Subject: RE: (Planning Application No. A/SK-CWBS/42) Request for Further Information

Dear Sir/Madam,

We would like to provide more detail about our application:

1. Drawing of proposed pole is attached.

2. This application is for low voltage -380V installation related with proposed poles and underground cables
3. According to the application form, the proposed electricity installation will connect to a meter box. This meter box position is under another approved planning application No. A/SK-CWBS/36.
4. As the existing network demand nearby is not sufficient for new development, new electricity installation is required.
5. This is the most efficiency alignment. the proposed routing is the least impact on nature conservation.
6. no tree felling is required
7. The tree protection zone should be at least 1.5m away from any tree within 250mm Diameter at Breast Height (DBH) or at least 6 times of the DBH of any tree if their DBH exceeds 250mm.
8. To protect the trees, tree protection zone fencing would be installed around the agreed perimeter of the Tree Protection Zone (TPZ). Fencing should be sturdy and highly visible to discourage entrance and disturbance of the area within the TPZ. (details referred to the Figure 3 below).
9. Moreover, All sections of fencing should be clearly marked with signs stating that the area within is a Tree Protection Zone and that no one is allowed to enter this area except the authorized person (details referred to the Figure 5 below).
10. Excavator will be the first choice if access allowed. Otherwise, the excavation work will be processed by hand tools to minimise the potential impacts to existing trees

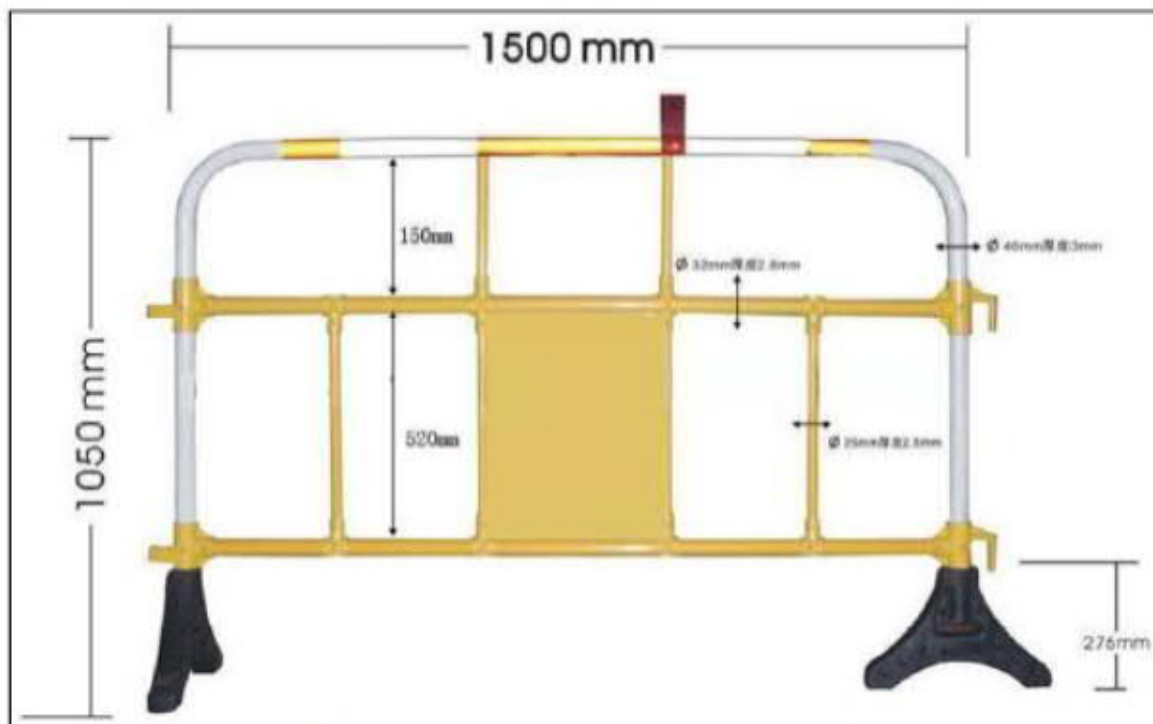

Figure 3. Example of the plastic fencing

Figure 5. Example of TPZ signage

Thank you for your consideration

Best Regards

Sam Chan
