Appendix 5.6 Emissions associated with Minibus Terminus/Metered carpark/Public Transport Interchange

Calculation of Iding Emission Factor

Remarks

[1] NO2/NOx ratio, at the respective running speed, was calculated based on emisison factors extracted from EMFAC-HK.

[2] NOx cold idling emission factors was referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by EPD.

[3] Due to the lack of information, RSP cold idling emission factor was referenced to the corresponding hot idling emission factor.

[4] Reference is made to Table 36 of the VEADV.

[5] Reference is made to Table 37 of the VEADV.

[6] Reference is made to the Approved Liantang / Heung Yuen Wai Boundary Control Point and Associated Works Environmental Impact Assessment Report.

[7] All TSP (PM) emissions were conservatively assumed to represent both RSP and FSP emissions.

[8] Reference is made to Table 33 of the VEADV.

[9] Reference is made to Table 34 of the VEADV.

[10] PM cold and hot idling emission factors were assumed to be zero, as the corresponding running and start emission factors from EMFAC-HK are also zero.

[11] Due to the lack of specific data and the similarity between taxis and private cars (PCs), hot idling emission factors for taxis were referenced to the corresponding hot idling emission factors of petrol-fuelled PCs.

[12] NOx idling emission factors were referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by the Environmental Protection Department (EPD) where available; otherwise, the highest emission factor within the same vehicle class was adopted as a conservative assumption.

[13] Reference is made to Table 42 of the VEADV.

[14] Reference is made to Table 43 of the VEADV.

[15] Reference is made to Table 39 of the VEADV.

[16] Reference is made to Table 40 of the VEADV.

[17] Reference is made to Table 45 of the VEADV.

[18] Reference is made to Table 46 of the VEADV.

[19] Reference is made to Table 27 of the VEADV.

[20] NOx cold idling emission factors were referenced to Calculation of Start Emissions in Air Quality Impact Assessment published by the EPD where available; otherwise, the corresponding hot idling emission factors were adopted.

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon

Appendix 5.6 Emissions associated with Minibus Terminus/Metered carpark/Public Transport Interchange

Tung Tau Estate (Tung Lung Road) Minibus Terminus (TTEMT)

Starting emission inside and outside TTEMT

Average Distance from Starting Place to TTEMT Egress =	9	m
Average Spread Distance outside TTEMT =	141	m

Hour	Idling Emission of Public Light Bus (LPG) (g)				Emission for Adjusting Starting Emission of Public Light Bus (LPG) (g)				Adjusted Starting Emission of Public Light Bus (LPG) Within TTEMT (g)				Adjusted Starting Emission of Public Light Bus (LPG) Outside TTEMT (g)				Starting Emission Rate of Public Light Bus (LPG) Outside TTEMT (g/s)

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon

Appendix 5.6 Emissions associated with Minibus Terminus/Metered carpark/Public Transport Interchange

Ning Yuen Street Carpark (NYSCP)

Running Emission inside NYSCP

Year: 2030 **Temp:** 11C **RH:** 18%

Average Travelling Distance within NYSCP =	56	m
Average Travelling Speed =	10	km/h

Remark:

[1] Number of cold starts were derived based on on-site observations at the PTIs and operators' published schedules, while sitting time were obtained based on on-site observations at PTIs.

Remark:

[1] Number of cold starts were derived based on on-site observations at the PTIs and operators' published schedules, while sitting time were obtained based on on-site observations at PTIs.

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon

Appendix 5.6 Emissions associated with Minibus Terminus/Metered carpark/Public Transport Interchange

Tung Lei Road Carpark (TLRCP)

Starting emission inside and outside TLRCP

Average Distance from Starting Place to TLRCP Egress =	121	m
Average Spread Distance outside TLRCP =	29	m

Hour	Idling Emission of PV5 (LPG) (g)				Emission for Adjusting Starting Emission of PV5 (LPG) (g)				Adujusted Starting Emission of PV5 (LPG) Within TLRCP (g)				Adjusted Starting Emission of PV5 (LPG) Outside TLRCP (g)				Starting Emission Rate of PV5 (LPG) Outside TLRCP (g/s)

Remark:

[1] Number of cold starts were derived based on on-site observations at the PTIs and operators' published schedules, while sitting time were obtained based on on-site observations at PTIs.

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon

Appendix 5.6 Emissions associated with Minibus Terminus/Metered carpark/Public Transport Interchange

Kai Tak Public Transport Interchanges (KTPTI)

Starting emission inside and outside Airside

Average Distance from Starting Place to Airside Egress =	48.1	m
Average Spread Distance outside Airside =	148.56	m

Hour	Idling Emission of Franchised Bus Double Deck (g)				Emission for Adjusting Starting Emission of Franchised Bus Double Deck (g)				Adjusted Starting Emission of Franchised Bus Double Deck Within Airside (g)				Adjusted Starting Emission of Franchised Bus Double Deck Outside Airside (g)				Starting Emission Rate of Franchised Bus Double Deck Outside Airside (g/s)

Project KC-015 at Kai Tak Road/Sa Po Road, Kowloon City, Kowloon
Appendix 5.10 Detailed assessment results
Concentration at representative ASRs from G/F - 41/F

10th Highest Daily RSP concentration at representative ASRs [1]

ASR ID	X	Y	Base Elevation (mPD), i.e. Ground Level	AQO (ug/m3)	Concentration (μg/m3) at a flatpole of (m)

1. INTRODUCTION

1.1. Background

1.1.1. The Kai Tak Road / Sa Po Road Development Scheme (KC-015) (the Scheme), is located in Kowloon City and is bounded by Kai Tak Road, Prince Edward Road East, Sa Po Road, and Carpenter Road. The Development Scheme Plan was approved by Chief Executive in Council (CE in C) on 29 September 2020 (the Approved DSP).

1.1.2. With an aim to enhance development flexibility to meet market needs, adopt Modular Integrated Construction (MiC) method and aboveground carpark design in response to the recent Government initiatives, the URA intends to seek Town Planning Board (TPB)'s approval on minor relaxation of domestic plot ratio (DPR) restriction from 7.5 to 8.0 and building height restrictions (BHR) from 120mPD to 140mPD for the Application Site (i.e. the area zoned 'R(A)" of the Approved DSP) in accordance to Section 16 of the Town Planning Ordinance (S16 Planning Application).

1.1.3. This S16 Planning Application is a "non-scheme-based" submission. The notional design and indicative development parameters provided in the application are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

1.1.4. Allied Environmental Consultants ("AEC") has been appointed to conduct a Water Supply Impact Assessment ("WSIA") to support the subject S16 Planning Application.

1.2. Objectives

1.2.1. The WSIA is prepared to evaluate the adequacy of water supply to cater for the development of the Scheme under the subject S16 Planning Application within the service area supplied by the distribution network concerned. It examines the potential impact on the distribution network, including any constraints on operational and maintenance for the distribution system in the future.

1.2.2. The report outlines the assessment results of the potential water supply impacts caused by the S16 Planning Application. The main objectives of the study include the following:

- Review the existing supply condition of the Application Site;
- Estimate the water demand under the proposal of the Approved DSP Scenario;
- Estimate the water demand under the current S16 Proposal;

- Identify any potential impact on the current water supply system due to the additional water supply demand from the current S16 Proposal;
- Propose water supply mitigation measures where appropriate to mitigate the potential water supply impact.

1.3. Report Structure

1.3.1. The remaining chapters of this report are shown below:

Chapter 2 – The Current S16 Planning Proposal
Chapter 3 – Existing and Planned Water Supply Conditions
Chapter 4 – Method of Analysis
Chapter 5 – Water Supply Impact Assessment
Chapter 6 – Conclusion

2. THE CURRENT S16 PLANNING PROPOSAL

2.1.1. The Application Site, with an area of about 5,307 m^2, is broadly bounded by Carpenter Road to the north, Kai Tak Road to the west and Sa Po Road to the east. Please refer to *Figure 2.1* for the location plan.

2.1.2. The S16 Planning Application seeks TPB permission for (i) minor relaxation of maximum permissible DPR from 7.5 to 8.0 and (ii) minor relaxation of BHR from 120mPD to 140mPD to enhance development flexibility to meet market needs and at the same time facilitate design flexibility for adopting MiC and aboveground carpark design to the Scheme in response to the recent Government initiatives.

2.1.3. A comparison table for the indicative parameters based on the notional design for the Approved DSP and the current S16 proposal is provided in ***Table 2-1*** below.

Table 2-1 Comparison of Indicative Development Parameters of the Approved DSP and the Current S16 Proposal

Development Parameters	Approved DSP [A]	Current S16 Proposal [B]	Difference [B]-[A] (% change)
Site Area - Application Site Area (for PR Calculation) (m^2)	About 5,352	About 5,307 (1)	-45 (-0.8%)
Maximum PR (3) - Total PR - Domestic PR	 9.0 7.5	 9.0 8.0(2)	 No Change +0.5 (+6.7%)
Max GFA (3) Total GFA (m^2) Domestic GFA (m^2)	 About 48,168 About 40,140	 About 47,763(1)(2) About 42,456(1)(2)(3)	 -405 (-0.8%) +2,316 (+5.8%)
Max. BH (mPD)	120	140	+20 (+16.7%)
GIC Facilities(4) (m^2)	About 800	About 800	No Change
Sunken Plaza (m^2)	About 1000	About 1000	No Change
Under Notional Design			
No. of Residential Towers	3 towers	2 towers	-1 (-33.3%)
No. of Storeys - Domestic - Clubhouse - Podium - Basement	 29 storeys 1 storey 3 storeys 5 storeys	 31 storeys 1 storey 5 storeys 2 storeys	 +2 (+6.9%) No Change +2 (+66.7%) -3 (-60.0%)
Average Flat Size (m^2)	About 42.8(5)	About 42.8	No Change(5)
No. of Flats	About 938(5)(6)	About 992(6)	+54 (+5.8%)(5)
Anticipated Population	About 2251(5)(7)	About 2480(8)	+229 (+10.2%)(5)
Site Coverage (9)	Domestic portion: Not more than 40% Non-domestic portion	Domestic portion: Not more than 40% Non-domestic	No change

Development Parameters	Approved DSP [A]	Current S16 Proposal [B]	Difference [B]-[A] (% change)
	below 15m: Not more than 100% Non-domestic portion above 15m: Not more than 65%	portion below 15m: Not more than 100% Non-domestic portion above 15m: Not more than 65%	

Remarks:

(1) As per area zoned "R(A)" under the Approved DSP with minor adjustment of area to reflect the net site area under land grant, resulting to corresponding adjustment in GFA.

(2) Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.

(3) The domestic and non-domestic PR/GFA are for illustrative purpose only. To allow flexibility and optimum use of development potential, development at the Application Site is subject to a maximum domestic PR and total PR. The actual domestic and non-domestic PRs and GFAs would be worked out at detailed design stage.

(4) GIC to be exempted from GFA calculation under the Approved DSP.

(5) For a like-to-like analysis, an average flat size of about 42.8 sq.m. under the Current S16 Planning Proposal has been applied to both the approved DSP and current S16 scenarios in the comparison table to show the net increase in the number of flats and population. For reference, the notional design for the Approved DSP for KC-015 approved by CE in C in Sep 2020 had adopted an average flat size of about 49.6 sq.m. with about 938 no. of flats and an estimated population of about 1940.

(6) The actual no. of flats would be worked out at detailed design stage.

(7) In lined with the notional design adopted for the Approved DSP, the estimated population is based on the average domestic household size of 2.4 persons in Lung Shing District Council Constituency Area under the Population By-census 2016.

(8) Based on Population Census 2021, the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(9) Assumed in accordance with the First Schedule of Building (Planning) Regulation that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.

2.1.4. While the subject S16 Planning Application is a "non-scheme-based" submission, this WSIA is prepared based on the indicative development parameters for S16 Planning Application (i.e. Column (B)) in ***Table 2-1*** above and the notional design provided in ***Appendix A***, for the purpose of conducting technical assessments. The tentative completion year for the Scheme will be 2030/2031.

3. EXISTING AND PLANNED WATER SUPPLY CONDITIONS

3.1. Existing Water Supply Condition

3.1.1. The Application Site is within the fresh water supply zone of Lok Fu Freshwater Service Reservoir (LFFWSR) and the salt water supply zone of Lok Fu Salt Water Service Reservoir (LFSWSR), located around 1 km away from the Application Site. The design storage capacity of LFFWSR and LFSWSR is 28,872 m^3 and 8,597 m^3 respectively.

3.1.2. Based on the water mains record plan provided by WSD, there is an existing DN300 fresh water distribution main running along Kai Tak Road at the west of the site and Carpenter Road at the north of the site. A DN150 fresh water distribution main branching off from the 300mm distribution main at west and northwest of the Application Site. Additionally, there is an existing DN200 and DN150 fresh water distribution main running along Sa Po Road to the south and the east of the Application Site respectively.

3.1.3. As for the salt water mains, there is an existing DN450 salt water distribution main running along Carpenter Road at the north of the Application Site. Additionally, there is a DN150 salt water distribution main running along Sa Po Road to the east and south of the Application Site. The existing water supply condition is shown in ***Figure 3.1*** and ***Appendix B***.

3.2. Planned Water Supply Condition

3.2.1. The fresh water and flushing water lead-in are proposed at the east boundary of the Application Site, as shown in ***Figure 3.1***. The proposed fresh and flushing water lead-in are branching off from the existing DN150 fresh water distribution main and DN150 salt water distribution main respectively, running along the Sa Po Road at the east of the site.

4. METHOD OF ANALYSIS

4.1. Design Guidelines

4.1.1. The following approach is adopted in carrying out this WSIA:

a) Review interface projects which may have bearing on the development;
b) Identify existing and planned water supply systems within the study area;
c) Assess the existing water demand and the additional water demands for the current S16 Proposal;
d) Propose the water supply scheme arising from the development including preparation of a hydraulic analysis;
e) Examine the short- and long-term impacts on existing water mains and any interface projects;
f) Recommend suitable mitigation measures and/or diversion schemes and arrangement to mitigate the permanent impacts on existing water supply system and minimize the disturbance to the normal operation of the system during construction stage.

4.1.2. The estimation of water demands for the Current S16 Proposal is primarily based on unit water demands as outlined in WSD Departmental Instruction (DI) No. 1309.

4.2. Unit Demand

4.2.1. Assumptions have been made for the unit daily demand (UDD) for each type of land use, for both freshwater and flush water. The UDD is used for estimating the total demand of the Current S16 Proposal and the required water supply capacity to support the development. The unit flow factors adopted for water demand estimation and calculation are summarized in ***Table 4-1***.

Table 4-1 Unit Daily demand Adopted in Water Supply Impact Assessment

Development Type	Consumer Type	Freshwater UFF [1]	Flush Water UFF [1]
Residential	Residential R2 – All Area	0.210 m^3/h/d	0.070 m^3/h/d
Commercial (Assumed to be 100% restaurant for worst-case scenario)	Staff of Commercial	0.200 m^3/h/d	0.070 m^3/h/d
GIC Facilities	Staff of GIC facilities	0.100 m^3/h/d	0.070 m^3/h/d

Note:
[1] Referred to Table 1 & Table 2 of WSD DI. No. 1309

4.3. Peaking factors

4.3.1. The peaking demand factors below shall be adopted for design:

- Peak flow rate in freshwater distribution mains = 3 x mean daily demand
- Peak flow in flushing water distribution mains = 2 x mean daily demand
- Peak flow rate in freshwater trunks mains = 1.5 x mean daily demand
- Peak flow rate in flushing water trunks mains = 1.2 x mean daily demand

4.4. Fire-fighting

4.4.1. In addition to the aforementioned facilities of the Current S16 Proposal, water supply for fire-fighting service has been considered in this WSIA. The fire-fighting requirements for the Current S16 Proposal are based on the residential and industrial zone requirements outlined in WSD DI. No. 1309. The minimum freshwater supply required is 6,000 m^3 per day, with a discharge pressure of 17m head. The fire hydrants should be of standard pattern with a minimum output pressure of not less than 25 psi. When multiple hydrants are operating simultaneously, the total output should be not less than 4,000 L/min and should last for 60 minutes. ***Table 4-2*** summarizes the fire-fighting requirements.

Table 4-2 Fire-Fighting Requirements

Requirements	Minimum Values
Minimum freshwater supply	6000 m^3/day
Discharge pressure	17 m
Minimum output not less than 25 psi	Not less than 4,000 L/min to last for an hour

4.5. Residual heads

4.5.1. The minimum residual heads at extremely of the freshwater and flush water supply systems for the Current S16 Proposal are adopted as follow:

- Fresh Water: 30 m
- Flush Water: 15 m

4.6. Design Velocity

4.6.1. The desirable flow velocities for hydraulic checking are as follows:

Maximum velocity (under peak flow condition)

Freshwater mains:

>DN700	≤ 3 m/s
DN700 – DN525	≤ 2.5 m/s
DN450 – DN375	≤ 2 m/s
DN300 – DN200	≤ 1.5 m/s

Flush water mains:

>DN1000	≤ 3 m/s
DN900 – DN800	≤ 2.5 m/s
DN700 – DN300	≤ 2 m/s
DN450 – DN300	≤ 1.5 m/s

Minimum velocity (under peak flow condition)

Freshwater mains: ≥ 0.9 m/s

Flush water mains: ≥ 0.9 m/s

4.6.2. The pipeline shall have a minimum gradient of 1:400. Pipes shall be laid at a minimum separation of 300mm away from existing utilities and underground structures.

5. WATER SUPPLY IMPACT ASSESSMENT

5.1. Water Supply Impact under the Current S16 Proposal

5.1.1. With the current S16 Proposal, the estimated fresh water demand for the Application Site is approximately 577.70 m^3/day. Meanwhile, the corresponding flushing water demand is approximately 194.46 m^3/day.

5.1.2. The peaking factor adopted for the sizing of distribution main is 3 for freshwater and 2 for flushing water. According to the calculation, the required peak flow rate for the current S16 Proposal is 0.0201 m^3/s for freshwater and 0.0045 m^3/s for flushing water.

5.1.3. The detailed calculation of water demand estimation for current S16 Proposal is shown in ***Table 5-1*** and ***Appendix C***.

Table 5-1 Water Demand of Current S16 Proposal

Water Usage	Fresh water Demand (m^3/day)	Flushing Water Demand (m^3/day)	Total Water Demand (m^3/day)
Residential	520.80	173.60	694.40
Commercial + GIC facilities	56.90	20.86	77.76
Total	**577.70**	**194.46**	**772.16**

5.2. Assessment of the Water Supply Impact

5.2.1. Based on the water usage identified in the approved DSP, the estimated existing fresh water demand and flushing water demand is approximately 557.45 m^3/day and 166.67 m^3/day respectively. The peak flow rate for the approved DSP scheme is 0.0194 m^3/s for freshwater and 0.0039 m^3/s for flushing water. The detailed calculation of water demand estimation for approved DSP is shown in ***Table 5-2*** and ***Appendix C***.

Table 5-2 Water Demand of Approved DSP

Water Usage	Fresh water Demand (m^3/day)	Flushing Water Demand (m^3/day)	Total Water Demand (m^3/day)
Residential	472.75	136.08	608.83
Commercial + GIC facilities	84.70	30.59	115.29
Total	**557.45**	**166.67**	**724.12**

5.2.2. Based on the results of the calculation, the additional fresh water and flushing water demand after the current S16 Proposal is 0.25 m^3/day (0.045%) and 27.79 m^3/day (16.7%) respectively. The details are shown in ***Table 5-3***.

Table 5-3 Comparison of Water Demand under Approved DSP and Current S16 Proposal

Water Demand	Approved DSP	Current S16 Proposal	Difference (% change)
Fresh Water Demand (m^3/day)	557.45	557.70	+0.25 (+0.045%)
Flushing Water Demand (m^3/day)	166.67	194.96	+27.79 (+16.7%)
Total Water Demand (m^3/day)	659.61	772.16	+112.55 (+17.1%)

5.2.3. The design storage capacity of LFFWSR and LFSWSR are approximately 28,872 m^3 and 8,597 m^3 respectively. The estimated fresh water demand of the Current S16 Proposal is approximately 557.70 m^3/day, which will utilize about 6.0% of the design storage capacity of LFFWSR. The estimated flushing water demand is approximately 194.96 m^3/day, which will utilize about 4.5% of the design storage capacity of LFSWSR.

5.2.4. Besides, the estimated peak fresh water demand would be occupied approximately 75.7% of the flow capacity of the existing DN150 public fresh water distribution main. Meanwhile, the peak flushing water demand would utilize approximate 38.2% of the flow capacity of existing DN100 public salt water distribution main.

5.2.5. The detailed hydraulic calculation is shown in ***Appendix D***.

5.2.6. The proposed fresh water (DN150) and flushing water (DN80) supplies for the Application Site will be connected via tee-off from the existing DN150 fresh water and DN100 salt water supply main along the Sa Po Road, with appropriate lead-in valve provided. The estimated peak fresh water and flushing water demand would utilize approximate 75.7% and 59.7% of the proposed fresh and salt water supply main respectively.

5.3. Liability

5.3.1. The Applicant shall be responsible for the construction works, including all internal water mains and water supply-in valves, regular inspection, and maintenance management of the water facilities strictly within the Application Site boundary.

6. CONCLUSION

6.1.1. The WSIA has been carried out to evaluate the potential impact on the existing water supply system, by comparing the additional water demand from the current S16 Proposal, comparing with the approved DSP. The Application Site falls within the fresh water supply zone of LFFWSR and the salt water supply zone of and LFSWSR. The Current S16 Proposal will be supplied by existing DN150 fresh water and DN100 salt water distribution mains located along Sa Po Road.

6.1.2. Based on the assessment, the total fresh water demand for the current S16 Proposal is estimated to be 577.70 m^3/day, with corresponding peak flow rates of 0.0201 m^3/s. The total flushing water demand is estimated to be 194.46 m^3/day, with corresponding peak flow rates of 0.0045 m^3/s.

6.1.3. The water demand from the Current S16 Proposal represents only a small proportion of the design storage capacities of the LFFWSR and LFSWSR, at approximately 6.0% and 4.5% respectively. In terms of distribution, the fresh water demand would utilise approximately 75.7% of the capacity of the existing DN150 fresh water mains, and approximately 59.7% of the capacity of the existing DN100 salt water mains.

6.1.4. Given that fresh water supply from LFFWSR and salt water supply from LFSWPS are enough to cater with the addition water demand due to Current S16 Proposal. It is concluded that no adverse impact on the local water supply network is anticipated, no mitigation measures are considered necessary.

6.1.5. Based on the above, it is concluded that the water supply impact arising from the Current S16 Proposal should be acceptable.

SIGN CONVENTIONS

TYPE / LEGEND

MAINS

- FRESH / SALT WATER MAINS
- RAW / UNTREATED WATER MAINS / CONDUIT
- WASHOUT PIPE / OVERFLOW PIPE
- SLUDGE PIPE
- TREATED EFFLUENT MAINS
- WATER MAINS REQUIRE REGULAR FLUSHING
- PIPE LAID IN SLEEVE
- PIPE LAID IN TROUGH
- PIPE LAID INSIDE TUNNEL
- BEING LAID MAINS
- WATER TUNNEL
- PROPOSED MAINS
- PRIVATE MAINS (SEE NOTE 2)
- MAINS OF OTHER DEPARTMENTS (SEE NOTE 3)

FIRE SERVICE

- PEDESTAL FIRE HYDRANT — PH
- GROUND FIRE HYDRANT — GH
- HEAVY DRAW-OFF FIRE HYDRANT — HD
- SWAN NECK FIRE HYDRANT — SN
- TWIN OUTLET SWAN NECK FIRE HYDRANT — SN

VALVE

- VALVE (SEE ABBREVIATIONS)
- NORMALLY CLOSED VALVE
- FLAP VALVE — FV
- FLOW REGULATING VALVE — FRV
- NON RETURN / REFLUX VALVE — NRV
- PRESSURE CONTROL / REDUCING / RELIEF VALVE — PRV

AIR VALVE

- AIR VALVE (SEE ABBREVIATIONS)
- AIR VALVE ON INSPECTION TEE (SEE ABBREVIATIONS)

METER

- METER (SEE ABBREVIATIONS)
- VENTURI TUBE — VEN
- CRITICAL PRESSURE POINT — PP

OTHERS

- CHANGE IN PIPE
- BLANK FLANGE / END CAP
- EXTENTS SHOWING FEATURES OF WATER MAINS
- INSPECTION TEE (SEE ABBREVIATIONS)
- PIPES CONNECTED
- STANDPIPE — STP
- STRAINER — STR
- CATHODIC PROTECTION INSTALLATION (SEE ABBREVIATIONS)
- LEAK NOISE CORRELATION POINT — LNC
- LEAKAGE COLLECTION CHAMBER — LCC
- FLOW MEASUREMENT CHAMBER — FMC
- INSPECTION MANHOLE — IMH
- MULTI - PURPOSE INSERTION CHAMBER — MIC
- ESSENTIAL VALVE REFERENCE NUMBER (ALPHABET SEE ABBREVIATIONS) — C 888888
- PIPES CROSS OVER

DESIGNATIONS

NOTES

1. WSD MAINS INCLUDE:
   (a) MAINS LAID AND MAINTAINED BY WSD.
   (b) MAINS LAID BY OTHER DEPARTMENTS OR PRIVATE PARTIES BUT MAINTAINED BY WSD AT WSD'S COST.
2. PRIVATE MAINS INCLUDE MAINS IN PRIVATE ROADS, PRIVATE HOUSING ESTATES, ETC. NOT MAINTAINED BY WSD.
3. MAINS OF OTHER DEPARTMENTS INCLUDE MAINS LAID BY OTHER GOVERNMENT DEPARTMENTS NOT MAINTAINED BY WSD.

SUPPLEMENTARY INFORMATION OF ASBESTOS CEMENT (AC) OR UNKNOWN WATER MAINS

IMPORTANT: Please note that existing asbestos cement (AC) or unknown water pipes are identified in the vicinity of your project/works area. It is very likely that the unknown water pipes are AC water pipes. You are strongly advised to make special provisions including monitoring measures as necessary to protect these water pipes that are vulnerable to damage. Should diversion/replacement of AC or unknown water pipes be found necessary to be carried out in conjunction with your proposed works after detailed investigations or studies, you should instruct your consultants and/or contractors (as the case may be) to take all necessary measures during design and/or construction stages (as the case may be) to comply with all prevailing statutory requirements for the safe handling, removal, transportation and disposal of AC pipes.

Water Demand Estimation

Project No. 2288

Water Demand Estimation of Proposed Development

Current S16 Proposal

Fresh Water

Residential			
Total Unit No.	992	unit	Referred to current S16 scheme
Average Household	2.5		Refer to Average Domestic Household Size in Lung Shing District Council Constituency Area in 2021 Population Census
Total Number of Residents	2480	persons	
Fresh Water Unit Daily Demand	0.210	m^3/person/day	Referred to WSD DI No.1309 Table 1 - Fresh Water for Residential R2 All Area
Average Fresh Water Demand	**520.80**	**m^3/day**	
Commercial (Assumed 100% restaurant for worse-case)			
Floor Area	5307.0	m2	Referred to current S16 scheme
Worker Density	5.1	person/100m2	Referred to the worker density of Restaurants (All Types) in Table 8 of CIFSUS
Total number of person	271	persons	
Fresh Water Unit Daily Demand	0.200	m^3/person/day	Based on daily operation activities of restaurant (such as food preparing, dish washing, cooking, cleaning etc.) Assumed to be slightly less than residential.
Average Fresh Water Demand	**54.20**	**m^3/day**	
GIC Facilities			
Floor Area	800.0	m2	Referred to current S16 scheme
Worker Density	3.3	person/100m2	Referred to the worker density of Community, Social & Personal Services (All Types) in Table 8 of CIFSUS
Total number of person	27	persons	
Fresh Water Unit Daily Demand	0.100	m^3/person/day	Assumed based on activities that consumed water (such as personal hygiene, facilities maintenance, cleaning etc.) The water demand is expected to be less than residential.
Average Fresh Water Demand	**2.70**	**m^3/day**	
Total Fresh Water Demand	**577.70**	**m^3/day**	
Peaking Factor	3.00		
Peak Flow Rate	**0.0201**	**m^3/s**	

Flushing Water

Residential			
Total Unit No.	992	unit	Referred to current S16 scheme
Average Household	2.5		Refer to Average Domestic Household Size in Lung Shing District Council Constituency Area in 2021 Population Census
Total Number of Residents	2480	persons	
Flushing Water Unit Daily Demand	0.070	m^3/person/day	Referred to WSD DI No.1309 Table 1 - Flushing Water for Residential R2 All Area
Average Flushing Water Demand	**173.60**	**m^3/day**	
Commercial (Assumed 100% restaurant for worse-case)			
Floor Area	5307.0	m2	Referred to current S16 scheme
Worker Density	5.1	person/100m2	Referred to the worker density of Restaurants (All Types) in Table 8 of CIFSUS
Total number of person	271	persons	
Flushing Water Unit Daily Demand	0.070	m^3/person/day	Assumed to be same as residential
Average Flushing Water Demand	**18.97**	**m^3/day**	
GIC Facilities			
Floor Area	800.0	m2	Referred to current S16 scheme
Worker Density	3.3	person/100m2	Referred to the worker density of Community, Social & Personal Services (All Types) in Table 8 of CIFSUS
Total number of person	27	persons	
Flushing Water Unit Daily Demand	0.070	m^3/person/day	Assumed to be same as residential
Average Flushing Water Demand	**1.89**	**m^3/day**	
Total Flushing Water Demand	**194.46**	**m^3/day**	
Peaking Factor	2.00		
Peak Flow Rate	**0.0045**	**m^3/s**

Appendices

Appendix A Notional Design for the S16 Planning Proposal
Appendix B Plantation Area Plan (for DIA assessment only)
Appendix C Detailed Information of Catchment Plan
Appendix D Extracts from Approved Drainage Impact Assessment Report (October 2025)
Appendix E Hydraulic Calculation

1. Introduction

1.1 The Kai Tak Road / Sa Po Road Development Scheme (KC-015) (the Scheme), is located in Kowloon City and is bounded by Kai Tak Road, Prince Edward Road East, Sa Po Road, and Carpenter Road. The Development Scheme Plan was approved by Chief Executive in Council (CE in C) on 29 September 2020 (the Approved DSP).

1.2 With an aim to enhance development flexibility to meet market needs, adopt Modular Integrated Construction (MiC) method and aboveground carpark design in response to the recent Government initiatives, the URA intends to seek Town Planning Board (TPB)'s approval on **minor relaxation of domestic plot ratio (DPR) restriction from 7.5 to 8.0 and building height restrictions (BHR) from 120mPD to 140mPD for Application Site (i.e. the area zoned "R(A)" of the Approved DSP)** in accordance to Section 16 of the Town Planning Ordinance (S16 Planning Application).

1.3 This S16 Planning Application is a "non-scheme-based" submission. The notional design and indicative development parameters provided in the application are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

1.4 SYW & Associates Ltd. was commissioned by URA to conduct the Drainage Impact Assessment (DIA) to assess the potential drainage impact and to recommend mitigation measures as necessary in support of this S16 Planning Application.

1.5 This DIA report has taken into account (i) the DIA for Approved DSP dated 2019 (2019 DIA for Approved DSP) and (ii) the DIA for diversion works for Carlson Court and High Place dated 2025 (2025 DIA for Approved Diversion Works), which the Drainage Services Department (DSD) had no in-principle objection on the assessments and the proposal provided in these two reports.

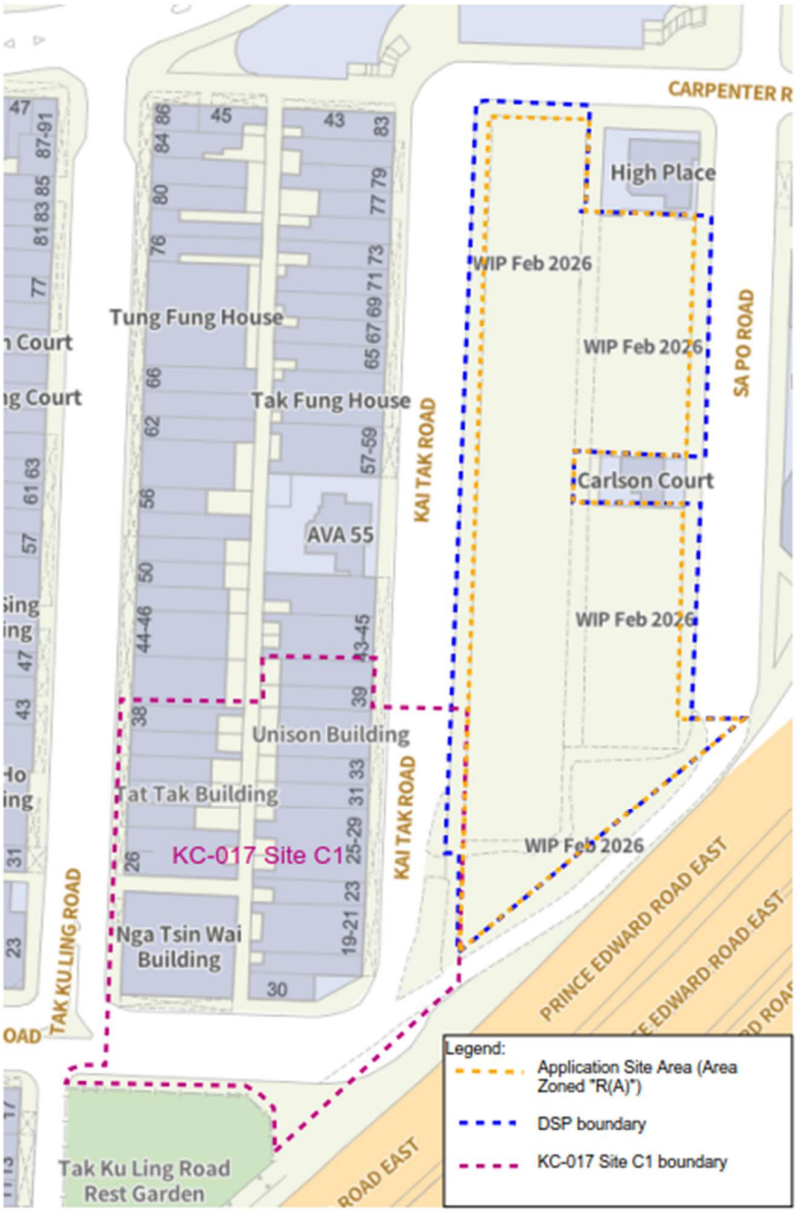

Figure 1 – Location Plan of the Site

2. The current S16 Planning Proposal

2.1 The Application Site, with an area of about 5,307sq.m., is broadly bounded by Carpenter Road to the north, Kai Tak Road to the west and Sa Po Road to the east. Please refer to Figure 1 for the location plan.

2.2 The S16 Planning Application seeks TPB permission for (i) minor relaxation of maximum permissible DPR from 7.5 to 8.0 and (ii) minor relaxation of BHR from 120mPD to 140mPD to enhance development flexibility to meet market needs and at the same time facilitate design flexibility for adopting MiC and aboveground carpark design to the Scheme in response to the recent Government initiatives.

2.3 A comparison table for the indicative parameters based on the notional design for the Approved DSP and the current S16 planning proposal is provided in **Table 2.1** below.

Table 2.1 Comparison of Indicative Development Parameters of the Approved DSP and the Current S16 Proposal

Development Parameters	Approved DSP [A]	Current S16 Proposal [B]	Difference [B]-[A] (% change)
Site Area			
- Application Site Area (for PR Calculation) (m^2)	About 5,352	About 5,307 (1)	-45 (-0.8%)
Maximum PR (3)			
- Total PR	9.0	9.0	No Change
- Domestic PR	7.5	8.0(2)	+0.5 (+6.7%)
Max GFA (3)			
Total GFA (m^2)	About 48,168	About 47,763(1)(2)	-405 (-0.8%)
Domestic GFA (m^2)	About 40,140	About 42,456(1)(3)	+2,316 (+5.8%)
Max. BH (mPD)	120	140	+20 (+16.7%)
GIC Facilities(4) (m^2)	About 800	About 800	No Change
Split-level Sunken Plaza (m^2)	About 1000	About 1000	No Change
Under Notional Design			
No. of Residential Towers	3 towers	2 towers	-1 (-33.3%)
No. of Storeys			
- Domestic	29 storeys	31 storeys	+2 (+6.9%)
- Clubhouse	1 storey	1 storey	No Change
- Podium	3 storeys	5 storeys	+2 (+66.7%)
- Basement	5 storeys	2 storeys	-3 (-60.0%)
Average Flat Size (m^2)	About 42.8(5)	About 42.8 (5)	No Change(5)
No. of Flats	About 938(5)	About 992(6)	+54 (+5.8%)(5)
Anticipated Population	About 2251 (5)	About 2480(8)	+229 (+10.2%)(5)

Remarks:
(1) As per the net site area under land grant resulting to corresponding adjustment in GFA.
(2) Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.
(3) The domestic and non-domestic PR/GFA are for illustrative purpose only. To allow flexibility and optimum use of development potential, development at the Application Site is subject to a maximum

domestic PR and total PR. The actual domestic and non-domestic PRs and GFAs would be worked out at detailed design stage.

(4) GIC to be exempted from GFA calculation under the Approved DSP.

(5) For a like-to-like analysis, an average flat size of about 42.8sq.m. under the Current S16 Planning Proposal has been applied to both the approved DSP and current S16 scenarios in the comparison table to show the net increase in the number of flats and population. For reference, the notional design for the Approved DSP for KC-015 approved by CE in C in Sep 2020 had adopted an average flat size of about 49.6sq.m. with about 938 no. of flats and an estimated population of about 1940.

(6) The actual no. of flats would be worked out at detailed design stage.

(7) In lined with the notional design adopted for the Approved DSP, the estimated population is based on the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(8) Based on Population Census 2021, the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(9) Assumed in accordance with the First Schedule of Building (Planning) Regulation that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.

2.4 While the subject S16 Planning Application is a "non-scheme-based" submission, this DIA is prepared based on the indicative development parameters for S16 Planning Application (i.e. Column (B)) in **Table 2.1** above and the notional design provided in **APPENDIX A**, for the purpose of conducting technical assessments. The tentative completion year for the Scheme will be 2030/2031.

3. Existing and Planned Drainage Works

3.1 Existing Drainage Context

3.1.1 The current surface run-off from the Application Site area is collected by drains along the scavenging lane between the buildings within the Application Site boundary as shown in **Figure 2**, by pipe sections from manhole SMH4037349 and discharge southwards.

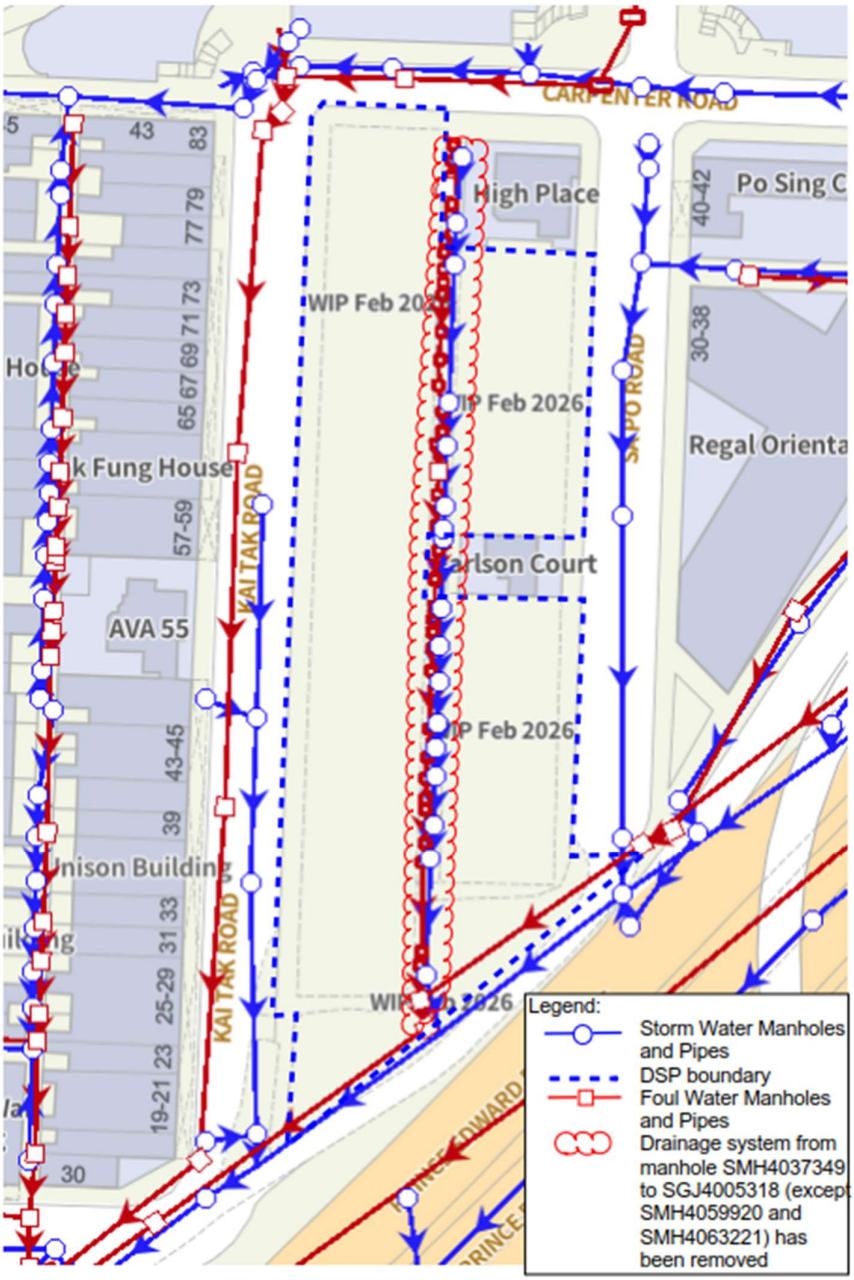

Figure 2 – Existing Drainage Network as shown in GeoInfo Map

3.2 Planned Drainage Context

3.2.1 The drainage proposals planned under in (2019 DIA for Approved DSP), is summarized as follows:

- Stormwater from High Place was proposed to be collected by public manhole SMH4037348 via a new 375mm dia. pipe, and 3 sections of surcharged pipes were proposed to be upgraded.
- Stormwater from Carlson Court was proposed to be collected by public manhole SMH4037321 via new 225mm dia. pipes; this proposed work has been completed.
- The stormwater runoff from the Application Site was proposed to be collected by a single manhole and discharge to the public drainage system via SGJ4005318.
- A portion of the public drainage pipe section (from manhole SMH4037328 to SMH4037342) under Sa Po Road is located within DSP boundary, temporary diversion during construction phase might be required if necessary.

3.2.2 A DIA had been approved for the diversion works for Carlson Court and High Place by DSD in 2025 (i.e. the 2025 DIA for Approved Diversion Works). Extracts from the report and acceptance letters can be found in **Appendix C**. Please note that the diversion works had already been completed as shown in **Figure 3**. The updates introduced to the 2019 DIA for Approved DSP by this 2025 DIA are listed below:

- The stormwater discharge from High Place was revised to discharge via Carpenter Road instead of Sa Po Road. The diversion work has now been completed.
- The proposed location of the terminal manhole has been revised and will be implemented in the detailed design stage.
- Upgrading of 3 sections of surcharged pipes along Sa Po Road is no longer required, as the discharge from High Place has been revised to discharge via Carpenter Road instead of Sa Po Road.

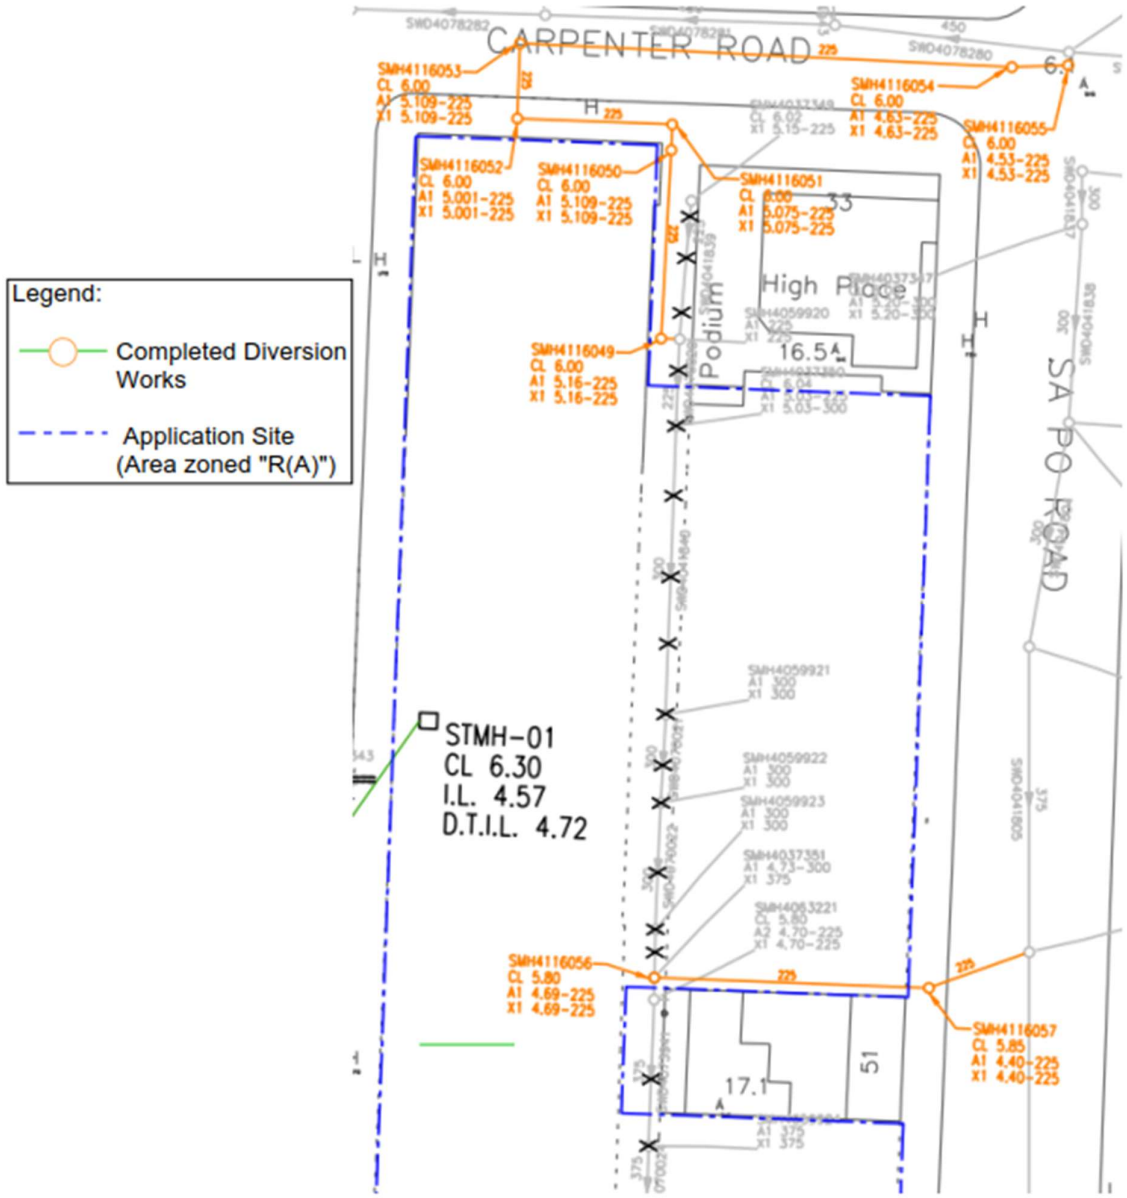

Figure 3 – Completed Diversion Works for Carlson Court and High Place

3.2.3 In addition, portion of Kai Tak Road and Nga Tsin Wai Road is planned to be realigned within the adjoining KC-017 Site C1 boundary as shown in Drawing 1. The corresponding drainage impact and indicative diversion within KC-017 Site C1 boundary provided in this report are solely for illustration purposes and for conducting necessary drainage impact assessment for the Current S16 Planning Proposal. Any proposals related to KC-017 Site C1 are subject to further study and detailed design.

4. Method of Analysis

The following information was reviewed for this DIA report:

1) Drainage Records as shown in GeoInfo Map from Hong Kong Government (https://www.map.gov.hk/gm/);
2) DSD Stormwater Drainage Manual, Fifth Edition, January 2018; and
3) DSD Stormwater Drainage Manual – Corrigendum No. 1/2022.

4.1 Project Interface

Another development project (KC-017 Site C1) by URA downstream of this site is proposed to be executed in the future, this coordination with KC-017 Site C1 has been carried out and the result is reflected in this DIA.

4.2 Assessment Criteria

Design Return Period

4.2.1 The design return period for the existing and proposed drainage system will be designed and assessed based on standards as set out in the Stormwater Drainage Manual (SDM) and Stormwater Drainage Manual – Corrigendum No. 1/2022, 1/2024 and 2/2024. Table 10 of the SDM recommended design return periods based on flood levels for the various drainage systems which is shown in **Table 4.1**.

Table 4.1 Recommended Design Return Periods based on Flood Levels

Type of Drainage System	Return Period
Urban Drainage Trunk System	200 years
Urban Drainage Branch System	50 years

4.2.2 Since the Site is located within an urban area, the proposed design return period will be reference to the "*Urban Drainage Branch System*". The definition of the system as per Section of SDM will be adopted in this Assessment Report. In particular, pipe size or the equivalent diameter in case of a box culvert less than 1.8m is considered as branch drain, while pipe or box culvert with an equivalent diameter equal of larger than 1.8m is considered as trunk drain.

4.2.3 According to the SDM, 50-year design return period is recommended for the design of urban drainage branch system and is adopted for the design of the proposed drainage works for the proposed re-developments.

Design Rainfall Data

4.2.4 The storm constants as stipulated in Table 3a of the SDM is adopted for estimating the design rainfall intensity since the proposed works is within the HKO Headquarters Rainfall Zone. The storm constants for 10-year and 50-year return period are shown in **Table 4.2**.

Table 4.2 Storm Constants for Different Return Periods of HKO Headquarters Return Period

Return Period T (years)	10	50
a	485.0	505.5
b	3.11	3.29
c	0.397	0.355

4.2.5 A 28.1% increase in rainfall for End of 21st Century as per Table 28 of SDM has been applied in design of the proposed drainage works.

Roughness

4.2.6 The roughness value for the proposed drainage works are referenced to the recommended roughness values (k_S) recommended in Table 14 of the SDM and the adopted value is shown in **Table 4.3** below.

Table 4.3

Material and Classification	**Value of k_s(mm)**
Concrete Pipe	**0.15**
PE Pipe	**0.006**

Rational Method

4.2.7 The Rational Method is adopted for estimating the peak flows based on the size, runoff coefficient of the sub-catchment and the intensity of the storm event. The design rainfall intensity is determined in accordance with the Intensity-Duration-Frequency (IDF) relationship as specified in Section 4.3.3 in the SDM. The fundamental formula of Rational Method is as follows:

$$Q = C\,i\,A$$

Where:

Q = Peak load (flow) (m^3/s)
C = Runoff coefficient (unit less)
i = Rainfall intensity (mm/hr)
A = Catchment area (m^2)

The formula of IDF relationship is as follows

$$i = \frac{a}{(t+b)^c}$$

Where:

i = Extreme mean intensity in mm/hr
t = Duration in minutes (td ≤ 240)
a, b, c = Storm constants given in Table 3 of SDM

Hydraulic capacity

4.2.8 The hydraulic capacity of the proposed drainpipe is controlled by its size, shape, gradient and friction resistance. In the hydraulic analysis, Colebrook-White Equation is used for the drainage pipes. The formula of Colebrook-While Equation is as follows:

$$\overline{V} = -\sqrt{32gRS_f}\log\left[\frac{k_s}{14.8R} + \frac{1.255\nu}{R\sqrt{32gRS_f}}\right]$$

Where:

V = Cross-sectional mean velocity (m/s)
R = Hydraulic radius (m)
Sf = Friction gradient (dimensionless)
ks = Surface roughness (m)
v = Kinematic viscosity (m^2/s)
g = Acceleration due to gravity (m/s^2)

4.2.9 Derived value from above Colebrook-White is used to determine the required pipe/channel size using the Discharge and Mean Velocity formula as follows:

$$Q = V \times A$$

Where:

Q = Rate of flow, m^3/s
A = Pipe cross-sectional area, m^2
V = Cross-sectional mean velocity, m/s

Time of concentration

4.2.10 Times of concentration for various types of catchments shall be calculated in accordance with the methodology specified in **Table 4.4**.

Table 4.4 Time of Concentration or Various Types of Catchments

Type of Catchment	Time of Concentration	Remarks
Urban Catchment	Time of entry (Assumed to be 5 mins)+Time of flow in pipe	Time of flow to be calculated using full bore velocity

Siltation

4.2.11 Siltation allowance is made for the deposition of sediment in stormwater channels and pipes in the design and assessment of proposed drains. For the permissible degradation between desilting cycles, the following principle is adopted to account for the effects to flow capacity due to materials deposited on the bed:

a) 5% reduction in flow area if the gradient is greater than 1 in 25; or
b) 10% reduction in flow area in other cases

Runoff Coefficient

4.2.12 Runoff coefficient value C = 0.9 and 0.3 are adopted for paved and unpaved areas respectively in both existing and post-development conditions.

Kinematic Viscosity

4.2.13 Kinematic viscosity of stormwater is assumed to be 1×10^{-6} m^2/s.

5. Drainage Impact Assessment

5.1 Existing Catchments and Surface Runoffs

5.1.1 The existing drainage catchments associated with the existing drainage networks of the Application Site are identified based on the existing storm drainage layout. **Appendix C** provides existing catchment area information.

Manhole No.	Downstream Pipe Diameter	Downstream Peak Flow (m^3/s)	Remaining Capacity
SMH4037343	375 mm	0.376	overload
SMH4037588	450mm	0.521	overload

Table 5.1 – Hydraulic Performance for Existing Pipe under 50 years return period and End of 21st Century Climate Change Condition

5.2 Connection From The Application Site

5.2.1 This chapter evaluates the drainage impact of the additional flow from the area zoned "R(A)" to the public drainage system along Kai Tak Road. The existing public drainage pipes downstream from manholes SMH4037343 will be evaluated.

5.2.2 The neighborhood catchment areas are shown in **Drawing No. CP-01** under **Appendix D** and the indicative plantation area for the Application Site is provided in **Appendix B**, and each catchment is summarized in **Table 5.2** below and presented in **Appendix D**.

Catchment Zone	Area (m^2)	Paved Ratio
C1	512	100%
C2	1920	100%
C3	3557	90%
C4	1340	90%
C5	408	100%
C6	272	90%
C7	407	100%
C8	1155	90%
C9	334	100%
C10	2393	90%
C11	8400	100%
C12	1209	90%

Table 5.2 Neighborhood Catchment Areas

5.2.3 According to the hydraulic performance discussed in Chapter 5, the collected surface runoff from the area zoned "R(A)" is proposed to discharge to manhole SMH4037343 at Kai Tak Road.

5.3 Existing Drainage Condition with the Development Surface Runoff

5.3.1 The estimated total peak runoff from the Current S16 Proposal is **0.376m^3/s** under 50 years storm with end of 21st century climate change condition.

5.3.2 The hydraulic performance of the pipe downstream of manhole SMH4037343 at Kai Tak Road is presented in **Appendix D**. The drainage impact from the additional flow from the Application Site will only impact the existing public drainage pipes downstream from manholes SMH4037343.

5.4 New Drainage from The Application Site

5.4.1 A new manhole STMH-01 is proposed serving as the connection point of terminal manhole of the Application Site. **Drawing 1** shows alignments and invert levels for the proposed drainage pipes along the new layout and surface levels of Kai Tak Road

5.4.2 The proposed drainage pipes would adopt PE pipe which follows the relevant BS EN standard, and its hydraulic performance is summarized in **Table 5.3**.

Manhole No.	Downstream Pipe Diameter	Downstream Peak Flow (m^3/s)	Remaining Capacity
STMH-01	450	0.376	14.5%
SMH4037343	450	0.376	29.2%
SMH4037588	600	0.521	26.8%
SMH102	600	0.559	8.2%
SMH4037344	600	0.580	43.9%
SMH201	600	0.693	33.2%
SMH202	750	0.886	37.8%
SMH203	1050	1.605	26.2%
SMH204	1050	1.605	36%
SMH205	1050	1.605	35.1%

Table 5.3 – Hydraulic Performance for Proposed Pipes under 50 years return period with End of 21st Century Climate Change Condition

5.4.3 According to the hydraulic calculation presented in **Appendix E**, it is observed that the existing pipe would not have sufficient capacity under end of 21st century climate change condition with additional discharge from the Application Site, hence, the downstream pipe from SMH4037343 is proposed to be upgraded to 450mm dia. and the pipe downstream of SMH4037588 is proposed to be upgraded to 600mm dia.

5.4.4 As the drainage pipe at the junction of Kai Tak Road and Nga Tsin Wai Road is assumed to be demolished due to the gateway square (by KC-017 Site C1), the downstream of drainage along new Kai Tak Road and existing Tak Ku Ling Road are further diverted toward south along the west of Tak Ku Ling Road Rest Garden. The pipe size is assumed to be 1050mm dia. pipe.

5.4.5 In view of the level of existing sewerage pipe, the proposed drainage between SMH4037360 and proposed SMH203 is proposed to be a twin 450mm dia. pipe to prevent clashing. Subject to detailed design and further study, the drainage manhole SMH4037360 is assumed to be reconstructed by KC-017 Site C1.

5.5 Assessment of The Drainage Impact

5.5.1 Since the catchment area are the same for the Approved DSP and the Current S16 Scenario, the impact on the existing drainage network is the same for both scenarios.

5.6 Proposed Mitigation Measures

5.6.1 As discussed in Chapter 5, 2nos. of existing pipes will have insufficient capacity to handle the end of 21st century climate change condition with additional discharge from the Application Site and are proposed to be upgraded. Please refer to **Table 5.4** for a summary of the proposed upgraded work by KC-015.

Manhole No.	S16 Scenario	
	Existing Downstream Pipe Diameter	Proposed Upgrade Downstream Pipe Diameter
SMH4037343	375 mm	450mm
SMH4037588	450mm	600mm

Table 5.4 Proposed Upgrading Works

6. Overall Conclusion

6.1 The stormwater surface runoff from the Current S16 Proposal will be decreased due to less impermeable area from the planned layout. The stormwater runoff is proposed to be collected by manhole and discharge to the public drainage system via SMH4037343.

6.2 To cater for the Kai Tak Road realignment (by KC-017 Site C1), the existing drainage is assumed to be diverted and upgraded to suit the change in catchment characteristic by KC-017 Site C1.

6.3 Under the existing drainage network, 2nos. of existing pipes will have insufficient capacity to handle the end of 21st century climate change condition with additional discharge from the Application Site and hence proposed to be upgraded.

6.4 Since, the catchment area are the same for the Approved DSP and the Current S16 Scenario, the impact on the existing drainage network is the same for both scenarios.

6.5 The diversion and upgrading works by KC-017 Site C1 mentioned under this assessment are assumptions adopted for the DIA assessment for assessment purpose, it is not a proposal under this DIA and is subject to change and agreement with relevant Government Departments.

6.6 With mitigation measures (the downstream pipe from SMH4037343 is proposed to be upgraded to 450mm dia. and the pipe downstream of SMH4037588 is proposed to be upgraded to 600mm dia.; and the upgrading works / diversion works proposed to be carried out by KC-017 Site C1 as stated in para. 5.6.1), there is no adverse impact anticipated arising from the Current S16 Proposal.

Utility Diversion Works for Carlson Court & High Place, Kowloon City, Kowloon

DRAINAGE IMPACT ASSESSMENT REPORT

Wilson & Associates Ltd.

3 DRAINAGE DIVERSION

3.1 As mentioned in **Section 2.3**, the drainage connection from Carlson Court and High Place to the public drainage system will be influenced by the removal of the pipes along the existing scavenging lane. The closest manhole to Carson Court is SMH4037321; and the closest manholes to High Place are SMH4037346 and SMJ4066541. The downstream of these manholes will be assessed in the following sections for a suitable diversion proposal.

High Place

3.2 The drainage discharge from High Place is currently collected by manhole SMH4059920 and flow southwards to downstream. Total drainage discharge from rooftop and podium of High Place is 20.4L/s.

3.3 The closest manholes for diversion are SMH4037242, SMH4066540 and SMH4066541 on Carpenter Road to the North of High Place and SMH4037346 on Sa Po Street to the East. The public drainage system surrounding High Place is shown in **Figure 3.1**.

3.4 For the option of discharging drainage from High Place to the public drainage system via SMH4066541, there is a 1050mm diameter wide sewer which runs parallel with the drainage pipes along Carpenter Road, the sewer have a invert level of approximately 3.70mPD, and the invert level at SMH4066540 approximately 4.30mPD, which means that it is impracticable to build a pipe from High Place to the drainage manhole SMH4066541 across Carpenter Road.

3.5 For the option of discharging via SMH4037346, due to the outgoing pipe invert level of SMH4037346 (5.35mPD) and SMH4037347 (5.20mPD) are higher than SMH4059920 (~5.1mPD), gravity pipe cannot be constructed or a drain pump is necessary for the stormwater to flow upward against gravity.

3.6 Therefore, the downstream is proposed to be connected to SMH4037242 as minimal work is required for this diversion as shown in **Figure 3.2**.

3.7 The total catchment including High Place and the service lane between High Place and the DSP boundary contribute 22.0L/s drainage discharge to the public drainage system. **Table 3.1** below summarizes the flowrate of the catchment; the detailed calculation is presented in **Appendix I**.

Table 3.1 Stormwater Runoff from High Place Catchment

Assessment Area	Total Area (m^2)	Paved Ratio	Surface Runoff, Q (L/s)
High Place (including rooftop, podium and lane)	420	100%	22.0
Total			**22.0**

The surface runoff is calculated with reference to DSD Stormwater Drainage Manual, Fifth Edition, January, corrigendum no. 1/2022 and corrigendum no. 1/2024

3.8 The total drainage discharge is proposed to be collected by a 250mm outer diameter PE pipe, the hydraulic parameters and capacity are listed in **Table 3.2** below and the calculation is detailed in **Appendix I**.

Table 3.2 Proposed Drainage Pipes from High Place Catchment

Manhole	Upstream Invert Level	Downstream Invert Level	Diameter (mm)	Full Capacity (L/s)
SMHA01	5.19	5.16	250 (OD)	43.3
SMHA02	5.16	5.109	250 (OD)	51.1
SMHA02-1	5.109	5.075	250 (OD)	44.6
SMHA02-2	5.075	5.020	250 (OD)	41.5
SMHA03	5.020	5.001	250 (OD)	79.5
SMHA04	5.001	4.63	250 (OD)	47.9
SMHA05	4.63	4.53	250 (OD)	52.9

Note: 10% reduction of flow area is allowed for effect of deposition of sediment

Carlson Court

3.9 The drainage discharge from Carlson Court is currently collected by manhole SMH4063221 at the service lane and discharge southwards. Total drainage discharge from rooftop and podium of Carlson Court is 17.0L/s.

3.10 According to the planned layout (**Figure 2.1**), there will be a new 3m wide lane for pedestrian use surrounding Carlson Court. As the manhole SMH4063221 is not disturbed, it is proposed that the drainage discharge from the building to be collected by the same manhole as existing setting and connect to SMH4037321 on Sa Po Road as shown in **Figure 3.3**. However, the sewage flow direction would be changed if the diversion proposal is adopted, the connected pipes will be demolished and rebuilt; and the manhole may also need to be rebuilt, but the location and connection to Carlson Court would remain the same.

3.11 The total catchment including Carlson Court and the service lane contribute 17.0L/s drainage discharge to the public drainage system. **Table 3.3** below summarizes the flowrate of the catchment; the detailed calculation is presented in **Appendix II**.

Table 3.3 Stormwater Runoff from Carlson Court Catchment

Assessment Area	Total Area (m^2)	Paved Ratio	Surface Runoff, Q (L/s)
Carlson Court – (including rooftop, podium and lane)	327	100%	17.0
Total			**17.0**

The surface runoff is calculated with reference to DSD Stormwater Drainage Manual, Fifth Edition, January, corrigendum no. 1/2022 and corrigendum no. 1/2024

3.12 The total drainage discharge is proposed to be collected by a 225mm dia. pipe, the hydraulic parameters and capacity are listed in **Table 3.4** below and the calculation is detailed in **Appendix II**.

Table 3.4 Proposed Drainage Pipes from High Place Catchment

Upstream manhole	Downstream manhole	Upstream Invert Level	Downstream Invert Level	Diameter (mm)	Full Capacity (L/s)
SMH4063221	SMHB01	4.70	4.67	225	76.1
SMHB01	SMHB02	4.67	4.37	225	63.5
SMHB02	SMH4037321	4.37	4.30	225	63.5

Note: 10% reduction of flow area is allowed for effect of deposition of sediment

4 DRAINAGE IMPACT ASSESSMENT

4.1 This chapter evaluates the drainage impact of the diverted drainage from High Place and Carlson Court to the public drainage system along Sa Po Road due to the redevelopment. The existing public drainage pipes from manholes SMH4037348 to SMH4037342 will be evaluated.

4.2 "Stormwater Drainage Manual – Planning, Design and Management", fourth edition, May 2013, (hereafter called "the DSD Manual") prepared by the DSD provides guidelines for the design of the drainage system. According to Table 10 of the DSD Manual, the recommended design return period based on flood levels is 50 years ("main rural catchment drainage channels") for conservative purpose.

4.3 The neighborhood catchment areas are shown in **Figure 4.1** and the area ratio of each catchment is summarized in **Table 4.1** below and presented in **Appendix III**.

Table 4.1 Neighborhood Catchment Areas

Catchment Zone	Area (m^2)	Paved Ratio
A (Po Sing Court with Service Lane)	1509	100%
B (High Place) and Service Lane	420	100%
C (Sa Po Road upstream of Carlson Court Outlet)	684	100%
D (Carlson Court and Service Lane)	327	100%
E (Sa Po Road downstream of Carlson Court Outlet)	934	100%
F (Carpenter Road upstream of High Place)	1840	100%
G (Carpenter Road downstream of High Place)	403	100%
H (Regal Oriental Hotel)*	1108	100%

*Portion of catchment (approximate 1/3 of the area shown on table) in Regal Oriental Hotel is discharged into the concerned drainage system

4.4 The hydraulic calculation of the maximum flow capacities of the existing public network is shown in **Table 4.2**. The detailed calculation can be found in **Appendix III**.

Table 4.2 Existing Public Drainage Pipe Capacity

Pipe No.	Outlet from	From Manhole	To Manhole	Diameter	Full Capacity
Pipe01	High Place	SMH4037242	SMH4066540	450mm	257L/s
Pipe02	High Place	SMH4066540	SMH4066541	450mm	355L/s
Pipe03	Carlson Court	SMH4037320	SMH4037321	375mm	245L/s
Pipe04	Carlson Court	SMH4037321	SMH4037322	375mm	155L/s
Pipe05	Carlson Court	SMH4037322	SMH4037327	375mm	322L/s

Note: 10% reduction of flow area is allowed for effect of deposition of sediment

4.5 The existing drainage system is evaluated with the catchment zones listed in **Table 4.1**, together with the catchment of High Place and Carlson Court. **Table 4.3** shows the stormwater discharge from catchment zones to each section of public drain and **Figure 4.2** shows the locations of the various downstream pipes.

Table 4.3 Stormwater Discharge

Downstream pipe	Pipe Capacity	Catchment	Total Discharge	Utilization
Pipe01	257 L/s	B (High Place) & F	126 L/s	49%
Pipe02	355 L/s	B (High Place) & F & G	126 L/s	36%
Pipe04	155L/s	A & C & D (Carlson Court) & H	151 L/s	98%
Pipe05	322L/s	A & C & D (Carlson Court) & E & H	245 L/s	76%

4.6 Impact of downstream of SGJ4005318

Based on the development as discussed, no discharge is considered connecting to SGJ4005318 from the service lane between Kai Tak Road and Sa Po Road. No impact is imposed to the connection SGJ4005318.

Meanwhile, the total catchment reserved for downstream of SGJ4005318 is reduced in this scheme (particularly due to the reduction of discharge from the demolished development and High Place). Therefore, no adverse impact is imposed on the drainage system concerned.

4.7 Drainage flow justification

The proposed public drainage pipe connecting to the public manhole reserves one source of building outlet. The flow angle is checked so that the design turning angle shall be less than 90 degrees. The corresponding drainage flow is presented in Figure **3.2** and **3.3**.

5 CONCLUSION

5.1 The stormwater surface runoff from the site will be decreased due to less impermeable area from the planned layout. Hence, no expected drainage impact is anticipated from this Scheme. The stormwater runoff is proposed to be collected by manhole and discharge to the public drainage system via SMH4037242 and SMH4037321 as the existing setting.

5.2 A portion of the public drainage pipe section (from manhole SMH4037328 to SMH4037342) under Sa Po Road is located within DSP boundary, temporary diversion during construction phase might be required if necessary. However, no disturbance to the public drainage service is expected and the pipes would be restored within site after construction phase.

5.3 However, due to the redevelopment, drainage pipe sections from manhole SMH4037349 to SGJ4005318 (except SMH4059920 and SMH4063221) within the DSP boundary will be removed; diversion of drainage system for High Place and Carlson Court is proposed.

5.4 The stormwater from High Place is proposed to be collected by public manhole SMH4037242 via new 225mm dia. pipes; and stormwater from Carlson Court is proposed to be collected by public manhole SMH4037321 via new 225mm dia. pipes.

5.5 The public pipe sections from SMH4037348 to SMH4037342 along Sa Po Road are evaluated. All drainage pipes have sufficient capacity to cater the drainage discharge from High Place, Carlson Court and the proposed development

Subject: Planning Application No. A/K10/281 - S16 for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015)

Dear Sir/Madam,

As instructed by the Kowloon District Planning Office of the Planning Department (KDPO, PlanD), please find attached the consolidated replacement pages for the Application Form (Pages 7, 8, 14, 15 and 16) which supersede all previous versions submitted earlier today for further processing.

Please feel free to contact me if you have any questions.

Many thanks

Regards
Simone Tang
Manager (Planning & Design), URA

請列明擬議略為放寬的發展限制**並填妥於第(v)部分的擬議用途/發展及發展細節** –

☑	Plot ratio restriction 地積比率限制	From 由 Max Domestic PR: 7.5 to 至 Max Domestic PR: 8
☐	Gross floor area restriction 總樓面面積限制	From 由 .....sq. m 平方米 to 至 .....sq. m 平方米
☐	Site coverage restriction 上蓋面積限制	From 由 .....% to 至 ..... %
☑	Building height restriction 建築物高度限制	From 由 .....m 米 to 至 ..... m 米 From 由 120 ..... mPD 米 (主水平基準上) to 至 140 .....mPD 米 (主水平基準上) From 由 ..... storeys 層 to 至 ..... storeys 層
☐	Non-building area restriction 非建築用地限制	From 由 .....m to 至 ..... m
☐	Others (please specify) 其他（請註明）	.....

(v) For Type (v) application 供第(v)類申請

Note: The notional design and indicative development parameters of this S16 Planning Application are solely for illustration purpose and for conducting necessary technical assessments.

(a) Proposed use(s)/development 擬議用途/發展	Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for Permitted Residential Development with Government, Institution or Community, Commercial / Retail and Public Vehicle Park uses of the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Please illustrate the details of the proposal on a layout plan 請用平面圖說明建議詳情)

(b) Development Schedule 發展細節表

Proposed gross floor area (GFA) 擬議總樓面面積	47,763 [Note 3] ..... sq.m 平方米	☑About 約
Proposed plot ratio 擬議地積比率	Total PR: 9.0 (Max. Domestic PR: 8)	☐About 約
Proposed site coverage 擬議上蓋面積 [Note 4]	Domestic: Not more than 40%; Non-domestic below 15m: 100% [Note 5] Non-domestic above 15m: Not more than 65% ..... %	☐About 約
Proposed no. of blocks 擬議座數	2	
Proposed no. of storeys of each block 每座建築物的擬議層數	37 [Note 6] ..... storeys 層 ☐ include 包括 ..... storeys of basements 層地庫 ☑ exclude 不包括 2 storeys of basements 層地庫	
Proposed building height of each block 每座建築物的擬議高度	Not more than 140 mPD 米(主水平基準上)	☐About 約
	144 [Note 7] ..... m 米	☑About 約

Note 3: Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.
Note 4: Assumed in accordance with the First Schedule of B(P)R that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.
Note 5: For reference, taking into account the provision of the split-level sunken plaza, the site coverage is approximately 85%. This calculation factors in that about 40% of the sunken plaza will be covered by a canopy to provide pedestrian weather protection.
Note 6: Including 31 residential storeys, 1 storey for clubhouse and 5 storeys of podium.
Note 7: Measured from mean site formation level of about -4 mPD.

Note: The notional design and indicative development parameters of this S16 Planning Application are solely for illustration purpose and for conducting necessary technical assessments.

☑ Domestic part 住用部分

GFA 總樓面面積	42,456 [Note3 & Note 8] sq. m 平方米	☑About 約
number of Units 單位數目	About 992	
average unit size 單位平均面積	42.8 sq. m 平方米	☑About 約
estimated number of residents 估計住客數目	About 2480 [Note 9]	

☑ Non-domestic part 非住用部分

	GFA 總樓面面積

Town Planning Board Secretariat,
Town Planning Board,
15/F, North Point Government Offices,
333 Java Road,
North Point, Hong Kong

Dear Sir/Madam,

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015)
Planning Application No. A/K10/281
- Submission of Response-to-Departmental Comments -

We refer to the captioned s.16 planning application submitted to the Town Planning Board (TPB) on 16 June 2026.

To address the departmental comments received via the Kowloon District Planning Office, Planning Department (KDPO, PlanD) in July and August 2026, we submit herewith four (4) copies of the Responses to Departmental Comments table (**R to C Table**), together with the relevant replacement pages of the Environmental Assessment (**Appendix 1**) and replacement pages of the Visual Impact Assessment **(Appendix 2)** for TPB's consideration.

In addition, in response to the verbal comments from KDPO, PlanD, relevant replacement pages of the Planning Statement **(Appendix 3)** and replacement pages of the Application Form **(Appendix 4)** are also provided for TPB's considerations. Please note that the updated Notional Block Plan and Notional Section Plan (i.e. Figures 3.1 and 3.2 of the replacement pages of the Planning Statement provided in Appendix 3 of this R-to-C submission) will supersede the previous notional design plans included in all technical assessments submitted on 16 June 2026. This update will not affect the assessments/results of all previous submitted technical assessments.

Should you have any enquiry, please feel free to contact me at [redacted] or our Ms. Mable Kwan at [redacted] / Ms. Simone Tang at [redacted]. Thank you.

Yours faithfully,

Mike Kwan
General Manager, Planning & Design
Urban Renewal Authority

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Response to Departmental Comments Table

Nos.	Comments received from:
1.	Director of Environmental Protection (DEP)
2.	Chief Town Planner/Urban Design & Landscape, Planning Department (CTP/UD&L, PlanD)
3.	Director of Social Welfare (DSW)
4.	District Lands Office/Kowloon West, Lands Department (DLO/KW, LandsD)
5.	Commissioner for Transport, Transport Department (C for T, TD)

Appendix 1: Replacement pages of the Environmental Assessment
Appendix 2: Replacement pages of the Visual Impact Assessment
Appendix 3: Replacement pages of the Planning Statement
Appendix 4: Replacement pages of the Application Form

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Response to Departmental Comments Table

Departmental Comments	Responses
1. Comments of the Director of Environmental Protection (DEP)	
Received via email dated 10 July 2026	
1. Please state clearly in Section 5 of EA why quantitative air quality impact assessment is conducted.	Noted. It is supplemented in Section 5.6.1 of the replacement pages of the Environmental Assessment (EA) report in **Appendix 1** that the separation distances between the ASRs within the Application Site and the nearby roads are insufficient under the Notional Design for the subject S16 Planning Application. Therefore, a quantitative AQIA have been conducted.
2. The conclusion (Section 10) is not matched with Section 5 to 9 in the EA. Please critically review.	The conclusion (Section 10) has been revised to ensure consistency with Section 5 to 9 of the EA report. The corresponding replacement pages are enclosed in **Appendix 1.** This revision is only to rectify editorial errors and would not affect the original assessment results/ findings under the EA report submitted on 16 June 2026.
3. Please also submit the Air Modelling files for checking.	The air modelling files have been submitted to EPD separately on 13 July 2026 for review.
Received via email dated 3 August 2026	
1. The applicant (Urban Renewal Authority (URA)) seeks planning permission for the proposed minor relaxation of Domestic Plot Ratio (DPR) and Building Height Restrictions (BHR) for permitted residential development with Government, Institution or Community (GIC), commercial/retail uses, and proposed 'Public Vehicle Park' use for URA's development scheme (KC-015) at Kai Tak Road/Sa Po Road (the Site). The captioned application proposed to be "non-scheme-based" submission for illustration purpose for technical assessment. Based on the findings of the Environmental Assessment (EA) submitted under Planning Statement, insurmountable environmental impact associated with the proposed development is not anticipated and summarized as follows:	Noted with thanks.

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Response to Departmental Comments Table

Departmental Comments	**Responses**
i. On air quality, quantitative Air Quality Impact Assessment (AQIA) has been conducted for the Site and the predicted results indicated that no air sensitive receiver (ASR) is located in the Air Quality Objectives (AQO) exceedance zone at G/F. Thus, adverse air quality impact is not anticipated; ii. On noise and sewerage, insurmountable noise and sewerage impacts are not anticipated. Noise Impact Assessment (NIA) Clause (72) and Sewerage Impact Assessment (SIA) Clause (71) have been imposed under the Agreement and Conditions of Grant by Private Treaty Grant (PTG) executed by URA on 6 March 2026. In this connection, the noise and sewerage impacts arising from the proposed minor relaxation of DPR and BHR will be addressed under land lease mechanism.	
2. On the above basis, insurmountable environmental impacts associated with the proposed development are not anticipated. Hence, we have no objection to the captioned application from environmental perspective. However, we have some comments on the EA as provided in Annex A for follow up please.	Noted. EPD's 'no objection' to the subject S16 Planning Application is gratefully acknowledged. The technical comments on the EA will be addressed accordingly at detailed design stage subsequent to the approval of the subject planning application.
2. Comments of the Chief Town Planner/Urban Design & Landscape, Planning Department (CTP/UD&L, PlanD)	
Received via email dated 3 August 2026	
1. While the proposed increase in BH of about 9m for aboveground carpark is considered reasonable, the proposed increase in BH of about 11m for MiC appeared to be excessive;	Please be clarified that the proposed 11m increase in Building Height (BH) for MiC is a technically necessary solution to facilitate adoption of MiC, delivery of the committed planning gains, accommodate site constraints and further providing urban design merits: • **Address the technical requirements for MiC:** Under current technology, double slabs between MiC modules are required

Departmental Comments	Responses
	and typically adopted by current market practice. The floor-to-floor height is required to increase for about 0.15m to accommodate the double slabs thickness. To physically absorb this cumulative thickness along with the 10% GFA exemption for MiC floor areas allowed under JPN No. 8, a BH increase of about 11m (i.e. about 2 additional residential floors) is technically required. • **Facilitate delivery of committed planning gains:** The Scheme would deliver major planning gains committed under the approved DSP, including a 1,000 sq.m. sunken plaza and a 50m tower setback from Prince Edward Road East to enhance wind penetration of the area. These at-grade spatial commitments would inevitably constraint the horizontal building mass and the layout's design flexibility and thus the proposed 11m increase in BH is essential to accommodate the required MiC floor area vertically. • **Accommodate site constraints:** The Application Site is interspersed by two existing buildings, namely the High Place and Carlson Court along Sa Po Road, resulting in an irregular site configuration, which constraints the flexibility and spatial efficiency of the horizontal building layout. The proposed 11m increase in building height directly addresses this physical constraint by allowing the permissible development parameters to be distributed vertically and enable the adoption of a more regular tower footprint that enhances the building's architectural form and fits harmoniously within the surrounding urban fabric. • **Enhance urban design and visual comfort:** Accommodating the 10% exempted GFA for MiC floor areas allowed

Departmental Comments	Responses
	under JPN No. 8 vertically rather than horizontally provides the design flexibility necessary to further provide design merits that could further enhance urban design and visual comfort for the local built environment, including: - The 11m BH increase allows the Scheme to reduce the number of residential towers to 2 nos. which allows for a much wider building separation between residential towers, enhancing visual and spatial comfort for future residents. - Repositioning the residential towers away from Kai Tak Road opens up the views of the neighbouring developments (e.g. the Carlson Court, AVA 55 and existing developments along Kai Tak Road), enhancing visual permeability and comfort of the surrounding area.
2. The Applicant has submitted a Visual Impact Assessment (VIA) for the Notional Scheme in support of the application. The VIA concluded that the overall visual impacts of the proposed development from the identified public viewing points (VPs) range from "negligible" to "slight" when compared with the approved DSP Proposal, taking into account the existing and planned developments in the surroundings. Design measures including the provision of a sunken plaza of 1,000m^2 and 50m setback of domestic tower from Prince Edward East as proposed in the approved DSP Scheme are retained in the Notional Scheme. However, the following rectifications should be noted for the VIA:	Noted.
(i) the VIA should be prepared in accordance with the latest promulgated Town Planning Board Guidelines on Submissions of VIA	Noted. The VIA has been updated in accordance with the latest promulgated Town Planning Board Guidelines on submissions of Visual Impact Assessment for Planning

Departmental Comments	Responses
for Planning Applications to the Town Planning Board (TPB PG-No. 41A);	Applications to the Town Planning Board (TPB PG-No. 41A). The relevant replacement pages of the VIA report have been provided in **Appendix 2**.
(ii) VSRs should read key public viewers in accordance with TPB PG-No. 41A;	Noted. The VIA has been updated in accordance with TPB PG-No. 41A. 'The term 'key public viewers' has been adopted, and the relevant updated pages are provided as replacement page of the VIA report in **Appendix 2**.
(iii) para. 3.2.1 – as per TPB PG-No. 41A regarding visual envelope, the extent of assessment area should be equal to three times of the actual BH of the proposed development instead of the proposed BH restriction;	Noted. Paragraph 3.2.1 of the Visual Impact Assessment (VIA) has been updated in accordance with TPB PG-No. 41A. The extent of the assessment area has been revised based on three times of the actual building height of the proposed development. Since the actual building height as per the notional design for the Current S16 Planning Proposal is about 134m (i.e. the proposed BHR of 140mPD minus the site formation level of about 6mPD), the visual envelope (VE) is therefore covering a radial area of about 402m (i.e. 134m x 3). Figure 3.1, 3.4 and 5.1-5.7 have been revised and provided in replacement pages of the VIA report are provided in **Appendix 2**.
(iv) Table 4.1 – it would be more tenable to grade the sensitivity of VP3 (Kowloon Walled City Park) as high rather than medium;	Noted. The visual sensitivity of VP3 has been updated to "high" in Tables 4.1 and 6.1 in the VIA report, please refer to the replacement pages provided in **Appendix 2**.
(v) Tables 4.1 and 5.2 (VP4) – VP4 (the future GIC Complex of KC-017) should be located to the northwest, rather than the west, of the Site;	Noted. The relevant paragraph under Tables 4.1 and 5.2 (VP4) have been updated and provided as replacement page of the VIA report in **Appendix 2**.
(vi) Tables 5.2 and 6.1 (VP7) – according to the photomontages, the Notional Scheme would further obstruct the open sky view compared with the approved DSP Proposal. In this connection, the overall visual impact for VP7 (Tung Tau Estate)	Noted. The visual sensitivity of VP7 has been updated to "slight" in Tables 5.2 and 6.1 in the VIA report, please refer to the replacement pages provided in **Appendix 2**.

Departmental Comments	Responses
should be graded as slight rather than negligible;	
(vii) Figure 3.1 – the annotation of VP2 should be shifted to the north of Kai Tak Road in accordance with the photograph on Figure 5.2.	Noted. Figure 3.1 and 5.2 have been updated and provided as replacement page of the VIA report in **Appendix 2**.
3. Comments of the Director of Social Welfare	
Received via email dated 3 August 2026	
1. We understand that URA now proposes to seek minor relaxation of domestic plot ration and building height restrictions for permitted residential development at KC-015. According to our previous exchange with URA, SWD has proposed and URA has agreed to incorporate a 100-place Child Care Centre thereat.	Noted.
2. On the understanding that URA will ensure all requirements for the Child Care Centre as stipulated in the Conditions of Grant and Technical Schedule as well as all current and prevailing ordinances and regulations will be fulfilled, and there will be ongoing liaison with us during the detailed design stage, we have no adverse comment on the planning application.	Noted.
4. District Lands Office/Kowloon West, Lands Department (DLO/KW, LandsD)	
Received via email dated 4 August 2026	
1. The application site is located at New Kowloon Inland Lot No. 6658 ("the Lot") which is held under the Conditions of Grant No. 20457 dated 6.3.2026 ("the Lease") for a term of 50 years commencing from 6.3.2026.	Noted.
2. Pursuant to SC(12)(c)(ii) of the Lease, the total gross floor area ("GFA") of any building or buildings to be erected on the Lot for private residential purpose shall not exceed 39,802 m². Under the current proposal, the	Noted.

Departmental Comments	Responses
maximum domestic GFA will be increased to about 42,456 m² which would be in breach of the Lease. Should the planning application be approved by the Town Planning Board ("TPB"), the Grantee is required to apply to Lands Department ("LandsD") for a lease modification to implement the proposal. However, there is no guarantee that the lease modification application would be approved. If the application is eventually approved by LandsD in the capacity as the landlord at its sole discretion, it will be subject to such terms and conditions including, among others, payment of premium and administrative fee as may be imposed by LandsD.	
3. Noting that more than 2 floors of aboveground car park is proposed under the planning application, the Grantee is required to obtain written approval from the Director of Lands ("the Director") (subject to payment of any premium and administrative fee as determined by the Director) pursuant to SC(53)(a)(i) of the Lease for not taking into account any parking spaces (including public vehicle park) in any floor in addition to 2 floors of parking spaces at or above the ground level of the building or buildings erected on the Lot for the purpose of calculating the total GFA provided that they have been excluded by the Building Authority from the calculation of GFA under the Buildings Ordinance.	Noted.
5. Commissioner for Transport, Transport Department (C for T, TD)	
Received via email dated 4 August 2026	
1. Unlike the previously approved TIA which featured two run-ins (at Kai Tak Road and Sa Po Road), the revised proposal relies solely on a single run-in at Sa Po Road. This arrangement increases the likelihood of traffic queues tailing back onto public roads.	Please note that the proposed vehicular access arrangement proposed under Section 2.2 of the Traffic Impact Assessment (TIA) report submitted on 16 June 2026, with one ingress at Sa Po Road and one egress at Kai Tak Road for all types of vehicles, aligned with the

Departmental Comments	Responses
Consequently, the applicant shall provide detailed assessments and mitigation measures to prevent traffic queue from building up on the public road network under this revised scheme.	arrangement under GBP submission approved in February 2026. Meanwhile, the proposed vehicular access arrangement has paid due considerations to prevent any potential traffic queue. A drop bar with an integrated camera system will be installed to minimize operation time, as a result vehicle queuing on Sa Po Road is not anticipated. Additionally, any potential queuing will be accommodated entirely within the site boundary along the internal ramp through active traffic management and physical design, ensuring Sa Po Road remains completely clear from traffic tailbacks.
2. I have no comment on the following proposed parking and L/UL spaces to be provided within the Development provided that the relevant lease conditions are complied with:- For Residential Use (310 units < 40m^2, 682 units >40m^2 but <70m^2 in 2 towers) 69 ancillary PC parking spaces, 10 visitor PC parking spaces, 10 MC parking spaces and 2 L/UL spaces for HGV; For Non-Industrial Use (GFA: 5307m^2) 27 PC parking spaces, 3 MC parking spaces, 5 L/UL spaces for HGV and 2 L/UL spaces for LGV; and PVP 217 PC parking spaces	Noted.
3. Figure 2.4 - Given the reduction in PVP parking spaces from 300 to 217 and the keen demand for parking spaces in Kowloon City Area, the applicant shall retain the existing on-street metered parking spaces at Sa Po Road and Kai Tak Road as far as practicable, in particular at locations not directly affected by the proposed run-in/out.	Please note that the aim of the subject S16 Planning Application is to seek minor relaxation of DPR and BHR to facilitate adoption of MiC and above-ground car parking at the Application Site. The concerned on-street metered parking spaces along Sa Po Road and Kai Tak Road fall outside the boundary of the subject Application

Departmental Comments	Responses
	Site and the scope of the subject S16 Planning Application. While it is noted of TD's concern on the arrangement of the on-street metered parking spaces adjoining the site, on-going liaison with TD would be made separately to reach an agreement with TD during the detailed design/ construction stages of the Project subsequent to the approval of this S16 Planning Application.
4. Table 5.3 and Table 5.4 on Pedestrian Walkways LOS - Please substantiate why the pedestrian flows for 2033 Design Scenario (with KC-015)(s16) are in general lower than that for 2033 Reference Scenario (without KC-015) (without s16) at PM Peak.	With reference to pedestrian walkway assessment methodology provided under Section 4.2.3 of the TIA report submitted on 16 June 2026, please be clarified that the 2033 Reference Scenario does not represent the scenario without KC-015, but represent the scenario with the Approved DSP but without the subject S16 Planning Application, while the 2033 Design Scenario represent the scenario with the subject S16 Planning Application. The pedestrian flow for the 2033 Design Scenario (i.e. with the subject S16 Planning Application) is derived by taking the 2033 Reference Scenario baseline (i.e. with the Approved DSP but without the subject S16 Planning Application) and applying the net difference in pedestrian trip generation resulting from the adjusted development parameters with the subject S16 Planning Application. Under the notional design for the subject S16 Planning Application, the retail plot ratio and its corresponding GFA have been reduced. As such, this reduction in retail floor area results in lower pedestrian trip generation during the PM peak period as shown in Table 4.10 of the TIA report submitted on 16 June 2026, which cause the PM peak pedestrian flows in the 2033 Design Scenario (i.e. with the subject S16 Planning Application) appears lower than that in the 2033 Reference Scenario (i.e. with the Approved DSP but without the subject S16 Planning Application).

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Response to Departmental Comments Table

Departmental Comments	Responses
5. It is noted from Figure 2.2 at Appendix A of the TIA that the proposed 2 levels of aboveground car park will occupy less than 10m of building height. TD is not in a position to comment on the proposed building height relaxation of 20m which exceeds the spatial requirement for the 2 levels of aboveground car park.	Noted.

Appendix 1:

Replacement pages of the Environmental Assessment Report

pollution problem. O_3 is therefore not considered as a key parameter in this assessment.

5.4. Assessment Area and Representative Air Quality Sensitive Receivers (ASRs) during operation phase

5.4.1. In general, the assessment area for an air quality impact assessment (AQIA) is defined by a distance of 500m from the site boundary are shown in ***Figure 5.1.***

5.4.2. Representative air quality sensitive receivers (ASRs) of the Current S16 Proposal were identified for the assessment of the air quality impacts arising from the surrounding air pollution sources during the operational phase. After reviewing the layout, the identified ASRs during operational phase are shown in ***Figure 5.2a*** and ***Figure 5.2b,*** and summarised in ***Table 5-5***.

Table 5-5 Representative Air Sensitive Receivers (ASRs)

ID	Ground level (mPD)	Flagplot Height (mAG)	Floor	Nature of ASR (Short-term/ Long-term) [1]	Usage of ASRs
A01-26	6.1	33.20-130.7	Residential 1/F-31/F	Long term	Residential
		7.5-24.55	Podium 1-5/F [2]	Short term	2/F: GIC [4] 5/F: Clubhouse
		1.50	G/F	Short term	Retail Sunken Plaza [3]
P01-65		-4.85	B1/F	Short term	Sunken Plaza [3]
		-9.95	B2/F	Short term	Sunken Plaza [3]

Remark:

[1]: Short term refers to the averaging time of 10min, 1-hour, 8-hour and 24-hour while long term refers to the averaging time of annual

[2] The ASRs at Podium 1–5/F will be short-term only in terms of duration of stay.

[3] Refer to the commercial use under the "purpose-designed non-domestic portion of a building connecting to the sunken plaza" as per the Approved Development Scheme Plan (DSP)

[4] Child Care Centre (CCC) will be provided as the designated Government, Institution and Community (GIC) use, in accordance with the Land Grant executed in March 2026.

5.4.3. The ASRs have been identified within the Current S16 Proposal and are summarised in ***Table 5-5***. The ASRs comprise Sunken Plaza from B2/F to G/F and retail units at G/F are considered short-term usage ASRs, for which only short-term averaging time criteria are applicable. The ASRs located at 2/F consist of the designated Government,

- The area where vehicle washing takes place and the section of the road between the washing facilities and the exit point should be paved with concrete, bituminous materials or hardcore.
- Vehicles within the site are restricted to a maximum speed of 10 kph.
- Vehicles are inspected regularly and well maintained to ensure that they are operating efficiently and that exhaust emissions are not causing nuisance.
- Vehicle engines are turned off when they are not in use.
- Haul road of the Application Site is located as far as possible from nearby ASRs.

5.5.8. Requirements set out in the Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation to control potential emissions from non-road mobile machinery (NRMM) will need to be fully complied with. Therefore, gaseous emissions from diesel-fuelled construction equipment would be minor and would not cause any significant adverse air quality impacts.

5.5.9. To reduce SO_2 emissions from diesel-fuelled machinery operating on-site, Air Pollution Control (Fuel Restriction) Regulations was enacted in 1990 to impose legal control on the types of fuel allowed for use and their sulphur contents in commercial and industrial processes. To improve air quality and protect public health, EPD has introduced the Air Pollution control (Non-road Mobile Machinery) (Emission) Regulation since 1 December 2015, under which only approved or exempted NRMMs are allowed to be used in construction sites. In addition, all construction plants are required to use ULSD (defined as diesel fuel containing not more than 0.001% sulphur by weight) as stipulated in Environment, Transport and Works Bureau Technical Circular (ETWB-TC(W)) No.19/2005 on Environmental Management on Construction Sites. Furthermore, given the localised and small-scaled nature of the Project, as well as the small number of PMEs involved, adverse air quality impacts due to emissions from the use of PMEs would be unlikely.

5.6. Potential Air Quality Impact – Operational Phase

5.6.1. In accordance with the HKPSG recommendation to minimise adverse air quality impacts associated with vehicular emissions from open roads, horizontal buffer zones of at least 5m, 10m and 20m shall be provided between the ASRs within the Application Site and Local Distributors, District Distributors and Primary Distributors respectively as illustrated in Figure 5.4. However, the separation distances between the ASRS within the Application Site and the nearby roads are insufficient under the Notional Design for the subject S16 Planning Applicaiton. Therefore, a quantitative AQIA has been conducted to evaluate the environmental acceptability of the Current S16 Proposal from an air quality perspective.

restaurants/ commercial kitchens and refuse collection points, adverse air quality impact to ASRs within site and in the vicinity is not expected.

Tier 2 – Emissions within 500m study area

Vehicular Emissions from Open Road Traffic

5.6.8. Vehicular emissions from all open roads within the 500m Assessment Area would be taken into account in the assessment. Traffic forecast data, including 24-hour traffic flows and vehicle compositions, as provided by the Project Traffic Consultant would be adopted. Submission of Traffic forecast data to Transport Department (TD) was made on 2 June 2026 as shown in ***Appendix 5.1***. Endorsement of the adopted traffic forecast data is being sought from TD and will be provided when it is available. The assessment years for air quality impacts would be determined based on the year with the highest emission within the next 15 years following commencement of operation of the Current S16 Proposal. Traffic forecasts for the identified roads would be assessed for four selected years, namely 2030 (the commencement year), 2035 (5 years after commencement), 2040 (10 years after commencement), and 2045 (15 years after commencement). The traffic forecasts for Air Quality Assessment in 2030, 2035, 2040 and 2045 are provided in ***Appendix 5.2***.

Vehicular Emissions from Minibus Terminus/Metered carpark/Public Transport Interchange

5.6.9. There are one Minibus Terminus (MT) and two metered carpark, and one Public Transport Interchanges (PTIs) found within 500m Assessment Area from the Application Site boundary, including Tung Tau Estate (Tung Lung Road) Minibus Terminus (TTEMT), Ning Yuen Street Carpark (NYSCP), Tung Lei Road Carpark (TLRCP) and Kai Tak Public Transport Interchange (KTPTI) as shown in ***Figure 5.5a***. Those vehicular emissions would have the potential to cause air quality impacts to the Current S16 Proposal during the operational phase. NO2, RSP and FSP impacts due to vehicular emissions from the above-mentioned MT, metered carparks and PTI (including starting, idling and running emissions) were quantitatively assessed.

5.6.10. For vehicle activity data at TTEMT and KTPTI, the minibus and bus route timetables, including travelling time, arrival and departure times, and headways (in minutes), were referenced from information provided by the respective bus companies. For TLRCP, traffic activity data were referenced to the traffic flow of Tung Lei Road (Road ID: RD_013) as adopted in the traffic forecast as a conservative approach. For NYSCP, vehicle arrival and departure patterns were estimated with reference to the

operating hours and number of parking spaces of the car park, and the emission factors for Light Goods Vehicles with a gross vehicle weight of 2.5–3.5 tonnes (i.e. LGV4) were adopted as a conservative approach.

5.6.11. Vehicle activity data adopted for the calculation of starting, idling, and running emissions associated with car parks (including NO, NO_2, RSP, and FSP) were referenced from the Calculation of Start Emissions in Air Quality Impact Assessment published by the Environmental Protection Department (EPD). This reference was used as the basis for calculating starting, idling, and running emissions. Starting and running emission factors were predicted using the EMFAC-HK model (v4.3). Cold idling emissions were derived from emission factors provided in Annex A of the Calculation of Start Emissions in Air Quality Impact Assessment, while warm idling emissions were estimated using emission factors presented in Road Tunnels: Vehicle Emissions and Air Demand for Ventilation published by the World Road Association.

Vehicular Emissions from Portal

5.6.12. The deck of the Current S16 Proposal above Sa Po Road creates a tunnel-like structure. The vehicular emissions generated inside the tunnel is regarded as volume source and the calculation is referred with Road Tunnels: Vehicle Emissions and Air Demand for Ventilation published by the World Road Association. The location of the portal emission is shown in ***Figure 5.5b***.

Industrial Chimney Emissions

5.6.13. Based on desktop study conducted on 11 Nov 2025, no existing chimneys were found within 500m of the Application Site. Given the Current S16 Proposal is for residential use, which is not environmentally polluting in nature and does not have provision of chimneys, hence, no chimney emissions will arise from the Current S16 Proposal and no adverse air quality impact due to chimney emissions is anticipated.

Odour Emission

5.6.14. Based on desktop study conducted on 11 Nov 2025, there are two existing sewage pumping stations within a 500m radius of the Application Site. Kowloon City No. 2 Sewage Pumping Station is located south-west of the site with a separation distance of 280m and Kowloon City No. 1 Sewage Pumping Station is located 400m east of the site. It is anticipated that with appropriate mitigation measures already implemented by the sewage pumping station, potential odour impacts from the sewage pumping stations to the Current S16 Proposal can be properly controlled.

Portal Emissions

5.7.6. The portal emission is modelled as "VOLUME" sources as shown in ***Figure 5.5b***. In accordance with the recommendations in the Permanent International Association of Road Congress Report (PIARC, 1991), the pollutants were assumed to eject from the portal as a portal jet such that 2/3 of the total emissions is dispersed within the first 50m of the portal and the other 1/3 of the total emissions within the second 50m.

5.7.7. The annual minimum temperature and RH values (11^{o}C and 18%) at PATH grids (42,34) were used in the calculation as a conservative approach. The SAMP v2.1 with ZEV scenario was used for the calculation of composite vehicular emission factor and emission rates. ***Appendix 5.5*** is provided for the volume sources produced by SAMP.

Minibus Terminus/Metered carpark/ Public Transport Interchange Emissions

5.7.8. The start emissions, running exhaust emissions, and idling emissions (i.e., NO, NO2, RSP, and FSP) associated with the MT/Metered carpark and PTI are calculated based on the start emission and running exhaust emission factors predicted by EMFAC-HK model, cold idling emission factors from Calculation of Start Emissions in Air Quality Impact Assessment published by EPD, warm idling emission factors from Road Tunnels: Vehicle Emissions and Air Demand for Ventilation published by World Road Association. Starting emissions from diesel vehicles equipped with selective catalytic reduction (SCR) systems were assumed to be dispersed over a total distance from the point where the vehicle start occurred. Running and idling emissions were assumed to be released at their respective locations. The detailed calculation of emission is provided in ***Appendix 5.6.***

5.7.9. Precise approach has been adopted to estimate the MT, meter carpark and PTI emission. Starting emissions from terminating vehicles, together with idling and running emissions from both terminating and non-terminating vehicles (where applicable), were included and modelled in the assessment. For emissions occurring beyond the car park boundaries, the remaining spread distance of starting emissions from terminating vehicles was also considered and modelled. Calculated starting emissions from terminating vehicles were adjusted to account for their corresponding idling emissions within the car parks, with reference to the Calculation of Start Emissions in Air Quality Impact Assessment.

5.7.10. One MT, two metered carpark and one PTIs were identified within 500m Assessment Area from the Application Site Boundary of the Current S16 Proposal, as shown in ***Figure 5.4***. The nature of Tung Tau Estate (Tung Lung Road) Minibus Terminus

6. Noise Impact Assessment

6.1.1. A Noise Impact Assessment (NIA) to assess the potential noise impact and identify any necessary noise mitigation measures will be submitted to the EPD for approval in accordance with the Special Condition (S.C.) stipulated in the Land Grant executed in March 2026. No adverse noise impacts are anticipated from the subject S16 Planning Application.

10. Conclusion

Air Quality Impact

10.1.1. Potential air quality impact, noise impact, water quality impact, land contamination and waste management during construction and operation phase of the project are evaluated in this Environmental Assessment Report for the Application Site.

10.1.2. Fugitive dust due to construction works and gaseous emission from construction equipment would make insignificant air quality impacts to the nearby air sensitive receivers, with the implementation of air quality control measures and good site practice as stipulated under Air Pollution Control (Construction Dust) Regulation, Air Pollution Control (Non-road Mobile Machinery) (Emission) Regulation and Air Pollution Control (Fuel Restriction) Regulations. With the implementation of dust suppression measures and good site practices, no adverse air quality impact is anticipated during construction phase.

10.1.3. During the operation phase, the air quality impacts of emissions from the surrounding to our Current S16 Proposal were assessed by AERMOD modelling. The predicted results indicated that it complies with AQO where no ASR is located in the exceedance zone at G/F. It is anticipated that there will be no adverse air quality impact towards the Current S16 Proposal.

Noise Impact

10.1.4. A Noise Impact Assessment (NIA) to assess the potential noise impact and identify any necessary noise mitigation measures will be submitted to the EPD for approval in accordance with the Special Condition (S.C.) stipulated in the Land Grant executed in March 2026. No adverse noise impacts are anticipated from the subject S16 Planning Application.

Water Quality Impact

10.1.5. For water quality impact during construction phase, it is expected to be minimal when appropriate guidelines and mitigation measures stated in ETWB TC (Works) No. 5/2005 and good site practice outlined in ProPECC PN 2/24 are implemented to properly discharge site run-offs. Hence, no adverse water quality impact is anticipated.

10.1.6. For the operational phase, the effluent discharge should be in compliance with the WPCO-TM and WPCO discharge license conditions. Following the ProPECC PN1/23,

no adverse water quality impact related to surface runoff is anticipated. Moreover, all sewage generated from the Current S16 Proposal will be discharged to the public foul sewer. Thus, no adverse water quality impact on the nearby WSRs during the operational phase is anticipated.

Land Contamination

10.1.7. For land contamination, land contamination assessment and remediation works have been conducted in 2025. Given there is no change in land use since 2025. Further land contamination is considered not necessary.

Waste Management

10.1.8. For waste management, top priority should be given to waste avoidance, followed by minimization, reuse/recycling, treatment and disposal of waste as a last resort during construction and operation phases. C&D material, general refuse and chemical waste are expected to be generated from the construction phase, while general refuse and chemical waste will be the major waste generated from operation phase. Provided that all these wastes are reused and recycled if appropriate, handled, stored and disposed of in strict accordance with the relevant legislative requirements and the recommended mitigation measures are properly implemented, no adverse waste impact is anticipated.

10.1.9. For waste management during construction phase, C&D waste will be properly sorted on-site into inert and non-inert waste for recycling and disposed of at designated facilities. Top priority should be given to waste avoidance, followed by minimization, reuse/recycling, treatment and disposal of waste as a last resort. During the operational phase, general refuse will be the major waste type. Recycling bins will be provided to promote separation of recyclables and will be collected regularly by recycling agents. The Project Team will explore feasibility of providing separate bins for food waste with disposal to the ORRC. Provided that all these wastes are reused and recycled if appropriate, handled, stored and disposed of in strict accordance with the relevant legislative requirements and the recommended mitigation measures are properly implemented, no adverse waste impact is anticipated during construction and operational phases.

Appendix 2:

Replacement pages of the Visual Impact Assessment

1. INTRODUCTION

1.1. This Visual Impact Assessment (VIA) was prepared in support of the planning application pursuant to Section 16 of the Town Planning Ordinance (Cap. 131) (S16 Planning Application), for minor relaxation of maximum domestic plot ratio (DPR) and building height restriction (BHR) for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (the Scheme).

1.2. The Scheme is located in Kowloon City and is bounded by Kai Tak Road, Prince Edward Road East, Sa Po Road and Carpenter Road. It adjoins Site C1 of URA Nga Tsin Wai Road / Carpenter Road Development Scheme (KC-017) at its southwestern boundary. It is currently vacant, as the demolition works were completed in 2024 (**Figure 1.1** and **Figure 1.2** refer).

1.3. The Application Site falls within the area zoned "Residential (Group A)" ("R(A)") on the approved URA Kai Tak Road / Sa Po Road Development Scheme Plan No. S/K10/URA1/2 (the Approved DSP) (**Figure 1.2** refers). It is subject to a maximum DPR of 7.5 and total plot ratio (PR) of 9.0, with BHR of 120mPD.

1.4. With an aim to enhance development flexibility to meet market needs, adopt Modular Integrated Construction (MiC) method and aboveground carpark design, this S16 Planning Application seeks Town Planning Board (TPB)'s permission for the Scheme on the following:

(i) minor relaxation of DPR from 7.5 to 8.0, with total permissible plot ratio remains the same as 9.0; and

(ii) minor relaxation of BHR from 120mPD to 140mPD.

1.5. The S16 Planning Application is a "non-scheme-based" submission. The notional design and indicative development parameters provided in the application are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

1.6. To support the S16 Planning Application, this Visual Impact Assessment (VIA) report is prepared to assess the potential visual impact arising by the S16 Planning Application in accordance with the TPB Guideline No. 41A – Guidelines on Submission of Visual Impact Assessment for Planning Applications to the Town Planning Board (TPB PG-No. 41A).

1.7. This VIA report has made reference to the selected viewpoints (VPs) adopted in the Visual Appraisal for the Approved DSP dated February 2019 (VA for Approved DSP), with minor adjustments to account for the changes in development context. The VPs adopted in this VIA has obtained no in-principal objection from the Urban Design & Landscape Section of Planning Department (UD&L, PlanD) in October 2025. The selected VPs have covered all four cardinal directions and included short-to-long range views as per TPB PG-No. 41A. The notional design of the Approved DSP has been adopted as the baseline visual condition for assessment (**Appendix 1** refers).

1.8. This VIA report will cover the followings:

Section 2:	describes the indicative development proposal under the current S16 Planning Application;
Section 3:	identifies the area of assessment and the visual context of the Application Site;
Section 4:	identifies the key public viewers;
Section 5:	appraises the potential visual impacts induced by the S16 Planning Application; and
Section 6:	summarizes the findings of the VIA.

Table 2.1: Comparison of Indicative Development Parameters of the Approved DSP Proposal and Current S16 Planning Proposal

Development Parameters	Approved DSP Proposal [A]	Current S16 Planning Proposal [B]	Difference [B]-[A] (% change)
Site Area(1) - Application Site Area (for PR Calculation) (m^2)	About 5,307	About 5,307	No change
Maximum PR (3) - Total PR - Domestic PR	 9.0 7.5	 9.0 8.0(2)	 No Change +0.5 (+6.7%)
Max GFA (1)(3) Total GFA (m^2) Domestic GFA (m^2)	 About 47,763 About 39,803	 About 47,763(2) About 42,456(2)	 No change +2,653 (+6.7%)
Max. BH (mPD)	120	140	+20 (+16.7%)
GIC Facilities(4) (m^2)	About 800	About 800	No Change
Sunken Plaza (m^2)	About 1000	About 1000	No Change
Under Notional Design			
No. of Residential Towers	3 towers	2 towers	-1 (-33.3%)
No. of Storeys - Domestic - Clubhouse - Podium - Basement	 29 storeys 1 storey 3 storeys 5 storeys	 31 storeys 1 storey 5 storeys 2 storeys	 +2 (+6.9%) No Change +2 (+66.7%) -3 (-60.0%)
Average Flat Size (m^2)	About 42.8(5)	About 42.8	No Change(5)
No. of Flats	About 930(5)(6)	About 992(6)	+62 (+6.7%)(5)
Anticipated Population (7)	About 2325(5)	About 2480	+155(+6.7%)(5)
Site Coverage (8)	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100% Non-domestic portion above 15m: Not more than 65%	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100%(9) Non-domestic portion above 15m: Not more than 65%	No change
Local Open Space (m^2) (10)	About 2251	About 2480	+229 (+10.2%)

Remarks:

(1) Based on the net site area under the Land Grant, subject to agreement with LandsD. For reference, the net site area under the Approved DSP was about 5,352 sq.m., the corresponding total GFA was about 48,168 sq.m. and domestic GFA was about 40,140 sq.m.

(2) Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.

(3) The domestic and non-domestic PR/GFA are for illustrative purpose only. To allow flexibility and optimum use of development potential, development at the Application Site is subject to a maximum domestic PR and total PR. The actual domestic and non-domestic PRs and GFAs would be worked out at detailed design stage.

(4) GIC to be exempted from GFA calculation under the Approved DSP.

(5) For a like-to-like analysis, an average flat size of about 42.8 sq.m. under the Current S16 Planning Proposal has been applied to both the approved DSP and current S16 scenarios in the comparison table to show the net increase in the number of flats and population. For reference, the notional

design for the Approved DSP for KC-015 approved by CE in C in Sep 2020 had adopted an average flat size of about 49.6 sq.m. with about 938 no. of flats and an estimated population of about 1940.

(6) The actual no. of flats would be worked out at detailed design stage.

(7) Based on Population Census 2021, the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(8) Assumed in accordance with the First Schedule of Building (Planning) Regulation that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.

(9) For reference, the podium below 15m will not extend towards the sunken plaza of about 1000 sq.m. (i.e. equivalent to about 18.84% of the Application Site area.)

(10) Private open space for future residents will be provided in accordance with HKPSG requirements of 1 sq.m. per person.

2.6. All previously committed planning gains under the Approved DSP Proposal have been retained, including:

- Provision of a split-level sunken plaza of about 1,000sq.m., which connects with the future subway (to be constructed by CEDD) linking Kai Tak Development Area (KTDA) and its Underground Shopping Street (USS), to create a nodal point to connect this part of Kowloon City District with KTDA for enhancing the area's connectivity and walkability. The sunken plaza will be opened for public use and will incorporate retail components, sitting area and event space for place-making opportunities to enrich users' experience, as well as providing a 50m setback of towers from Prince Edward Road East to enhance wind flow penetration;

- Replanning and converting the existing portion of Sa Po Road within the Application Site to optimize the configuration of the sunken plaza, provide solution space for bus queuing at the pavement of Prince Edward Road East and enhanced pedestrian circulation;

- Provide not less than 800 sq.m. of GFA for GIC uses to meet the community needs; and

- Provide PVP to address local parking demand. The URA submitted a Technical Note on Public Vehicle Park for KC-015 in April 2025 to Transport Department (TD), proposing minor reduction of PVP provision from 300 nos. under the Approved DSP to 217 nos. to reflect an updated estimate of local parking demand. The Note has obtained no in-principle objection from TD and no in- principle objection from Kowloon City District Council (KCDC) after consultation. As such, the current S16 Planning Proposal adopts the reduced numbers of PVP provision (i.e. 217 private car parking spaces).

3. AREA OF ASSESSMENT

3.1 Baseline Visual Condition

3.1.1 To comprehensively appraise the potential visual impacts arising from the Current S16 Planning Proposal, the notional design of the Approved DSP Proposal, with maximum DPR of 7.5, total PR of 9.0 and BHR of 120mPD, will serve as baseline visual condition of the Application Site to assess the visual changes. The Notional Design of the Approved DSP Proposal is provided in **Appendix 1** and its indicative development parameters is available in **Table 2.1**.

3.2 Area of Visual Influence (AVI)

3.2.1 According to TPB PG-No. 41A, the assessment area (i.e., the visual envelope) should cover the AVI within which the future development at the Application Site is pronouncedly visible from key sensitive viewers. The assessment area for the VIA is defined by the visual envelope ("VE") of the Application Site. The VE has taken 3 times of the proposed building height of the proposed development. Since the actual building height as per the notional design for the Current S16 Planning Proposal is about 134m (i.e. the proposed BHR of 140mPD minus the site formation level of about 6mPD), the VE is therefore covering a radial area of about 402m (i.e. 134m x 3).

3.2.2 As illustrated in **Figure 3.1**, the assessment area extends to a cluster of public housing, which includes Mei Tung Estate, Tung Tau Estate and Tung Wui Estate, as well as a portion of the Kowloon Walled City Park to the north; the Light Public Housing at Olympic Avenue to the east; a cluster of medium-to-high rise residential developments in KTDA to the south; and the Nga Tsin Wai Road area which is the urban core of Kowloon City with a mixed of existing tenement buildings, recent high-rise residential developments and the planned URA KC-017 development to the west. Apart from the coverage of the assessment area, the strategic viewpoint from Quarry Bay Park located across the Victoria Harbour (i.e. SVP 4), has also been identified for assessment (**Figure 3.3** refers).

3.2.3 The VPs for selected this VIA has made reference to those adopted in the VA for the Approved DSP, as the visual context surrounding the Application Site remains largely unchanged that most of the VPs adopted in the VA for Approved DSP are considered applicable and valid

4. KEY PUBLIC VIEWERS AT LOCAL VIEWPOINTS

4.1 As per the requirements of TPB PG-No. 41A, key public viewers are those people, who have views of the Application Site from the most affected VPs in the AVI, and they are most likely to be affected by the proposed visual change. The identified key public viewers of the VIA include the public at popular areas for outdoor activities, recreation, rest, leisure and prominent travel routes where their visual attention may be caught by the proposed development.

4.2 Key public viewers are categorised based on the characters and what they engage in the public VPs. The sensitivity of receivers of visual changes will be influenced by:

1) The activities they are engaged in;
2) The duration for which the proposed development remains visible;
3) View towards the change is full or partial; and
4) The public perception towards the portion of the proposed development.

4.3 With consideration of the nature of the people who are mostly affected by the proposed visual changes at the key VPs, the selected key public viewers of the subject VIA are categorised into two groups, namely;

1) **Recreation** – General public has sights on the Notional Design of the Application Site while engaging in recreational facilities. Their visual sensitivity varies depending on the type of recreational activity they are engaging in.

2) **Traveller** – General public has sights on the Notional Design of the Application Site in public passageways. Their visual experience depends on the speed of travel and whether their views will be continuous or occasional.

4.4 Based on the above criteria, the visual sensitivity of key public viewers from the VPs are categorized into 3 grades (i.e. “High”, “Medium”, and “Low”), depending on the duration of stay at the VPs. For example, the visual sensitivity of key public viewers from public open spaces is classified as “High”, while the visual sensitivity of travellers is classified as “Low”.

4.5 **Table 4.1** lists the visual sensitivity of the selected key public viewers at the selected VPs.

Table 4.1 – Brief Analysis of Visually Sensitive Receivers at Selected Viewing Points

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Viewing Distance**	**Quality of Existing View (Good / Fair / Poor)**	**Degree of Visibility on the Notional Design of the Application Site (Full /Partial / Glimpsed)** **Frequency of View of the Notional Design of the Application Site (Frequent / Occasional / Rare)**	**Sensitivity**
VP 1: Prince Edward Road East Bus Stop **Key Public Viewers:** Nearby residents and pedestrians, users of the Kowloon City Bus-bus Interchange (BBI) **Type of User:** Traveller	About 100m to the south-west of the Application Site	**Fair –** An oblique view of the south-western boundary of the Application Site, capturing the pavement of Prince Edward Road East in the foreground with bus stops at Kowloon City BBI at the right, existing tenement buildings to the left and a sky view partially obstructed by existing medium-to-high rise buildings such as Le Billionaire, Billionaire Royale and the Regal Oriental Hotel at the back.	**Partial View –** The proposed sunken plaza, podium and the lower floors of the residential towers of the Notional Design are visible from this VP due to its proximity to the Application Site. **Frequent View –** This VP is located right next to various bus stop (i.e. the Kowloon City BBI) with a high level of pedestrian activity. Due to the proximity to the Application Site, the pedestrians and facilities users will have a frequent view of the Application Site.	High
VP 2: Kai Tak Road **Key Public Viewers:** Nearby	About 35m to the west of the Application Site	**Fair –** The view of the western boundary, capturing vacant Application Site surrounded by site hoardings on the left, a row of low-to-medium rise tenement buildings on the right, and a sky view	**Partial View –** The podium and the lower floors of the residential towers of the Notional Design are visible from this VP due to its proximity to the Application Site.	Medium

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Viewing Distance**	**Quality of Existing View (Good / Fair / Poor)**	**Degree of Visibility on the Notional Design of the Application Site (Full /Partial / Glimpsed)** **Frequency of View of the Notional Design of the Application Site (Frequent / Occasional / Rare)**	**Sensitivity**
Residents, shoppers at G/F shops and pedestrians/ drivers of Kai Tak Road **Type of User:** Traveller		partially obstructed by a relatively new high-rise building (i.e. the Carlson Court) and various residential developments in the KTDA in the background.	**Occasional View –** This VP is observed with low level of pedestrian and vehicular activities. The key public viewers are mainly pedestrians and drivers passing by Kai Tak Road, who are mostly transient in nature, with short duration of stay and major attention on the road/ traffic condition.	
VP 3: Kowloon Walled City Park **Key Public Viewers:** Tourist to Kowloon Walled City Park, facility users, nearby residents and pedestrians	About 290m to the north-west of the Application Site	**Good –** The view of the north-western boundary of the Application Site, capturing the greenery within the park in the foreground, and a sky view partially obstructed by existing medium-to-high rise buildings in the background.	**Partial View –** The podium and the lower floors of the residential tower of the Notional Design will be screened off by the trees in the foreground. **Occasional View –** This VP is located within the Kowloon Walled City Park, an area frequently visits by many tourists and recreational users. The focus of the key public viewers is on the park's heritage elements and leisure activities and their view towards the	High

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Viewing Distance**	**Quality of Existing View (Good / Fair / Poor)**	**Degree of Visibility on the Notional Design of the Application Site (Full /Partial / Glimpsed)** **Frequency of View of the Notional Design of the Application Site (Frequent / Occasional / Rare)**	**Sensitivity**
Type of User: Recreation			partially-blocked residential towers of the Notional Design is considered occasional.	
VP 4: Future GIC Complex of KC-017 (near the existing entrance of Carpenter Road Park) **Key Public Viewers:** Visitors to the Park, nearby residents and pedestrians **Type of User:** Recreation/ Traveller	About 380m to the north-west of the Application Site	**Fair –** The view of the north-western boundary of the Application Site, capturing trees at the entrance of Carpenter Road Park on the left, and low-rise buildings (i.e. the existing Lok Sin Tong Transitional Housing and some tenement buildings) on the right in the foreground, and a sky view partially obstructed by existing medium-to-high rise buildings in the background.	**Partial View –** The major views to the Application Site will be screened off by existing developments in the foreground, leaving only a partial view of the residential tower of the Notional Design. **Occasional View –** While the key public viewers at this VP are primarily pedestrians walking along Carpenter Road who are transient in nature, the frequency of view is considered occasional due to the partial obstruction caused by existing buildings.	Medium

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Viewing Distance**	**Quality of Existing View (Good / Fair / Poor)**	**Degree of Visibility on the Notional Design of the Application Site (Full /Partial / Glimpsed)** **Frequency of View of the Notional Design of the Application Site (Frequent / Occasional / Rare)**	**Sensitivity**
VP 5: Olympic Avenue **Key Public Viewers:** Nearby residents and pedestrians/ drivers along the Olympic Avenue **Type of User:** Traveller	About 370m to the south-west of the Application Site	**Fair –** An oblique view of the south-western boundary of the Application Site, capturing a network of roads and flyovers in the foreground and a sky view partially obstructed by various existing high-rise, single-block buildings within Kowloon City.	**Partial –** The podium and the lower floors of the residential tower of the Notional Design will be screen by the network of roads and flyovers and existing trees and vegetation in the foreground. **Rare View –** A low level of pedestrian activity is observed at this VP, within mainly pedestrian passing by the footpath of the Olympic Avenue and the construction sites of KTDA. The key public viewers will have a rare view of the Application Site as they are mostly transient in nature.	Low
VP 6: Kai Tak Station Square **Key Public Viewers:** Nearby residents and pedestrians	About 440m to the south-east of the Application Site	**Poor –** An oblique view of the south-eastern boundary of the Application Site from KTDA, capturing an existing high-rise subsidized housing (i.e. Kai Yan Court) on the left, a construction site of a high-rise private residential development on the right in the foreground, and an obstructed sky-view in the background.	**Glimpsed View –** Views are mostly screened off by the existing buildings of Kai Yan Court and the construction site of high-rise private residential development in the foreground. **Rare View –** Although this VP is located within the Station Square with a high level of pedestrian activity observed, the frequency of	Low

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Type of User: Traveller			views towards the Application Site is considered rare due to the obstruction caused by existing and construction sites of high-rise residential buildings in the foreground.	
VP 7: Tung Tau Estate **Key Public Viewers:** Nearby residents and pedestrians/ drivers along Lok Sin Road **Type of User:** Traveller	About 340m to the north-east of the Application Site	**Fair –** An oblique view of the north-eastern boundary of the Application Site, capturing existing medium to high-rise public housing blocks (i.e. Tung Wui Estate and Tung Tau Estate) along both sides of Lok Sin Road in the foreground with a sky view partially obstructed by two high-rise buildings (i.e. Billionaire Royale and Le Billionaire)	**Partial View –** Major views will be screened off by existing developments in the foreground with partial view of the residential towers of the Notional Design. **Rare View –** While the key public viewers at this VP are primarily pedestrians and drivers along Lok Sin Road who are transient in nature, the frequency of views is considered rare due to the obstruction caused by existing buildings.	Medium
VP8: Quarry Bay Park (Strategic VP (SPV4))	About 4.3km to the southeast of the Application	**Good –** Long distance panoramic views towards the Application Site largely characterized by the existing high-rise and high-density development in Kwun Tong, Kowloon Bay and KTDA, featuring the Victoria Harbour and the continuous	**Glimpsed view –** long distance view of the Notional Design, which will be blended and compatible with the urban built environment along the harbourfront.	High

Key Public Viewer and Type of User (Recreation and/or Traveller)	**Approx. Viewing Distance**	**Quality of Existing View (Good / Fair / Poor)**	**Degree of Visibility on the Notional Design of the Application Site (Full /Partial / Glimpsed)** **Frequency of View of the Notional Design of the Application Site (Frequent / Occasional / Rare)**	**Sensitivity**
Key Public Viewers: Facility users, pedestrians along the Quarry Bay Promenade **Type of User:** Recreation	Site on the opposite side of the harbour	ridgelines extending from Beacon Hill to the Lion Rock and Kowloon Peak as backdrop.	**Rare view –** Although active pedestrian activities are observed and anticipated, the Notional Design will be largely screened off by buildings in KTDA. Meanwhile, the key public viewers' view along the promenade would mainly focus on Victoria Harbour, skyline, ridgeline and urban developments.	

5 ASSESSMENT OF VISUAL IMPACTS

5.1 Methodology for the Appraisal of Visual Impacts

5.1.1 With reference to TPB PG-No. 41A, visual changes could be positive or negative and they are not necessarily mutually exclusive. In considering the effect of visual changes, it covers the following three aspects:

1) Visual Composition (i.e., to assess the visual effects resulted from changes in massing, heights, disposition, forms etc. viz the overall visual backdrop);

2) Visual Obstruction (i.e., to assess the degree of visual obstruction and loss of views or visual openness due to the proposed development); and

3) Visual Change (i.e., to assess the visual changes from key public viewing points with a direct sightline to the proposed development).

5.1.2 The resultant overall visual impact will be categorized into the following ranges of threshold:

Table 5.1 – Classification of Overall Visual Impacts

Classification	Description
Beneficial	The project will complement the visual character of its setting, and/or will improve overall visual quality;
Negligible	The project has no noticeable effects or insignificant visual effects
Slight	The project causes slight adverse visual effects.
Moderate	The project causes some adverse visual effects, but these can be eliminated, reduced or moderated to a certain extent by design/mitigation measures.
Substantial	The project causes adverse effects that are considered too excessive and obstructive, and significant modification is required to mitigate the impacts.

Table 5.2 – Appraisal of Visual Impacts of Selected Viewpoints

Location of VP	Distance and Direction from the Application Site:	Key Public Viewers Type	Visual Composition	Visual Obstruction	Visual Change	Resultant Overall Visual Impact
VP 1: Prince Edward Road East Bus Stop	About 100m to the south-west of the Application Site	Traveller	As shown in **Figure 5.1**, the visual composition of this VP mainly features a wide pavement of Prince Edward Road East with bus stops (i.e. Kowloon City BBI) and various existing medium-to-high rise buildings (e.g. Le Billionaire, Billionaire Royale and the Regal Hotel etc.) Due to the close proximity to the Application Site, both the Approved DSP Proposal and the Current S16 Planning Proposal (both proposals) will inevitably visible with a large building mass at this VP.	The visual openness to the sky is already partially obstructed by the existing medium-to- high rise buildings. Both proposals will result in further obstruction of the sky view, nevertheless a portion of the sky view is still visible. Comparing to the Approved DSP Proposal, the visual openness and permeability remains the same. Thus, the impact of visual obstruction to the established VP is **negligible**.	The key visual elements are the existing pavement of Prince Edward Road East with bus stops, the existing buildings and the partially obstructed sky view. Under both proposals, the sunken plaza, podium and the lower floors of the proposed towers will be visible and become a dominant visual element, which would reduce the existing sky view.	Negligible

Location of VP	**Distance and Direction from the Application Site:**	**Key Public Viewers Type**	**Visual Composition**	**Visual Obstruction**	**Visual Change**	**Resultant Overall Visual Impact**
			Nevertheless, comparing with the Approved DSP Proposal, the visual composition remains the same, and thus the effect on visual composition is considered **negligible**.		If compared with the Approved DSP Proposal, there will be **negligible** change to the existing visual elements and resources.	
VP 2: Kai Tak Road	About 35m to the west of the Application Site	Traveller	As shown in **Figure 5.2**, the visual composition of this VP mainly features low-to-medium tenement buildings along Kai Tak Road with a glimpse of planned residential development in KTDA across the Prince Edward Road East in the background. Both proposals will inevitably visible with a large	As the Application Site is currently vacant as demolition works were completed in 2024, this VP possess a relatively open sky view with only a small degree of visual obstruction by the existing buildings at the foreground. While, both proposals will result in some obstruction of the existing sky view, a portion	The key visual elements are the existing buildings along Kai Tak Road. Under both proposals, the proposed sunken plaza, podium and the lower floors of the proposed towers will be visible and become a dominant visual element, which would	Negligible

Location of VP	**Distance and Direction from the Application Site:**	**Key Public Viewers Type**	**Visual Composition**	**Visual Obstruction**	**Visual Change**	**Resultant Overall Visual Impact**
			building mass at this VP due to its close proximity to the Application Site. Nevertheless, the visual composition remains largely the same when compared with the Approved DSP Proposal, and thus the effect on visual composition is considered **negligible**.	of the sky view will remain visible. When compared directly with the Approved DSP Proposal scenario, the degree of visual openness and permeability remains largely the same. Thus, the effect on visual obstruction is considered **negligible**.	reduce the existing sky view. When compared with the Approved DSP Proposal, the visual elements and resources remains largely the same. Thus, the magnitude of visual change from this VP is appraised as **negligible.**	
VP 3: Kowloon Walled City Park	About 290m to the north-west of the Application Site	Recreation	As shown in **Figure 5.3**, the visual composition of this VP mainly captures the vegetations within the Kowloon Walled City Park in the foreground, and various existing middle-to-high rise buildings in the background.	This VP possess a relatively open sky view with small degree of visual obstruction from the existing medium-to-high rise buildings. While the proposed towers under both proposals will be	Despite the slight visual change brought by the Current S16 Planning Proposal, the impact on key visual elements at this VP, namely are the existing vegetations within the Kowloon	Slight

Location of VP	Distance and Direction from the Application Site:	Key Public Viewers Type	Visual Composition	Visual Obstruction	Visual Change	Resultant Overall Visual Impact
			The visual composition remains largely unchanged, as park's vegetation screens off the building mass in both proposals. While a minor increase in building height is noted in the Current S16 Planning Proposal when compared to the Approved DSP Proposal, this visual composition remains compatible with the surrounding development context, thus the effect on visual composition is considered as **slight**.	visible and will impinge upon this sky view, the additional impact caused by the minor height increase in the Current S16 Planning Proposal would be minor. Therefore, the impact of visual obstruction to the established VP is **slight**.	Walled City Park in the foreground and the background buildings and a partially obstructed sky view, is very minor when compared to the Approved DSP Proposal. Thus, the magnitude of visual change is considered as **slight**.	
VP 4: Future GIC Complex of KC-017 (near the	About 380m to the north-west of the Application Site	Traveller / Recreation	As shown in **Figure 5.4**, the visual composition of this VP is framed by existing trees at the entrance of Carpenter Road Park on the left and	The existing sky view is already partially obstructed by the existing medium-to- high rise buildings in Kowloon City	Despite the slight visual change brought by the Current S16 Planning Proposal, the impact on key visual elements, namely the existing	Slight

Location of VP	**Distance and Direction from the Application Site:**	**Key Public Viewers Type**	**Visual Composition**	**Visual Obstruction**	**Visual Change**	**Resultant Overall Visual Impact**
existing entrance of Carpenter Road Park)			low-rise buildings (i.e. the existing Lok Sin Tong Transitional Housing and a few existing tenement buildings) on the right. The background consists of medium-to-high rise buildings that partially obstruct the sky view. When compared to the Approved DSP Proposal, the Current S16 Planning Proposal incorporates a minor increase in building height, the overall visual composition remains compatible with the scale of the surrounding development context, thus the effect on visual composition is considered as **slight**.	(i.e. Le Billionaire, Billionaire Royale and AVA 55). The visual openness will only result in minor additional obstruction when compared with the Approved DSP Proposal. Therefore, the impact of visual obstruction to the established VP is **slight**.	trees, buildings and the partially obstructed sky view, is very minor when compared to the Approved DSP Proposal. Thus, the magnitude of visual change from this VP is appraised as **slight**.	

Location of VP	**Distance and Direction from the Application Site:**	**Key Public Viewers Type**	**Visual Composition**	**Visual Obstruction**	**Visual Change**	**Resultant Overall Visual Impact**
VP 5: Olympic Avenue	About 370m to the south-west of the Application Site	Traveller	As shown in **Figure 5.5**, the visual composition of this VP captures a network of roads and flyovers in the foreground and a sky view partially obstructed by various existing high-rise single-block buildings. The building mass under both proposals will be visible, but it will be partially screened off by the road network in the foreground. The incremental change induced by the S16 Proposal is limited to a minor increase in building height, which is compatible with the	The visual openness to the sky is already partially blocked by the existing roads, flyovers and buildings. While both proposals will result in further obstruction of the sky view, the additional reduction in visual openness and permeability caused by the minor increase in building height under the Current S16 Planning Proposal is considered minor when compared to the Approved DSP. Therefore, the impact of visual obstruction to the established VP is **slight**.	The visual elements at this VP includes roads and flyovers in the foreground and a sky view partially obstructed by existing buildings. Although the proposed towers will be a visible element in this VP under both proposals, the minor increase in building height under the Current S16 Planning Proposal will only induce a slight change to the overall composition of visual elements and resources when compared to the Approved DSP Proposal. Thus, the	Slight

Location of VP	**Distance and Direction from the Application Site:**	**Key Public Viewers Type**	**Visual Composition**	**Visual Obstruction**	**Visual Change**	**Resultant Overall Visual Impact**
			surrounding development context. The effect on visual composition is considered as **slight**.		magnitude of visual change from this VP is appraised as **slight**.	
VP 6: Kai Tak Station Square	About 440m to the south-east of the Application Site	Traveller	As shown in **Figure 5.6**, the visual composition of this VP consists of the high-rise subsidized housing buildings (Kai Yan Court) and private residential buildings under construction within the KTDA, which results in a narrow sky view. As the building mass in both proposals has been largely screened off by the existing buildings of Kai Yan Court and the buildings under construction, the visual composition remains largely	The existing sky view at this VP is limited, being largely obstructed by existing buildings and those under construction in the KTDA. Since the proposed towers are largely obscured from view in both proposal, the minor height increase in the Current S16 Planning Proposal causes no change to the overall visual openness and permeability. Thus, the effect on visual obstruction is considered **negligible**.	The key visual elements at this VP consist of the continuous building mass within the KTDA and a limited sky view. Under both proposals, the towers will be largely blocked by the foreground buildings. Nevertheless, the incremental change to visual elements and resources induced by the Current S16 Planning Proposal is minor, resulting solely from the slight increase	Negligible

Location of VP	Distance and Direction from the Application Site:	Key Public Viewers Type	Visual Composition	Visual Obstruction	Visual Change	Resultant Overall Visual Impact
			the same. As such the degree of change on visual composition is considered **negligible**.		in building height when compared to the Approved DSP. Thus, the degree of visual change on visual elements and resources is **negligible** when compared to the OZP Compliant Proposal.	
VP 7: Tung Tau Estate	About 340m to the north-east of the Application Site	Traveller	As shown in **Figure 5.7**, the visual composition of this VP is characterised by existing medium-to- high rise buildings along both sides of Lok Sin Road in the foreground, with a sky view partially obstructed by two high-rise buildings (i.e. Le Billionnaire and Billionnaire Royale).	The existing sky view is partially blocked by the buildings along Lok Sin Road. Since the proposed towers of the Notional Design have been largely screened off under both proposals, the minor increase in building height under the Current S16 Planning Proposal causes no discernible change to the existing visual openness and	The key visual elements at this VP includes the continuous building mass along both sides of Lok Sin Road. The proposed residential towers of the Notional Design will be largely blocked by and blends in with adjacent residential developments to form a	Slight

Location of VP	Distance and Direction from the Application Site:	Key Public Viewers Type	Visual Composition	Visual Obstruction	Visual Change	Resultant Overall Visual Impact
			With building mass in both proposals being largely screen off by existing buildings, the minor increase in building height under the Current S16 Planning Proposal does not result in a noticeable visual difference when compared to the Approved DSP Proposal, thus the change in visual composition compared with the Approved DSP Proposal is **slight**.	permeability. Thus, the effect on visual obstruction is considered **slight**.	continues residential building mass under both proposals. Therefore, when compared to the Approved DSP, there is no material change to the composition of visual elements and resources. Thus, the magnitude of visual change is considered as **slight**.	
VP8: Quarry Bay Park (Strategic Viewing Point)	About 4.3km to the southeast of the Scheme, on the opposite	Recreation	As shown in **Figure 5.8**, visual composition of this viewpoint is characterised by the existing high-rise and high-density development in Kwun Tong, Kowloon Bay	Under both proposals, the mountain ridgeline and the 20% building-free zone remain entirely unobstructed. Furthermore, strategic views towards Victoria Harbour and	The key visual elements at this VP comprises the view of the Victoria Harbour towards the Kowloon Peninsula with	Negligible

Location of VP	Distance and Direction from the Application Site:	Key Public Viewers Type	Visual Composition	Visual Obstruction	Visual Change	Resultant Overall Visual Impact
	side of the harbour		and KTDA, featuring the Victoria Harbour and the continuous ridgelines extending from Beacon Hill to the Lion Rock and Kowloon Peak as backdrop. From this VP, the substantial building mass of the buildings in KTDA at the forefront has almost entirely shields the Application Site from view. Only a very limited portion of the Notional Design is visible under both proposals, and the change in visual composition between the two scenarios is therefore considered **negligible.**	the open sky are preserved and unaffected. As such, the Current S16 Planning Proposal would have **negligible** impact on visual obstruction and the overall visual openness and permeability from this VP remain unchanged.	open sky view and the ridgeline as backdrop. Since both proposals would not interrupt the 20% building-free zone or the ridgeline, ensuring that the abovementioned key visual elements remain unaffected. As such, the effect on the overall visual change is considered **negligible**.	

6 EVALUATION OF OVERALL VISUAL IMPACT

6.1 This VIA is submitted to evaluate the degree of visual impacts on key public viewers from major public VPs arise by the subject S16 Planning Application. The notional design of the Approved DSP Proposal approved by CE in C in September 2020 is adopted as the baseline visual condition to access the potential impact arise by the Current S16 Planning Proposal.

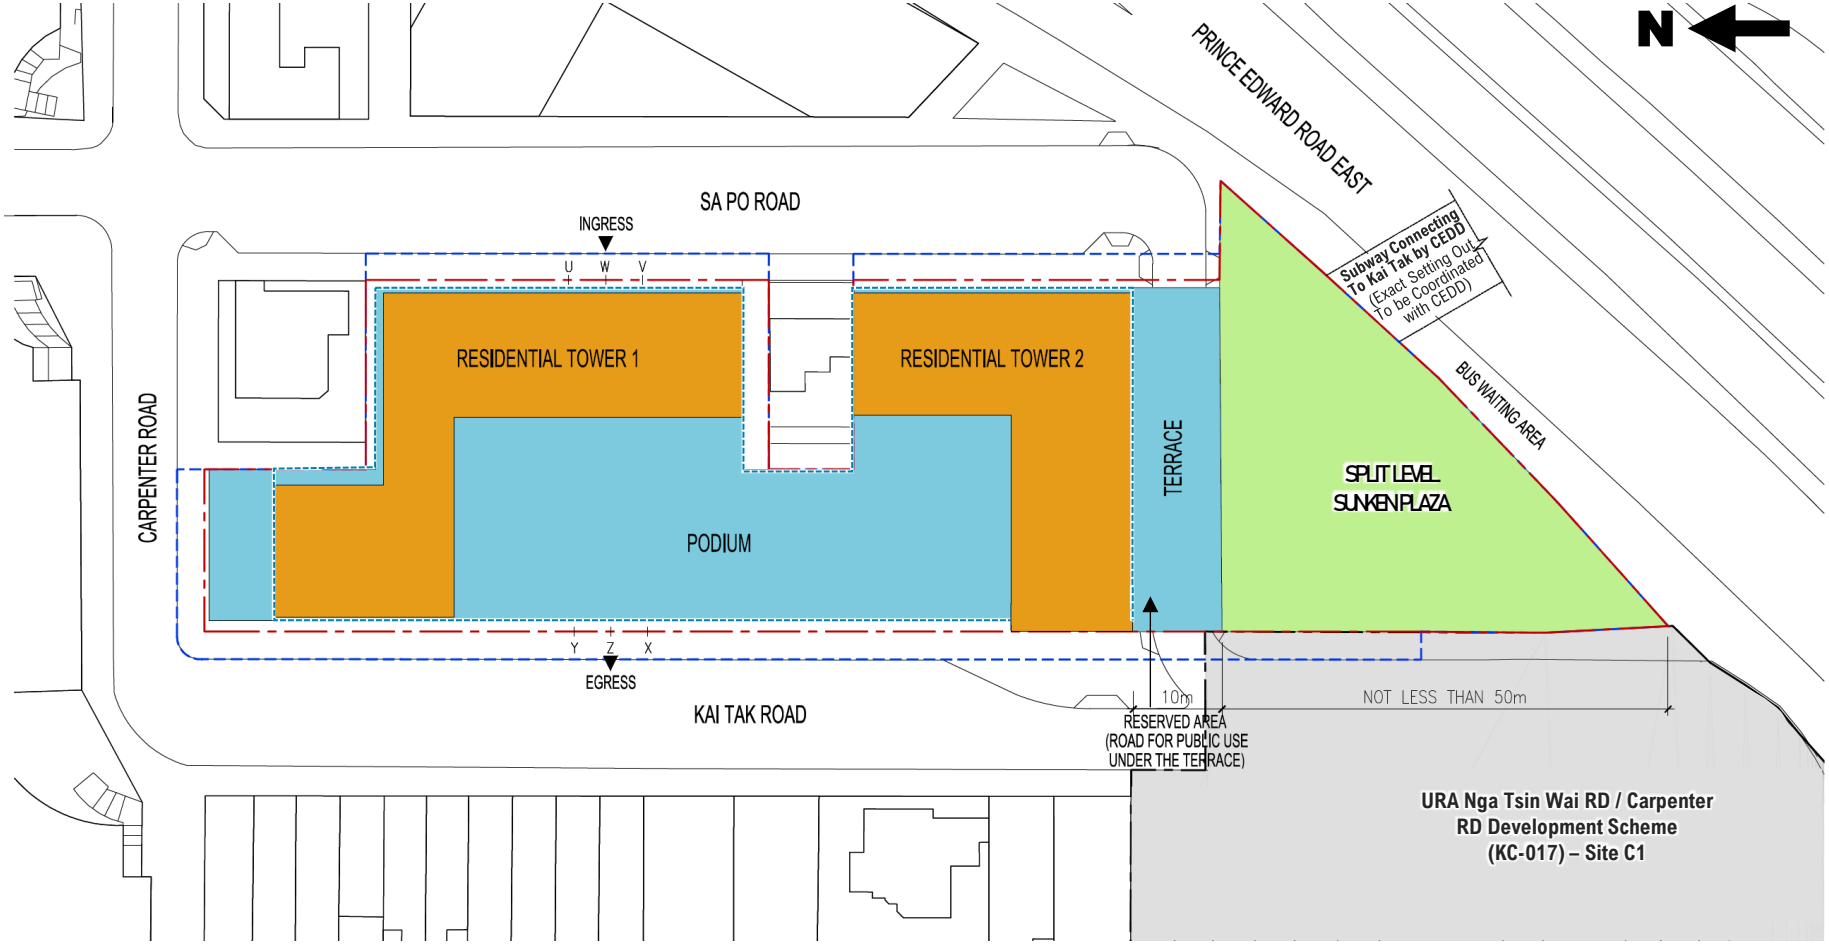
6.2 **Table 6.1** below summarizes the visual sensitivity and impact of the selected VPs.

Table 6.1 – Summary of Visual Impacts

Viewing Points	Visual Sensitivity	Resultant Overall Visual Impact
VP 1: Prince Edward Road East Bus Stop	High	Negligible
VP 2: Kai Tak Road	Medium	Negligible
VP 3: Kowloon Walled City Park	High	Slight
VP 4: Future GIC Complex of KC-017 (near the existing entrance of Carpenter Road Park)	Medium	Slight
VP 5: Olympic Avenue	Low	Slight
VP 6: Kai Tak Station Square	Low	Negligible
VP 7: Tung Tau Estate	Medium	Slight
VP 8: Quarry Bay Park (Strategic VP (SPV4))	High	Negligible

6.3 By comparing the views to the Approved DSP Proposal and the Current S16 Planning Proposal from the 8 selected VPs (7 local VPs and 1 SVP), the subject S16 Planning Application will have negligible to slight visual impacts across all assessed VPs. The anticipated changes in building mass will be limited, as the total PR remains unchanged at 9.0. The proposed minor increase in building height from 120mPD to 140mPD will only result in minor magnitude of visual change, as the Current S16 Planning Proposal generally blends in with the existing urbanscape.

6.4 In conclusion, it is anticipated that the subject S16 Planning Application would unlikely induce significant adverse visual impacts to the surroundings.



Remarks:
This S16 Planning Application is a "non-scheme-based" submission. This notional design layout is solely for illustration purpose and for conducting necessary technical assessments.

Replacement pages of the Planning Statement

EXECUTIVE SUMMARY

This Planning Application is submitted by the Urban Renewal Authority (URA) to the Town Planning Board (TPB) pursuant to Section 16 of the Town Planning Ordinance (Cap. 131), for minor relaxation of maximum domestic plot ratio (DPR) and building height restriction (BHR) for URA Kai Tak Road / Sa Po Road Development Scheme (KC-015).

The Application Site is located in Kowloon City district and is zoned "Residential (Group A)" ("R(A)") on the approved URA Kai Tak Road / Sa Po Road Development Scheme Plan No. S/K10/URA1/2 (the Approved DSP). It is subject to a maximum DPR of 7.5 and total plot ratio (PR) of 9.0, with BHR of 120mPD.

With an aim to enhance development flexibility, facilitate the adoption of the Modular Integrated Construction (MiC) method, and accommodate an above-ground carpark design, this S16 Planning Application seeks TPB's approval for a minor relaxation of DPR from 7.5 to 8.0 (with total permissible PR remains the same as 9.0) and BHR from 120mPD to 140mPD.

The proposed increase in BHR is primarily driven by two factors:
(i) an increase of about 11m for MiC; and
(ii) an increase of about 9m for above-ground carpark subject to detailed design.

Should MiC not be adopted by practisers in the implementation of the future development, the minor relaxation of BHR to 129mPD (i.e. increase of 9m) would still be adopted for the above-ground carpark design.

This S16 Planning Application is a "non-scheme-based" submission. The notional design and indicative development parameters provided are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

The main justification in support of the S16 Planning Application are listed as follows:

- In line with the Government's directives to promote wider use of MiC in development projects;
- Deliver environmental and social planning gains through adoption of MiC;
- Facilitate delivery of committed planning gains and accommodate site constraints;
- Provide additional urban design merits to the surrounding neighbourhood;
- In line with the Government's initiatives of facilitating aboveground carpark design;
- Enhance flexibility for residential and commercial land uses allocation in response to market needs;
- Maintain development flexibility and project's implementability;
- Opportunity has been taken to increase housing supply by slight adjustment of permissible domestic plot ratio;
- Compatible with existing and planned surrounding context;
- Retain previously committed planning gains; and
- No Insurmountable technical impacts anticipated.

In light of the justifications presented in this planning statement, the TPB is respectfully requested to give favourable consideration to the application.

行政摘要

(聲明：此中文譯本僅供參考，如中文譯本和英文原文有歧異時，應以英文原文為準。)

是項規劃申請由市區重建局（市建局）向城市規劃委員會（城規會）提交，旨在根據《城市規劃條例》（第 131 章）第 16 條就市建局啟德道/沙浦道發展計劃（KC-015 / 申請地點）申請略為放寬最高住用地積比率及建築物高度限制(本規劃申請)。

申請地點位於九龍城區，在已核准的《市建局啟德道／沙埔道發展計劃圖則編號 S/K10/URA1/2》（「已核准發展計劃圖」）上劃為「住宅（甲類）」地帶。該地點現時受最高住用地積比率 7.5 倍及總地積比率 9.0 倍的限制，而建築物高度限制則為主水平基準上 120 米。

為增加發展彈性以應對市場需求，並採納「組裝合成」建築法（MiC）及地面停車場的設計，本規劃申請向城規會申請規劃許可，將最高住用地積比率 7.5 倍略為放寬至 8.0 倍（最高總地積比率維持在 9.0 倍），並將建築物高度限制由主水平基準以上 120 米略為放寬至 140 米。

擬議略為放寬建築物高度限制主要基於兩個因素：
(i) 為採用「組裝合成」建築法而增加約 11 米；及
(ii) 因應地面停車場設計而增加約 9 米（需視乎詳細設計而定）。
即使發展項目最終不採用「組裝合成」建築法，為容納地面停車場設計，建築物高度限制仍放寬至主水平基準上 129 米（即增加地面停車場所需高度）。

本規劃申請屬「非方案主導」(“non-scheme-based”) 性質。本申請所提供的初步概念設計及發展參數僅供參考及用於進行必要的技術評估。除任何施加於規劃許可的相關附帶條件外，未來項目的發展設計將不受本申請所提交的初步概念設計所限制。

以下為支持本規劃申請的主要理據：

- 配合政府推動在發展項目中更廣泛使用「組裝合成」建築法；
- 透過採用「組裝合成」建築法以帶來環境與社會規劃增益；
- 促進落實規劃裨益並克服地盤限制；
- 為周邊社區增添額外城市設計效益；
- 配合政府推動及便利設置的地面停車場；
- 提高住宅及商業用途分配的彈性以回應市場需求；
- 保持設計彈性及項目可實施性；
- 輕微調整最高住用地積比率以增加房屋供應；
- 與周邊現有及已規劃的環境互相協調；
- 保留已承諾的規劃裨益；及
- 不會產生無法克服的技術問題。

基於以上的發展理據，現懇請城規會對本規劃申請予以贊同。

1. INTRODUCTION

1.1 This planning application is submitted by the Urban Renewal Authority (URA) to the Town Planning Board (TPB) pursuant to Section 16 of the Town Planning Ordinance (Cap. 131) (S16 Planning Application), for minor relaxation of maximum domestic plot ratio (DPR) and building height restriction (BHR) for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015/the Scheme). The application site of the subject S16 Planning Application comprises only the area zoned "Residential (Group A)" ("R(A)") within the Scheme boundary, excluding the adjoining area shown as "Road" on approved URA Kai Tak Road / Sa Po Road Development Scheme Plan No. S/K10/URA1/2 (the Application Site) (**Figure 1.1** refers). The subject S16 Planning Application is a "non-scheme-based" submission, the design of the future development will not be bounded by the notional design submitted herein.

1.2 The Scheme was commenced on 22 February 2019 by way of a development scheme under Section 25 of the Urban Renewal Authority Ordinance (URAO). On the same day, the URA submitted the draft Kai Tak Road / Sa Po Road Development Scheme Plan (DSP) to the TPB, which was subsequently approved by the Chief Executive in Council (CE in C) on 29 September 2020. The approved URA Kai Tak Road / Sa Po Road Development Scheme Plan No. S/K10/URA1/2 (the Approved DSP) was published on 9 October 2020.

1.3 With an aim to enhance development flexibility to meet market needs, adopt Modular Integrated Construction (MiC) method and above-ground (AG) carpark design, the URA intends to seek Town Planning Board (TPB)'s approval on **minor relaxation of domestic plot ratio (DPR) restriction from 7.5 to 8.0 while keeping total plot ratio (PR) of 9.0 unchanged, and minor relaxation of building height restrictions (BHR) from 120mPD to 140mPD** for the Application Site in accordance to Section 16 of the Town Planning Ordinance (S16 Planning Application).

1.4 The subject S16 Planning Application is a **"non-scheme-based"** submission and the notional design and indicative development parameters provided are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

2.3.5 To the further south of the Application Site across Prince Edward Road East is the KTDA, which features a mix of community, housing, business, tourism and infrastructural uses. The KTDA is under active construction, with major developments including the Kai Tak Sports Park, shopping malls such as Airside and the Twins and various public and private residential developments completed and have been actively in use.

2.4 Policy Context

Modular Integrated Construction (MiC) & Joint Practice Note No. 8 (JPN No.8)

2.4.1 MiC is a construction method where integrated modules are prefabricated in a factory and then transported to the site for installation. This approach enhances quality control, minimizes disruption to the surrounding community, simplifies the construction process, and reduces waste.

2.4.2 The "Enhanced Facilitation Measures for Buildings Adopting MiC" under JPN No. 8 was promulgated by the Government in 2022 with an aim to to promote wider adoption of MiC in new private buildings by providing incentives. According to JPN No. 8, MiC involves thickened double slabs between MiC modules under current technology, resulting in an increase in storey height of MiC floor and hence in the overall BH of the building. To promote the adoption of MiC, 10% of the MiC floor area of a new building may be disregarded from GFA calculation, and favourable consideration may be given by the TPB for an increase of BH up to 4% of the total storey height of MiC floors.

Enhanced GFA Exemption Arrangements for Above-ground Carparks

2.4.3 As announced in the Policy Address 2025, the Government has committed to sustain efforts to improve the efficiency of land production and lower construction costs through initiating the enhanced GFA exemption arrangements for carparks in developments projects. In this connection, the new Practice Note for Authorized Persons, Registered Structural Engineers and Registered Geotechnical Engineers (PNAP) APP-2 was published in November 2025, which allows for full GFA exemption for up to two levels of above-ground carparks for both private and public car parks.

Table 3.1 Comparison of Indicative Development Parameters of the Approved DSP and the Current S16 Planning Proposal

Development Parameters	Approved DSP Proposal [A]	Current S16 Planning Proposal [B]	Difference [B]-[A] (% change)
Site Area(1) - Application Site Area (for PR Calculation) (m^2)	About 5,307	About 5,307	No Change

No. of Flats	About 930(5)(6)	About 992(6)	+62 (+6.7%)(5)
Anticipated Population (7)	About 2325(5)	About 2480	+155(+6.7%)(5)
Site Coverage (8)	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100% Non-domestic portion above 15m: Not more than 65%	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100%(9) Non-domestic portion above 15m: Not more than 65%	No change
Ancillary Car Parking and L/UL Spaces - Private Car Parking Spaces - Motorcycle Parking Spaces - L/UL Bays	 120(10) 14(10) 11(10)	 106(11) 13(11) 9(11)	 -14 (-11.7%) -1 (-7.1%) -2 (-18.2%)
PVP for Private Cars	300	217(12)	-83 (-27.7%)
Local Open Space (m^2) (13)	About 2251	About 2480	+229 (+10.2%)

Remarks:

(1) Based on the net site area under the Land Grant, subject to agreement with LandsD. For reference, the net site area under the Approved DSP was about 5,352 sq.m., the corresponding total GFA was about 48,168 sq.m. and domestic GFA was about 40,140 sq.m.

(2) Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.

(3) The domestic and non-domestic PR/GFA are for illustrative purpose only. To allow flexibility and optimum use of development potential, development at the Application Site is subject to a maximum domestic PR and total PR. The actual domestic and non-domestic PRs and GFAs would be worked out at detailed design stage.

(4) GIC to be exempted from GFA calculation under the Approved DSP.

(5) For a like-to-like analysis, an average flat size of about 42.8 sq.m. under the Current S16 Planning Proposal has been applied to both the approved DSP and current S16 scenarios in the comparison table to show the net increase in the number of flats and population. For reference, the notional design for the Approved DSP for KC-015 approved by CE in C in Sep 2020 had adopted an average flat size of about 49.6 sq.m. with about 810 no. of flats and an estimated population of about 1940.

(6) The actual no. of flats would be worked out at detailed design stage.

(7) Based on Population Census 2021, the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(8) Assumed in accordance with the First Schedule of Building (Planning) Regulation that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.

(9) For reference, the podium below 15m will not extend towards the sunken plaza of about 1000 sq.m. (i.e. equivalent to about 18.84% of the Application Site area.)

(10) Refers to the car parking provision submitted under the TIA for the Approved DSP.

(11) Based on the car parking requirements stipulated under Land Grant.

(12) For details, please refer to Para. 3.2.1 of this planning statement.

(13) Private open space for future residents will be provided in accordance with HKPSG requirements of 1 sq.m. per person.

3.2 Retention of All Key Planning Gains of the Approved DSP Proposal

3.2.1 The current S16 Planning Proposal will retain all the following key planning gains of the Approved DSP Proposal, including:.

- Provision of a split-level sunken plaza of about 1,000sq.m., which connects with the future subway (to be constructed by CEDD) linking KTDA and its Underground Shopping Street (USS), to create a nodal point to connect this part of Kowloon City District with KTDA for enhancing the area's connectivity and walkability. The sunken plaza will be opened for public use and will incorporate retail components, sitting area and event space for place-making opportunities to enrich users' experience, as well as providing a 50m setback of towers from Prince Edward Road East to enhance wind flow penetration;

- Replanning and converting the existing portion of Sa Po Road within the Scheme to optimize the configuration of the sunken plaza, provide solution space for bus queuing at the pavement of Prince Edward Road East and enhanced pedestrian circulation;

- Provide not less than 800 sq.m. of GFA for GIC uses to meet the

community needs; and

- Provide PVP to address local parking demand. The URA has submitted a Technical Note on Public Vehicle Park for KC-015 dated April 2025 to Transport Department (TD) to review the local parking demand in the area. The Technical Note proposed minor reduction of PVP provision from 300 nos. under the Approved DSP to 217 nos . to reflect an updated estimate of local parking demand. The Note has obtained no in-principle objection from TD (refer to Section 2.4 and Appendix B of the Traffic Impact Assessment (TIA) report provide in **Appendix A** for details) and no in-principle objection from Kowloon City District Council (KCDC) after consultation. As such, the current S16 Planning Proposal adopts the reduced numbers of PVP provision (i.e. 217 nos. of PVP for private cars).

3.3 Access, Parking and Servicing Facilities

3.3.1 While the proposed vehicular access points located at Sa Po Road and Kai Tak Road is the same as that proposed under the Approved DSP, the access arrangement under the subject S16 Planning Proposal has been refined to provide one ingress at Sa Po Road and one egress at Kai Tak Road for all types of vehicles to enhance the overall efficiency and smooth operation of the car park.

3.3.2 The proposed car parking and internal transport provision for the Current S16 Planning Proposal is summarised in **Table 3.2**. For details, please refer to the Traffic Impact Assessment (TIA) report provided in **Appendix A**.

Table 3.2 Proposed Car Parking and Internal Transport Provision

Facilities	Proposed Total Provision (1)(2)
Private Car Parking Spaces	106 (Including 2 accessible parking spaces)
Motorcycle Parking Spaces	13
L/UL Bays	HGV: 4 LGV: 5(3)

Remarks:

(1) For the detailed breakdown of the provisions for the residential, retail and GIC uses, please refer to the TIA report provided in Appendix A.

(2) Based on the car parking requirements stipulated under Land Grant.

(3) 1 no. of LGV L/UL space will be shared with the proposed GIC uses.

3.4 Above-ground Carpark Provision

3.4.1 The latest notional design of the S16 Planning Proposal has made reference to the PNAP APP-2 published in November 2025 to provide above-ground carpark. The PNAP APP-2 permits full GFA exemption for up to two levels of above-ground public and private carparks. Compared with the notional design for the Approved DSP of which all car parking

spaces are located within a 5-storey basement carpark, the subject S16 Planning Proposal proposes to reduce the basement car park from 5 storeys to 2 storeys; with the remaining portion of car parking spaces (including public and ancillary carparks) to be located in 4 storeys of above-ground levels. Retail provision and L/UL bay provision are located at ground floor, resulting in a 5-storey podium.

3.4.2 The design has obtained no in-principle objection from Buildings Department (BD) for full exemption of the above-ground carpark in view of the site constraints. An approved GBP with the 5-storey podium was obtained in February 2026 (**Attachment 1** refers). Details of the carparking provision and layout will be worked out at detailed design stage.

3.5 Implementation Programme

3.5.1 Subsequent to the approval of the DSP, the URA has completed land acquisition and is actively processing with the land grant application. Site clearance and demolition works were completed in 2023 and 2024 respectively and the land grant for the Approved DSP was executed in March 2026. An application to modify the land grant to reflect the proposals in this S16 Planning Application will be submitted upon obtaining approval from TPB.

3.5.2 The URA will continue with the detailed design and go through the required submission/ procedures for implementation of Scheme. The tentative completion year is anticipated by 2030/31.

4. PLANNING MERITS AND JUSTIFICATIONS

4.1 In line with the Government's directives to promote wider use of MiC in development projects

4.1.1 In response to the Government's directives to promote wider use of MiC in Hong Kong to enhance productivity of the construction industry, initiatives have been taken to review the planning and design of the Scheme for adopting MiC construction method.

4.1.2 Under current technology, double slabs between MiC modules are required and typically adopted by current market practice. The floor-to-floor height is required to increase for about 0.15m to accommodate the structural slab thickness. To physically absorb this cumulative thickness along with the 10% GFA exemption for MiC floor areas allowed under JPN No. 8, a building height increase of about 11m (i.e. about 2 additional residential floors under the notional design) is technically required to facilitate adoption of MiC, delivery of the committed planning gains and accommodate site constraints (elaborated in **para. 4.3** below) and further providing urban design merits (elaborated in **para. 4.4** below).

4.2 Deliver environmental and social planning gains through adoption of MiC

4.2.1 The subject S16 Planning Application proactively seeks to adopt the MiC construction method for the Scheme to optimize environmental and social planning gains, which include reducing construction waste to enhance overall environmental sustainability, mitigating on-site risks to improve site safety, and shortening construction timeline to expedite project delivery. Furthermore, the MiC method simplifies the construction process and ensures strict quality control, and shifting the primary fabrication works to off-site manufacturing facilities could also minimize localized noise and dust, thereby minimizing disruption to the surrounding community.

4.3 Facilitate delivery of committed planning gains and accommodate site constraints

4.3.1 The proposed increase of 11m in building height for MiC is technically necessary solution to facilitate the adoption of MiC while delivering the committed planning gains and to accommodate site constraints. The Project has committed to provide a 1,000 sq.m. sunken plaza and a provision of 50m tower setback from Prince Edward Road East. These spatial commitments can enhance wind penetration and visual comfort as well as serving as noise buffer of the area. To facilitate the delivery of these planning gains, it would inevitably constraint the horizontal plane for building mass and layout disposition, and thus the proposed 11m

increase in building height is essential to accommodate the required MiC floor area vertically.

4.3.2 In addition, the Application Site is interspersed by two existing buildings, namely the High Place and Carlson Court along Sa Po Road. This results in an irregular site configuration, which constraints the flexibility and spatial efficiency of the horizontal building layout. The proposed 11m increase in building height directly addresses this physical constraint by allowing the permissible development parameters to be distributed vertically and enable the adoption of a more regular tower footprint that enhances the building's architectural form and fits harmoniously within the surrounding urban fabric.

4.4 Provide additional urban design merits to the surrounding neighbourhood

4.4.1 The proposed minor relaxation of BHR provides the design flexibility required to deliver additional urban design merits to the surrounding neighbourhood when compared to the notional design of the Approved DSP. Specifically, the proposed 11m building height increase for MiC also enables the Scheme to reduce the number of proposed residential towers from 3 to 2, which facilitates a much wider building separation between residential towers and enhances visual and spatial comfort for future residents and the surrounding neighbourhood. By strategically repositioning the two towers away from Kai Tak Road, it could open up the views of the neighbouring developments (e.g. the Carlson Court, AVA 55 and existing developments along Kai Tak Road), enhancing visual permeability and comfort of the surrounding area.

4.4.2 Furthermore, the reduction to 2 residential towers could also optimize design efficiency by enabling more efficient and shared use of various ancillary facilities such as lifts, staircases, and E&M facilities etc.

4.5 In line with the Government's initiatives of facilitating above-ground carpark design

4.5.1 With an aim to shorten construction time, lower construction costs and lessen site disruption and impacts to the surrounding environment, the subject S16 Planning Application proposed to reduce the basement car park to two storeys and to relocate a portion of the car parking spaces (including public and ancillary carparks) to above-ground levels. Such design refinement is also a response to the Government's initiative to facilitate the provision of above-ground carpark in development projects as promulgated in PNAP APP-2 published in November 2025, which allows full GFA exemption for up to two levels of aboveground carparks for both private and public car parks.

4.5.2 Since the relocation of underground carparks to above-ground levels will inevitably be constrained by the podium footprint and other uses that have already been planned for above-ground provision (e.g. retail, GIC, E&M, internal driveway area etc.), 5 levels of above-ground storey is

required to accommodate the required public and ancillary carparking spaces, L/UL bays and other internal transport provisions, resulting in a building height increase of about 9m (i.e. about 2 podium storeys). The proposed increase in BHR from 120mPD to 140mPD is necessary to allow sufficient vertical "headroom" to accommodate the above-ground carparks.

4.6 Enhance flexibility for residential and commercial land uses allocation in response to market needs

4.6.1 In view of the high vacancy rates and ample supply of commercial properties contrasted with the prevailing housing demand in recent years, the subject S16 Planning Application proposes to increase DPR from 7.5 to 8.0, while keeping the maximum total PR at 9.0. This minor relaxation could enhance the flexibility to optimise the mix of residential and commercial GFAs and potentially enable an increase in housing supply, while without increasing the overall development intensity of the Scheme.

4.7 Maintain development flexibility and project's implementability

4.7.1 The Application Site is zoned "R(A)" in the approved DSP. There is no change of the zoning of the Application Site in the subject S16 Planning Application. Under the "R(A)" zoning in the approved DSP, the planning intention is to provide high-density residential development with provision of a sunken plaza and underground public vehicle park, while commercial uses always permitted on the lowest three floor of a building or in the purpose-designed non-residential portion of a building connecting to the sunken plaza. The R(A) zone also controls the maximum domestic PR, maximum total PR, and maximum BHR; while minor relaxation of such may be considered by the TPB.

4.7.2 The "R(A)" zone provides design flexibility of the development without control on the specific form and layout of the future development, which is considered necessary to facilitate project implementability to meet the market needs. The subject S16 Planning Application is a "non-scheme-based" submission, which tallies with the "R(A)" zone which controls mainly on the planning intention, uses and development parameters but not the specific building design.

4.7.3 Upon the subject S.16 planning approval, the Scheme will proceed with detailed design and subsequent GBP submissions for relevant government departments' approval, a concrete scheme layout can only be developed at the detailed design stage/ GBP submission stage for implementation.

4.8 Opportunity has been taken to increase housing supply by slight adjustment of permissible domestic plot ratio

4.8.1 The subject S16 Planning Application with minor relaxation of maximum permissible DPR from 7.5 to 8, is in line with the strategic housing policy

4.11.3 A Visual Impact Assessment (VIA) (**Appendix B** refers) has been conducted for the Current Indicative Proposal. Comparing with the Approved DSP Proposal, the anticipated changes in building mass will be limited, as the total PR remains unchanged at 9.0. The proposed minor increase in building height from 120mPD to 140mPD will only result in minor magnitude of visual change and no adverse visual impact is anticipated.

No Adverse Air Quality Impact

4.11.4 An Air Quality Impact Assessment (AQIA) has been included in the Environmental Assessment (**Appendix C** refers) and the findings concluded no insurmountable air quality impact are anticipated from the Current S16 Proposal.

No Adverse Noise Impact

4.11.5 A Noise Impact Assessment (NIA) to assess the potential noise impact and identify any necessary noise mitigation measures will be submitted to the EPD for approval in accordance with the Special Condition (S.C.) stipulated in the Land Grant executed in March 2026. No adverse noise impacts are anticipated from the Current S16 Proposal.

No Adverse Waste Management Impact

4.11.6 Assessment on the potential waste management impact has been included in the EA report (**Appendix C** refers) and the findings shows that with good site management and mitigation measures, no adverse waste management impact is anticipated.

No Adverse Land Contamination Impact

4.11.7 The land contamination works, as identified in the Remediation Report of Land Contamination Assessment dated June 2025, have been completed. Consequently, the S.C. related to Land Contamination Assessment was removed from the executed land grant in Mar 2026. No adverse land contamination impact is anticipated. For details, please refer to Land Contamination section provided in the EA report (**Appendix C** refers).

No Adverse Water Quality Impact

4.11.8 Assessment on the potential water quality impact has been included in the EA report (**Appendix C** refers) and the findings concluded that with good site management and mitigation measures, no adverse water quality impact is anticipated during both construction and operational phases.

No Adverse Water Supply Impact

5. CONCLUSION

5.1 The Application Site of the subject S16 Planning Application comprises only the area zoned "Residential (Group A)" ("R(A)") within the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) and is subject to a maximum DPR of 7.5 and total PR of 9.0, with BHR of 120mPD.

5.2 With an aim to enhance development flexibility, facilitate the adoption of the MiC construction method, and accommodate above-ground carpark design, this S16 Planning Application seeks TPB's approval for a minor relaxation of DPR from 7.5 to 8.0 and BHR from 120mPD to 140mPD.

5.3 The proposed increase in BHR is primarily driven by two factors:

(i) an increase of about 11m for MiC; and

(ii) an increase of about 9m for above-ground carpark subject to detailed design.

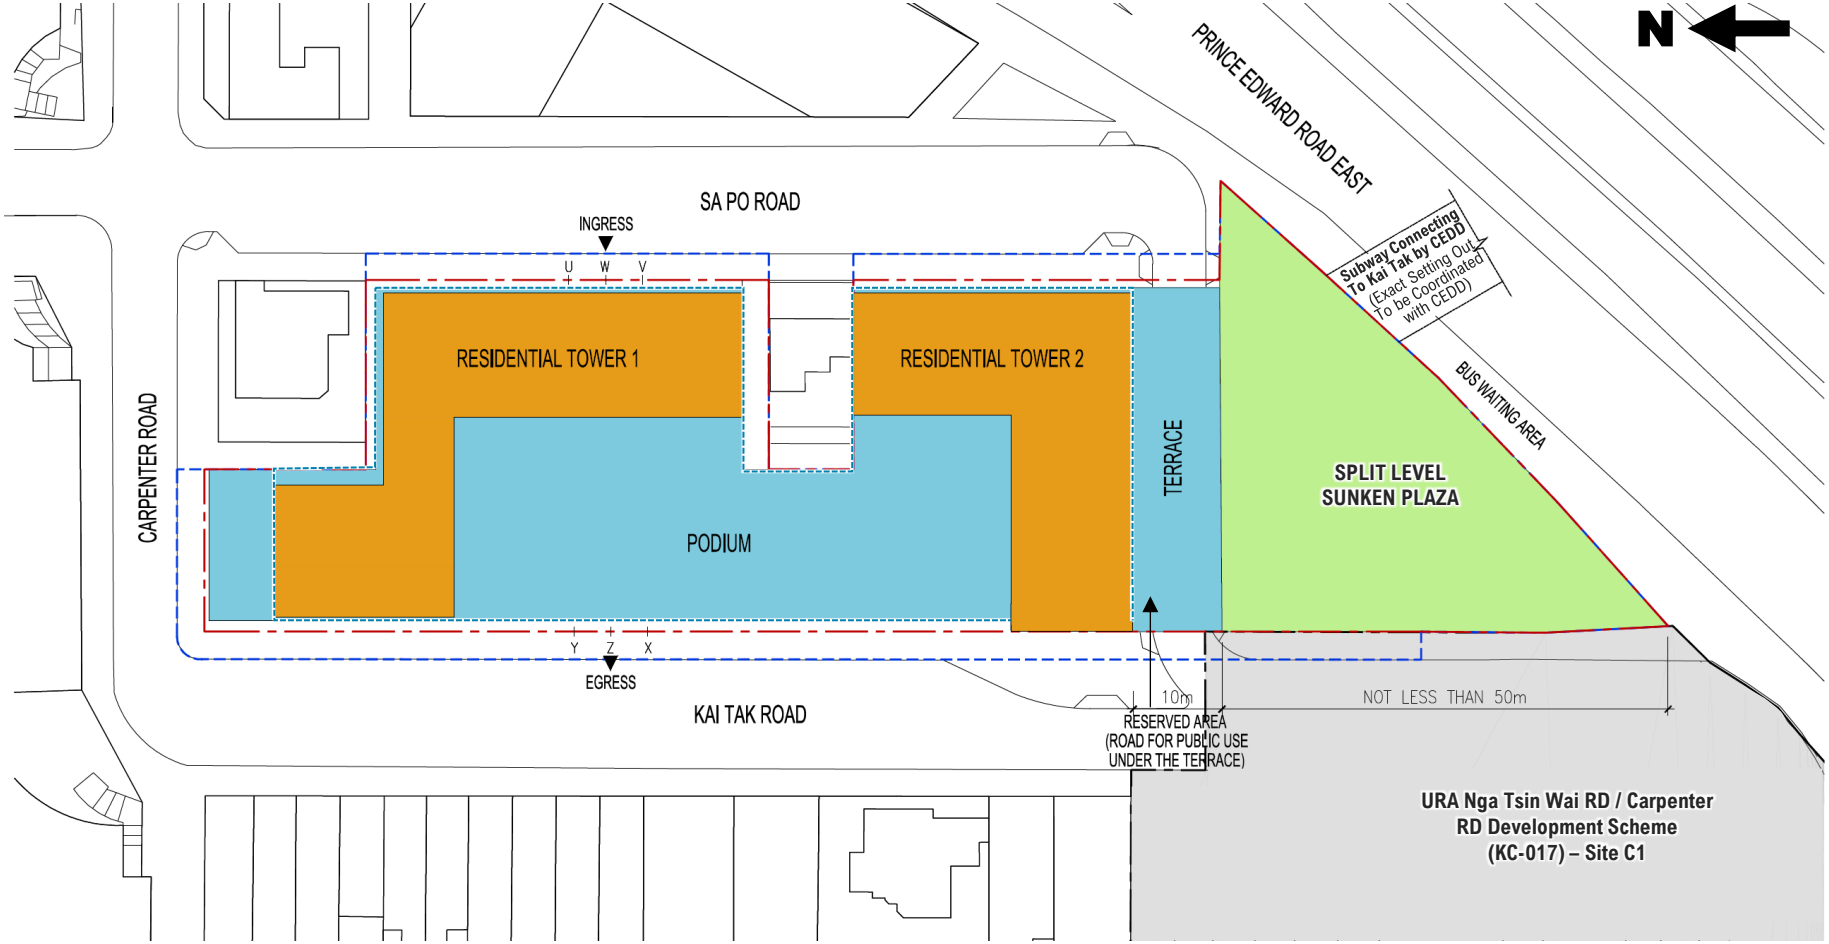
Should MiC not be adopted by practisers in the implementation of the future development, the minor relaxation of BHR to 129mPD would still be needed for the above-ground carpark design.

5.4 The subject S16 Planning Application is a "non-scheme-based" submission. The notional design and indicative development parameters provided are solely for illustration purpose and for conducting necessary technical assessments. Except for any planning condition(s) to be imposed, the design of the future development will not be bounded by the notional design submitted in the S16 Planning Application.

5.5 Relevant technical assessments have been conducted and the findings concluded that the current S16 Planning Proposal is technically feasible and no insurmountable problem is anticipated.

5.6 The subject S16 planning application is supported by the following development planning merits and justifications:

- In line with the Government's directives to promote wider use of MiC in development projects;
- Deliver environmental and social planning gains through adoption of MiC;
- Facilitate delivery of committed planning gains and accommodate site constraints;
- Provide additional urban design merits to the surrounding neighbourhood;
- In line with the Government's initiatives of facilitating aboveground carpark design;
- Enhance flexibility for residential and commercial land uses allocation in response to market needs;
- Maintain development flexibility and project's implementability;
- Opportunity has been taken to increase housing supply by slight adjustment of permissible domestic plot ratio;



Remarks:
This S16 Planning Application is a "non-scheme-based" submission. This notional design layout is solely for illustration purpose and for conducting necessary technical assessments.

	144 [Note 7] ..... m 米	☑About 約

Note 3: Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.
Note 4: Assumed in accordance with the First Schedule of B(P)R that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.
Note 5: For reference, the podium below 15m will not extend towards the sunken plaza of about 1000 sq.m. (i.e. equivalent to about 18.84% of the Application Site area).
Note 6: Including 31 residential storeys, 1 storey for clubhouse and 5 storeys of podium.
Note 7: Measured from mean site formation level of about -4 mPD.

Subject: [E2026080ED] RE: S.16 Planning Application (No. A/K10/281) - Proposed Minor Relaxation of Dom PR and BH Restrictions for KC-015

Dear Sir/Madame,

Reference is made to the captioned s.16 planning application submitted to the Town Planning Board (TPB) on 16 June 2026 and our subsequent Responses to Departmental Comments (R-to-C) submitted on 12 August 2026.

To address the comments from Drainage Services Department (DSD) received via the Kowloon District Planning Office, Planning Department (KDPO, PlanD) on 11 August 2026, we herewith provide the following supplementary information:

- Certified Page of the DIA Report: The Drainage Impact Assessment (DIA) report submitted on 16 June 2026 has been reviewed, signed, and certified by the Registered Professional Engineer (R.P.E.) in charge. The signed and certified cover page of the DIA report is herewith attached as **Attachment A**.
- DIA Calculation Excel Files: The Excel calculation files for the DIA assessment were submitted directly to DSD on 12 August 2026 for checking.

In addition, in response to the verbal comments from KDPO, PlanD received on 13 August 2026, we enclose herewith the replacement page of Page 6 of the Planning Statement as **Attachment B.**

Should you have any enquiry, please feel free to contact me at [redacted] or our Mr. Issac Ng at [redacted]

Many thanks

Regards
Simone Tang

Subject: [E2026080CN] S.16 Planning Application (No. A/K10/281) - Proposed Minor Relaxation of Dom PR and BH Restrictions for KC-015

Dear Sir/ Madam,

We refer to the captioned s.16 planning application submitted to the Town Planning Board (TPB) on 16 June 2026.

To address the departmental comments received via the Kowloon District Planning Office, Planning Department (KDPO, PlanD) in July and August 2026, we submit herewith the Responses to Departmental Comments table (**R to C Table**), together with the relevant replacement pages of the Environmental Assessment (**Appendix 1**) and replacement pages of the Visual Impact Assessment **(Appendix 2)** for TPB's consideration.

In addition, in response to the verbal comments from KDPO, PlanD, relevant replacement pages of the Planning Statement **(Appendix 3)** and replacement pages of the Application Form **(Appendix 4)** are also provided for TPB's considerations. Please note that the updated Notional Block Plan and Notional Section Plan (i.e. Figures 3.1 and 3.2 of the replacement pages of the Planning Statement provided in Appendix 3 of this R-to-C submission) will supersede the previous notional design plans included in all technical assessments submitted on 16 June 2026. This update will not affect the assessments/results of all previous submitted technical assessments.

The full R-to-C Submission Package (including the R-to-C table and all appendices) are available at below link:
[redacted]

In addition, the hard copy of the submission has been delivered to the TPB earlier today, attached please find the cover letter with TPB's stamp of receipt for your information.

Should you have any enquiry, please feel free to contact me at [redacted] or our Mr. Issac Ng at [redacted]

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
Concerns on potential traffic impact and public vehicle park (PVP) provision			
1.	Concerns on reduction in PVP provision and unassessed cumulative demand The Paragraph 7.9 of the ES of the approved DSP committed an underground public vehicle park of about 300 spaces to address a recognised local shortfall. The current application proposes to reduce the PVP provision to 217 spaces (a ~27.7% reduction), which is justified only by a narrow study area that fails to model the event-day demand of the upcoming Kai Tak Sports Park, notwithstanding the Scheme's role as a key gateway and connection. According to the Legislative Council Panel on Development Affairs meeting dated 28 April 2026 (LC Paper No. CB(1)405/2026(02) / minutes LC Paper No. CB(1)494/2026), and Kowloon City District Council Traffic and Transport Committee papers (2026), there was concerns about reduction of PVP would be inadequate for future demand once Kai Tak Sports Park event-day coach and visitor traffic is taken into account. When KC-015 and KC-017 are read together, area-wide public parking in eastern Kowloon City are being materially	Please noted that that the reduction of PVP provision from 300 nos. under the Approved DSP to 217 nos. has consulted Kowloon City District Council (KCDC) in May 2025 and KCDC had no objection to the proposal. The reduction of PVP provision was based on the updated parking demand and supply assessments outlined in the Technical Note on Public Vehicle Park for KC-015 (the Technical Note). The Technical Note confirmed that only 195 nos. of PVP parking spaces would be adequate to satisfy the local parking demand. Nevertheless, to adopt a conservative approach, 217 nos. of PVP car parking spaces (which includes 22 surplus spaces) are proposed in the current S16 Planning Proposal to address the parking demand estimate. The Technical Note was submitted to TD for comment, and received no in-principle objection from Transport Department (TD) in April 2025 . As discussed and agreed with TD, the study area of the Technical Note did not include the Kai Tak Development Area (KTDA), as the Kowloon City area and the KTDA are physically separated by a major road (namely Prince Edward Road East), while the Kai Tak Sports Park is more than 1km away from KC-015, it is considered highly improbable that visitors or coach traffic would park at KC-015 and then walk to the Kai Tak Sports Park. As such, the parking demand of the KTDA is considered technically irrelevant to the Scheme.	1

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	reduced as a major new demand generator comes online, TD's no-in-principle-objection on reduction of PVP could not address the aggregate effect per application. A revised cumulative parking demand-and-supply study should be provided for the Board's review.		
2.	Concerns on the impact of above-ground carpark on street vibrancy Paragraph 7.9 of the ES of the approved DSP tied the underground PVP to creating "a solution space and... pavement widening in the surrounding area." Relocating parking into a 5-storey above-ground podium removes that mechanism, with the loss of most acute at Carpenter Road frontage and the new private road dedicated to public use. Relocating underground carpark to aboveground would remove vitality from the streetscape.	Please be clarified that relocating a portion of the underground carpark to aboveground levels will not affect the provision of G/F retail shops and street frontage of the Scheme and the "private road for public use" will be retained under the subject S16 Planning Proposal. Under the notional design of the subject S16 Planning Proposal, the aboveground carpark is proposed on 1/F to 4/F of the podium floors which will not affect the G/F retail shops and street frontage of the Scheme, and thus the street vibrancy of the area could be maintained. Meanwhile, the Scheme will provide a split-level sunken plaza of about 1,000sq.m. which will incorporate retail components, sitting area and event space for place-making opportunities to further enhance vibrancy of the neighbourhood. Furthermore, the "private road for public use" under the Approved DSP has been retained. As demonstrated in the Notional Block Plan of the subject S16 Planning Proposal (Figure 3.1 of the Planning Statement refers), an area has been reserved to accommodate this private road for public use.	1,2

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
Concerns on potential visual impact			
3.	Enlarged podium bulk and a potentially misleading VP The podium increases from three to five storeys. At VP2, the podium dominates the view, yet the VIA provides no façade treatment for the enlarged podium and relies on wide-angle photomontages that understate the added mass at the pedestrian scale, which is misleading.	Please be clarified that the Visual Impact Assessment (VIA) submitted for the subject S16 Planning Application was prepared in accordance with the Town Planning Board Guidelines (TPB PG-No. 41A), under which façade treatments are not the visual impact consideration under the Guidelines. The detailed architectural design and façade treatments will be carefully considered and confirmed during subsequent detailed design stage. In accordance with the TPB PG-No.41A, the locations of all selected viewpoints in the VIA (including VP2) have been carefully selected and complied with TPB PG-No. 41A requirements to ensure an objective assessment of the building bulk and massing. The photomontages provided could effectively reflect a future notional building mass of the Scheme (including building mass of the podium) at pedestrian scale.	1
4.	Potential wall effect and the reduction in sunlight penetration Potential impact of the wide and high wall effect podium has been ignored. There is no image of visual impact on the streetscape, nor any indication of the impact on sunlight penetration to the streets and surrounding buildings resulting from the bulky podium and wall effect of the proposed higher towers.	Please note that a VIA has been conducted to assess the potential visual impact arising from the proposed increase of BHR from 120mPD to 140mPD based on the notional building bulk (including the podium) of the subject S16 Planning Proposal. The findings of the VIA shows that the minor relaxation of BHR will induce no adverse visual impact and the photomontage shows that the notional design of the podium is compatible with the surrounding environment with no anticipated wall effect. Meanwhile, detailed podium,	2

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
		streetscape, and micro-climate (such as sunlight penetration) design considerations, are detailed design matters that will be considered and accommodated as appropriate at detailed design stage subsequent to approval of the subject S16 Planning Application.	
5.	Concerns on compatibility with existing and planned surrounding context The potential "wall effect" will overwhelm the surrounding developments that are 80mPD and less.	Please be clarified that the proposed minor relaxation of BHR from 120mPD to 140mPD is highly compatible with the existing and planned surrounding planning context. It fits harmoniously within the established stepped building height profile of the area, which gradually descends from inland area where buildings across Carpenter Road, i.e. Billionaire Royale and Le Billionaire with building height of 170mPD & 145mPD respectively, down to the proposed 140mPD of the subject S.16 Planning Application, and then the Kai Tak area where buildings step down from 135mPD/125/115/100mPD at KTDA to 55mPD near the waterfront. The proposed building height is well fit in the stepping profile and thus potential "wall effect" is not anticipated. Besides, the Scheme will provide a split-level sunken plaza of about 1,000sq.m. , which creates a 40m buffer distance between residential towers and Prince Edward Road East, which will create visual and spatial comfort in the surrounding dense urban context. Furthermore, the VIA conducted for the subject S16 Planning Application has demonstrated that the proposed BHR of 140mPD is visually compatible with the local context, and no adverse visual impact anticipated.	2

Section 16 Planning Application for Proposed Minor Relaxation of Domestic Plot Ratio and Building Height Restrictions for the URA Kai Tak Road / Sa Po Road Development Scheme (KC-015) (Planning Application No. A/K10/281)

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
Concerns on retail connectivity			
6.	Retail element disconnect from the sunken plaza It is a stated objective of the DSP that "commercial space will be provided connecting to the sunken plaza to enable extension of vibrant retail activities from the underground shopping street (USS) of the Kai Tak Development Area (KTDA)" (ES Paragraph 7.5). The current notional scheme disconnects the retail element from this plaza which defeating the objective. This paradoxically reduces the retail's own attractiveness, which depends on the footfall from the plaza and USS. A binding approval condition requiring retail seamlessly connected to the sunken plaza should be required, notwithstanding the non-scheme-based nature of the submission.	Please be clarified that subject S16 notional design would not disconnect the retail element from the sunken plaza. The Scheme is strictly bounded by the statutory planning intention of the subject 'R(A)' zone that " is intended primarily for high-density residential developments with the provision of a sunken plaza and underground public vehicle park. Commercial uses are always permitted on the lowest three floors of a building or in the purpose-designed non-domestic portion of a building connecting to the sunken plaza.". It is the planning intention of the Scheme to provide commercial/retail uses connecting to the sunken plaza and to connect with KTDA via the USS to extend the vibrant retail activities of the wider area. As the planning intention of the subject R(A) zone is already statutory binding in nature, imposing an extra approval condition with similar purpose to enforce the provision of retail connection with the sunken plaza is considered not necessary.	1
Concerns on reduction of retail floor area			
7.	Unsubstantiated retail reduction and relocation commitments to Lung Shing operators The URA previously committed that affected local "character shops" in KC-015/KC-017 could relocate back ("回遷") into the projects to preserve the unique Chiu-Chow/Thai character and small-shop atmosphere of the "Lung	The subject S.16 planning application aims to provide flexibility in future design to increase the domestic PR up to 8.0, with total PR remains at 9.0. There is no restriction to the non-domestic PR to 1.0. There is still flexibility to provide more non-domestic PR for commercial/retail uses to meet the market needs if required. Besides, under the notional design of the subject S.16 planning application, the reduced non-domestic GFA would not	1

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	Shing" area. Reports indicate over 60% of these shops joined the relocation/return scheme, with most selecting KC-015 due to its earlier completion. Reducing KC-015's retail floor area directly undermines the return capacity the URA promised the community. The application should not be supported unless a full DFS report and a quantified retail GFA schedule (approved DSP vs. proposed) are provided.	affect the G/F retail shops, street frontages and street-level vibrancy, and thus will not undermine the return capacity for shops with Chiu-chow/ Thai characters that URA promised to the local community. URA has offered the "Special Arrangement for Preserving Local Character" (保留地區特色特別安排) (the "Special Arrangement") to provide priority leasing (優先租用) and concessionary rents (特惠租金) to the affected operators of the Scheme to facilitate eligible operators (e.g. affected G/F shop operators of the long-established local/Thai eateries and local organizations/ institutions serving the Chiu-Chow/Thai communities) in continuing their businesses within the district. For those operators who signed the memorandum with URA will be able to return to the completed development in future to lease the ground floor shops to continue their businesses. Furthermore, full Development Facilitation Services (DFS) report and quantified retail GFA schedule are detailed design and operational leasing matters that fall outside the scope of this S16 Planning Application that will be finalized during the detailed design stage subsequent to obtaining the subject S16 planning approval.	
Concerns on planning merits and development control accountability			
8.	Absence of net public planning and design gain to justify the relaxation DSP Notes Remark 8 and ES Paragraph 7.4 permit	Please be clarified that the subject S16 Planning Application is well supported by the following additional planning and design merits when compared with the Approved DSP Proposal:	1, 2

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	relaxation of development restrictions based on "individual planning and design merits." The merits advanced (MiC under JPN No. 8, above-ground carpark under PNAP APP-2, financial viability, marketability and housing supply) are predominantly proponent-side justification. The only arguable public design merit is lower permeability arising from the reduction from three to two towers. The application does not demonstrate a net planning gain exceeding the approved scheme. The justification of enhancing financial viability and increasing housing supply departures from the URA's statutory mandate to improve living environments and reduce density in congested urban areas.	• **Deliver Environmental and Social Gains through MiC Adoption**: The subject S16 Planning Application facilitate the adoption of MiC to the Scheme, which would optimize environmental and social benefits by reducing construction waste, enhancing site safety, shortening construction timelines, and shifting primary fabrication off-site to minimize localized noise and dust impacts on the neighborhood. • **In line with the Government's initiatives of facilitating above-ground carpark design and deliver design merits:** The subject S16 Planning Application facilitates reduction of basement car park to two storeys and relocate a portion of the carpark to above ground levels, which could minimize potential excavation risks and potential structural impacts on adjacent buildings. It is also a response to the Government's initiative to facilitate the provision of above-ground carpark in development projects as promulgated in PNAP APP-2. • **Increase housing supply to alleviate housing shortage:** The subject S16 Planning Application also facilitates minor relaxation of DPR from 7.5 to 8, which is in line with the strategic housing policy of increasing housing supply in Hong Kong. Based on the notional design for the subject S16 Planning Application, it is anticipated that the Scheme could provide about 992 nos. of residential units, which contributes to the housing supply for alleviating the problem of housing	

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
		shortage in Hong Kong.	
9.	Non-scheme-based submissions weakens accountability for public benefits The parameter uplifts become binding entitlements, while the public-benefit design elements revert to non-binding indicative status, to be resolved later with a joint-venture developer — noting that the 2024 tender attracted a single bid and was not awarded. This risks capture of the development upside while public gains remain unenforceable.	Please note that the Application Site is zoned "R(A)" in the approved DSP. There is no change of the zoning of the Application Site in the subject S16 Planning Application. Under the Schedule of Use of the subject "R(A)" zone under the DSP, residential development ("Flat" use), with commercial/ retail uses on the lowest three floors, are always permitted uses as of right. The "R(A)" zone only controls the maximum domestic plot ratio (DPR), maximum total plot ratio (PR), and maximum building height restriction (BHR), while minor relaxation of such may be considered by the Town Planning Board (TPB). The control under the "R(A)" zone provides the necessary design flexibility without control on the specific form and layout of the future development, which is considered necessary to facilitate project implementation. The non-scheme-based approach under the subject S16 Planning Application which seek minor relaxation of DPR to 8.0 (total PR remain unchanged as 9.0) and BHR to 140mPD, follows the same spirit as the control provided under the subject "R(A)' zone which provides the necessary design flexibility for project implementation during detailed design stage, while ensuring the future development remains strictly bounded by the maximum permissible parameters approved by TPB. The design flexibility allowed in the non-scheme-based approach enables the future development to respond dynamically to site-specific constraints	1

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
		and market needs during the detailed design stage. Upon the subject S.16 planning approval, the Scheme will proceed with detailed design and subsequent GBP submissions for relevant government departments' approval, a concrete scheme layout can only be developed at the detailed design stage/ GBP submission stage for implementation. Throughout the implementation process, the URA, as a statutory public body, will actively safeguard, enforce, and optimize the overall urban design quality and committed public gains.	
Concerns on potential air ventilation impacts			
10.	<u>Elimination of the east-west ventilation corridor without any updates to the Air Ventilation Assessment (AVA)</u> The original 2020 approval linked the permitted height increase to "slimmer building design and wider building gaps," and the previous AVA raised no adverse comments on the approved three-tower form (TPB Paper No. 10542, Paragraph 9.1.11 refers). The proposed two-tower scheme with an enlarged 5-storey podium eliminates the east-west ventilation corridor, yet the application provides no update to AVA and conflates "no adverse air quality impact" (a vehicular-emission assessment) with air ventilation and breathability, which is a distinct matter. Building height and podium bulk are	Please be clarified that as demonstrated in the AVA report of the 2020 approved DSP, which is subsequently incorporated in the ES of the Approved DSP, the Scheme shall provide the following air-ventilation-related good design features: • Provision of the split-level sunken plaza; • A 50m setback of domestic tower (at above 15m) from the intersection point of site boundary where Kai Tak Road and Prince Edward Road East meet); and • Provision of building design elements (e.g. building separation) in accordance with the Sustainable Building Design Guidelines (SBDG). As all air-ventilation-related good design features will be fully retained and incorporated into the subject S16 Planning Proposal, a fresh AVA is considered not necessary. Meanwhile, the subject S16 Planning	1

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	recognised dominant inhibitors of pedestrian-level airflow. A fresh AVA for the revised form should be required.	Proposal has maintained the following air ventilation measures to enhance the east-west air flow with with minor adjustments introduced: • Retain the 11m-wide gap between towers to facilitate penetration of the prevailing annual eastern wind; • Retain the provision of the split-level sunken plaza and 50m setback of towers from Prince Edward Road East to ensure penetration of the prevailing summer south-western wind. • The non-critical 13m-wide gap (flowing from Carpenter Road via the narrow strip between The High Place and the Application Site) has been omitted, as northern wind does not represent a major prevailing wind direction for the area (which is dominated by eastern wind annually and south-western wind in summer).	
11.	Apartment layout will enjoy less cross-ventilation The reduction in the number of towers from three to two means the layout of the apartments will enjoy less cross-ventilation. Apartments with windows facing a single direction experience single-sided ventilation, causing stagnant air, heat buildup, and high moisture, which leads to excessive dependence on air conditioning.	Please be clarified that detailed layout of individual residential units (including location of the windows) and micro-climate (including air ventilation performance within individual units) are detailed design matters that will be finalized at detailed design stage subsequent to approval of the subject S16 Planning Application.	2
Concerns on elements of notional design			
12.	Concern on Site Coverage	Please be clarified that the indicative site coverage for the subject Section 16 Planning Application has fully adhered to	2

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	The proposed site coverage substantially exceeds the guidelines.	the First Schedule of Building (Planning) Regulation on the site coverage requirement. As the subject site is a Class C site, the notional design is fully adhered to a Class C site with building height exceed 61m, which the site coverage is permitted up to 40% for the domestic portion, up to 65% for the non-domestic portion above 15m, and up to 100% for the non-domestic podium of 15m or below. The actual site coverage will be determined in detailed design stage.	
13.	Reduction in Public Realm and Open Space The proposed scheme results in the elimination of existing alleyways, public parks, recreation grounds and open spaces.	Please be clarified that the Scheme aims to rationalise land uses through replanning and restructuring to optimise the site's development potential. Through restructuring the underutilized back lanes and pocket-sized open spaces, the Scheme would introduce a split-level sunken plaza of about 1,000sq.m., that will be opened for public use and will provide retail components, sitting area and event space for place-making opportunities to enrich users' experience and at the same time enhance walkability and connectivity of the area. There is no large-scale public park nor recreation ground exists within the Scheme area, except a small sitting-out area next to Prince Edward Road East. Furthermore, the proposed development of the Subject S.16 planning application will also provide sufficient local open space in accordance with the HKPSG requirement of 1 sq.m. per person.	2

Table 3.1 Comparison of Indicative Development Parameters of the Approved DSP and the Current S16 Planning Proposal

Development Parameters	Approved DSP Proposal [A]	Current S16 Planning Proposal [B]	Difference [B]-[A] (% change)
Site Area(1) - Application Site Area (for PR Calculation) (m^2)	About 5,307	About 5,307	No Change
Maximum PR (3) - Total PR - Domestic PR	9.0 7.5	9.0 8.0(2)	No Change +0.5 (+6.7%)
Max GFA (1)(3) Total GFA (m^2) Domestic GFA (m^2)	About 47,763 About 39,803	About 47,763(2) About 42,456(2)	No Change +2,653 (+6.7%)
Max. BH (mPD)	120	140	+20 (+16.7%)
GIC Facilities(4) (m^2)	About 800	About 800	No Change
Sunken Plaza (m^2)	About 1000	About 1000	No Change
Under Notional Design			
No. of Residential Towers	3 towers	2 towers	-1 (-33.3%)
No. of Storeys - Domestic - Clubhouse - Podium - Basement	 29 storeys 1 storey 3 storeys 5 storeys	 31 storeys 1 storey 5 storeys 2 storeys	 +2 (+6.9%) No Change +2 (+66.7%) -3 (-60.0%)
Average Flat Size (m^2)	About 42.8(5)	About 42.8(13)	No Change(5)
No. of Flats	About 930(5)(6)	About 992(6)	+62 (+6.7%)(5)
Anticipated Population (7)	About 2325(5)	About 2480	+155(+6.7%)(5)
Site Coverage (8)	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100% Non-domestic portion above 15m: Not more than 65%	Domestic portion: Not more than 40% Non-domestic portion below 15m: Not more than 100%(9) Non-domestic portion above 15m: Not more than 65%	No change
Ancillary Car Parking and L/UL Spaces - Private Car Parking Spaces - Motorcycle Parking Spaces - L/UL Bays	 120(10) 14(10) 11(10)	 106(11) 13(11) 9(11)	 -14 (-11.7%) -1 (-7.1%) -2 (-18.2%)
PVP for Private Cars	300	217(12)	-83 (-27.7%)
Local Open Space (m^2)	To be provided in accordance with the HKPSG requirement of 1 sq.m. per person.	To be provided in accordance with the HKPSG requirement of 1 sq.m. per person.	N/A

Remarks:

(1) Based on the net site area under the Land Grant, subject to agreement with LandsD. For reference, the net site area under the Approved DSP was about 5,352 sq.m., the corresponding total GFA was about 48,168 sq.m. and domestic GFA was about 40,140 sq.m.

(2) Excluding 10% of MiC floor area which could be disregarded from calculation of GFA and plot ratio as per Joint Practice Note No. 8.

(3) The domestic and non-domestic PR/GFA are for illustrative purpose only. To allow flexibility and optimum use of development potential, development at the Application Site is subject to a maximum domestic PR and total PR. The actual domestic and non-domestic PRs and GFAs would be worked out at detailed design stage.

(4) GIC to be exempted from GFA calculation under the Approved DSP.

(5) For a like-to-like analysis, an average flat size of about 42.8 sq.m. under the Current S16 Planning Proposal has been applied to both the approved DSP and current S16 scenarios in the comparison table to show the net increase in the number of flats and population. For reference, the notional design for the Approved DSP for KC-015 approved by CE in C in Sep 2020 had adopted an average flat size of about 49.6 sq.m. with about 810 no. of flats and an estimated population of about 1940.

(6) The actual no. of flats would be worked out at detailed design stage.

(7) Based on Population Census 2021, the average domestic household size in Lung Shing District Council Constituency Area is 2.5 persons.

(8) Assumed in accordance with the First Schedule of Building (Planning) Regulation that for a Class C site with building height over 61m, the site coverage shall not exceed 40% for a domestic building or for the domestic part of a composite building, and shall not exceed 65% for a non-domestic building, or for the non-domestic part of a composite building. If the non-domestic podium does not exceed 15m in height, a site coverage of not more than 100% shall be permitted. The actual site coverage for the development at the Application Site will be determined at detailed design stage.

(9) For reference, the podium below 15m will not extend towards the sunken plaza of about 1000 sq.m. (i.e. equivalent to about 18.84% of the Application Site area.)

(10) Refers to the car parking provision submitted under the TIA for the Approved DSP.

(11) Based on the car parking requirements stipulated under Land Grant.

(12) For details, please refer to Para. 3.2.1 of this planning statement.

(13) For reference, taken into account the maximum 10% of the MiC floor area to be disregarded from the GFA calculation as per JPN No.8, the estimated average flat size would be about 47.08 sq.m.. The actual average flat size will be determined at detailed design stage.

3.2 Retention of All Key Planning Gains of the Approved DSP Proposal

3.2.1 The current S16 Planning Proposal will retain all the following key planning gains of the Approved DSP Proposal, including:.

- Provision of a split-level sunken plaza of about 1,000sq.m., which connects with the future subway (to be constructed by CEDD) linking KTDA and its Underground Shopping Street (USS), to create a nodal point to connect this part of Kowloon City District with KTDA for enhancing the area's connectivity and walkability. The sunken plaza will be opened for public use and will incorporate retail components, sitting area and event space for place-making opportunities to enrich users' experience, as well as providing a 50m setback of towers from Prince Edward Road East to enhance wind flow penetration;

- Replanning and converting the existing portion of Sa Po Road within the Scheme to optimize the configuration of the sunken plaza, provide solution space for bus queuing at the pavement of Prince Edward Road East and enhanced pedestrian circulation;

- Provide not less than 800 sq.m. of GFA for GIC uses to meet the community needs; and

Subject: [E2026080CN] S.16 Planning Application (No. A/K10/281) - Proposed Minor Relaxation of Dom PR and BH Restrictions for KC-015

Dear Sir/ Madam,

We refer to the captioned s.16 planning application submitted to the Town Planning Board (TPB) on 16 June 2026.

To address the departmental comments received via the Kowloon District Planning Office, Planning Department (KDPO, PlanD) in July and August 2026, we submit herewith the Responses to Departmental Comments table (**R to C Table**), together with the relevant replacement pages of the Environmental Assessment (**Appendix 1**) and replacement pages of the Visual Impact Assessment **(Appendix 2)** for TPB's consideration.

In addition, in response to the verbal comments from KDPO, PlanD, relevant replacement pages of the Planning Statement **(Appendix 3)** and replacement pages of the Application Form **(Appendix 4)** are also provided for TPB's considerations. Please note that the updated Notional Block Plan and Notional Section Plan (i.e. Figures 3.1 and 3.2 of the replacement pages of the Planning Statement provided in Appendix 3 of this R-to-C submission) will supersede the previous notional design plans included in all technical assessments submitted on 16 June 2026. This update will not affect the assessments/results of all previous submitted technical assessments.

The full R-to-C Submission Package (including the R-to-C table and all appendices) are available at below link:
https://edms-ext.ura.org.hk/antelope/getfile/BCGDMDPCOPPLFKMDFJACJCDHMDPKPCMC/

In addition, the hard copy of the submission has been delivered to the TPB earlier today, attached please find the cover letter with TPB's stamp of receipt for your information.

Should you have any enquiry, please feel free to contact me at [redacted] or our Mr. Issac Ng at [redacted].

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
		sunlight penetration) design considerations, are detailed design matters that will be considered and accommodated as appropriate at detailed design stage subsequent to approval of the subject S16 Planning Application.	
5.	Concerns on compatibility with existing and planned surrounding context The potential "wall effect" will overwhelm the surrounding developments that are 80mPD and less.	Please be clarified that the proposed minor relaxation of BHR from 120mPD to 140mPD is highly compatible with the existing and planned surrounding planning context. It fits harmoniously within the established stepped building height profile of the area, which gradually descends from inland area where buildings across Carpenter Road, i.e. Billionaire Royale and Le Billionaire with building height of 170mPD & 145mPD respectively, down to the proposed 140mPD of the subject S.16 Planning Application, and then the Kai Tak area where buildings step down from 135mPD/125/115/100mPD at KTDA to 55mPD near the waterfront. The proposed building height is well fit in the stepping profile and thus potential "wall effect" is not anticipated. Besides, the Scheme will provide a split-level sunken plaza of about 1,000sq.m., which creates a 50m buffer distance between residential towers and Prince Edward Road East, which will create visual and spatial comfort in the surrounding dense urban context. Furthermore, the VIA conducted for the subject S16 Planning Application has demonstrated that the proposed BHR of 140mPD is visually compatible with the local context, and no adverse visual impact anticipated.	2

Responses to Public Comments

Para.	Summary of Public Comments	URA's Responses	Relevant to Public Comment No.
	recognised dominant inhibitors of pedestrian-level airflow. A fresh AVA for the revised form should be required.	Proposal has maintained the following air ventilation measures to enhance the east-west air flow with with minor adjustments introduced: • Retain the 11m-wide gap between towers to facilitate penetration of the prevailing annual eastern wind; • Retain the provision of the split-level sunken plaza and 50m setback of towers from Prince Edward Road East to ensure penetration of the prevailing summer south-western wind. • The non-critical 13m-wide gap (flowing from Carpenter Road via the narrow strip between The High Place and the Application Site) has been omitted, as northern wind does not represent a major prevailing wind direction for the area (which is dominated by eastern wind annually and south-western wind in summer). • Ensure provision of building design elements (e.g. building separation) in accordance with SBDG as appropriate.	
11.	Apartment layout will enjoy less cross-ventilation The reduction in the number of towers from three to two means the layout of the apartments will enjoy less cross-ventilation. Apartments with windows facing a single direction experience single-sided ventilation, causing stagnant air, heat buildup, and high moisture, which leads to excessive dependence on air conditioning.	Please be clarified that detailed layout of individual residential units (including location of the windows) and micro-climate (including air ventilation performance within individual units) are detailed design matters that will be finalized at detailed design stage subsequent to approval of the subject S16 Planning Application.	2

意見詳情
Details of the Comment :

I write to submit opposing comments on the above application. I do not oppose urban renewal or additional housing supply in principle. My concern is that the application secures binding uplifts in plot ratio and building height while diluting, disconnecting, or leaving unassessed the public benefits upon which the Chief Executive in Council approved the Development Scheme in September 2020. The relaxation is justified predominantly on proponent-side policy and financial-viability grounds and, with respect, does not demonstrate a net public planning and design merits exceeding that of the approved scheme, as the DSP Explanatory Statement (ES) outlines.

Ground 1 — Reduction of Public Vehicle Park and unassessed cumulative demand
The ES paragraph 7.9 committed an underground public vehicle park of about 300 spaces to address a recognised local shortfall. The application reduces this to 217 spaces (−27.7%), justified on a narrow study area that does not model Kai Tak Sports Park event-day demand, notwithstanding the scheme's own gateway/connectivity premise. This concern is corroborated at the primary level: at the LegCo Panel on Development Affairs meeting of 28 April 2026 (LC Paper No. CB(1)405/2026(02); minutes at LC Paper No. CB(1)494/2026), Hon Yang Wing-kit (Kowloon Central) recorded that public parking at the adjoining URA KC-017 main site is being cut from over 300 to about 165 spaces, and expressed concern that this would be inadequate for future demand once Kai Tak Sports Park event-day coach and visitor traffic is taken into account. The Kowloon City District Council Traffic and Transport Committee paper (2026) confirms the KC-017 provision of 165 public spaces and TD's written no-objection. When KC-015 and KC-017 are read together, area-wide public parking in eastern Kowloon City is being materially reduced as a major new demand generator comes online, an aggregate effect that per-application, no-in-principle-objection responses from the Transport Department do not address.
A revised cumulative parking demand-and-supply study should be provided before the application is reviewed by the Board. Alas, the ES paragraph 7.9 tied the underground PVP to creating "solution space and... pavement widening in the surrounding area". Relocating parking into a 5-storey above-ground podium removes that mechanism, with the loss most acute at the Carpenter Road frontage and the new private road dedicated to public use.

Ground 2 — Enlarged podium bulk and a potentially misleading VPs
The podium increases from three to five storeys. At VP 2, the podium dominates the view, yet th

e VIA provides no façade treatment for the enlarged podium and relies on wide-angle photomont ages that understate the added mass at the pedestrian scale, which is misleading.

Ground 3 — Retail element disconnected from the sunken plaza
It is a stated object of the Plan that "commercial space will be provided connecting to the sunken plaza to enable extension of vibrant retail activities from the USS of KTDA" (ES paragraph 7. 5). The current notional scheme disconnects the retail element from the plaza, defeating that obj ect and, paradoxically, reducing the retail's own attractiveness — which depends on plaza and U SS footfall — thereby undermining the very marketability rationale advanced for the reduction. A binding approval condition requiring retail seamlessly connected to the sunken plaza should b e required, notwithstanding the non-scheme-based nature of the submission.

Ground 4 — Unsubstantiated retail reduction and the relocation commitment to Lung Shing ope rators
The retail reduction rests only on unquantified Development Facilitation Services feedback. Mor e significantly, the URA publicly and repeatedly committed that affected KC-015/KC-017 chara cter shops could relocate back ("回遷") into the projects to preserve the Chiu-Chow/Thai charac ter and small-shop atmosphere of the "Lung Shing" area. Reporting confirms that most returning food operators specifically chose KC-015 owing to its earlier completion, and that over 60% of character shops joined the relocation/return scheme. Reducing KC-015's retail floor area directly undermines the return capacity the URA promised the community. Unless a full DFS report and a quantified retail GFA schedule (approved DSP versus proposed) can be provided by the Applic ant, the Application should not be supported.

Ground 5 — Absence of net public planning or design gain to justify the relaxation
DSP Notes Remark 8 and Explanatory Statement paragraph 7.4 permit relaxation only on "indiv idual planning and design merits". The merits advanced (MiC under JPN No. 8, above-ground c arpark under PNAP APP-2, financial viability, marketability and housing supply) are predomina ntly proponent-side; the sole arguable public design merit is tower permeability arising from the reduction from three to two towers. On Grounds 1, 2, 4, 5 and 8, the public position is worse tha n under the approved scheme, so the application does not demonstrate public gain exceeding tha t scheme.

Ground 6 — Non-scheme-based submission weakens accountability for public benefits
The parameter uplifts become binding entitlements, while the public-benefit design elements rev ert to non-binding indicative status, to be resolved later with a joint-venture developer — noting that the 2024 tender attracted a single bid and was not awarded. This risks capture of the develop ment upside while public gains remain unenforceable.

Ground 7 — Elimination of the east-west ventilation corridor without any updates to Air Ventila tion Assessment
The 2020 approval linked the height increase to "slimmer building design and wider building ga ps," and the Air Ventilation Assessment raised no adverse comment on the approved three-tower form (TPB Paper No. 10542, paragraph 9.1.11). The two-tower scheme with an enlarged 5-store y podium eliminates the east-west ventilation corridor, yet the application provides no updated A ir Ventilation Assessment, and conflates "no adverse air quality impact" (a vehicular-emission as sessment) with air ventilation and breathability, which is a distinct matter. Building height and p odium bulk are recognised dominant inhibitors of pedestrian-level airflow. A fresh Air Ventilatio n Assessment for the revised form should be required from the Applicant prior to TPB decision; the notional block plan cannot be assumed ventilation-neutral or superior.

For the reasons above, the application should not be approved in its present form.

A/K10/281 URA Kai Tak Road / Sa Po Road DS Plan No. S/K10/URA1/2
New Kowloon Inland Lot 6658
Site area: About 5,307sq.m
Zoning 地帶 "Res (Group A)"
Applied development: 2 (3) Towers – 992 Units (938) / PR 9 - Domestic 8 (7.5) / 140mPD (120)/ OS 2,480sq.m / 115 Vehicle Parking / 217 Public Parking

Dear TPB Members,

Strongest Objections. Here we have the URA that was supposed to provide better living conditions in densely developed urban districts, again pushing the envelope in its quest to pack ever more units into its developments.

At no point in the preamble is there any mention of improvement of living conditions, its all about financial viability.

"*In line with the Government's directives to promote wider use of MiC in development projects;*
SAVE MONEY VIA PROVISION OF HOMES AND BUILDINGS THAT ARE ALL THE SAME

In line with the Government's initiatives of ***facilitating above-ground carpark design****;*
In response to market needs and to ***enhance project financial viability****;*"

IGNORING THE IMPACT OF WIDE AND HIGH WALL EFFECT PODIUMS AND THAT PARKING AT GRADE REMOVES VITALITY FROM THE STREET SCAPE

"Enhance development flexibility and ***project's market attractiveness****;*
DESPERATION AS PREVIOUS TENDERS HAVE FAILED TO MEET PRICE EXPECTATIONS

"Opportunity has been taken to increase housing supply by slight adjustment of permissible domestic plot ratio;"
BUT WE WERE TOLD THAT THE FOCUS OF THE URA WAS TO REDUCE DENSITY IN CORE URBAN DISTRICTS NOT INCREASETHENUMBER OF RESIDENTS

Compatible with existing and planned surrounding context*;*
REALLY, THE WALL EFFECT WILL OVERWHELM THE SURROUNDING DEVELOPMENTS THAT ARE 80MTS AND LESS

□Urgent □Return receipt □Expand Group □Restricted □Prevent Copy

"Retain previously committed planning gains;"
WHAT GAINS?

"No Insurmountable technical impacts anticipated"
HAS ANYONE EVER SEEN A PLAN THAT DID NOT INCLUDE THIS STATEMENT? OF COURSE ALL IS POSSILBE IF ENOUGH CORNERS ARE CUT AND COMPROMISES MADE.

There is also the issue of Site Coverage that substantially exceeds the guidelines:

Non-domestic (below 15m): 100%
Non-domestic (above 15m): 65% (Res A = 33.34%) 5-storey podium)
Domestic: 40% (Res A = 33.34%)

The reduction in the number of towers from three to two means the layout of the apartments will enjoy less cross-ventilation. Apartments with windows facing a single direction experience single-sided ventilation, causing stagnant air, heat buildup, and high moisture. This leads t excessive dependence on air conditioning, bad for the environment and the wallet. Certainly not the better living conditions the URA was supposed to provide.
Unfortunately, Hong Kong and Mainlanders buying units rarely consider this issue URA should definitely not support the trend by taking advantage of ignorance in the community re the importance of cross ventilation.

No image of visual impact on the street scape. No indication of the impact on the penetration of sunlight to the streets and surrounding buildings of the bulky podium and wall effect higher towers.

Add to the equation the elimination of alleyways and takeover of public parks, recreation grounds and open spaces, it is clear that URA has achieved none of the benefits that it was mandated to provide.

The application should be, but of course will not be because now the main focus is to maximize revenue instead of replacing older buildings with well-designed units that enrich the quality of life of residents.

Mary Mulvihill

Detailed Comments of Government Departments

(a) Comments of the District Lands Officer/Kowloon East, Lands Department (DLO/KE, LandsD):

NKIL 6658 held under the Conditions of Grant No. 20457 dated 6.3.2026 for a term of 50 years and commencing from 6.3.2026, with the following salient conditions:

(i) restricted for non-industrial (excluding godown, hotel and petrol filling station) purposes;
(ii) the total gross floor area (GFA) shall not exceed 47,763m^2 (i.e. Plot Ratio 9) or the GFA figure calculated according to the formula for non-industrial (excluding godown, hotel and petrol filling station) purposes, whichever is the lesser; and a maximum GFA of 39,802m^2 for private residential purposes;
(iii) no restriction on building height;
(iv) parking and loading/unloading (L/UL) requirements for residents or occupiers of the buildings erected on the Lot;
(v) public vehicle park (PVP) of 217 spaces for parking of motor vehicles;
(vi) reserved area for building, vehicular and pedestrian traffic;
(vii) one child care centre to be provided within the Lot; and
(viii) construction of subway connection open for public use.

(b) Comments of the Chief Building Surveyor/Kowloon, BD (CBS/K of BD):

(i) all building works are subject to compliance with BO. Detailed comments under the Buildings Ordinance (BO) will be given at the building plans submission stage; and

(ii) Building ("Localized" Major Revision) with the adoption of MiC and application of gross floor area (GFA) concession for the two domestic towers were submitted for approval on 10.7.2026 and under processing.

(c) Comments of the Commissioner for Transport:

(i) she has no comment on the following proposed parking and Loading/Unloading (L/UL) spaces to be provided within the proposed development provided that the relevant lease conditions are complied with:

(I) For residential use (310 units < 40m², 682 units >40m² but <70m² in two towers)
- 69 ancillary private car parking spaces;
- 10 visitor private car parking spaces;

- 10 motorcycle parking spaces; and
- 2 L/UL spaces for Heavy Goods Vehicles (HGV);

(II) For non-industrial use (GFA: 5,307m²)
- 27 prviate car parking spaces;
- 3 motocycle parking spaces;
- 5 L/UL spaces for HGV; and
- 2 L/UL spaces for Light Goods Vehicles (LGV); and

(III) Public vehicle park (PVP) of 217 private car parking spaces.

(d) Comments of the Director of Environmental Protection:

(i) the applicant seeks planning permission for the proposed minor relaxation of domestic plot ratio (PR) and building height (BH) restrictions for permitted residential development with Government, Institution or Community (GIC), commercial/retail uses, and proposed 'PVP' use for URA's Development Scheme (KC-015) at Kai Tak Road/Sa Po Road (the Site). The application proposed to be 'non-scheme-based' submission for illustration purpose for technical assessment. Based on the findings of the Environmental Assessment (EA) submitted under the Planning Statement, insurmountable environmental impact associated with the proposed development is not anticipated and summarized as follows:

(I) on air quality, quantitative Air Quality Impact Assessment (AQIA) has been conducted for the Site and the predicted results indicated that no air sensitive receiver (ASR) is located in the Air Quality Objectives (AQO) exceedance zone at G/F. Thus, adverse air quality impact is not anticipated; and

(II) on noise and sewerage, insurmountable noise and sewerage impacts are not anticipated. Noise Impact Assessment (NIA) Clause (72) and Sewerage Impact Assessment (SIA) Clause (71) have been imposed under the Agreement and Conditions of Grant by Private Treaty Grant (PTG) executed by URA on 6 March 2026. In this connection, the noise and sewerage impacts arising from the proposed minor relaxation of domestic PR and BH restrictions will be addressed under land lease mechanism.

(ii) on the above basis, insurmountable environmental impacts associated with the proposed development are not anticipated. Hence, he has no objection to the captioned application from environmental perspective. However, he has some comments on the EA as provided

in **Annex A** of Appendix V of MPC Paper No. A/K10/281 for follow up please.

(e) Comments of the Director of Fire Services (D of FS):

(i) he has no comment on the application subject to water supplies for firefighting and fire service installations being provided to the satisfaction of the D of FS;

(ii) should the application be confirmed to fall under the regulatory regimes, i.e. lands, buildings, licensing and other control regimes, he has no objection to removing the relevant approval conditions without the need for further consultations from the Fire Services Department;

(iii) detailed fire services requirements will be formulated upon receipt of a formal submission of Short Term Tenancy/Short Term Waiver, general building plans or referral of application via relevant licensing authority. Furthermore, the emergency vehicular access (EVA) provision in the captioned work shall comply with the requirements as stipulated in Section 6, Part D of the Code of Practice for Fire Safety in Buildings 2011, which is administered by the Building Authority; and

(iv) shall the proposed work affect any EVA provision of nearby buildings, the applicant should make separate enquiry to this department to ensure work feasibility.

Recommended Advisory Clauses

(a) to note the comments of the District Lands Officer/Kowloon East, Lands Department (LandsD) that:

(i) the Site is located at NKIL No. 6658 (the Lot) which is held under the Conditions of Grant No. 20457 dated 6.3.2026 (the Lease) for a term of 50 years commencing from 6.3.2026;

(ii) pursuant to the Lease, the total gross floor area (GFA) of any building or buildings to be erected on the Lot for private residential purpose shall not exceed 39,802m². Under the current proposal, the maximum domestic GFA will be increased to about 42,456m² which will be in breach of the Lease. Should the subject application be approved by the Board, the Grantee is required to apply to LandsD for a lease modification to implement the proposal. However, there is no guarantee that the lease modification application will be approved. If the application is eventually approved by LandsD in the capacity as the landlord at its sole discretion, it will be subject to such terms and conditions including, among others, payment of premium and administrative fee as may be imposed by LandsD; and

(iii) noting that more than two floors of aboveground carpark is proposed under the application, the Grantee is required to obtain written approval from the Director of Lands (the Director) (subject to payment of any premium and administrative fee as determined by the Director) pursuant to the Lease for not taking into account any parking spaces (including public vehicle park (PVP)) in any floor in addition to two floors of parking spaces at or above the ground level of the building or buildings erected on the Lot for the purpose of calculating the total GFA provided that they have been excluded by the Building Authority from the calculation of GFA under the Buildings Ordinance (BO).

(b) to note the comments of the Chief Building Surveyor/Kowloon, Buildings Department:

(i) all building works are subject to compliance with BO. Detailed comments under the BO will be given at the building plans submission stage; and

(ii) granting of GFA and/or SC concessions under BO for the adoption of Modular Integrated Construction (MiC) in the proposed development will be favourably considered subject to compliance with Joint Practice Note No. 8.

(c) to note the comments of the Director of Environmental Protection that:

(i) based on the findings of the Environmental Assessment (EA) submitted under the Planning Statement, insurmountable environmental impact associated with the proposed development is not anticipated and summarized as follows:

(I) on air quality, quantitative Air Quality Impact Assessment (AQIA) has been conducted for the Site and the predicted results indicated that no air sensitive receiver (ASR) is located in the Air Quality Objectives (AQO) exceedance zone at G/F. Thus, adverse air quality impact is not anticipated; and

(II) on noise and sewerage, insurmountable noise and sewerage impacts are not anticipated. Noise Impact Assessment (NIA) Clause (72) and Sewerage Impact Assessment (SIA) Clause (71) have been imposed under the Agreement and Conditions of Grant by Private Treaty Grant (PTG) executed by URA on 6 March 2026. In this connection, the noise and sewerage impacts arising from the proposed minor relaxation of domestic PR and BH restrictions will be addressed under land lease mechanism;

(ii) he has some comments on the EA as provided in **Annex A** for follow-up by the applicant.

(d) to note the comments of the Chief Engineer/Mainland South, Drainage Services Department that the following comments on the Drainage Impact Assessment should be addressed by the applicant during detailed design stage:

(i) with reference to Clause 9.3 of SDM, 10% reduction of area shall be considered for siltation;
(ii) please provide details of the unpaved area assumed for justification of the runoff coefficients adopted. If the area is on structure and/or discharge to the drainage system, the runoff coefficient for the unpaved area should be similar to that of the paved area;
(iii) Section 4.2.10 of the report - Please justify the proposed "5 minutes" of time of entry with reference to Section 7.5.2 of SDM;
(iv) with reference to Section 6.4 of SDM, please consider the effect of the tide and review the drainage impact assessment, including but not limited to the proposed sunken plaza;
(v) please review the adequacy of design with reference to DSD Practice Note No. 2/2023 Guidelines on Flood Resilience;
(vi) Appendix E - The adequacy of the proposed upgraded pipes between SMH102 and SMH4037344 currently 92%. Please review; and
(vii) please provide the up-to-date excel softcopy of all calculation for review.

(e) to note the comments of the Director of Fire Services that:

(i) detailed fire services requirements will be formulated upon receipt of a formal submission of Short Term Tenancy/Short Term Waiver, general building plans or referral of application via relevant licensing authority. Furthermore, the emergency vehicular access (EVA) provision in the captioned work shall comply with the requirements as stipulated in Section 6, Part D of the Code of Practice for Fire Safety in Buildings 2011, which is administered by the Building Authority; and

(ii) shall the proposed work affect any EVA provision of nearby buildings, the applicant should make separate enquiry to this department to ensure work feasibility.

(f) to note the comments of the Director of Social Welfare that:

URA will ensure all requirements for the Child Care Centre as stipulated in the Conditions of Grant and Technical Schedule as well as all current and prevailing ordinances and regulations will be fulfilled, and there will be ongoing liaison with SWD during the detailed design stage.

Annex A

Detailed Comments of the Director of Environmental Protection on the Environmental Assessment:

General Comments

1. The consultant is suggested to review if any over-conservative assumptions were adopted in the emission calculations which could lead to exceedance and thus imposing unnecessary restrictions on the development.
2. The consultant is also suggested to review whether assessment for the locations with no sensitive use is needed, to avoid inducing unnecessary false perception on the air quality of the development.
3. Please also carefully review the representative ASRs and whether the planned ASRs (i.e. with fresh-air intake / ventilations) are actually within the buffer distance or not, and re-evaluate whether a quantitative AQIA is required for this case (details at comment #16(a) below)

Specific Comments

4. Section 5.2.1: Please rectify the typo "Air Pollution Control (Fuel Restriction) Regulations".
5. Section 5.2.2, 5.3.3, 5.4.2: Please complete the last sentence.
6. Table 5-2: This table does not tally with Table 3.1 of HKPSG Ch.9. Please amend as appropriate and consider to delete the discussions of 500m chimney buffer distance (sensitive uses) as it is not relevant to this planning case.
7. Section 5.3:
   (a) Please extract the nearest general Air Quality Monitoring Station (AQMS) for evaluating the background air quality, instead of only using Mong Kong Roadside AQMS. If some air pollutants are not measured at the general AQMS (such as CO). Please specify in the Notes of table.
   (b) Please use 2021-2025 AQMS data, which is already available in SAMP.
8. Section 5.3.3 and Table 5-4: Please delete "it is noted that the PATH v3.0 … air quality concentrations for Year 2030. Therefore," and complete the last sentence. All the PATH Grids within 500m assessment area of the project site should also be included for better presentation of the future background air quality. Please update.
9. Section 5.3.4: Please improve the readability of the first two sentences.
10. Section 5.4.1 and Figure 5.1: Please overlay the figure with PATH grids.
11. Table 5-5 and Figure 5.2a & 5.2b: **To ensure the representativeness of the ASRs**, please carefully review:
    (a) Table 5-5: Please specify which ASR IDs belongs to residential / clubhouse / retail. Besides, please review the necessity of assessing 65 ASRs within the Sunken Plaza. If the non-residential use, e.g. clubhouse, CCC and Plaza would only rely on central air conditioning,

please identify the locations of the fresh air intakes as ASRs and remove all other ASRs.

(b) Please clarify whether there would be fresh air intake on B1/F and B2/F.

(c) Please also include "Short term" for the residential floor in the 5th column.

(d) Since there would be commercial use in Sunken Plaza, please include "Long term" for the ASRs for Sunken Plaza (for the fresh air intakes).

12. Section 5.5: Please also list the selected ASRs during the construction phase, and present them in a separate table and figure with labels showing their shortest distance to the project site.

13. Section 5.5.1: Please delete "Total suspended particulates (TSP)," in the 2nd line. Also, to avoid confusion, please amend the sentence "*No demolition works will be carried out as there is no existing structure to demolish*" by stating that the existing buildings had already been demolished and vacated since year 202x.

14. Table 5-6: At Row 2, please review the necessity of stating "*Only ASR 9 and ASR 10 are potentially exposed to cumulative impacts*", which appears to be irrelevant.

15. Section 5.5.7: Please revise: "*Mitigation measures to control construction dust/gaseous emissions listed below are recommended to be incorporated into the specifications* ***of construction contract*** *for the contractor's implementation*".

16. Section 5.6.1 and Figure 5.4:

(a) Referring to comment #11 above, please carefully review the representative ASRs and **whether the planned ASRs (i.e. with fresh-air intake / ventilations) are actually within the buffer distance or not** (e.g., With reference to 1st notional plan under Appendix 3.1, the 20m buffer area seems to be occupied by the Sunken Plaza but not residentials, and the residential towers may actually outside 5m buffer area of Sa Po Road and Kai Tak Road), and re-evaluate whether a quantitative AQIA is required for this case.

(b) Please provide the source of information about the road types of the surrounding roads. If the road type is not available in the public domain, please seek confirmation from Transport Department on the proposed road type.

(c) The notional plan at Appendix 3.1 indicates that the junctions of Kai Tak Road Sa Po Road (i.e. in the south central of the project site) will be occupied as part of the site as Terrace. Please clarify the applicability of buffer distance of the road under the terrace.

17. Section 5.6.8 and Appendix 5.2: Please supplement a roadmap indicating the roads with road IDs, and highlighted the road are with/without start emission. The roadmap should also cover the 500m assessment area or the project site.

18. Section 5.6.9 and Figure 5.5a:

(a) Please cover the entire 500m area, instead of only showing the north-east portions.

(b) The figure does not indicate any metered carpark. Also, according to TD's information, there are several metered carparks for Good Vehicles near the site. Please review and adopt precise

approach for those metered parks.

(c) The portal of KTPTI (i.e. under Airside) should be outside the 500m assessment area, please review whether this PTI should still be assessed.

(d) Please justify why the vehicle flow from the TLRCP would only pass through the road under the terrace of the project site.

19. Section 5.6.12 & 5.7.6 and Figure 5.5b:

(a) Please review why the road covered with terrace inside the project site (without only around 44m) would be considered as a tunnel with portal emission. And revise the calculation at Appendix 5.5 as appropriate.

(b) Please avoid overlap the existing building (e.g. Tat Tak Building) with the planned road (i.e. URA project KC-017 Site C1).

20. Section 5.6.13:

(a) Please confirm whether the ventilation building of Central Kowloon Rote (CKR) will be within 500m assessment area.

(b) Please move the discussion of no chimney within the project site to Section 5.6.3 – 5.6.7 for Tier 1 emission.

21. Section 5.6.14: Please indicate the location of sewage pumping stations (SPS), and supplement what is the definition of "appropriate mitigation measures" (e.g. deodourizers and their removal efficiency?).

22. Section 5.6.16 and Appendix 5.7:

(a) In view of the presence of tall buildings in Diamond Hill and Kowloon City area, please review whether the impact due to Diamond Hill Crematorium is anticipated to be very small or not.

(b) For Kai Tak Cruise Terminal:

i. Please exclude maneuvering emissions. Only hoteling emissions[1] are required to be assessed as point sources.

ii. There is no submission of calculation spreadsheet demonstrating how the emission rates are assessed, such as Cruise Schedule, Cruise Ferry information (usually with highest engines' power), Load Factor, Emission Factor. Please supplement the relevant information.

iii. Hoteling time of 30 minutes is not reflecting the actual situation. Please revise the assumption of only 30 minutes hoteling.

23. Section 5.7.5: Please clarify the start-emission approach, as the phrase "the start emissions for all vehicle types at all assessed roads using the broad-brush approach" is inconsistent.

---

24. Section 5.7.8: Please explain why precise approach is adopted to estimate the start emissions from the metered carpark (e.g. for HGV/coaches?) . Please clarify which approach has been adopted for estimating the emissions from the carpark of the proposed development itself.
25. Section 5.7.13: Please specify the version number of SAMP.
26. Section 5.8 – Assessment Results and contour plots at Figures 5.6-5.17:
    (a) Please cover the entire project site with pollutants levels.
    (b) Please provide the contours for all AQO parameters including annual averages at the worst hit levels. If there is exceedance zone, the contour for the next level should be provided to demonstrate there would be no exceedance at the next level.
    (c) Please overlay the layout plans of the proposed development on the contours to demonstrate that there would be no ASRs within the exceedance zone.
    (d) Please indicate the location of ASRs for checking.
    (e) Please also add a legend that no air sensitive uses / fresh air intake will be situated within the exceedance zones.
27. Table 5-8: Since there are more than one ASRs at each level, please present the range of concentrations of the air pollutants instead of just one value for each AQO parameter at each level.
28. Appendix 3.1: Please amend the garbled text at 1st figure of Appendix 3.1
29. Appendix 5.4 and Calculation Spreadsheet for Open Road:
    (a) Please provide the Start Profile for SAMP input.
    (b) Please rectify the Annual Traffic Census (ATC) values for the "Proportion of Roads with Potential Start within Hong Kong" and provide the detailed information and calculation supporting these values.
    (c) Please review the start-emission approach and confirm the road allocation for all LD and RR links. For example, Olympic Avenue (DD), Prince Edward Road East (PD) & Argyle Street (PD), and similar links should be classified as without start emissions, whereas Lok Sin Road, Nga Tsin Wai Road, Tung Tsing Road, and Tung Kwong Road, and similar links should be treated as with start emissions. Please clarify and review the start Profile for SAMP.
30. Appendix 5.6 and Calculation Spreadsheet for PTIs:
    (a) Please rectify for missed PTI serving route 69 in 70 Lion Rock Road.
    (b) Please confirm the adopted approach for the temperature and relative humidity values used for all PTI/carpark.
    (c) Please specify the date of the on-site observations for the existing PTI and the observation period.
    (d) Oxides of nitrogen (NOx) in EMFAC are not equivalent to nitric oxide (NO). Please clarify as it may cause over-conservative results.
    (e) For all PTI spreadsheets, please ensure that bypass vehicle idling emissions are not used for

adjusting starting emissions, and refer to the PTI/carpark templates for EMFAC submissions issued in July 2024 by the Environmental Protection Department.

(f) For start emissions outside the PTI/car park, the emissions have been uniformly distributed. Please confirm whether all outside roads have the same width for the purpose of deriving the emission rate. If the road widths are not identical, it is recommended that the emissions be distributed proportionally by road length first.

(g) Please rectify the travelling distance in FBDD.

(h) Please align the "Source of Emission" entries in the emission inventory within Appendix (e.g. Airside PTI), so that all sources are consistently named and referenced.

(i) Spreadsheet "03_Idling Emission Factor": the vehicle population results for year 2030 in the PTI spreadsheet are not aligned. Please review and use that the detailed BDN report result, disaggregated by model year and technology groups.

(j) Spreadsheet "03_Idling Emission Factor": please apply the air conditioning factor consistently, in accordance with the approach whereby the PM cold idling emission factor is referenced to the corresponding hot idling emission factor.

(k) Spreadsheet "03_Idling Emission Factor": please rectify the weighted average emission factors (g/s) for MC_Petrol, PV5_LPG, taxi_LPG, PC and LGV3, as the calculated cold idling emission factors are lower than the corresponding hot idling emission factors.
