully aligns with the planning intention of "R(E)" as set out in the OZP. While the Proposed Scheme will phase out the existing industrial uses at the Application Site, it will also support for the ongoing transformation of the YTIA into a liveable residential area. Together with other approved applications with minor relaxation of PR in the surroundings as mentioned in **Section 2.4**, the Proposed Scheme can further provide additional flat units in the YTIA. Besides, an additional waterfront promenade open for public enjoyment on a 24/7 basis, which is not required within the "R(E)" zone, is proposed within the Application Site to achieve wider public benefit. The resultant minor relaxation of BH is only for one residential band in the inland portion of the Application Site, which will not jeopardise the overall stepped BH profile concept in the YTIA area.

5.1.3 In summary, the Proposed Scheme with minor relaxation of PR and BH restrictions, which is fully in line with the planning intention of the "R(E)" zone, is to facilitate the achievement of greater planning benefits and provide further effort to enhance liveability and quality of residential neighbourhood in view of the latest needs at territorial and local level.

5.2 Echoing with the Government's Prevailing Policy to Secure Minimum Flat Sizes and Optimise Flat Supply at Urban Centre

5.2.1 To echo with the minimum flat size requirement in residential developments announced by DEVB in February 2022 as mentioned in **Section 3.5**, the Proposed Scheme (with average flat size of about 43m^2) would secure all residential flats to be equal or not less than 26m^2 to realise the policy intention of enhancing living space and responding to the society's aspirations.

5.2.2 Considering the recent policy initiative, the Applicants seek to optimise number of flats for the enhancements in both quality (larger living space) and quantity (more flat provision) for the housing supply at the urban centre. The Proposed Scheme with minor relaxation of domestic PR from 5.0 to 6.0 has complied with all the consideration factors listed in Chapter 2 of the HKPSG, including traffic and infrastructural capacity, local characteristics, existing development intensity and various possible impacts of the proposed development in the area concerned, when seeking a minor relaxation of domestic

PR from 5 to 6 in this Planning Application. The Proposed Scheme will be able to provide an additional about 60 units, with a total of 342 flats with a decent living space by 2032.

5.3 Responding to Local Needs by Reserving Suitable Retail Floor Space for a Vibrant Living Environment

5.3.1 With respect to the non-domestic PR of 1.0 under the "R(E)", the Proposed Scheme would obtain PR of 0.9 for non-domestic floor space on G/F and L1/F serving as retail uses, including 'Shop and Services' and 'Eating Place' along Tung Yuen Street (one of the main streets in YTIA) and the waterfront promenade to serve the local neighbourhood.

5.3.2 Along the Tung Yuen Street frontage, a full-height setback of about 5m-wide is proposed for provision of a 3.5m-wide footpath under ODP requirement and a full-height setback of about 1.5m-wide adjoining the planned footpath. It is anticipated that the provision of retail shop frontage at street level with widened footpath and tree plantings along Tung Yuen Street would not only enhance the current street environment, but also activate the street life and support the need of local neighbourhood.

5.3.3 On the other hand, 5m-wide covered public passageway adjoining retail shops on both sides along the waterfront promenade would contribute to creating an attractive and welcoming waterfront environment for public enjoyment on a 24/7 basis. The retail shop frontage with a panoramic view towards the Victoria Harbour would further promote the vibrancy of waterfront activities.

5.4 Fostering a Connected Waterfront Experience in Kowloon East

5.4.1 To celebrate the iconic Victoria Harbour with the public, the Applicants have taken initiative to provide a voluntary waterfront promenade, which will be owned by the Applicants, of not less than 15m-wide along the western fringe of the Application Site for public access and enjoyment. The Applicants are committed to take up the construction as well as the management and maintenance responsibility of the waterfront promenade within the Application Site. Taken into consideration of the approved residential development in the adjacent "CDA(1)" zone (i.e. The Coast Line I under construction), the Harbour Planning Principles & Guidelines and local expectations, a mixture of soft and hard landscapes will be adopted to create a pleasant waterfront promenade for various recreation activities.

5.4.2 Besides, a 5m-wide public passageway is proposed along the northern boundary of the Application Site to connect the footpath along Tung Yuen Street to the waterfront promenade. Future users, including residents of the Proposed Scheme as well as visitors from other parts of Hong Kong, can reach the waterfront of YTIA directly from Tung Yuen Steet (one of the main streets in the YTIA) via the proposed public passageway on a 24/7 basis.

5.4.3 While a total area of 608m^2 will be used for provision of the open-air waterfront promenade for public enjoyment on a 24/7 basis, only about 3/4 of the Application Site is remained for the Proposed Scheme. As a result, the Applicants seek minor relaxation of

BH from 80mPD to 100mPD (for one residential band in the inland portion only) to accommodate the domestic and non-domestic PR put forward in the Proposed Scheme.

5.4.4 With the "incremental approach" adopted by the Government in recent years to expedite the connection of different parts of the waterfront in Hong Kong including Kowloon East, approval of the Proposed Scheme will set a desirable precedent encouraging private-sector's contribution to collaboratively realise public aspiration for a connected waterfront which is proven to be viable and technically feasible.

5.5 Introducing Multiple Planning and Design Merits to Enhance the Pedestrian Connectivity and Comfort

5.5.1 The Proposed Scheme would introduce multiple planning and design merits to benefit the pedestrian environment in terms of connectivity, comfort and safety.

5.5.2 To improve pedestrian circulation, a full-height setback of about 5m-wide from Tung Yuen Street, of which including for the 3.5m-wide footpath under ODP requirement and the further setback of 1.5m-wide, is proposed to improve pedestrian connectivity and provide a buffer zone between pedestrians and vehicular traffic. A new tree is proposed at northwestern part of the Application Site to improve the pedestrian comfort and walking experience on Tung Yuen Street. For details, please refers to the Illustrations in **Appendix B**.

5.5.3 Besides, along adjoining retail shops on both sides to enhance vibrancy and create a more welcoming environment for all visitors. Active retail shop frontages will be provided under a 5m-wide covered public passageway along the waterfront promenade. The shop frontages not only improve the pedestrian interest and street vibrancy of the area, but also provide the needed retail services to the residents at the Application Site and the adjacent area. For details, please refers to the Illustrations in **Appendix B**.

5.6 Respecting the Harbour Vision Statement and the Harbour Planning Principles

5.6.1 Full respect had also been made to the Harbour Vision Statement and the Harbour Planning Principles promulgated by the Harbourfront Commission, which aims to "*provide a quality harbourfront through innovative building design and a variety of recreational activities, to enhance the waterfront as a unique attractive, to enhance the scenic views and maintain visual access to the harbourfront, and to bring the people to the Harbour and the Harbour to the people*" etc.

5.6.2 The Proposed Scheme includes the provision of an additional waterfront promenade of not less than 15m-wide for public enjoyment on a 24/7 basis, to expediate the provision of a vibrant and connected waterfront promenade to the wider area and to improve the physical linkage and connectivity with the rest of Kowloon East.

5.6.3 To bring people to the Harbour and the Harbour to the people, the Proposed Scheme introduces a 5m-wide public passageway within the Application Site that improves the at-grade pedestrian connectivity to the YTIA waterfront. Together with the pedestrian improvement measure as mentioned in **Section 5.5**, the new pedestrian linkage encourages the public to visit and connect with the Victoria Harbour in a convenient manner and serve

as an additional visual access to the waterfront from Tung Yuen Street. The Applicants are also committed to take up the construction, management and maintenance responsibility of the waterfront promenade and the associated public passageway within the Application Site.

5.6.4 The Proposed Scheme incorporates sensitive design and disposition of residential bands to avoid a monotonous harbourfront image. The stepped BH design with the proposed waterfront promenade would also provide a more interesting skyline along the YTIA waterfront area. (Please refer to **Appendix B** on the illustration on the additional waterfront promenade). To reduce the building bulk of the development, car parking spaces are proposed at two basement levels to avoid bulky podium structure along the waterfront. With the Proposed Scheme respecting the overall stepped BH profile of the YTIA, the Application Site will create a more distinctive harbourfront image at the Eastern Gateway of Hong Kong.

5.7 Respecting the Distinct Gradation of Building Height Profile Towards the Harbourfront and Ensuring Compatibility with the Surrounding Context

5.7.1 Based on the discussion above, minor relaxation of BH is considered necessary to accommodate the additional flat units and provide the voluntary waterfront promenade for public enjoyment on a 24/7 basis. Yet, the Applicants have paid due consideration on optimising the architectural design to ensure the Proposed Scheme is compatible with the surrounding context.

5.7.2 To create an interesting skyline at the Application Site, a stepped BH profile with two bands of BH for one residential bulk is proposed for the Proposed Scheme. A stepped BH profile, consisting of one residential band with 100mPD at inland portion along Tung Yuen Street and one residential band with 80mPD towards the Victoria Harbour, is proposed, resulting in a more interesting skyline in the YTIA. Efforts are also in place to minimise overall BH of the Proposed Scheme. For instance, all car parking spaces are proposed at the two basements levels and reasonable typical floor-to-floor height has been adopted (i.e. an average of about 3.15m for residential floors) without jeopardising quality of living for future residents. The Proposed Scheme with BHs of 80 to 100mPD will be in line with the BH restriction of 100mPD along other side of Tung Yuen Street, and hence the overall pattern of stepped BH at YTIA will be maintained.

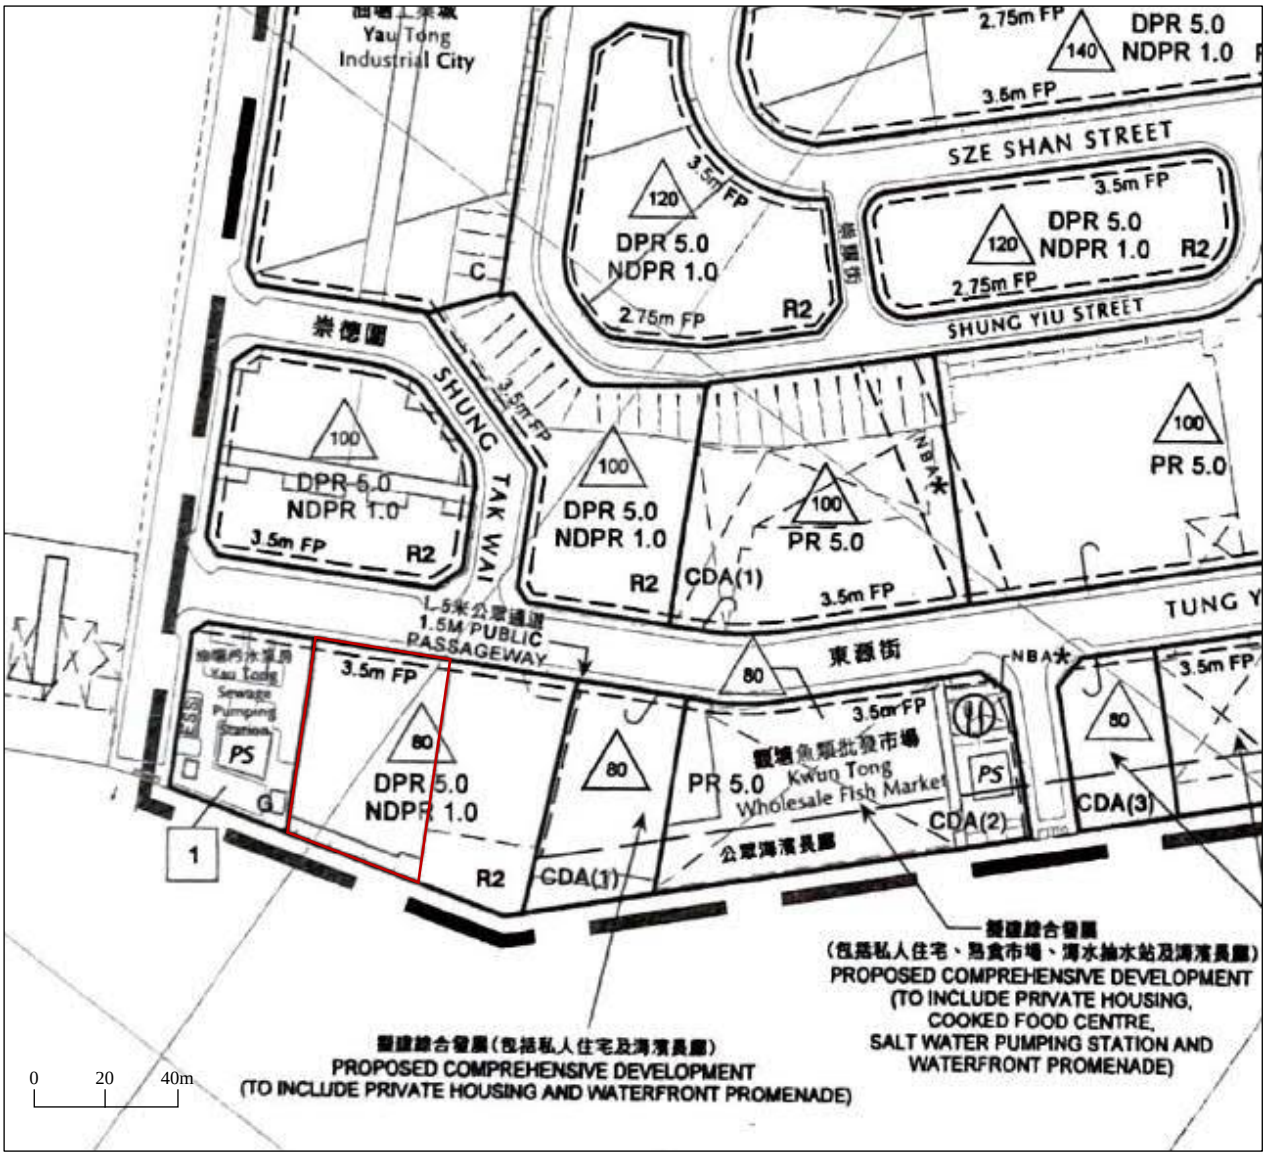
5.7.3 Moreover, a Visual Impact Assessment (**Appendix I**) covering 6 viewing points, including a strategic viewing point at Quarry Bay Park, concluded that the Proposed Scheme is fully compatible with the context of YTIA and the stepped BH profile of YTIA will not be contravened with the minor relaxation of the BH under this Planning Application.

5.8 Resulting in NO Adverse Impact to the Surroundings

5.8.1 Various technical assessments including Landscape Master Plan (LMP) and Tree Treatment Proposal (**Appendix C**), Traffic Impact Assessment (TIA) (**Appendix D**), Environmental Assessment (EA) (**Appendix E**), Drainage and Sewerage Impact Assessment (DSIA) (**Appendix F**), Air Quality Impact Assessment (AQIA) (**Appendix G**), Air Ventilation Assessment (AVA) (**Appendix H**) and Visual Impact Assessment

(VIA) (**Appendix I**), have been conducted to assess the technical feasibility of the Proposed Scheme.

5.8.2 Findings of the technical assessment have confirmed that the Proposed Scheme is technically feasible and will not generate adverse impacts to the surrounding area.



5.9 Establishing a Desirable Precedent of Residential Development with Quality Waterfront Promenade Aspired to Enhance Living Quality in Yau Tong

5.9.1 This Planning Application is seeking for a minor relaxation of domestic PR restriction from 5.0 to 6.0 and BH restriction from 80mPD to 100mPD for a residential development with a quality waterfront promenade, retail facilities with pedestrian improvement measures along the waterfront of YTIA.

5.9.2 The Proposed Scheme is in line with the planning intention of the "R(E)" zone, echoes with the Government's prevailing policy to secure minimum flat sizes and increase flat supply, as well as responds to local needs by reserving suitable retail floor space for a vibrant living environment. To realise the minor relaxation of PR for additional about 60 flat units at the urban centre, about one-fourth of the site area (i.e. about 608m^2) has been designated for a voluntary waterfront promenade of 15m-wide for public enjoyment on a 24/7 basis, as well as various measures to enhance pedestrian connectivity/comfort, a minor relaxation of BH from 80mPD to 100mPD is therefore required. The minor relaxation of BH is confirmed creating no adverse visual impact to the surroundings and the overall stepped BH profile of YTIA will be respected. Overall speaking, the Proposed Scheme put forward in this Planning Application is confirmed technically feasible and will not generate unacceptable impacts to the surrounding areas.

5.9.3 Therefore, approval of the Proposed Scheme will set a desirable precedent for establishing a seaside residential development aspired to enhance living quality in YTIA. Meanwhile, the approval of the minor relaxation of domestic PR and BH restrictions would also mobilise private initiatives in contributing additional housing supply, creating a continuous waterfront environment in Kowloon East, and fully optimising the use of valuable land resources at an urban centre location, resulting in a win-win situation to society.

ARUP	*Date* April 2025	*Source*	Draft Cha Kwo Ling, Yau Tong & Lei Yue Mun Outline Development Plan (No. D/K15C/1B-A)

5.3.3 "Residential – Zone 2" ("R2"): Total Area 19.01 ha

Land under this zoning accounts for 6.98% of total development area. This zone covers two major comprehensive private residential developments, namely, Laguna City and Sceneway Garden as well as five sites located within Yau Tong Industrial Area.

Laguna City consists of three sites (Sites A, B and C) located on the both sides of Cha Kwo Ling Road with a total area of 10.92ha. Site A of 6.39 ha containing Phases I and IV of the development is located on the western side of Cha Kwo Ling Road whereas Site B of 2.45 ha containing Phase II is located on the eastern side of Cha Kwo Ling Road. Sites A and B together provide 6,568 flats with a total domestic GFA of 440,000m^2 and commercial GFA of 15,000m^2. Site C containing Phase III lies to the east of the Cha Kwo Ling Road with an area of 2.08 ha. It comprises some 100,900m^2 domestic and 4,570m^2 non-domestic GFA with a total of 1,504 flats. As part of the development, various GIC facilities including an indoor recreation centre, swimming pools, kindergarten and children and youth centre are provided within these development.

Sceneway Garden is a comprehensive commercial/residential development situated above Lam Tin MTR Station. It falls partly within Planning Areas 14 and 15. There are nine domestic blocks with a total domestic GFA of 146,408m^2 and non-domestic GFA of 23,605m^2 within Planning Area 15. Another eight domestic blocks falling within Planning Area 14 are built on top of the public transport interchange on the other side of Lei Yue Mun Road. A landscaped deck is built over the road linking the development together.

To ensure the development intensities of Laguna City and Sceneway Garden are under statutory control, maximum domestic GFA are imposed under the Notes of the OZP.

The five sites in Yau Tong Industrial Area are also zoned "R2" to encourage redevelopment of the existing obsolete industrial buildings into residential development. To ensure the proposed residential redevelopment within these five sites will be environmentally acceptable, the developers are required to submit proposed development scheme to the Town Planning Board for consideration. Developments within these five sites are subject to specific control on plot ratios, i.e. a maximum domestic plot ratio of 5 and a maximum non-domestic plot ratio of 1, so as to restrain traffic growth which will otherwise overload the existing and planned transport network.

5.4 "Village Type Development" ("V") - Total Area 11.57 ha

Land under this zoning accounts for 4.25% of total development area. This zone covers the existing Lei Yue Mun Villages which comprise Ma Wan Village, Che Teng Village, Sam Ka Tsuen, Ma San Tsuen and Ling Nam San Tsuen. The area is characterised by a mixture of one to two-storey village houses and squatter settlement. A number of seafood restaurants which has long been a tourist attraction are densely packed along the waterfront and along the main path in the villages. The traditional

ARUP	Date: April 2025	Source	Extract from Explanatory Statement of Draft Cha Kwo Ling, Yau Tong & Lei Yue Mun Outline Development Plan (No. D/K15C/1B-A)

constructed on Lei Yue Mun Road passing the Roundabout with Kai Tin Road and Approach Roads to EHC. The junction of Lei Yue Mun Road and Yau Tong Road is also proposed to be widened.

6.3 A number of footbridges have been provided across Cha Kwo Ling Road and Pik Wan Road to facilitate access to the major shopping centres, public transport interchanges, MTR Stations and other community facilities in the area. Two footbridge connections have been reserved to allow future provision of footbridges to connect the MTR Yau Tong Station with the proposed "CDA" development at Yau Tong Bay.

6.4 To cater for the demand arising from the redevelopment of Yau Tong Industrial Area for residential and commercial purposes, the boundaries of the developments along Ko Fai Road, Shung Tak Wai, Sze Shan Street, Cha Kwo Ling Road, Cho Yuen Street and Shung Shun Street are required to be set back to allow for provision of 3.5m wide footpaths to improve pedestrian circulation. Likewise, the development boundaries along the unnamed road between Sze Shan Street and Cho Yuen Street are also required to be set back to for introduction of 2.75m wide footpaths along the road.

Mass Transit Railway

6.5 The existing MTR Kwun Tong Line with a station at Lam Tin underneath Sceneway Garden runs through the central part of the Area and terminates at MTR Quarry Bay Station on Hong Kong Island.

6.6 The construction works for the MTR TKE, which connects Tseung Kwan O New Town with Kwun Tong District and Hong Kong Island, is now in progress for completion by 2002. As an integral part of the TKE project, the MTR Kwun Tong Line will be extended to MTR Yau Tong and Tiu Keng Leng Stations. The proposed MTR Yau Tong Station situated at the junction of Cha Kwo Ling Road and the existing Yau Tong Road is designed with interchange facilities to allow passengers interchange between the Kwun Tong Line and the TKE.

Public Transport

6.7 Apart from the MTR, the Area is well served by various modes of public transport including bus and public light bus. A public transport interchange is located above the MTR Lam Tin Station and a public transport terminus is provided at Yau Hong Street beside the Sai Tso Wan Neighbourhood Community Centre. Public transport terminus are to be provided in Phase 3 of the EHC Housing Site, Yau Tong Estate Redevelopment and Yau Tong Bay "CDA" Development.

Car Parking

6.8 There are two existing multi-storey car parks within the Area. They are located in Tak Tin Estate and Hong Park Court. Three sites, one to the west of the Yau Tong Ventilation Building, one at King Yip Street and one at Shung Shun Street are reserved for car/lorry park purposes. Besides, a public car park is also proposed to be incorporated into a commercial development on Cha Kwo Ling Road near its junction with Lei Yue Mun Road.

S16 Application for Proposed Flat, Shop and Services and Eating Place with Minor Relaxation of Plot Ratio and Building Height Restrictions in "Residential (Group E)" Zone at No. 4 Tung Yuen Street, Yau Tong, Kowloon

LANDSCAPE MASTER PLAN

March 2025

Landscape Government Submission Consultant
Signed by:

Axxa Group Limited

Mr. Jason TEO, Registered Landscape Architect (R101)

axxa group

3.0 LANDSCAPE OBJECTIVES

3.1 The primary landscape objectives are:

3.1.1 To generate suitable massing, composition and arrangement of development that initiates renovation process with the surrounding context;

3.1.2 To integrate the Proposed Development with the waterfront and waterfront promenade;

3.1.3 To provide linkage and connections from Tung Yuen Street to the waterfront promenade;

3.1.4 To provide a quality and sustainable living environment for future occupants;

3.1.5 To maximize greening opportunities and create a high-quality environment for the residents and the public.

4.0 LANDSCAPE PROPOSAL

This section provides a broad description of the design, function and amenity provisions for the landscape components. Refer to **Appendix B** and **C** for details.

4.1 Proposed Development

4.1.1 The Proposed Development consists of one 22-28-storeys (for inland portion only) residential tower excluding 2 storeys of basement Car Park, with building height not more than 100mPD.

4.2 EVA/ Access Road

4.2.1 The vehicular run-in and run-out of the Proposed Development will be via Tung Yuen Street and ramp down to L/UL and basement Car Park. Refer to **Appendix D** for details.

4.3 General Landscape Area

4.3.1 The landscape framework is summarised as follows:

(A) Voluntary Waterfront Promenade (VWP)

- The design of the Voluntary Waterfront Promenade is intended to encourage social interaction and harbour-viewing, as well as linking up Tung Yuen Street to the waterfront via a Public Passage on G/F level. The design of the Voluntary Waterfront Promenade will make reference to the "CDA(1)" zone waterfront promenade for compatibility in a broader context.
- Geometric pattern will be adopted to generate a unique configuration and arrangement of hard and soft landscape. Colour paving and patterns will be used to delineate the waterfront promenade and adjacent Proposed Development to create an inviting environment upon which pedestrians will feel safe and comfortable.
- Seating benches, wooden deck and ornamental planting will be provided for public enjoyment.

(B) Open Space within Proposed Development

- Podium Landscape – The open space within Proposed Development is featured by a dynamic landscape area at podium level to create a relaxed and informal outdoor space for enjoyment of future users. Viewing deck, swimming pool, outdoor lounge area will be provided for relaxation and leisure. The podium landscape is further enhanced by planting a variety of large and flowering shrubs.

- Amenity planting – A combination of trees and shrub planting will be provided throughout the development. The planting incorporates a varied planting palette to yield changing variety and seasonal interest.
- Peripheral Planting along the northwest boundary – In order to minimize the visual impact to the surrounding, tall hedge buffer planting will be added along the northern boundary to soften the building façade and enhance overall landscape quality. These tall hedges provide a strong visual mitigation buffer to the adjacent sewage and pumping station.

4.4 Streetscape

4.4.1 Paving pattern facing Tung Yuen Street will be matching with the Footpath outside the Lot to create a smooth transition. A canopy tree facing Tung Yuen Steet will be provided at the entrance ramp to basement Car Park as streetscape enhancement.

5.0 HARD LANDSCAPE (PAVING MATERIALS/ FINISHES)

This section provides a description of the hardscape design together with general information on hardscape related aspects of the design which relate to lighting, levels and technical standards. Hardscape elements of the landscape include: paving; walls; site structures; site furniture; signage and lighting.

5.1 Hard Landscape Materials

5.1.1 Hardscape materials and design are chosen to compliment the building finishes, add character to the Proposed Development and provide variety to the circulation areas.

5.1.2 Natural stone materials and/ or artificial granite tiles, all suitable for outdoor uses are proposed as outdoor paving materials and wall finishes.

5.1.3 The use of varied finishes to granite and/ or artificial granite tiles provide for safe application through varied textures in the paving pattern design, including ripple texture, brush and hammered finishes.

5.1.4 Natural material textures exhibit a natural variation in material colour, adding interest to the patterns and helping to highlight entrances to different functional zones.

5.2 Landscape Lighting

5.2.1 The landscape lighting design for all areas will follow an aesthetic and functional approach. Generally, lighting will be provided for the safety and security of pedestrian circulation as well as highlighting specific landscape features. Lighting will be designed in accordance with the intended use of an area, such as seating areas or play areas.

5.2.2 The desired effect for general landscape lighting in amenity areas is indirect, non-glaring and subtle, with occasional accent lighting to highlight points of interest.

5.2.3 Accent landscape lighting will be soil-recessed up-lights for trees. Signage and feature walls will be spot lit to give prominence. Surface mounted fixtures and buried up-lighters will be employed to highlight the entrance areas.

5.3 Design Codes, Technical Standards & Safety Provision

5.3.1 Hard landscape design works shall be in compliance with, or better than, government ordinances, codes and regulations, and relevant international standards. Criteria for the selection of hard landscape materials include: durability, sustainability, low maintenance, reasonable cost, contemporary theme and specific criteria for themed areas as necessary.

5.3.2 Criteria for the selection of soft landscape materials include: salinity tolerance, low maintenance, seasonal interest and appropriately selected plant stock in good health.

5.3.3 All paved areas will have adequate gradient falls for proper drainage and positive fall to drain inlets, gullies or covered channels, in accordance with accepted surface water run-off drainage practices.

5.3.4 Design of disabled access shall be in compliance with the Barrier Free Access 2008 (2024 Edition).

6.0 SOFT LANDSCAPE

This section provides a description of the soft landscape design and softscape elements together with general information on softscape related aspects of design, including irrigation and maintenance.

6.1 Plant Material Tables

6.1.1 The following list indicates the proposed combination of native and exotic tree species along with suitable ornamental evergreen and flowering species to strengthen the greening/ conservation.

6.1.2 The summary schedule of key plant material listed below is subject to further refinement and plant availability upon detail design stage. Refer to **Table 1A** and **1B** below:

Table 1A: Proposed Tree Species

Proposed Species	Chinese Name	Quantity/ Size
Cinnamomum burmannii *	陰香	7 nos. Size: Standard to Heavy Standard Size
Terminalia mantaly	細葉欖仁	
*Viburnum odoratissimum**	珊瑚樹	

Remarks: * Native

Table 1B: Proposed Shrubs and Groundcover Species

Proposed Species	Chinese Name	Height x Spread (mm)	Spacing(mm)
Shrub Species			
Aglaia odorata	米仔蘭	600 x 500	400
Duranta repens	金連翹	300 x 300	250
Fagraea ceilanica	灰莉（柱）	2000 x 800	750
Ixora coccinea	黃花龍船花	400 x 300	200
*Melastoma malabathricum**	野牡丹	500 x 400	300
Murraya paniculata	九里香	800 x 600	500
Rhododendron mucronatum	白花杜鵑	600 x 500	400
Schefflera arboricola	花葉八葉	600 x 500	400
Ground Cover Species			
Cuphea hyssopifolia	細葉雪茄花	300 x 300	200
*Nephrolepis auriculata**	腎蕨	300 x 300	250
Rhoeo discolor dwarf	矮種蚌花	200 x 250	200

Remarks: * Native

6.2 Open Space Provision

Not less than 855m^2 open space is provided within the Application Site for enjoyment of future users. Refer to **Appendix E**.

6.3 Greenery Provision

A minimum site coverage of greenery of 20% of the site area, i.e. 484 m^2 to be provided in accordance to PNAP APP-152. Refer to **Appendix F**.

6.4 Soil Depth and Drainage Provision for the Planted Area

6.4.1 The need for adequate soil depths to ensure proper plant growth is taken into account for all planting areas. The appropriate soil depths (approximate and excluding drainage layers) are:

- Trees: 1200mm
- Shrub/ Groundcover: 600mm
- Lawn: 300mm

6.4.2 Structural engineers have made sufficient allowances to accommodate the necessary planting components, i.e., plant stock, soil volume and sub-surface drainage materials loading.

6.4.3 Closed bottom planters will have proper and adequate subsoil drainage system and drain outlets to the storm water drainage system.

6.4.4 The landscape works are designed to avoid obstruction of the maintenance of drainage works. Adequate clearance between drainage works and landscape works will be maintained so as to prevent any potential damage to drainage works.

6.5 Irrigation and Proposed Source of Water Supply

6.5.1 Water points (not more than 40m apart c/c) are located throughout the Application Site for irrigation.

6.6 Future Maintenance and Management

Maintenance and establishment works to soft landscape areas within the Application Site shall be undertaken by the softworks contractor for an Establishment Period of a minimum of 12 months following Practical Completion of the Proposed Development. This will ensure the proper establishment of the planted materials. The applicant will undertake the future maintenance of the hard and soft landscape works in the proposed promenade. Tree risk assessment will be conducted by future property management at appropriate time for appropriate trees as instructed by the owner in accordance with Handbook on Tree Management by DEVB.

Soft Landscape Maintenance Schedule

Watering: Water all plants as necessary, adjusted to rainfall, to ensure adequate water supply for plant consumption during the establishment period.

Pruning: Cut back annuals after flowering period. Healthy cuttings may be used for propagation. Prune shrubs and groundcover in early March to encourage flowering. Prune woody shrubs and trees selectively according to species (annually). Utilise established and approved tree surgery techniques as necessary and seal all sharp cut wounds with approved material to resist disease attack.

across Shung Wo Path are the planned comprehensive residential development (80mPD to 100mPD) under Approved Application No. A/K15/126 within the waterfront portion and inland portion of "CDA(3)" zone, and another planned comprehensive residential development (80mPD) under the Approved Application No. A/K15/121 within "CDA(4)" zone. To the **further southeast** bounded by Yan Yue Wai is Montego Bay (80mPD to 100mPD) within the "CDA(5)" zone. Similar to the YTB "CDA" zone, there is a long-term planning intention for a waterfront promenade of not less than 15m-wide along the YTIA as specified in the PB of the YTIA and designated in the OZP. The waterfront promenade will connect Lei Yue Mun to YTB and Cha Kwo Ling and further to the Kowloon East area. To the **further southeast** beyond Shung Shun Street are Sam Ka Tsuen Ferry Pier, Lei Yuen Mun Typhoon Shelter Breakwater Sitting Out Area and Sam Ka Tsuen Typhoon Shelter.

2.2.4 To the **immediate east** and **southeast** across Tung Yuen Street are "R(E)" zones and the inland portion of "CDA(1)", "CDA(3)" and "CDA(5)" zones with BH restriction of 100mPD. To the **further east** and **further southeast** bounded by Shung Yiu Street or across Yan Yue Wai are the other two (E)" zones with BH restrictions of 100mPD and 120mPD. Whilst there is an existing residential development with BH exceeding the restriction as stipulated in the OZP (i.e. Peninsula East (147mPD)), the BH bands of about 100mPD and 120mPD among the stepped BH profile descending from towards the waterfront can still be formed alongside with other planned comprehensive/residential developments to the east of Tung Yuen Street. Other than those existing/planned residential developments, some existing IBs also can be identified in these zones, including Gloria Weaving & Knitting Factory Limited to be developed as transitional housing via wholesale conversion[1].

2.2.5 To the **east** and **southeast** beyond Sze Shan Street are other "R(E)" zones with BH restrictions of 120mPD and 140mPD respectively. High-rise residential developments including Canaryside (140mPD), Ocean One (120mPD), The Spectacle (148mPD) and Maya (140mPD) can be found within the two "R(E)" zones to the east of Sze Shan Street, forming other two BH bands of about 120mPD and 140mPD among the stepped BH descending towards Yau Tong waterfront. Except those residential developments, a few Government, Institution or Community (GIC) facilities including Sze Shan Street Cooked Food Market and Chung Pak Healthcare Services Complex can also be found. Sam Ka Tsuen Recreation Ground zoned "Open Space" is located in between in these two "R(E)" zones.

2.2.6 To the **further east** beyond Cha Kwo Ling Road are a cluster of existing/planned public housing developments with GIC facilities, including Ko Chun Court (122mPD to 124mPD), Ko Yee Estate (65mPD to 115mPD), Yau Mei Court (150mPD to 154mPD), Yau Tong Estate (132mPD to 144mPD), Lei Yue Mun Estate Phase I to III (126mPD to 151mPD), planned Lei Yue Mun Estate Phase IV (150mPD), planning public housing development with minor relaxed BH at Pik Wan Road (185mPD approved under Application No. A/K15/123) and other planned developments. Situating at the rising topographies of Chiu Keng Wan Shan and Devil's Peak, those existing/planned public

---

[1] The transitional housing project 'Light Factory' for about 166 units and about 560 population at the Tung Yuen Street No.1 is estimated to be completed by Q3 2024 via wholesale conversion of the existing IB. For details, please refers to Housing Bureau's website (https://www.hb.gov.hk/eng/policy/housing/policy/transitionalhousing/details_98.html).

would create an active shop frontage for a more vibrant street life and serve local essential needs.

3.1.6 **Respecting the Distinct Gradation of Height Profile with Descending Building Height Towards the Harbourfront –** Despite that the proposed residential band in the inland portion is with minor relaxed BH of 100mPD, the residential band fronting the Victoria Harbour would be kept at 80mPD, which is fully in line with the BH restriction on the "R(E)" zone along the waterfront. Besides, the relaxed BH for the residential band at inland portion will not exceed the BH restriction (i.e.100mPD) along Tung Yuen Street. The stepped BH profile for the Proposed Scheme will maintain the distinct gradation of height profile with descending BH towards the harbourfront, while at the same time accommodate additional flat supply and the additional waterfront promenade, resulting in a win-win scenario.

3.2 Key Development Parameters

3.2.1 The key development parameters of the Proposed Scheme as compared with the Baseline Scheme (i.e. Development Parameters of "R(E)" zone under the OZP) are summarised in **Table 3-1** below.

Table 3-1 Key Development Parameters of the Proposed Scheme

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Site Area (m^2)	About 2,419m^2	About 2,419m^2	-
Proposed Uses	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	'Flat', 'Shop and Services' and 'Eating Place' are Column 2 uses while 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	Column 2 uses (S16 Application required)
Plot Ratio (PR)			
- Total PR	Not more than 6	Not more than 6.9 [1]	+ 15%
- Domestic PR	Not more than 5	Not more than 6	+ 20%
- Non-domestic PR	Not more than 1	Not more than 0.9 [2]	-
Gross Floor Area (GFA) (m^2) [1]			
- Total GFA (excluding Bonus GFA to be claimed)	Not more than 14,514m^2	Not more than 16,691.1m^2	+ 15%
- Domestic GFA (excluding Bonus GFA to be claimed)	Not more than 12,095m^2	Not more than 14,514m^2	+ 20%
- Non-domestic GFA	Not more than 2,419m^2	Not more than 2,177.1m^2 [2]	-

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Bonus Plot Ratio (Bonus GFA)	Provision under Remark (5) of the Notes of "R(E)" zone	Not more than 0.081 [3] (to be included in Domestic PR) (Not more than 197.93m^2)	Provision under Remark (5) of the Notes of "R(E)" zone
Building Height (BH) (mPD)	Not more than 80mPD	80mPD to 100mPD (for inland portion only)	+25% (for inland portion only)
Floor-to-Floor Height	N/A	Basement: about 4.5m Retail: about 4.5-5.5m Clubhouse: about 3.9m Transfer Plate: about 1.85m Typical Residential: about 3.15m	-
No. of Storeys	N/A	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark	-
Site Coverage (SC)			
- Below 15m	N/A	Not more than 70%	-
- Above 15m	N/A	Not more than 33.3%	
No. of Residential Block	N/A	1	-
No. of Flats	N/A	About 342	-
Average Flat Size	N/A	About 43m^2	-
Anticipated Population	N/A	About 855 [4]	-
Local Open Space	N/A	Total area of not less than 855m^2, which includes a voluntary waterfront promenade of not less than 608m^2 for public access and enjoyment	-
Greenery Provision	N/A	Not less than 20% [5]	-
Car Parking Spaces			
Private Car Parking Spaces	N/A	63 (incl. 2 accessible car parking spaces)	
- Residential	N/A	50	-
- Visitor	N/A	5	-
- Shop and Services/ Eating Place	N/A	8	-
Motorcycle Parking Spaces	N/A	4	
Loading/ Unloading (L/UL) Bays	N/A	3 (1 Light Goods Vehicle Space and 2 Heavy Goods Vehicle Spaces)	-
Completion Year	N/A	2032	-

Notes:

[1] Proposed clubhouse GFA (5% of total domestic GFA) is exempted from GFA calculation.

[2] The area of the covered public passageway (about 223m^2) for public access from Tung Yuen Street to the waterfront promenade through our proposed building at ground level is not included in the non-domestic GFA of 2,177.1m^2. Considering the nature of serving the public and users of the proposed development with reference to PNAP APP-108, the 223m^2 is proposed as an exempted GFA.

[3] On top of the PR/GFA set out above, a bonus PR of not more than 0.081 (rounded down, equivalent to a GFA of not more than 197.93m^2) and SC of 0.257% will be claimed for the 39.586m^2 of ODP-required setback areas. While the bonus PR and SC will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2) at detailed design stage, nevertheless, the bonus PR and SC have been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.

[4] A person per flat (PPF) ratio of 2.5 is adopted with reference to the average domestic household size of the subject Yau Tong West District Council Constituency Area as reported in the 2021 Population Census results published by the Census and Statistics Department.

[5] The total greenery provision is located at Primary Zone, i.e. 15m vertical zone, of the Application Site which accounts for not less than 20% of SC of greenery.

4. ASSESSMENT AREA AND SELECTION OF VIEWING POINTS

4.1 Assessment Area

4.1.1 According to the TPB PG-No. 41, the Assessment Area is defined by approximately three times of overall maximum BH of the subject development, i.e. 95.6m (100mPD with 4.4mPD at ground level). Thus, a radius of 286.8m (i.e. 95.6m × 3) from the boundary of the Application Site defines the boundary of the Assessment Area (**Figure 2**).

4.2 Selection of Viewing Points

4.2.1 The Urban Design Guidelines in the Hong Kong Planning Standards and Guidelines (HKPSG) have identified strategic viewing points for the consideration of harbourfront development (Figure 3 of Chapter 11 of HKPSG refers), of which the strategic VP at Quarry Bay Park is chosen for assessment purpose.

4.2.2 When assessing the potential visual impacts of the Proposed Scheme, the classification of VPs is categorised as follows:

Table 4-1 Classification of Visual Sensitivity

Receivers	Main Activities	Sensitivity
Recreational	Those viewers who would view the Application Site while engaging in recreational activities.	High
Travellers	Those viewers who would view the Application Site from vehicles or on foot.	Medium

4.2.3 In summary, a total of 6 VPs are adopted in the VIA (**Figure 2**) to evaluate the medium-range and long-range VPs. They are:

- **VP1: Yau Lai Estate – Footbridge next to Fung Lai House** – This VP is located on the podium of the southern part of Yau Lai Estate, a public housing estate which is located to the north of the Application Site with a distance of approximately 650m and a site level of about 35mPD. Since it serves as one of the important commuting routes for the residents travelling from Yau Lai Estate to Yau Tong MTR Station, this medium-range VP is selected to assess the travellers who have a direct view towards the YTB and the YTIA but not directly visit to the Application Site. Owing to the transient nature of this VP, visual sensitivity is considered **medium**.

- **VP2: The Rooftop Garden (the Outdoor Maze Area) atop Domain Mall** – This VP is situated about 550m to the northeast of the Application Site across Cha Kwo Ling Road. This VP has been selected since it is one of the major public open spaces where residents in the adjacent public housing estates (such as Yau Tong Estate) would visit for passive recreation activities. Besides, the Rooftop Garden is also a famous destination for visitors from other districts due to its unique architectural design. It is a medium range VP to represent views of the local residents and visitors from this

Table 5-2 Classification of Overall Resultant Visual Impact

Classification of Overall Resultant Visual Impact	Description
Enhanced	If the Proposed Scheme in overall term will improve the visual quality and complement the visual character of its setting from most of the identified key public viewing points.
Partly Enhanced/Partly Adverse	If the Proposed Scheme will exhibit enhanced visual effects to some of the identified key public viewing points and at the same time, with or without mitigation measures, exhibit adverse visual effects to some other key public viewing points
Negligible	If the Proposed Scheme will, with or without mitigation measures, in overall terms have insignificant visual effects to most of the identified key public viewing points, or the visual effects would be screened or filtered by other distracting visual elements in the assessment area.
Slightly Adverse	If the Proposed Scheme will, with or without mitigation measures, result in overall terms in some negative visual effects to most of the identified key public viewing points.
Moderately Adverse	If the Proposed Scheme will, with or without mitigation measures, result in overall terms in negative visual effects to most of the key identified key public viewing points.
Significantly Adverse	If the Proposed Scheme will in overall terms cause serious and detrimental visual effects to most of the identified key public viewing points even with mitigation measures.

VP1: Yau Lai Estate – Footbridge next to Fung Lai House (Figure 3)

5.1.4 This medium-range VP represents travellers in the neighbourhood of Yau Lai Estate with a transient view towards the Proposed Scheme at the Application Site on their way to/from the MTR station.

5.1.5 **Effects on Visual Composition** – The foreground of this VP is occupied by a cul-de-sac with roadside greenery within Yau Lai Estate while the middle-ground is dominated by clusters of residential buildings including the planned residential developments in the YTB. Both the Baseline and Proposed Schemes would be completely hidden behind the approved YTB development and the sky view forms part of the visual composition at the background. The Proposed Scheme will blend in with other planned residential developments in the vicinity upon completion. Therefore, there will be **negligible** impact to the concerned visual composition.

5.1.6 **Effects on Visual Obstruction and Visual Permeability –** Both the Baseline and Proposed Schemes would be completely hidden behind the approved YTB development. Since there is no additional blockage caused by the Proposed Scheme as compared with Baseline Scheme, the Proposed Scheme will have **negligible** effect on visual obstruction and visual permeability.

5.1.7 **Effects on Public Viewers –** From this VP, more kinetic public viewers will be walking along the podium within Yau Lai Estate. Given that the Proposed Scheme would be completely hidden behind the approved YTB development, it is unlikely to attract public

viewers' attention with the minor relaxation of BH as compared to the Baseline Scheme. Therefore, the Proposed Scheme will have **negligible** effect to the public viewers.

5.1.8 **Effects on Visual Elements/Resources –** The Proposed Scheme will not be visible as it will blend in well to building clusters in the background of this VP. The cul-de-sac with roadside greenery within Yau Lai Estate in the foreground and high-rise residential developments such as the Peninsula East (147mPD) will remain as significant components of the VP with the Proposed Scheme. The open sky view will not be affected by the Proposed Scheme. Therefore, the effects on visual elements/resources will be **negligible**.

5.1.9 Based on the above, the Proposed Scheme will bring **negligible** visual impact to the public viewers in this VP.

VP2: The Rooftop Garden (the Outdoor Maze area) atop Domain Mall (Figure 4)

5.1.10 This medium-range VP represents views of local residents or visitors from other districts who enjoyed passive recreation activities at the Rooftop Garden atop Domain Mall (the Outdoor Maze area). From this VP, only the topmost part of the Baseline Scheme or Proposed Scheme is visible at the background as they are mostly intercepted by existing developments in the foreground.

5.1.11 **Effects on Visual Composition –** The visual composition from this VP consists of low to medium-rise IBs in the foreground as well as the existing and planned high-rise residential developments in the YTIA and the YTB such as planned residential under Approved Application No. A/K15/127 (120mPD), Maya (140mPD), Peninsula East (147mPD) and The Coast Line II (100mPD) under construction etc. As compared with Baseline Scheme, only a very minor portion of open sky view would be obstructed by the Proposed Scheme. In view of that both the Baseline and Proposed Scheme blends in well with the existing and planned high-rise residential developments with only the topmost portion visible, views to the waterfront will not be affected with the minor relaxation of BH under the Proposed Scheme. The impact to visual composition caused by the Proposed Scheme is thus **negligible**.

5.1.12 **Effects on Visual Obstruction and Visual Permeability –** In view of the insignificant visual change of the Proposed Scheme at this VP, slight additional visual obstruction created by the Proposed Scheme to the open sky view is considered minimal at this VP as compared to the Baseline Scheme. While those high-rise developments near Quarry Bay across the Victoria Harbour still can be seen in this VP, the Proposed Scheme largely maintains the visual permeability which is comparable to the Baseline Scheme. Hence, the potential effects visual obstruction and visual permeability caused by the Proposed Scheme are **negligible to slightly adverse**.

5.1.13 **Effects on Public Viewers –** Only the upper levels of the Proposed Scheme will be visible between the planned residential developments and blends in well with the high-rise residential developments in the surrounding. The change of BH under the Proposed Scheme might be unnoticeable to the public viewers given that existing and planned high-rise developments (e.g. Peninsula East with BH of 147mPD, Maya with BH of 140mPD and Approved Application No. A/K15/127 of 120mPD) will likely attract visual attention at this VP. The Proposed Scheme remains highly compatible and integrated with the

design of the building masses of the surrounding high-rise developments. Hence, the Proposed Scheme has caused **negligible** effect on public viewers.

5.1.14 **Effects on Visual Elements/Resources –** In view of that Proposed Scheme is visually integrated into the high-rise existing and planned residential developments in the background, the cityscape of this VP would generally be remained. The minor relaxation of BH might not be highly noticeable from this VP. The visual resources have been gradually amended by the on-going transformation of the YTB and YTIA under the Baseline Condition. The Proposed Scheme would bring no significant changes on the key visual elements/ resources from this VP, including the view towards Victoria Harbour. Only a very minor portion of open sky view would be obstructed by the Proposed Scheme compared with Baseline Scheme. The effect on visual elements/ resources is therefore considered **negligible**.

5.1.15 Based on the above, the Proposed Scheme will bring **negligible** visual impact to the recreational users in the Rooftop Garden atop Domain Mall.

VP3: Devil's Peak – Wilson Trail (Figure 5)

5.1.16 This long-range VP represents views of hikers and travellers who are hiking along the Wilson Trail of Devil's Peak. From this VP, only a slight part of both the Baseline and Proposed Schemes are visible at the background as they are intercepted by the existing residential development including Maya, Spectacle and Lei Yue Mun Estate Phase 1 – 3 as well as the planned Lei Yue Mun Estate Phase 4.

5.1.17 **Effects on Visual Composition –** The visual composition from this VP consists of vegetations in the foreground and high-rise residential developments in the YTIA and Lei Yue Mun in the middle-ground (i.e. Lei Yue Mun Estate Phase 1-3, planned Lei Yue Mun Estate Phase 4, and other existing and planned residential developments such as The Spectacle, Maya, Ocean One, Canaryside, One East Coast and Montego Bay). The Victoria Harbour view constitutes the background of this VP. In view of that the Proposed Scheme would be completely screened off by the existing and planned high-rise residential developments, the view towards the waterfront is not affected as compared to the Baseline Condition. Hence, the impact to visual composition caused by the Proposed Scheme is considered **negligible**.

5.1.18 **Effects on Visual Obstruction and Visual Permeability –** In view of the insignificant visual change of the Proposed Scheme at this VP, no additional visual obstruction created by the Proposed Scheme is observed at this VP. The visual permeability to the Victoria Harbour at the background is largely maintained in the Proposed Condition with the minor relaxation. Hence, potential effects visual obstruction and visual permeability caused by the Proposed Scheme are **negligible**.

5.1.19 **Effects on Public Viewers –** The upper levels of the Proposed Scheme will not be visible as it would be completely hidden behind the planned residential clusters at the foreground and blends in well with the residential development at the backdrop. The change in the BH is largely unnoticeable to the public viewers hiking along the trail. The Proposed Scheme remains highly compatible and integrated with the design of the building masses of the surrounding high-rise developments. The public viewers may pay attention to the overall urban profile of the YTIA and Lei Yue Mun area instead of the minor relaxation

of BH of the Proposed Scheme. Hence, the Proposed Scheme has caused **negligible** effect on public viewers.

5.1.20 **Effects on Visual Elements/Resources –** The Proposed Scheme is visually integrated into the existing and planned high-rise residential developments in the middle-ground and is hardly noticeable from this VP. The visual resources have been gradually amended by the on-going transformation of the YTIA and Lei Yue Mun area under the Baseline Scheme. The Proposed Scheme would bring no significant changes on the key visual elements/resources from this VP, including the view towards Victoria Harbour and Hong Kong Island in this VP. The effect on visual elements/ resources is therefore considered **negligible**.

5.1.21 In gist, the Proposed Scheme will bring **negligible** visual impact at this VP on the visual composition, visual obstruction and permeability, public viewers, and visual elements/resources.

VP4: Lighthouse at Lei Yue Mun Rest Garden (Figure 6)

5.1.22 This VP is located at the waterfront area of Lei Yue Mun Rest Garden. This medium-range VP is taken to represent the public view of the visitors enjoying in this recreational area and local villages/residents in Lei Yue Mun Village. Part of the Baseline and Proposed Scheme are both visible in the middle-ground of the VP.

5.1.23 **Effects on Visual Composition –** The existing view from this medium range VP primarily comprises the beach in the foreground with some high-rise residential developments in the middle-ground, with open sky view, Victoria Harbour and the Lion Rock at the background. The Proposed Scheme located behind the planned residential under construction (i.e. The Coast Line I) at the centre of the middle-ground will integrate with the planned and existing residential development at both sides of Tung Yuen Street with BH ranging from 80mPD to 147mPD in the background. Upon completion, the form and scale of the Proposed Scheme (80mPD to 100mPD) will be in harmony with the surroundings, echoing with the stepped BH profile of YTIA as observed at this VP. Therefore, impact to the visual composition caused by the Proposed Scheme is thus **negligible**.

5.1.24 **Effects on Visual Obstruction and Visual Permeability –** Only the topmost portion of the Proposed Scheme will be observed at this VP, with majority part of the building bulk screened off by planned residential development in front. The minor relaxation of BH at the inland portion of the Application Site will not bring obstruction of views towards the skyline and waterfront, indeed in harmony with the stepped BH profile from this VP. Thus, visual obstruction and visual permeability under the Proposed Scheme would be **negligible**.

5.1.25 **Effects on Public Viewers –** The public viewers from this VP at the lighthouse of Lei Yue Mun Rest Garden will be able to view the Proposed Scheme in the centre of middle-ground. Besides, the public viewers are more interested to appreciate the open view of the Victoria Harbour with the cityscape as the backdrop for this VP. Provided that the development scale of the Proposed Scheme is compatible with other surrounding residential development upon completion, the effect on public viewers will be finite as it

will be viewed as part of the skyline. Therefore, the visual impact to the public viewers is **negligible**.

5.1.26 **Effects on Visual Elements/Resources –** The compatible building profile of the Proposed Scheme (maintaining a stepped BH of 80mPD to 100mPD) with the adjacent planned residential development will create visual interests by the stepped building height profile from this VP. Victoria Harbour in the foreground and open sky view with Lion Rock in the background will be retained upon completion. No additional interception to the skyline and waterfront will be resulted with the Proposed Scheme as compared with the Baseline Scheme. In this regard, the Proposed Scheme will have **negligible** effects on the visual elements/resources.

5.1.27 In view of the above, the Proposed Scheme will generally bring **negligible** impacts on the visual composition, visual obstruction and permeability, public viewers and visual resources associated with this VP at the lighthouse in Lei Yue Mun Rest Garden.

VP5: Quarry Bay Park (Figure 7)

5.1.28 This VP is situated at about 1500m away from the southwest of the Application Site, which is a strategic VP identified in the Urban Design Guidelines to assess impacts on the views to Kowloon Peak and other major Kowloon ridgelines. It is a long-range VP representing recreational users and public viewers who engage in passive recreational activities such as sitting-out and resting purposes while having a view toward the Application Site with the Victoria Harbour in the foreground.

5.1.29 **Effects on Visual Composition –** The foreground of this VP is occupied by the Victoria Harbour while the middle-ground is dominated by clusters of buildings in Kowloon East. The ridgelines of Devil's Peak, Chiu Keng Wan Shan and Black Hill can be seen alongside with the open sky view in the background. The Proposed Scheme will blend in with existing and planned residential developments in the vicinity, maintained the stepped BH profile towards the Kowloon waterfront, with a very minor portion of the ridgeline of Devil's Peak being obstructed. Therefore, there will be **negligible** impact to the concerned visual composition towards the Kowloon ridgelines.

5.1.30 **Effects on Visual Obstruction and Visual Permeability –** The Proposed Scheme will only be seen in the middle-ground. Thus, the Proposed Scheme will be blending in the surrounding high-rise developments and will create a very minor degree of visual obstruction to the ridgeline and skyline as compared to the Baseline Scheme. Therefore, the Proposed Scheme will have **negligible to slightly adverse** effect on visual obstruction and visual permeability.

5.1.31 **Effects on Public Viewers –** From this VP, more kinetic public viewers would walk along the waterfront promenade in Quarry Bay Park. Instead of focusing on one individual development, more attention may be paid to the overall visual profile of East Kowloon and its relationship with the ridgeline of this VP by the recreational users. Given that the Proposed Scheme will be well blend with building cluster and form part of the stepped BH profile in Yau Tong, it is unlikely to attract public viewers' attention with the minor

attention with the minor relaxation of BH at its inland portion. As such, the Proposed Scheme will have **negligible** effect to the public viewers.

5.1.38 **Effects on Visual Elements/Resource –** As compared to the Baseline Scheme, the Proposed Scheme will not degrade the existing condition as it does not obstruct any views to existing visual resources and is fully integrated with the surrounding environment. Views to the Victoria Harbour in the foreground and the open sky view in the background will be preserved. Besides, the view to the ridgelines in the Kowloon East will not be affected upon completion of the Proposed Scheme. Therefore, the effects on visual elements/resources will be **negligible**.

5.1.39 Based on the above, the Proposed scheme will bring **negligible** visual impact to the recreational users in Kai Tak Runway Park.

5.1.40 Please refer to **Table 5-3** for summary of visual impacts as discussed in the above section.

Table 5-3 Visual Impact Assessment Summary

VP	Visual Sensitivity	Appraisal Components				Conclusion
		Visual Composition	Visual Obstruction	Effect on Public Viewers	Effect on Visual Resources	
VP1: Yau Lai Estate – Footbridge next to Fung Lai House	Medium	Negligible	Negligible	Negligible	Negligible	**Negligible**
VP2: The Rooftop Garden (the Outdoor Maze area) atop Domain Mall	High	Negligible	Negligible to Slightly Adverse	Negligible	Negligible	**Negligible**

Appendix 3.2 Detailed Sewerage Impact Assessment Calculations

1. INTRODUCTION

1.1 Background and Objectives

1.1.1 The Proposed Development is located at No. 4 Tung Yuen Street, Yau Tong ("Application Site"). It is zoned as "R(E)" site under OZP S/K15/27 Cha Kwo Ling, Yau Tong, Lei Yue Mun, gazetted on 18/11/2022.

1.1.2 This S16 application is submitted to the Town Planning Board for the Proposed Flat, Shop and Services, and Eating Places with Minor Relaxation of Plot Ratio and Building Height Restrictions at the Application Site.

1.1.3 Ramboll Hong Kong Limited is commissioned by the Applicants to prepare this Drainage and Sewerage Impact Assessment (DSIA) Mitigation measures will be identified if it is necessary. Development parameters of the Proposed Development are provided by project architect, P&T.

1.2 Application Site and its Environ

1.2.1 The Application Site has an area of about 2,419 m^2, which are situated in Yau Tong area. The Application Site is bounded by Yau Tong Sewage Pumping Station to the Northwest, Tung Yuen Street to the Northeast, The Coastline to the Southeast. Figure 1.1 shows the location of the Application Site and its environ.

1.3 Proposed Residential Development

1.3.1 The Proposed Development consist of 1 residential tower, providing not more than 342 residential units. The residential tower is situated atop a 3 storeys podium for shop and services, eating place, and clubhouse with two level of basements for carparking and loading/ unloading spaces.

1.3.2 The tentative completion year of the Proposed Development would be Years 2032.

1.3.3 The development parameters of the Proposed Development are shown in Appendix 1.1.

2. DRAINAGE IMPACT ASSESSMENT

2.1 Existing Drainage and Condition of the Application Site

2.1.1 The Application Site is consisting with an industrial building (i.e., ground level 4.40 mPD) and is almost 100% paved under existing conditions. As confirmed by the Project Proponent, there will be no change in the gradient of the Application Site after redevelopment.

2.1.2 According to APP-152, at least 20% of greenery will be provided after development. The provision of a greenery area of approximately 484 m^2 will further increase filtration of stormwater and minimize surface runoff. The paved / unpaved ratio of the Application Site before and after the Proposed Development were reviewed and summarized in Table 2.1.

Table 2.1 Estimated Peak Flow

	Before Development	After Development
Paved Area	2,419 m^2(99%)	1,935 m^2 (80%)
Unpaved Area	36 m^2 (1%)	484 m^2 (20%)

2.1.3 As change in land use would affect the amount of surface runoff flowing into the existing drainage system. Meanwhile, there is a slight increase in greenery area in the Proposed Development, peak runoff from the Application Site will slightly decrease as compared to existing site conditions. Adverse impact to the public drainage system is thus not anticipated. Upgrading works is considered not necessary.

2.2 Sea Level Rise due to Climate Change

Site Constraints

2.2.1 With reference to the Outline Zoning Plan (OZP) and confirmation from the Project Proponent, the design of the promenade within the Application Site should align directly with the design of the waterfront (i.e., at 4.40 mPD). Therefore, the current ground level of the proposed design is 4.40 mPD.

2.2.2 With reference the Table 8, and Table 29 in the *Stormwater Drainage Manual-Corrigendum No. 1/2022*. Based on the preliminary calculation, the design extreme sea level would be 4.39 mPD (i.e. 4.19+0.20 mPD) with reference the return period years 200 and the mean sea level rise in Mid-21st Century, compared with the the ground level (i.e., 4.40 mPD) of the Proposed Development, which is adequate to protect the Proposed Development from seawater inundation.

Table 8 Design Extreme Sea Levels (in mPD)

Return Period (Years)	North Point / Quarry Bay (1954- 2019)	Tai Po Kau (1962-2019)	Tsim Bei Tsui (1954-2019)	Tai O (1954-2019)
2	2.82	2.97	3.07	2.87
5	3.03	3.27	3.31	3.16
10	3.20	3.54	3.52	3.36
20	3.38	3.56	3.74	3.57
50	3.66	4.41	4.09	3.84

100	3.91	4.93	4.41	4.06
200	4.19	5.59	4.78	4.28

Note:

1. *The extreme sea levels at Tsim Bei Tsui and Tai O were based on the frequency analysis of instrumental data and correlated data from North Point/ Quarry Bay for an extended data set of 66 years (from 1954 to 2019).*
2. *For facilities which are vulnerable and sensitive to sea water level, e.g. E&M installations, where more stringent design is desirable, designers can make reference to the extreme sea levels as shown in Appendix 1. These extreme sea levels were derived with inclusion of significant storm surge events in Hong Kong before 1954.*

Table 29 Mean Sea Level Rise due to Climate Change

	Mean Sea Level Rise
Mid-21st Century	0.20 m
End of 21st Century	0.47 m

Notes:

1. *The mean sea level rise is relative to the average of 1995-2014.*
2. *Median projection values are adopted in the table.*
3. *Mid-21st century refers to period around 2050; end of 21st century refers to period around 2090.*

Mitigation Measures

2.2.3 For the Proposed Development design, the façade of the Proposed Development facing the waterfront on the ground floor primarily consists of blank walls with few entrances. Furthermore, there will be a basement for 2-story carpark and will be at about -4.6 mPD. The entrance of the basement carpark faces to Tung Yuen Street.

2.2.4 Apart from the scheme design, demountable flood barrier would be installed manually in front of the entrances of buildings, and carparks to prevent floodwater intrusion, and in open spaces to contain floodwater within the area. This type of barrier is widely used in Hong Kong to minimize flooding impact. Therefore, with proper mitigation measures there would be no adverse flooding impact.

3. SEWERAGE IMPACT ASSESSMENT

3.1 Scope of Work

3.1.1 The aim of this SIA is to assess whether the capacity of the sewerage network serving the Application Site is sufficient to cope with the sewage flow from the proposed development.

3.2 Assessment Criteria and Methodology

3.2.1 The Commercial and Industrial Floor Space Utilization Survey (CIFSUS) conducted by the Planning Department has been used to determine the worker density for various economic activities and planned usage types.

3.2.2 Environmental Protection Department's (EPD's) Guidelines for Estimating Sewage Flows for Sewage Infrastructure Planning, Version 1 (GESF) has been referred to for the purposes of estimating the quantity of the sewage generated from the Proposed Development and the existing catchment area. Sewage flow parameters and global peaking factors in this document have been adopted for this SIA.

3.2.3 According to the GESF, the overall unit flow is composed of flows due to employees and the associated activities. The following unit flow factors have been adopted in the SIA calculation in accordance with Tables T-1, T-2 and T-3 of the GESF:

- Residential housing: 0.27m^3/day (Private RR)
- Restaurant & Hotel: 1.58m^3/day (Commercial Employee and J10 – Restaurant & Hotel)
- Wholesale & Retail: 0.28m^3/day (Commercial Employee and J4 – Wholesale & Retail)
- Industrial: 1.08m^3/day (Industrial Employee and J1 – Yau Tong)

3.2.4 The catchment inflow factor, PCIF of 1.1 (East Kowloon), is adopted in catchment calculations.

3.3 Existing and Future Sewerage System

3.3.1 With reference to the sewerage system shown in Geo-info Map, all the sewage generated from the proposed development will be discharged to the terminal manhole (T0) which is located at the eastern side of the proposed development. The terminal manhole TMH-01 (S0) is connected to the exciting manhole FMH4034524 (S1) outside the proposed development via a new Ø300mm polyethylene pipe. The sewer eventually discharges the collected sewage to Yau Tong Sewage Pumping Station.

3.3.2 The Yau Tong Sewage Pumping Station (YTSPS) is located at the junction of Ko Fai Road and Tung Yuen Street which is next to the Application Site. Based on the information for DSD, The YTSPS currently has a design capacity with 28,800m^3/day.

3.3.3 The existing sewers and catchment areas in the vicinity of Application Site are shown in Figure 3.1.

3.4 Wastewater Generated by the Proposed Development

3.4.1 The sewage generated by the proposed development will be mainly contributed by the residential units, club house, retail and F&B facilities. Detailed calculation of sewage generation from the proposed development is given in Table 3.1 below and in Appendix 3.1.

Table 3.1 Estimated Peak Flow

Calculation for Sewage Generation Rate of the Proposed Development at the Application Site

1. Proposed Residential Development			
Total number of residential units	=	342	units
Total number of residents	=	855	of 2.5 in Yau Tong West)
Design flow	=	0.27	m^3/person/day -- (Private R2 in Table T-1 of GESF)
Sewage generation rate	=	230.9	m^3/day
2. Club House			
Assumed Area	=	725	m^2 (refer to Appendix 1.1)
Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS – Community, Social & Personal Services)
Total number of employees	=	24	employees
Design flow	=	200	Services)
Sewage generation rate	=	6.7	m^3/day
3. Swimming Pool			
			2
			3
			3 2
			2
Backwashing			
			Water Treatment Installation in Government Buildings of the HKSAR published by the ArchSD)
Backwashing			
4. Retail			
Assumed area	=	1306.3	m^2
Assumed floor area per employee	=	28.6	m^2 per employee – (refer to Table 8 of CIFSUS – Retail Trade)
Total number of employees	=	46	employees
Design flow	=	200	litre/employee/day -- (refer to Table T-2 of GESF – J4 Wholesale & Retail)
Sewage generation rate	=	12.9	m^3/day
			2
			2
			3
Flow rate (without swimming pool)	=	320.0	m^3/day
Flow rate with P_{CIF} (without swimming pool)	=	352.0	m^3/day (refer to Table T-4 of GESF – East Kowloon - 1.0)
Contributing population	=	1304	people
Peaking factor	=	6	allowance)
Peak flow (without swimming pool)	=	22.2	litre/sec
Peak flow (with swimming pool)	=	32.6	litre/sec

3.5 Assessment of Sewerage Impact

3.5.1 The potential sewerage impact due to the Proposed Development has been quantitatively addressed. Total sewage generation rate from the Proposed Development is estimated to be 320.0 m^3/day (i.e. peak flow 22.2 litre/sec).

3.5.2 Based on the assessment results, it is found that the capacity of sewers FWD4036746, and FWD4036747 are not sufficient for the sewerage generated from the Proposed Development and the surrounding catchment. Therefore, sewers FWD4036746, and FWD4036747 are proposed to upgrade. The proposed upgrading works are summarized in Table 3.2 and Figure 3.2.

Table 3.2 Proposed Upgrading Works

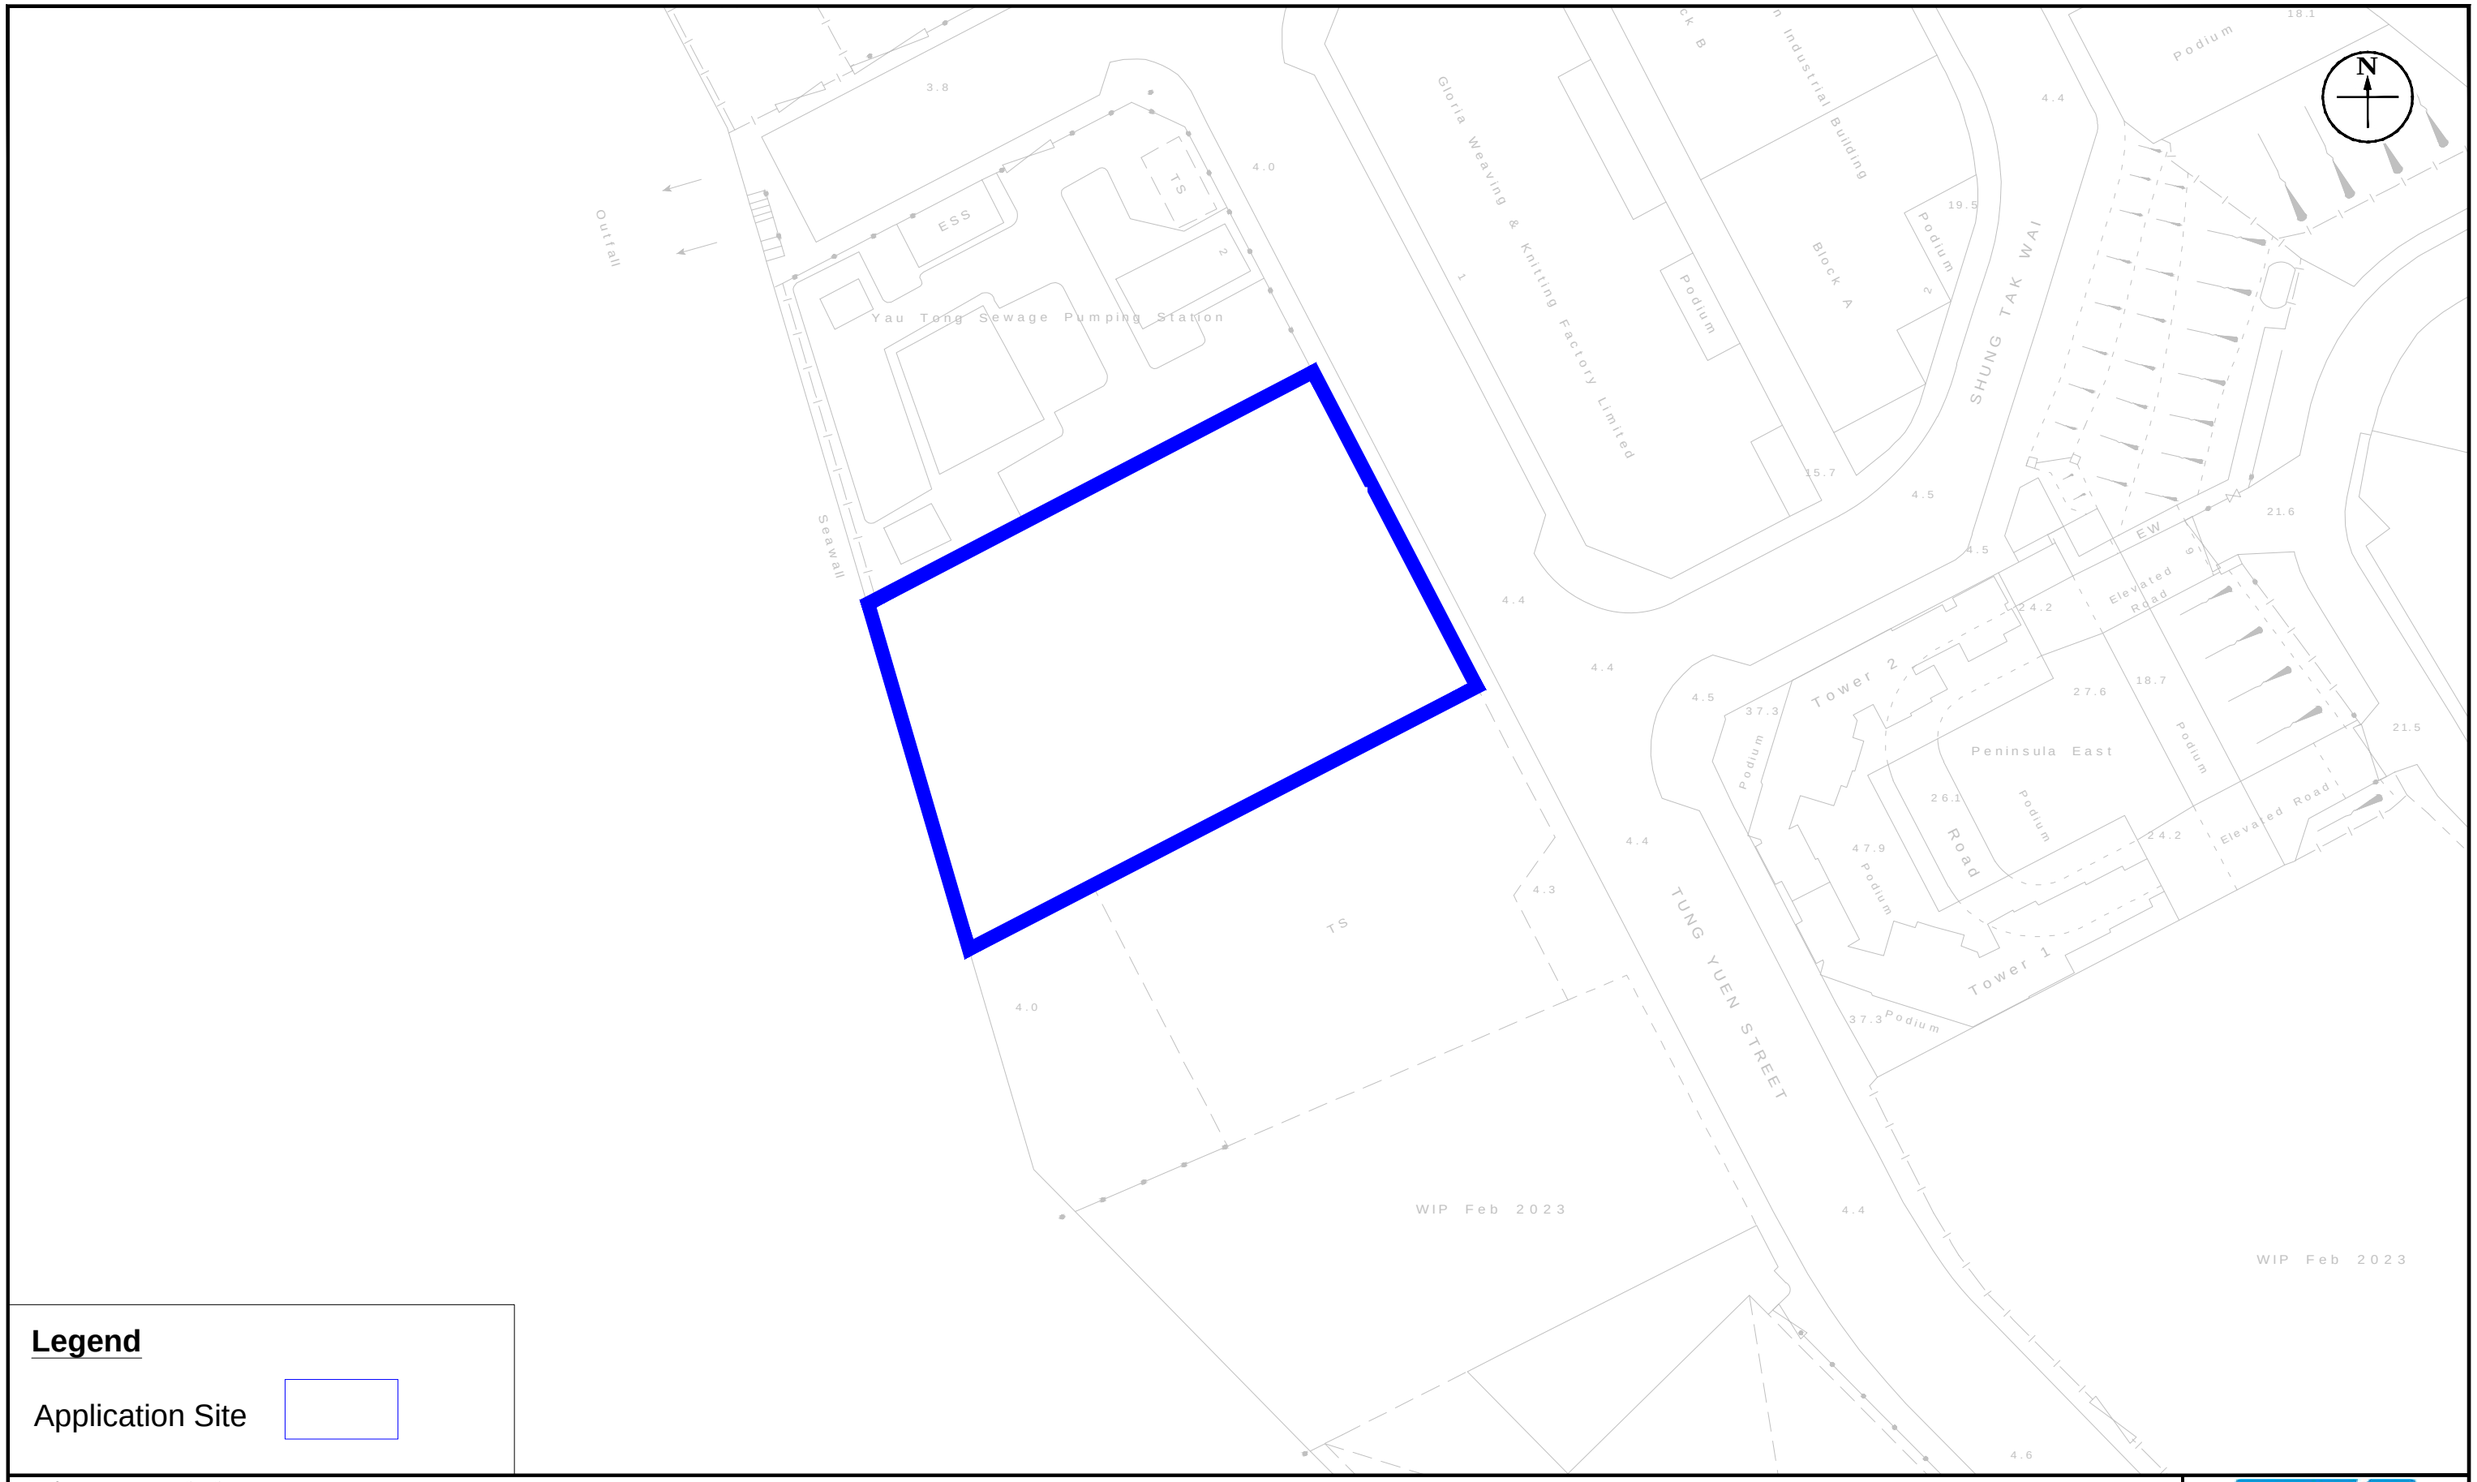
Segment	Manhole Reference	Manhole Reference	Length (m)	Original Size (Ø)	Upgraded Size (Ø)
S1-S2	FMH4034524	FMH4034525	41.7	675	825
S2-S3	FMH4034525	FMH4034509	8.0	675	825

3.5.3 Hence, upgrading works on the public sewers FWD4036746, and FWD4036747 by the project proponent are required.

3.5.4 The estimated sewage generated including existing development and Proposed Development is about 7166.5m^3/day, which the flow is occupied about 25% of the current capacity of YTSPS. It is unlikely that the YTSPS will be overloaded. Detailed calculation for the capacities of YTSPS is given in Appendix 3.1.

4. OVERALL CONCLUSION

4.1.1 With a slight increase in greenery area in the Proposed Development, peak runoff from the Application Site will slightly decrease as compared to existing site conditions. The proposed development can be completed without aggravating the flooding conditions within, upstream, or downstream of the Application Site. Therefore, it is anticipated that there will not be any impact on the existing drainage system. As such, upgrading work on the drainage system is NOT required.



4.1.2 The potential sewerage impact arisen from the Proposed Development has been quantitatively assessed. Two of existing Ø675mm sewerage pipe (S2-S3 and S3-S1) will be upgraded to Ø825mm sewerage pipes. New Ø300mm sewerage pipes and manhole will be proposed to connect the existing pipe.

4.1.3 The TYSPS that the sewerage system would be connecting to has adequate capacity for the expected daily flows from the Proposed Development based on the assessment results.

4.1.4 With the proposed new connection and upgrading works in place, this SIA confirms the feasibility of the Proposed Development with no adverse impacts imposed to the public sewerage system.

4.1.5 This DIA and SIA confirm the feasibility of the proposed development in terms of its drainage and sewerage impact.

Appendix

Appendix 1.1 Key Development Parameters

4.3 Key Development Parameters

4.3.1 The key development parameters of the Proposed Scheme as compared with the OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) are summarised in **Table 4-1** below.

Table 4-1 Key Development Parameters of the Proposed Scheme

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
Site Area (m^2)	About 2,419m^2	About 2,419m^2	-
Proposed Uses	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	'Flat' is Column 2 use; 'Shop and Services' and 'Eating Place' are always permitted on the lowest three floors of a building, taken to include basements., excluding floors containing wholly or mainly car parking, loading/unloading bays and/or plant room)	Column 2 uses (S16 Application required)
Plot Ratio (PR)			
- Total PR	Not more than 6	Not more than 6.9 [1]	+ 15%
- Domestic PR	Not more than 5	Not more than 6	+ 20%
- Non-domestic PR	Not more than 1	Not more than 0.9 [2]	-
Gross Floor Area (GFA) (m^2) [1]			
- Total GFA (excluding Bonus GFA to be claimed)	Not more than 14,514m^2	Not more than 16,691.1m^2	+ 15%
- Domestic GFA (excluding Bonus GFA to be claimed)	Not more than 12,095m^2	Not more than 14,514m^2	+ 20%
- Non-domestic GFA	Not more than 2,419m^2	Not more than 2,177.1m^2 [2]	-
Bonus Plot Ratio (Bonus GFA)	Provision under Remark (5) of the Notes of "R(E)" zone	Not more than 0.081 [3] (to be included in Domestic PR) (Not more than 197.93m^2)	Provision under Remark (5) of the Notes of "R(E)" zone
Building Height (BH) (mPD)	Not more than 80mPD	80mPD to 100mPD (for inland portion only)	+25% (for inland portion only)
Floor-to-Floor Height	N/A	Basement: about 4.5m Retail: about 4.5-5.5m Clubhouse: about 3.9m Transfer Plate: about 1.85m	-

Key Development Parameters	OZP Scenario (i.e. Development Parameters of "R(E)" zone under the OZP) (a)	Proposed Scheme (b)	Differences/ Compliance (b) – (a)
		Typical Residential: about 3.15m	
No. of Storeys	N/A	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark	-
Site Coverage (SC) - Below 15m - Above 15m	 N/A N/A	 Not more than 70% Not more than 33.3%	 -
No. of Residential Block	N/A	1	-
No. of Flats	N/A	About 342	-
Average Flat Size	N/A	About 43m^2	-
Anticipated Population	N/A	About 855 [4]	-
Local Open Space	N/A	Total area of not less than 855m^2, which includes a voluntary waterfront promenade of not less than 608m^2 for public access and enjoyment	-
Greenery Provision	N/A	Not less than 20% [5]	-
Car Parking Spaces Private Car Parking Spaces - Residential - Visitor - Shop and Services/ Eating Place Motorcycle Parking Spaces	 N/A N/A N/A N/A N/A	 63 (incl. 2 accessible car parking spaces) 50 5 8 4	 - - -
Loading/ Unloading (L/UL) Bays	N/A	3 (1 Light Goods Vehicle Space and 2 Heavy Goods Vehicle Spaces)	-
Completion Year	N/A	2032	-

Notes:

[1] Proposed clubhouse GFA (5% of total domestic GFA) is exempted from GFA calculation.

[2] The area of the covered public passageway (about 223m^2) for public access from Tung Yuen Street to the waterfront promenade through our proposed building at ground level is not included in the non-domestic GFA of 2,177.1m^2. Considering the nature of serving the public and users of the proposed development with reference to PNAP APP-108, the 223m^2 is proposed as an exempted GFA.

[3] On top of the PR/GFA set out above, a bonus PR of not more than 0.081 (rounded down, equivalent to a GFA of not more than 197.93m^2) and SC of 0.257% will be claimed for the 39.586m^2 of ODP-required setback areas. While the bonus PR and SC will be subject to approval by the Building Authority under Building (Planning) Regulations (B(P)R) 22(2) at detailed design

stage, nevertheless, the bonus PR and SC have been incorporated in the building bulk (including BH) of the Proposed Scheme and adopted in the technical assessments.

[4] A person per flat (PPF) ratio of 2.5 is adopted with reference to the average domestic household size of the subject Yau Tong West District Council Constituency Area as reported in the 2021 Population Census results published by the Census and Statistics Department.

[5] The total greenery provision is located at Primary Zone, i.e. 15m vertical zone, of the Application Site which accounts for not less than 20% of SC of greenery.

Appendix 3.1 Detailed Sewerage Impact Assessment Calculations

Table 1 Calculation for Sewage Generation Rate of the Proposed Residential Development at the Application Site

1. Proposed Residential Development			**Remarks**
1. Residential Towers (T1-T3)			
a. Total number of units	=	342	units
b. Total number of residents	=	855	people -- (average household size of 2.5 from Hong Kong 2021 Population Census -Yau Tong West)
c. Design flow	=	0.27	m^3/person/day -- (Private R1 in Table T-1 of GESF)
d. Sewage Generation rate	=	**230.9**	m^3/day
2. Club House			
a. Assumed used area	=	725	m^2
b. Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
c. Total number of employees	=	24	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J11)
f. Sewage generation rate	=	**6.7**	m^3/day
3. Swimming Pool			
a. Assumed Area of Swimming Pool	=	250	m2
b. Average Depth of Water	=	1.5	m
c. Volume of Swimming Pool	=	375	m3
d. Turnover Rate	=	6	hr (CAP132, Section 42 Swimming Pools Regulation (open air pool))
e. Surface Loading Rate of Filter	=	50	m3/m2/hr
f. Filter Areas required	=	1.3	m2
g. Backwash flow rate	=	30	$m^3/m^2/hr$
h. Design flow for Swimming Pool Backwashing	=	37.5	m^3/hr
i. Backwash Duration	=	7	min/day
j. Backwash generation rate	=	3.75	m^3/day
k. Design flow for Swimming Pool Backwashing	=	**10.4**	litre/sec
4. Retail			
a. Assumed used area	=	1306.2	m^2
b. Assumed floor area per employee	=	28.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Retail Trade)
c. Total number of employees	=	46	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J4)
f. Sewage generation rate	=	**12.9**	m^3/day
5. F&B			
a. Assumed used area	=	870.8	m^2
b. Assumed floor area per employee	=	19.6	m^2 per employee -- (refer to Table 8 of CIFSUS - Restaurant)
c. Total number of employees	=	44	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	1500	litre/employee/day -- (refer to Table T-2 of GESF Job Type J10)
f. Sewage generation rate	=	**69.5**	m^3/day
Total Flow at Manhole T0			
Flow Rate (Without Swimming Pool)	=	320.0	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	352.0	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	1304	people
Peaking factor	=	6	Refer to Table T-5 of GESF for population 1,000 - 5,000 including stormwater allowance
Peak Flow (Without Swimming Pool)	=	22.2	litre/sec
Peak Flow (With Swimming Pool)	=	**32.6**	litre/sec

Table 2a Hydraulic Capacity at Sewers along Tung Yuen Street, Yau Tong

Segment	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Invert Level 1	Invert Level 2	g	k_s	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s^2	m		m^2/s	m/s	m^2	m^3/s	L/s
T0-S1	Terminal Manhole	FMH4034524	300	9.5	1.04	0.97	9.81	0.0015	0.007	0.000001	1.19	0.07	0.08	84

S4-S5	FMH4034510	Yau Tong Sewage Puminp Station	1425	6.4	-	-	9.81	0.0015	0.002	0.000001	1.50	1.59	2.38	2385

Remarks: (1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 1.5 mm is used with reference to Slimed uPVC Sewers, poor example in Table 5 of Sewerage Manual Part 1.

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used:

$$V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

(5) The pipe information in Table 2a is obtained from Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3)

(6) According to DSD Drainage Records, the downstream invert level of manholes FMH4034525 is missing, as a conservative approach, the slope of the upstream Segment (i.e. S1-S2) is used instead.

(7) According to DSD Drainage Records, the invert level of manholes FMH4034509 and FMH4034510 are missing, as a conservative approach, the slope 0.002 is used .

The Invert Level 1 is reference the FWD4036916 downstream 1.22mPD and the Invert Level 2 is reference the FWD4036741 downstream 0.98mPD with length

Table 3a Hydraulic Capacity of Sewers (Catchment A)

1. Full Bore of Pipes FWD4036773 and FWD4125280 (Assumption)

Pipe Reference	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Upstream Invert Level	Downstream Invert Level	g	k_s	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s^2	m		m^2/s	m/s	m^2	m^3/s	L/s
FWD4036773	FMH4034555	FMH4034556	600	38.9	1.89	1.86	9.81	0.006	0.001	0.000001	0.49	0.28	0.14	138
FWD4125280	FMH4099933	FMH4034556	225	6.1	2.15	2.10	9.81	0.006	0.008	0.000001	0.81	0.04	0.03	32
													Sub-total	170

Remarks:

(1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 6mm is used for the calculation of concrete sewer (based on Table 5: Recommended roughness values in Sewerage Manual)

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used: $V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$

(5) The pipe information is obtained from Geoinfo Map.

2. 18 Tung Yuen Street Application No A/K15/121

a. Sewage Generation rate at FMH4034557	=	91	m^3/day (from EPD)
b. Sewage Generation rate at FMH4034558	=	136	m^3/day (from EPD)
c. Total Dewerage Generate rate	=	227	m^3/day

3. With reference Planning Application No. A/K15/126 (https://www.tpb.gov.hk/tc/plan_application/Attachment/20200828/s16_A_K15_126_0_gist.pdf)

Residential

a. Total number of units	=	1393	units
b. Total number of residents	=	3483	people -- (average household size of 2.5 from Hong Kong 2021 Population Census -Yau Tong West)
c. Design flow	=	0.27	m^3/person/day -- (Private R1 in Table T-1 of GESF)
d. Sewage Generation rate	=	**940.3**	m^3/day

Club House

a. Assumed used area	=	950	m^2
b. Assumed floor area per employee	=	30.3	m^2 per employee -- (refer to Table 8 of CIFSUS - Community, Social & Personal Services)
c. Total number of employees	=	31	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-2 of GESF)
e. Design flow for commercial activities	=	200	litre/employee/day -- (refer to Table T-2 of GESF Job Type J11)
f. Sewage generation rate	=	**8.7**	m^3/day

Outdoor Swimming Pool

Assumed area	=	112.1	m^2
Assumed depth of water	=	1.5	m
Volume of water	=	168.2	m^3
Turnover Rate	=	6.0	hr (CAP132, Section 42 Swimming Pools Regulation (open air pool))
Surface loading rate of filter	=	50.0	$m^3/m^2/hr$
Filter areas required	=	0.6	m^2
Backwashing flow rate	=	30.0	$m^3/m^2/hr$
Design flow for backwashing	=	16.8	m^3/hr
Backwash duration	=	7.0	min/day
Backwash generation rate	=	1.96	m^3/day
Backwash generation rate	=	**4.67**	litre/sec

4. Residential (Other Proposed Residential Development ref. YTML No. 69 & YTIL No. 4RP) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate	=	627	m^3/day (from EPD)

5. Commercial (Kwun Tong Wholesale Fish Market and Tung Yuen Street Cooked Food Market) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewage Generation rate	=	30	m^3/day

6. Peninsula East (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate	=	193.5	m^3/day

7. Industrial (Redland Concrete Limited) (From Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3))

a. Sewerage Generate rate	=	27	m^3/day

Total Flow at Manhole S1 (FMH4034524), including Proposed Development and Catchment A

Flow Rate (Without Swimming Pool & Item 1 of Catchment A)	=	2373.4	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	2610.8	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	9670	people
Peaking factor	=	5	Refer to Table T-5 of GESF for population 5,000 - 10,000 including stormwater allowance)
Peak Flow (Without Swimming Pool)	=	307.7	litre/sec
Peak Flow (With Swimming Pool)	=	**322.8**	litre/sec

Table 3b Calculation for Sewage Generation Rate of the Existing Surrounding Building (Catchment B)

1. Yau Tongindustrial City Block A			
a. Assumed used area	=	47051	m^2
b. Assumed floor area per employee	=	43.5	m^2 per employee -- (refer to Table 8 of CIFSUS -Manufacturing)
c. Total number of employees	=	1082	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-3 of GESF)
e. Design flow for commercial activities	=	1000	litre/employee/day -- (refer to Table T-3 of GESF Yau Tong)
f. Sewage generation rate	=	**1168.6**	m^3/day
2. Yau Tongindustrial City Block B			
a. Assumed used area	=	36735	m^2
b. Assumed floor area per employee	=	43.5	m^2 per employee -- (refer to Table 8 of CIFSUS -Manufacturing)
c. Total number of employees	=	845	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-3 of GESF)
e. Design flow for commercial activities	=	1000	litre/employee/day -- (refer to Table T-3 of GESF Yau Tong)
f. Sewage generation rate	=	**912.6**	m^3/day
3. Union Industrial Building Blook A&B			
a. Assumed used area	=	9149	m^2
b. Assumed floor area per employee	=	43.5	m^2 per employee -- (refer to Table 8 of CIFSUS -Manufacturing)
c. Total number of employees	=	210	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-3 of GESF)
e. Design flow for commercial activities	=	1000	litre/employee/day -- (refer to Table T-3 of GESF Yau Tong)
f. Sewage generation rate	=	**226.8**	m^3/day
5. Gloria Weaving & Knitting Factory Limited			
a. Assumed used area	=	100052	m^2
b. Assumed floor area per employee	=	43.5	m^2 per employee -- (refer to Table 8 of CIFSUS -Manufacturing)
c. Total number of employees	=	2301	employees
d. Design flow for commercial employee	=	80	litre/employee/day -- (refer to Table T-3 of GESF)
e. Design flow for commercial activities	=	1000	litre/employee/day -- (refer to Table T-3 of GESF Yau Tong)
f. Sewage generation rate	=	**2485.1**	m^3/day

Total Flow of Catchment B			
Flow Rate (Without Swimming Pool & Item 1 of Catchment A)	=	4793.0	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	5272.3	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	19527	people
Peaking factor	=	4	Refer to Table T-5 of GESF for population 10,000 - 50,000 including stormwater allowance)
Peak Flow (Without Swimming Pool)	=	221.9	litre/sec
Total Flow at Manhole S3 (FMH4034509), including Catchment A and Catchment B			
Flow Rate (Without Swimming Pool & Item 1 of Catchment A)	=	7166.5	m^3/day
Flow Rate with inflow factor (Without Swimming Pool)	=	7883.1	m^3/day (Catchment Inflow Factor for East Kowloon = 1.1)
Population	=	29197	people
Peaking factor	=	4	Refer to Table T-5 of GESF for population 10,000 - 50,000 including stormwater allowance)
Peak Flow (Without Swimming Pool)	=	331.8	litre/sec
Peak Flow (With Swimming Pool)	=	**346.2**	litre/sec

Table 3c Calculation for Sewage Generation Rate of the Existing Surrounding Building (Catchment C)

1. Full Bore of Pipes FWD4036721 (Assumption)

Pipe Reference	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Upstream Invert Level	Downstream Invert Level	g	k_s	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s^2	m		m^2/s	m/s	m^2	m^3/s	L/s
FWD4036721	FMH4034501	FMH4034502	1125	42.2	1.15	0.97	9.81	0.006	0.004	0.000001	1.74	0.99	1.73	1732
													Sub-total	1732

Remarks:
(1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity
(2) The value of k_s = 6mm is used for the calculation of concrete sewer (based on Table 5: Recommended roughness values in Sewerage Manual)
(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)
(4) Equation used: $$V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$
(5) The pipe information is obtained from Geoinfo Map.
(6) Assumed sewage generated form Catchment C is discharged to FWD4036721 with full flow condition as a worst case scenario.

Total Flow at Manhole S1 (FMH4034524), including Proposed development, Cathment A, Catchment B and Catchment C

Peak Flow (Without Swimming Pool)	=	2063.6	litre/sec
Peak Flow (With Swimming Pool)	=	**2078.4**	litre/sec

Table 4 Hydraulic Capacity at Sewers After Upgrading

Segment	Manhole Reference	Manhole Reference	Pipe Dia.	Pipe Length	Invert Level 1	Invert Level 2	g	k_s	s	v	V	Area	Q	Estimated Capacity
			mm	m	mPD	mPD	m/s^2	m		m^2/s	m/s	m^2	m^3/s	L/s
T0-S1	Terminal Manhole	FMH4034524	300	9.5	1.04	0.97	9.81	0.0015	0.007	0.000001	1.19	0.07	0.08	84
S1-S2	FMH4034524	FMH4034525	825	41.7	0.97	0.94	9.81	0.0015	0.001	0.000001	0.71	0.53	0.38	379

S3-S4	FMH4034509	FMH4034510	1425	17.6	-	-	9.81	0.0015	0.002	0.000001	1.50	1.59	2.38	2385
S4-S5	FMH4034510	Yau Tong Sewage Puminp Station	1425	6.4	-	-	9.81	0.0015	0.002	0.000001	1.50	1.59	2.38	2385

Remarks:

(1) g=gravitational acceleration; k_s=equivalent sand roughness; s=gradient; v=kinematic viscosity of water; V=mean velocity

(2) The value of k_s = 1.5 mm is used with reference to Slimed uPVC Sewers, poor example in Table 5 of Sewerage Manual Part 1.

(3) The value of velocity (V) is referred to the Tables for the hydraulic design of pipes, sewers and channels (8th edition)

(4) Equation used:

$$V = -\sqrt{(8gDs)}\log\left(\frac{k_s}{3.7D} + \frac{2.51v}{D\sqrt{(2gDs)}}\right)$$

(5) The pipe information in Table 2a is obtained from Sewerage Impact Assessment for Proposed Development at YTML No. 57 and YTILs 4 sB & 9, and Adjoining Government Land, Yau Tong (R7481_v1.3)

(6) According to DSD Drainage Records, the downstream invert level of manholes FMH4034525 is missing, as a conservative approach, the slope of the upstream Segment (i.e. S1-S2) is used instead.

(7) According to DSD Drainage Records, the invert level of manholes FMH4034509 and FMH4034510 are missing, as a conservative approach, the slope 0.002 is used .

The Invert Level 1 is reference the FWD4036916 downstream 1.22mPD and the Invert Level 2 is reference the FWD4036741 downstream 0.98mPD with length

1. INTRODUCTION

1.1 Background

1.1.1 The Application Site is located at Yau Tong Marine Lot No.70, Tung Yuen Street (hereinafter collectively called "Application Site"). The Application Site is zoned as "Residential (Group E)" "R(E)" under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP). Figure 1.1 Shows the Location of the Application Site.

1.1.2 Ramboll Hong Kong Limited is commissioned by the Applicants to provide environmental consultancy services and prepare the relevant submissions to demonstrate the environmental sustainability of the Proposed Development for this Section 16 planning application.

1.1.3 The master layout plan (MLP) is provided by the project architect – P&T Group. The traffic forecast for vehicular emission impact assessment and road traffic noise impact assessment is provided by the project traffic consultant – MVA Asia Ltd.

1.2 Application Site and its Environ

1.2.1 The Application Site falls within an area zoned "R(E)" under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP). The area of the Site is about 2,419 m^2 and currently occupied by Wah Tung Godown Building.

1.2.2 The Application Site is bounded by Tung Yuen Street to the east and Ko Fai Road to the north. The surrounding areas are currently dominated by industrial and residential uses. Figure 1.1 Shows the Location of the Application Site and its environs.

1.3 Proposed Development

1.3.1 The Proposed Development consist of 1 residential tower, providing not more than 342 residential units. The residential tower is situated atop a 3 storeys podium for shop and services, eating place, and clubhouse with two level of basements for carparking and loading/ unloading spaces.

1.3.2 The residential towers have a various building height, ranging from ~ 80 mPD to ~ 100 mPD, and the level of first residential floor is ranging from 21.10 mPD.

1.3.3 Detailed development parameters can be referred to Table 1.1 below.

Table 1.1 Development Parameters of the Proposed Development

Tower		
No. of Residential Floors	25	19
Typical Floor Height (m)	1-18/F: 3.10 19/F: 3.4 20-24/F :3.15 25/F: 3.95	3.1
Floor Level of lowest Residential Floor (mPD)	21.10	
Building Height (mPD)	100	80
Ancillary Facilities	Shop and Services, Eating place (3 storeys podium)	
Total no. of residential Units	342	

Completion year	2032
Site Area (m^2)	2,419

1.3.4 The master layout plan, floor plans and section plan of the Proposed Development are shown in Appendix 1.1.

1.4 Key Environmental Issues and Study Approach

Noise

1.4.1 As mentioned, the Application Site is situated immediate to nearby carriageways including Tung Yuen Street and Ko Fai Road. Road traffic noise impact assessment (detailed in Section 3) was therefore conducted to address the potential adverse traffic noise impact that would be generated from these local roads.

1.4.2 Apart from road traffic noise impact, the Application Site is surrounded by various industrial establishments such as concrete batching plants, vehicle repair workshop, Kwun Tong Wholesale Fish Market, Tung Yuen Street Food Market, Yau Tong Saltwater Pumping Station and recycling workshop. In view of the Application Site is located in close proximity to the nearby industrial uses, an industrial noise impact assessment (detailed in Section 4) was carried out to address the potential adverse industrial noise impact on the Proposed Development.

1.4.3 There is no railway noise source identified in the vicinity within 300m of the Application Site and thus, no adverse railway noise impact is anticipated on the Proposed Development.

Air Quality

1.4.4 The Application Site is subject to the nearby emissions from road traffic, concrete batching plants, marine emissions and active chimneys in the industrial areas, so an air quality impact assessment was conducted to assess the air quality concentrations and to recommend mitigation measures, if applicable, to be incorporated in the Proposed Development. The quantitative air quality impacts are addressed in a separate assessment report.

Waste Management and Land Contamination Review

1.4.5 The historical land use and existing condition have been studied for the purpose to identify if there is/was any potentially land contaminating activity held onsite, and actions recommended to be taken afterwards. The details will be discussed in Section 5.

1.4.6 The potential waste management issues in connection with the construction and operation of the Proposed Development Sites will be discussed in Section 5. Waste management Practices and mitigation measures will be recommended in order to alleviate the impacts, where necessary.

1.5 Interim Industrial / Residential Interface

1.5.1 The presence of Industrial / Residential ("I/R") interface scenario has long been a circumstance when the Yau Tong Bay was first zoned as CDA. The Application Site is located at the southwestern fringe of Yau Tong Industrial Area (YTIA). Based on the information, the YTIA is rezoned to "CDA", "R(E)", and "Commercial" zone with the intention of phasing out the existing industrial activities. Currently there are still a number of existing industrial operations in the vicinity of the Application Site under other "CDA" sub-zones and "R(E)" zone, for example the fish market to the southwest

of the Application Site. According to the Notes of the OZP, the "CDA" zone is intended for comprehensive development/redevelopment of the area for residential and/or commercial uses with the provision of open space and other community and supporting facilities. Under the "R(E)" zone, existing industrial uses will be tolerated, while new industrial developments are not permitted in order to avoid perpetuation of I/R interface problems.

1.5.2 It should be emphasised that various recommendations based on the findings of this Environmental Assessment Report have been incorporated in the MLP of the Proposed Development with a view to fully addressing the interim I/R interface issues, including but not limited to the followings:

(i) Podium Design

Podium of 14.40mPD have been incorporated in the current design so that the residential uses start on elevated levels. It can reduce the air quality and noise impacts induced from the nearby roads, especially Tung Yuen Street and Ko Fai Road.

(ii) Building Layout / Orientation

Since the Application Site is located next to Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

(iii) Direct Noise Mitigation Measures – Enhanced Acoustic Balcony (Baffle Type) in ProPECC PN 5/23 (EAB (BT)- (EPD-PN)]

As mentioned in Section 3.7.6, EAB (BT)- (EPD) with sidewall are proposed for living rooms to mitigate the road traffic noise impact. The industrial noise modelling results shows that there is no exceedance for NSRs F1-01 and F1-02, which immediately next to the concrete batching plant. In fact, the sidewall in the provision of the EAB (BT)- (EPD) applied at F1-01 and F1-02 could be consider as an effective barrier to provide further protection and completely blocked the line of sight from the NSRs to the concrete batching plant. Thus, the predicted industrial noise level in F1-01 and F1-02 should be lower as than modelling results. To present a worst-case scenario, such barrier correction has not applied at the mentioned NSRs in the assessment.

1.5.3 It should be emphasised the findings of this environmental assessment report confirm that there would not be any adverse noise or air quality impact with respect to the Proposed Development. That is, the predicted road traffic and industrial noise levels would comply with the relevant standards and air pollutant concentrations and odour at the fresh air intake locations for the clubhouse would comply with the Air Quality Objectives and odour criterion respectively. Nevertheless, in view of the nearby industrial activities are occurring in close proximity of the Application Site, the applicants would provide channels to assist the future residents to deal with their complaints relating to I/R interface issues of the Proposed Development. For instance, a designated hotline would be setup by the future management office to handle complaints with respect to the interim I/R interface matters. The future management office would also help future owners actively communicate and liaise with the nearby industrial operators to minimise disruption to the future residents.

1.6 Structure of the Environmental Assessment Report

1.6.1 According to the appraisal above, the environmental assessment reports are set out as follows:

- Section 2 Construction Noise Impact Assessment
- Section 3 Road Traffic Noise Impact Assessment
- Section 4 Industrial Noise Impact Assessment
- Section 5 Land Contamination Review and Waste Management
- Section 6 Overall Conclusion of the Environmental Assessment

2. CONSTRUCTION NOISE IMPACT ASSESSMENT

2.1 Introduction

2.1.1 The noise impact assessment is prepared to evaluate potential construction noise impact to the surroundings and to recommend mitigation measures where practicable to attenuate the impact.

2.2 Construction Phase Impact

2.2.1 During the construction phase of the proposed development, major noise impacts would arise from piling works, operation of Powered Mechanical Equipment (PME), and construction-related traffic.

Construction Noise Criteria

2.2.2 Construction noise is controlled under the Noise Control Ordinance (NCO) which prohibits the use of powered mechanical equipment (PME) during the restricted hours (7 p.m. to 7 a.m. on normal weekdays and any time on a public holiday, including Sunday) without a valid Construction Noise Permit (CNP) from the Authority. The criteria and procedures for issuing such a permit are specified in the "Technical Memorandum on Noise From Construction Works Other than Percussive Piling" (TM1). While there is no planned construction works to be carried out during the restricted hours, TM1 should be followed in case there is any need to carry out works in such time period in future.

2.2.3 With effect from 1 November 1996, the use of specified powered mechanical equipment (SPME) for carrying out construction work other than percussive piling and/ or the carrying out of prescribed construction work (PCW) within a designated area are also brought under control. The relevant technical details are provided in the "Technical Memorandum on Noise from Construction Work in Designated Areas" (TM2).

2.2.4 Percussive pilling is controlled similarly by a construction noise permit system and described in the NCO and the "Technical Memorandum On Noise From Percussive Piling" (TM3) which restrict the number of hours during which piling can be conducted. Percussive piling is prohibited between 7 p.m. and 7 a.m. and on holidays (including Sundays). Percussive piling during the daytime (i.e. between 7 a.m. and 7 p.m. on any day not being a holiday) may be carried out in accordance with the permitted hours and other conditions under a valid construction noise permit.

2.2.5 For construction works other than percussive piling, although TM1 does not provide control over daytime construction activities, noise limits as shown in below Table are set out in the "Practice Note for Professional Persons Environmental Consultative Committee" (ProPECC) PN/1 issued in 2024.

Table 2.1 Noise Limit for Daytime Construction Activities

NSR	0700 to 1900 Hours on Any Day Not Being a Sunday or General Holiday, Leq (30 min), dB(A)
Dwelling	75
School	70 (65 during examinations)

Notes:

(i) The above standards apply to uses which rely on opened windows for ventilation;

(ii) The above standards shall be viewed as the maximum permissible noise levels assessed at 1 m from the external façade.

2.2.6 In all circumstances, future contractor will be required to exercise adequate mitigation measures to minimise potential construction noise impact on the surrounding noise sensitive uses.

Mitigation Measures

2.2.7 Sufficient noise mitigation measures should be introduced in the development to alleviate potential noise impacts on nearby NSRs. The Contractor(s) will be required under the contract to ensure regular maintenance of all plant and equipment, and that noise generation at source would be minimized and practicable noise mitigation measures would be in use. The Contractor(s) will be required to adopt quiet type construction plants (e.g. EPD's quality powered mechanical equipment (QPME) inventory), wherever practicable. Similarly, quieter method other than percussive piling will be adopted as far as practicable for any piling works subject to ground investigation result (which usually dictates the piling method). Movable noise barriers will also be erected around noisy plants in order to minimize noise generation at source. With these measures in place noise generation due to construction activities would be minimized.

2.2.8 The following general noise mitigation measures are recommended for implementation:

- Use of quieter equipment and construction method where practicable;
- Application of properly designed silencers, mufflers, acoustically dampened panels and acoustic sheds or shields, etc.;
- Use of electric-powered equipment where applicable instead of diesel-powered or pneumatic-powered equipment;
- Erecting noise enclosures/ movable noise barriers around noisy plants;
- Only well-maintained plants should be operated on-site;
- Plants should be serviced regularly during the construction programme;
- Noisy activities can be scheduled to minimize exposure of nearby NSRs to high levels of construction noise. For example, noisy activities can be scheduled for midday or at times coinciding with periods of high background noise;
- Noisy equipment such as emergency generators shall always be sited as far away as possible from noise sensitive receivers;
- Location of noise emitting plants at maximum possible distances from sensitive receivers;
- Contractual clauses for construction works; and
- Schedule of noisy operations during non-restricted hours where possible.

2.2.9 The above-mentioned noise mitigation measures will be included in the contractual clauses for implementation by the contractor(s) during the construction stage.

2.2.10 "Recommended Pollution Control Clauses for Construction Contracts" is available on EPD website. These clauses spell out the recommended noise control measures to be implemented by the contractor(s) during the construction stage of the Project. The

Project Proponent will include the "Recommended Pollution Control Clauses for Construction Contracts" in the construction contract(s).

2.2.11 With these measures in place, construction noise due to the Proposed Development can be minimized, and no significant noise impact is anticipated.

2.3 Conclusion

2.3.1 With the implementation of recommended mitigation measures, including the use of QPMEs, installing temporary noise barrier and enclosure for PMEs as required in ProPECC PN 1/24, quiet construction methods and applying good site practices and together with the clauses of the "Recommended Pollution Control Clauses for Construction Contracts" in the construction contract(s) implemented by the contractor(s), the noise impact generated during the construction works on the NSRs will be minimised.

3. ROAD TRAFFIC NOISE IMPACT ASSESSMENT

3.1 Introduction

3.1.1 This road traffic noise impact assessment is prepared to address road traffic noise impact on the noise sensitive uses of the Proposed Development and to recommend mitigation measures where practicable to attenuate the impact.

3.2 Assessment Criteria

3.2.1 Noise standards are recommended in Chapter 9, "Environment", of the Hong Kong Planning Standards and Guidelines (HKPSG) for planning against possible noise impact from road traffic, railway and aircrafts.

3.2.2 For the Proposed Development, only dwellings will rely on openable window for ventilation purpose. The clubhouse will be provided with air-conditioning system and will not be provided with any openable windows / openings for ventilation.

3.2.3 According to the guidelines, the criterion for road traffic noise impact on domestic premises (habitable rooms) is $L_{10(1\text{-hour})}$ 70dB(A). This criterion applies to uses which rely on openable windows for ventilation.

3.3 Assessment Methodology

3.3.1 In this assessment, the potential noise impact arising from nearby existing and future road carriageways on the development has been assessed. It involved the prediction of future noise impacts on Noise Sensitive Receivers (NSRs) arising from traffic flows along existing and future road carriageways situated within or in the vicinity of the Application Site. Calculation of predicted road traffic noise were based on the worst-case peak hour traffic flows projected within a 15-year period from the target completion date (Year 2032) of the Proposed Development. For worst-case scenario evaluation, the assessment year was chosen to be year 2047, which has the maximum forecasted traffic flow within the 15-year period. The year 2047 traffic forecast data is prepared by the project traffic consultant and attached in Appendix 3.1.

3.3.2 The U.K. Department of Transport's procedure "Calculation of Road Traffic Noise" (CRTN) has been applied to predict the hourly L10(1-hour) noise levels generated from road traffic at selected representative NSRs. Practicable environmental mitigation measures have been recommended, where necessary. The predicted noise levels were compared with the relevant HKPSG noise criterion (i.e., L10(1-hour) 70dB(A)).

3.3.3 Based on the site visit, the construction works at the YTIL 45 has already been started, the building blocks of the YTIL 45 is considered in this assessment as noise barriers.

3.4 Road Characteristics

3.4.1 Appendix 3.1 presents the predicted 2047 peak hour traffic data (i.e. road speed, traffic volume and percentage of heavy vehicle) on the main road carriageways surrounding the Application Site. The Tung Yuen Street is considered to be the dominant road traffic noise sources contributing on the Proposed Development. All roads are assumed with an impervious surface.

3.5 Noise Sensitive Receivers

3.5.1 All residential dwellings with openable windows/doors of habitable room (noise sensitive use) for prescribed ventilation purposes have been assigned with assessment points. All assessment points were taken at 1.2m above the floor and 1m away from

the facade of openable windows in rooms of sensitive use. Figure 3.1 shows the location of the NSRs of dwellings for road traffic noise impact assessment.

3.6 Road Traffic Impact Assessment Result (Base Case)

3.6.1 The assessment result for dwelling under base case scenario is presented in Detailed result is presented in Appendix 3.2 and summarised below.

Table 3.1 Assessment Result under Base Case Scenario

Scenario	Max Predicted Noise Level dB(A)	Total Number of Exceedances	Compliance Rate
AM	74	88	75%
PM	74	80	77%

3.6.2 Based on the result table above, scenario for AM peak flow is considered to be the worst-case scenario. Noise mitigation measures are recommended for the Proposed Development based on the AM scenario to attenuate the road traffic noise impact.

3.7 Proposed Road Traffic Noise Mitigation Measures

3.7.1 Noise mitigation measures have been duly studied and applied where practicable.

a. Podium Building

3.7.2 Since the Proposed Development on slope with the Tung Yuen Street at lower mPD level (+3.9 to +4.6 mPD) than the Proposed Development (+21.10 mPD FFL for first typical residential floor) podium (+14.40 mPD) has been provided to the Application Site. The podium would provide some shielding effects and increase the separation between the noise sources for the residential units.

b. Acoustic Window / Enhanced Acoustic Balcony (Baffle Type) (AW(BT)-(EPD-PN) / EAB(BT)-(EPD-PN)

3.7.3 Innovative noise mitigation measures are being explored in recent years. Baffle type acoustic windows and acoustic doors have been adopted for numerous residential developments for attenuating road traffic noise. It is understood that Environmental Protection Department (EPD) has issued the ProPECC PN 5/23 Application of Innovative Noise Mitigation Designs in Planning Private Residential Developments against Road Traffic Noise Impact (hereafter referred as "EPD-PN") for mitigating road traffic noise impact.

3.7.4 The reference cases in EPD-PN have been proposed in the Proposed Development. It refers to the type of window that has an inner sliding panel behind the outer opening, both readily openable, for creating an air gap for the supply of fresh air with noise mitigation effect. It comprises two glazing: -

(i) the outer window system with side hung openable window; and

(ii) the inner sliding panel.

3.7.5 The "designed setting" to reduce noise entering indoor area is achieved by placing the inner sliding panel behind the openable window, so that noise from outside cannot pass through the opening window and enter indoor area directly. As there is no gap at top and bottom of the sliding panel, direct transmission of sound energy into the habitable room is avoided. Instead, outdoor noise has to pass through the gap between the inner sliding panel and outer façade aside the opening window in order to enter indoor area. The design allows natural ventilation through the aforementioned gap (although extent of natural ventilation may be inferior to the case without the inner

sliding panel behind) and prevent most noise from entering indoor environment. According to the latest PNAP APP-130: "Lighting and Ventilation Requirements – Performance-based Approach", the proposed EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) are considered complying with prescribed ventilation requirement if the net opening when the inner sliding panel is moved to another side with least obstruction to the openable window at the outer façade.

3.7.6 A road traffic noise sound attenuation of EAB(BT)-(EPD-PN) with sidewall applied in 14m^2 living rooms reaches 8.0 dB(A), and AW(BT)-(EPD-PN) applied in 8m^2 bedroom can reach 6.0 dB(A). The indicative EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) design adopted in the Proposed Development is shown in Appendix 3.3.

3.7.7 The outer opening size & room size also play a significant role in affecting the sound attenuation performance. The sound attenuation performance provided by EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) increases with room size because of the longer reverberation time and lower reverberation effect in larger room. Due to the room size difference between the Proposed Development and the EPD-PN, further adjustment is needed and is made by accounting the difference between the room size between the Proposed Development and the EPD-PN. As a conservative approach, the corrected noise level would not be greater than the EPD-PN even the room size of the Proposed Development is larger than the EPD-PN. Appendix 3.4 shows the sound attenuation adjustment of EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) adopted in the Proposed Development. In case, the noise reduction of the proposed EAB(BT)-(EPD-PN) and AW(BT)-(EPD-PN) is higher than the residual exceedance, it is assumed that the reduction is equal to the residual exceedance for conservative assessment approach.

3.8 Road Traffic Impact Assessment Result (Mitigated Case)

3.8.1 The predicted road traffic noise effects on the selected NSRs based on the noise mitigation measures discussed above were assessed and presented in Appendix 3.5. With the implementation of the above recommended mitigation measure, full compliance can be achieved for the residential towers. The compliance rate would be 100%.

3.9 Conclusion

3.9.1 Road traffic noise impact assessment has been carried out for the Proposed Development.

3.9.2 Effective noise mitigation measures have been explored, which include podium building, acoustic window (baffle type), acoustic balcony (baffle type).

3.9.3 With the implementation of the above mitigation, no exceedance is found, i.e., 100% full compliance with the traffic noise standard. No adverse road traffic noise impact is anticipated for the Proposed Development. Figure 3.2 and Appendix 3.6 show the location and schedule of the consolidated noise mitigation measures respectively.

4. INDUSRTIAL NOISE IMPACT ASSESSMENT

4.1 Introduction

4.1.1 The aim of this study is to assess potential noise impacts arising from nearby industrial noise source of the industrial buildings and activities on the Proposed Development. Practicable noise mitigation measures would be recommended, where necessary.

4.1.2 There is a planning application (A/K15/129) of residential development is located at 18-20 Sze Shan Street southeast to the Proposed Development (hereinafter referred as "129 Approval Scheme") recently approved in 2023. The information from this recently approved planning application is referenced for this assessment. Site visits had been carried out in Aug, Sep, Nov, Dec 2023, and Feb, Oct and Nov 2024 to review and update the information of the industrial activities in the area in comparison with that identified in the 129 Approval Scheme. In general, the industrial noise sources identified in the 129 Approval Scheme remains. Apart from that identified in the 129 Approval Scheme, there is a temporary recycling workshop "全記" located north of the Ko Fai Road.

4.1.3 Since the Application Site is located next to Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

4.2 Assessment Criteria

4.2.1 Industrial noise impact assessment has been conducted in accordance with the Technical Memorandum for the Assessment of Noise from Places Other Than Domestic Premises, Public Places or Construction Sites (IND-TM), published under the Noise Control Ordinance (NCO). The IND-TM specifies the applicable Acceptable Noise Levels (ANLs) at Noise Sensitive Receivers (NSRs) which are dependent on the Area Sensitivity Rating (ASR) and the time period concerned. The ASR of NSR is determined based on the perceived usage of the study area and the presence of any influencing factors such as major roads, industrial areas, and airports.

4.2.2 The Application Site is located in urban area. Since there are a number of industrial establishments surrounding the site, such as Mai Tong Industrial Building, Ajisen Group Tower, Safer Industrial Building, Wholesale Fish Market, Redland Concrete Ltd., as well as other industrial buildings within 300m from the site etc), the Application Site is considered to be either directly or indirectly affected by these influence factors. According to the TM for the Assessment of Noise from Places or Construction Sites, an Urban Area with directly or indirectly affected by the Influence Factor is considered to having the Area sensitivity rating (ASR) of "C". Noise standards of 70 dB(A) and 60 dB(A) are adopted for daytime and night-time respectively.

4.2.3 For the façade facing away from the clusters of the industrial establishment, i.e. facing towards the Victoria Harbour, these façades are considered to be not affected by the influencing factor, and so ASR "B" is adopted.

4.2.4 Figure 4.1 shows the applicable ASR of the noise sensitive facades of the Proposed Development.

Table 4.1 Acceptable Noise Level (ANLs), dB(A)

Time Period	ASR	
	B	C
Day and Evening (0700 to 2300 hours)	65	70
Night (2300 to 0700 hours)	55	60

4.3 Industrial Noise Sources

Site Inspections

4.3.1 According to the recent site surveys carried out in Aug, Sep, Nov, Dec 2023, and Feb, Oct and Nov 2024, there are various industrial establishments in the vicinity of the Application Site. During site surveys, the industrial noise sources identified would include Saltwater Pumping Station, Redland Concrete Ltd., Kwun Tong Wholesale Fish Market, Tung Yuen Street Cooked Food Market, Tung Lee Motor Services Centre, Ko's Brother Hardware Shop, and Cooling Towers at the roof top of Ajisen Group. For the concrete batching plant at the eastern end of Tung Yuen Street, i.e. China Concrete Co. Limited, Hong Kong Concrete Co. Limited, their specified process licences have been expired. Additionally, to the further north of the Application Site, industrial noise generated from material screening and loading & unloading activities as well as were observed temporary recycling workshop "全記" at YTML No.1-4.

4.3.2 Although the Specified Process Licences (SP Licence) of China Concrete Co. Limited and Hong Kong Concrete Co. Limited has been expired and their zoning is for residential use, the industrial noise coming from these concrete batching plants will be considered in the assessment as a hypothetic conservative scenario.

4.3.3 Site inspections, for both day & evening time and night-time, were conducted in Aug, Sep, Nov & Dec 2023, and Feb, Oct and Nov 2024 to verify and update the industrial activities information, if necessary. Figure 4.2 shows the locations of the identified noise sources in the vicinity of the Application Site.

4.3.4 Photo records of site investigation are shown in Appendix 4.1.

Noise Measurement for the Industrial Activities

4.3.5 Noise measurements were carried out by using a calibrated Bruel&Kjaer (B&K) Precision Integration Sound Level Meter Type 2250L, which complies with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1). The weather condition was fine with calm wind during measurements, which satisfied the required criteria. The equipment was properly calibrated immediately prior to and following each measurement by a B&K Sound Level Calibrator Type 4321.

4.3.6 Sound Power Levels (SWLs) of the noise activities are determined in accordance with standard acoustical principles, and "International Standard ISO 3746: Acoustics – Determination of sound power levels of noise sources using sound pressure – survey method using an enveloping measurement surface over a reflecting plane" (herein referred as ISO 3746), where necessary and practicable.

4.3.7 For 全記, standard acoustic principle was adopted for measuring the noise level generated from the industrial activities carried out in it. Details is shown in Appendix 4.2.

4.3.8 Measurement locations and data of the industrial noise sources are shown in Appendix 4.2.

4.3.9 Calculations of the SWLs are shown in Appendix 4.3.

4.3.10 Table 4.2 below lists out the identified industrial noise sources and the respective SWLs based on the findings of recent site surveys. The derived SWLs have taken into account the acoustic characteristics of tonality, impulsiveness and intermittency, if any.

Table 4.2 Identified Industrial Noise Sources

Noise Sources	Observations	Key Noise Sources	Noise Source IDs	Type of Industrial Noise Sources (Point Source/ Area Source)	Sound Power Level (SWLs), dB(A)	
					Day & Evening time	Nighttime
China Concrete Co. Limited	General Description and Characteristics • As observed from site surveys, the plant is enclosed without any opening at the top and sides. The main openings were located at the entrance / exit in front of Tung Yuen Street. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 71.8 dB(A) to 81.9 dB(A). • Given the size of the openings are considerable large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.	Concrete Batching Plant (Concrete Lorry Mixer)	CCC_1	Area Source	96.3	Nil
		Concrete Batching Plant (Concrete Lorry Mixer)	CCC_2	Area Source	95.2	Nil
		Concrete Lorry Mixer Washing Bay	CCC_3	Area Source	100.4	Nil
		Concrete Lorry Mixer Washing Bay	CCC_4	Area Source	100.4	Nil
		Concrete Batching Plant (Tanker)	CCC_5	Area Source	94.3	Nil
		Concrete Batching Plant (Tanker)	CCC_6	Area Source	97.9	Nil
Hong Kong Concrete Co. Limited	General Description and Characteristics • Site inspections revealed that the concrete batching plant is enclosed without any opening at the top and sides, resulting in no direct line of sight of the concrete lorry mixed and the associated loading operation within the concrete batching plant to all NSRs of the Proposed Development. There are only openings at the entrance / exit in front of Tung Yuen Street. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 74.4 dB(A) and 82.8 dB(A). • Given the size of the openings are considerable large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.	Concrete Batching Plant (Concrete Lorry Mixer)	HKA_1	Area Source	102.4	Nil
		Concrete Batching Plant (Tanker)	HKA_2	Area Source	96.2	Nil
		Screw Pumping Barge	HKA_3	--	102.0	Nil
Kwun Tong Wholesale Fish market	General Description and Characteristics • According to site investigations and as confirmed with the staff of the Wholesale Fish Market, peak hours of the operation of Fish Market are 07:00 – 12:00 for day-time and 04:00 – 6:00 for night-time. During day-time (07:00-12:00), noisy activities include fish unloading activities from fishing boats and lorries from restaurants or supermarkets	Operation Noise	Day & Evening time: WFM_1;	Area Source	92.9	91.6

	picking up and packing from the Fish Market before noon which started from the early morning. During night-time (04:00-06:00), there are mainly fish unloading activities from fishing boats. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 64.3 dB(A) to 76.2 dB(A) for day-time and 63.3 dB(A) to 74.3 dB(A) for night-time. • Please refer to Appendix 4.2 for noise measurement details. Time Period of Operation • Both daytime and night-time operations were observed.		Night-time: WFM_1N			
		Loading and Unloading By Marine Vessels	Day & Evening time: WFM_2; Night-time: WFM_2N	Point Source	96.7	94.8
Cooked Food Stall	General Description and Characteristics • The Cooked Food Stall comprises two ordinary cooking stove equipment which are considered to be the major noise sources. Derivation of Sound Power Level • The measured noise levels of the opening was 63.8 dB(A). • Given the size of the openings are considerably large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • The operating hours is observed to be between 07:30 to 17:00. Thus, no night-time operation is anticipated.	Operation Noise	CFS_1	Area Source	75.3	Nil
Yau Tong Salt Water Pumping Station	General Description and Characteristics • The operational plant was enclosed within the building. It was observed that there were only small sized louvers and window that emit sound. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 71.4 dB(A) to 71.8 dB(A) for day-time and 63.9 dB(A) to 64.5 dB(A) at night-time. • Given the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • Both day-time and night-time operations were observed.	Operation Noise	WPS_1	Area Source	84.3	84.3
Tung Lee Motor Service Centre	General Description and Characteristics • Tung Lee Motor Service Centre is located at Shung Tak Wai to the further north of the Application Site. Based on observations from site surveys, the operation mainly involves insignificant grinding hammering and air-compressor noise. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 61.3 dB(A) to 61.9 dB(A). • Given the size of the openings are considerable large, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.	Operation Noise	TLM_1	Area Source	80.8	Nil
Redland Concrete Limited	General Description and Characteristics • The concrete batching plant is enclosed without any opening at the top and sides. There are only openings at the entrance / exit in front of Tung Yuen Street. Derivation of Sound Power Level (SWL) • The measured noise levels of the openings range from 74.8 dB(A) to 75.7 dB(A).	Operation Noise	RLC_1	Area Source	97.9	Nil

	• Given the size of the openings are considerably large and the close proximity between the noise source and the NSRs, the SWL is therefore derived in accordance with ISO 3746 (Please refer to Appendix 4.2 and Appendix 4.3 for noise measurement details and derivation of sound power level, respectively). Time Period of Operation • No night-time operation was being observed.					
	General Description and Characteristics • Two cooling towers were identified located at the roof of Redland concrete plant. According to observations from site surveys, the diameter of cooling towers are less than 4m. Derivation of Sound Power Level (SWL) • Since noise measurement was unable to conduct due to restriction of access, SWLs are derived from the SPL* provided from a catalogue in Appendix 4.5 based on their estimated size. For a conservative approach, two cooling towers are assumed as model FT-225 – FT-250 with SPL* of 63 dB(A). **SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level according to the catalogue in Appendix 3.5.* Time Period of Operation • No night-time operation was being observed.	Cooling Tower	RLC_2	Point Source	95.1	Nil
		Cooling Tower	RLC_3	Point Source	95.1	Nil
	Derivation of Sound Power Level (SWL) • Noise measurement was not able to conduct due to restriction of access. SWL used for the industrial noise impact assessment was referenced from “TECHNICAL MEMORANDUM ON NOISE FROM CONSTRUCTION WORK OTHER THAN PERCUSSIVE PILING” (GW-TM). Time Period of Operation • No night-time operation was being observed.	Derrick Barge	RLC_4	Point Source	102.0	Nil
全記	General Description and Characteristics • As observed from site surveys, the industrial activities of the recycling workshop mainly involve screening material and loading and unloading. • Derivation of Sound Power Level (SWL) • The measured noise levels of the activities about 105 dB(A). • Appendix 4.3 shows noise measurement details and derivation of sound power level, respectively). Based on the analysis of the measurement data, no tonality correction is to be adopted in the calculation. The analysis is also shown in Appendix 4.3. Time Period of Operation • No night-time operation was being observed during the site visits.	Operation Noise	QJ_1	Area Source	105.1	Nil

4.4 Assessment Methodology

4.4.1 Standard acoustical principles were adopted for prediction of cumulative industrial noise impact. In accordance with the “Technical Memorandum On Noise From Construction Work Other Than Percussive Piling”, a -10dB shielding correction was adopted where the line of sight from the representative NSR would be completely blocked by buildings or barriers. A façade correction of +3dB was assumed. Corrections for tonality, intermittency or impulsiveness shall be applied where necessary.

4.4.2 Figure 4.5 indicates the line-of-sight from the NSRs which applied the vertical fin for noise reduction.

4.5 Noise Sensitive Receivers

4.5.1 A total of 11 Representative NSRs of residential towers nearest to the identified noise sources have been selected for the assessment. The NSRs are taken at 1m away from the façade opening and 1.2m above the floor level of habitable rooms. Figure 4.4 shows the locations of the representative NSRs.

4.6 Assessment Result (Base Case)

4.6.1 From the results of industrial noise impact assessment, it is also found that the major industrial noise source which have significant contribution to Industrial noise at the NSRs are the concrete batching plant - Redland Concrete Limited, which is found to be the same findings of the adjacent residential development, the Coastline I and II. As such, mitigation measures would be required for mitigating these exceedances.

4.6.2 As mentioned in Section 3.7.6, EAB (BT)- (EPD) with sidewall are proposed for living rooms to mitigate the road traffic noise impact. The industrial noise modelling results shows that there is no exceedance for NSRs F1-01 and F1-02, which immediately next to the concrete batching plant. In fact, the sidewall in the provision of the EAB (BT)-(EPD) applied at F1-01 and F1-02 could be consider as an effective barrier to provide further protection and completely blocked the line of sight from the NSRs to the concrete batching plant. Thus, the predicted industrial noise level in F1-01 and F1-02 should be lower as than modelling results. To present a worst-case scenario, such barrier correction has not applied at the mentioned NSRs in the assessment.

4.6.3 A summary of predicted industrial noise levels at selected NSRs are tabulated in Table 4.3 below. Detailed calculations are shown in Appendix 4.4.

Table 4.3 Industrial Noise Impact Assessment Results under Unmitigated Scenario

NSR ID	ASR	Noise Criteria, dB(A)		Predicted Noise Level, dB(A)	
		Day & Evening, dB(A)	Nighttime, dB(A)	Day & Evening, dB(A)	Nighttime, dB(A)
F1-01	C	70	60	70	46
F1-02	C	70	60	68	41
F1-03	C	70	60	65	55
F1-04	C	70	60	65	52
F2-01	B	65	55	70	40
F2-02	B	65	55	69	40
F2-03	B	65	55	69	40
F2-04	B	65	55	68	40
F2-05	B	65	55	67	40
F2-06	B	65	55	67	40
F2-07	B	65	55	67	40

4.7 Proposed Industrial Noise Mitigation Measures

Building Layout / Orientation

4.7.1 Since the Application Site is located next to the Redland Concrete Ltd, single aspect building design has been adopted as a precautionary layout design to minimize the potential noise impact from this industrial noise activity, the similar approach of the adjacent residential development, the Coastline I.

Vertical Acoustic Fin

4.7.2 Full-height vertical acoustic fins with the length from 1.8 m to 2.5 m long are proposed at strategic locations to further reduce the view angle to nearby source.

4.7.3 It is understood that erection of vertical fins near NSRs would possibly create a semi-enclosure area and hence induce possible multi-reflection effect. To minimize the possible effect, sound absorptive material (SAM) is proposed at the surface and tip of all vertical fins.

4.7.4 The proposed fixed noise mitigation measures are shown in Figure 4.4 and Table 4.4.

Table 4.4 Detailed Schedule of Noise Mitigation Measures for Industrial Noise

NSR ID	Flat	Floor	Room	Noise Mitigation Measures
F2-01	1b	1/F – 19/F	MBR	2.5 m Vertical Fin
F2-02	1b	1/F – 19/F	BR	2.5 m Vertical Fin
F2-03	1b	1/F – 19/F	BR	2.5 m Vertical Fin
F2-04	1b	1/F – 19/F	LIV/DIN	2.5 m Vertical Fin
F2-05	1b	1/F – 19/F	LIV/DIN	1.8 m Vertical Fin
F2-06	1b	1/F – 19/F	BR	1.8 m Vertical Fin
F2-07	1b	1/F – 19/F	MBR	1.8 m Vertical Fin

4.8 Assessment Result (Mitigated Case)

4.8.1 The predicted Industrial noise levels at selected NSRs for mitigated scenario are tabulated in Table 4.5. Detailed calculation is shown in Appendix 4.6. With the proposed mitigation measures in place, all NSRs comply with industrial noise standard. No exceedance is found.

Table 4.5 Industrial Noise Impact Assessment Results under mitigated Scenario

NSR ID	ASR	Noise Criteria, dB(A)		Predicted Noise Level, dB(A)	
		Day & Evening, dB(A)	Nighttime, dB(A)	Day & Evening, dB(A)	Nighttime, dB(A)
F1-01	C	70	60	70	46
F1-02	C	70	68	68	41
F1-03	C	70	65	65	55
F1-04	C	70	65	65	52
F2-01	B	65	55	63	40
F2-02	B	65	55	62	40
F2-03	B	65	55	62	40
F2-04	B	65	55	62	40
F2-05	B	65	55	62	40
F2-06	B	65	55	62	40
F2-07	B	65	55	62	40

4.9 Conclusion

4.9.1 An industrial noise impact assessment has been carried out. No unacceptable noise impact is envisaged without noise mitigation measure in place.

4.9.2 In order to avoid adverse noise impact of the future industrial noise sources onsite on the surrounding NSRs, the future contractor shall ensure that the equipment within the Proposed Development would be designed and installed to meet the HKPSG criteria.

5. WASTE MANAGEMENT

5.1 Introduction

5.1.1 This section presents the management and disposal strategy of the wastes generated from the construction work and operation phase. The options for waste minimization, reuse, recycling, collection, transportation and disposal of wastes arising from the construction, demolition work and operation phase have been examined. Where appropriate, procedures for waste reduction and management are considered and environmental control measures for avoiding and minimising the potential impacts are recommended.

5.2 Legislation

5.2.1 The following legislations and guidelines are relevant to the handling, treatment and disposal of waste in HKSAR and references were made in assessing the potential impacts and their avoidance or mitigation:

- *Waste Disposal Ordinance (Cap. 354);*
- *Waste Disposal (Chemical Waste) (General) Regulation (Cap. 354C);*
- *Waste Disposal (Charges for Disposal of Construction Waste) Regulation (Cap. 354N);*
- *Practice Note for Authorized Persons and Registered Structural Engineers – Construction and Demolition Waste (PNAP ADV-19, also known as PN for AR&RSE No. 243);*
- *Public Health and Municipal Services Ordinance (Cap 132);*
- *Land (Miscellaneous Provisions) Ordinance (Cap 28);*
- Dumping at Sea Ordinance (Cap.466);
- *Monitoring of Solid Waste in Hong Kong 2023; and*
- *Project Administration Handbook (PAH) for Civil Engineering Works, Section 4.1.3 of Chapter 4.*

5.2.2 The following guidelines also relate to waste management and disposal:

- *Waste Disposal Plan for Hong Kong (1989);*
- *Hong Kong Planning Standards and Guidelines (HKPSG), Chapter 9 – Environment;*
- *WBTC No. 2/93, Public Dumps;*
- *WBTC No. 2/93B, Public Filling Facilities;*
- *WBTC No. 12/2000, Fill Management, Hong Kong SAR Government;*
- *WBTC No. 12/2002, Specification Facilitating the Use of Recycled Aggregates, Works Bureau, Hong Kong SAR Government;*
- *WBTC No. 32/92, The Use of Tropical Hard Wood on Construction Site;*
- *ETWB TC(W) No. 19/2005 Environmental Management on Construction Sites;*
- *DEVB TC(W) No. 2/2011, Encouraging the Use of Recycled and other Green Materials in Public Works Projects;*
- *DEVB TC(W) No. 6/2010, Trip Ticket System for Disposal of Construction & Demolition Materials, Development Bureau, Hong Kong SAR Government;*
- *DEVB TC(W) No. 8/2010, Enhanced Specification for Site Cleanliness and Tidiness, Works Bureau, Hong Kong SAR Government;*

- *CEDD TC No. 11/2019, Management of Construction and Demolition Materials;*
- *Code of Practice on the Handling, Transportation and Disposal of Asbestos Waste (1993) Environmental Protection Department;*
- *Code of Practice on Asbestos Control: Preparation of Asbestos Investigation Report, Asbestos Management Plan and Asbestos Abatement Plan (1997) Environmental Protection Department;*
- *ProPECC PN2/97, Handling of Asbestos Containing Materials in Buildings; and*
- *Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes, EPD (1992)*; and
- Guidance Note. No. 1/2024" under Dumping at Sea Ordinance, Cap. 466"

5.3 Assessment Methodology

5.3.1 The assessment of the potential waste management implications during the construction and operation phases of the Project has been conducted in accordance with Annexes 7 and 15 of the EIAO-TM, including the following tasks:

- Estimation of the types and quantities of the wastes generated;
- Evaluation of opportunities for waste reduction and re-use;
- Identification of disposal options for each type of wastes;
- Assessment of potential environmental impacts arising from the wastes management with respect of potential hazards, air and odour emissions, noise, wastewater discharge, and public transport; and
- Assessment of the impacts caused by handling, collection, transportation and re-use /disposal of wastes.

5.3.2 Prior to considering the disposal options for various types of waste, opportunities for reducing waste generation, on-site or off-site reuse and recycling have been evaluated. Measures which can be taken in the planning and design phases (e.g. by modifying the design approach) and in the construction phase for maximizing waste reduction have been separately considered. Practices to promote segregation of waste materials are additionally considered for advancing the waste management efficiency.

5.3.3 After considering the opportunities for reducing waste generation and maximizing reuse, the types and quantities of the waste required to be disposed of have been estimated and the disposal options for each type of waste have been described. The disposal method recommended for each type of waste has been taken into account the result of the assessment. The impacts caused by handling (including stockpiling, labelling, packaging and storage), collection and reuse / disposal of waste have been addressed and appropriate mitigation measures have been proposed.

5.4 Identification and Evaluation of Potential Impact during Construction Stage

5.4.1 The construction activities to be carried out for the proposed Project would generate a variety of wastes that can be divided into distinct categories based on their composition and ultimate method of disposal. The identified waste types include:

- Construction and Demolition (C&D) materials due to excavation and site formation;
- General refuse generated by the workforce;
- Chemical and oily wastes due to maintenance of equipment; and

- Asbestos Containing Materials (ACM)

Key sources of C&D materials

It is anticipated that the majority of C&D materials will be generated from the following key construction activities:

- Excavation of ground for basement of the Proposed Development;
- Demolition existing industrial buildings; and
- Building construction and superstructure works.

C&D Materials

5.4.2 C&D materials comprise mainly of unwanted materials, including surplus materials arising from excavations that are generated from the works (e.g. site clearance, demolition works of substructure, site formation works, excavation work for basement). Inert soft C&D materials comprise of soil, sand, clay, slurry, etc., while hard C&D materials comprise of crushed concrete, asphalt, rock, etc. The amount of non-inert C&D materials generated during site clearance would be minor (as there is little vegetation at the Application Site). C&D materials may comprise different types of materials, including:

- Inert C&D materials (also known as public fill, including soil, rock debris, rubble earth, concrete, etc.) do not decompose and are suitable to reuse as filling materials for land reclamation and site formation. Inert C&D materials could be reused on-site as filling materials. For those inert C&D materials that cannot be reused should be delivered to CEDD designated public fill reception facilities.
- Non-inert C&D materials (also known as C&D waste, including bamboo, timber, paper, metal, glass, plastic, packaging wastes, etc.). Non-inert C&D materials should be reused or recycled as far as possible. For those non-inert C&D materials that cannot be reused or recycled, they should be disposed of at designated landfill sites as last resort.

5.4.3 The general waste management strategy is to avoid waste generation in the first place. Should it be unavoidable, reduction and segregation at-source should be exercised as far as practicable, and recycling and reuse should be adopted at the same time to salvage all the recyclable and reusable materials as much as possible.

5.4.4 According to ETWB TC(W) 19/2005 on "Environmental Management on Construction Sites", waste management plan (WMP) becomes part of Environmental Management Plan (EMP) to be submitted to Architect/ Engineer for approval before construction works. The Project team will require the Contractor(s) to submit WMPs for approval. The WMPs will include appropriate mitigation measures to avoid, reduce, reuse and recycle C&D materials. It will ensure that the day-to-day operations on site comply with the approved WMPs. It will control the delivery of inert C&D materials and non-inert C&D materials to public fill reception facilities and landfills, respectively, through a trip-ticket system. It will require the Contractor(s) to separate public fill from C&D materials for delivery at appropriate facilities. It will record the delivery, reuse and recycling of C&D materials for monitoring purposes.

5.4.5 The site area of the Application Site is approximately 2,419m^2 with 1 existing industrial building. It is assumed that all buildings are 7-story with 3m floor height. Assuming the inert and non-insert materials produced during the demolition is 90% and 10%, 36,900m^3 and 4,100m^3 of inert and non-inert materials will be produced in this stage. For the area of the basement in the Proposed Development is 1,800m^2 with 9m depth (which is a conventional headroom for basement level). Considerations will be made to minimise the excavation extent as practicable as possible while ensuring the parking

provision can meet the HKPSG standard. It is estimated that 14,580m^3 and 1,620m^3 of inert and non-inert materials are generated from excavation, assuming 90% inert C&D materials and the remaining are non-insert C&D materials. During the building construction, appropriately 1,669 m^3 C&D materials will be produced. Assuming 90% are inert materials and 10% non-inert materials, 1,530m^3 and 170m^3 of inert and non-inert materials will be produced. Therefore, it is estimated that about 53,010m^3 of inert C&D material and 5,890m^3 of non-inert C&D material will be generated during the course of construction (including demolition, excavation and building construction). Adequate areas for sorting and storage of segregated materials should be provided onsite. Construction wastes shall be sorted, with the inert C&D materials broken up into small pieces for delivery at public fill reception facility, and the non-inert C&D materials should be disposed of at landfill.

5.4.6 The Contractor(s) should be responsible for ensuring that all on-site wastes will be collected by approved waste collectors and appropriate measures should be undertaken to minimise adverse impacts to the surrounding environment, such as dust generation. The Contractor(s) must also ensure that all necessary waste disposal permits have been obtained before actions.

5.4.7 Prior to disposal of non-inert C&D materials, it is recommended that wood, steel, glass and other metals will be collected separately for re-use and/or recycling and inert C&D materials utilized as fill materials to minimize the quantity of waste to be delivered to the Public Fill Reception Facilities and landfill. The details are shown in Table 5.1.

5.4.8 All the soil generated from the underground work should be refill on site to form the site to the required level. Other C&D materials should be used on-site as far as practicable.

5.4.9 Project Administration Handbook for Civil Engineering Works, Section 4.1.3 Management of Construction and Demolition Material Including Rock published by CEDD to enhance the management of C&D materials and to minimise their generation at source. The enhancement measures include drawing up a Construction and Demolition Material Management Plan (C&DMMP) at an early design stage to minimise C&D materials generation and encourage proper management of such materials.

5.4.10 Under DEVB TCW No. 6/2010 Trip Ticket System for Disposal of Construction and Demolition Materials, for all contracts that are expected to generate inert C&D materials requiring disposal from site, the project office should write to the Public Fill Committee (PFC) through Secretary of the PFC to request a designated disposal ground for incorporation into the tender documents. For contracts where the estimated amount of non-inert C&D materials requiring disposal at landfill facilities equals to or exceeds 50,000 m^3, the project office should seek confirmation from the DEP in terms of the availability of landfill facilities for disposal of such materials and the DEP would designate landfill facilities, if available, for the contracts. For contracts where the estimated amount of non-inert C&D materials to be generated from the contract is less than 50,000 m^3, the project office is not required to apply to DEP for designated landfill facilities, but it should still specify in the tender documents of the appropriate landfill facilities for disposal.

Chemical Waste

5.4.11 Construction plant and equipment will require regular maintenance and servicing, which would generate waste such as solvents, lubrication oil and fuel, etc. Chemical wastes arising during the construction phase may pose serious environmental, health and safety hazards if not stored and disposed of in an appropriate manner.

5.4.12 It is difficult to quantify the amount of chemical wastes as it will solely depend on the contractor's on-site maintenance practice and the quantities of plant and vehicles utilized at the construction site. Nevertheless, it is anticipated that the quantity of chemical waste such as lubrication oil and solvent produced from equipment maintenance would be small and less than hundred litres per month.

5.4.13 The contractor is required to register as a chemical waste producer if chemical wastes would be produced from the construction activities. The Waste Disposal Ordinance (Cap 354) and its subsidiary regulations in particular the Waste Disposal (Chemical Waste) (General) Regulation should be observed and complied with for control of chemical wastes. The amount of chemical waste to be generated shall be quantified in the Waste Management Plan (WMP) as part of the Environmental Management Plan (EMP) to be prepared by the Contractor in the subsequent construction stage. Also, the requirements to register with EPD as a chemical producer is observed and will be duly followed by the Project Proponent or its Contractor.

5.4.14 Storage, handling, transportation and disposal of chemical waste should be arranged in accordance with the Code of Practice on the Packaging, Labelling and Storage of Chemical Waste published by the EPD. Chemical wastes such as wasted solvents, lubrication oil and fuel, etc. will need special handling and storage arrangements and should be collected by licensed chemical waste collectors for subsequent disposal and appropriate treatment at licensed waste disposal facilities, for example the Chemical Waste Treatment Facility Centre (CWTC) in Tsing Yi. Mitigation and control requirements for chemical waste are provided in the "Recommended Pollution Control Clauses for Construction Contracts" available in EPD website mentioned the handling, storage and disposal of chemical wastes. With good management and site particles, adverse environmental impacts should not result.

General Refuse

5.4.15 Throughout the construction stage, the workforce would generate general refuse comprising food scraps, wastepaper, empty containers, etc. Release of general refuse into the nearby storm drain should not be permitted as introduction of these wastes is likely to have detrimental effects on water quality in the area. Effective collection of site wastes would be required to prevent waste materials being blown around by wind, flushed or leached into the surrounding environment, and odour nuisance. The work site may also attract pests and vermin if the waste storage area is not well maintained and cleaned regularly.

5.4.16 Recyclable materials (i.e., food scraps and container, paper, plastic bottles and aluminium cans) will be separated for recycling, in order to reduce the amount of general refuse to be disposed of at landfill. Adequate number of enclosed waste containers will be provided to avoid over-spillage of waste. The non-recyclable refuse will be placed in bags and stored in enclosed containers and disposed of on a daily basis to designated landfill.

5.4.17 With the implementation of recommended waste management practices at the site, adverse environmental impacts would not arise from the storage, handling and transportation of general refuse.

Asbestos Containing Materials (ACM)

5.4.18 Asbestos was widely used in the construction industry prior to the early 1980s for fireproofing, thermal and electrical insulation as well as in sound absorption materials. However, asbestos is currently recognized as hazardous materials, due to its etiological effects on human respiratory system.

5.4.19 As the Schemes involve the demolition of buildings/ structures that were built before 1980s, ACM may be present in the buildings within the Schemes. It is requires that all asbestos wastes must be disposed of at designated or licensed facilities. In Hong Kong, the only proven method of disposing of asbestos is by secure burial in a landfill site, so as to avoid the release of harmful asbestos fibres to environment and minimise potential hazard.

5.4.20 All ACM if confirmed to be present within the existing premises must be removed and disposed of in accordance with the Air Pollution Control Ordinance (APCO) and WDO prior to the demolition works. A Registered Asbestos Consultant and Registered Asbestos Laboratory shall be engaged to conduct investigation for the presence of ACM. An Asbestos Investigation Report, an Asbestos Abatement Plan (AAP) (if required) and a notification of commencement of asbestos abatement works commences. Also, the removal of ACMs should be carried out by a Registered Asbestos Contractor according to the approved AAP under the supervision of a Registered Asbestos Consultant. The asbestos waste generated shall be disposed of by a licensed chemical waste collectors in compliance with the WDO.

5.4.21 Table 5.1 below presents the estimation of waste generated during construction phase.

Table 5.1 Summary Table of Estimated Waste during Construction Phase

Construction activities	Factor / Assumption adopted	Estimated Quantities of C&D Materials Generated
Demolition of Existing Building	• Site Area:2,149 m^2 • Anticipate Existing Building Height: 21m (7-Story with 3m floor height) • Ratio for Inert and Non-Inert C&D Materials: 9:1	• Inert C&D Materials generated: 36,900 m^3 • Non-inert C&D Materials generated: 4,100m^3 ~0.5% (i.e.1,845m^3) would be reused or recycled on site or in other projects; and the remaining (i.e., 99.5%, ~35,055m^3) would be delivered to Public Fill Reception Facilities for another beneficial reuse. (c)(d)
Excavation of Basements	• Excavation Area:1,800 m^2 • Excavation Depth: 9m • Ratio for Inert and Non-Inert C&D Materials: 9:1	• Inert C&D Materials generated: 14,580 m^3 • Non-inert C&D Materials generated: 1,620m^3 • ~0.5% (i.e.729m^3) would be reused or recycled on site or in other projects; and the remaining (i.e., 99.5%, ~13,851m^3) would be delivered to Public Fill Reception Facilities for another beneficial reuse. (c)(d)
Construction of New Buildings/Structures	• GFA: 16,691m^2 • Ratio for Inert and Non-Inert C&D Materials: 9:1	• Inert C&D Materials generated: 1,530 m^3 • Non-inert C&D Materials generated: 170m^3

General refuse	• ~33 kg per day	• Recyclables to recyclers; • Non-recyclables to landfill
Chemical Waste	• Anticipated to be limited (not more than 50L of chemical waste)	• To be collected by licensed chemical waste collectors and deliver to Chemical Waste Centre

Note:

(a) The above estimated quantities are subject to detailed design.

(b) As the majority of sites are managed by private owners and still in operation, further investigation is required by the asbestos specialist after land resumption, when access to the sites becomes available.

(c) With total ~64, 444 tonnes inert/ non-inert C&D material, the number of dump truck is anticipated to be around 16 trucks/day (assuming each truck can carry 15 tones and there is around 270 working day per year)

(d) The destination of inert C&D materials is subject to the designation by the Public Fill Committee according to DEVB TC(W) No.6/2010

(e) The disposal of non- inert C&D materials is subject to agreement with relevant section of the EPD

5.5 Mitigation Measures During Construction Phase

5.5.1 The mitigation measures for construction phase are recommended based on the waste management hierarchy principles. Recommendations of good site practices, waste reduction measures as well as the waste transportation, storage and collection are described in following sub-sections.

Good Site Practices

5.5.2 Appropriate waste handling, transportation and disposal methods for all waste arisings generated during the construction phase should be implemented to ensure that construction waste do not enter the nearby sensitive receivers.

5.5.3 It is expected that adverse impacts from waste management would not arise, provided that good site practices are strictly followed. Recommendations for good site practices during construction include:

- Nomination of approved personnel, such as a site manager, to be responsible for good site practices, and making arrangements for collection of all wastes generated at the site and effective disposal to appropriate facilities;
- Training of site personnel in proper waste management and chemical waste handling procedures;
- Provision of sufficient waste disposal points and regular collection for disposal;
- Appropriate measures to minimise windblown litter and dust during transportation of waste by either covering trucks or by transporting wastes in enclosed containers;
- Regular cleaning and maintenance programme for drainage systems, sumps and oil interceptors.

5.5.4 In order to monitor the disposal of C&D material at landfills and public fill reception facilities, as appropriate, and to control fly tipping, a trip-ticket system should be included as one of the contractual requirements to be implemented by the Contractor. Reference shall be made to DEVB TCW No. 6/2010 for details.

Waste Reduction Measures

5.5.5 Good management and control can prevent the generation of significant amounts of waste. Waste reduction is best achieved at the planning and design stage, as well as

by ensuring the implementation of good site practices. Recommendations to achieve waste reduction include:

- Segregation and storage of different types of waste in different containers, skips or stockpiles to enhance reuse or recycling of materials and their proper disposal;
- Separate labelled bins shall be provided to segregate aluminium cans from other general refuse generated by the work force, and to encourage collection of by individual collectors;
- Any unused chemicals or those with remaining functional capacity shall be recycled;
- Maximising the use of reusable steel formwork to reduce the amount of c&d material;
- Prior to disposal of non-inert C&D material, it is recommended that wood, steel and other metals shall be separated for re-use and / or recycling to minimise the quantity of waste to be disposed of to landfill;
- Proper storage and site practices to minimise the potential for damage or contamination of construction materials;
- Plan and stock construction materials carefully to minimise amount of waste generated and avoid unnecessary generation of waste; and
- Minimize over ordering of concrete, mortars and cement grout by doing careful check before ordering.

5.5.6 In addition to the above good site practices and waste reduction measures, specific mitigation measures are recommended for the identified waste to minimise environmental impacts during handling, transportation and disposal of these wastes.

General Refuse

5.5.7 Recycle bins will be provided onsite to collect recyclable wastes such as paper, metal (e.g. cans), plastic and glass. Recyclable wastes will be segregated from non-recyclable waste to be stored in enclosed bins or compaction units. A reputable waste collector should be employed by the contractor to remove general refuse from the site on a daily basis. Recyclable waste will be collected in appropriate frequency to ensure no over stacking of recyclable wastes. An enclosed and covered area is preferred to reduce the occurrence of 'wind blown' light material.

5.5.8 For the food waste, it is recommended an adequate number of enclosed waste containers will be provided to avoid over-spillage of waste. Also, food waste will be placed in bags and stored in enclosed containers. The containers should be placed in prominent places to promote wate separation at the source. The food waste should be collected by daily basis to minimize any potential odour and environmental hygiene impacts.

Construction and Demolition Material

5.5.9 The C&D material generated from excavation should be sorted on-site into inert C&D material (that is, public fill) and non-inert C&D material. In order to minimise the impact resulting from collection and transportation of C&D materials for off-site disposal, the excavated material comprising fill material should be reused on-site as far as practicable. Non-inert C&D material, such as wood, plastic, steel and other metals should be reused or recycled and, as a last resort, disposed of to landfill.

5.5.10 The Applicant and its contractor will consider if "All dump trucks engaged on-site for delivery of inert and non-inert C&D material from the site to the designated disposal location, including PFRFs, landfill etc., should be equipped with GPS or equivalent system for tracking and monitoring of their travel routings and parking locations by the Contractor to prohibit illegal dumping and landfilling of materials." and "The data collected by GPS or equivalent system should be recorded properly for checking and analysis the travel routing and parking locations of dump truck engaged on site." are appropriate in the construction phase. Disposal and transportation of C&D materials are recommended before foreseeable inclement weather such as typhoon or heavy rain.

5.5.11 Suitable areas should be designated within the site for temporary stockpiling of C&D material and to facilitate the sorting process. Within stockpile areas, the following measures should be taken to control potential environmental impacts or nuisance:

- Covering material during heavy rainfall;
- Locating stockpiles to minimise potential air quality, water quality and visual impacts; and
- Minimising land intake of stockpile areas as far as possible.

Chemical Wastes

5.5.12 For those processes which would generate chemical waste, it may be possible to find alternatives to eliminate the use of chemicals, to reduce the generation quantities or to select a chemical type of less impact on environment, health and safety as far as possible.

chemical wastes are produced at the construction site, the Contractor should register with EPD as a Chemical Waste Producer and to follow the guidelines stated in the Code of Practice on the Packaging, Labelling and Storage of Chemical Wastes. Good quality containers compatible with the chemical wastes should be used. Appropriate labels should be securely attached on each chemical waste container indicating the corresponding chemical characteristics of the chemical waste, such as explosives, flammable, oxidising, irritant, toxic, harmful, corrosive, etc. The Contractor shall use a licensed chemical waste collector to transport, and disposal of the chemical wastes generated at the Chemical Waste Treatment Centre at Tsing Yi, or other licenced facility, in accordance with the Waste Disposal (Chemical Waste) (General) Regulation.

Asbestos Containing Materials

5.5.13 Due to the potential presence of ACM during the site clearance stage, asbestos investigation is required. An asbestos specialist shall be employed during the design and construction stage to investigate this issue.

5.5.14 Sufficient and reasonable lead time shall be allowed for the preparation, vetting and implementation of asbestos investigation report and asbestos abatement plan in accordance with APCO before commencement of any demolition or site clearance work.

5.5.15 Asbestos waste will be handled in accordance with the Code of practice on the Handling, Transportation and Disposal of Asbestos Waste issued by the EPD.

5.5.16 Some key precautionary measures related to the handling and disposal of asbestos based on Handling of Asbestos Containing Materials in Buildings (ProPECC PN 2/97) are listed as following:

- Adoption of protection, such as full containment, mini containment, or segregation of work area;
- Provision of decontamination facilities for cleaning of workings, equipment and bagged waste before leaving the work area;
- Adoption of engineering control techniques to prevent fibre release from work area, such as use of negative pressure equipment with high efficiency particulate air (HEPA) filters to control air flow between the work area and the outside environment;
- Wetting of asbestos containing materials before and during disturbance, minimising the breakage and dropping of asbestos containing materials, and packing of debris and waste immediately after it is produced;
- Cleaning of work area by wet wiping and vacuuming with HEPA filtered vacuum cleaner;
- Coating on any surfaces previously in contact with or contained by asbestos with a sealant;
- Proper bagging, safe storage and disposal of asbestos and asbestos contaminated waste;
- Pre-treatment of all effluent from the work area before discharged; and
- Air monitoring strategy to check the leakage and clearance of the work area during and after the asbestos work.

Marine Sediment

5.5.17 At this planning stage, there is no detailed information about the land-based sediment. As shown in the MLP, the concrete structure of the proposed basement carpark reaches -4.65mPD. With reference to the surrounding Drillhole Record of project "East Kowloon Sewerage Improvements and Pollution Control, Stage I" (Appendix 5.1), there is no marine deposits were observed above -2.18mPD. However, once the relevant information is available and land-based sediment is confirmed, the Consultant shall adequately address the potential environmental impacts. Meanwhile, it is recommended that the marine sediment would be reused onsite as much as possible; otherwise, the handling and disposal of these excavated materials in accordance with "Guidance Note. No. 1/2024" under the Dumping at Sea Ordinance, Cap. 466" and "Dumping at Sea Ordinance (Cap.466)".

5.6 Identification and Evaluation of Potential Impact during Operation Phase

5.6.1 During operation of the project, there will be waste generation from residential and recreational such as glass, metals, paper, plastics, food wastes, textile, wood, household hazardous wastes and others. Instead, general waste is anticipated to be the major type of waste generated during the operation of the proposed development. With reference to the latest data from "Monitoring of Solid Waste in Hong Kong 2023" by EPD, the per capita disposal rates of municipal solid waste, domestic waste, commercial & industrial waste are respectively 1.44 kg/person/day, 0.89 kg/person/day and 0.55 kg/person/day (Plate 2.7 of Waste Statistics for 2023). Among domestic and commercial waste, the recovery rate is 21% and 46% respectively (Plate 3.2 of Waste Statistics for 2023). Based on the Proposed Development with around 855 residential population and 42 working population, there will be around 614kg/day of waste generation (i.e. 0.89/ (1-21%) x 855 + 0.55/ (1-46%) x 42). With adequate

waste collection/storage facilities provided to segregate recyclable and non-recyclable wastes, the burden of waste treatment facilities in Hong Kong will be reduced. In addition, the applicant will explore in detailed design stage to collect these recyclable wastes mentioned above to further reduce waste generation.

5.6.2 The refuse shall be properly managed by suitable waste collectors so that intentional or accidental release to the surrounding environment will not occur. Storage of general refuse would generate odour nuisance and visual impact if they are not managed in a proper manner. Vermin and pests may also be attracted if the waste containers are not cleaned or maintained properly and frequently. Therefore, general refuse should be temporarily stored in proper containers with covers to avoid adverse impact to the surroundings. To reduce waste and improve recycling, sufficient properly labelled recycling bins for paper, plastic and aluminium should be provided at appropriate locations of the site to collect recyclables for off-site recycling. Regular (e.g., daily) waste removal and recyclables collecting should be arranged to avoid odour nuisance or pest/vermin problem. These waste management practices and good site practises should be properly implemented to ensure adverse environmental impacts from handling and disposal of general refuse would not arise.

5.6.3 For the food wastes such as leftovers, it is recommended an adequate number of enclosed waste containers will be provided to avoid over-spillage of waste. Also, leftovers will be placed in bags and stored in enclosed containers. Rather than disposing of the food waste to the designated landfill directly, the project proponent is recommended to deliver the food waste to the Organic Resources Recovery Centre (ORRC) to reduce the pressure on the existing landfill. Therefore, the chances of odour nuisance and hygiene issues are reduced.

Chemical Waste

5.6.4 Chemical waste will be generated from various routine maintenance and servicing activities for air conditioning systems, and other electrical and mechanical equipment. Chemical waste such as waste lubricating oil, contaminated rags, waste paint, used solvents and spent chemicals are expected to be generated from these activities. It is difficult to quantify the amount of chemical waste that will arise from those activities at this stage since it will be dependent on the equipment maintenance requirements and the amount of equipment utilised.

5.6.5 Chemical wastes arising during the operation phase may pose environmental, health and safety hazards if not stored and disposed of in an appropriate manner as stipulated in the Waste Disposal (Chemical Waste) (General) Regulations. The potential hazards include:

- Toxic effects to workers;
- Adverse impacts on water quality and wildlife from spills; and
- Fire hazards.

5.6.6 Chemical wastes will require special handling and storage arrangements in accordance with the relevant regulations before off-site disposal at the approved Chemical Waste Treatment Facility or recycling by licensed facilities. Provided that the handling, storage and disposal of chemical wastes will be in accordance with these requirements, adverse environmental impacts will not be expected.

5.7 Conclusion

5.7.1 The types of wastes which may be generated from the construction and operation of the Project have been identified. The quantities of waste shall be estimated during the later project design stage when more information is available. The storage, handling and disposal of the identified wastes shall follow relevant guidelines in order to minimize potential environmental nuisance to the nearby sensitive receivers.

6. PRELIMINARY LAND CONTAMINATION REVIEW

6.1 Assessment Criteria for Preliminary Land Contamination Review

6.1.1 This preliminary land contamination review has been prepared following the below guidelines published by EPD:

- *Guidance Manual for Use of Risk-Based Remediation Goals for Contaminated Land Management (RBRGs), EPD, Revised in April 2023*
- *Guidance Note for Contaminated Land Assessment and Remediation, EPD, Revised in April 2023*; *and*
- *Practice Guide for Investigation and Remediation of Contaminated Land (EPD's Practice Guide), EPD, Revised in April 2023*

6.1.2 As the RBRGs and the EPD's Practice Guide were the latest guidelines promulgated for use in August 2007 and August 2011 respectively, the RBRGs criteria and the requirements stated in the EPD's Practice Guide will be adopted in this land contamination review.

6.2 Review of Historical and Currently Available Information

6.2.1 The Application Site is zoned as "Residential (Group E)" (RE) under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP).

6.2.2 The Subject Site comprises an industrial building, (i.e., Wah Tung Godown). The building was 6 storeys high without basements.

6.2.3 In the aerial photograph taken in 1963 by the Lands Department (LandsD), the Application Site was depicted as a sea area. Reclamation work began around 1964, and by 1967, the Application Site had been formed and become vacant land. In 1977, a building (i.e., Wah Tung Godown Building) was constructed at Lot No. YTML 70. It is important to note that the building at YTML 70 has remained unchanged until the present day.

6.2.4 Upon review of the aerial photographs in Years 1963, 1964, 1967, 1972, 1976, 1977, 1982, 1987, 1992, 1997, 1998, 2003, 2008, 2013, 2018, and 2022 from the Lands Department (LandsD), the land uses of the Subject Site are summarized in Table 6.1. The relevant aerial photographs from LandsD are presented in Appendix 6.1.

Table 6.1 Historical Landuse Summary of the Subject Site

Period / Year	Landuse / Description	Off-Site Properties	Sources of Information
	YTML70		
1963	The Application Site was a sea area.	N.A.	Aerial photographs from LandsD
1964	The Application Site was a sea area.	N.A.	Aerial photographs from LandsD
1967	The Application Site was being formed by reclamation and become vacant land.	N.A.	Aerial photographs from LandsD
1972	The Application Site was become vacant land.	N.A.	Aerial photographs from LandsD
1976	The Application Site was become vacant land.	N.A.	Aerial photographs from LandsD

Period / Year	Landuse / Description	Off-Site Properties	Sources of Information
	YTML70		
1977	A building (i.e., Wah Tung Godown Building) was constructed.	N.A.	Aerial photographs from LandsD
1982 - 1992	No landuse change for the Application Site.	N.A.	Aerial photographs from LandsD
1997	No landuse change for the Application Site.	Redland Concrete Batch Plant	Aerial photographs from LandsD
1998	No landuse change for the Application Site.	Redland Concrete Batch Plant	Aerial photographs from LandsD
2003-2022	No landuse change for the Application Site.	Redland Concrete Batch Plant	Aerial photographs from LandsD

Site Inspection and Observation

6.2.5 Desktop review and site inspection to the Application Site was conducted on Nov, Dec 2023 and Feb, Oct, Nov 2024. Photo records are provided in Appendix 6.2.

6.2.6 For the building (i.e., Wah Tung Godown Building) at YTML 70, it is observed that the ground floor generally consists of car park. There were no aboveground / underground oil storage tanks, chemicals and dangerous goods observed to be stored on site during the site visit. Besides, the site was fully paved with good condition. However, due to the nature of the existing industrial building, potential land contamination issues need to be ascertained in later stage.

6.2.7 On the other hand, it is observed that a Redland Concrete Batch Plant is located immediately adjacent to the south of the Application Site. As the plant are still in operation access was not granted, a site inspection outside the plant was also conducted. It is observed that the ground floor generally consists of the carpark for loading/ unloading activities, and the ground of the plant was fully paved in good condition. Nevertheless, considering the nature of the plant, it could be considered a potential land contamination source.

Information available from BRAVO website

6.2.8 Building Records Access and Viewing On-line (BRAVO) of Buildings Departments (BD) was visited to obtain records for completed private buildings. It is observed there is one (1) building plan for the Application Site. There were no basement and aboveground / underground oil storage tanks are observed in the building plan. The ground floor generally consists of car park for loading/ unloading activities. The captured shown of BRAVO is provide in Appendix 6.3.

Information from Government Department

6.2.9 Apart from the historical aerial photos, the following Hong Kong Special Administration Region (HKSAR) Government Departments have been enquired on the latest update on the availability of land contamination and/or spillage (i.e. (i) Dangerous Goods Incidents, (iv) Explosive Storage/Spillage, (v) Spillage/Leakage of Chemical or Dangerous Goods; and (vi) Fire Incidents) for Subject Site. The summary of correspondence is tabulated in Table 6.2 below. Copy of the response letters and emails are included in Appendix 6.4.

6.2.10 As advised by Environmental Protection Department (EPD), there are 3 chemical waste producer registrations in the Application Site.

6.2.11 As advised by Civil Engineering and Development Department (CEDD), There are no licences issued for the manufacture, storage, or use of explosives in the Application Site, and no records indicating that any incidents related to explosives occurred in the concerned area.

6.2.12 As advised by Lands Department, they are not in a position to provide on the land contamination issues.

6.2.13 As advised by Fire Services Department, there are no records of dangerous goods license, fire incidents nor incidents of spillage/ leakage of dangerous goods were found at Subject Site.

Table 6.2 Enquiries and Responses on Land Contamination Issue

Consultant's Letter Ref.	Department	Response Letter Ref.	Response Date	Summary
CRC_4TYSEI00_0_0002L.24	Environmental Protection Department (EPD)	Email	4 March 2024	No record of a chemical spillage/leakage accident at the Application Site in past 5 years. 3 chemical waste producer registrations in the Application Site
CRC_4TYSEI00_0_0003L.24	Fire Services Department (FSD)	(63) in FSD GR 6-5/4 R Pt.52	25 March 2024	No records of dangerous goods license, fire incidents nor incidents of spillage/ leakage of dangerous goods were found at Subject Site.
CRC_4TYSEI00_0_0004L.24	Planning Department (PlanD)	K-15/100	18 April 2024	Not in a position to provide on the land contamination issues.
CRC_4TYSEI00_0_0005L.24	Lands Department (LandsD)	(167) in DLOKE 852/KPA/ 63	8 April 2024	Not in a position to provide on the land contamination issues.
CRC_4TYSEI00_0_0006L.24	Civil Engineering and Development Department (CEDD)	() in CEDD-MIN-06-20-1	7 March 2024	There are no licences issued for the manufacture, storage, or use of explosives in the Application Site, and no records indicating that any incidents related to explosives occurred in the concerned area.

Discussion

6.2.14 The whole Application Site was formed by reclamation in the 1960s and was vacant until 1977. From 1977 to 1997, a building structure was observed at YTML 70, with the land use as an industrial building. The building at YTML 70, known as Wah Tung Godown Building, have remained unchanged to this day.

6.2.15 Based on the desktop review and site inspection, considering the nature of the existing industrial building and land uses, it is concluded that the Application Site has a potential land contamination issue related to its historical land use. The potential land contamination issue needs to be ascertained in later stage.

6.3 Conclusion

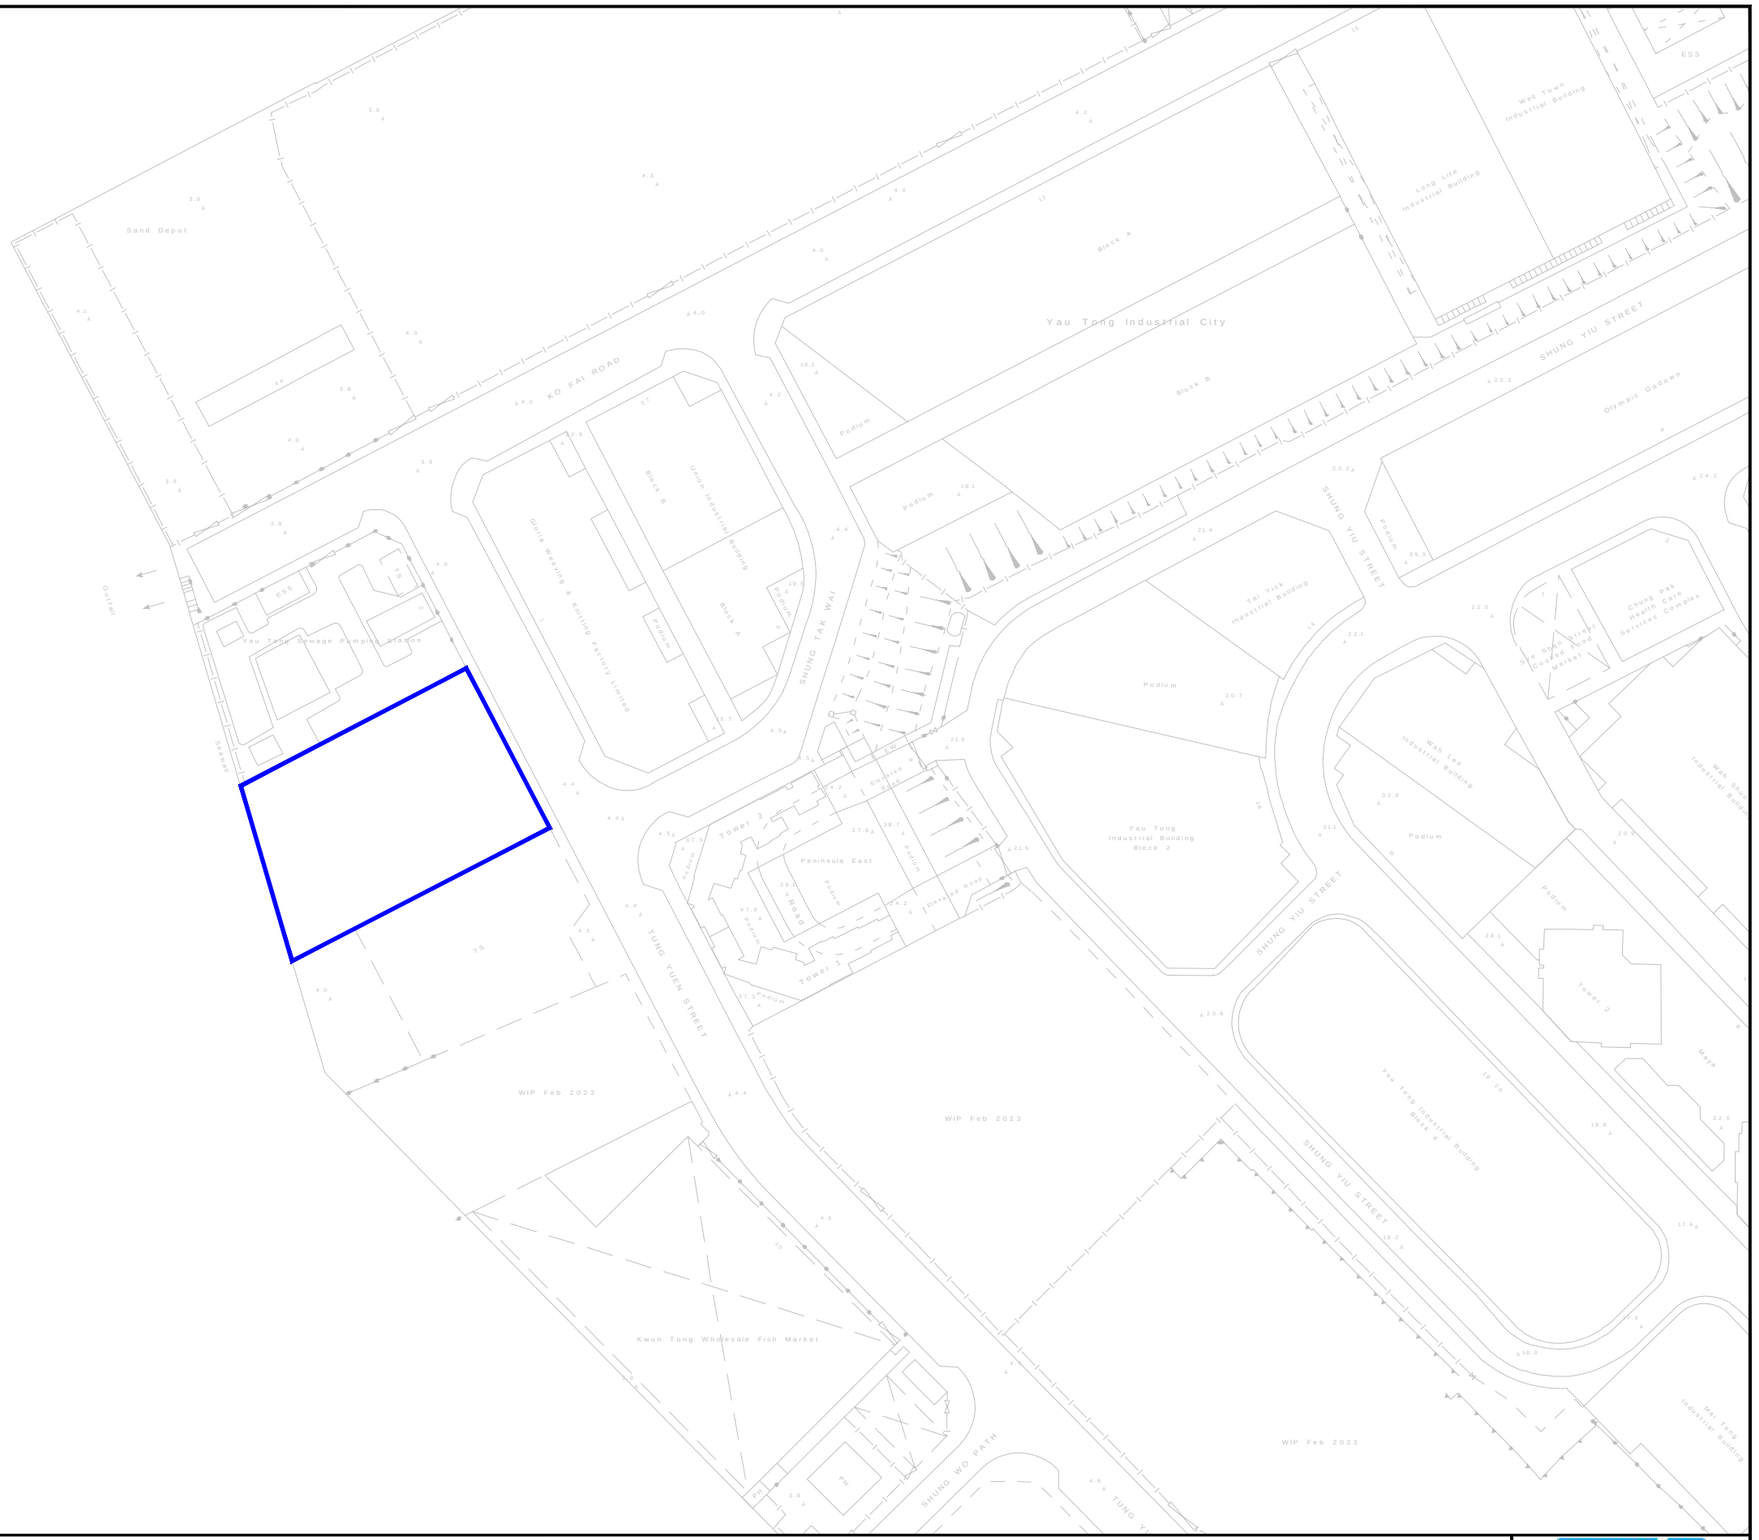
6.3.1 A preliminary land contamination review has been conducted for the Application Site. Historical aerial photos from Lands Department and building plans from Buildings Department have been reviewed. Site inspection has also been conducted to identify the potential land contamination in the Application Site.

6.3.2 In considering the nature of existing industrial building at the Application Site and the surrounding land use, further site investigations shall be conducted to determine whether potential contamination sources are present at the Application Site subject to the findings of site investigation, a detailed land contamination study and hence Contamination Assessment Plan (CAP), Environmental Site Investigation (SI) and Contamination Assessment Report (CAR), if necessary, is recommended to be conducted and prepared in the later stage to determine the presence and extent of contamination on the Subject Site. The Consultant shall agree with EPD on the Contamination Assessment Plan before undergoing site investigation works.

6.3.3 Further land contamination assessment and/or remediation works will be completed before commencement of any construction works for the development, in accordance with relevant guidelines issued by government departments.

7. OVERALL CONSULSION

7.1.1 In order to confirm the environmental acceptability of the Proposed Development, an Environmental Assessment was carried out to examine the impacts associated with the Proposed Development. Potential environmental impacts, including air and noise impact have been assessed. Quantitative Air quality Impact Assessment is included in separation submission.



7.1.2 According to the road traffic noise impact assessment and industrial noise impact assessment, with the implementation of appropriate noise mitigation measures, the Proposed Development shall not be subject to adverse road traffic noise and industrial noise impact.

7.1.3 Due to the usage of the Project Site (i.e., industrial building and concrete batch plant), there are potential land contamination issues associated. Detail study will be carried out at later stages. The land contamination assessment and/or remediation works will be completed before commencement of any construction works for the development, if the later stage assessment demonstrated the land is contaminated.

7.1.4 With the implementation of the waste management measures, no adverse impact is anticipated due to the waste generated during construction and operational stages.

7.1.5 This Environmental Assessment confirms the feasibility of the Proposed Development from an environmental point of view.

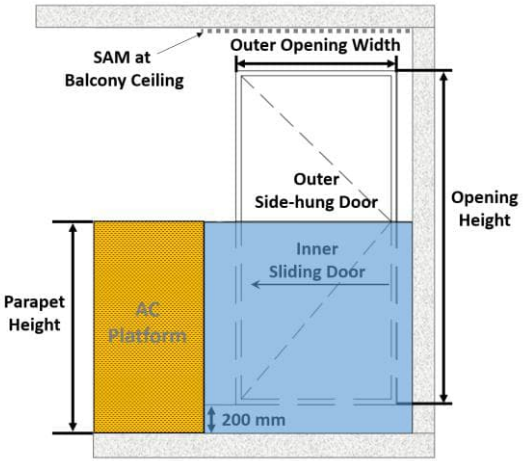
Appendix 3.3 Indicative Design of EAB(BT)-(EPD-PN) & AW(BT)-(EPD-PN) Adopted in the Proposed Development

(I) Possible design of "Acoustic Window (Baffle Type)" for 8m² and 18m² habitable rooms (i.e. dining room, living room or bedroom)

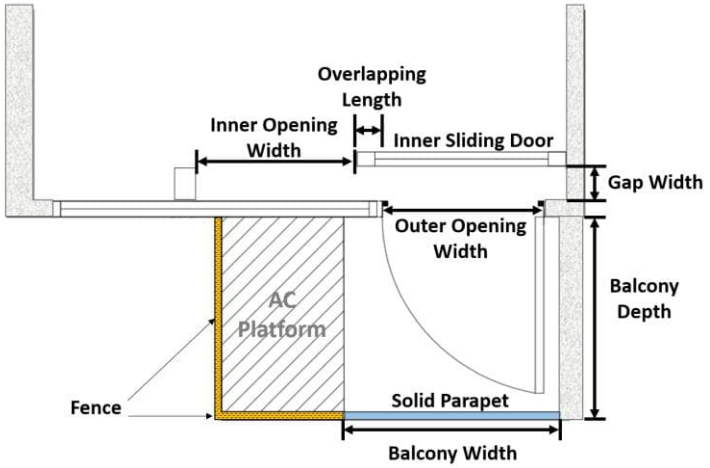
INTERNAL VIEW (NOT TO SCALE)

PLAN (NOT TO SCALE)



Possible Designs of "Acoustic Window (Baffle Type)" for 8m² and 18m² rooms					
Room Size (m^2)	**Room Dimensions (mm^3)**	**Inner Window Opening (mm^2)**	**Outer Window Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
8	**3200 (W) x 2500 (D) x 3400 (H)**	**580 (W) x 870 (H)**	**600 (W) x 870 (H)**	**≥ 100**	**100 to 175**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**750 (W) x 1500 (H)**	**750 (W) x 1500 (H)**	**≥ 100**	**100 to 175**

Notes:



a. These are feasible designs of AW(BT) for 8m² and 18m² rooms.

b. For optimum performance of noise reduction, the air gap should have a pane-to-pane overlapping length of ≥ 100mm and a gap width between 100mm and 175mm, with the inner sliding glass panel in a closed position. The window pane shall be ≥ 6mm in thickness.

(II) Possible designs of "Enhanced Acoustic Balcony (Baffle Type)" in 14m^2 and 18m^2 habitable rooms (i.e. dining room, living room or bedroom)

EXTERNAL VIEW (NOT TO SCALE)

PLAN (NOT TO SCALE)

Fence (≥ 70% Permeability) Solid Parapet

Possible Designs of "Enhanced Acoustic Balcony (Baffle Type)" for 14m^2 and 18m^2 rooms								
Room size (m^2)	**Room Dimensions (mm^3)**	**Balcony Width (mm)**	**Balcony Depth (mm)**	**Parapet Height (mm)**	**Inner Opening (mm^2)**	**Outer Opening (mm^2)**	**Overlapping Length (mm)**	**Gap Width (mm)**
14	**3400 (W) x 4100 (D) x 3100 (H)**	**≥ 1440**	**≥ 1300**	**≥ 1450**	**1025 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**
18	**5300 (W) x 3390 (D) x 3400 (H)**	**≥ 2055**	**≥ 1300**	**≥ 1450**	**1150 (W) x 2210 (H)**	**1150 (W) x 2210 (H)**	**≥ 100**	**100**

Notes:
1. These are feasible designs of EAB for 14m^2 and 18m^2 rooms. The room with EAB should meet the natural lighting and ventilation requirements in regulations 30 & 31 of the Building (Planning) Regulations (B(P)R). The AC platform should comply with the requirements under Appendix B of Code of Practice on Access for External Maintenance 2021 (AfEM Code), and balconies for residential buildings should comply with the criteria and conditions set out in Joint Practice Note (JPN) 1 for application of exemption from gross floor area and/or site coverage under the B(P)R.
2. SAM at balcony ceiling refers to sound absorptive material of noise reduction coefficient ≥ 0.7. It is an essential feature to attain the basic noise reduction performance in Annex B.
3. Comparable noise performance is anticipated should the AC platform be replaced by balcony with solid parapet.

Appendix 3.4 Sound Attenuation Adjustment of EAB(BT)-(EPD-PN) & AW(BT)-(EPD-PN) Adopted in the Proposed Development

Adjustment of Sound Attenuation for Traffic Noise Impact Assessment

Tung Lee Motor Service Workshop (TLM_1)

Measurement Date: 19 Sep 2023 (Tue) 1100 – 1130 Weather Condition: Sunny Noise Source ID: QJ_1	Noise measurement was therefore carried out at 25m away of the sources, which having direct line of sight with the activities. 

Sound Level meter: Norsonic 139	Sound Calibrator: Norsonic 1256

Deduced Sound Power Level for the Chiller

Activity	SPL, dB(A)	Background Noise, dB(A)	Calculated SPL, dB(A)	Façade Correction, dB(A)	Measurement distance (D), m	Derived SWL, dB(A)*	Duration (min) / 30mins
Loading and unloading	72.0	70.7	66.2	+3	25	105.1	30

Note:

1. Only noise measurement was conducted during daytime as no operation was observed during site survey at nighttime.

Remark:

* Derived SWL = SPL + 20 x log (D) + 8 + façade correction

Frequency Analysis to determine the correction of tonality in accordance with IND-TM (Fixed Noise Source (S1) - VRV at the roof of the Police Station)

Noise Source Type(s): *operation Sound*

Highest	62.5
Overall	72.0
Tonality Correction Adopted, dB(A)	*0*

A correction for tonality shall be applied if, between 31.5Hz and 16kHz, any one-third octave band or any pair of adjacent one-third octave bands of the A-weighted spectrum of the noise under investigation satifies all of the following conditions:

(a) the level of the one-third octave band under consideration, or, in the case of a pair of bands, the level of the highest band in that pair, is not more than 15.0 dB below the level of the highest one-third octave band;

(b) the level of the one-third octave band under consideration, or, in the case of a pair of bands, the arithmetic average of the levels of the two bands, is more than 1.0 dB higher than the level of each of the adjacent bands on either side of the band or pair of bands under consideration; and

(c) the level difference, known as the tonality factor, ftone, between the level of the one-third octave band under consideration, or, in the case of a pair of bands, the arithmetic average of the levels of the two bands, and the arithmetic average of the levels of the adjacent bands on either side of the band or pair of bands under consideration is 3.0 dB or more

f_{tone}(dB)	C_{tone}(dB(A))	
	in cases where the frequency of any band under consideration is below 250 Hz	in cases where the frequency of each band under consideration is higher than or equal to 250 Hz
greater than or equal to 3.0 and less than 6.0	0	3
greater than or equal to 6.0 and less than 9.0	3	6
greater than or equal to 9.0	6	6

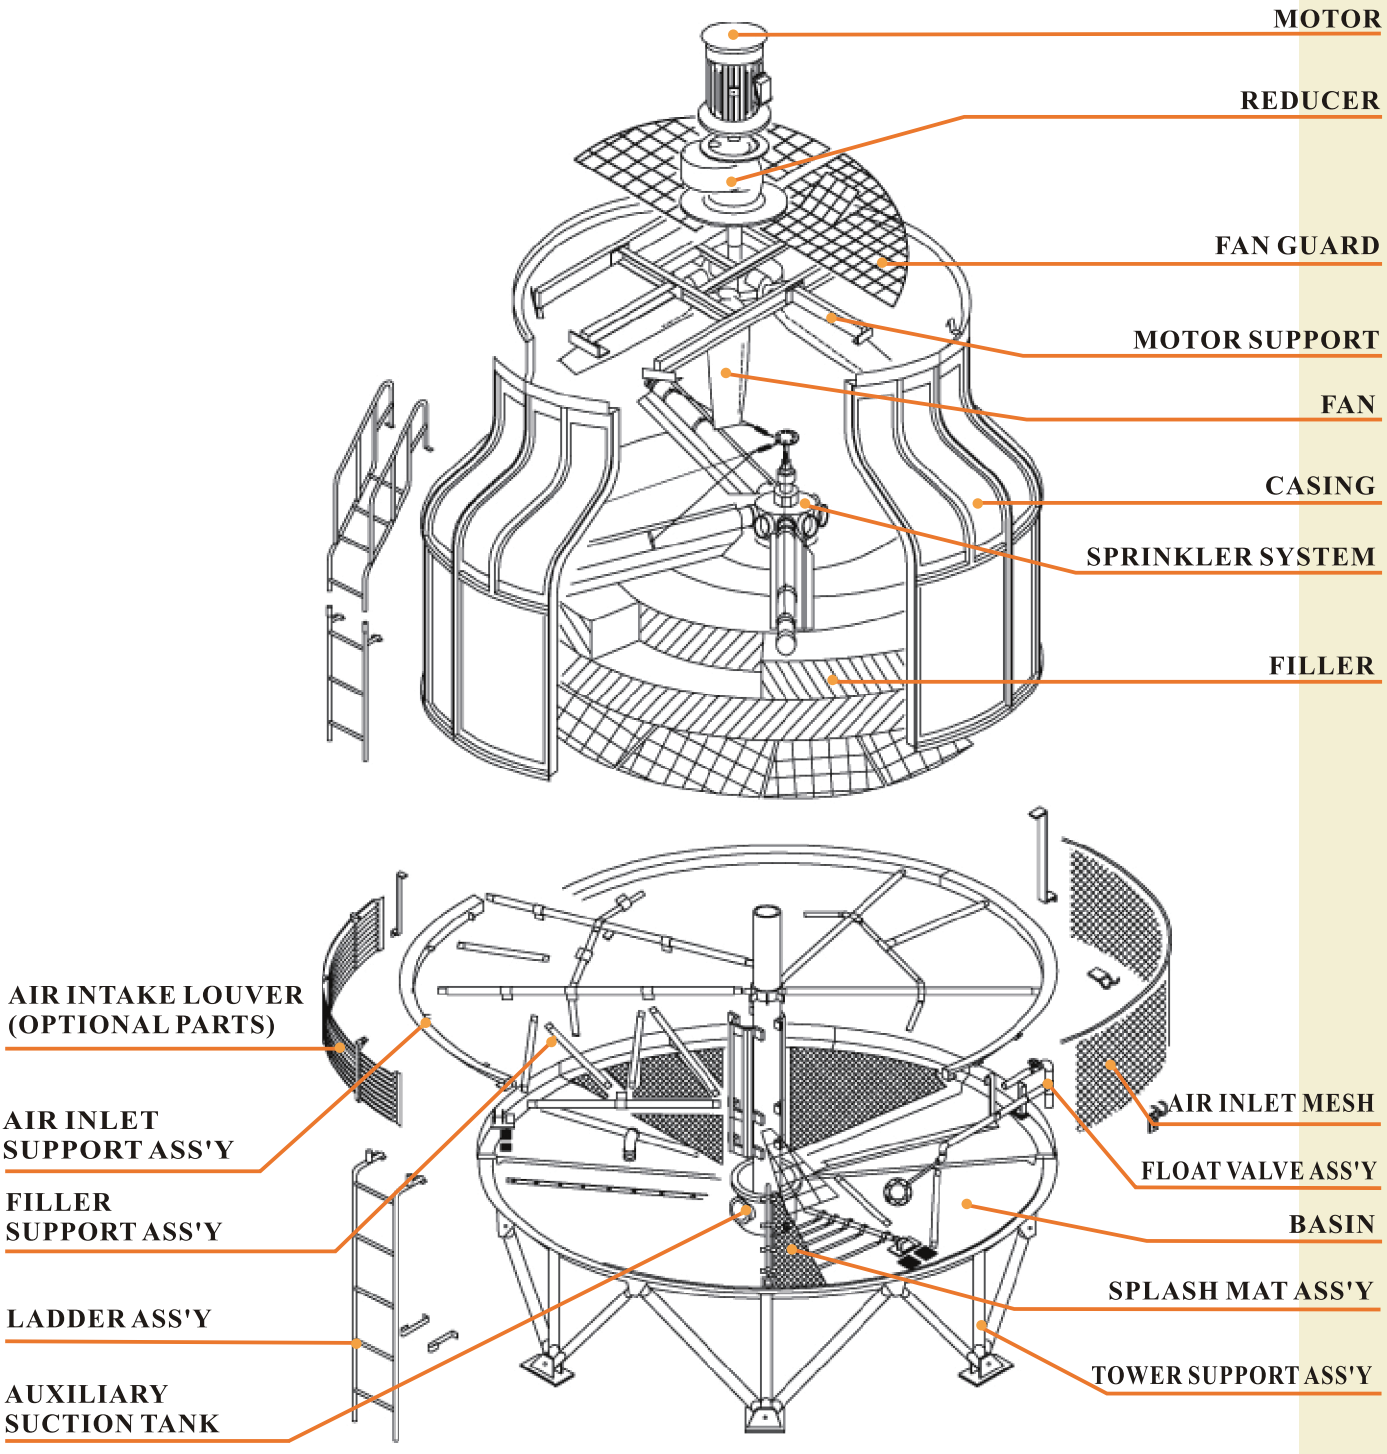
Appendix 4.5 Catalogues of Cooling Towers

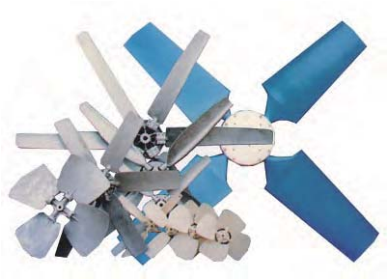


菱和
ryowo™

FRP COUNTER FLOW FT SERIES

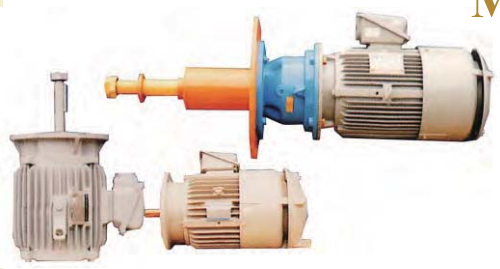
COOLING TOWER

STRUCTURE



PRINCIPLE OF OPERATION

Hot water is distributed over the filler through the low velocity automatic sprinkler system and is mixed with the upward draft of ambient air causing evaporation and thus heat is removed from the water. The cooled water falls into the basin and is pumped to the heat sources for recirculation.



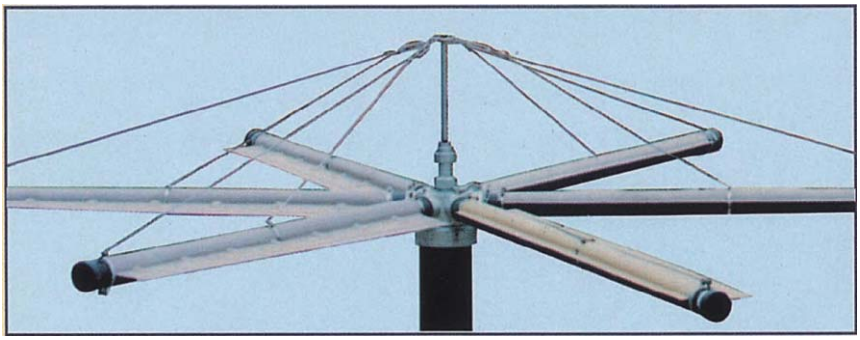
COMPONENT FUNCTION & FEATURE

AXIAL FAN

All fans are induced-draft axial type with adjustable pitch. Material chosen are non-corrosion of plastic, FRP or alu-minium alloy. The high efficiency design ensures low running cost and the lowest possible noise level . Fan blade pitches is factory set and balanced.

MOTOR

The motors, totally enclosed, fan cooled flange type, 380V/ 3ph/ 50 Hz, induction weather proof, are specially designed for RYOWO. Motors from 5.5 kw and up are Y- start and below are direct-on-line start.



TRANSMISSION SYSTEM

The fans of small models are designed to be driven by low speed motor of 6,8,10 or 12 poles which can minimise the numbers of transmission parts used. For large models, the fans are vee-belt or gear driven with 4 poles motors so the speed of fans can be adjustable to suit various application.

SPRINKLER SYSTEM

Automatic rotary sprinkler system with rotary head and sprinkler pipe distributes the hot water over the entire face area of the filler. Sprinkler pipes are non-clogging, require low-pressure to operate, and assures uniform water flow with minimal operating pump head. The F.R.P. eliminators attached to sprinkler pipes are specifically designed for Low pre Ssure drop and minimises the drift loss of water.

COMPONENT FUNCTION & FEATURE

CASING & BASIN

F.R.P. (fibreglass reinforced polyester) formed casings are durable, non-corrosive, weather-proof, and light weight. Cylindrical form is shaped to fully withstand wind pressure, vibration and such F.R.P. casings obliviate need for painting, reduce maintenance costs and guarantee long dependable service.

Bowl-shape basins are also made from F.R.P. with built in socket or flanged outlets for piping connections. For large models, a F.R.P. aux. suction tank is employed and fitted with piping flanges or sockets.

STEEL STRUCTURE

All supporting steel members are hot-dip galvanized to minimise rusting and corrosion ensuring long service life even in corrosive atmosphere. The stainless hardware members are also available upon request.

FILLER

High performance RYOWO V-30 film filler is the heart of the tower. The specially formed PVC sheets maximize the air/water contact area and minimise air pressure drop to assure efficient heat transfer while keeping fan power requirement low. It is virtually immune to corrosion and decay.

Eliminator

Specially made drift eliminator consisted of 2 types of sheets forms a “v” shape path for the transmission of the cooling tower discharge air stream. The small water droplets in the stream impact the surfaces of the drift eliminator sheets and are separated from the stream such that the drift loss ratio maintain at less than 0.001% of circulating water flow rate.

SPLASH MAT (LOW NOISE MODELS)

Specially designed noise absorbing splash mat is provided for low noise models on the water basin to minimise the unpleasant water dripping noise in the basin.

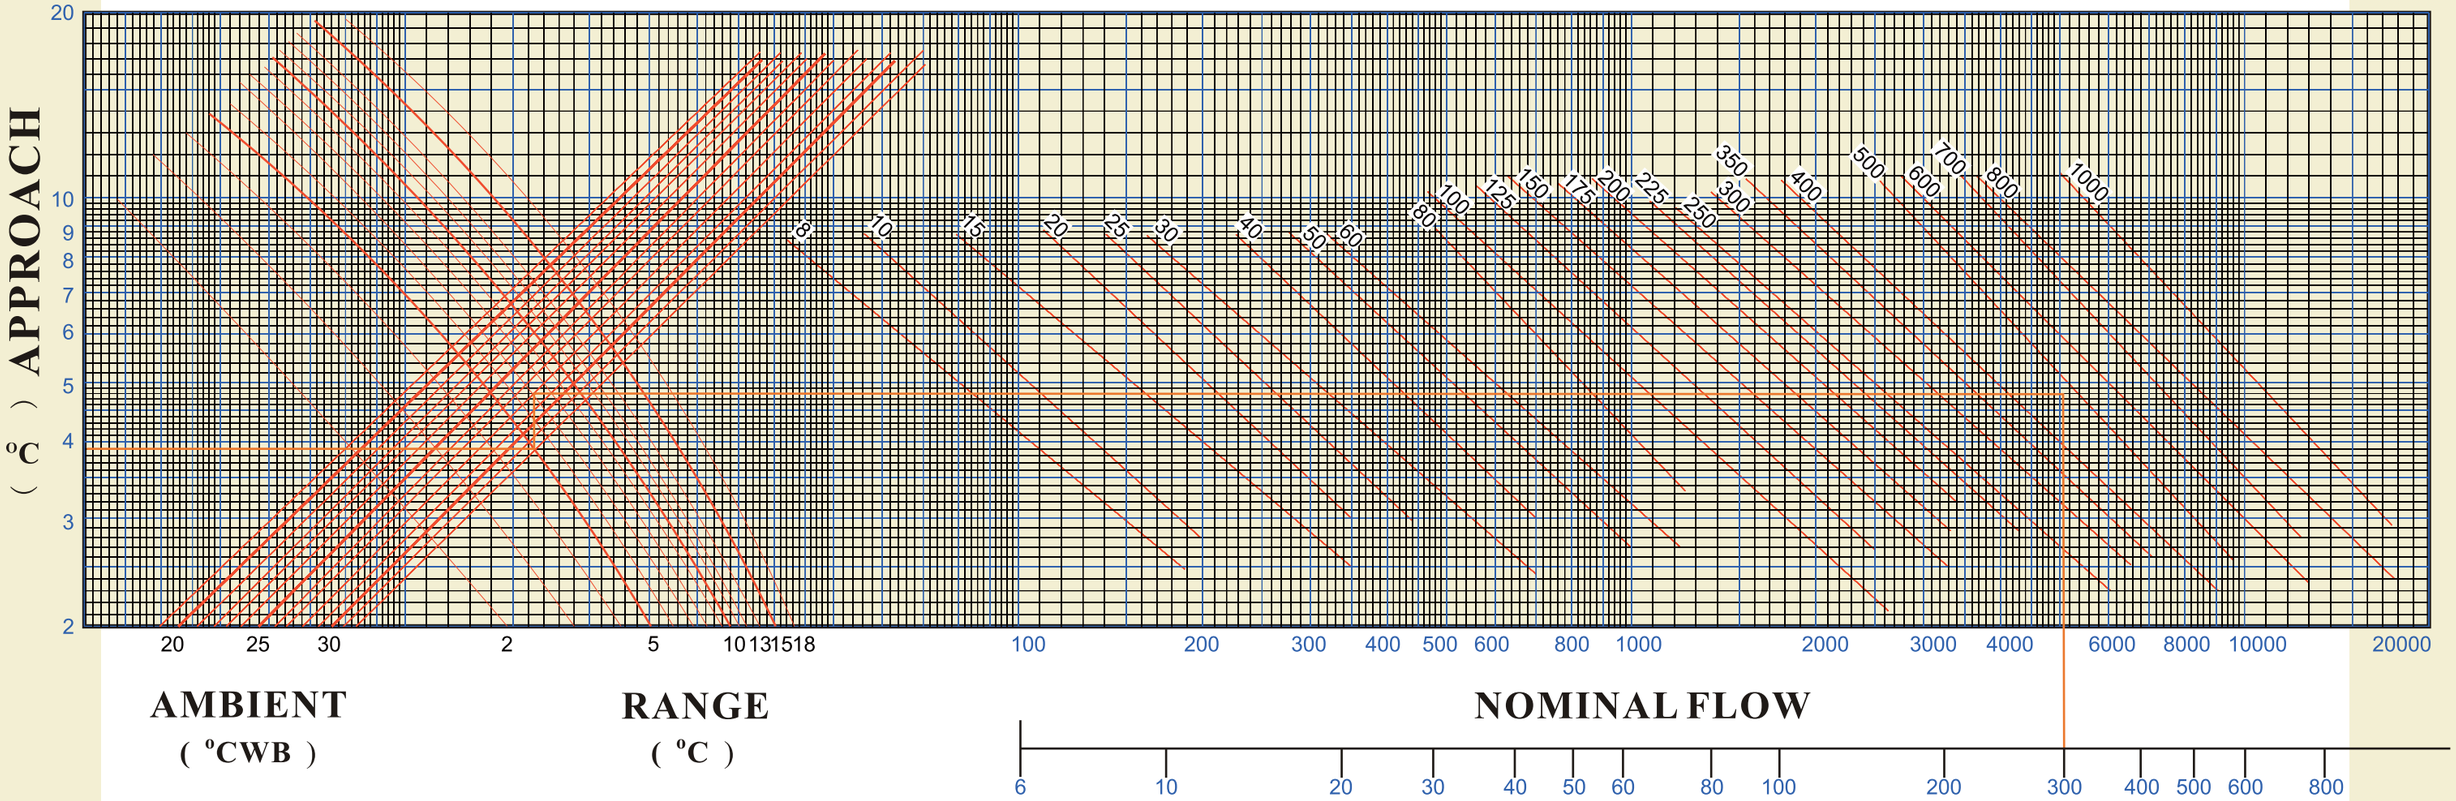
NOTE : Nominal cooling capacity is based on 13 ℓ / min / RT (1 RT=3,900 Kcal / hr) at 37ºC inlet water tpmperature, 32ºC outlet water temperature and 27ºC ambient wet bulb temperature.



The SPLs are measured 16m horizontally from the edge of the tower at 1.5m above the foundation level.

Pump head is obtained by adding resistance of piping/condenser and the tower height(H).

The unit dimension in this catalogue is metric. Specifications listed in this catalogue are subject to change without further noticefor technical improvement of our products.

FT OR FT/LN SERIES QUICK SELECTION TABLE

(20°CWB~30°CWB)

EXAMPLE:

RATE :300m³/hr

INLET WATER TEMP :37°C

OUTLET WATER TEMP :32°C

WET BULB TEMP :28°C

RANGE: INLET WATER TEMP-OUTLET WATER TEMP
: 37°C - 32°C = 5°C

APPROACH: OUTLET WATER TEMP -WET BULB TEMP
: 37°C - 32°C = 5°C

TOWER SELECTED: FT - 500 OR FT/LN - 500

COOLING TOWER	CT							
NOMINAL FLOW	m³/hr							
INLET WATER	HWT°C							
OUTLET WATER	CWT°C							
AMBIENT WB	WB°C							
RANGE	(HWT-CWT)°C							
APPROACH	(CWT-WB)°C

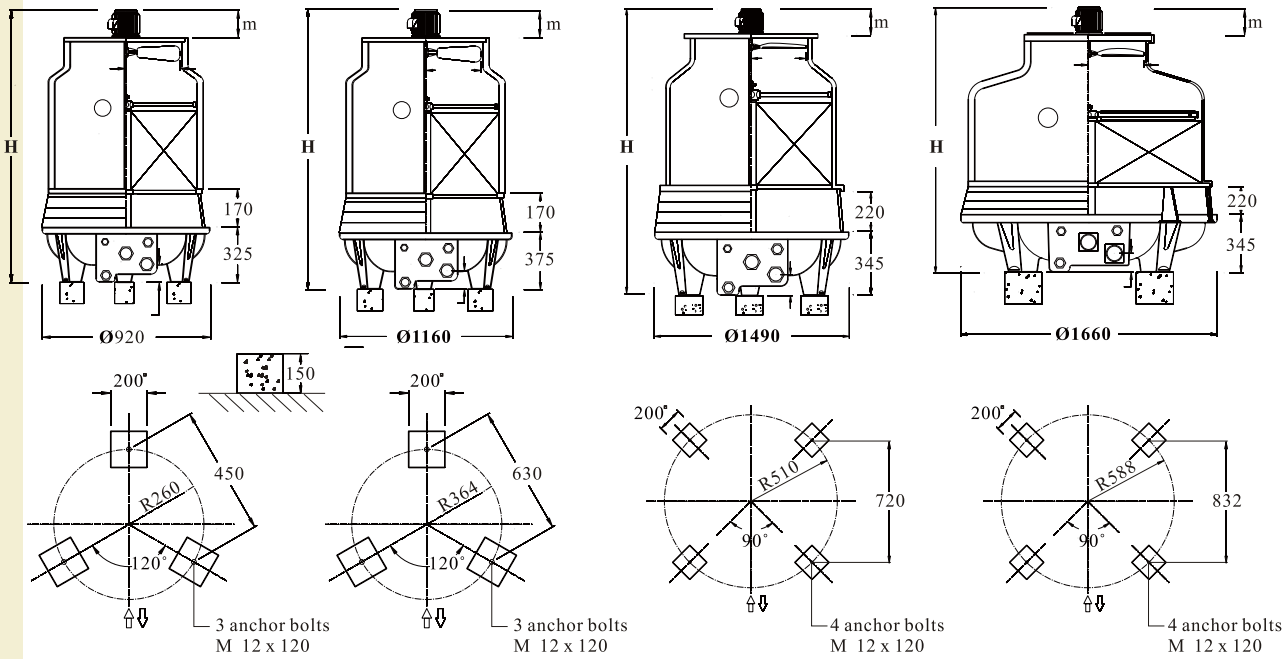
GUARANTEE:

All components are guaranteed against defective material for a period of one (1) year.

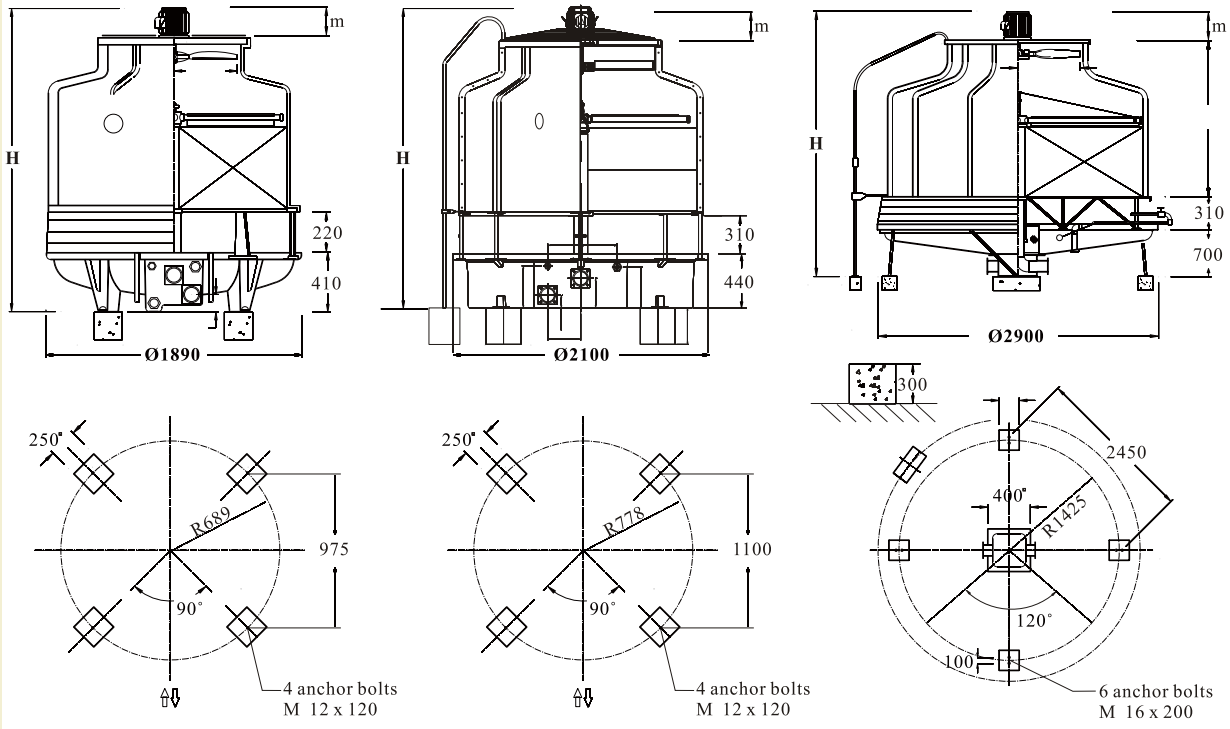
When return to RYOWO with transportation prepaid , all parts found by factory inspection to be defective will be repaired replaced without charge , FOB HONG KONG.

No liability will be assumed for loss or damage resulting from misuse of products.



APPLICATION

For inquiry on RYOWO cooling towers , please contact local agents and specify the following conditions:



a). Circulating water flow
b). Inlet water temperature
c). outlet water temperature
d). ambient wet bulb temperature
e). power sources-voltage & frequency

TOWER FOUNDATION

AVAILABLE OPTIONAL ACCESSORIES

DISCHARGE HOOD

This option is available on small models. It provides another direction of discharge air leaving the tower. It is made of F.R.P. with services door and wiring mesh on the air outlet.

HIGH TEMPERATURE FILLER

For high temperature operation such as waste water treatment , P.P. filler can withstand up to 80℃inlet water. (Special arrangement should be made for other components, please contact us for details.)

STAINLESS STEEL COMPONENTS

As an option, we can provide type 304 stainless steel major steel members, bolts and nuts.

TWO-SPEED MOTOR

As an option, two-speed motor can be provided in 4P/6P single winding configeration. A considerable reduction in noise and energy management can be achieved.

F.R.P. AIR INLET LOUVER

Inlet louver constructed of F.R.P. material can be provided, which matches the rest of tower and prevents water splashing out from the tower.

BASIN HEATERS

Electric immersion heaters with thermostat and control box are available to keep the basin water from freezing in sub-zero weather.

BODY COLOR

Cooling tower installed on the roof of building may be barely noticeable from the ground, and a colored cooling tower matching to building color will make it "good look".

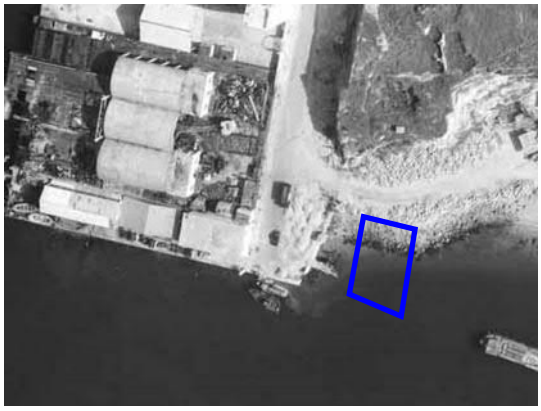
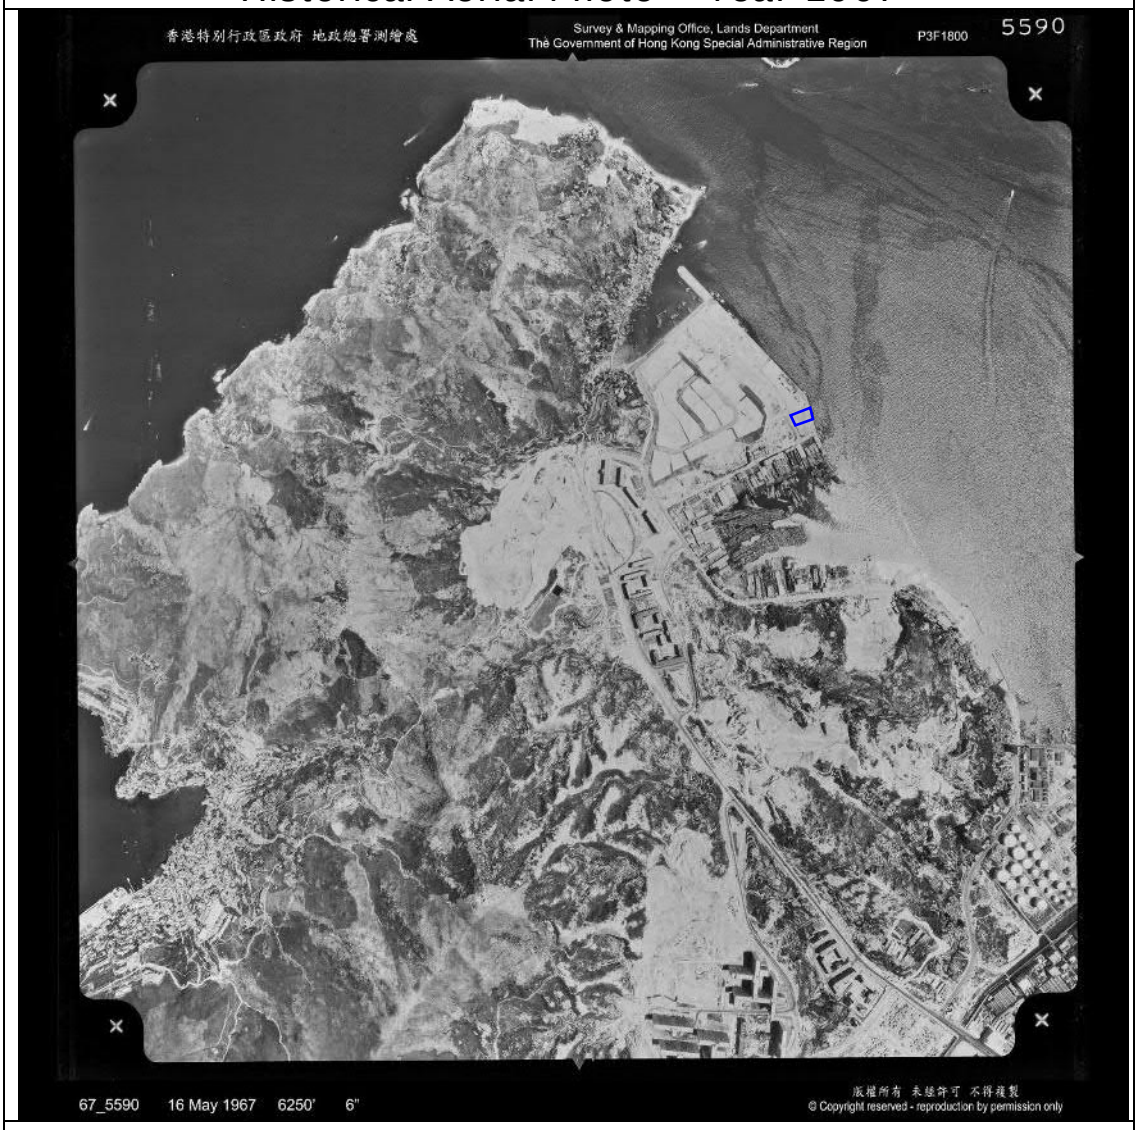
Appendix 6.1 The Relevant Aerial Photographs from LandsD

Historical Aerial Photo – Year 1963



Aerial photo from LandsD (Ref.: 5241), Height: 2700 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1963	The Application Site was a sea area



Historical Aerial Photo – Year 1964

Aerial photo from LandsD (Ref.: 5367), Height: 1800 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1964	The Application Site was a sea area.

Historical Aerial Photo – Year 1967

Aerial photo from LandsD (Ref.: 5590), Height: 6250 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1967	The Application Site was being formed by reclamation and become vacant land.

Historical Aerial Photo – Year 1972

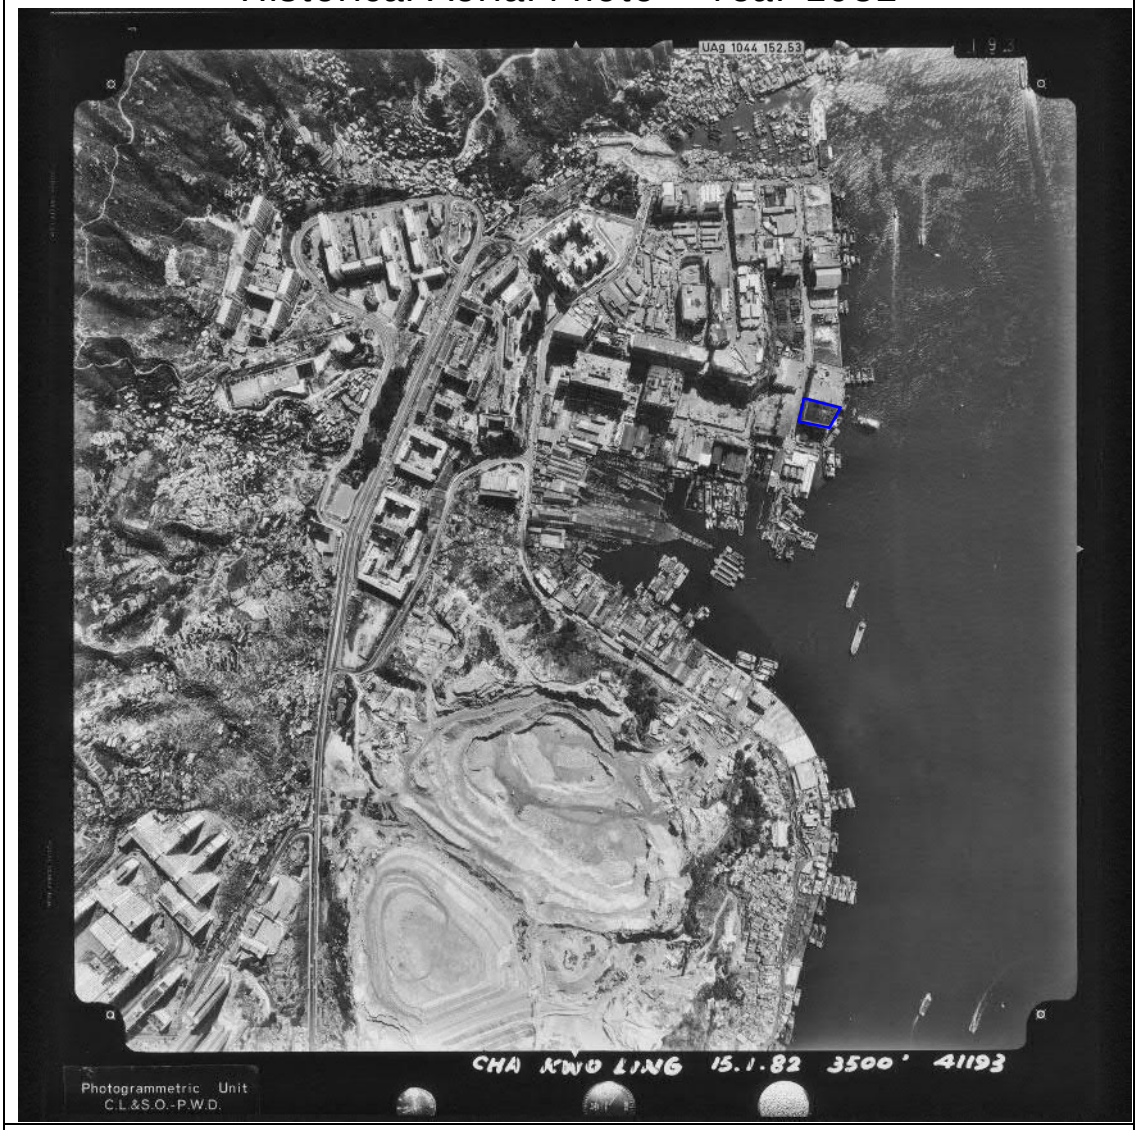
Aerial photo from LandsD (Ref.: 00079), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1972	The Application Site was become vacant land.

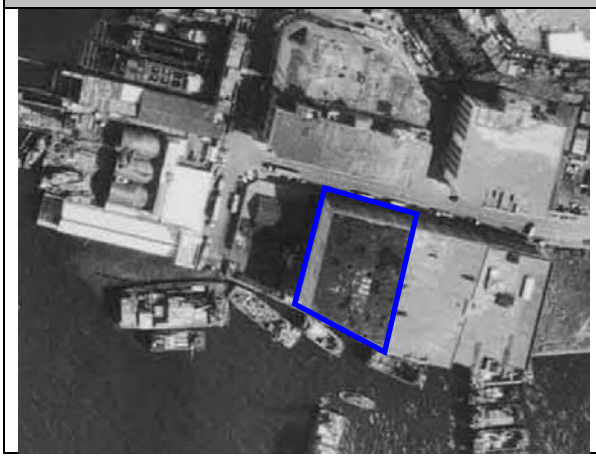
Historical Aerial Photo – Year 1976

Aerial photo from LandsD (Ref.: 12250), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1976	The Application Site was become vacant land.



Historical Aerial Photo – Year 1977



Aerial photo from LandsD (Ref.: 18753), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1977	A building (i.e., Wah Tung Godown) was constructed at Lot No. YTML 70 .

Historical Aerial Photo – Year 1982

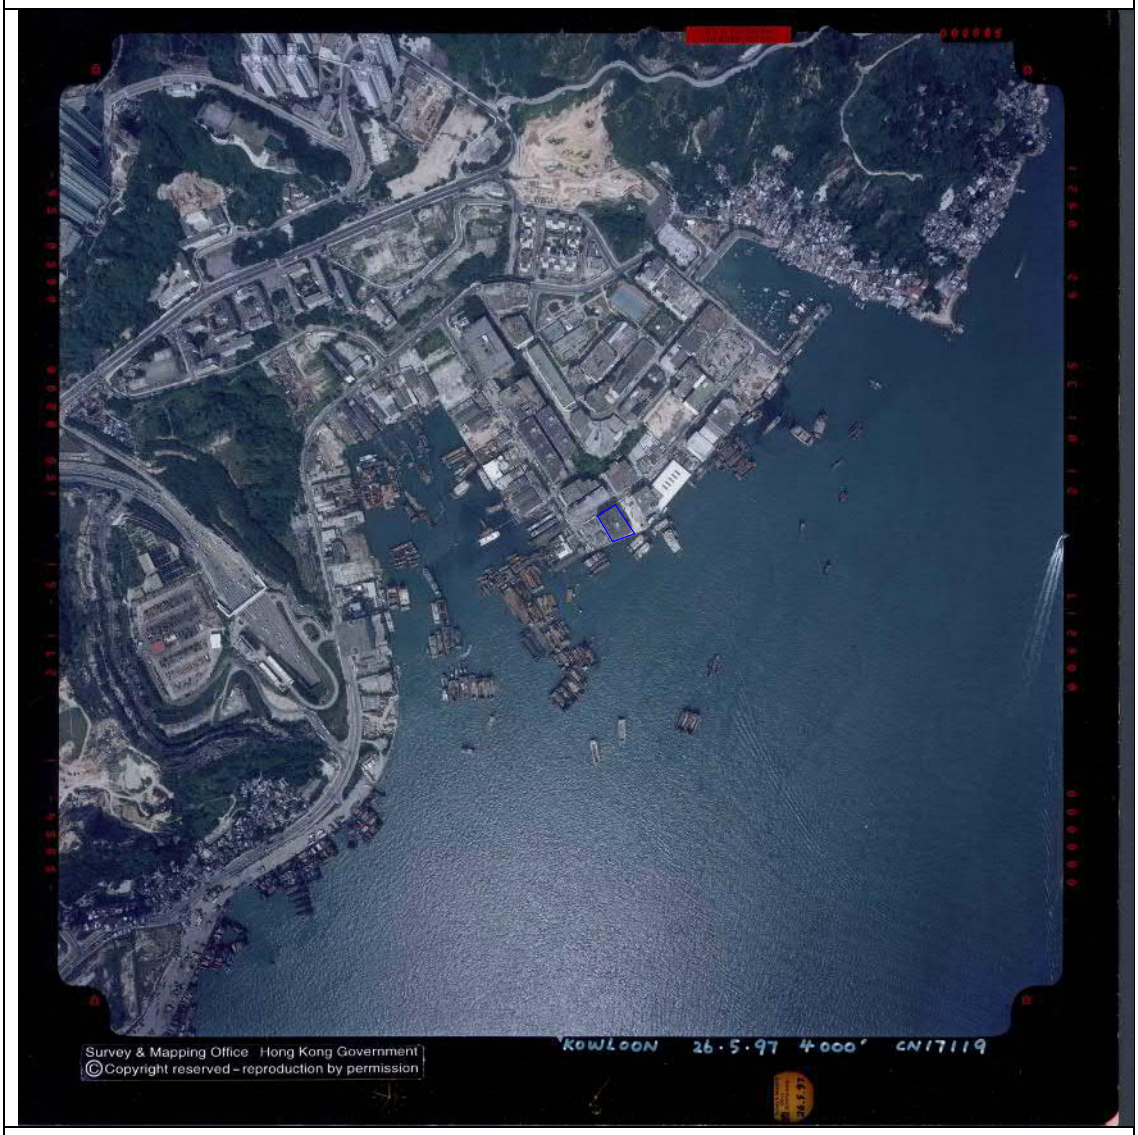
Aerial photo from LandsD (Ref.: 41193), Height: 3500 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1982	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1987

Aerial photo from LandsD (Ref.: A08892), Height: 2000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1987	No landuse change for the Subject Site.



Historical Aerial Photo – Year 1992

Aerial photo from LandsD (Ref.: CN3131), Height: 3000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1992	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1997

Aerial photo from LandsD (Ref.: CN17119), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1997	No landuse change for the Subject Site.

Historical Aerial Photo – Year 1998

Aerial photo from LandsD (Ref.: CN20115), Height: 3500 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	1998	No landuse change for the Subject Site.

Historical Aerial Photo – Year 2003

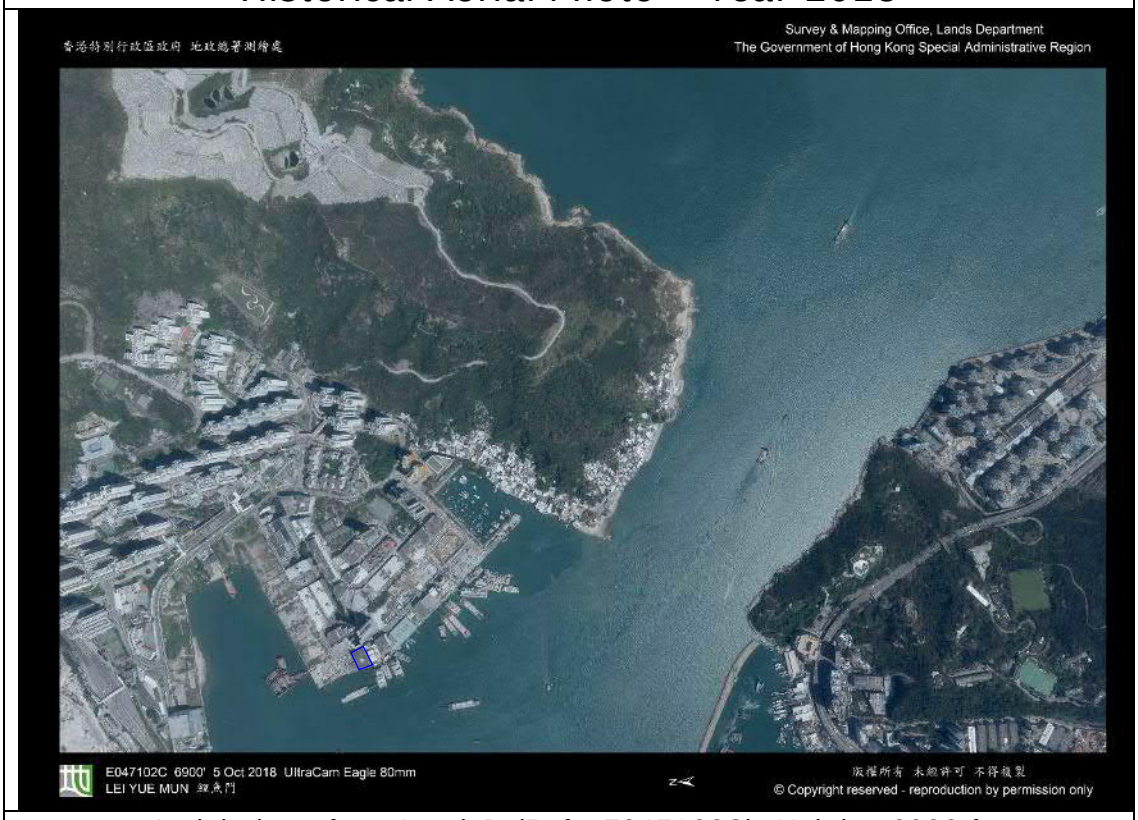
Aerial photo from LandsD (Ref.: CW47662), Height: 4000 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2003	No landuse change for the Application Site.

Historical Aerial Photo – Year 2008

Aerial photo from LandsD (Ref.: CS13379), Height: 6000 ft

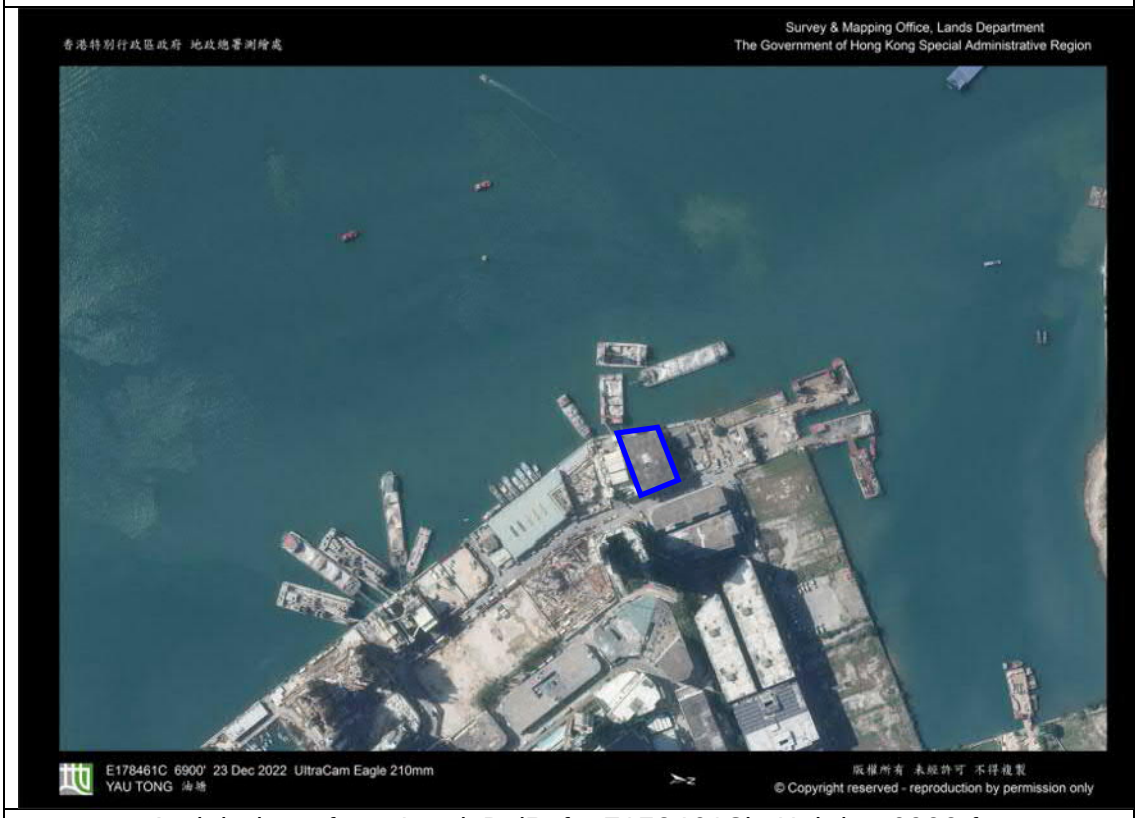
Blow up Photo of Subject Site	Year	Landuse/Description
	2008	No landuse change for the Application Site.



Historical Aerial Photo – Year 2013

Aerial photo from LandsD (Ref.: CS44647), Height: 6000 ft

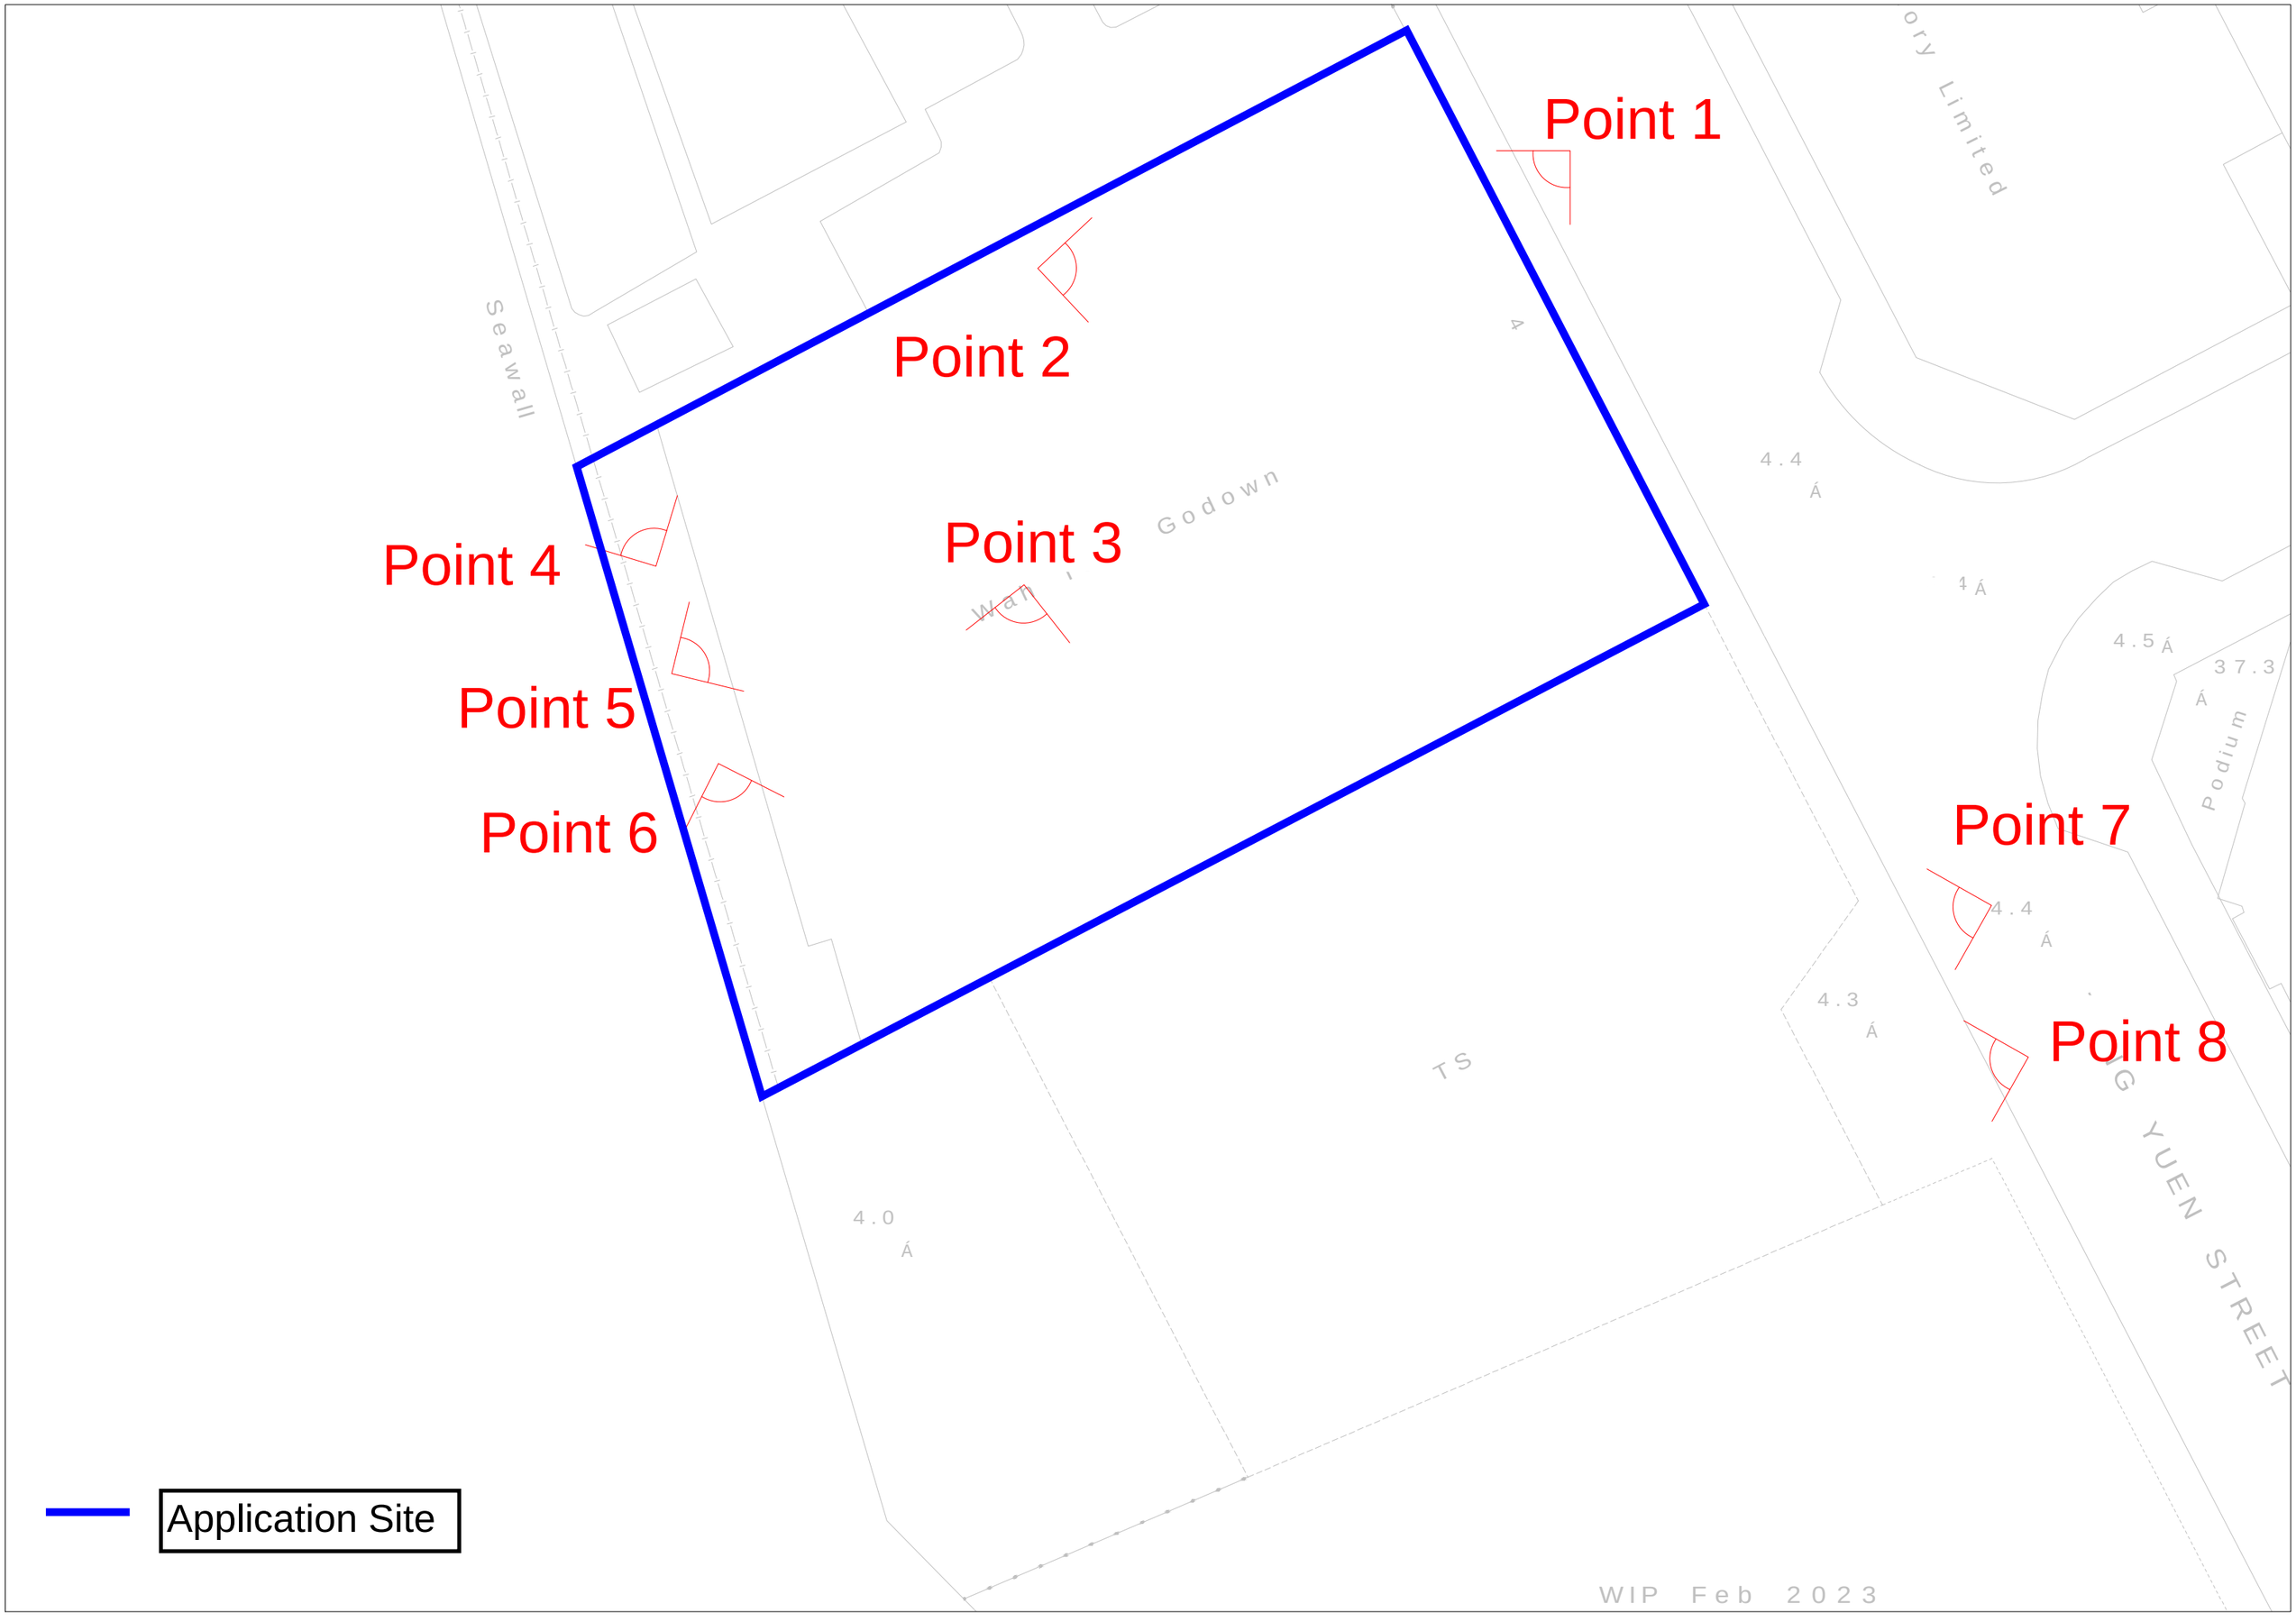
Blow up Photo of Subject Site	Year	Landuse/Description
	2013	No landuse change for the Application Site.



Historical Aerial Photo – Year 2018

Aerial photo from LandsD (Ref.: E047102C), Height: 6900 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2018	No landuse change for the Application Site.



Historical Aerial Photo – Year 2022

Aerial photo from LandsD (Ref.: E178461C), Height: 6900 ft

Blow up Photo of Subject Site	Year	Landuse/Description
	2022	No landuse change for the Application Site.

Site Walkover Checklist

Date of Site Visit: 01 November 2024

GENERAL SITE DETAILS

SITE OWNER/CLIENT: China Resources Land Ltd

PROPERTY ADDRESS: Yau Tong Marine Lot No.70, Tung Yuen Street

PERSON CONDUCTING THE QUESTIONNAIRE

NAME: Kyle Kam

POSITION: Assistant Environmental Consultant (Ramboll Hong Kong Limited)

AUTHORIZED OWNER/CLIENT REPRESENTATIVE (IF APPLICABLE)

NAME: N/A

POSITION: N/A

TELEPHONE: N/A

SITE ACTIVITIES

Briefly describe activities carried out on site, including types of products/chemicals/materials handled. Obtain a flow schematic if possible.

Number of employees:

Full-time: N/A

Part-time: N/A

Temporary/Seasonal: N/A

Maximum no. of people on site at any time: N/A

Typical hours of operation: N/A

Number of shifts: N/A

Days per week: N/A

Weeks per year: N/A

Scheduled plant shut-down: N/A

Detail the main sources of energy at the site:

Gas	~~Yes~~/No
Electricity	~~Yes~~/No
Coal	~~Yes~~/No
Oil	~~Yes~~/No
Other	~~Yes~~/No

SITE DESCRIPTION

This section is intended to gather information on site setting and environmental receptors on, adjacent or close to the site.

What is the total site area: About 2,146 m^2

What area of the site is covered by buildings (%): 0%

Please list all current and previous owners/occupiers if possible.

China Resources Land Ltd

Is a site plan available? If yes, please attach. ~~Yes~~ /No

Are there any other parties on site as tenants or sub-tenants? ~~Yes/~~No

If yes, identify those parties: N/A

Describe surrounding land use (residential, industrial, rural, etc.) and identify neighbouring facilities and types of industry.

North: Yau Tong Sewerage Pumping Station

South: Redland concrete Ltd.

East: Tung Yuen Street

West: Sea

Describe the topography of the area (flat terrain, rolling hills, mountains, by a large body of water, vegetation, etc.).

Industrial building- Wah Tung Godown Building

State the size and location of the nearest residential communities.

Southeast (about 74m from the Application Site): Peninsula East

Are there any sensitive habitats nearby, such as nature reserves, parks, wetlands or sites of special scientific interest?

No

Questionnaire with Existing Site Owner

		Yes/No	Notes
1.	What are the main activities/operations at the above address?	NA	NA
2.	How long have you been occupying the site?	NA	NA
3.	Were you the first occupant on site? (If yes, what was the usage of the site prior to occupancy?)	NA	NA
4.	Prior to your occupancy, who occupied the site?	NA	NA
5.	What were the main activities/operations during their occupancy?	NA	NA
6.	Have there been any major changes in operations carried out at the site in the last 10 years?	NA	NA
7.	Have any polluting activities been carried out in the vicinity of the site in the past?	NA	NA
8.	To the best of your knowledge, has the site ever been used as a petrol filling station/car service garage?	NA	NA
9.	Are there any boreholes/wells or natural springs either on the site or in the surrounding area?	NA	NA
10	Do you have any registered hazardous installations as defined under relevant ordinances? (If yes, please provide details.)	NA	NA
11.	Are any chemicals used in your daily operations? (If yes, please provide details.)	NA	NA
	• Where do you store these chemicals?	NA	
12.	Material inventory lists, including quantities and locations available? (If yes, how often are these inventories updated?)	NA	NA
13.	Has the facility produced a separate hazardous substance inventory?	NA	NA
14.	Have there ever been any incidents or accidents (e.g. spills, fires, injuries, etc.) involving any of these materials? (If yes, please provide details.)	NA	NA
15.	How are materials received (e.g. rail, truck, etc.) and stored on site (e.g. drums, tanks, carboys, bags, silos, cisterns, vaults and cylinders)?	NA	NA
16.	Do you have any underground storage tanks? (If yes, please provide details.)	NA	NA
	▪ How many underground storage tanks do you have on site?	NA	NA
	▪ What are the tanks constructed of?	NA	NA
	▪ What are the contents of these tanks?	NA	NA
	▪ Are the pipelines above or below ground?	NA	NA
	▪ If the pipelines are below ground, has any leak	NA	NA

	and integrity testing been performed?		
	▪ Have there been any spills associated with these tanks?	NA	NA
17.	Are there any disused underground storage tanks?	NA	NA
18.	Do you have regular check for any spillage and monitoring of chemicals handled? (If yes, please provide details.)	NA	NA
19.	How are the wastes disposed of?	NA	NA
20.	Have you ever received any notices of violation of environmental regulations or received public complaints? (If yes, please provide details.)	NA	NA
21.	Have any spills occurred on site? (If yes, please provide details.)	NA	NA
	• When did the spill occur?	NA	
	• What were the substances spilled?	NA	
	• What was the quantity of material spilled?	NA	
	• Did you notify the relevant departments of the spill?	NA	
	• What were the actions taken to clean up the spill?	NA	
	• What were the areas affected?	NA	
22.	Do you have any records of major renovation of your site or rearrangement of underground utilities, pipe work/underground tanks (If yes, please provide details.)	NA	NA
23.	Have disused underground tanks been removed or otherwise secured (e.g. concrete, sand, etc.)?	NA	NA
24.	Are there any known contaminations on site? (If yes, please provide details.)	NA	NA
25.	Has the site ever been remediated? (If yes, please provide details.)	NA	NA

Observations

		Yes/No	Notes
1.	Are chemical storage areas provided with secondary containment (i.e. bund walls and floors)?	No	-
2.	What are the conditions of the bund walls and floors?	Yes	Paving in good condition
3.	Are any surface water drains located near to drum storage and unloading areas?	Yes	-
4.	Are any solid or liquid waste (other than wastewater) generated at the site? (If yes, please provide details.)	No	-
5.	Is there a storage site for the wastes?	No	-
6.	Is there an on-site landfill?	No	-
7.	Were any stressed vegetation noted on site during the site reconnaissance? (If yes, please indicate location and approximate size.)	No	-
8.	Were any stained surfaces noted on-site during the site reconnaissance? (If yes, please provide details.)	No	-
9.	Are there any potential off-site sources of contamination?	Yes	Redland Concrete Ldt.
10.	Does the site have any equipment which might contain polychlorinated biphenyls (PCBs)?	No	-
11.	Are there any sumps, effluent pits, interceptors or lagoons on site?	No	-
12.	Any noticeable odours during site walkover?	No	-
13.	Are any of the following chemicals used on site: fuels, lubricating oils, hydraulic fluids, cleaning solvents, used chemical solutions, acids, anti-corrosive paints, thinners, coal, ash, oily tanks and bilge sludge, metal wastes, wood preservatives and polyurethane foam?	No	-

Dear Sir / Madam,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot no. YTML68 & YTML70) - Enquiry for Land Contamination Information

We are conducting a Land Contamination Assessment Study for a site at Tung Yuen Street, Yau Tong (see attached Annex 1). As required by the "Practice Guide for Investigation and Remediation of Contaminated Land" published by the Environmental Protection Department of the Government of HKSAR (EPD), information pertaining to the change of land uses/past activities/incidents/accidents at the subject site are required as part of the vetting process.

In view of this, we would like to request for the following information for our assessment.

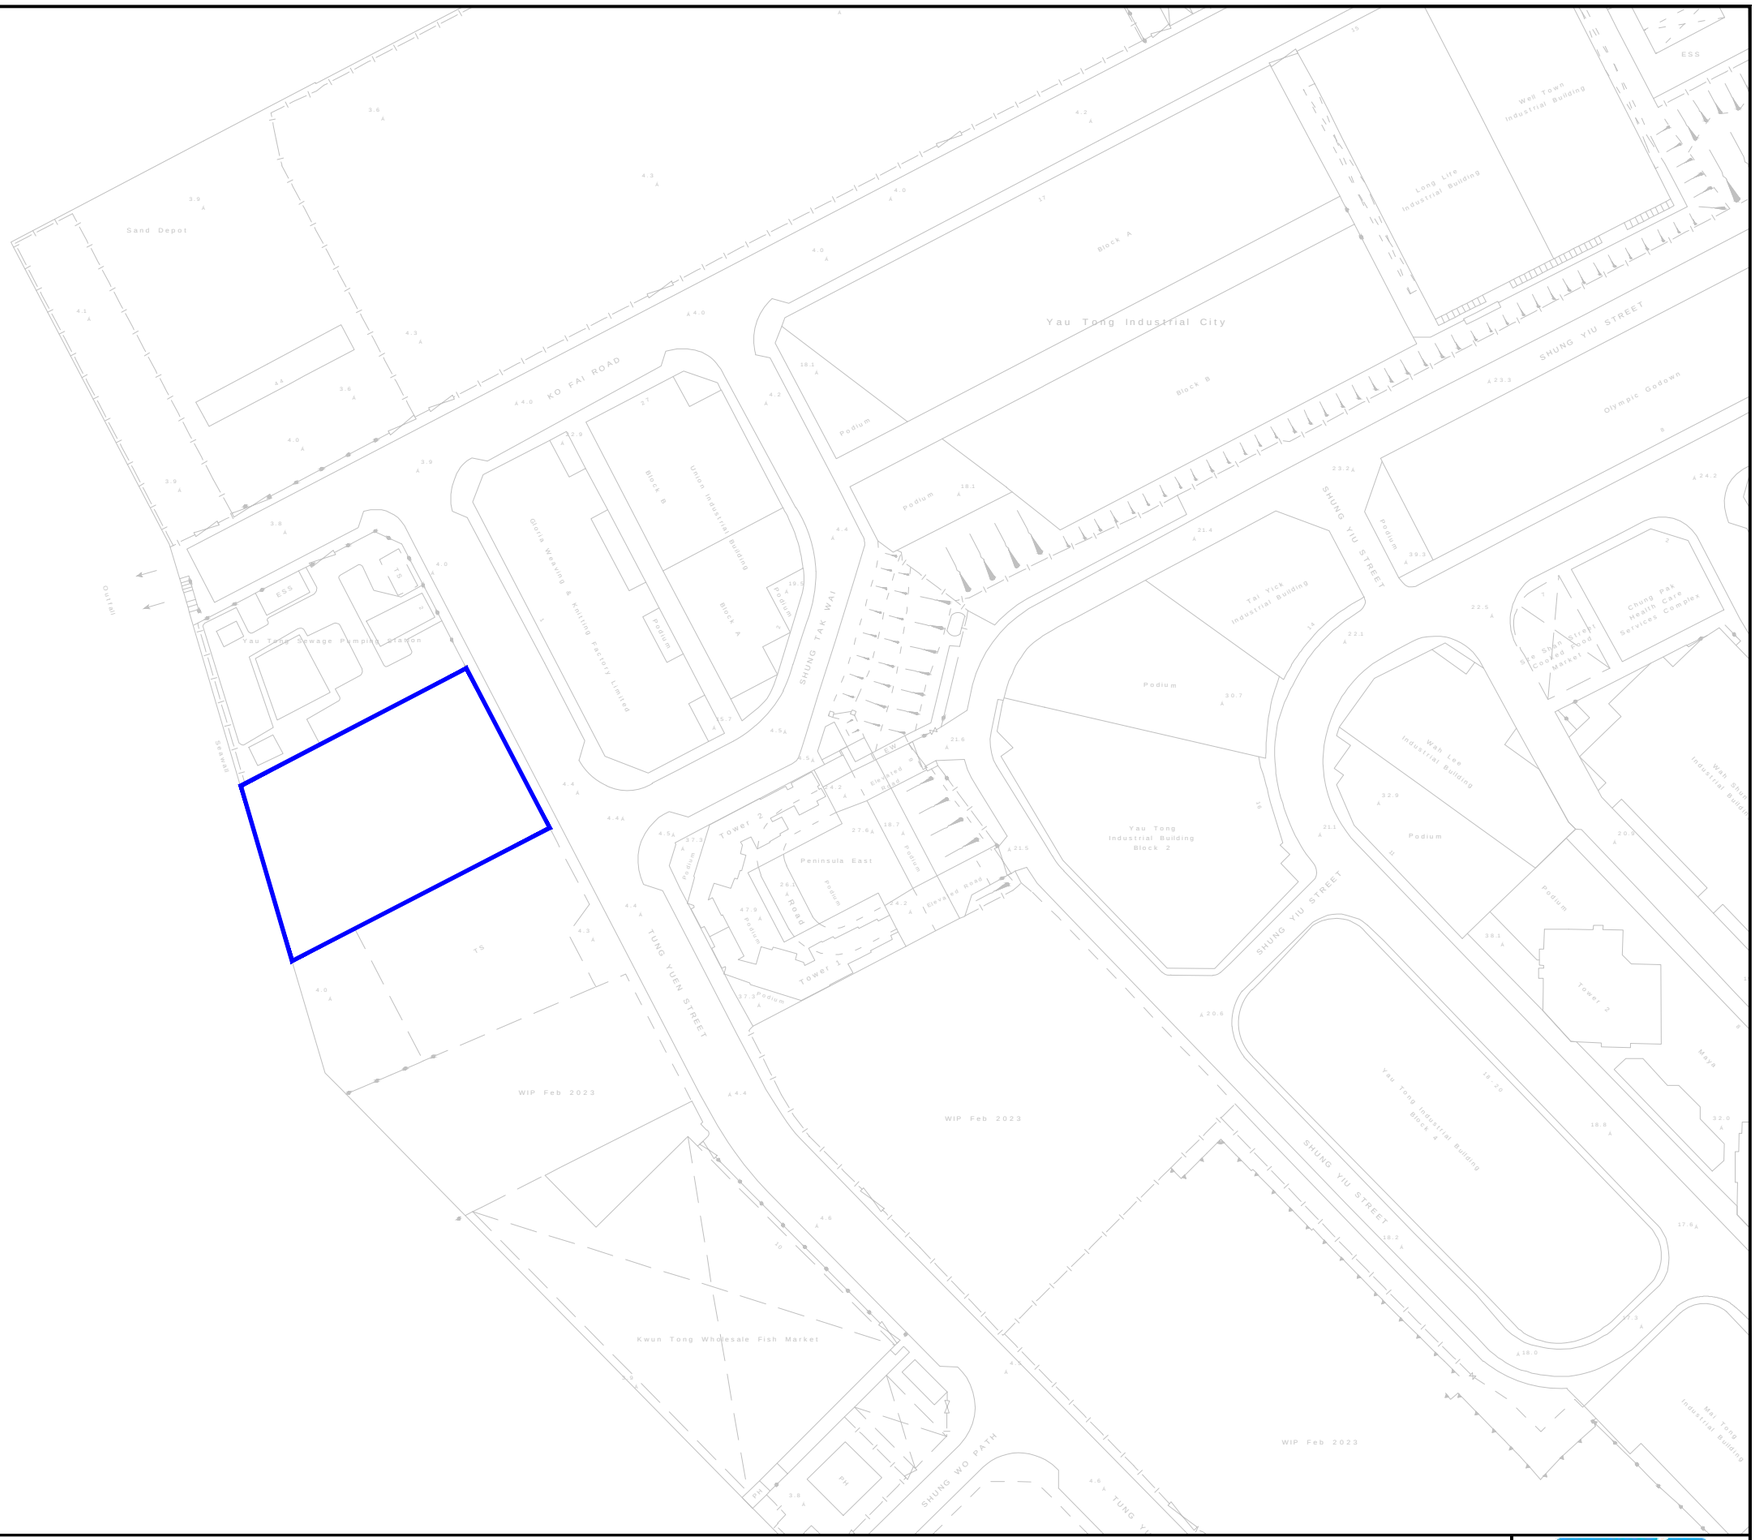
1. Potentially contaminating activities that have occurred at the site such as storage and handling of chemicals, oils and/or hazardous waste, on-site waste disposal, burn pits, etc.;

2. Accidents, fires, explosions, spillages and any pollution incidents attributed to the site and any remediation that has occurred at the site or neighboring areas; and

3. Any land contamination assessment that has conducted at the site or neighboring areas.

Due to the tight timeline of the project, we would be much appreciated if you could provide the requested information ay your earliest convenience.

Should you have any queries, please do not hesitate to contact our Mr. Kyle Kam at [redacted] or the undersigned at [redacted].
We thank you in anticipation of your help in the matter.



Thank you for your attention.

Yours faithfully,
For and on behalf of
Ramboll Hong Kong Limited

Dear Wendy.

Refers to your letter dated 4 Mar 2024.

Please be informed that:
1. There are 3 chemical waste producer registrations in the concerned area; &
2. No chemical spillage & land contamination had been recorded in last 5 years.

Thanks & Regards,
Herrick HO / EPD

(Attn.: Wendy Tin)

18 April 2024

Dear Wendy,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot No. YTML 68 & YTML 70) - Enquiry for Land Contamination Information

I refer to your letter dated 4.3.2024 enquiring the current and historical site information and land use changes of the site as indicated on the site map attached to your letter for land contamination investigation purposes.

2. The subject site falls within an area zoned "Residential (Group E)" ("R(E)") on the approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan (OZP) No. S/K15/27. This zone is intended primarily for phasing out of existing industrial uses through redevelopment (or conversion) for residential use. According to Schedule I (for non-industrial buildings) of the Notes of the OZP for "R(E)" zone, the proposed 'Flat' is a Column 2 use requiring planning permission from the Town Planning Board. The subject "R(E)" zone is restricted to a maximum domestic plot ratio (PR) of 5.0, a maximum non-domestic PR of 1.0, and a maximum building height (BH) of 80mPD.

3. Regarding the land use changes of the subject site, the current "R(E)" zoning for the site was first designated on the approved Cha Kwo Ling, Yau Tong, Lei Yue Mun OZP No. S/K15/11 approved in March 2000 and has remained unchanged since then. Before that, the site had been subject to land use zonings/designation on statutory town plan, including:

- "Industrial" on the draft Cha Kwo Ling, Yau Tong, Lei Yue Mun OZP No. LK 15/35 exhibited on 12 March 1971.

By Fax (2782 5061) & Post

Dear Sir / Madam,

Environmental Assessment for Proposed Residential & Commercial Development at No.4 Tung Yuen Street, Yau Tong (Lot no. YTML68 & YTML70) - Enquiry for Land Contamination Information

We are conducting a Land Contamination Assessment Study for a site at Tung Yuen Street, Yau Tong (see attached Annex 1). As required by the "Practice Guide for Investigation and Remediation of Contaminated Land" published by the Environmental Protection Department of the Government of HKSAR (EPD), information pertaining to the change of land uses/past activities/incidents/accidents at the subject site are required as part of the vetting process.

In view of this, we would like to request for the following information for our assessment.

1. Potentially contaminating activities that have occurred at the site such as storage and handling of chemicals, oils and/or hazardous waste, on-site waste disposal, burn pits, etc.;

2. Accidents, fires, explosions, spillages and any pollution incidents attributed to the site and any remediation that has occurred at the site or neighboring areas; and

3. Any land contamination assessment that has conducted at the site or neighboring areas.

Due to the tight timeline of the project, we would be much appreciated if you could provide the requested information ay your earliest convenience.

Should you have any queries, please do not hesitate to contact our Mr. Kyle Kam at [redacted] or the undersigned at [redacted].
We thank you in anticipation of your help in the matter.

Thank you for your attention.

1. INTRODUCTION

1.1 Background

1.1.1 The Application Site is located at Yau Tong Marine Lot No. 70, Tung Yuen Street (hereinafter collectively called "Application Site"). The Application Site is zoned as "Residential (Group E)" ("R(E)") under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27. **Figure 1.1** shows the location of the Application Site.

1.1.2 Ramboll Hong Kong Limited is commissioned by the Applicants to provide environmental consultancy services and prepare the relevant submissions to demonstrate the environmental sustainability of the Proposed Development for this section 16 planning application.

1.1.3 The master layout plan (MLP) is provided by the project architect – P&T Architects Ltd. The traffic forecast for vehicular emission impact assessment and road traffic noise impact assessment is provided by the project traffic consultant – MVA Asia Ltd.

1.2 Application Site and its Environ

1.2.1 "Residential (Group E)" ("R(E)") under the Approved Cha Kwo Ling, Yau Tong, Lei Yue Mun Outline Zoning Plan No. S/K15/27 (OZP). The area of the Site is about 2,419 m^2 and currently occupied by Wah Tung Godown Building.

1.2.2 The Application Site is bounded by Tung Yuen Street to the east and Ko Fai Road to the north. The surrounding areas are currently dominated by industrial and residential uses. **Figure 1.1** shows the location of the Application Site and its environs.

1.3 Proposed Development

1.3.1 The Proposed Development consists of 1 residential tower, providing not more than 342 residential units. The residential tower is situated atop a 3 storeys podium accommodating a shopping arcade, E&M rooms and clubhouse. 2 storeys of carpark and loading/ unloading area are located at the basement.

1.3.2 The residential towers have a various building height, ranging from ~ 80mPD to ~ 100 mPD, and the level of first residential floor is from 21.10 mPD.

1.3.3 Floor layout plans and sections of the Proposed Development are shown in **Appendix 1.1**.

1.3.4 **Table 1.1** shows the summary table of the key parameters for the Proposed Development.

Table 1.1 Key Development Parameters of Proposed Development

`Key Development Parameters	Proposed Scheme
No. of Storey for Residential	22 - 28 storeys (for inland portion only), excluding 2 storeys of basement carpark
Floor Level of lowest Residential Floor (mPD)	21.10
Building Height (mPD)	80mPD to 100mPD (for inland portion only)

`Key Development Parameters	Proposed Scheme
Ancillary Facilities	Clubhouse, shopping arcade
No. of Residential Block	1
No. of Residential Units	342
Anticipated Completion year	2032
Site Area (m^2)	About 2,419m^2

2. QUANTITATIVE AIR QUALITY IMPACT ASSESSMENT

2.1 Scope of Work

2.1.1 This assessment predicts air quality pollutant concentration at the Proposed Development, informing the provision of air quality mitigation measures to ensure future residents are not exposed to unacceptable levels of poor air. The air pollutants assessed are Nitrogen Dioxide (NO_2), Sulphur Dioxide (SO_2), Respirable Suspended Particulate (RSP) and Fine Suspended Particulate (FSP). Concentrations of these pollutants are predicted at air sensitive receivers (ASRs) within the Proposed Development through the use of quantitative computer modelling and are compared with the relevant Air Quality Objectives (AQOs).

2.1.2 The study also considers nearby odour sources within 500m radius of the Application Site and identified three potential odour sources, i.e. Yau Tong Sewage Pumping Station, Kwon Tong Wholesale Fish Market and Sam Ka Tsuen Typhoon Shelter. According to the several site visits, there are no changes to the aforementioned odour sources as compared to those mentioned in the Approved Planning Application A/K15/126 (126 Approval Scheme). Therefore, the odour emission information used in the 126 Approval Scheme is adopted in this assessment.

2.1.3 The assessment area of 500m radius from the Application Site is shown in **Figure 2.1**.

2.1.4 Appropriate mitigation measures will be recommended if exceedances of AQOs and/or odour units are identified.

2.1.5 The air quality control measures during the construction phase of Proposed Development are also addressed in this chapter.

2.2 Relevant Legislations, Standards and Guidelines

2.2.1 The following legislation and regulations provide the standards and guidelines for evaluation of air quality impacts and the type of works that are subject to air pollution control:

- Air Pollution Control Ordinance (APCO) (Cap. 311) and the Air Quality Objectives (AQO)
- Air Pollution Control (Construction Dust) Regulation
- Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation
- Air Pollution Control (Fuel Restriction) Regulations
- Recommended Pollution Control Clauses for Construction Contracts
- Control of Air Pollution in Car Parks (ProPECC PN 2/96)

Air Pollution Control Ordinance (CAP 311)

2.2.2 A set of Air Quality Objectives (AQOs) is established under the Air Pollution Control Ordinance (Cap. 311). The prevailing AQOs that came into effect on 11 April 2025 is presented in the following Table 2.1 below.

Table 2.1 Hong Kong Air Quality Objectives (AQOs)

Pollutants	Average Time	Standard [i] (µg/m³)	No. of exceedances allowed
SO_2	10-min	500	3
	24-Hour	40	3
RSP (PM_{10}) [ii]	24-Hour	75	9
	Annual	30	NA
FSP ($PM_{2.5}$) [iii]	24-Hour	37.5	18
	Annual	15	NA
NO_2	1-Hour	200	18
	24-Hour	120	9
	Annual	40	NA
Ozone (O_3)	8-Hour	160	9
	Peak Season	100	NA
Carbon Monoxide (CO)	1-Hour	30,000	0
	8-Hour	10,000	0
	24-Hour	4,000	0
Lead (Pb)	Annual	0.5	NA

Notes:

[i] All measurements of the concentration of gaseous air pollutants, i.e. sulphur dioxide, nitrogen dioxide, ozone and carbon monoxide, are to be adjusted to a reference temperature of 293 Kelvin and a reference pressure of 101.325 kilopascal.

[ii] Respirable suspended particulates mean suspended particles in air with a nominal aerodynamic diameter of 10 µm or less.

[iii] Fine suspended particulates mean suspended particles in air with a nominal aerodynamic diameter of 2.5 µm or less.

2.2.3 In accordance with the EIAO-TM, odour predicted at all ASRs should meet 5 odour units (OUs) based on an averaging time of 5 seconds.

Air Pollution Control (Construction Dust) Regulation

2.2.4 Made under Section 43 of the APCO, this Regulation defines notifiable and regulatory works for achieving the purpose of dust control for a number of activities. The Regulation requires that any notifiable work shall give advance notice to EPD, and the Contractors shall ensure that the notifiable and regulatory works are carried out in accordance with the Schedule of the Regulation. Dust control and suppression measures are also provided in the Schedule.

2.2.5 The proposed construction works for the proposed Project are both regulatory and notifiable works due to activities including material stockpiling and dusty material handling as potential sources of fugitive dust emissions as detailed under Parts I to IV of the Schedule on Dust Control Requirements.

Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation

2.2.6 The Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation, which aims to control emissions from non-road mobile machinery (NRMMs) to improve air quality, became effective on 1 June 2015. NRMMs include non-road vehicles, as well as mobile machines and equipment (regulated machines) such as crawler cranes, excavators and air compressors.

2.2.7 Under the regulation, regulated machines have to comply with the Stage IIIA emission standards of the European Union (EU). It also requires all regulated machines sold or leased for use in Hong Kong to bear an approval or exemption label issued to them by the EPD, started from 1 September 2015. It restricts specified activities and locations

including construction sites, designed waste disposal facilities and specified processes to use only NRMMs that bear an approval or exemption label issued to them by the EPD, with effect from 1 December 2015.

Air Pollution Control (Fuel Restriction) Regulations

2.2.8 The Air Pollution Control (Fuel Restriction) Regulation was enacted in 1990 to impose legal control on the type of fuels allowed for use and their sulphur contents in commercial and industrial processes to reduce sulphur dioxide (SO_2) emissions. The Air Pollution Control (Fuel Restriction) (Amendment) Regulation 2024 commenced on 1 April 2025. The sulphur content of liquid fuel is tightened to 0.001% by weight. The Regulation does not apply to any fuel-using equipment that is used or operated in premises used solely as a dwelling or is used or operated in or on a vessel, motor vehicle, railway locomotive or aircraft.

ProPECC PN2/96 - Control of Air Pollution in Car Parks

2.2.9 This practice notes include air quality guidelines required for the protection of public health and factors that should be considered in the design and operation of car parks in order to achieve the required air quality. The limits for air pollutants as recommended by the practice notes are summarised in **Table 2.2**.

Table 2.2 Limits of Air Pollutant Concentrations Inside Car Parks

Air Pollutant	Average Time	Maximum Concentration (µg/m3) [i]	Parts Per Million (ppm)
Carbon Monoxide (CO)	5 minutes	115,000	100
Nitrogen Dioxide (NO_2)	5 minutes	1,800	1

Notes:
[i] All limits are expressed as at reference conditions of 298K and 101.325kPa.

2.3 Existing Air Quality in Kwun Tong District

2.3.1 The nearest air quality monitoring station (AQMS) to the Proposed Development is the Kwun Tong AQMS. The five most recent years of air quality monitoring data, 2019 to 2023, from this station are summarized in **Table 2.3**. According to the AQMS monitoring data presented in **Table 2.3**, exceedance in annual NO_2 concentrations is recorded.

Table 2.3 Air Quality Monitoring Data at Kwun Tong AQMS

Pollutant	Averaging Time	AQO	Pollutant Concentration (µg/m3)				
			2019	2020	2021	2022	2023
Respirable Suspended Particulates (RSP)	10th Highest 24-hour	75 (9)	73	67	72	49	57
	Annual	30	38	32	31	24	26
Fine Suspended Particulates (FSP)	19th Highest 24-hour	37.5 (18)	40	32	32	31	28
	Annual	15	21	16	17	14	15
Nitrogen Dioxide (NO2)	19th Highest 1-hour	200 (18)	184	153	164	145	147
	10th Highest 24-hour	120 (9)	96	81	97	83	75

	Annual	40	45	43	49	45	41
Sulphur Dioxide (SO2)	4th Highest 10-Min	500 (3)	41	24	24	19	29
	4th Highest 24-hour	40 (3)	11	8	7	11	10
Ozone (O3)	10th Highest 8-hour	160 (9)	150	126	136	148	136
	Peak season	100	93	84	79	81	85
Carbon Monoxide (CO)	1st Highest 1-hour	30000 (0)	-	-	-	-	-
	1st Highest 8-hour	10000 (0)	-	-	-	-	-
	1st Highest 24-hour	4000 (0)	-	-	-	-	-

(a) Bolded values exceed the relevant AQO.
(b) Data extracted from EPD's Smart Air Modelling Platform (SAMP v2.1).

2.3.2 Apart from the air quality monitoring data, a set of background levels from PATH v3.0 ("Pollutants in the Atmosphere and their Transport over Hong Kong") is also reviewed. As the tentative year of the completion of the Proposed Development is 2032, the background air quality predicted by PATH v3.0 for Year 2030 in Grid 46,30; 46,31; 47,30 and 47,31 will be adopted for the quantitative assessment as it is considered conservative and closest to the opening year. The predicted Year 2030 background concentrations at these grids are summarized in **Table 2.4**. With respect to the future background air quality predicted by PATH v3.0 in **Table 2.4**, all values are below the relevant AQOs except O_3.

Table 2.4 Year 2030 Background Annual Average Concentrations of the Air Pollutants from PATH v3.0

Pollutant	Averaging Time	AQO	Data Summary	PATH v3.0 Grid in Year 2030			
				46,31	47,31	47,30	46,30
RSP	24-hour	75 (9)	10th	51	50	50	49
			Exceedance	0	0	0	0
	Annual	30	-	19	19	19	19
FSP	24-hour	37.5 (18)	19th	29	28	28	28
			Exceedance	4	2	2	2
	Annual	15	-	12	11	11	11
NO2	1-hour	200 (18)	19th	82	76	69	71
			Exceedance	0	0	0	0
	24-hour	120 (9)	10th	33	29	27	29
			Exceedance	0	0	0	0
	Annual	40	-	13	11	11	13
SO2	10-Min	500 (3)	4th	23	22	23	23
			Exceedance	0	0	0	0
	24-hour	40 (3)	4th	7	7	7	7
			Exceedance	0	0	0	0

	24-Hour	4000 (0)	1st	458	447	448	457
			Exceedance	0	0	0	0
(a) Numbers in brackets is the number of exceedances allowed per year (b) Bolded values exceed the relevant AQO (c) Data extracted from EPD's Smart Air Modelling Platform (SAMP v2.1)							

2.4 Identification of Representative Air Sensitive Receivers (ASRs) during Construction Phase

2.4.1 There are a number of industrial buildings, residential buildings, churches, community centres, sports centres and playgrounds located within 500m of the Proposed Development. Location of representative ASRs during construction phase are shown in **Figure 2.2**. Their details are listed below:

Table 2.5 Details of Representative Air Sensitive Receivers during Construction Phase

Representative ASR ID	Description	Land Use	Assessment Height (m)	Horizontal Distance from the Application Site (m)
A01	Planned Transitional Housing	Residential	1.5 - 33.0	18
A02	Peninsula East	Residential	1.5 - 150	34
A03	Kwun Tong Wholesale Fish Market	G/IC	1.5 - 18.0	138
A04	Planned Residential Development (Application No. A/K15/122)	Residential	1.5 - 100	37
A05	Planned Comprehensive Residential Development (Application No. A/K15/126)	Residential	1.5 - 100	203
A06	Planned Residential Development (Application No. A/K15/121)	Residential	1.5 - 75.5	222
A07	Montego Bay	Residential	1.5 - 100	351
A08	Yau Tong Industrial City Block B	Industrial	1.5 - 54.0	121
A09	Wah Lee Industrial Building	Industrial	1.5 - 53.0	177
A10	Maya by Nouvelle	Residential	1.5 - 112	224

Representative ASR ID	Description	Land Use	Assessment Height (m)	Horizontal Distance from the Application Site (m)
A11	Planned Residential Development (Application No. A/K15/129)	Residential	1.5 - 120.0	160
A12	Mai Tong Industrial Building	Industrial	1.5 - 33.0	268
A13	The Spectacle	Residential	1.5 - 150	305
A14	Canaryside at Shung Shun Street	Residential	1.5 - 120	402
A15	Ocean One at Shung Shun Street	Residential	1.5 - 120	424
A16	Ko Fai Industrial Building	Industrial	1.5 - 50.0	323
A17	Sam Ka Tsuen Recreation Ground	G/IC	1.5	308
A18	Yau Tong Centre Tower 7 at Ka Wing Street	Residential	1.5 - 18.0	443
A19	全記五金貿易有限公司	Commercial	1.5 – 18.0	75
A20	Planned Residential Development (Application No. A/K15/122)	Residential	1.5 - 100	67
A21	Union Industrial Building	Industrial	1.5 - 33	49
A22	Yau Tong Industrial Building Block 2	Industrial	1.5 - 33	102

2.5 Impact arising from Proposed Development - Construction Phase

Identification of Sources

2.5.1 Major source of potential air quality impact during construction phase would be fugitive dust generated from wind erosion of the stockpiles and open sites, as well as from the following construction activities:

- Excavation resulting in exposed ground vulnerable to air erosion;
- Earth moving, loading and unloading of excavated material;
- Wind effect on material stockpiling; and
- Vehicle movements on haul roads and over the construction site.

2.5.2 There will be potential impacts from the criteria pollutants (e.g. nitrogen oxides (NO_x), sulphur dioxide (SO_2), and carbon monoxide (CO)). Emission from diesel trucks for the haulage of materials and construction plants will contain high percentage of smoke particulate and unburned hydrocarbons in comparison with petrol driven vehicles. In all circumstances, the contractor will be required to observe all relevant regulations and maintain all equipment in good condition to avoid any excessive emission. Under the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation, only approved or exempted non-road mobile machineries (NRMMs) (including mobile generator, air compressor, excavator, crawler crane, bulldozer and etc.) with a proper label are allowed to be used in the construction site. Exempted NRMMs shall be avoided as far as practicable to minimize the fugitive dust and gaseous emissions. With reference to other similar scale projects, the number of on-site diesel/petroleum fuelled machinery (2-3 machineries) to be used for construction works is limited owing to the small size of the work site with an area of 2,419 m^2. In addition, availability of electricity supply during construction of the project will be explored and such requirement will be specified in future contract. If available, contractor should maximise use of electric non-road mobile machinery (NRMMs) and with least reliance of diesel fuelled equipment (e.g. for electricity powered stationary equipment such as pump instead of using generator).

2.5.3 The Proposed Development includes excavation of basement for car parking facilities, erection of residential towers and ancillary facilities. The site topography is generally flat so that no extensive site formation work is required. The tentative excavation area is around 1,800m^2 with a depth of about 12m. As this planning application stage, there is no detailed information on the construction program; however, with reference to other similar scale projects, there is likely to be around 2 dump trucks per hour during the site formation stage of the Proposed Development. Watering the haul road and the site once per hour would be implemented to minimize the potential dust emission during the traveling of the dump trucks within the site. In general, excavation, pilling, and superstructure works are typical of many residential developments in Hong Kong. The effective mitigation measures for the construction activities (mentioned in **Section 2.5.7**) will be considered and implemented to minimize the air quality impacts arising from the Proposed Development during the construction periods.

Concurrent Projects in the Vicinity

2.5.4 The tentative year of the completion of the Proposed Development is 2032 and the existing/ planned concurrent projects with construction works in the vicinity are as follows:

- Proposed Comprehensive Residential Development at 5 and 8 Tung Yuen Street, and Adjoining Government Land, Yau Tong, Kowloon (Application No.: A/K15/122; Commencement date: Not Available; Completion date: Year 2025)
- Proposed Comprehensive Residential Development at Yau Tong Inland Lots 4 S.B and 9, Yau Tong Marine Lot 57 and adjoining Government Land, Tung Yuen Street, Yau Tong, Kowloon (Application No.: A/K15/126; Commencement date: Not Available; Completion date: Year 2025)
- Proposed Minor Relaxation of Plot Ratio Restriction for Flat and Permitted Shop and Services, Eating Place and Social Welfare Facility (Day Care Centre for the Elderly) at 18-20 Sze Shan Street, Yau Tong, Kowloon (Application No.: A/K15/129; Commencement date: Not Available; Completion date: Not Available)
- Proposed Comprehensive Development (including Commenced Phases 1 and 2 Developments, and Proposed Remaining Phase Development for Residential, Hotel, Commercial uses and Pier (Landing Steps)) with Minor Relaxation of Plot

Ratio Restriction at Various Lots and Adjoining Government Land at Yau Tong Bay, Yau Tong, Kowloon (Application No.: A/K15/130; Commencement date: Not Available; Completion date: Not Available)

2.5.5 Their locations shown in **Figure 2.9.** The above concerned concurrent projects have the potential to cause cumulative construction dust impact, as their planned construction periods overlap with that of this Project.

2.5.6 For each of the concerned concurrent projects, proper mitigation measures including watering frequently and good site practice will be implemented to ensure that their construction activities would not cause adverse construction dust impacts. Furthermore, close liaison with the contractors of the concurrent projects will be taken place in order to avoid dusty activities being carried out at the same time. Therefore, adverse cumulative construction dust impact arising from construction activities of the concurrent projects of concern are not anticipated.

Mitigation Measures for Dust Emission

2.5.7 Fugitive dust emission arising from the construction can be effectively suppressed by incorporating proper mitigation measures into work procedures through contractual clauses (e.g. regular and sufficient watering, enclosure of potential dust sources, etc.), good site management, and close enforcement of the resident engineers. The contractor(s) shall be required to follow the requirements of the Air Pollution Control (Construction Dust) Regulation which requires notification before carrying out construction works and to adopt dust reduction measures while carrying out construction activities. A monitoring programme can be instigated to monitor the construction process in order to enforce dust controls and modify methods of works to reduce the dust emission down to acceptable levels.

2.5.8 To mitigate fugitive dust impacts, all dust control measures recommended in the Air Pollution Control (Construction Dust) Regulation, where applicable, shall be implemented. Relevant dust control measures include:

- The works area for site clearance shall be sprayed with water before, during and after the operation so as to maintain the entire surface wet;
- Restricting heights from which materials are to be dropped, as far as practicable to minimize the fugitive dust arising from unloading/ loading;
- Immediately before leaving a construction site, all vehicles shall be washed to remove any dusty materials from the bodies and wheels. However, all spraying of materials and surfaces should avoid excessive water usage;
- When a vehicle leaving a construction site is carrying a load of dusty materials, the load shall be covered entirely by clean impervious sheeting to ensure that the dusty materials will not leak from the vehicle;
- Erection of hoarding of not less than 2.4 m high from ground level along the site boundary, where appropriate;
- Any stockpile of dusty materials shall be covered entirely by impervious sheeting; and/or placed in an area sheltered on the top and four sides;
- All dusty materials shall be sprayed with water immediately prior to any loading, unloading or transfer operation to maintain the dusty materials wet; and
- To reduce the traffic induced dust dispersion and re-suspension, the travelling speed of vehicles within the site should be controlled.

2.5.9 In addition, emission control during the construction phase shall be carried out in accordance with the requirements of the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation. The emissions of non-road mobile machinery (NRMMs) include mobile machines and vehicles powered by internal combustion engines used primarily off-road. All NRMMs operating on-site which are subject to the emissions control of the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation shall be approved/exempted (as the case may be) and affixed with the requisite approval/exemption labels.

2.5.10 The recommended dust mitigation measures for protection of nearby ASRs are described below:

Good Site Management

2.5.11 Good site management is important in reducing potential air quality impacts to an acceptable level. As a general guide, the contractor(s) shall maintain a high standard of housekeeping to prevent fugitive dust emissions. Loading, unloading, handling and storage of fuel, demolished debris and wastes or by-products should be carried out in a manner so as to minimise the release of visible dust emission.

2.5.12 Appropriate working methods should be devised and arranged to minimise dust emissions and to ensure any installed control system and/or measures are operated and/or implemented in accordance with their design merits. No free falling of debris should be allowed. Debris should be lowered by a hoist to the ground, preferably with an enclosed tunnel.

2.5.13 A high standard of housekeeping shall be maintained. Any piles of materials accumulated on or around the work areas shall be cleaned up regularly. Cleaning, repair and maintenance of all plant facilities within the work areas shall be carried out in a manner that does not generate fugitive dust emissions. Prior to cleaning, the materials should be handled properly to prevent fugitive dust emission.

2.5.14 Frequent mist spraying should be applied on dusty areas. The frequency of spraying will depend upon local conditions such as rainfall, temperature, wind speed and humidity. The amount of mist spraying should be just enough to dampen the materials without over-watering, which could result in surface water runoff.

Dust Emissions from Site Traffic

2.5.15 Dust emission from construction traffic is generated predominantly from the travelling of waste removal lorries. Areas within the Application Site where there are regular vehicle movements should have a hard surface. Speed controls at an upper limit of 10km/hr should be imposed and their movements should be confined to designated roadways within the Application Site. All dusty vehicle loads should have side and tail boards covered by tarpaulin extending at least 300mm over the edges. Wheel-wash troughs and hoses should be provided at exit points of the Application Site.

2.5.16 "Recommended Pollution Control Clauses for Construction Contracts" is available on the EPD website which set out the recommended air pollution control measures to be implemented by the contractor(s) during the construction stage of the Project.

2.5.17 With the adoption of good practices, it is expected that emission of construction fugitive dust can be kept to an acceptable level.

2.6 Identification of Air Sensitive Receivers (ASRs) during Operational Phase

2.6.1 Representative ASRs within the Proposed Development are selected to assess the air quality at the Proposed Development and determine the appropriate fresh air intake locations for the podium of the Proposed Development.

2.6.2 Assessment heights of each ASR are scattered from the local ground floor to the higher floors of the residential towers.

2.6.3 The locations of the representative ASRs during operational phase are shown in **Figure** 2.3 and summarized in **Table 2.6**. All the fresh air intake and openable window of facilities have been included as ASRs.

Table 2.6 Details of Representative Air Sensitive Receivers during Operational Phase

ASR ID	Local Ground mPD	Flagpole Height, mAG	Assessment Height, mPD
D01 to D14	4.4	1.5 – 92.85	5.9 – 97.25

2.7 Identification of Pollution Sources During Operational Phase

General

2.7.1 As there are numerous industrial emissions (such as concrete batching plant) and marine vessels emissions identified within the 200m assessment area from the site boundary of the Application Site which cannot satisfied the buffer distance as stipulated in Table 3.1 of HKPSG Ch.9, a quantitative air quality impact assessment is therefore conducted to assess and ensure the future air sensitive receivers of the proposed development would not be under adverse air quality impact.

2.7.2 In line with EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", all three tiers of emissions that will contribute to the total air quality impacts on ASRs within the assessment area have been identified, including:

(1) Primary Contribution: Project induced

(2) Secondary Contributions: Pollutant-emitting activities in the immediate neighbourhood

(3) Background Contributions: Pollution not accounted for by (1) and (2)

2.7.3 Primary and secondary contributions are near-field source impacts due to sources within the assessment area such as vehicular emission from existing road network and proposed roads (if any), industrial emissions and marine emissions, etc. Background contributions are far-field source impacts outside the assessment area and are predicted using the PATH v3.0. The cumulative air quality impact assessment for operation phase is a combination of all three tiers of contributions and thus has considered the near-field and far-field sources.

2.7.4 As referred to 2nd paragraph of Section 2.3 of EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", for Tier 3 – Background Contributions, a major point source located within 4km from a receptor should be evaluated to see if it can cause direct impact. According to the list of major point sources provided in the guideline, two major point sources, i.e. Kai Tak Cruise Terminal and Cape Collinson Crematorium, have been identified within the 4km radius area of the Application Site. The details of identified major point sources would be discussed in **Section 2.7.30** to **2.7.33**.

2.7.5 Several site visits were conducted on 23 August 2023, 18 & 25 September 2023, 28 February 2024 and 14 & 15 March 2025 to verify the presence of chimneys, other industrial and marine vessels activities, and potential odour sources.

2.7.6 As mentioned above, emissions from open roads and industrial sources (i.e. secondary contributions), and major sources (i.e. background contributions), have been considered and assessed. **Table 2.7** shows a summary of the sources and the

associated air pollutants of concern. The details of the summary in **Table 2.7** are discussed in the following sections.

Table 2.7 Summary of Emission Sources

Sources	SO_2	NOx	RSP	FSP	
(i) Industrial Emissions	X	X	✓	✓	Section 2.7.6 – 2.7.15
(ii) Marine Vessels Emissions	✓	✓	✓	✓	Section 2.7.16 – 2.7.28
(iii) Other Major Emission Sources within 4km	✓	✓	✓	✓	Section 2.7.29 – 2.7.32
(iv) Vehicular Emissions					
a. Bus Terminus	-	-	-	-	Section 2.7.33
b. Open Roads	X	✓	✓	✓	Section 2.7.34

2.7.7 A summary of model input in AERMOD for sources is given in **Appendix 2.8**.

(i) Industrial Emissions

Emissions from Chimney

2.7.8 Based on several site visits and Hong Kong Environmental Database (HKED) - SP licence search, no active chimney was identified within 500m assessment area from the site boundary of the Site. Besides, there will not be any proposed air emission sources within the Site anticipated.

Emissions from Concrete Batching Plant

2.7.9 In general, the process of concrete batching plant involves mixing of aggregate, cement and other cementitious materials without combustion. Therefore, the major emission from concrete batching plant is dust emission, i.e. RSP and FSP.

2.7.10 Based on several site visits and HKED - SP licence search, one concrete batching plant, Redland Concrete Limited, is recorded within 500m radius of the Application Site (see **Figure 2.4**). Its Specified Process (SP) Licenses is shown in **Appendix 2.1**. The emissions from the concrete batching plant have been included in this assessment. It is noted that China Concrete Co. Limited and Hong Kong Concrete Co. Limited will cease all operations of the concrete batching process and related operations by early April[1]. Their emissions are therefore excluded in the assessment.

2.7.11 According to Annex I of A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process – Cement Works (Concrete Batching Plant) BPM 3/2 (2025) issued in April 2025, the concentration limit of particulate matter should be limited to 10mg/m^3 for license renewal. Therefore, the concrete batching plants after 2032 (the commission year of the Proposed Development) has to comply with the relevant requirements.

2.7.12 Due to the confidentiality, nil or rejection replies was received from the company and site staffs for the plant emission information. Based on the latest available information, the emission information of Redland Concrete Limited is therefore referenced to the SP license (see **Appendix 2.1**).

2.7.13 Haul road emissions were modelled as area sources and the extent of which were based on the operations observed during the several site surveys for the three concrete batching plants.

2.7.14 Sand at the concrete batching plants will be refilled by barges, given that the refilling activities and sand storage area of the barge were enclosed, wind erosion from these

[1] https://www.info.gov.hk/gia/general/202504/07/P2025040700531.htm?fontSize=1

activities are considered insignificant. Nevertheless, the impact due to the wind erosion from barges are included in the assessment for conservative purpose.

2.7.15 Detailed calculations of concrete batching plant emissions are shown in **Appendix 2.2**.

Emissions from Sand Depot at Yau Tong Bay

2.7.16 A sand depot at Yau Tong Bay is identified within the 500m assessment area. The location of the sand depot is presented in **Figure 2.4**. Detailed calculations of sand depot are presented in **Appendix 2.3**.

(ii) Marine Vessels Emissions

2.7.17 **Figure 2.5** shows the identified the marine vessels emissions within the 500m radius assessment area. The detailed calculation of marine vessels emissions are shown in **Appendix 2.1**. The identified sources are as follows:

- Ferry service between Sam Ka Tsuen and Sai Wan Ho provided by Coral Sea Ferry Service;
- Ferry service between Sam Ka Tsuen and Tung Lung Island provided by Coral Sea Ferry Service;
- Ferry service - Montego Bay Circular Route (Sam Ka Tsuen <– Tsim Sha Tsui No.4 Pier – Central No.10 Pier->Sam Ka Tsuen) provided by Coral Sea Ferry Service;
- Barge serving Redland Concrete Limited
- Barge serving Architectural Salvage Store (全記五金貿易有限公司);
- Barge serving Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext);
- Speedboats and sampans at Sam Ka Tsuen Typhoon Shelter;
- Fishing Vessels at the Kwun Tong Wholesale Fish Market; and
- Planned local vessels at Lei Yue Mun Waterfront

2.7.18 With reference to "Study on Marine Vessels Emission Inventory – Final Report" by HKUST in February 2012, the total emissions from vessels can be calculated using the following equations:

$$\text{Total Emission}_{(\text{pollutant})} = \Sigma \text{ Emission (pollutant, activity mode, equipment)}$$

$$\text{Emission}_{(\text{pollutant, activity mode, equipment})} = P \times FL \times T \times EF$$

where P is the installed power of equipment;

FL is fractional load of equipment in a specific mode;

T is operation time-in-mode; and

EF is fractional load emission factor of equipment.

2.7.19 Emissions from ferries and barges during sailing have been modelled as evenly distributed point sources representing the segment they travel to and from the berths within the 500m assessment area. The individual routes are shown in **Figure 2.5**.

Ferry services between Sam Ka Tsuen - Sai Wan Ho, Sam Ka Tsuen - Tung Lung Island and Montego Bay Circular Route (Sam Ka Tsuen <– Tsim Sha Tsui No.4 Pier – Central No.10 Pier->Sam Ka Tsuen) provided by Coral Sea Ferry Service

2.7.20 No information can be obtained from operators. The information of passenger ferries including release height, exit temperature, exit velocity and internal diameter of its

chimney extracted from Appendix 3.5 of approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA-258/2018) are therefore adopted.

2.7.21 According to the current ferry schedule on the operator's website[2],the visiting frequencies of different modes at each hour are studied and presented in **Appendix 2.4**.

Barges for Concrete batching Plants

2.7.22 Based on the site visits, both main engine and auxiliary engine of the barges will be switched off during the berth. The auxiliary engine will operate intermittently during sand refilling of silos only. As a conservative approach, it is assumed that the auxiliary engine of the barge will be in operation during sand refilling process for the entire working hours. In additions, only one barge can berth at one loading/ unloading point at any one time based on observation, therefore, the maximum number of barges in operation at any time would be three. Since the barge will berth at the CBPs for several days, it is assumed that there would be one arrival/ departure per hour of barge at each loading/ unloading point during operation hours for the worst-case scenario.

2.7.23 According to the site visits, raw materials stored on the barges are not fully enclosed on some occasions, wind erosion of raw materials may impose negative impact on the Proposed Development. To be conservative, wind erosion of raw materials from barges at the three concrete batching plants are included as shown in **Figure 2.4** and it is assumed that the barges stay at the berths for the whole day.

2.7.24 Detailed calculations of barge emissions and its wind erosion are shown in **Appendix 2.2**.

Fishing Vessels at Kwun Tong Wholesale Fish Market

2.7.25 Information for the fishing vessels at Kwun Tong Wholesale Fish Market was not provided by the operator, referenced is therefore made to the Appendix 3.7 of approved S16 application for Proposed Residential Development in "Comprehensive Development Area (4)" Zone and "Road" at No. 18 Tung Yuen Street, Cha Kwo Ling Yau Tong, Kowloon (A/K15/121). As stated in Appendix 3.7 of A/K15/121, the activities at Kwun Tong Whole Sale Fish Market include delivery and collection of fish by fishing vessels during the morning (i.e. 05:00 to 12:00) and night (i.e. 00:00 to 02:00) periods. The maximum number of fishing vessels berthing can be up to 16 at 07:00 to 12:00 as advised by AFCD. For assessment purposes, it is assumed that there would be 16 fishing vessels and 2 night-time fishing vessels (i.e. 2 vessels for night-berthing as there would be 2 arriving / departing according to AFCD) berthing at the market during the morning and night periods, respectively. The auxiliary engines of fishing vessels will be in continuous operation for the entire period for conservative approach.

2.7.26 In view of the operation of the whole sale fish market is similar as before, the assumed frequency from the referenced report (i.e. A/K15/121) is still valid. Detailed calculations of fishing vessels emissions and the visiting frequency (extracted from Appendix 3.7 of A/K15/121) are shown in **Appendix 2.5**.

Planned Ferry to/from Lei Yue Mun New Landing Facility

2.7.27 There will be additional marine traffic to/from Lei Yue Mun New Landing Facility, and tentatively scheduled for completion in the fourth quarter of 2024[3]. The emissions from

[2] https://www.coralseaferryservice.com.hk/timetable

[3] LC Paper No. CB(4)390/19-20(03) (https://www.legco.gov.hk/yr19-20/english/panels/edev/papers/edevcb4-390-3-e.pdf)

the additional marine traffic to/from Lei Yue Mun New Landing Facility is included in this assessment.

2.7.28 Due to lack of information, the emission parameters for the planning local vessels are referenced to the Appendix 3.7 of approved planning application A/K15/121 and presented in **Appendix 2.6**.

Speedboats and sampans at Sam Ka Tsuen Typhoon Shelter

2.7.29 Several site visits were conducted in November 2023, December 2023, February 2024 and September 2024 to observe the speedboats and sampans activities at Sam Ka Tsuen Typhoon Shelter. Less than 5 speedboats and sampans were sailing within the shelter in every hour based on observation. In addition, the operators turned off the engine after berthing. The impact is considered insignificant and therefore would not be included in the assessment.

(iii) Other Major Point Sources within 4km

2.7.30 As referred to 2nd paragraph of Section 2.3 of EPD's "Guidelines on Assessing the 'TOTAL' Air Quality Impacts", for Tier 3 – Background Contributions, a major point source located within 4km from a receptor should be evaluated to see if it can cause direct impact. According to the list of major point sources provided in the guideline, two major point sources, i.e. Kai Tak Cruise Terminal and Cape Collinson Crematorium, have been identified within the 4km radius area of the Application Site. Location of identified major point sources is shown in **Figure 2.6**.

Kai Tak Cruise Terminal

2.7.31 According to the list of major point sources provided in the guideline, the cruise emission in hotelling mode at Kai Tak Cruise Terminal was identified as a major point source about 2.4km from the site boundary of the Application Site. According to the latest cruise schedule from 2025 to 2027, the highest number of scheduled cruise liners visiting Hong Kong will be in the Year 2025 and, hence, the cruise liner type in 2025 has been reviewed. As presented in **Appendix 2.7**, Costa Serena has the highest engine power among all cruise ships in Year 2025. Given there are two berthing spaces at the Cruise Terminal, another cruise ships with the second-highest engine power have been identified, including Anthem of the Seas, Celebrity Solstice, Ovation of the Seas and Spectrum of the Seas which have the same engine power. However, in view of the frequency of visit to Hong Kong of these four cruises, Spectrum of the Seas has therefore been selected as the second cruise ship for hotelling at Kai Tak Cruise Terminal at the same time for every hour of a day as "Costa Serena" for a conservative approach.

2.7.32 The details of model inputs and the detailed information of the emission rates of these cruise vessels are shown in **Appendix 2.7**.

Cape Collinson Crematorium

2.7.33 Cape Collinson Crematorium has been identified as a major point source located about 3.9km from the site boundary of the Application Site. However, the emission from Cape Collinson Crematorium would not have a direct impact to the representative ASRs of the Application Site due to screening by natural terrain. The potential impact from the emission of Cape Collinson Crematorium is considered sufficiently represented by the PATH v3.0 model (i.e. Tier 3 contribution) and thus not separately modelled by local dispersion model.

(iv) Vehicular Emission

a. Bus Terminus & On-site Street Parking Spaces

2.7.34 Two bus terminuses, namely Yau Tong (Shung Tak Wai) Bus Terminus and Yau Tong Bus Terminus, are found to be located within the 500m air assessment area. Since the Yau Tong Bus Terminus is far away from the Application Site (over 470m), it is considered that the start emission generated by this bus terminus is insignificant to the Proposed Development. An on-street bus terminus "Yau Tong (Shung Tak Wai) Bus Terminus" is located at northeast of the Application Site which is being served for one bus route only. In view of this terminus scale is relatively small, the start emission generated by the bus terminus is minimal. Nevertheless, start emission of all 18 vehicle classes (including FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the bus terminus.

2.7.35 In addition to bus terminuses, on-site street parking spaces were also identified based on the information from SAMP. In general, no starting emission will be applied if the roads with double yellow line and the road classified as District Distributor, Primary Distributor, Trunk Road & Expressway. In view of the on-site street parking spaces within 500m assessment area, e.g. Cho Yuen Street, Tung Yuen Street and Ko Fai Road, all roads are considered as with starting emission. Similar with bus terminus abovementioned, start emission of all 18 vehicle classes (including FBSD and FBDD) have been assigned to all roads identified with cold start as broad-brush approach to prevent any underestimation of emission from the on-site street parking spaces.

b. Open Roads Emissions

2.7.36 Air pollutant concentration at the Application Site due to the emission from the nearby road networks (vehicular tailpipe emissions) was assessed. The emission rate of each road within 500m from the Application Site is calculated from with latest EMFAC-HK issued by EPD. Based on the emission rate of each road, the air pollutant concentration at the Application Site was modelled with AERMOD.

2.8 Dispersion Modelling and Modelling Approach for Emission Sources

Computer Modelling

2.8.1 The dispersion of NO_X, RSP, FSP and SO_2 were modelled using AERMOD software released by Lakes Environmental Software. The model is based on the principle of Gaussian dispersion and is widely accepted by EPD and is used in this assessment to predict both concentration and deposition of pollutants from line, point and area sources. As discussed in **Section 2.7.3**, PATH v3.0 was adopted to provide the background pollutant concentrations in assessing the total air quality impact on the representative ASRs. In addition, met data including temperature and relative humidity extracted from the SAMP v2.1 were also adopted for modelling.

2.8.2 The Application Site and its 500m assessment area fall within the PATH grids (46,30), (46,31), (47,30) and (47,31). The predicted meteorological data for the relevant PATH grids from PATH v3.0 obtained from EPD's website were used for model input. The WRF meteorological data, including wind data, temperature, relative humidity, pressure, cloud cover, mixing height and Pasquill stability classes, for Year 2019 extracted from the PATH v3.0 released by EPD in January 2024 at the relevant grids have been adopted as on-site data into AERMET.

2.8.3 Land use types surrounding the Proposed Development, the albedo, Bowen ratio for the 10km x 10 km area, surface roughness for the 1km area, and the Surface File and

Profile File to be used as input in AERMOD are downloaded and extracted from the AERMET tool in the SAMP v2.1. The relevant information is provided in **Appendix 2.9**.

2.8.4 Model input parameters and assumptions for the operation phase are summarised in **Table 2.8**.

Table 2.8 Model Input Parameters and Assumptions for Operation Phase

Input Parameters & Assumptions	Descriptions
Type of Sources	• Emissions from concrete batching plants: Point and Area sources • Emissions from marine vessels and major point source: Point sources • Vehicular Emissions: Line sources
Assessment Parameters	• Hourly and annual NOx/ NO/ NO_2 • Daily and annual RSP • Daily and annual FSP • 10-min and daily SO_2
Meteorological data	• Year 2019 WRF data from PATH v3.0 • PATH grids: (46,30) • Mixing height values recorded by HKO in 2019 were in the range of 119m to 2009m. Mixing heights from WRF data which are lower than 119 or higher than 2009 were adjusted to 119m and 2009m, respectively • Wind speed <0.5m/s adjusted to 0.5m/s • Anemometer height of WRF data: 8.5m

EMFAC-HK (embedded in SAMP v2.1)

2.8.5 2032 is chosen as the Model Year for EMFAC-HK year in the SAMP v2.1 to represent the worst-case scenario emission.

2.8.6 In accordance with a Guideline of Use of Temperature and Relative Humidity Data for Vehicular Emission Factor Prediction published by EPD in March 2021, the monthly minimum temperature and relative humidity (RH) (i.e. ranging from 11°C – 26°C and 25% to 61%) were applied for both short-term (i.e. hourly) and long-term (i.e. annual average) air quality impact of NO_2 while annual minimum temperature and RH (i.e. 11°C and 25%) were applied for both short-term (i.e. daily average) and long-term (i.e. annual average) air quality impact of RSP and FSP. The RH and temperature are extracted from SAMP v2.1. Summary of met data is shown in **Appendix 2.10**.

Traffic Data

2.8.7 Project specific hourly traffic data for 2047 having the maximum traffic data of the concerned roadway network within 15 years from the assumed completion year of the developments was adopted in combination with emission factors based on the EMFAC-HK Model (with calendar year set as 2032) to estimate the highest vehicular emission rate for each roadway. The traffic data predicted by the project traffic consultant includes hourly traffic flows with a composition of 18 vehicle classes according to "Guideline on Modelling Vehicle Emissions". Traffic forecast, based on the traffic count including vehicles from all concrete batching plants within the vicinity, is included in **Appendix 2.11**, which shows the hourly Vehicle Kilometer Travelled (VKT), the number of trips travelled, and the hourly averaged speed of road carriageways respectively, with 24-hour speed limits of 50 kilometers per hour (kph).

2.8.8 The estimated 18-class distribution as defined in EMFAC-HK was derived by sectoring the relevant classes in the Transport Department's Annual Traffic Census record or vehicle distribution obtained from manual traffic count surveys, in proportion to the recorded distribution in EPD document: "2018 Licensed Vehicle by Age and Technology Group Fractions".

2.8.9 The roadway network within the 500m study area consists of 73 distinct roadway links.

2.8.10 The established road traffic data, including traffic flow, 24-hour vehicle mix and speed limits (with the latter assumed to be the same under the same road groups) will be confirmed by the Project Traffic Consultant. Relevant correspondence of the endorsement and the confirmation letter from traffic consultant on the validity of the traffic data will be provided when it is available.

Calculation of Vehicular Emissions

2.8.11 The road segments within 500m assessment area and their corresponding predicted traffic flow were imported into SAMP v2.1. Setting of the road width and centerline XY for all roads within 500m assessment area are followed the "Modelling Open Road Emissions using AERMOD" published by EPD. Zero emission vehicle scenario was adopted in the assessment. The total composite emission rate calculated by SAMP contains the running emissions and start emissions by broad-brush approach. For calculations of start emissions by the broad-brush approach, start emissions for each vehicle class are assumed directly proportional to Trips per Vehicle-kilometer-travelled ratio (Trip/VKT) with consideration of the proportion of local and rural roads within Hong Kong based on the Annual Traffic Census (ATC) prepared by the TD. For SAMP v2.1, default trip and VKT values from EMFAC-HK model v4.3 are used in the calculations. In this assessment, the estimated % of VKT for local and rural roads with possible starting emission is ~21.7988% of total VKT, which is calculated by raw data of 2023 provided by TD and the estimated % of VKT for local and rural roads is agreed with EPD (see **Appendix 2.19**).

Noise Barrier

2.8.12 No vertical or cantilevered noise barriers are found within 500m from the Site.

Road Elevation

2.8.13 The base elevation is the elevation of the ground surface underneath the road link in meter above Principal Datum (mPD). The height of the road surface above ground (in mAG) should be added to the release height.

2.9 Post-processing of Modelling Results and Background Pollutant Contribution

2.9.1 Pollutant dispersion from vehicular, industrial and marine emissions have been simulated using the AERMOD model. Dispersion results and background pollutant contributions have been combined and post-processed for the different averaging periods required for comparison with the relevant AQOs.

Ozone Limiting Method for Short-term Cumulative NO_2 Assessment

2.9.2 The conversion of NO_x to NO_2 is a result of a series of complex photochemical reactions and determines the prediction of near field impact of NO_x emissions. To determine vehicular emission impacts, the emission factors of NO_2 are extracted from the results of the EMFAC-HK Model version 4.3 and the emission factors of NO are calculated from the emission factors of NO_x and NO_2 for all motor vehicle types. For the industrial emissions, initial NO_2 to NO_x ratio for chimneys is assumed as 10% with reference to the Heathrow Airport EIA report.

2.9.3 For NO_x in particularly, an algorithm has been built-in to convert a portion of NO_x predicted at ASRs into NO_2 using the Ozone Limiting Method (OLM) when they mix with the ambient O_3. The OLM assumes a conversion process that is stoichiometrically limited by the ambient O_3 levels, and hence the latter can be used to predict the maximum convertible NO_2 from NO_x for superimposing onto the initial "out-of-tailpipe / in-stack" NO_2 levels as the base level. OLM has been applied for the sum of the vehicular, industrial and marine sources to compare with the available ozone for conversion to NO_2.

$$[NO_2]_{Predicted} = [NO_2]_{initial} + Min([NO]_{Predicted} \, or \, \frac{46}{48}[O_3]_{PATH})$$

where

$[NO_2]_{Predicted}$	is the predicted NO_2 Concentration;
$[NO_2]_{initial}$	is the initial NO_2 Concentration;
Min	means the minimum of the two values within the bracket;
$[O_3]_{PATH}$	is the representative O_3 PATH Concentration (from other contribution;
$\frac{46}{48}$	is the molecular weight of NO_2 divided by the molecular weight of O_3.

Jenkin Method for Long-term Cumulative NO_2 Assessment

2.9.4 For the long-term cumulative NO_2 assessment (i.e. predictions of annual average NO_2 concentration), Jenkin Method was adopted for the conversion of cumulative annual average NOx to cumulative annual average NO_2. The details of Jenkin Method for this assessment extracted from the SAMP v2.0 are shown in **Appendix 2.12**.

Background Pollutant Contribution

2.9.5 The latest Pollutants in the Atmosphere and their Transport over Hong Kong model (PATH v3.0) released by EPD is used to estimate the background air quality. Since Year 2032 has been selected as the assessment year, PATH v3.0 for Year 2030 of Grid 46,30 has been adopted as the background concentration.

2.10 Assessment Results

2.10.1 The predicted air quality concentrations from surrounding vehicular, industrial and marine emissions have been quantitatively assessed separately for SO_2, NO_2, RSP and FSP. The predicted results of SO_2, NO_2, RSP and FSP at all predetermined ASRs are summarized in **Appendix 2.13**. The range of the assessment results of all the pollutants are summarized below.

Table 2.9 Range of Assessment Results of All Pollutants

ASR ID	NO_2			RSP		FSP		SO_2	
	19th Highest Hourly (μg/m³)	10th Highest Daily (μg/m³)	Annual Average (μg/m³)	10th Highest Daily (μg/m³)	Annual Average (μg/m³)	19th Highest Daily (μg/m³)	Annual Average (μg/m³)	4th Highest 10-min (μg/m³)	4th Highest Daily (μg/m³)
D01	85.8-97.9	34.8-44.3	14-24.5	49.4-50.3	18.7-19.9	28.5-28.9	11.1-11.6	22.7-22.8	6.8-6.9

AQO ($\mu g/m^3$)	200	120	40	75	30	37.5	15	500	40

Note:

1. Bolded values exceed the relevant AQO.

SO_2

2.10.2 The predicted results of the 4th highest 10-minute average and daily average SO_2 concentration at ASR levels are summarized in **Appendix 2.13**. The results indicate that SO_2 concentrations at the Proposed Development comply with the relevant AQOs.

NO_2

2.10.3 The predicted results of the 19th highest 1-hour average and annual average NO_2 concentration at all selected ASR levels are summarized in **Appendix 2.13**. The results indicate that NO_2 concentrations at all locations of the Proposed Development comply with the relevant AQOs.

RSP

2.10.4 The predicted results of the 10th highest 24-hours and annual average RSP concentrations at all ASR levels are summarized in **Appendix 2.13**. The results indicate that RSP concentrations at all locations of the Proposed Development comply with the relevant prevailing AQOs except ASR D06 of 10th highest daily average and annual average at 4/F (27.5m above ground) and annual average at 5/F (30.6m above ground) at the south portion of the proposed Development. The predicted RSP concentration at these levels exceed the prevailing AQOs which is enacted in April 2025.

FSP

2.10.5 The predicted results of the 36th highest 24-hours and annual average FSP concentration for all selected ASRs at all levels are summarized in **Appendix 2.13**. The results indicate that FSP concentration at all locations of the Proposed Development comply with the relevant AQOs except ASR D06 of annual average at 4/F and 5/F (27.5m and 30.6m above ground) at the south portion of the proposed Development. The predicted RSP concentration at these levels exceed the prevailing AQOs which is enacted in April 2025.

2.10.6 The contour plots of SO_2, NO_2, RSP and FSP at their worst hit level are shown in **Appendix 2.14**. The contour plots show that there is no exceedance within the Application Site at their worst hit level of SO_2 and NO_2.

2.10.7 For the RSP and FSP, there are some portions of the Proposed Development at 4/F and 5/F of the residential tower fall within the exceedance zone. However, there is no fresh air intake nor openable window are located within the exceedance zone. From the assessment results, the rest of the residential towers would comply with the relevant AQOs. Therefore, the occupants at the residential tower would not be subject to adverse air quality impact.

2.10.8 The predicted air quality concentration at non-domestic portion including podium comply with the prevailing AQOs. the fresh air intake for the non-domestic use of the Proposed Development is recommended to be located at or above 1.5mAG except the exceedance zone, thus, it is anticipated that the Proposed Development will not be subject to any adverse air quality impact.

2.11 Odour Impact Assessment

Introduction

2.11.1 Upon the visits, the odour source of the area is same as that assessed in the approved planning application of the 126 Approval Scheme, i.e. three identified odour sources are Yau Tong Sewage Pumping Station, Kwun Tong Wholesale Fish Market and Sam Ka Tsuen Typhoon Shelter as shown in **Figure 2.7**. Also, there is no change in their operation. Therefore, the odour impact assessment used in the previous assessment for A/K15/126 is adopted in this assessment.

2.11.2 In addition, according to the reply from EPD's regional office (see **Appendix 2.18**), there is no odour complaint in the concerned area such as Yau Tong Sewage Pumping Station, concrete batching plant & Wholesale Fish Market.

Identified Odour Sources

a. Yau Tong Sewage Pumping Station

2.11.3 Yau Tong Sewage Pumping Station (YTPS) is located at the junction of Ko Fai Road and Tung Yuen Street which is next to the Application Site. The pumping station has three sewage pumps that operate in a 2 duty and 1 standby mode with each pump

having a design capacity of 0.5m^3/s. Therefore, the ultimate design capacity for YTPS is 1.0m^3/s according to the approved EIA Study for Yau Tong Bay Development – Engineering Feasibility Study for the Comprehensive Development at Yau Tong Bay (AEIAR-054/2002).

2.11.4 Upon the visits, no identifiable odour was detected at the site boundary of the sewage pumping station and the junction of Shung Tai Wai and Tung Yuen Street. With the consideration of the above findings, odour impact from sewage pumping station is not anticipated.

b. Kwun Tong Wholesale Fish Market

2.11.5 Kwun Tong Wholesale Fish Market, which is located at the junction of Shung Wo Path and Tung Yuen Street, is at about 100m from the Application Site. The peak operating hour of the market would be from 7:00am to 12:00 noon. The market activities include the delivery by fishing vessels and immediate collection, after transaction, by lorry of boxed fresh marine fish. The live fish are delivered in containers which are transferred to shore, alive, and are placed in aquariums inside the market or transported directly to waiting lorries which are equipped with aquariums inside. Since fish market office building and Tung Yuen Street Cooked Food Market are situated at the northern and southern sides of the fish market respectively and the fish market is covered by a roof, odour can only be emitted at the sides facing the sea and Tung Yuen Street.

2.11.6 Upon the visits, it is observed that some fish stores were not in operation and floor was dry at some area. In addition, polyfoam boxes were collected at a designated area inside the fish market and disposed of by dump trucks regularly. However, in this odour assessment, to be conservative, apart from carpark, indoor storage area and administrative building, all other area are regarded as different types of odour sources (see **Figure 2.8**). Impact from these area sources is modelled by AERMOD. Emission parameters for the Kwun Tong Wholesale Fish Market are referenced to the approved planning application A/K15/126 and are presented in **Appendix 2.15**.

c. Sam Ka Tsuen Typhoon Shelter

2.11.7 Sam Ka Tsuen Typhoon Shelter is located to the southeast of the Application Site. The proposed residential buildings are more than 400m away from the Typhoon Shelter. In the south-eastern side of the typhoon shelter, many seafood restaurants and shops exist to serve the public and tourists visiting the area.

2.11.8 The area is predominantly impacted by sewage outfalls of the seafood restaurant, shops and low-rise village houses in the vicinity. In order to resolve the odour problem arising from the sewage outfalls, in-situ bioremediation works for facilitating decomposition of organic pollutants in sediments were carried out in the typhoon shelter in 2004 [Ref-4]. Several studies [Ref-5,6,7&8] documented its successful application to treat odorous sediments at Sam Ka Tsuen Typhoon Shelter where over 95% of odorous acid volatile sulphides were removed. Referring to the meeting minute of the Legislative Council on 1 February 2012 [Ref-2], no complaint regarding odour of Sam Ka

Ref-8 Kai Tak Development Environmental Improvement to Kai Tak Approach Channel CB(1)1375/08-09(01) https://www.legco.gov.hk/yr08-09/english/panels/dev/papers/dev0331cb1-1375-1-e.pdf

Tsuen Typhoon Shelter was recorded in Year 2009 to 2011 (i.e. 5 to 7 years after the bioremediation works).

2.11.9 Moreover, Drainage Services Department (DSD) is carrying out a study "Lei Yue Mun Village Sewerage – Investigation, Design and Construction (4398DS)" to improve the water quality at Sam Ka Tsuen Typhoon Shelter and the hygiene conditions of the unsewered areas at Lei Yue Mun by providing sewerage system which is expected to be completed in Year 2021 [Ref-9] i.e. one year before the operation of the Project. In light of this, it is expected that Sam Ka Tsuen Typhoon Shelter therefore will no longer be impacted by sewage outfalls of the unsewered areas during heavy rainfall.

2.11.10 Odour patrol on 28 February 2024 and 14 March 2025 were conducted at the boundary of Sam Ka Tsuen Typhoon Shelter. A slightly detectable odour was noticed at the Sam Ka Tsuen Typhoon Shelter. However, no odour was noticeable at around 20m away from the Sam Ka Tsuen Typhoon Shelter. Since the boundary Application Site is around 180m away from the Sam Ka Tsuen Typhoon Shelter, it is anticipated that the associated odour impact is not anticipated.

Odour Impact Appraisal and Assessment Result

2.11.11 Nevertheless, a quantitative odour assessment was conducted in an environmental study supporting a S16 town planning application of a neighbouring planned residential site under Application No. A/K15/126 (Feb 2022). The report also identified that Yau Tong Sewage Pumping Station, Kwun Tong Fish Market and Sam Ka Tsuen Typhoon Shelter as existing odour sources in the vicinity of their Application Site. Similar to the findings in this EAS, odour impact for Yau Tong Sewage Pumping Station and Sam Ka Tsuen Typhoon Shelter was not anticipated at the planned residential site. Therefore, a quantitative odour impact assessment was carried out under the environmental study of Application No. A/K15/126 for the Kwun Tong Wholesale Fish Market only, which is considered relevant and applicable for this EAS. The range of the assessment results of odour is summarized below.

Table 2.10 Range of Assessment Results of Odour

ASR ID	Odour
	Highest 5-s average (OU)
D01	0.016-0.305
D02	0.015-0.345
D03	0.014-0.385
D04	0.014-0.432
D05	0.017-0.438
D06	0.017-0.421
D07	0.017-0.329
D08	0.016-0.27
D09	0.015-0.242
D10	0.013-0.214
D11	0.012-0.212

[Ref-9] 工務計劃項目編號 4398DS 鯉魚門村污水收集系統工程 (觀塘區議會屬下環境及衞生委員會文件第 18/2016 號, http://www.districtcouncils.gov.hk/kt/doc/2016_2019/tc/committee_meetings_doc/EHC/10261/E HC_18_2016.pdf

ASR ID	Odour
	Highest 5-s average (OU)
D12	0.012-0.271
D13	0.012-0.309
D14	0.013-0.308
Criteria (OU)	5

2.11.12 The predicted result of odour impact for all selected ASRs at all levels are summarized in **Appendix 2.16**. The contour plot of odour at the worst hit level (i.e. G/F, 1.5m above ground) is shown in **Appendix 2.17**. The contour plot shows that there is no exceedance within the Application Site at the worst hit level. It reveals that odour at all locations of the Proposed Development comply with the criterion (i.e. <5OUs). The future occupant will not be subject to adverse odour impact.

2.12 Review on Impact from Proposed Carpark

2.12.1 Basement carpark has been proposed for the Proposed Development. The air quality inside the basement carpark should satisfy the air pollutant standards as recommended by the ProPECC PN 2/96 Control of Air Pollution in Car Parks. Therefore, the mechanical ventilation system and layout the basement carpark should be properly designed. Furthermore, the exhaust outlet of the mechanical ventilation system of the basement carpark should also be designed by facing away from the nearest air sensitive uses as practicable as possible to ensure not to cause a nuisance to the occupants/ residents of the air sensitive uses including the surrounding developments and the Proposed Development. As the Project is still under initial design stage, the location of the exhaust outlet of the mechanical ventilation system is yet available.

3. CONCLUSION

3.1.1 Based on the air quality impact and odour assessment results, the Proposed Development will not be subject to any unacceptable air quality or odour impact provided that the air pollutant concentrations and odour at the fresh air intake locations for the Proposed Development comply with the AQOs and odour criteria. Besides, the fresh air intake for the Proposed Development is recommended to be located at or above 1.5mAG except the exceedance area at 4/F and 5/F of some portion of the residential tower.

3.1.2 Based on above conclusion, it confirms the feasibility and acceptability of the Proposed Redevelopment from an environmental perspective.

*Expressed as at Standard Temperature & Pressure of 0℃and 101.325kPa.

11. Note:

Any person may object within 30 days of notice in newspapers to the granting of the application on the grounds that the air quality objective in that area is being threatened or the emission of noxious or offensive emissions would be, or be likely to be, prejudicial to health. An objection requires the name, address ,and identity of person making the objection, the address of the premises of the proposed specified process, and how the air quality objective is being threatened or how the emission of noxious or offensive emission would cause prejudice to health. Objections should be made in Form 5 in the Second Schedule to the Air Pollution Control (Specified Processes) Regulation 1987 and be forwarded to the Authority and copied to the Secretary for the Environment and Food.

Appendix 2.2 Calculation of Concrete Batching Plant Emissions

Calculations of Time-In-Mode (TIM) for Barge to/ from the Concrete Batching Plant (CBP)

Premise	Vessel Type	Length of Sailing Route (m) [1]	Design Speed (m/s)	Speed Under Various Mode (m/s)		Time-In-Mode (min)	
				Hotelling	Maneuvering [2]	Hotelling [3]	Maneuvering [4]
Redland Concrete Ltd.	Barge	483.5	NA	0	2.315	60	3.48

Notes:
[1] Length of sailing route within 500m assessment area.
[2] No information is available from the operator. The travelling speed of barge is referenced to Appendix 3.5 of approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA-258/2018). (i.e. about 4.5 knots, 2.315m/s) and adopted in this assessment. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.

[3] Time-In-Mode (TIM) for hotelling - As advised by the operator, there would be one barge at one time serving each CBP and the barges would stay for around one to two days then depart. Given that the long duration of stay and infrequent sailing schedule of the barges, it is assumed that there would be one barge for each CBP hotelling continuously during the operation hours as a conservative assessment.
[4] TIM for maneuvering is estimated based on the recorded averaged speed of the barges and the length of sailing route within 500m assessment area.

Emisson Factor for Barge of Concrete Batching Plant (CBP)
Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Premise	Vessel Type	Engine Type	Average Engine Power (kW) [1]	Loading Factor [4]		Time-In-Mode (min) [5]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [2]	NOx [2]	RSP [2]	FSP [2]
Redland Concrete Ltd.	Barge	Main Engine	727	0.00	0.30	60	3.48	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.48	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine and Auxiliary Engine - No information from operator is available. Referenced to Table 4-5 and 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012, Main Engine Power and Auxiliary Engine of Barge at GRT Class >=1000 for conservative purpose.
[2] Emission Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012, engine type of ME(Cat.1) for main engine and AE for Auxiliary Engine.
[3] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh
[4] Loading Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Tables 4-7 and 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012, vessel type of All except tug and All RTVs respectively for conservative purpose.
[5] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Barge to / from the concrete batching plant.

Detailed Emission Rate

Premise	Vessel Type	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
Redland Concrete Ltd.	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	2.629E-03	1.265E-01	3.796E-03	3.669E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	6.013E-04	2.894E-02	1.158E-03	1.129E-03

Note:
[1] It is assumed that there would be one barge hotelling during the operation hours.
[2] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering at Redland Concrete Ltd. (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (116 x 0.43 x 10.0 x 2.61 / 60 / 1000)
= 0.02168 kg/hour

Calculations of Emission Factor for Wind Erosion within Concrete Batching Plant (CBP)

		Emission Factor	Unit	Reference
TSP	=	0.85	Mg/hectare/yr	Table 11.9.4 of AP-42 S11.9

Therefore,

RSP	=	0.40	Mg/hectare/yr	Multiplied by a conversion factor of 0.47 for TSP to RSP according to Table 2 of AP-42 S13.2.4
	=	1.27E-06	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.
FSP	=	0.06	Mg/hectare/yr	Multiplied by a conversion factor of 0.07 for TSP to FSP according to Table 2 of AP-42 S13.2.4
	=	1.89E-07	g/sq.m/s	24 hour emission. No watering and covering are assumed in emission rate calculation as a conservative approach.

Calculations of Emission Factor for Paved Road within Concrete Batching Plant (CBP)

$$E = k\,(sL)^{0.91} \times (W)^{1.02}$$

where

E= Emission factor in grams per vehicle kilomter travelled (g/veh-km)

k= Particle size multiplier, k = 0.62 g/veh-km for RSP and 0.15 g/veh-km for FSP as defined according to Table 2 of AP42 S13.2.1-1

sL= Road surface silt loading (g/m^2), as per AP-42 Table 13.2.1-3, mean silt loading for concrete batching plant is 12 g/m^2

W= Average weight (ton) of vehicles travelling on road, 22 tons is assumed as full load condition (Reference is made to approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121))

RSP Emission Factor = 0.139 g/veh-m

FSP Emission Factor = 0.034 g/veh-m

Description	Source ID	Distance (m)	Road Width (m)	Road Surface Area (m^2)	Peak Hourly Flow of Mixer Trucks [1]	Dust Removal Efficiency (%) [2]	Emission Rate [3][4]	
							RSP (g/s/m^2)	FSP (g/s/m^2)
Redland Concrete Ltd.	L21	7	16	110	22	91.7%	4.46E-06	1.08E-06

Note:

1. Peak hourly mixer trucks count of the concrete batching plant based on site observations.

2. Calculation of Dust Removal Efficiency for Redland Concrete Ltd.

$$C = 100 - \frac{0.8pdt}{i}$$

(ref.: Eq. 3-2 in Section 3.3.3 of USEPA Control of Open Fugitive Duat Sources - Final Report)

where

C = Average control efficiency, in percent

p = Potenial average hourly daytime evaporation rate, 0.23676 mm/h (p = 0.0049 x 48.3189 inch is equivalent to total evaporation of 1227.3mm obtained from Hong Kong Observatory)

d = Average hourly daytime traffic rate per hour, 22 veh/hr based on site observation

t = Time between applications in hour, once in each working hour as observed during site visit

i = Application intensity, 0.5 L/m^2 for haul road as minimum application intensity

Therefore,

C = 100-(0.8)(0.2368)(22)(1)/0.5 = 91.7%

3. Emission Rate(g/s) = Emission Factor x (1- Dust Removal Efficiently) x No. of Trucks per hour x Travelling Distance/Road Surface Area

4. According to Table 2 of AP42 S13.2.1-1, Particle size multiplier (k) of TSP, RSP and FSP for paved road is defined as 3.23 g/veh-km, 0.62 g/veh-km and 0.15 g/veh-km, respectively. The conversion ratio of TSP to RSP and FSP for paved road has thus referenced to the particle size multiplier.

Calculations of Emission Sources within Concrete Batching Plant (CBP)

Description	Fugitive Emission (Y/N)	Source ID	Source ID from SPL	Emissions/ Parameters extracted from SP License [1]							Concentration	Emission Rate adjusted to Emission Concentration Limit (10 mg/m^3) [2][3]		Exit Velocity (m/s)	Operation Hours [4]
				Exhaust Gas Flowrate (m^3/h)	Exit Temp (K)	Emission Height (mAG)	Stack Width (m)	Stack Length (m)	Stack Diameter (m)	Max Emission Rate (kg/hr)	RSP (mg/m3)	RSP (g/s)	FSP (g/s)

Note:

1. No information is provided by the operators, reference has been made to the Specified Processes (SP) License L-3-117 (6) for Redland Concrete Ltd..
2. According to Appendix B.2, General Particle Size Distributions, page B.2-13, AP-42, 1/95 version, USEPA, RSP and FSP are 51% and 15% of TSP for general concrete batching activity.
3. According to Annex I of A Guidance Note on the Technical, Management and Monitoring Requirements for Specified Process - Cement Works (Concrete Batching Plant) BPM3/2(16) (Februrary 2016), the concentration limit of Particulate Matter (PM) would be limited to 10mg/m^3 for license renewal by 1 January 2018 for all plants.
4. Operation hours of Redland Concrete Ltd. were made reference to approved EIA EIA-258/2018 - Lei Yue Mun Waterfront Enhancement Project.

Appendix 2.3 Calculation of Sand Depot (YTML 25 &Ext), Architectural Salvage Store (YTML 26 &Ext) and Architectural Salvage Store (全記五金貿易有限公司) at Yau Tong Bay

Calculation of Emission factor for Wind Erosion at Sand Dunes (Sand Depot (YTML 25 &Ext))

Emission Factor is referenced to USEPA AP-42, 5th ed. 8/04 ed.: Section 11.9

where

			Remark
p = Percentage active area =	100.0%		
d = Number of working days per year =	365		Emission to be applied during 19:00
TSP Emission Factor =	0.85	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 11.9.2,
RSP Emission Factor =	0.40	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 13.2.4.3
FSP Emission Factor =	0.06	Mg/hectare/year of activity	USEPA AP-42, 5th ed. 8/04 ed., Section 13.2.4.3

	RSP	FSP	
Unmitigated Emission Factor, E ($g/m^2/day$) =	1.10E-01	1.68E-02	
Unmitigated Emission Factor, E ($g/m^2/s$) =	**1.27E-06**	**1.94E-07**	24 hour emission

Calculations of Time-In-Mode (TIM) for Barge to/ from the Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext)

Premise	Vessel Type	Length of Sailing Route (m) [1]	Design Speed (m/s)	Speed Under Various Mode (m/s)		Time-In-Mode (min)	
				Hotelling	Maneuvering [2]	Hotelling [3]	Maneuvering [4]
Sand Depot (YTML 25 &Ext)	Barge	600.7	NA	0	2.06	60	4.86
Architectural Salvage Store (YTML 26 &Ext)	Barge	645.0	NA	0	2.06	60	5.22

Notes:

[1] Length of sailing route within 500m assessment area.

[2] No information is available from the operator. The travelling speed of sand barges with similar nature and operation mode are recorded and can be found at https://www.marinetraffic.com. The recorded averaged speed of sand barges (i.e. about 4 knots, 2.06m/s) is adopted in this assessment, assuming the travelling speed of the barges is the same during their journey. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.

[3] Given that the long duration of stay and infrequent sailing schedule of the barges, it is assumed that there would be one barge for hotelling continuously during the operation hours as a conservative assessment.

[4] TIM for maneuvering is estimated based on the recorded averaged speed of the barges and the length of sailing route within 500m assessment area.

Emisson Factor for Barge of Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext)

Marine Emission

Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Premise	Vessel Type	Engine Type	Average Engine Power (kW) [1]	Loading Factor [4]		Time-In-Mode (min) [5]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [2]	NOx [2]	RSP [2]	FSP [2]
Sand Depot (YTML 25 &Ext)	Barge	Main Engine	727	0.00	0.30	60	4.86	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	4.86	0.21	10.00	0.40	0.39
Architectural Salvage Store (YTML 26 &Ext)	Barge	Main Engine	727	0.00	0.30	60	4.86	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	4.86	0.21	10.00	0.40	0.39

Note:

[1] Engine Power for Main Engine and Auxiliary Engine - No information from operator is available. Referenced to Table 4-5 and 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012, Main Engine Power and Auxiliary Engine of Barge at GRT Class >=1000 for conservative purpose.

[2] Emission Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012, engine type of ME(Cat.1) for main engine and AE for Auxiliary Engine.

[3] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction

where

BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.

Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.

Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh

[4] Loading Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Tables 4-7 and 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012, vessel type of All except tug and All RTVs respectively for conservative purpose.

[5] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Barge to / from the sand depot.

Detailed Emission Rate for Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext)

Premise	Vessel Type	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
Sand Depot (YTML 25 &Ext)	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	3.671E-03	1.767E-01	5.300E-03	5.123E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	8.395E-04	4.040E-02	1.616E-03	1.576E-03
Architectural Salvage Store (YTML 26 &Ext)	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	3.671E-03	1.767E-01	5.300E-03	5.123E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	8.395E-04	4.040E-02	1.616E-03	1.576E-03

Note:

[1] Due to lack of information, it is assumed that there would be one barge hotelling during the operation hours (i.e. 0700-1900).

[2] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*

e.g. NOx emission factor of auxiliary engine under maneuvering (kg/hour)

= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000

= (116 x 0.43 x 10.0 x 4.86 / 60 / 1000)

= 0.0404 kg/hour

Vessels Schedule for Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext)

Hour		Number of Activities per hour		
		Monday to Sunday & Public Holidays		
Start	End	Hotelling	Arrival	Departure
0	1	0	0	0
1	2	0	0	0
2	3	0	0	0
3	4	0	0	0
4	5	0	0	0
5	6	0	0	0
6	7	0	0	0
7	8	1	1	0
8	9	1	0	0
9	10	1	0	0
10	11	1	0	0
11	12	1	0	0
12	13	1	0	0
13	14	1	0	0
14	15	1	0	0
15	16	1	0	0
16	17	1	0	0
17	18	1	0	0

19	20	1	0	1
20	21	0	0	0
21	22	0	0	0
22	23	0	0	0
23	24	0	0	0

Note:

[1] Due to lack of information and infrequent event of vessel activity for Sand Depot (YTML 25 &Ext) and Architectural Salvage Store (YTML 26 &Ext), it is assumed that one barge will arrive at 0700 and departure at 1900, and for hotelling during the operation hours (i.e. 0700-1900).

Calculations of Time-In-Mode (TIM) for Barge to/ from the Architectural Salvage Store

Premise	Vessel Type	Length of Sailing Route (m) [1]	Design Speed (m/s)	Speed Under Various Mode (m/s)		Time-In-Mode (min)	
				Hotelling	Maneuvering [2]	Hotelling [3]	Maneuvering [4]
全記五金貿易有限公司	Barge	493.7	NA	0	2.06	60	3.99

Notes:
[1] Length of sailing route within 500m assessment area.
[2] No information is available from the operator. The travelling speed of sand barges with similar nature and operation mode are recorded and can be found at https://www.marinetraffic.com. The recorded averaged speed of sand barges (i.e. about 3.2 knots, 2.06m/s) is adopted in this assessment, assuming the travelling speed of the barges is the same during their journey. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, the barges are travelling under maneuvering mode within the assessment area for assessment purpose.
[3] Given that the long duration of stay and infrequent sailing schedule of the barges, it is assumed that there would be one barge for hotelling continuously during the operation hours as a conservative assessment.
[4] TIM for maneuvering is estimated based on the recorded averaged speed of the barges and the length of sailing route within 500m assessment area.

Emisson Factor for Barge of Architectural Salvage Store

Marine Emission

Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Premise	Vessel Type	Engine Type	Average Engine Power (kW) [1]	Loading Factor [4]		Time-In-Mode (min) [5]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [2]	NOx [2]	RSP [2]	FSP [2]
全記五金貿易有限公司	Barge	Main Engine	727	0.00	0.30	60	3.99	0.21	10.00	0.30	0.29
		Auxiliary Engine	116	0.43	0.43	60	3.99	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine and Auxiliary Engine - No information from operator is available. Referenced to Table 4-5 and 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012, Main Engine Power and Auxiliary Engine of Barge at GRT Class >=1000 for conservative purpose.
[2] Emission Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012, engine type of ME(Cat.1) for main engine and AE for Auxiliary Engine.
[3] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh
[4] Loading Factor for Main Engine and Auxiliary Engine - No information from operator is available. Reference to EPD's Tables 4-7 and 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012, vessel type of All except tug and All RTVs respectively for conservative purpose.
[5] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Barge to / from the architectural salvage store.

Detailed Emission Rate

Premise	Vessel Type	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Maneuvering			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
全記五金貿易有限公司	Barge	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	3.017E-03	1.452E-01	4.356E-03	4.210E-03
		Auxiliary Engine	1.04E-02	4.99E-01	2.00E-02	1.95E-02	6.899E-04	3.320E-02	1.328E-03	1.295E-03

Note:
[1] Due to lack of information, it is assumed that there would be one barge hotelling during the operation hours (i.e. 0700-1900).
[2] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering at China Concrete Co. Ltd. (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (116 x 0.43 x 10.0 x 3.99 / 60 / 1000)
= 0.0332 kg/hour

Vessel Schedule

Note:
[1] Due to lack of information and infrequent event of vessel activity, it is assumed that one barge will arrive at 0700 and departure at 1900, and for hotelling during the operation hours (i.e. 0700-1900).

Appendix 2.4 Calculation of Passenger Ferry Emissions and Visiting Frequencies

Calculations of Time-In-Mode (TIM) for Marine Vessels

Vessel Type	Journey	Length of Sailing Route (m) [1]	Design Speed (m/s)	Averaged Travelling Speed (m/s) [2]	Time-In-Mode (min)	
				Maneuvering	Hotelling [3]	Maneuvering [4]
Sam Ka Tsuen <-> Sai Wan Ho						
Ferry	Departure	620.1	NA	3.70	5	2.79
	Arrival	620.1	NA	3.70	5	2.79
Sam Ka Tsuen <-> Tung Lung Chau						
Ferry	Departure	99.2	NA	4.32	5	0.38
	Arrival	99.2	NA	4.32	5	0.38
Montego Bay Circular Route (Sam Ka Tsuen <– Tsim Sha Tsui No.4 Pier – Central No.10 Pier->Sam Ka Tsuen)						
Ferry	Departure	808.0	NA	4.32	5	3.12
	Arrival	808.0	NA	4.32	5	3.12

Notes:

[1] Length of sailing route within 500m assessment area. The entire length of the navigation route (within and outside assessment area) is indeed 1.5km and 7.5km for Sam Ka Tsuen <-> Sai Wan Ho and Sam Ka Tsuen <-> Tung Lung Chau, respectively.
[2] No information is available from the operator. The travelling speed of the ferries are referenced to https://www.vesselfinder.com (i.e. 6.6 - 7.8 knots for ferry to/ from Sai Wan Ho, 7.9 - 8.9 knots for ferry to/ from Tung Lung Chau and 7.9 - 8.9 knots for Montego Bay Circular Route). The averaged travelling speed is about 7.2knots (i.e. 3.70m/s) for anand it has been adopted for assessment purpose. According to EPD's study on marine vessel (2012), the speed in maneuvering mode ranges from 1 to 8 knots (i.e. 0.51 and 4.12m/s). Therefore, it is assumed that the kaito ferry is travelling under maneuvering mode within the assessment area for assessment purpose.
[3] TIM for hotelling for Sam Ka Tsuen <-> Sai Wan Ho and Sam Ka Tsuen <-> Tung Lung Chau are based on site observation.
TIM for hotelling for Sam Ka Tsuen <– Tsim Sha Tsui No.4 Pier – Central No.10 Pier->Sam Ka Tsuen is determined by the arrival and departure time at Sam Ka Tsuen Public Ferry Pier.
e.g. A ferry departs Central No.10 Pier at 13:05 and the total sailing time to arrive the pier is about 35 minutes. It will arrive Sam Ka Tsuen Public Ferry at 13:40 and depart at 13:45. Its TIM for hotelling is about 5 mins.
[4] TIM for maneuvering is estimated based on the averaged speed of the ferry and the length of sailing route within 500m assessment area.

Emisson Factor for Marine Vessels

Marine Emission

Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Vessel Type	Journey	Engine Type	Engine Power (kW) [1]	Loading Factor [2]		Time-In-Mode (min) [3]		Emission Factor (g/kWh)			
				Hotelling	Maneuvering	Hotelling	Maneuvering	SO_2 [5]	NOx [4]	RSP [4]	FSP [4]
Sam Ka Tsuen <-> Sai Wan Ho											
Ferry	Departure	Main Engine	707	0.00	0.30	5	2.79	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	2.79	0.21	10.00	0.40	0.39
	Arrival	Main Engine	707	0.00	0.30	5	2.79	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	2.79	0.21	10.00	0.40	0.39
Sam Ka Tsuen <-> Tung Lung Chau											
Ferry	Departure	Main Engine	707	0.00	0.30	5	0.38	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	0.38	0.21	10.00	0.40	0.39
	Arrival	Main Engine	707	0.00	0.30	5	0.38	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	0.38	0.21	10.00	0.40	0.39
Montego Bay Circular Route (Sam Ka Tsuen <– Tsim Sha Tsui No.4 Pier – Central No.10 Pier->Sam Ka Tsuen)											
Ferry	Departure	Main Engine	707	0.00	0.30	5	3.12	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	3.12	0.21	10.00	0.40	0.39
	Arrival	Main Engine	707	0.00	0.30	5	3.12	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	5	3.12	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine - No information from operator is available. Referenced to "Other Vessel" (GRT >=1000) in Table 4-5 of the Study on Marine Vessels Emissions Inventory, February 2012.
Engine Power for Auxiliary Engine - No information from operator is available. Referenced to "Other Vessel" (GRT >=1000) in Table 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012.
[2] Loading Factor for Main Engine - No information from operator is available. Reference to "All except tug" in Table 4-7 of the Study on Marine Vessels Emissions Inventory, February 2012.
Loading Factor for Auxiliary Engine - No information from operator is available. Reference to "All RTVs" in Table 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012.
[3] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Marine Vessels
[4] Emission Factor for the Propulsion Engine & Auxiliary Engine of Ferry - No information from operator is available. As a conservative approach, the emission factors for river-trade vessels from Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012 are adopted.
[5] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh

Detailed Emission Rate

Vessel Type	Journey	Engine Type	Emission Factor (kg/hour)

Notes:

[(1)] The daily schedule of the ferry service is reference to the operator's website (https://www.coralseaferryservice.com.hk/timetable); accessed on 9 March 2024.

[(2)] It is assumed that there is no ferry parking at the Sam Ka Tsuen Pier. Hour 6-7 is then adopted as the arrival hour of the ferry as a conservative approach.

[(3)] The hour of departure is the hour the ferry departs at Sam Ka Tsuen Ferry Pier.

Notes:

[1] The daily schedule of the ferry service is reference to the operator's website (https://www.coralseaferryservice.com.hk/timetable); accessed on 9 March 2024.

[2] The ferry services between Sam Ka Tsuen and Tung Lung Island are only provided on Saturday, Sunday & public holidays.

[3] It is assumed that there is no ferry parking at the Sam Ka Tsuen Pier. Hour 8-9 is then adopted as the arrival hour of the ferry as a conservative approach.

[4] The hour of departure is the hour the ferry departs at Sam Ka Tsuen Ferry Pier.

[5] According to the ferry schedule, the last ferry will departure at Tung Lung Island at 17:40. Its sailing time is about 30 minutes. The last ferry from Tung Lung Island will arrive at Sam Ka Tsuen Ferry Pier at 18:10 (i.e. within Hour 18-19).

Notes:

[(1)] The daily schedule of the ferry service is reference to the operator's website (https://www.coralseaferryservice.com.hk/montego-bay-schedule); accessed on 5 March 2025.

[(2)] The hour of departure is the hour the ferry departs at Sam Ka Tsuen Ferry Pier.

[(3)] It is assumed that there is no ferry parking at the Sam Ka Tsuen Pier. Hour 6-7 is then adopted as the arrival hour of the ferry as a conservative approach.

Appendix 2.5 Calculation of Fishing Vessel Emissions and Visiting Frequencies

Calculations of Time-In-Mode (TIM) for Fishing Vessels

Vessel Type	Journey	Length of Sailing Route (m) [1]	Design Speed (m/s)	Averaged Travelling Speed (m/s) [2]	Time-In-Mode (min) [3][4]	
				Maneuvering	Hotelling [3]	Slow Cruise [4]
Fishing Vessels	Departure	452.2	NA	1.75	60	4.31
	Arrival	452.2	NA	1.75	60	4.31

Notes:
[1] Length of sailing route within 500m assessment area.
[2] Averaged travelling speed of the fishing vessel was referenced Vessel Finder (https://www.vesselfinder.com/). The speed of the fishing vessels is about 3.4 knots. (1.75m^3/h) is adopted as a conservative assumption due to the longest TIM resulted. As the design speed of the fish vessel is not available, it is assumed the vessels will be sailing under its maximum speed. Therefore, the vessel is assumed travelling under slow cruise mode within the assessment for assessment purpose.
[3] TIM for hotelling is assumed as continuous operation (i.e. 60 mins) per hour as a conservative assumption.
[4] TIM for cruising is estimated based on the averaged speed of the ferry and the length of sailing route within 500m assessment area.

Emisson Factor for Marine Vessels

Marine Emission
Emission Rate = Engine Power x Loading Factor x Emission Factor x Time-in -mode

Vessel Type	Journey	Engine Type	Engine Power (kW) [1]	Loading Factor [2]		Time-In-Mode (min) [3]		Emission Factor (g/kWh)			
				Hotelling	Slow Cruise	Hotelling	Slow Cruise	SO_2 [5]	NOx [4]	RSP [4]	FSP [4]
Fishing Vessels	Departure	Main Engine	707	0.00	0.45	60	4.31	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	60	4.31	0.21	10.00	0.40	0.39
	Arrival	Main Engine	707	0.00	0.45	60	4.31	0.21	10.00	0.30	0.29
		Auxiliary Engine	115	0.43	0.43	60	4.31	0.21	10.00	0.40	0.39

Note:
[1] Engine Power for Main Engine - No information from operator is available. Referenced to "Other Vessel" (GRT >=1000) in Table 4-5 of the Study on Marine Vessels Emissions Inventory, February 2012.
Engine Power for Auxiliary Engine - No information from operator is available. Referenced to "Other Vessel" (GRT >=1000) in Table 4-6 of the Study on Marine Vessels Emissions Inventory, February 2012.
[2] Loading Factor for Main Engine - No information from operator is available. Reference to "All except tug" in Table 4-7 of the Study on Marine Vessels Emissions Inventory, February 2012.
Loading Factor for Auxiliary Engine - No information from operator is available. Reference to "All RTVs" in Table 4-10 of the Study on Marine Vessels Emissions Inventory, February 2012.
[3] Time-In-Mode (TIM) Estimation - Refer to Calculations of TIM for Fishing Vessel
[4] Emission Factor for the Propulsion Engine & Auxiliary Engine of Ferry - No information from operator is available. As a conservative approach, the emission factors for river-trade vessels from Table 4-16 of the Study on Marine Vessels Emissions Inventory, February 2012 are adopted.
[5] The emission factor of SO_2 is corrected with the fuel sulphur content according to Section 4.2.31 of EPD's "Study on Marine Vessels Emission Inventory" using the following equation: SO_2 Emission Factor (Auxiliary Engine) = BSFC x 2 x 0.9755 x Fuel Sulphur Fraction
where
BSFC of the vessel is referenced to Section 4.2.27 of EPD's "Study on Marine Vessels Emission Inventory", i.e. 213 g/kWh.
Fuel Sulphur Fraction refers to the fuel sulphur content limit of the MLD i.e. 0.05% with effective of the Air Pollution Control (Marine Light Diesel) Regulation on 1st April, 2014.
Therefore, SO_2 Emission Factor of Auxiliary Engine = 213 x 2 x 0.9755 x (0.05/100) = 0.21 g/kWh

Detailed Emission Rate

Vessel Type	Journey	Engine Type	Emission Factor (kg/hour)							
			Hotelling				Slow Cruise			
			SO_2	NOx	RSP	FSP	SO_2	NOx	RSP	FSP
Fishing Vessels	Departure	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	4.75E-03	2.28E-01	6.85E-03	6.63E-03
		Auxiliary Engine	1.03E-02	4.95E-01	1.98E-02	1.93E-02	7.38E-04	3.55E-02	1.42E-03	1.39E-03
	Arrival	Main Engine	0.00E+00	0.00E+00	0.00E+00	0.00E+00	4.75E-03	2.28E-01	6.85E-03	6.63E-03
		Auxiliary Engine	1.03E-02	4.95E-01	1.98E-02	1.93E-02	7.38E-04	3.55E-02	1.42E-03	1.39E-03

Note:
[1] *Emission = Engine Power (kW) x Loading Factor x Time-in-mode (hr) x Emission Factor (g/kWh)*
e.g. NOx emission factor of auxiliary engine under maneuvering (kg/hour)
= Engine Power (kW) x Loading Factor x Emission Factor (g/kWh) x Time-in-mode (hr) / 1000
= (115 x 0.43 x 10.0 x 4.31 / 60 / 1000)
= 0.0355 kg/hour

Appendix 2.7 Calculation of Cruise Terminal Emissions and Year 2025 Cruise Schedule

Derivation of Emission Rates and Inventory of 4km Major Point Source (Tier 3)

Marine Emission from Cruises at Kai Tak Cruise Terminal

Emission Factors for Cruises

Cruises	Engine Type	Engine Power kW	Loading Factor [5]	Emission Factor (g/kWh) [6]		
			Hotelling	NOx	RSP	FSP
Spectrum of the Seas	Main Engine [1]	67200	0	13.20	0.31	0.29
	Auxiliary Engine [3]	18682	0.416	13.90	0.32	0.29
	Boiler [4]	1000	1	2.00	0.19	0.14
Costa Serena	Main Engine [2]	75600	0	13.20	0.31	0.29
	Auxiliary Engine [3]	21017	0.416	13.90	0.32	0.29
	Boiler [4]	1000	1	2.00	0.19	0.14

Note:

[1] Engine Power for the Main Engine of Spectrum of the Seas is referenced from website https://en.wikipedia.org/wiki/Spectrum_of_the_Seas

[2] Engine Power for the Main Engine of Costa Serena is referenced from website https://www.fincantieri.com/globalassets/prodotti-servizi/navi-da-crociera/costa/scheda_costa_concordia_serena_pacifica.pdf

[3] Engine Power for the Auxiliary Engine - According to Table 3-20 of the Study on Marine Vessels Emissions Inventory, February 2012, the ratio of the engine power for the Auxiliary Engine is equal to 0.278 of the engine power of the Main Engine.

[4] Engine Power for the Boiler - According to Table 3-23 of the Study of Marine Vessels Emissions Inventory, February 2012, the engine power for the boiler of the Cruise with the passenger carrying capacity >= 2600 is adopted as the passenger carrying capacity of Costa Serena (https://www.fincantieri.com/globalassets/prodotti-servizi/navi-da-crociera/costa/scheda_costa_concordia_serena_pacifica.pdf) and Spectrum of the Seas (https://en.wikipedia.org/wiki/Spectrum_of_the_Seas) are 4890 and 4905, respectively.

[5] Loading Factor for the Main Engine - Table 3-18 of the Study on Marine Vessels Emissions Inventory, February 2012 is referred.
Loading Factor for the Auxiliary Engine - Table 3-21 of the Study on Marine Vessels Emissions Inventory, February 2012 is referred.
Loading Factor for the Boiler - 100% of loading is assumed as a conservative approach.

[6] According to the Air Pollution Control (Fuel for Vessels) Regulation, starting from 1 January 2019, all vessels except for specified vessel types as set out in the Regulation, are required to use low sulphur marine fuel (i.e. with sulphur content no exceeding 0.5% by weight).

- Emission Factor for the Main Engine - According to Table 3-27 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the engine type of Medium Speed Diesel engine and use of marine gas oil with 0.5% sulphur content).
- Emission Factor for the Auxiliary Engine - According to Table 3-28 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the use of marine gas oil with 0.5% sulphur content).
- Emission Factor for the Boiler - According to Table 3-29 of the Study on Marine Vessels Emissions Inventory, February 2012 (assuming the use of marine gas oil with 0.5% sulphur content).

Emission Rate (Hotelling)

Emission Rate = Engine Power x Loading Factor x Emission Factor

Cruises	Air Pollutants	Emission Rate (kg/hr)				Emission Rate for 60 mins within an hour (g/s) [1]
		Main Engine	Auxiliary Engine	Boiler	Total	
Spectrum of the Seas	NOx	0.00	108.02	2	110.02	30.56
	RSP	0.00	2.49	0.19	2.68	0.74
	FSP	0.00	2.25	0.14	2.39	0.66
Costa Serena	NOx	0.00	121.53	2	123.53	34.31
	RSP	0.00	2.80	0.19	2.99	0.83
	FSP	0.00	2.54	0.14	2.68	0.74

Name of Cruise	Frequency of Visiting HK (Times) [a]	Total Engine Power (kW) [b]

Note:

[1] According to the latest cruise schedule Year 2025, Costa Serena has the highest engine power among all cruise ships. Given there are two berthing spaces at the Cruise Terminal, another cruise ships with the second-highest engine power have been identified, including Anthem of the Seas, Celebrity Solstice, Ovation of the Seas and Spectrum of the Seas which have the same engine power. However, in view of the frequency of visit to Hong Kong of these four cruises, Spectrum of the Seas has therefore been selected as the second cruise ship for hoteling at Kai Tak Cruise Terminal at the same time for every hour of a day as Costa Serena for a conservative approach.

Note:
1. Please refer to "Calculations of Emission Sources within Concrete Batching Plant (CBP)" for details.
2. The stack diameter is calculated from the dimensions (i.e. length and width) of the emission source available in the SP Licence (L-3-117 (6)) (e.g. Stack Diameter = 2 x sqrt (Length of Emission Source x Width of Emission Source)/π).

Concrete Batching Plant - Area Source

Description [1]	ID	X	Y	Z	RSP	FSP	Release Height	X length	Y length	Source Angle	Plume Height	Operation Hours
					g/s-m^2	g/s-m^2	mAG	m	m	degree clockwise from N.	m	
Redland Concrete Ltd.	L21 [2]	842149	817213	4.5	4.46E-06	1.08E-06	0.5	7	16	-26	0	0700-1900

Note:
1. Please refer to "Calculations of Emission Sources within Concrete Batching Plant (CBP)" for details.
2. Please refer to "Calculations of Emission Factor for Paved Road within Concrete Batching Plant (CBP)" for details.

Wind Erosion of Sand Barge - Area Source

Description [1] [3]	ID	X	Y	RSP	FSP	Release Height	X length	Y length	Source Angle	Plume Height	Operation Hours
				g/s-m^2	g/s-m^2	mAG	m	m	degree clockwise from N.	m	
Redland Concrete Ltd.	SB04	842026.2	817196.7	1.27E-06	1.89E-07	1.5	20	50	71	0	Full day

Notes:
1. All parameters of Wind Erosion of Sand Barge of concrete batching plants are referenced to the approved S16 application for Proposed Residential Development in "Comprehensive Development Area (4)" Zone and "Road" at No. 18 Tung Yuen Street, Cha Kwo Ling Yau Tong, Kowloon (A/K15/121) (extracted in **Appendix 2.3**).
2. Mean Sea Level is 1.5m, referenced to 2016 data of Hong Kong Observatory.
3. Details of RSP and FSP emission rates were shown in "Calculations of Emission Factor for Wind Erosion within Concrete Batching Plant (CBP)".

Note:
1. Base elevation of vessesl was assumed to be mean sea level, which is 1.3 m above the Hong Kong Principle Datum
2. No information from the operator is available. Barge information including release height, exit temperature, exit velocity and internal diameter of its chimney is referenced to another similar type of vessel presented in Appendix 3.5 of approved Lei Yue Mun Waterfront Enhancement Project EIA (EIA-258/2018) due to the similar nature and operating mode.

Route of SKT Ferry to/from LYM New Landing Facility	NRLF2	POINT	842383	816853	1.3	1.05E-05	6.91E-04	1.61E-05	1.48E-05	555	8	0.8	8	Please refer to **Appendix 2.5** for the planned local vessel frequency
	NRLF3	POINT	842383	816813	1.3	1.05E-05	6.91E-04	1.61E-05	1.48E-05	555	8	0.8	8	

Notes:

1. Base elevation of vessesl was assumed to be mean sea level, which is 1.3 m above the Hong Kong Principle Datum.

2. All parameters including emission rates of planned local vessel is referenced to approved Section 16 Planning Application of Proposed Residential Development at 18 Tung Yuen Street, Yau Tong (A/K15/121).

Input Parameters of Major Point Sources in AERMOD

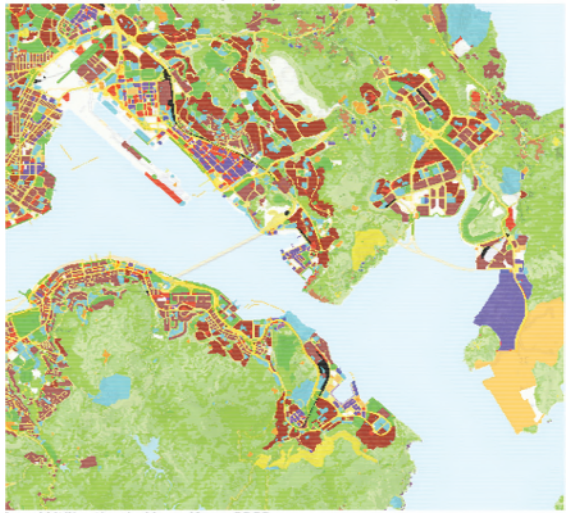
Major Point Sources within 4km Assessment Area - Cruise Vessels at Kai Tak Cruise Terminal

Description [1] [2] [3]	ID	Type	X	Y	Base Elevation	SO_2	NOx	RSP	FSP	Exit Temperature	Exit Velocity	Internal diameter	Release Height	Operation Hours
					mPD	g/s	g/s	g/s	g/s	K	m/s	m	mAG	
Hotelling of Spectrum of the Seas	H1	Point	839744	818698	1.3	5.36	30.56	0.74	0.66	537	24.6	1.9	63.2 [1]	Full day
Hotelling of Costa Serena	H2	Point	840021	818427	1.3	5.93	34.31	0.83	0.74	537	24.6	1.9	62 [2]	

Notes:

1. Base elevation of vessesl was assumed to be mean sea level, which is 1.3 m above the Hong Kong Principle Datum.

2. The emission height of the chimney of Spectrum of the Seas is estimated based on the website (https://zh.wikipedia.org/wiki/%E6%B5%B7%E6%B4%8B%E5%85%89%E8%AD%9C%E8%99%9F#%E5%A4%96%E9%83%A8%E9%93%BE%E6%8E%A5). The estimated height is about 63.2m (above water surface).



3. The emission height of the chimney of Costa Serena is estimated based on the observation. The estimated height is about 60m (above water surface) which is close to the height of the Post-Panamax (62m above water surface) as stated in the Approved EIA Report for Kai Tak Development. Therefore, the height of 62m above water surface has been adopted for the assessment.
