**Proposed Temporary Animal Boarding Establishment (Dog Kennel) for
a Period of 3 Years and Filling of Land
at
Lot 1455 RP in D.D. 118, Tai Shu Ha Road West, Yuen Long, New
Territories**

Annex 1 Drainage Proposal

1.1 Existing Situation

A. Site particulars

- 1.1.1 The application site occupies an area of about 660m².
- 1.1.2 The site is serviced by a vehicular access leading from Tai Shu Ha Road West. The area adjacent to the proposed development is mainly rural in nature.

B. Level and gradient of the subject site & proposed surface channel

- 1.1.3 It has a gradient sloping from southwest to northeast from about +27.2mPD to +25.5mPD. (Figure 4)

C. Catchment area of the proposed drainage provision at the subject site

- 1.1.4 The land to the north, west and east is found lower in level than the application site. However, there is a knoll to the southwest of the application site. As such, an external catchment has been identified as shown in Figure 4.

D. Particulars of the existing drainage facilities to accept the surface runoff collected at the application site

- 1.1.5 As shown in Figure 4, a public drain is found at the opposite side of Tai Shu Ha Road West. The stormwater intercepted by the proposed surface drain at the application site will be dissipated to the said public drain.

1.2 Runoff Estimation

1.2.1 Rational method is adopted for estimating the designed run-off

$$Q = k \times i \times A / 3,600$$

Assuming that:

- i. The area of the catchment including the external catchment is approximately 2,900m²; (Figure 4)
- ii. The application site has been fully paved. It is assumed that the value of run-off co-efficient (k) is taken as 1.

$$\text{Difference in Land Datum} = 56.9\text{m} - 25.5\text{m} = 31.4\text{m}$$

$$L = 166\text{m}$$

$$\therefore \text{Average fall} = 31.4\text{m in } 166\text{m} \text{ or } 1\text{m in } 5.29\text{m}$$

According to the Brandsby-Williams Equation adopted from the "Stormwater Drainage Manual – Planning, Design and Management" published by the Drainage Services Department (DSD),

$$\text{Time of Concentration } (t_c) = 0.14465 [L / (H^{0.2} \times A^{0.1})]$$

$$t_c = 0.14465 [157 / 18.92^{0.2} \times 2,900^{0.1}]$$

$$t_c = 6.00 \text{ minutes}$$

With reference to the Intensity-Duration-Frequency Curves provided in the abovementioned manual, the mean rainfall intensity (i) for 1 in 50 recurrent flooding period is found to be 260 mm/hr

By Rational Method,

$$Q_t = 1 \times 260 \times 2,900 / 3,600$$

$$\therefore Q_t = 209.44 \text{ l/s} = 12,566.67 \text{ l/min} = 0.21 \text{ m}^3/\text{s}$$

In accordance with the Chart or the Rapid Design of Channels in "Geotechnical Manual for Slopes", for an approximate gradient of about 1:25 and 1:30 in order to follow the gradient of the application site, 300mm surface U-channel along the site periphery is considered adequate to dissipate all the stormwater accrued by the application site and adjacent land.

1.3 Proposed Drainage Facilities

- 1.3.1 Subject to the calculations in 1.2 above, it is determined that proposed 300mm concrete surface U-channel along the site periphery is adequate to intercept storm water passing through and generated at the application site (Figure 4).
- 1.3.2 The collected stormwater will then be discharged directly to the public drain at the opposite side of Tai Shu Ha Road West.
- 1.3.3 All the proposed drainage facilities will be provided and maintained at the applicant's own expense. Also, sand trap and surface U-channel will be cleaned at regular interval to avoid the accumulation of rubbish/debris which would affect the dissipation of storm water.
- 1.3.4 The provision of the proposed surface channel will follow the gradient of the application site. All the proposed drainage facilities will be constructed and maintained at the expense of the applicant.
- 1.3.5 Prior to the commencement of the drainage works, the applicant will seek consent from District Lands Office/North and relevant land owners for the provision of drainage facilities outside the application site.
- 1.3.6 The proposed development would not affect the existing ditches, drains and obstruct the flow of the flow of surface runoff.
- 1.3.7 The provision of trees and surface channel at site boundary is detailed hereunder:
- (a) Soil excavation at site periphery, is inevitably for the provision of surface channel. The accumulation of excavated soil at the site periphery would obstruct the free flow of the surface runoff from the surroundings. Hence, the soil will be cleared at the soonest possible after the completion of the excavation process.
 - (b) In view of that soil excavation may be continued for several working days, surface channel will be dug in short sections and all soil excavated will be cleared before the excavation of another short section.
 - (c) No leveling work will be carried at the site periphery. The level of the site periphery will be maintained during and after the works. The works at the site periphery would not either alter the flow of surface runoff from adjacent areas.
 - (d) Holes will be provided at the toe of site hoarding to allow unobstructed flow of surface runoff.

Annex 2 Estimated Traffic Generation

- 2.1 The application site is serviced by a vehicular access leading from Tai Shu Ha Road West. Having mentioned that the site is intended for dog kennel, traffic generated by the proposed development is not significant.

Lot 1455 RP in D.D. 118, Tai Shu Ha Road West, Yuen Long

Site area: About 660sq.m

Zoning: "Agriculture"

Applied use: Animal Boarding Establishment / 3 Vehicle Parking / **Filling of Land**

Dear TPB Members,

Strongly objections. Agriculture land is for growing crops, there is active farming in the immediate area. On 26 June 2021 you approved a carbon copy application on the adjoining lot 1284 (512). On June 24 2022 another approval for lots 1454 S.B ss.1 and 1454 S.B RP. However to date conditions have not been fulfilled for both operations. Members must question if there is any connection between applicants.

There is no previous history of approval. Buildings and parking would cover most of the site and the discharges of both sewerage and chemical laden water used in washing animals would destroy the quality of the soil.

Another No Names application for an animal boarding establishment.

For far too long these No Names applications with zero information on the applicants status and suitability with regard to caring for animals have been routinely rubber stamped.

Consequently the result is significant cruelty to animals, proliferation of puppy farms illegal importation of sick animals, etc.

Animal shelter nightmare: inspectors discover 36 dead cats and dogs at decrepit New Territories facility as rescue mission continues

- Eight cats and 28 dogs found dead 'on the ground, beds, cupboards or in cages'

- Inspector believes many died of thirst, starvation or disease

Is this a registered facility? Has it been approved? Is it a 'puppy mill'? No information on the number of animals to be housed there. Do Ag and Fish even know it exists? Moreover the site is zoned primarily for agriculture, the toxic waste has to go somewhere, obviously into the ground or nearby streams. This is poisoning land.

The community is very concerned about animal welfare. In recent weeks there have been reports numerous cases of pet smuggling from the mainland. This presents a risk of unknown virus being imported into the territory. Only legitimate and well managed facilities can be tolerated.

There have been a number of similar applications for this district, Members should request data on supply and demand for such facilities.

How many dogs are there in HK and what is the genuine demand for these facilities.

But of course the bottom line is that these applications are rarely for the purported use but in order to acquire approval to fill in land. PlanD knows this, members have a duty to evaluate the legitimacy of the proposed land use.
